It is said that Mr. Obeid, Chairman-Director General of STE is eager to use Japanese Government 's Yen Credit Finance for the second five-year project after 2000.

Concerning the first five-year plan, STE made a public announcement of international tender in September, 1996 in line with the Feasibility Study extracted form Master Plan formulated by NTT International Corporation. Details are as follows:

1. Switching: 1.65 million lines expansion
2. Transmission: Microwave inter-city and spur route
FOTS inter-city and spur route
3. Billing System
4. Outside Plant

Total is 7 packages. This tender was closed in February, 1997 and evaluation is being proceeded. NEC and Fujitsu are participating in this tender.

Description :

(FY 1997 Domestic Survey)

Presently, the projects proposed by the JICA Study is examined by the Government of Syria.

(FY 1998 Domestic Survey)

The request for OECF loan has been submitted.

(FY 2000 Overseas Survey)

Fund Procurement

1. Latakia Port Rehabilitation

Source: JBIC, 122.6 million USD (Foreign 107.247 million USD, Local 15.843 million USD)

Contents of project: Modernization of Existing Countainer Terminal, Moderneization of Current Grain-Handling Operations, Reinforcement of Existing Conventional Berths

2. Tartous Port Rehabilitation

Source: JBIC, Total Cost: 56,860,000 USD), Date of approval: Near future, Contents of project: Reinforcement of Multi-purpose Terminal at Pier B, Establishment of Multi-purpose Terminal at Pier B of Tartous Port, Dredging of Fairway and Basin.

3. New Port Construction in Hamidiya

Source: JBIC, Total Cost: 466,548 mil. US\$, Date of approval: Un known, Contents of project: Phosphate Terminal, Pellet Terminal, Scrap Terminal, Sulfur Terminal, Fertilizer Terminal, Prepararion of Public Berths

(FY 2001 Domestic Survey)

This study suggested to implement the rehabilitation project at Latakia and Tartous and the new port construction project at Hamidiya. The Yen loan request on the modernization project of port of Latakia has been made since 1997 as the priority project of the present two merchant ports (Latakia and Tartous) rehabilitation projects. The selection of this project as Yen loan was delayed because the provision to the electric power sector for the purpose of resolving the problem between supply and demand of power has been attached greater importance, however the selection was made in Sep.2001. The contents of request are as follows although the official loan contract is not concluded yet.

Amount: about 9.7 billion yen

Contents: Provision of cargo handling equipment and facilities (2 Container Gantry Cranes etc.) to the container and general cargo berths, provision of cargo handling equipment and construction of silo to the grain terminal.

Description :
 (FY 1999 Domestic Survey) Part of the priority project (establishing public and private joint promotion committee, media exposure by oversea's media, provision of further incentives for private investment) is being implemented. Yen Loan was requested to Japan.

(FY 2001 Domestic Survey)
 No Yen Loan was approved as of October, 2001.

Japanese Technical Cooperation (dispatch of experts):
 (FY 2003 Domestic Survey)
 Period: From December 2003 for two years.
 Number of personnel: 1 personnel

(FY 2004 Domestic Survey)
 No information a part of FY 2003 Domestic Survey. (Experts are currently being dispatched.)

(FY 2004 Overseas Survey)
 Several projects mentioned in the plan are being implemented outside M.O.T. area.
 M.O.T. requested matters listed below to the Government of Japan.
 1) Installation of two sets of touch panel display screens at the tourist information center.
 2) Dispatch of experts for developing the contents of touch panel screen system.
 3) Dispatch of experts for general knowledge of the tourist information center.
 4) Training course in Japan for three to five tourist information center staff.
 M.O.T also requested technical cooperation to the Government of Japan.
 1) Dispatch of experts for vocational training about the tourism and hotel industry.
 2) School and training organization.
 3) Dispatch of experts for tourism resources development.
 4) Training for field of tourism industry project feasibility study.
 5) Achievement study by the Government of Japan.

(FY 2008 Domestic Survey)
 No information to be specifically mentioned.

Description :

(FY 2000 Domestic Survey)

After the final report being submitted in Jul.1999, the result of the Study were presented in seminars broadly held in Damascus, Allopo and Latakia. Damascus Governorate, one of counterpart agencies, established the Department of Follow-up for Japanese Transport Study, which is responsible to implement the results of the Study. Al-Yarmouk Square Underpass Project is in Detailed Design stage, and another priority project, Umaween Square Under Pass is now being considered for implementation.

New JICA project related to this Study, Damascus Governorate proposed a Signalization System Improvement during the Study period as a Grant Aid Project, but it was unaccepted. The Damascus Government also proposed a Feasibility Study of Public Bus System Improvement, but it was not realized.

(FY 2001 Domestic Survey)

Although the City of Damascus is forward-looking for the implementation, the projects are not progressed because of the following factors:

- The governor was changed twice in three years so that the policy cannot be fixed (three times since the time of the Study).
- The City of Damascus demands to be implemented by the grant aid, which does not meet with the Japanese assistance policy.

(FY 2002 Domestic Survey)

The Govt. has implemented construction work of 1 fry-over self financially, one of the Underpass projects proposed by the Study. The Govt. submitted the proposal to JBIC for improving road network (beltway and radiating roads) which is currently under consideration within JBIC. As related projects, a French organization is conducting F/S on public transportation projects, and examining on project funds as well.

(FY 2003 Domestic Survey)(FY 2003 Overseas Survey)

We have been reported that a request for a grant aid has been made for the traffic signal system. However, this project has been once sounded out during JICA's study and viewed as difficult then. Also there had been an intention before that the nation wanted to improve the signal system by yen loan, which was discontinued due to a change of mayor. On the other hand, the yen loan request for highway network improvement of Damascus city is under consideration, which is confronted with an objection that it should be considered after the improvement of Latakia Harbor settles.

City roads and intersection improvement (underpass) has been under construction on its own budget, with some of them partly completed.

As for future trend, the municipal intention often changes depending on the administrative management of the Mayor of Damascus, who is ranked at same level as the prefectural governor). And it has been reported (from participants from Damascus City to JICA's training in FY2003) that the position of the traffic department was upgraded associated with the reform of the organization within the city government recently.

(FY 2004 Domestic Survey)

Three years have passed since the start of Bshar al-ASAD's presidency, where political infiltration of his policy can be seen. Within this situation, economic infrastructure development, especially improvements in road networks and port facilities, and railway modernisation, have the highest priority to promote further economic reforms. For Damascus city, transportation construction of roads are conducted in line with JICA M/P within the budget.

Among the projects, Umawyeen Square Underpass has opened, Aba-shin crossing is in construction, Al Yarmouk is in detail design process, and grade separation of Al Hourien St. in Northern Umawyeen Square and Lbarahim Al Qouwatly St. is being considered.

Hejat Tunnel proposed in JICA M/P requires advanced technology to cut cross centre of the city. Therefore, they requires Japanese technical cooperation.

Urban Development Policy Study in Damascus City, which is now prepared for a request, requires revision of M/P, where urban transportation is viewed as an important sector along with the water sector and has been 5 years since the completion of M/P.

(FY 2004 Overseas Survey)

1. Extended Projects: Anwar kamel street, Al-Hajia street
2. New Projects: Northern beltway, Barzeh Altal, Northern Street in former city.
3. An overhead crossing Project: North-South highway, Mujtahed, Hasean Al-karrat, Kafer Sousch, Yarnouk, Zi Qar, Qasioun-Demmar, Alo-jamark, Al-Mahdi bin Baraka
4. Street Parking: Has been publicly announced
5. Alleyway Parking: Souk Al-Hal, kassa
6. Various pedestrian overpasses and underpasses
7. Terminal: Northern terminal, Southern terminal, and Western terminal

| Description : | | |
| (FY 2000 Domestic Survey) After the completion of the Feasibility Study, the JICA regional office in Syria sent two short-term experts in order to formulate the concrete development plan. In addition, the JICA regional office sent a member of JOCV to the Ministry of Irrigation that should be the counterpart agency in case that the project is implemented. In order to realize the Trans-basin Project from the Coastal Region aims to transfer water from the Coastal area where they have a certain amount of surplus water to Damascus City where they will face serious problem of water shortage in near future. For the implementation of the Trans-basin Project, the potential of water resources in the Coastal region should be investigate and clarified in advance. The Government of the Syria express their intention to request a technical cooperation to the Japanese government for the clarification of water resources in Coastal Region. Now JICA regional office arranges the framework of the project between the Ministry of Irrigation and Ministry of House to formulate the technical cooperation. | | |
| (FY 2002 Domestic Survey) The "Water Resources Information Management Center Equipment and Materials Improvement Project" is expected to be implemented in December 2002 under the Grant Aid. The said project has important relations with this project and the Equipment and Materials Improvement Project will lead to implementation of the proposed project. | | |
| (FY 20003Domestic Survey) A short-term dispatch of experts is expected to be implemented in 2003 as the "Water Resources Information Center Improvement Project". | | |
| (FY 2003 Overseas Survey) Some proposal projects as a result of the study has been implemented as flowing; 1) The project for Development Hydrological and Meteorological Observation Network Finance: 10 Dec.2003 E/N 650 mil. yen 2) Rehabilitation irrigation project Finance: Syrian Government The plan will be executed through numbers of years ; the found for rehabilitation plan was about 12 billion Syrian pounds for the last three years. 3) Building new dams Finance: Syrian Government The amount of money needed is about 7.4 billion Syrian Pounds will be secure thought numbers of years. | | |
| (FY 2004 Domestic Survey) No information to be specifically mentioned.. | | |
| (FY 2004 Overseas Survey) 1. Design/Construction 1) Construction Period: 15th June, 2002 - 14th June 2005 2) Maintenance/Management Body: Water Resources Information Centre, Ministry of Irrigation 2. Subsequent Studies 1) Project Name: Development of Hydrological and Meteorological Observation Network in the Syrian Arab Republic 2) Contents: To supply hydrological and meteorological observation system to facilitate management of coastal area 3) Funding Request: Grant Aid (approved on 10th December 2003), 650 million YEN 3. Technical Assistance 1) Detachment of Technical Experts - 2003 3 long-term experts, 3 short-term experts, 5 consultants - 2004 long-term experts, 3 short-term experts, 5 consultants 2) Training - 2003 Hydrological observation (13th - 31st July) 3 personnel. Water resource management (26th October - 9th November) 2 personnel - 2004 Database, GIS, and Network (8th February - 7th March) 5 personnel, Hydrological observation (10th - 31st July) 5 personnel, Water resource management (4th - 19th September) 2 personnel, Water resource planning (10th - 31st October) 5 personnel - 2005 Database, GIS, and Network (undecided) | | |
| (FY 2005 Domestic Survey) No information to be specifically mentioned. | | |
| (FY 2009 Domestic Survey) No information. | | |
| (FY 2009 Overseas Survey) Technical Cooperation Project : Establishment of Water Resources Information Center (Term of Cooperation)2002.6-2007.6 (Project Purpose)The system, which enables appropriate management of the water resource information, will be established at the areas such as coastal region. | | |

| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | Based on a request of the government of Syria, make a master plan for improving railways to increase transportation capacity (for 2005, 2010, and 2020) and conduct a feasibility study for the short-term emergency projects (2 projects). | | |
| 7. CONSULTANT(S) | Japan Railway Technical Service Yachiyo Engineering Co., Ltd. | | |
| 8. STUDY PERIOD | Apr.2000 ~ Aug.2001 16month(s) ~ | | |
| 9. SITE OR AREA | M/P: GESR and GEHR railway network system operation areas and planned areas F/S: GESR area , 1) Tartous-Homs-Al-Sharqia area, 2) Jublin- Muslimia area | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>M/P: (2001-2020) (GESR)</p> <p>1) Rehabilitation and modernization of existing facilities (8 projects by section, 5 projects by sector such as workshop) 2) New line construction (9 projects by section)</p> <p>(GEHR)</p> <p>1) Rehabilitation of existing facilities (3 projects by line (measures for ensuring safety in train operation))</p> <p>F/S:</p> <p>(GESR)</p> <p>1) Rehabilitation and Modernization of Tartous, Homs and Al Sharqia Section (F/S-1)(2001-2020) This project covers the route of about 270km running from Tartous (an important port for import and export) to Al Sharqia (with phosphate ore mines) via Homs. For this route, the project aims at the rehabilitation and modernization of the existing track facilities, electric facilities and so forth; as well as the additional construction of signal stations and double tracking for the smooth operation of trains which will be increased to cope with the growth of demand.</p> <p>2) Locomotive Workshop Modernization (F/S-2)(2001-2015) Since the existing locomotive maintenance workshop in Jublin is narrow and has superannuated, this project aims at the construction of a new workshop at a separate place so as to promote locomotive workshop modernization. Specially, it is planned to construct a new workshop a place of about 38ha neighboring the present Muslimia Station. The scale of main shop of the new workshop will be about 34,000km² in total, and about 1,000 units of inspection devices and so forth will be installed.</p> | | |

Description :

(FY 2002 Domestic Survey)

The Syrian Ministry of Transport and GESR have highly evaluated the results of the Master Plan and Feasibility Studies.

GESR will make efforts to implement measures that can be materialized by themselves, however, based on the consideration by the Syrian side, they have the wish to obtain Japanese cooperation regarding the following items.

- 1) Advice by railway experts to promote improvement of soft aspects (especially, Management improvement, education, etc)
- 2) Financial assistance by Yen Loans, for the Locomotive Workshop Modernization project on which a feasibility study has been conducted.
- 3) Project -Type technical cooperation for reinforcing Railway Education/ Training Center.

Technical cooperation of Japan: Dispatch of short-term expert (railway management adviser)

(FY 2003 Domestic Survey)

Period: November 5, 2002 - February 4, 2003

Number of experts: 2

Objective: Examination of an improvement plan for the management of Syria Railway by analyzing the present financial condition of Syria in more detail for the purpose of implementing the suggestion conducive to efficient transportation proposed in this study.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Overseas Survey)

A research project related to the mentioned study listed below is implementing.

- (1) Construction of a mid-scale maintenance factory with the capacity of 50 rail vehicles for emergency repair.

The project will be completed in 2009. Currently, preparation for bidding is in progress. Requested funding amount: 9.5 billion SYP (1JPY =0.484(2008/05/29)).

- (2) Study for the development of the Series 2800 and 1800 rail cars.

Implementing rail car development survey. Bidding for purchase of 41 cars is in progress, in order to cope with the traffic increase. Requested funding amount: 10 billion SYP.

- (3) Development of rail cars and preliminary study for modernization. (Technical and Finance)

Maximum design speed for the passenger car is 160km/h and for the freight car is 120km/h. Modernize/develop the rail cars to cope with a curve radius of 400m. The mentioned study has not been declared because the funding body has not yet been decided. 34 billion SYP (1JPY =0.484(2008/05/29)).

- (4) Development and restoration of passenger rail cars between Kamisheli and Yaranebeyeh.

The preliminary study for the development and modernization was formulated, and a contract was concluded. The study has already started. Maximum design speed for the passenger rail car is 160km/h and freight car is 120km/h. Modernize/develop the passenger cars to cope with a curve radius of 400m between Kamisheli and Yaranebeyeh. The project will deal with increase in the amount of traffic between Syria and Iraq. Requested funding amount: 3.5 billion SYP.

- (5) Preliminary study for construction of double lines and electrification (Technical and Finance)

Construction of double lines and electrification to cope with increase in the number of passengers and amount of freight between north and south, at maximum design speed for the passenger rail car of 250km/h and freight of 150km/h. The mentioned study has not been declared because the funding body has not been decided. Requested funding amount: 80 billion SYP.

- (6) Study of rail cars

The study is to implement a maximum design speed for the passenger rail cars of 250km/h and freight cars of 150km/h with 25 ton of axle load. Construction of a bridge and embankment between Baharia and Kiswaare are complete. The project will be completed by 2012. Requested funding amount: 7.5 billion SYP.

- (7) Preliminary study (Technical and Finance)

The contract preliminary study was concluded. Construction of a short transport line between the Eastern district, phosphorus mine and Judban. Construction of passenger rail cars with maximum design speed of 160km/h and freight cars of 120km/h which complies international standards. The study is halted until the decision of the F/S and fund raising completion. Requested funding amount: 7.5 billion SYP.

- (8) Preliminary study Northern Damascus (Technical and Finance)(Dmeir-Adra-Kab Requested funding amount: 1 billion SYP.

- (9) Development and repair of cars: Requested funding amount: 6.5 billion SYP.

- (10) Study of rail cars

The preliminary studies by Plabas German Co and implementation study for rail car repair by Finite Italia Co were completed. Repair the cars which can cope with the maximum design speed of the passenger rail cars of 250km/h and freight cars of 150km/h. The work responds to the expected increase in the amount of cargo to Syria, Turkey and Europe in the future. Requested funding amount: 6.5 billion SYP.

- (11) Preliminary study on railway (Technical and Finance)

Study for the railway network from Sheikh Ahmad industrial estate.

- (12) Study on railway

Study to connect Syrian network and Iraqi networks. Passenger rail cars with a maximum design speed of 160km/h and freight cars of 120km/h to meet international standards. 55% of the construction of the embankment and bridge has been completed. The project will be completed in 2010. Requested funding amount: 9 billion SYP.

- (13) Automatic train operation project.

STUDY SUMMARY SHEET

| 3. SECTOR | Public Utilities | / Urban Sanitation | 4. TYPE OF STUDY F/S |
| 5. COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Ministry of Local Administration, Ministry of State Environment Affairs, Homs City and Lattakia City | | |
| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | 1. Develop a master plan for solid waste treatment for Lattakia and 3 surrounding cities for the year 2010, and conduct a feasibility study for priority projects in M/P. 2. Conduct a feasibility study on the compost plant project for Homs City. 3. Technical transfer to the counterparts of Syria. | | |
| 7. CONSULTANT(S) | Yachiyo Engineering Co., Ltd. | | |
| 8. STUDY PERIOD | Dec.2000 | ~ | Jan.2002 13month(s) |
| 9. SITE OR AREA | Lattakia (population: 375 thousand), Jableh (population: 93 thousand), Qurdaha (population: 49 thousand), Al-Haffeh (population: 24 thousand), and Homs (population: one million) | | |
| 10. MAJOR PROPOSED PROJECT(S) | 1. Lattakia and 3 cities: Procurement of collection equipment (47 collection vehicle), Construction of Al-Bassa recycle center (sorting center (20 ton/day) and compost plant rehabilitation (25 ton/day)), Rehabilitation of the existing (Al-Bassa) disposal site. Public awareness campaign, Establishment of a new organization at the Governorate level 2. Homs: Procurement of collection equipment (59 collection vehicle), Construction of Homs cleansing center (Compost plant (50 ton/day), transfer station (800 ton/day)), Rehabilitation of the existing (Dir-Baalbeh) disposal site, Establishment of medical waste management, Establishment of new organization for Homs cleansing center | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description : (FY2002 Domestic Survey) Grand Aid Application was submitted from Ministry of Local Administration, Homs city and Lattakia city with following priorities. (Requested amount: USD 27 mil) (1) Supply of disposal collection equipment for Lattakia and Homs (2) Construction of compost plant for Lattakia and Homs (3) Construction of sorting center for Lattakia and transfer station for Homs</p> <p>(FY2003 Domestic Survey) In Homs City, improvement of existing garbage disposal facilities was implemented in 2002 with the budget of Homs City. The counterpart played a central role in the implementation.</p> <p>(FY 2004 Domestic Survey)(FY 2005 Domestic Survey) Subsequent Study: "The Basic Design Study on Solid Waste Treatment Facilities Improvement Plan at Local City" B/D Implemented period: The mid of Nov. 2004 to the mid of Mar. 2005. Implementing body: Homs City, Lattakia City, and 3 neighboring cities. Design and construction: D/D will be started from May. 2005. Objective: The objective of this project is to improve the collection rate of Homes, Lattakia and 3 neighboring cities from 80% to 95% (for general disposal), and to 100%(for medical waste) in order to solve the low disposal collection rate problem. Relation with the mentioned study: Syrian government has requested Japanese government for a Yen Loan for solid waste treatment facilities improvement project in August, 2003. Japanese government has commissioned JICA for a study of this plan, which JICA has conducted its P/S in June 2004 to identify and to organize project components. This study aims to prepare a fundamental material by researching the context of the request, objective, benefit, and management capability required for an implementation, and analyzing its validity from social/economic aspect, which the basic concept will be discussed with the counterpart government to make an agreement make a settlement for B/D and estimated project cost.</p> <p>(FY 2004 Overseas Survey) Other progress: 1) Reclaimed land has been rehabilitated in accord with the proposal made by JICA 2) Reclamation has been conducted by private sector. 3) Private sector is participating in solid waste disposal collection. 4) The waste collection site has been transferred to public land. 5) In December 2004, a law cleaning to be the responsibility of municipal was enforced. 6) Based on the M/P prepared by Ministry of Local Administration and Environment and French corporation, management department will be newly established in the Cleaning Office.</p> <p>Implemented project: Improvement of the Existing Disposal site in A1-Bssa Implemented period: The project will be launched in 2003 and be continued to July. 2005 by funding governmental special fund. Contents: Improvement plan is based on the proposal made in the improved plan for Zone II prepared by JICA. At present, construction for Zone III improvement construction is in progress conducting covering of reclaimed land, setting of tariff, isolation of land, and installment of gas removal equipment. Implemented period: Oct. 2004 to 2008. Funding party: Syrian Government (Ministry of Local Administration and Environment) amount: SYR 50 mils Progress: EIA study was launched for the new Oasia disposal site. Content: Reclamation work has been implemented toward the establishment of new Oasia disposal site. The new disposal site will be used by Lattakia, Jableh, Quardaha, Al-haffeh and neighboring municipals. Technical cooperation: Training: 1 personnel, in Japan (for 1 month)</p> <p>(FY 2006 Domestic Survey) Implemented project: Solid waste treatment equipment improvement plan at local city (period 1/2) Funding: Funding party: Japanese government (grant aid cooperation, E/N concluded: 22nd of June, 2006) Amount: JPY 583 mil Content: Provision of solid waste collection vehicles (65 compacters of 8 m3). After a study on the solid waste treatment equipment improvement plan in a local city was conducted, E/N on provision of solid waste collection vehicles was signed in 2006. The 2/2 phase of the project (33 compactors of 4 m3, etc.) will be implemented after the conclusion of E/N.</p> <p>(FY 2006 Overseas Survey) Technical cooperation Training: Waste Management Training (25 people, 4 days) Dispatch of experts: Solid waste management (1 person, 2 years)</p> <p>(FY 2007 Domestic and Overseas Survey) Implemented project: Solid waste treatment equipment improvement plan at local city (period 2/2) Funding: Funding party: Japanese government (grant aid cooperation, E/N concluded: 26th of June, 2007) Amount: JPY 449 mil Technical cooperation: Training: 1 staff of Homes City (15 days from 16th of Oct. 2007)</p> | | |

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY2003 Domestic Survey)
 There is no information available on the current situations of this project.

(FY2003 Overseas Survey)
 The proposed projects have not executed yet. Ministry of Agriculture mistrusted Committee Planning to ask JICA for a fund to the proposed project. However, answer has not been determined yet.

(FY 2004 Domestic Survey)(FY 2004 Overseas Survey)
 No information to be specifically mentioned.

(FY 2005 Domestic Survey)
 No information to be specifically mentioned.

(FY 2006 Domestic Survey)
 No information to be specifically mentioned.

(FY 2006 Overseas Survey)
 Collective Marketing system proposed in the mentioned study requires support from JICA for development.

(FY 2007 Domestic Survey)
 It is estimated that the Japan has not supported the project above since JICA has thought that "we are not going to support the project proposed in the study" from the early period of the study. However, there is some possibility of concrete movement on the "wholesale market improvement project" since Syrian side strongly wish to transfer the central market of Damascus. Furthermore, there is high possibility that Syria side develops "market information service project" individually, considering establishment of information system and distribution of some machineries and materials, that were expected to be the base of model project, were implemented.

(FY 2007 Overseas Survey)
 The study has been implemented on the project. Considering the outcome of the study, 3 projects are planned to be implemented after funding.

Description :
(FY 2008 Domestic Survey)
Subsequent study: The Study for Detailed Plan on Capacity Development for Urban Planning and Management for Metropolitan Damascus
The 1st preliminary study: from the end of November 2008 to the end of January 2009
The 2nd preliminary study: from the middle of March 2009 to the middle of April 2009
Cooperating Agency: JICA
Background:
Toward the realization of the measures proposed in the study, it is considered necessary to improve the capacity of Syrian government for formulating and implementing urban plans. Also, there are challenges for the government in formulating urban plans with participatory methods for a five-year plan and legal measures on urban development through public-private partnership as proposed in the development study. This is because Syrian counterparts (i.e. Ministry of Local Administration and Environment (MLAE) and Damascus City) has no/little experience in those areas. There is thus substantial need for development of their capacities and institutions for those issues.
Under this situation, technical cooperation was requested to Japan for the development of related institutions and capacities of Syrian counterparts for formulating and implementing urban plans with the implementation of pilot projects based on actual urban planning. This request for technical cooperation was adopted in 2008.

Regarding "Waterworks and Sewerage System Improvement Program", Ministry of Housing and Construction ,which is responsible for waterworks and sewerages in the whole country, recognizes that the issues that Damascus Water Supply and Sewerage Authority (DAWSSA) has faced are common for other cities and they require urgent actions for solution. The ministry thus considers that it is necessary to tackle the issues of DAWSSA first and replicate the measures for solution nationwide.

| 3. SECTOR | Forestry | / Forestry & Forest Conservation | 4. TYPE OF STUDY M/P |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Direction General of Forestry Ministry of Agriculture | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | To formulate a forest management plan and a forest conservation plan for the Mejerdanet river basin in the northwestern region of Tunisia. The aim of the plan is to contribute to adequate and proper management of forests and river basin of Tunisia. | | |
| 7. CONSULTANT(S) | Japan Forest Technical Association | | |
| 8. STUDY PERIOD | Dec.1988 ~ May.1991 29month(s) ~ | | |
| 9. SITE OR AREA | An area of 5,000sq. km extended over Jandouba and other 4 province in the north westen part of the Tunisia. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>(1) The forest management plan was proposed for the Intensive Area by means of:</p> <ul style="list-style-type: none"> - Demarcation of national forests - Compilation of forest register & volume table - Development of technology of reforestation and natural regeneration - Formulation of a management plan for the whole area based on the model plan <p>(2) The forest conservation plan was formulated for the dam's water-catchment area(30,000ha) within the Intensive Area. Accordingly, the model designs of those works were prepared.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Subsequent Study:
 (FY 1997 Overseas Survey)
 Forest management study over an area of 30,000 ha in Jandouba and Ain Draham was carried out with KFW and WB funding.

(1) Forest Management Plan
 Based on the basic plan and model plan formulated by M/P, the Department of Forestry is currently preparing a forest management plan itself.
 Finance:
 KFW 240000 Dinars
 World Bank 20000 Dinars

(2) Forest Conservation Plan
 It has not been implemented due to the budget constrains. The Tunisian government desires the Japanese government to assist the implementation of the model plan. The formulation of the forest conservation plan covering the whole Mejerdanet Basin has never been tried in Tunisia. Therefore, the government has an intention to learn the Japanese management method through the implementation of the model plan.

(3) Other Projects
 (FY 1997 Overseas Survey)
 1. The results of the study have been used as a basis for forest types mapping and forestry resources assessment in the national inventory and comprehensively used in the planning process and policy formulation for the preparation of the forestry and pasture-land resources development plan.
 2. Timber harvesting, natural regeneration and silvicultural operations have been performed in line with the recommendations formulated in the document.
 3. Infrastructures have been improved including forest road opening and maintenance.
 4. Integrated projects are being carried out for the improvement of local population's well-being based on the study findings, for an effective participation of populations in natural resources management.

Detail
 (FY 1993 Overseas Survey)
 The model plan formulated in M/P will be utilized in Tunisia as the standard plan to conduct the development study in future. Local governments will conduct further study. In addition, the central government has been effectively utilizing the map.

(FY 1996 Overseas Survey)
 Forest Management Study has been utilized for formulation of plans and policy. There is a request for mapping project for the area where this project didn't cover.

(FY 1997 Domestic Survey)
 Forest Management Plan and method to formulate it are being utilized by Direction General of Forestry.

(FY 1997 Overseas Survey)
 Integrated projects targeting the local populations as main beneficiary, are being implemented financed by WB over the area covered by the study. More projects are being contemplated for forest management through WB, KFW and Northern Investment Bank financing.

Description :

The study was started in Aug. 1990 and completed in March 1994. 1/50,000 topographic maps of Central Region (45 sheets) were produced as final products. They will be published for official use and are expected to be used for the planning of the 8th Social Economic Development Plan.

(FY1996 Overseas Survey)

The outputs are being utilized to make plans like development plan, road and dam construction and so forth. They will be utilized for the 9th Social Economic Development Plan (1997-2001).

Description :

Finance:
 (FY 1997 Domestic Survey)
 13 Dec. 1996 L/A 8,106 mil. yen.
 (Irrigation Perimeters Improvement Project in Oasis in South Tunisia)
 General untied, Interest rate: 2.1%~2.7%
 Payment Period/ Grace Period: 25 / 7 years
 Project Contents: The objective of the project is to improve irrigation efficiency by rehabilitating, with P.V.C. or concrete pipes, the small branch channels in 153 oases (23,435 ha in total) in four prefectures located 250 km to 390 km south of Tunis (Gabes, Gafsa, Kebili, Tozeur). The rehabilitation will reduce irrigation water loss, and thus economize on water, as well as improve agricultural production. Improvement of the scenery at oases, which can be vulnerable tourism resources for Tunisia, is also expected. The loan is to be used for procurement of equipment and civil works and consulting services.

Bid:
 (FY 1997 Domestic Survey)
 In 1997s, selection of consultant is started.

(FY 1998 Overseas Survey)
 Contracts were signed.
 BAS RHONE LANGUEDOG (French) and STUDI INGENIERIE (Tunisian) for Gabes, Kebili and SCET TUNISIE (Tunisian) for Gafsa oasis.

Construction:
 (FY 1998 Overseas Survey)
 Oct.1998~ D/D was started.
 (FY 2000 Overseas Survey)
 The construction will be completed in 2003.
 Contents of construction: Irrigation canal and drainage canal

Description :

Description :

(FY 2006 Domestic and Overseas Survey)(FY 2007 Domestic and Overseas Survey)

Implemented project: Water Supply Project in Rural Area (II)

Implementing body: Ministere de l Agriculture, de l Environnement et des Ressources Hydrauliques, Direction Generale du Genie Rural et de l Exploitation des Eaux (DG/GREE)

Implementing period:

Period of construction:

Funding:

Funding party: Yen loan (JBIC, L/A concluded: 31 March, 2003)

Amount: 4,495 million JPY

Objective: The objective of the project is to improve the access to safe water by implementing participatory maintenance management, providing related machineries (such as pumps and water pipes), restoring and constructing water supply facilities that are planned in 2004 to 2006. This targets 100 poor provinces nationwide and the objective is based on the "10th Rural Water Supply Plan" formulated by the Tunisian government.

Managing and operating body after the completion of the construction: The GIC (the water users association which will be established when rural water supply facilities are constructed) will manage and operate, with assistance of Rural Agriculture Development Office.

Progress:

(FY 2006 Domestic Survey) As of October 2005, nearly half of the construction work of projects planned for the year 2005 has already been started. Although the current progress has not been confirmed yet, it seems to be a little ahead of the schedule.

(FY 2007 Domestic and Overseas Survey) More than 90% has completed.

Conducted in 2004 (53 projects): Progress rate: 99%, 49 projects completed

Conducted in 2005 (43 projects): Progress rate: 97%, 28 projects completed

Conducted in 2006 (40 projects): Progress rate: 89%, 9 projects completed

Restoration projects conducted in 2004 (13 projects): Progress rate: 97%, 9 projects completed

Restoration projects conducted in 2005 (13 projects): Progress rate: 89%, 9 projects completed

Restoration projects conducted in 2006 (6 projects): Progress rate: 86%, 5 projects completed

(FY 2008 Domestic Survey)

No information to be specifically mentioned.

Description :
 (FY 2009 Domestic Survey)
 Part of the proposed content, the 11th nation building development project, 'Medjerda River Flood Prevention Operation' is under planning and preparation.
 - Structural measures: River repair project (dikes and retarding basin)
 - Nonstructural measures: Strengthening the reservoir flooding adjustment function (coordinated operation), strengthening the existing flood warning system, strengthening the evacuation water system, strengthening the organizational ability and regulation management of flood plains.

(FY 2009 Overseas Survey) No information.

(FY 2013 Overseas and Domestic Survey) No information.

| 9. SITE OR AREA | Ankara | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The project is to construct plants to produce biocoal and rentan.</p> <p>1) Biocoal plant 100,000t/yr 6plants 2) Rentan plant 80,000t/yr 4plants</p> <p>The amount of investment are follows;</p> <p>1) Biocoal Plant 29,640 (million Turkey Lira) 2) Rentan Plant 7,720</p> <p>Other proposed projects are; improvement of heating systems, and development of boiler systems. The investment is estimated 10,270 million Turkey Lira. It is also proposed that clearer energy than coal, oil and so on should be introduced in future.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Reasons of Stoppage:
 The application for yen credit for the rentan plant was approved at the OECF's internal meeting attended by representatives of four Ministries. Subsequently the Government of Turkey decided to use natural gas and withdrew the application.

Situation:
 (FY1993 Overseas Survey)
 Observation on air pollution is continued using the equipments supplied after the study.
 But, it is heard that in the middle of 1993, yen credit was to be applied unofficially. Because, even though natural gas improved air pollution drastically, difficult collection of gas rate has caused financial problem to the Govt. and furthermore, in other cities like Istambur, air pollution becomes serious.

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY 1997 Overseas Survey)
 Adatepe Project (dam + irrigation network) is included in the investment programme of the Government in 1991. Total cost of the project is 71.948 billion TL by estimated prices of 1998.

(FY 1999 Domestic Survey)
 As the cost of the project on dam, tunnel, main canal, and pump stations, 14 trillion TL has been used up to present and 185 trillion TL will be used.

(1)Adatepe Dam
 (FY 1996 Overseas Survey)
 Finance:
 Dec.1994 Government budget approved (Bidding price:644,700mil.TL)
 (FY 1997 Overseas Survey)
 The money spent for the project by the end of 1997 is 3,522 billion TL by estimated prices of 1998.
 Construction:
 1994~2000 Being implemented
 Operation & Management:
 DSI is in charge.

(2)Irrigation Facilities (38,438ha)
 (FY 1996 Overseas Survey)
 DSI is seeking the financial source.
 (FY 1997 Overseas Survey)
 Final engineering designs is being prepared. Irrigation area will be decreased due to the discovery of new coal mines. A part of the area will be irrigated by sprinkling system. Construction is planned to be financed by Government funds. Operation and maintenance of the irrigation network will be DSI's responsibility.

Other:
 As to the implementation of the Irrigation Project in Karakuz, which is similar to this project, the Ministry of Agriculture, Forestry and Fisheries received the inquiry (Dec.1991).

(FY 1997 Overseas Survey)
 It will be delayed quite considerably if the Government cannot allocate enough money to the project.

Description :

Subsequent Studies:

(FY1996 Overseas Survey)

JICA has been requested for the implementation of a review study.

Finance:

(FY1996 Overseas Survey)

In order not to lose time, the Turkish Government has decided to start the project implementation with the BOT scheme. The tender is going to be made in April. Only if it is unsuccessful, foreign loan will be of question.

(FY 1997 Overseas Survey)

The Turkish Government decided to start the project implementation on BOT scheme. The tender has been made in April 1996 and a recently privatized company KARDEMIR Iron and Steel Plant, Inc. is awarded to implement the project based on a 5 million tons cargo handling capacity. However, the decision related to this tender will be finalized upon approval of the High Planning Council followed by positive opinion to be acquired from the Council of State. Foreign loan could be required by KARDEMIR either at the initial stage, in order to start up the implementation of the project, or at forthcoming stages, in order to up-grade the ports capacity and enhance the service volume.

(FY 2000 Overseas Survey)

The details of BOT scheme is as follows.

Name of Project: Port of Filyos

Amount of Fund: 700 mil US\$

Date of Pledge or Approval: Mar. 11, 1999

Contents of Project: Port Infrastructure and Port Superstructure (Construction of main and secondary break water, deep wharfs, container terminal and bulk quays, cargo handling equipment, multi-purpose terminal units, administration building and others)

DLH has already finished the bidding. The project is in the process to obtain "Approval of Construction" from the local government.

Situation:

(FY1996 Overseas Survey)

The project should be reviewed because the construction of a new port should be implemented, taking into the consideration the political, economical and social changes both inside and outside the country as follows.

*USSR has been divided into a number of independent countries, which now develop bilateral trade relationships on their own.

*There is an on going construction of a channel for connecting River Danube and River Rheine, which will enable a non-stop river navigation from Baltic Sea to Black Sea.

*Turkey is on the way to be a member of EEC and has already joined custom union.

*War is over in Middle East Countries.

*The marine route to transport goods between West Europe, Middle East and Far East countries pass through Mediterranean close to Turkish ports.

*The operation of thermal power plants is considered to necessary to meet future energy demand. Thus, the port facility will be necessary to handle imported coal.

(FY 1997 Overseas Survey)

Circumstances have changed as follows in addition to above mentioned changes.

- Russia seeks new dominant roles in the Black Sea trade and business sphere.

- Member countries of the Black Sea Economic Cooperation including Turkey, undertake new infrastructural projects to promote their trade and business opportunities.

- Turkey has already joined the European Customs Union, however her EU membership came recently to a critical phase, which can lead to substantial changes in international trade relations.

- Bosphorus and Dardanelles will perpetually gain importance in respect to increasing commodity flow volume having Black Sea origin and / or destination.

- Turkey stands short before an enormous energy demand, which could alternatively be met by thermal power plants with port facilities to handle imported coal.

(FY 2000 Overseas Survey)

Since a high potential of cargo traffic is expected to densify in Turkish long coastal strip on the Black Sea, Turkey decided to create new traffic capacities in order to Anatolian Market to Asian, Black Sea and East European Countries. On the other hand, the prevailing transportation line via Bosphorus and Dardanelles straits cause safety and environmental problems. Therefore, Port of Filyos will play a vital role in minimizing the traffic volume via the straits.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Finance:

Own fund

Construction:

1993 commenced

The establishment of the Maintenance Centers, the assignment of necessary personnel, the placement of machinery, the compilation of manuals concerning the maintenance and operation works and the installation of emergency telephone system have been completed. The further works will be implemented continuously.

(FY 1997 Overseas Survey)

The establishment of 18 Maintenance Centers out of 38 and the installation of emergency telephone system have been complete.

Completion of the telecommunications system is in progress. But is confronted with financial constraints.

(FY 1999 Overseas Survey)

23 out of 43 maintenance centers have been established by 2000.

Detail:

Based on the study results, the Turkish government has been steadily implementing necessary arrangement concerning Motorway Maintenance, Operation and Traffic Management System; establishment of offices, set-up of the management system, the compilation of data base, etc.

The installation of equipment for M&O, such as the telecommunication machinery, has not been implemented as it had been planned because of the financial constraints.

The Government has no plan to request the foreign assistance, like an OECF loan, for the procurement of the equipment.

(FY 1997 Overseas Survey)

Compilation of manuals concerning motorways maintenance guidelines and operation instructions; set-up of the information management system; as well as, preparation of data-base are essential works which need more effort and effective support.

The extension of the motorway network has a high priority and stands in the political agenda of the Government. Although motorways maintenance has not yet gained the political priority it deserves, there is no doubt that its relevance will rise in near future as Turkey's motorway network gets longer and older.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Based on the final report, development of statistical system on fisheries is under consideration. A report is being prepared to request IBRD loan.

(FY 1997 Overseas Survey)

Following the submission of the Report at November 1993, a briefing was organized within MARA, in order to explain the study results to the related technical personnel. Later on the Report has been translated into Turkish, printed and distributed among related institutions. Another meeting was held with the World Bank Resident Mission in order to determine the work to be done following the recommendations of the Report. With the exception of the above mentioned actions, nothing has been done by MARA in order to put the recommendations of the survey into implementation. The administration of MARA at the time of preparation has viewed this survey as an academic study which was carried out for informative purposes. There was not a political will supporting the survey.

Related Project:
 Ministry of Agriculture and Rural Affairs (MARA) is requesting to the Japanese Government to carry out feasibility study on environment and fisheries resources survey in the Black Sea.

*Project-Type Technical Cooperation
 Apr.1997~Mar.2002 "The Fish Culture Development in the Black Sea"
 The purpose of this project is development of turbot fishery by rearing, propagating and releasing fries to save natural stocks.

Description :

(FY1995 Overseas Survey)

Based on the findings of F/S, the Turkish government does not give high priority on the project. However, the implementation of the project is considered to help the counterparts to have the experience and technology required in this field.

(FY 1996 Overseas Survey)

DSI planned to incorporate this project in the Yedigoze Dam project, which was scheduled to be implemented with DSI budget. However, the implementation of Dam project with BOT scheme was decided, thus, DSI is now seeking new financial sources.

(FY 1997 Overseas Survey)

Construction of the Catalan Dam has been completed in 1997. Irrigation function was assigned to Yedigoze Dam which will be constructed on the Seyhen river at upstream of Catalan Dam. So, Catalan Dam will be functioning to regulate water flow for flood control and for producing electricity.

The for F/S the Yedigoze dam have been completed. Construction of the Yedigoze dam will be implemented through BOT system.

Observation stations proposed by the F/S have not been installed, and project was not put into implementation.

The probabilities of flood have been highly decreased after the completion of the Catalan Dam.

The project investment cost was considered very high. So, one of the main reasons of discontinuation of the project is financing problem due to limited funds available domestically.

For these reasons, the priority of the project was considered lower than irrigation projects and other DSI projects.

(FY 1998 Domestic Survey)

The project plans to control flood by dams including Catalan Dam. It also plans to utilize high and low water by FFWS system.

(FY 1998 Overseas Survey)

The proposed projects are needed, but not urgent. They have lower priority in the project list.

(FY 1999 Overseas Survey)

There has not been any progress.

Related project:

(FY 1998 Overseas Survey)

2000~2006 Yedigoze dam and HEPD

Finance: US\$ 251,000,000 (BOT scheme, ERG Insaat Kollektif Sirketi)

| 9. SITE OR AREA | 7 provinces of Izmir Prefecture, Western part of Turkey | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>In the plains (0.1 mil.ha) of Kucuk Menderez Basin (0.35 mil.ha), irrigation agriculture depending on ground water is being performed and inhabitants live on cultivation and forwarding of raw cotton, fresh vegetables and fruits. However, the decrease of rainfall in recent years caused remarkable lowering of ground water and is affecting agriculture production. To resolve the situation, the study to establish balanced irrigation project was undertaken, reviewing surface water resources and ground water resources. On M/P, ground water amount is estimated 160 mil.ton/year and potential amount of surface water exploitation, 3.9 mil.ton/year. For the exploitation of surface water dam is indispensable, after examining 12 points of main and branch river, 4 points (Beydag, Engenli, Aktas, Burgaz) were considered promising. Out of them, irrigation development impact of Beydag dam is the highest and given high priority owing also to its social and economic situation. F/S on Irrigation Development Project of Beydag dam was undertaken. The study's points were 1)Irrigation with ground water and surface water introducing water consumption economize system 2)Introduction of advanced agriculture system 3)Establishment of effective administration and maintenance system of facilities. As a result, it becomes possible to irrigate 20,670ha with surface water and 10,340ha with ground water, in total 31,010ha, (planting percentage 140%) after the dam construction. Vegetables, fruits, rare cotton will be main products. Moreover, to reinforce support service, agriculture promoting activity, agriculture finance service, establishment of village development association, managing organization and an irrigation association were proposed.</p> | | |

| Description : | | |
| <p>Subsequent Study: (FY 1998 Domestic Survey) Sep. 1998 OECF Appraisal Survey The survey estimates that the total cost of the project (excluding the dam construction) will be 24.6 billion yen, 70 % of which will be provided by OECF loan.</p> <p>Finance: (FY 1998 Overseas Survey) DSI submitted the implementation of Beydag Dam Irrigation Project to NPO as the first priority project among loan requesting projects to Japan (May.1996). (FY 1998 Domestic Survey) The ceiling of OECF loan to Turkey in 1999 is set 40 billion yen. Therefore there is low possibility to approve this project since higher priority will be given to the large-scale projects such as the Bosphorus Subway Tunnel Project. (FY 1999 Overseas Survey) It is thought to be financed by ODA loan for irrigation and drainage facilities, on-farm development works, procurement of O&M equipment and consulting service, however, the decision of the Japanese Government about financing has not been recieved yet.</p> <p>(FY 2000 Domestic Survey) In FY1998, the request for loan was screened by OECF(present JBIC), however the request was not accepted because of the excess of the limit to the amount of loan.</p> <p>(FY 2001 Domestic Survey) Although the request for Yen loan was submitted and the evaluation was done by the JBIC appraisal mission, the following the consultation of the four ministries concerned seemed to decide the suspension of the project continuation.</p> <p>(FY 2001 Overseas Survey) 1. A yen loan request for Beydag Dam Irrigation and Drainage System Project has been submitted to JBIC. Amount: 97.8 million US\$. Contents of the projects to be funded: Beydag dam irrigation and drainage facilities construcion, operation and maintenance equipment consturction, and consulting services. 2. Odemis Irrigation System Study To be implemented by domestic budget (2003-2007).</p> <p>(FY 2002 Oversea Survey) Construction: 16% completed by National Budget The following components has been completed; Cutting and cement concrete lining at diversion tunnel, Tunnel portal structures and intake structure, Contact and consolidation grouting in the tunnel, Connection roads of dam and material area,Upstream and downstream cofferdam alluvial grouting</p> <p>Background: (FT 1996 Overseas Survey) The Construction of Beydag Dam, which is the prerequisite for the implementation of Beydag Dam Irrigation Project, has been undertaken by DSI. Also, F/S of Aktas dam has been completed and this dam is in implementation program. (FY 1998 Domestic Survey) DSI, the implementing agency, promises to strengthen the support services such as agricultural extension services and agricultural financial services, to establish village development cooperative associations, management organizations, and water users' associations by the completion of the project facilities by OECF loan.</p> <p>Related project: Construction of Beydag Dam (as a precondition of realizing the proposed project)</p> <p>(FY 1998 Domestic Survey) (FT 1998 Overseas Survey) Finance: Own fund Construction: 1993~2001 Progress: Diversion tunnel has been completed cofferdam foundation grouting works area on-going.</p> <p>Operation & Management: to be done by DSI.</p> | | |

Description :
 (FY 1997 Domestic Survey)
 Although Turkish side acknowledges the importance of maintenance of the bridges, there is financial constraint and it is anticipated to be difficult to continue the rehabilitation and maintenance of the bridges on its own. To start rehabilitation in early stage, loan should be considered as one of financial sources.

(FY 1998 Overseas Survey)
 Some actions have been taken for realizing the proposed projects of 5 out of 10 bridges (Akçay, Gelincik, Candu Hasanpasa, Babadat, Selyeri) .

(FY 1998 Domestic Survey)
 Many bridges are deteriorated. The rehabilitation of deteriorated bridges will be implemented in order with the government budget. However, the budget has not been brought into existence.

(FY 1999 Domestic Survey)
 The proposed projects of 5 bridges have not been realized. The analytical machine provided by this Study is utilized.

(FY 2002 Overseas Survey)
 Since the related ministry could not allocate budget, the maintenance and rehabilitation of highway Bridge cannot be implemented.

Description :

(FY 1998 Domestic Survey)

There is a plan of private container births in Izmit Bay, and the permission for the construction has already been gotten. It is not necessary to construct a container terminal in Derince Harbor by 2005, taking into consideration the amount of containers treated. But it seems that the government of Turkey implemented bidding for a container terminal in Derince Harbor by BOT in November 1997.

(FY 2000 Overseas Survey)

MTC recognizes the present situation in the following way.

- 1) The demand for water transportation increases rapidly in the area of sea around Marmara, in comparison with other areas of sea.
 - 2) Many ship routes in Southeast Europe concentrate on Istanbul.
 - 3) The government of Turkey advises private sectors not to construct small-scale harbors as new harbors since a large-scale harbor is generally more efficient and as a result increases the number of ships calling at a port, which is useful for fostering industries related to export.
 - 4) It is expected that the demand for water transportation will also increase rapidly in the next few years in the area of sea around Marmara.
- Small-scale harbor facilities of private sectors have already secured a certain capacity of carrying water. The Derince container terminal project aims for the construction of a large-scale efficient harbor with the treatment capacity of 1 million TEU, and bidding for BOT was implemented in November 1997.

(FY 2001 Domestic Survey)

Although there is movement toward the construction of facilities with the participation of private sectors by the BOT method, in this study, they propose the necessity for "long-term and integrated national harbor policies for carrying out suitable guidance, examination, etc. of the development of private sectors by the government, since there is a possibility that a case of the development of small-scale harbor facilities by private sectors can be inefficient".

Considering that the "Long-term National Integrated Plan" was made in August 2000 by development study, it is thought that there will be a concrete movement in the future in line with an expected increase in container freight etc..

(FY 2001 Overseas Survey)

A final report of the study was distributed to related organizations such as public organizations, universities, semi public organizations, and assemblies, as a reference. And based on the results of the study, related studies were started in each organizational base.

(FY 2002 Overseas Survey) (FY 2003 Overseas Survey)

They make a contract of the Derince container terminal project in BOT method.

(FY 2007 Overseas Survey)

Though the Derince container terminal project was contracted in BOT method, it was cancelled due to the nonfulfillment. However, since the project is regarded as priority project in "Traffic Infrastructural Needs Assessment (TINA)", contract will be made again as soon as the solution is planned and approved/revised by EIA.

Description :

(FY 1998 Domestic Survey)

GDRS was willing to implement the project with sector loan by Yen loan. It seems that L/P was made and submitted to the reception of the Turkish Economical Cooperation.

(FY 1999 Overseas Survey)

Yen loan was informally requested to the Japanese Embassy, but no positive reply has come.

(FY 2001 Overseas Survey)(FY 2002 Overseas Survey)

1. Arable land redeployment plan in Tokat, Merkez and Camlibel

Implemented period: 1998-2005 Construction: Bidding has not been started.(as of February 2003) Financial source: Domestic budget (budget of the Turkish government) Amount of money invested: 1,551 billion TRL (2002)

Difference with a JICA proposal: The content of the project was completely changed.

2. Groundwater irrigation plan in Kirikkale, Luleburgaz and K.Karistiran

Implemented period: 1998-2005 Construction: In progress.(as of February 2003) Financial source: Domestic budget (budget of the government of Turkey) Amount of money invested: 180 billion TRL (2002)

Difference with a JICA proposal: The content of the project was completely changed.

3. Groundwater irrigation plan in Izmir, Torbali and Aslanlar

Implemented period: 1999-2003 Construction: Construction works were completed (as of February 2002). Financial source: Domestic budget (budget of the Turkish government) Amount of money invested: 125 billion TRL (2001)

Difference with a JICA proposal: There is no difference with a proposal regarding implemented projects.

4. Groundwater irrigation plan in Konya, Cumra and Urunlu.

Implemented period: 1999-2003 Construction: Construction works were completed. (as of February 2003) Financial source: Domestic budget (budget of the government of Turkey) Amount of money invested: 68 billion TRL (1999)

Difference with a JICA proposal: There is no difference with a proposal regarding implemented projects.

5. Irrigation plan in Adana, Saimbeyli and Kalesekisi

Implemented period: Unknown Construction: Bidding has not been started. Financial source: Domestic budget (budget of the government of Turkey) Amount of money invested: 2,405 billion TRL (2002)

Difference with a JICA proposal: No difference

6. Irrigation plan in Samsun, Terme and Kozluk

Implemented period: Unknown Construction: Bidding has not been started. Financial source: Domestic budget (budget of the government of Turkey) Amount of money invested: 2,470 billion TRL (2002)

Difference with a JICA proposal: No difference

7. Soil conservation in Kastamonu, Merkez and Kuskara

Implemented period: Unknown Construction: Bidding has not been started. Financial source: Domestic budget (budget of the government of Turkey) Amount of money invested: 499 billion TRL (2002)

Difference with a JICA proposal: No difference

8. Dam plan in Yalova, Ciftlik and Ilyaskoy

Implemented period: Unknown Construction: Bidding has not been started. Financial source: Domestic budget (budget of the government of Turkey) Amount of money invested: 2,496 billion TRL (2002)

Difference with a JICA proposal: No difference

9. Dam plan in Eskisehir, Alpu and Ozdenk

Implemented period: Unknown Construction: Bidding has not been started. Financial source: Domestic budget (budget of the government of Turkey) Amount of money invested: 3,709 billion TRL (2002)

Difference with a JICA proposal: No difference

(FY 2003 Domestic Survey)

Implemented project: Small-scale Irrigation Project

Funding party: Own budget Amount: 3mil to 10 mil JPY per district

This project is a small-scale irrigation project with an area per project ranging from dozens of hectares to hundreds of hectares. Thus, the counterpart government implements the project on their own budget at present.

Content: Construction of weirs, small-scale pump plants, channels and pipelines and land consolidation for the implementation of small-scale irrigation

Time to start construction: Gradual start from 2000 Progress situation of construction (degree of progress %): about 10% Time to complete construction: 2020

Japanese Technical Cooperation: Dispatch of experts

About 5 people, Management of irrigation projects for 10 years from 2004.

(FY 2007 Domestic and Overseas Survey)

The condition is unknown due to the reorganization of related organizations and change of personnels.

Description :

(FY 1999 Domestic Survey)

1. The Study Team proposed a management by computers in each Sub-Division. As a result, KGM provided computer to each Sub-Division. KGM will develop the database network by computer.
2. Each Sub-Division is using the manuals.
3. KGM will arrange the manuals in new maintenance handbook.

(FY 1999 Overseas Survey)

Maintenance Manuals which is prepared by JICA Study Group have been sent to all Divisions and Sub-Divisions. A Database Program which has been developed to manning the data obtained from the preliminary road inspection will be sent to the Divisions and Sub-Division. In order to use this Program, computers were bought to all Sub-Divisions last year.

(FY 2001 Domestic Survey)

The road maintenance manuals, which have been revised based on the proposed manuals, are currently utilized.

(FY 2002 Overseas Survey)

All KGM Sub-Division has been computerized in recent years as proposed in JICA Report. However, The Database program doesn't work because of some trouble and difficulty to solve the troubles. For this reason, the database program has not been used and the study has been delayed.

(FY 2003 Domestic Survey)

This project was a preparation and instruction of a road maintenance manual and the manual has been distributed to road maintenance offices all over the nation and used. Thus, although it is not related to a new project, reeducating Turkish engineers as a part of follow-up study is an important issue.

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY2000 Domestic Survey)

According to a counterpart of the Study, Adana City strongly expects implementation of the proposed projects. The City submitted an investment plan for the projects to State Planning Organization of Prime Minister's Office and it was already approved. As for a budget source, the City wishes a loan from the Japanese Government. On the other hand, the Ministry of Environment desires the implementation of the projects that conform to EU regulation regarding solid waste management in Adana City.

(FY 2001 Domestic Survey)

Although some works are implementing by self-effort, whole plan can not be implemented due to the financial shortage.

At the time of the Study, the technical transfer as a pilot project was made like the improvement of the Sofulu disposal site in Adana City to reduce smoke, smell and penetration. At the time of completion of the Study, the Adana City took over the pilot project, and improve and operate it by its own budget. As the result, the Sofulu disposal site scarcely discharge smoke, smell and penetration.

Future Perspective: 1) Purchase of compactors(Adana City): The Adana City will buy compactor trucks of total of US\$ 0.2 million. The financing source is though to be ODA credit or Seller Credit, Leasing. Although the request will be made, the concrete sources to request are not yet decided, 2) Separate collection system at the source of waste(Adana City): The Adana City will commence the separate collection system at the source of waste within 5 years with a cost of US\$ 3 million. The time and financing source to be requested are not yet known, 3) Recycle plant(Adana City): The Adana City plans to construct a recycle plant and the cost for the first step is US\$ 6 million. They expect the Japanese government to be a financing source for it.

(FY 2001 Overseas Survey)

Subsequent project: Rehabilitation of Opening Dump Site

Implementation Period: Apr. 1999 - Mar. 2002

While conducting the rehabilitation works in accordance with the principles stipulated in the Final Report of JICA on one hand, same landfill will be used for further disposal on the other (These are the works referred as the "Most urgent" by JICA team.).

Financial Sources: JICA and allocations by the Greater Municipality of Adana.

Difference with JICA proposal: Basically all the works performed so far have been and will be in accordance with the descriptions of the JICA team. By the M/P and F/S JICA has essentially proposed Sorting and Composting Plants. These were the conclusion reached taking into consideration of the insufficient finance conditions of the municipality and were concluded that there can be applied the other solutions if good available technologies and suitable financial opportunity have been found in Adana. Adana Greater Municipality is already in contact with a greater number of companies that are regarded by the embassies to reach the suitable implementation alternatives in respect to finance and technology to construct Solid Waste Treatment Plants. Within this concept, the Municipality is also keeping contact with Japanese companies. What the Municipality is trying to get at the end is the most appropriate "cost/technology" relation that could be implemented in Adana. The municipality is expecting that the total credit necessity for investment determination shall be available from early March 2002.

Subsequent project: Purchase of Compactor for Sanitary Landfill.

Funding: 1) Financial Sources: Not yet defined. Alternate sources, the ODA credit, Seller Credit or eventually Leasing, 2) Amount: The proforma offers indicate a cost of about USD 200,000 for a compactor.

Subsequent project: Public Training to Start "Source Separation" (A 5 year Project)

Funding: 1) Financial Sources: Not yet worked out. It shall be implemented if ODA possibilities can be obtained, 2) Amount: USD 3,000,000 (USD 800,000 first year, USD 500,000 second year, USD 500,000 third year, USD 700,000 fourth year and USD 500,000 fifth year.)

Subsequent project: Solid Waste Treatment and Recycling Plant.

Funding: 1) Financial Sources: Although it has not yet been defined. Adana Greater Municipality is willing to cooperate the Japanese Government for this Project. For purpose, some preliminary contacts with Kokusai Kogyo Ltd, the Consultant, have been made and it is sought to intensify such contacts after the definition of the technology to be applied, 2) Amount: not yet defined. (Municipality presume it will be a first stage investment of about 60 million USD, that is assumably a plant to treat nearly half of the solid waste.)

(FY 2002 Overseas Survey)

Bahgeli Municipality applied to court for Cimsa Solid waste Location against the Ministry of Environment, however the sentence of court has not been declared.

Therefore, this project has not been started yet.

(FY 2004 Domestic Survey)(FY 2004 Overseas Survey)

Although the requests has been submitted from municipal to the Ministry of Finance for the compost plant and disposal site project proposed for Mersin city, it has not been approved by the Ministry of Finance.

(FY 2005 Overseas Survey)

Subsequent study: Solid waste treatment facilities

Implementing period: 2006/Apr - 2007/Dec

Situation: Municipality has released tender document for construction and operation of 3 to 4 solid waste treatment plants, which two are in tender operation. The tender document requests the participants to submit their own concepts and technologies on BOT or BOOT, against electric or bio-gas or liquid fuel payment from the municipality for a period to be agree upon mutually.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

(FY 2009 Overseas Survey)

1. Adana Greater Municipality: Construction of Integrated Municipal Waste Disposal Facility and Medical Waste Sterilization Facility has been started in Sofulu Site. Construction phases will be completed by November 2010. Also Sofulu Site will be rehabilitated and will be used of landfill gas for energy production.

2. Mersin Greater Municipality: The court for Environmental Impact Assessment against the Ministry of Environment and Forestry was ended and Construction of Mersin Landfill Facility(Cimsa Site)was completed by Mersin Greater Municipality. Mersin Landfill Facility has been operated since 2008. Mersin dump site was rehabilitated by the municipality in 2008. Also Medical Waste Sterilization Facility has been started action by the municipality.

Description :

(FY 2001 Overseas Survey)

The Study results were published and distributed to the concerned organizations. Objectives of the study were given importance in the eighth five-year development plan which was approved by Supreme Planning Committee. English version of the study results (compact disk PDF format version) was completed in the study while the Turkish version is awaited. The complete Turkish version will be utilized on the internet to raise public awareness on the study.

(FY 2003 Overseas Survey)

Subsequent Study : Mini-development Study on Tourism Development in DOKAP Region

Implementing period: 2003/Aug/15 - Dec/31

Funding: Own fund

Content: data collection, analysis of present condition on turism industry, arrangement of town meetings among stakeholders, setting up the basic tourism development strategy, formulation of regional development plan, setting up a website on DOKAP tourism and overall evolution and recommendation.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

Subsequent Studies: Development Study on Environmental Awareness on Solid Waste Management in Eastern Balck Region

Implementing period: 2005/May - Nov

Content: The study consists of various activities for solid waste management in Eastern Black region, where solid waste has been a serious problem, and a promotion of 3R (Reduce, Reuse, Recycle) to raise environmental awareness. Objective of the study is to prepare an action plan to raise environmental awareness in solid waste management (SWM), to implementation pilot projects to raise environmental awareness for SWM and to implement capacity building of stakeholders, and to prepare corporation project for JICA, which is feasible in the future.

Technical Cooperation:

Training

Industrial Wastewater Treatment Technique II: 1 personnel, 2004

Afet Onlemleri: 2 personnel 2004

Marine Farming for Stock Enhancement: 1 personnel, 2004

Feed Development of Nutrition Analysis: 1 personnel, 2004

Mineral Exploration in Hopa Area: 1 personnel, 2003

Dispatch of Experts:

Related Sector: 1996 - 2004

Fishery: long-term experts, 1999/Apr - 2002/Mar, Short-term experts, 2002/Mar - 2004/Oct

Mining: 2002/Aug/28 - 2005/Mar/31

Basin development: 2002/Apr - 2004/Jan

Related Sectors - Phase 1: 2002May/5 - Jul/7

Related Sectors - Phase2: 2002/Sep/16 - Nov/13

Rural development: 2003/Apr/30 - May/22, 2003/Apr/8 - Apr/18

Rural community development: 2003/Oct/16 - 18

Regional development: 2003/Oct/29 - Dec/28, 2004/Sep/27 - Oct/8

Agriculture: 1st - 2003/Dec/27

Tourism: 2003/Dec/5 - 11, 2003/Oct/22 - 2004/Oct/14

Environment: 2004/Mar/30 - May/18, 2004/Nov/7 - Nov/13

Related Sector: 2003/Sep/18 - 2004/Sep/12

(FY 2005 Overseas Survey)

Training:

Human Resources Development for DOKAP region: 13 personnel, 2005

STUDY SUMMARY SHEET

(M/P)

Compiled May.2001

Revised Aug.2014

MEA TUR/S 113/00

| | | | |
|---|--|---|-----------------------------|
| 1. COUNTRY | Turkey | | |
| 2. NAME OF STUDY | The Study on Long Term National Port Development Plan in the Republic of Turkey | | |
| 3. SECTOR | Transportation / Port | | 4. TYPE OF STUDY M/P |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | General Directorate of Railways, Port and Airports Construction Ministry of Transport and Communication | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | 1) To formulate the basic policies on port infrastructure development and port management and operation. 2) To formulate the Nationwide Port Development Master Plan (ULIMAP) in Turkey, targeted toward the year 2020. 3) To strengthen institutional capacity of relevant organizations. | | |
| 7. CONSULTANT(S) | The Overseas Coastal Area Development Institute | | |
| 8. STUDY PERIOD | Jul.1999 | ~ | Sep.2000 14month(s) |
| 9. SITE OR AREA | Turkey | | |
| 10. MAJOR PROPOSED PROJECT(S) | | | |
| A. Strategy for Port Infrastructure Development | | | |
| (1) Classified port development system (Selection of major ports) : Since a major-port has a significant effect on the national interest. The government has to pay special attention to the development and maintenance of the function of the port, even if the port is constructed and managed by a private sector. Twenty-nine(29)ports are selected as major ports. Mediterranean:5 ports, Aegean:6ports, Marmara:10 ports, Black Sea:8 ports | | | |
| (2) Container facilities | | | |
| 1)The Mediterranean Sea : Mersin Port handles 240 thousand TEUs at the existing container terminal. Since it is certain that the container volume will exceed the existing capacity within several years, the new terminal should be constructed step by step to work in that case. Full capacity of 1.0 million TEUs of the new terminal is necessary after 2010. 2)The Aegean Sea : Izmir Ports handles 399 thousand containers at the existing terminal. Since it is certain that the container volume will exceed the existing capacity within a few years, the new terminal should be constructed as soon as possible. Even if the new terminal will be completed, the shortage of capacity of 300-400 thousand TEUs in 2010 and the shortage of 0.9-1.1 million TEUs in 2020 will be expected in a Aegean Sea . Another new terminal with sufficient capacity should be constructed. 3) The Marmara Sea : Because of shortage of the existing capacity within several years, new terminals should be prepared. Large-scale container terminals, namely Derince container terminal and Marmara Port, should be given high constructed. 4) The Black Sea : New facilities for containers should be constructed in a timely manner, watching the future progress of container volume of each port. | | | |
| (3) Long term development : The total berth length is assumed 5,900m in Turkey by 2020. | | | |
| (4) Short term development : It is essential to prioritize port facilities that should be constructed in the short term(2010). | | | |
| 1) Container terminal : The construction of a calling port of mother type in the Aegean and Marmara region respectively will be required by the target year(2010). Two container cargo berths, including all container port type, will be required in the Mediterranean and Aegean region respectively, and three berths in the Marmare region. The total berth length is assumed 2,200m. 2) General cargo berths : Five general cargo berths will be required for the Mediterranean region, 18 berths for the Aegean region and 21 berths for the Marmara region. Total length is assumed 10,000m. B. Strategy for Port Management C. Strategy for Port Investment Finance D. Strategy for Port Institutional Framework E. Strategy for Port Operation F. Environmental Consideration | | | |
| Container Terminal | Long Term Plan | 879,000 | Short Term Plan 362,000 |
| General Cargo Terminal | | 1,64,000 | 654,000 |

| | |

Description :
 Subsequent studies:
 (FY 2001 Overseas Survey)
 The Final Report of the Study was published and distributed to the concerned organizations (public organizations, universities, semi public organizations, and concerned councils). Based on the study results, or on the organizational basis, subsequent studies were started.

(FY 2002 Overseas Survey)
 Mersin Container Port & North Aegean Port: The feasibility and EIA studies are to be handled under a foreign grant program.
 Izmir extension & dredging work: Bidding documents on BOT basis has been prepared.

(FY 2004 Domestic Survey)
 No information to be specifically mentioned.

(FY 2004 Overseas Survey)
 Mersin container port F/S and Candarli port F/S are conducted with foreign Grant Aid. It is planned to be completed in the end of 2004.

(FY 2005 Domestic Survey)
 No information to be specified.

(FY 2005 Overseas Survey)
 Although the contracts for Derince container terminal and Filyos port have been concluded using BOT scheme, the projects have been cancelled due to default of the contractors.

Subsequent study: Mersin container port feasibility study
 Implementing period: 2003 - 2005
 Implementing body: General Directorate of Railways, Ports, and Airport Construction
 Objectives:
 To create and expand port capacity, which can also provide hub-port services while improving efficiency and profitability. The port forms part of the international transportation system, which act as a gateway to middle east, Caucasian, landlocked Asian, and Commonwealth of Independent states.
 Funding:
 Funding party: Dutch Grant Aid
 Amount: 259,630 EUR

Subsequent study: North Aegean (Canarh) port feasibility study
 Implementing period: 2003 -2005
 Implementing body: General Directorate of Railways, Ports, and Airport Construction
 Objectives: To overcome physical constraints and to meet future demands of Izmir port facilities, which will also provide hub-port services to potential traffics between Europe, Middle East, East, and West Anatolian hinterland.
 Funding:
 Funding party: Dutch Grant Aid
 Amount: 261,393.55 EUR
 Status: Final report of the F/S has been submitted and the project will be completed after the approval.

Description :
(FY 2003 Overseas Survey)
Subsequent survey: Istanbul earthquake master plan
Implementing period: January - October, 2003
Implementing body: Bosphorus University, Istanbul Technical University, Middle East Technical University, Yildiz Technical University
Funding: Funding party: Istanbul Metropolitan Municipality (IMM), Amount: 1 million USD
Objectives: To prepare a way map on earthquake disaster prevention/mitigation for Istanbul and Turkey. To propose new regulation, technical reforms, and relevant laws required, in accord with the development study conducted. In addition, the study has addressed importance of peoples participation in disaster prevention / mitigation, as well as volunteering. Furthermore, the study have proposed to initiate a training to increase awareness of the people against earthquake, which provided opportunity to explain long-term strategy of the project. Furthermore, IMM and the Ground and Earthquake Research Directorate, aims to prepare a mobile truck with a moving stage in order to train students, young workers and public under a situation of earthquake.
Others: With the valuable supports of JICA, our academicians have completed the Scientific Reduction of geological maps for Europe Side of Turkey. This map will be the base of development plans scaled 1/5000 and also scientific reduction of 1/5000 scale geological maps for Alizona Side which will be finished with supports from JICA.

(FY 2004 Overseas Survey)
Subsequent Study: The Study on A Disaster prevention / Mitigation Basic Plan in Istanbul including Seismic Microzonation
Funding request: Grant Aid
Objectives: Proposal of seismic resistant designed urbanization and to accumulate detailed seismic microzaonation map to be the basis of disaster prevention/mitigation plan for Istanbul city and province in conducting effective technical transfer for appropriate planning techniques. (1) Integration and development for detailed seismic microzaonation analysis, conducted in Istanbul, for disaster prevention/mitigation measures from scientific and technical perspective. (2) Recommendations for citywide disaster prevention/mitigation against building and infrastructure damage based on detailed seismic microzaonation analysis and fragility assessment of the construction. (3) Recommendations for disaster prevention issues to adopt in urban planning of the Istanbul city including land utilization plan and seismic resistant restrictions. (4) Technical transfer of planning techniques to Turkish counterpart officials through the study.
Progress: Construction plan and building research has not been started. However, fragility assessment for construction and city structure is planned to be started in 2005.
Technical cooperation: Dispatch of experts: JICA operation team member: 6 personnel, Advisory committee member: 5 personnel, JICA study team member: 15 personnel, Other technical cooperation: To monitor microscopic earthquake, additional 6 bases were established by JICA.

(FY 2005 Domestic Survey)
Implemented project: Earthquake disaster prevention/mitigation project
Implementing period: May 2005 - September 2010
Implementing body: the World Bank
Objective: Improvement of disaster prevention capacity
Details: The following four components are included as part of the improvement project. 1) Establishment institution with a capacity to prevent disaster, 2)Diagnosis and reinforcement of important public facilities, hospitals, and schools, 3)Review of earthquake-resistance standard and its complete application, 4) Improvement of organizational disaster prevention capacity (soft/hard)
Funding: Funding party: the World Bank, Amount: 4 million USD

(FY 2005 Overseas Survey)(FY 2006 Overseas Survey)
Implemented project: Zeytinburnu district pilot project based on IEMP
Objectives: 1) To define buildings heavily damaged by the Marmara earthquake in Zeytinburnu. 2) To analyse sectoral risks. 3) To propose urban renovation and transformation, and reinforcement of the building
Beneficiaries: All sectors, and 350,000 of Zeytinburnu residents
Others: 1) Microzoning project in Istanbul (starts in early 2006), 2) Geological, geotechnical, and seismological researches in Marmara Sea, 3) The project for Istanbul to constitute risk management system, cooperated by IMM and Turkish Science and Technical Researches Foundation (TUBITAK) is in progress, funded by EU funds (FORSIGHT project), 4) Earthquake vulnerability, risk and risk transfer in Istanbul is in progress, cooperated by IMM, Kandilli Observatory and Earthquake Research Institute (KOERI), Geoforschungs Zentrum Potsdam (GFZ), and Karlsruhe University.
Technical Cooperation: Training/Disaster management course (JICA): 4 personnel, 2002, 2003, 2004, 2005

(FY 2007 Domestic survey)
Implementing project: Earthquake reinforcement project on bridges, schools, hospitals and public buildings.
Objectives: To promote earthquake reinforcement construction on public buildings and reduce human casualties. To promote redevelopment of the old part of the town and progress seismic reinforcement to whole town.
Funding: JBIC: 12 billion JPY (Yen Loan: L/A concluded March, 2004), World Bank: 400 million USD
Progress: JBIC: Earthquake reinforcement construction on No.1 and 2 Bosphorus Bridge and Halic Bridge. World Bank: Earthquake reinforcement construction on public buildings such as hospitals, construction of earthquake reinforcement system in along the Sea of Marmara, setting up disaster control center (in progress).
Implemented project: Micro-zoning in heavily populated area and dangerous area of Istanbul City
Implementing period: 2006 - 2007 Funding: Own fund, TRL17,000,000
Details: The administration area of Istanbul City was expanded in 2005 and former districts have been managed as a metropolitan area since. For this reason, the micro-zoning survey carried out by JICA was not able to cover the entire area of Istanbul, so the city is currently proceeding detailed micro-zoning survey with its own budget. The survey of ground/detailed geological features on the European side was completed in December, 2007 and the same survey on the Asian side was started in January, 2008. It includes a few thousand boring surveys and eventually the result will be reflected in a 1/5,000 geological map and ground map and udef for building regulations.

Implemented project: Sea of Marmara Earthquake Risk Evaluation
Implementing period: 2006 - 2007 Funding: Own fund, TRL 480,000
Details: Evaluation of the faulting hazard of Sea of Marmara, next to urban area.
Implemented project: Sea of Marmara seismic activity monitoring by the general research for the purpose of influence prediction to the Istanbul shore area and continental shelf
Implementing period: 2007 Funding: Own fund, TRL 100,000
Detail: Active fault hazard evaluation of Sea of Marmara
Implemented project: "HAZTURK"
Implementing period: 2007 Funding: Own fund, TRL 498,000

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY 2003 Overseas Survey)
 There are six microcatchment plans in The Master Plan. Three of them will have been started to application in 2005 for afforestation, erosion control activities. The others activities and microcatchment plans will be started to implementation in 2006, 2007, 2008, 2009, 2010.

FY 2005 Domestic Survey)
 Subsequent study: DOKAP region agricultural development preparatory study (technical type cooperation project)
 Implementing period: FY 2004
 Implementing body: JICA
 Objective: Preparatory study for the formation of technical cooperation project. The main contents of the project are soil erosion control and improvement of living standard.
 Status: C/P of the mentioned study is the Ministry of Environment and Forestry, and the C/P of subsequent project is the Ministry of Agriculture and Rural Affairs.

(FY 2005 Overseas Survey)
 No budget has been acquired in FY 2006 for the project implementation, due to financial shortage. JBIC is contacted for project implementation.
 Subsequent study: Erosion control
 Implementing period: 2005
 Implementing body: General Directory of Forestation and Erosion Control (Erzurum and Artvin Environment and Forestry Province Directory)
 Relation with the report: The objective of the subsequent study and the study reports of JICA is the same as follows: soil conservation, erosion control restriction, planting, recovery.

(FY 2006 Domestic Survey)(FY2007 Domestic survey)
 Implemented project Eastern Black Sea Areas Agricultural Management Improvement Project
 Implementing period: late January 2007 - late March 2010
 Implementing body JICA
 Objective: Eastern areas of the Black Sea in Turkey are areas for low-income people which depend on agriculture. About 60% of working population is engaged in agriculture, and about 90% of it is engaged in agriculture for women. Main products are hazelnut and tea which are easily grown comparatively due to geographical and meteorological constraints. But, prices have dropped because of overproduction in recent years, and it is getting difficult to maintain income for farmers in the form of agricultural management which depends on these two crops. In the areas, agricultural GDP is only 23% although the rate of working population is high. Under the background, the government of Turkey worried about the vulnerability of economic structure of monoculture in the areas and requested for the technical cooperation project "Eastern Black Sea Areas Agricultural Management Improvement Project" to Japan to stabilize the economy in the areas through the improvement of agricultural management and to improve regional disparity.
 Status: Due to a lack of technical cooperation and financial support, it is inferred that progress of the proposed project did not go well.
 (FY2007 Domestic survey) In progress.

(FY 2006 Overseas Survey)
 Plans for human development, life improvement, and citizens' awareness have yet been implemented. The possibility of the implementation depends on the procurement of domestic and international funds such as GEF, IFAD, and JBIC. There is a possibility that international organizations such as JBIC, GEF, and IFAD support the implementation of M/P. Afforestation and erosion control projects were implemented with own funds of ministries in charge. 15 villages were selected in Erzurum area as a model project. Terrace and an erosion control dam were constructed and trees such as almond, walnut, oak, and cedar were planted.

(FY2007 Domestic survey)
 Implemented project: Special Assistance for Project Formation for Coruh River Watershed Rehabilitation Project (SAPROF)
 Implementing period: March - September, 2008
 Implementing body: Ministry Of Environment & Forest
 Objective: The eighth five-years plan (2001-2005), the national development program of Turkey, rectifying the regional divide, management of natural resources by involving the local community and improvement of living condition are recommend. For the current ninth development plan (2007-2013), reinforcement of the community development, rural development promotion, capability reinforcement of the local organizations and personnel training are the main point of focus.
 In Turkey, around 8,000,000 people, equivalent to 12% of the total population, live in 21,000,000 ha, equivalent to 26%, of the forest area. However, because employment opportunities and natural resources such as forests or soil are limited, the poor are likely to live in the forest area. The poor state causes the degradation of natural resources by overgrazing and illegal harvesting, and this will contribute to more poverty.
 440,000 ha, equivalent to 22%, of Coruh River watershed is forest and one of the poorest areas of Turkey. One of the reasons behind a vicious circle is easily eroded soil and geological features, poor productivity of agriculture and animal farming, inappropriate forest management and management plans.
 Based on this background, the purpose of this project will contribute the environment conservation and poverty reduction by promoting natural resources management such as forest management and soil conservation, and improvement of income by promoting quality life improvement activities in three states (Erzurum, Artvin and Bayburt) along the Coruh River.

(FY 2008 Domestic Survey)
 The Yen Loan "Coruh River Watershed Rehabilitation Project" is being prepared for implemented.

| 3. SECTOR | Transportation / Urban Transportation | | 4. TYPE OF STUDY M/P |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Istanbul Metropolitan Municipality | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | To formulate an integrated master plan for the transport sector which incorporates effective policy measures and investment planning consistent with the long-term metropolitan land use plan. | | |
| 7. CONSULTANT(S) | ALMEC Corporation | | |
| 8. STUDY PERIOD | Apr.2007 ~ Jan.2009 21month(s) ~ | | |
| 9. SITE OR AREA | ISTANBUL METROPOLITAN AREA | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Road Plan Metropolitan Istanbul extends lineally eastward and westward. The transversal movement dominates the traffic flows in the city and is destined to do so in the future. The two existing east . west expressways, TEM and D-100, will not be able to service the growing traffic before long. The need of the third transversal thoroughfare has been variously argued with proposals and counterproposals. The economic evaluation suggested high economic returns: namely, the IRR of 45% for the European side of the new expressway, 19% for the bridge crossing, 39% for the Asian side. The master plan proposes 13 tunnel roads to be completed by 2023.</p> <p>2. Railway Plan The master plan examined and proposed 21 projects to be added to the base network. The aggregated extension is a little over 300km, a total increase of 551km combined with the committed projects.</p> <p>3. Feasibility of Metro Bus Extension The well-developed transit network is the goal for public transportation in Istanbul, but it takes long time to achieve this goal. The metro bus service can be viewed as a most suitable transitional provider of public transportation. It will take, for example, more than 10 years from now to complete the extension of the suburban railway to Silivri. In the meantime, the metro bus transports the passenger traffic between the western area and CBD. When the rapid transit comes in to replace the metro bus, two exclusive bus lanes will be released for the automobile traffic. This improves the economic and financial viability of the transit operation as well as alleviates the congestion on the expressway. The financial analysis was done over the cost of construction and O&M and the total fare revenue. Except for the route 4 (Aksaray . Mamutbey), the collective and individual financial IRRs are over 12%, indicating reasonable feasibility.</p> <p>4. Investment Plan (2009-2020) Road & Bridge US\$1.54 billion, Railway USD26.0 billion, Maintenance & Improvement USD17.0 billion, Other Subsectors USD10.2 billion, Total USD68.6 billion</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY 2009 Domestic Survey)
 There are progresses being made in the proposed projects.
 1. East-west longitudinal expressway:building 100-kilometer expressway which crosses from east to the west across the study region. This will be the third expressway in the region and the combined bridge which shares with the railway across the Bosphorus Strait.
 2. Inner-city tunnels
 3. Street maintenance of the new urbanization-designated area
 4. Urban railroad building projects: total length of 300 km. There are 12 metros out of 21 projects and the total length of them is 196 km and the total cost is USD 12.2 billion.
 5. Restructuring bus lines:the buses with than 1000 lines currently aims to: (1) abandon long-distance routes and replacing with short-distance feeder service based in rail stations, (2)diversify services such as premium buses without standing passengers or overnight buses.
 6. Forming metro bus routes:establishing eight lines of metro bus service as provisional player until the metro railway system is established.
 7. Improvement in the worst 12 points: alleviating congestion by traffic-management measure(short-term project)
 8. Transportation Demand Management(TDM): congestion charge, park and ride, parking policy, introduction of traffic cells for environmental improvement in historical areas

(FY 2009 Overseas Survey)
 "Project on Promotion of Traffic Demand Management of Heavy Traffic Area (Historical Area) in Istanbul" is in preparation.
 (Purpose)To preserve its balance among differ internal regions thorough solving heavy traffic alleviation
 (Implementation Period)2010-2013
 (Supporting Organization)JICA

(FY2013 Domestic and Overseas Survey)
 The Project for Traffic Demand Management of Historical Area in Istanbul
 Implementing Period:2011/1 ~ 2014/6
 Implementing Organization:Transportation Department, Istanbul Metropolitan Municipality(IMM)
 Cooperating Agency:JICA
 Overall Goal:Appropriate traffic demand management measures will be implemented in the Istanbul historical area to create comfortable city environment.
 Project Purpose:Transportation Department's implementation capacities of TDM measures for the Istanbul historical area are strengthened.
 Outputs:
 1)Traffic characteristics of the Istanbul historical area are clarified and concerns on transportation planning are identified.
 2)Transportation Department's capacities are strengthened through planning implementing, evaluating and analyzing social experiments of TDM measures.
 3)Experience of the social experiments is summarized as guidelines and shared among relevant departments of IMM.

(FY2013 Domestic Survey)
 Implemented Project: Road Improvement project, Road network maintenance of approximately 900km in the total extension.
 Implemented Project: Railway Improvement project, City rail network system maintenance of approximately 300km in the total extension
 Implemented Project: Metro Bus Route extension plan
 Name of Implemented Organization: Transportation Department, Istanbul Metropolitan Municipality (IMM)

Description :

(FY1991 Overseas Survey)

Since the Unification of North and South Yemen, this project has been under the jurisdiction of ARDA in the Ministry of Agriculture.

Referring to this M/P, ARDA formulated the M/P report of NORAP, which was financed by IDA, UNDP and Own fund etc..

Installation of Simple waterworks: Financed by the Arab Fund

Road Network Improvement : unknown

Irrigation Improvement : Financed by IDA

(Pilot Project)

Agri.Mechanization Cener : Financed by IDA

Water Resource Development : Financed by UNDP

Construction:

1987-1996

Difference with JICA's proposal

(FY 1996 Overseas Survey)

Proposal of JICA was Hajjah Province but the Yemen Gov. implemented the Northern Regional Agricultural Development Project which covers three provinces (Sanaa, Sadah, Hajjab).

Effect:

(FY 1996 Overseas Survey)

- 1.Improved agricultural services
- 2.Improved irrigation and agricultural products
- 3.Improved and increased agricultural production

Description :

1) Great appreciation from residents where water was supplied;
 2) The 3rd rural water supply project is expected;
 3) Rural water supply has a high priority in desert areas; and
 4) Counterpart agency is particularly strong within the Ministry of Public Works.

Subsequent Studies:
 Mar.1985 D/D completed
 Oct.1986-Mar.1987 A basic design study on rural water supply development implemented.
 May.1987-Feb.1988 D/D and S/V implemented

Finance:
 1.Excavation of deep wells and construction of water supply facilities for the chronic shortage of water.
 Nov.1981 E/N (Project for the Rural Water Supply -Phase1/3, 500 mil.Yen)
 Jun.1982 E/N (Project for the Rural Water Supply -Phase2/3, 500 mil.Yen)
 Jul.1983 E/N (Project for the Rural Water Supply -Phase3/3, 600 mil.Yen)
 2.Water Supply in 3 regions
 Apr.1987 E/N (Project for the Rural Water Supply -Phase1/3, 319mil.Yen)
 Jul.1987 E/N (Project for the Rural Water Supply -Phase2/3, 915 mil.Yen)
 Sep.1988 E/N (Project for the Rural Water Supply -Phase3/3, 961 mil.Yen)
 3.Improvement on water supply facilities to obtain clean drink water in 10 villages.
 Nov.1991 E/N (Project for the Rural Water Supply -Phase1/3, 587 mil.Yen)
 Jul.1992 E/N (Project for the Rural Water Supply -Phase2/3, 531 mil.Yen)
 Jun.1993 E/N (Project for the Rural Water Supply -Phase3/3, 542 mil.Yen)

Construction:
 (FY 1991 Overseas Survey)
 Of 26 locations proposed by the present study, the Japanese grant helped to implement the project at 14 locations with some reduction in scale at the time of the basic design.

| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Finance:

Nov.2, 1982 L/A 8,200 mil. Yen for 7th Berth Construction Project of the Port of Hodeidah (Construction of Container Berth etc.)
 The OECF loan was provided for the short-term development plan with substantial changes in project components, as shown below.

| 1981 | | 1989 | |
|-----------------|-------------|---|----------------|
| Container berth | 250m | Dredging channels | 4.72 mil. cu.m |
| RO/RO berth | 1unit | Reclamation | 289,000cu.m |
| Reclamation | 271,000cu.m | Wharf (Berth 7) | 295m |
| Dredging | 85,000cu.m | Paving (apron, yard) | 89,000m |
| Paving | 31,000m | Shed, Substation | 2,520cu.m |
| Road | 850m | Service facilities (electricity, lighting, water supply & drainage) | 1set |
| Container Crane | 1unit | Cargo handling equip. | 1set |
| Building | 1unit | | |

The details of the project was changed because of the earthquake in Dec. 1982 and the stagnation of petroleum industries in the neighboring oil-exporting countries.

Construction:

July 1986 - Nov.1990

(FY 1996 Overseas Survey)

British Consultant implemented D/D for 8th Berth Construction Project. And now, the government of Yemen looks for a financial source.

Description :

Reasons for Delay or Suspension:
(FY 1994 Domestic Survey)
Due to the political chaos, which can be attributed to the Gulf War in 1991, the unification of North and South Yemen in April 1991, the civil war in 1994, etc., no information is available concerning the progress of this project.

Detail:
(FY 1991 Domestic Survey)
General Directorate for Local Government requested the Japanese government for a grant aid in March 1990. (Approximately US\$24 mil. or 3,100 mil.Yen) However, the Japanese government officially announced the provision of a grant aid for this project would not be possible.

(FY 1996 Overseas Survey)
Subsequent Studies:
1993~ Revision of JICA project by Germany

Finance:

Construction:
1998 scheduled to be commenced.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
(FY 2008 Domestic Survey)
1. SANA'A Basin water resource management activity plan "Action Plan":
The "Sana'a basin water resource management activity plan" prepared and proposed in the above mentioned development study needs to be approved by SBC with minister of Water and Environment Ministry in the chair. Through the discussion between the Yemen government, it was decided that the approval of SBC will be given in the discussion of the seminar for the content of the plan.
In the discussino of the draft final report, an implementing agency NWRA made suggestion for a support from Japan in implementing the action plan prepared in the study. However, request have not yet been made. Lack of liason with the local government can be one of the reasons.

(FY 2008 Overseas Survey)
1. Implementation and evaluation of capacity development activity for NWRA-SB staffs.
2. Awareness enhancement program for the government and managerial personnels to implement an action plan in Sana'a basin.
Both actions have not yet been realized. Budget and financial assistance from supporting agency is required for implementation of the proposed project and action plans.

(FY2012 Domestic Survey and Overseas Survey)
No information.

Description :
 (FY 2007 Domestic Survey)
 Subsequent study: Basic Design Study for the Urgent Rehabilitation Program of Ports in the Republic of Angola
 Implementing period: December 2006 - December 2007
 Implementing:
 Objective: Urgent rehabilitation of Lobito and Namibe Ports.
 Contents: 1) Lobito Port: Rehabilitation of berth (length:240m), yard (4.3ha), and loading facility procurement; 2) Namibe Port: Rehabilitation of berth (length:240m), yard (1.8ha), installation of yard lightning facilities, and water pipes and loading facility.

(FY 2009 Domestic Survey)
 Urgent Rehabilitation Program of the Port of Namibe
 (Objective)As the civil war ended in the Republic of Angola, this program aims to contribute to the country's economic reconstruction by conducting urgent rehabilitation of the port and its facilities.
 (Project Overview)Repairing quay of 240m, one 100-ton bollard, seven 70-ton bollards, 16 fenders, 4,800m² of apron pavement, 16,148m² of yard pavement, repairing roads in harbor 657.8m x10m, one water supply building, 2 illuminating lamps, a reach stacker, a forklift, a crane mobile
 (Implementing Agency)Ministry of Transport
 (Implementing Period)2009-2010
 (Funding)Grant aid
 (Others)Experts were dispatched.(2010.4)
 One of the target 2 ports, port of Lobito, is assisted by the Chinese government based on the Angolan government's request.

(FY2012 Domestic Survey)
 Implemented project: Expert dispatch (2006)
 The grant aid project was completed in August 2010.
 (Involvement of Japanese company) TOA Corporation(project construction)
 The Luanda Port reconstruction project is planned to be carried out with private-sector capital. The Lobito Port reconstruction project is slated to be implemented with Chinese fund.

| 6. OBJECTIVES OF THE STUDY | 1. To formulate a master plan on regional reconstruction and development. 2. To specify a rural reconstruction and development model through pilot projects then, considering the results of the projects determine their applicability in other areas, and integrate them into the master plan. 3. To disseminate lessons learned from the Study. | | |
| 7. CONSULTANT(S) | IC Net Ltd. Nippon Koei Co., Ltd. | | |
| 8. STUDY PERIOD | Aug.2006 | ~ Feb.2008 | 18month(s) |
| 9. SITE OR AREA | The study would be conducted in the coastal areas. Pilot projects were conducted in Capolo Comuna in the Porto Amboin Municipality in Kuanza Sul Province, Canjala Comuna in Lobito Municipality, and Dombe Grande Comuna in Baia Farta Municipality in Benguela Province. All of these areas are in great need of reconstruction. The Lobito rural area was selected as the target area for developing the master plan. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Framework for development of rural area of Lobito Municipality This plan is based on the concept of wanting a plan that supports the government's development policy while also resolving local development issues. The development issues pertaining to the target region can roughly be divided into four categories: ensuring a stable food supply, alleviating the burdens of heavy labor, providing educational opportunities, and improving livelihoods. Most of these issues are also attributed to reducing poverty. The aim of the master plan is to contribute to the improvement of living standards for people. This is included in the municipality's vision. In addition, its aim is to achieve the goals of "Development strategy for the long term of Angola 2025." Given that the target area in the reconstruction and development plan was the rural region of the municipality of Lobito, reducing poverty in rural regions was made the development goal of the plan. Accordingly, four basic goals were set to achieve the overall goal: ensuring a stable food supply, alleviating heavy labor, providing educational opportunities, and improving livelihoods.</p> <p>2. Strategies by Sector (Agriculture sector)1) Intensive cash farming should be created, taking advantage of the characteristics of the target area, 2)Soil should be improved with organic matter to increase yield in sustainable ways, 3) Old unused irrigation canals should be rehabilitated first for expanding croplands (Living improvement sector)Women's domestic labor should be reduced (Education sector)Adult literacy classes should have income generating activities to enhance financial sustainability (Health sector)Local human resources should be mobilized for preventing diseases</p> <p>3. Recommended Projects (Agriculture)1) Maize Yield Increase with Grasses(857,667USD), 2) Participatory Irrigation Rehabilitation(5,714,133USD), 3) Cattle Introduction(1,252,773USD), 4) Upland Rice Introduction(199,773USD), 5) Integrated Farming(257,373USD), 6) Beans Marketing Promotion(1,067,568USD) (Living Improvements) Cooking stove introduction and Living Improvement(372,067USD) (Education) Literacy Education with Income Source(282,200USD) (Health) Disease Prevention with Local Human Resources(1,324,500USD) (Institutional Capacity Development) Institutional Capacity Development for Lobito Municipality Administration(1,490,000USD)</p> | | |

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY 2009 Domestic Survey)
 Implementation Study: ' Development of Agricultural District Revival in the City of Lobito'
 Project Content:
 1) Repair of irrigation waterway in the village of Canjala and Cubero (Implemented)
 2) Repair of irrigation waterway in the village of Kapolo within the same state (In progress)
 Content of the Study: The targeted area used to be one of Angola's most prominent common bean producing district, and during the colonial period its irrigation facility was well maintained. However, as a result of the civil war that lasted for years, the facility deteriorated due to lack of proper maintenance. After the cease-fire, the villagers relied solely on rainwater to produce staple crops such as corn and cassava, and they were only able to secure the minimum amount of food. To overcome this, the irrigation facility was repaired, increase the staple food production, and the money convertible common bean production was introduced.
 Funding Sources: Grassroots grant aid from the Japanese Embassy in Angola
 Implementation Period: 2008-
 Implementation Agency: DC (Local NGO), the village office of Canjala and Kapolo of Lobito city
 Supporting Agency: Japanese Embassy of Angola

(FY2013 Domestic Survey)
 Implemented project:Eservoirs and irrigation channels in Benguela Province construction project
 (1)Project summary
 To fix the conventional reservoirs and set 10 water gates and do a maintenance for 2 irrigation channel in order to utilize the river water for agriculture for the poor area in Benguela Province of the West Southern Angola.
 (2)The Project Effectiveness
 Through this cooperation, the agricultural production activity would expand and the livelihood improvement of about800 households of Kulango district, that is about 4,000 people is expected. By involving the community as a whole to the irrigation system management, the area will be activated and will contribute to the community development.
 (3)The Interim Explanation
 The project started the repair work in 2010, and completed in August the same year. After the repair, one system out of two partially broke, and only one remained. It is unknown whether the system was repaired later or not.

(FY2013 Overseas Survey)

Description :

(FY 2001 Domestic Survey)

At the end of the study, the Benin Government side had requested,

1. Dispatch of the Japanese Expert related to the implementation of the plan
2. Formulation of forest management plan for the rest of the Trois-Riviere National Forest.

(FY 2001 Overseas Survey)

The forest was administrated by the residents without appropriate knowledge and planning before the study. However, through the study, the residents learned the importance of forest conservation and procured necessary equipments to continue the conservation work under the instruction by the study team. The counterpart staff successfully acquired new knowledge of forest management.

(FY 2003 Domestic Survey)

Although the project has not yet reached the next stage study, it has been reported that Benin is studying the following matters in relation to the project suggested in this study:

1. Request in relation to the implementation in the northern area
2. Request for JICA's Dispatch of Experts
3. Implementation of a similar study in other areas

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

Subsequent study: Coastal land and forest management project

Implementing period: 5 years

Implementing agency: DFRN/MAEP

Content: Survey for forests in 3 river basins, cultivation land survey, discussion with stakeholders for participatory reform plan preparation, aerial photo and mapping.

Funding party: the World Bank, Global Environmental Facility (GEF)

Description :
 (FY 2001 Domestic Survey)
 GIS basic data is used for the Forest Project executed by JICA in 2002.

(FY 2002 Domestic Survey)
 The output of the study is used in the study on the management of forest reserves in Comoe province.

(FY 2003 Overseas Survey)
 The results of the study have been utilized for the Forest Project.
 -Administration based of decentralization of government power (local governments and communes)
 -Development projects in agriculture and industrial fields
 -Education and so on
 In succession to completion of the studies, the Geographical Survey Institute continued its work under the support of the government and has prepared seven maps on its own. With fund raising realized for preparation of remaining maps in the regions in question, the project is expected to be implemented over the next five years.

(FY 2004 Domestic Survey)
 No information to be specifically mentioned.

(FY 2005 Domestic Survey)
 No information to be specifically mentioned.

(FY 2005 Overseas Survey)
 Subsequent study: Emergency mapping (1/50,000) of the First area
 Implementing body: Geographic Institute of Burkina (IGB)
 Implementing: 2002 - 2007 (planned)
 Funding:
 Funding party: own fund (the government of Burkina and IGB)
 Amount: 200 million XOF
 Objectives: To prepare 1/50,000 maps according to the national development plan of Burkinan. The program divides country into 4 areas.

Agendas of the management plans for each forest conservation area are as follows.</p> <p>*Bounouna Forest Conservation area: Objective: Promotion of the management and recovery of forest resources by establishing GGF of related villages. Stakeholders: Forest Service, GGF of related villages, Association, lumber mill, and Banfora citizens. Major Activities: Agroforestry, bush-fire measures, monitoring illegal activities, grazing measures in the area, establish future constitutional relaxation forest (zoning) Incentive of inhabitants: Divide profit raised from agricultural processing produced with agroforestry. Profit/benefit from future forestation trees (fuelwood).</p> <p>*Toumusseni Conservation Forest area: Objective: Participatory management and sustainable forest resource use (status quo) by stimulation of GGF of related villages. Stakeholders: Forest Service, GGF of related villages, GGF Union, Grazer groups Major activities: Felling management, monitoring illegal activities, afforestation, early burn, controlled grazing, modern beekeeping Incentive of inhabitants: Divide profit raised from felling of fuelwood and forest products, Permission for grazing within forest</p> <p>*Gouandougou and Kongoukou Conservation Forest areas: Objective: Keep the status quo of vegetation. Enhancement of conservation incentives for citizens of related villages and construction of mid-term community-based management structures. Integrated management structure to Gouandougou and Kongoukou forest conservation areas. Stakeholders: Forest Service (presently main role), Related rural-areas, existing CVGT, GGF, Forest processing harvester groups, Grazer groups Major activities: Promotion of usage of forest processing, organise village institution, grazing management, environment education, enlightenment dissemination, Measurement of cultivation in forest. Incentive of inhabitants: Improvement of livelihood by expanding the usage of forest resources, permission for agriforestry, permission for grazing within forest</p> | | | | | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY 2006 Domestic Survey)(FY 2006 Overseas Survey)
 The government of Burkina Faso has requested the government of Japan for funding to implement a participatory forest management plan throughout the Comoe district. The plan was accepted, from which preparation of the project is currently in progress. For this reason, project formation study was conducted in December, 2006.

(FY 2007 Overseas Survey)
 After the completion of the mentioned study, 4 forest management groups (GGF) have been continuing forest management by themselves, although there were no funding support. These GGF pursued the activities, though the forest management groups were hoping to receive additional support in order to consolidate their management ability.

(FY 2007 Domestic Survey)(FY 2008 Domestic Survey)
 Technical cooperation project is being implemented as a follow-up to this study.

Implemented project: The Project of Participatory and Sustainable Forest Management in the Province of Comoe (Technical cooperation project)
 Implementing period: 1 July, 2007 - 30 June, 2012
 Implementing body: Department of Environment and Living Environment, JICA (Technical cooperation project)
 Funding:
 Funding body: JICA (Target is 10% of owned revenue)
 Background: The development study of "Forest management project in Comoe province" (August 2002 - June 2005) indicated basic directions of and approach to community-based forest management for five target forests in Comoe province. Following this study, the Government of Burkina Faso requested the Government of Japan to provide technical cooperation in order to promote the community-based sustainable forest management. Behind this request is a recognition that Department of Forestry is not yet familiar with the methodologies of community-based forest management and also faces the lack of technical know-how to implement comprehensive project which deals with agricultural development in non-forest areas and the processing of agricultural products. It is also acknowledged that their experience on sustainable forest management utilizing NTFP is not sufficient, though the application of such management skills are highly expected in Comoe province, which is relatively abundant of forests in the country. It is also considered significant to preserve the target forests as valuable natural resources in the country.
 Objective: Activities for sustainable forest management at four target forests are expected to be implemented by local residents through participation in forest management groups (GGF) and the unions of forest management groups (UGGF) .

It includes/understands the three provinces of the Northern Center: Bam, Sanmatenga and Namentenga, and four provinces of the Sahel: Soum, Oudalan, S?no and Yagha, have a population of some 1.630.000 inhabitants and a surface of approximately 570.000 km ?. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1st stage(2006-07):End of the study to the implementation of a pilot scheme</p> <p>The first stage corresponds to the action plans of the end of the Study to the realization of a project. These action plans are methods suggested by the UCADR during the last meeting of exchanges between the UCADR whose contents are as follows: the 4 existing UCADR will support the continuation of the achievements by using the village contributions, will ensure the financing for the execution of the new achievements, will make the request for support near the organizations of projects etc, will regularly organize the meetings of the UCADR for these activities and the follow-up.</p> <p>2nd stage(2007-11):Execution of a pilot scheme</p> <p>The second stage is the execution of the pilot scheme with the use of the counterpart funds KR2 etc 7 new UCADR will be installation and the actors of the 4 existing UCADR will play the part of facilitator to give a framing on the execution, the management and the evaluation of the projects. For the execution of the projects, one will use inter alia the handbook of operation established in the M/P and will endeavor to carry out the achievements effectively.</p> <p>(Activities UCADR):1.Installation of UCADR (7departments, 7 UCADR) 2.Formations of the extension agents to the management of the UCADR 3.Program reinforcement of the capacities of the extension agents 4.Meetings of exchanges between UCADR 5.Trainings in local language (UCADR of the Sahel</p> <p>(Execution of the achievements):1.Preliminary study 2.Selection of the villages 3.Study of the villages 4.Support for the organization of the CVD/CVGT 5.Sout. operation CVD/CVGT 6.Development of the plans of achievements of rural development 7.Decision on the achievements 8.Execution of the achievements 9.Evaluation</p> <p>3rd stage(2011-27):Implementation of a true project</p> <p>The third stage, in the continuation of the pilot scheme, consists of two 8 years phases each one. During the first phase, 5 UCADR in the Northern Center and 5 UCADR in the Sahel will be installation, then, during the second phase 4 UCADR in the Northern Center and 5 UCADR in the Sahel. For the provinces of Sanmatenga and Oudalan whose priority is centered on the adjustment of the second stage, 1 UCADR by province and phase will be installation, and those will carry out the achievements by using the organizations of existing populations.</p> | | |

 (FY 2008 Domestic Survey) (FY 2008 Overseas Survey) No information available.

(FY2012 Overseas Survey)
 Implementing project: Country Partnership Programme on Sustainable Land Management in Burkina Faso (CPP)
 (Project outline) The CPP is a pilot partnership for sustainable land management in Burkina Faso that has the global objective of combating land degradation. The specific objectives are to: (a) develop and implement a sustainable partnership for an enhanced coordination and an equitable and integrated approach to sustainable land management; (b) promote an institutional and political enabling environment to better tackle and implement sustainable land management in Burkina Faso; and (c) foster the promotion of an equitable and integrated approach to sustainable land management including indigenous and innovative practices.
 (Implementation period) 2010-2014
 (Implementation body) FEM, SP/CONEDD

Implementing project: Project to Combat Sand Invasion in the Niger Basin (PLCE/BN)
 (Objective) Activities include: rehabilitating degraded land; capacity development at local levels; protecting river banks and small water bodies
 (Implementation period) 2005-2010
 (Implementation body) African Development Bank

Description :
 (FY 2000 Domestic Survey)
 The Government of the CAR placed the first priority on this project and officially requested to Japanese Government its urgent implementation by the grant aid system in November , 1999.

(FY 2003 Domestic Survey)
 Needs of the project iis still high. Study to observe local situation, including security condition, is required to implement the project.

(FY 2004 Domestic Survey)
 Reinvestigation of issues and problems related to the implementation of this project is required taking into account the security conditions and situation of implementing institutions.

(FY 2005 Domestic Survey)
 No progress. Request may arise if improvements in public security and institutional preparation for the implementation is made.

Description :

Reasons for Delay or Suspension:
Security problem

Detail
The prerequisite to the realization of this projects is to complete the renovation of the existing railway. Its renovation, the double-tracking, ect. have been implemented with the German fund. However, the progress has been so slow that it is considered to take more time before this project is commenced.
In September, 1991 the JICA long-term expert was sent back due to the worsening security problem. Since then, no information concerning this project has been obtained.

(FY 1994 Domestic Survey)
Along with the dispatch of the Japanese Self-Defense Force to Zaire in 1994, the Japanese embassy is going to resume its operation. However, no information has been obtained concerning this project.

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons of Cancellation:

(FY 1998 Overseas Survey)

- 1) The implementation plan of the project does not have the concrete components despite its high cost. Therefore, it has been difficult to be provided the fund.
- 2) Appropriate land for irrigated paddy cultivation is limited in the target area. In addition, soil has been deteriorated.

Background:

(FY 1994 Domestic Survey)

Although the Government requested the Japanese government for a grant aid to implement a part of project. However, the Japanese government turned down the request due to its high construction cost.

The Government has been looking for possible financial resources (as of September 1994).

(FY 1994 Overseas Survey)

While the estimated cost of this project is 1.8 mil. CFA/ha, which is considered to be very high, EIRR is only 7.4%. This low profitability makes it difficult to procure fund from donors.

(FY 1996 Overseas Survey)

Although the financial request has been made to the West African Development Bank and the Arab Bank for Economic Development in Africa, no positive reply has been received.

(FY 1997 Overseas Survey)

Procurement of fund is difficult.

(FY 1998 Domestic Survey)

Since the cost of construction became high and EIRR is low, there is little possibility to procure the funds for realizing the projects.

Description :

Outline of the Facilities in F/S area:

1) Irrigation Drainage Facilities: (1) dam in M'Bahiakro area, (2) 2 Pump Sites, (3) 4 branch river dams (Dienzou, Yanmon, Eholie, Atofou) Drainage Canal. 2) Farmland Preparation: 5 areas, 973ha 3) Post harvest facilities: Storehouse and rice mill 4) Agricultural machine: Cultivator and threshing machine 5) Rural Road: 28.9km 6) Village Water Supply (well with manual pump): 13 wells in 10 villages

(1) Eholie, Atofou

(FY 1997 Overseas Survey)

Subsequent study: Sep.-Oct.1995 Review Implementing Organization / BADEA

Finance: Government budget, BADEA Aug.1997 BADEA L/A US\$ 783mil.

*Contents of the project: 1) the construction of two dams (Eholie and Atofou), 2) the farmland preparation of 330ha, 3) the post harvest facilities (two rice millers), 4) the construction of rural road, 5) the village water supply, 6) the study of execution and control, 7) the management of the project

Imp. Period: Mar.1998~Apr.2000

(2) Dienzou, Yanmon

(FY 1998 Overseas Survey) The survey team of the Kuwait Fund is to visit to Cote d'Ivoire to appraise the project. The ceiling of the loan from the Kuwait Fund is approx. 1.2billion yen.

(FY 1999 Overseas Survey) Request for Japan's grant aid was submitted in Dec.1999.

(FY 2001 Overseas Survey) Fund has not been procured yet.

(3) M'Bahiakro

(FY 1998 Overseas Survey) Grant aid assistance (approx. 1.5billion yen) is being requested to Japanese government. Since the rubber dam is planned to be constructed in M'Bahiakro and it is to require higher technology, they expect Japanese government to implement the project.

(FY 1999 Domestic Survey) Preliminary survey is to be conducted by JICA within this fiscal year.

(FY 1999 Overseas Survey) Loan from Kuwait fund was approved on 10 Nov.1999.

(FY 2001 Overseas Survey) Fund procurement: Kuwait Fund, Amount: 3.1 million Kuwait Dinar, Date of fund procurement: Project implementation date in Apr. 2000, Contents: Construction of dam and plain development.

Factors of Implementing the Project:

(FY 1998 Overseas Survey)

1) High priority has been given to the projects, 2) Since the main component is the irrigated paddy cultivation, it corresponds to the policy of the Japanese government, 3) Project-type cooperation of the rural development aiming at the promotion of the sustainable irrigated paddy cultivation is to be started in FY1999. The proposed projects are expected to collaborate with this project-type cooperation.

(FY 2001 Overseas Survey) Request for Japan's project-type technical cooperation has not been submitted.

Proposal for Improvement:

(FY 1998 Overseas Survey)

The projects require the support to establish the maintenance and management system. If a grant aid assistance for M'Bahiakro is agreed, the support including enlightening the people at B/D and dispatch of experts and JOCV on irrigated paddy cultivation and water management after completion will be requested.

Detail:

(FY 1996 Overseas Survey)(FY 1997 Domestic Survey)

The Government of Cote D'ivore has requested the Arab Bank for Economic Development in Africa (BADEA) to finance the project for Eholie, Atofou while it also asked for grand aid assistance to the Japanese Government for M'Bahikro. ABEDA dispatched an experts team and, after the discussion, they decided to provide a loan for the implementation of the above, a part of the proposed project.

(4) Remaining Projects

(FY 1996 Overseas Survey)

The Japanese Government decided to give higher priority on "Central Northern Area Integrated Agriculture Improvement Project" and expressed its intention to support the project M'Bahikro after the completion of Central Northern Area Project.

March 1997 E/N 16million yen ("Central Northern Area Irrigated Agriculture Development Project").

(FY 1999 Domestic Survey) Completed.

(FY 1997 Overseas Survey) Fund has not been procured for Dienzou, Yanmon, M'Bahiakro yet.

(FY 1997 Domestic Survey) Probably B/D will be conducted in FY 1998. The government of Cote D'ivore has requested for grant aid to rehabilitation of existing farm land, construction of dam and pumping station.

(FY 1998 Domestic Survey) "Central Northern Area Irrigated Agriculture Development Project" will be completed soon. B/D is planning to be conducted by a grant aid assistance after the completion of the above project.

(FY2005 Domestic survey)

No information to be specifically mentioned.

Description :
(FY2000 Domestic Survey)
Implementation for the proposed project of F/S was requested to Japanese Embassy in Cote d'Ivoire by MINAGRA on 1999, however there is no progress after the request.

(FY 2001 Domestic Survey)
The assistance of Japan to Cote d'Ivoire is not resumed yet. Since 1998, the assistance from the World Bank and donor countries have been suspended, and not only this case but no projects have been progressing. Also in the current fiscal year, the Japanese Embassy in Cote d'Ivoire researches the request investigation, 12 general grant aids were listed by the government of Cote d'Ivoire, and this case was the 4th priority in it.

Situation of request:
(FY 2001 Overseas Survey)
Applicant: PNR
Date of request: Mar.18, 2001
Fund requested: 1 million Kuwait Dinar (approximately 243.56 billion CFA Franc)
Contents: F/S in Fabie, Campman and Colonel Plain.

(FY 2004 Domestic Survey)
No information to be specifically mentioned

(FY 2005 Domestic Survey)
No information to be specifically mentioned

(FY2009 Domestic Survey)
Japan has been banned in principle from implementing the supports other than urgent and humanitarian cooperations since the worsend situation in 2002.

(FY2009 Domestic Survey)
No financing is available for the implementation for the project.

Description :
(FY2000 Domestic Survey)
There is no information after this project.

(FY 2001 Domestic Survey)
A coup d'etat occured just after the explanation of F/S draft was completed. Since then, aids from overseas and international organizations has stopped. The political situation became more stable after the new administration was installed, however, aids from overseas has not recovered yet. It seems that the government submitted a request for Japan's grant aid in August 2000.

(FY 2001 Overseas Survey)
SODECI will be in charge of management/maintenance of the infrastructure, which was installed after the project completion, based on the contract concluded with the government. The management/maintenance cost will be collected from sewage water charge paid by users.
The government is waiting for JICA's confirmation for B/D implementation and expects its early implementation in the beginning of 2002 and also project implementaion in 2003 by Japan's grant aid.

(FY 2002 Domestic Survey)
Coup was occurred in 1999. Though the domestic situation has relatively stabilized afterwards, Ministry of Foreign Affairs, Japan, has taken measures to ask for an extension of traveling to some districts due to the occurrence of gun battle in Abidjan, Bouake and Congo districts as well as coups in November, and December. Embassy of Japan also issued curfew order in Dec. 2002. Under these circumstances, it seems impossible to carry the plans forward practice.

(FY 2004 Domestic Survey)
No information to be specifically mentioned

(FY 2005 Domestic Survey)
No progress has been made due to political factor and public disorder such as civil war and political changes.
Under the public disorder, many of the overseas donors except its suzerain of France are starting to exclude Cote d' Ivoire from their list, which result in exhaustion of the country's economy. However, judging from the past situation, difficulties exist for a rapid integration.
1999: A coup occurred after the JICA seminar in November.
2002: A curfew order during the night was issued in December.
2002-2005: Several coups by rebel troops occurred.
2005: A coup occurred again.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

| | Discontinued or Cancelled |

Description :
 Situation of progress:
 (FY 2001 Domestic Survey)
 No concrete action has been taken after the completion of the study.

(FY 2003 Domestic Survey)
 Not yet reached a point of implementation due to the political unrest. Of the sub projects proposed in M/P, the "Agneby River Basin Comprehensive Development Right Project" was adopted in August 2002 as the first priority but it has been left pending due to deterioration in the security situation.

(FY 2004 Domestic Survey)
 Although P/S of a highly prioritised "Agneby River Basin Comprehensive Development Project" has been conducted after this M/P, there are no progress seen after its completion. It is assumed that 3 to 5 years may be needed in actualising the project. Reason of the pending is considered to be deteriorated security conditions. However, if there are other factors for it, there may be an option to change to other projects.

(FY 2005 Domestic Survey)
 Agneby River Basin Integrated Development Plan proposed as a prioritised project in the M/P has been selected and had completed a pre-study,. However, the project has been suspended, due to degradation of security.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons for Delay or Suspension:

(FY 1995 Overseas Survey)

It is recommended to suspend the project implementation due to the worsening economic and financial situation, the incapability of the authorities concerned to promote the project and the lack of coordination among the authorities. In particular, it is an urgent need to enhance the capability of the authorities concerned.

(FY 1998 Domestic Survey)

The concerned authorities are lacking the ability of management and collaboration.

Detail:

(FY 1991 Overseas Survey)

Although a grant aid was requested for the project implementation in 1985, it was turned down due to the high GNP per capita (US\$910). In 1990 after the GNP per capita declined to the eligible level for a grant aid procurement, the Government applied for a Japanese grant aid again, but it was not accepted.

(FY 1998 Domestic Survey)

It is difficult to implement the project since construction in the damp area costs a lot and the environmental problems have occurred.

Description :

(FY 2000 Domestic Survey)

INGRH, the executing agency is willing to implement the proposed project, particularly Phase 1 component, as soon as possible under grant aid by Japanese government. Application of the project for Japanese Grant Aid has already been prepared and submitted.

(FY 2001 Domestic Survey)

The request for a grant aid has been made but was not adopted. It seems unlikely to be realized because the request amount was 1.4 billion yen and notwithstanding a few beneficiaries of 20 thousands.

(FY 2001 Overseas Survey)

Requested scheme: JICA's grant aid

Date of request: August 1999

Requested amount: 84 million USD

Contents: Construction of water supply system (34 systems) in villages in Santiago Island.

The project can be divided into phases according with available finance and appropriate factors.

These systems were selected from 1,160 prospective locations based on the targeted standards.

(FY 2003 Overseas Survey)

3 February 2004 E/N 40 mil.yen (The Study on Groundwater Development for Santiago Island D/D)

Contents: Construction of the simple small-scale water supply institution which used groundwater for 6 county 23 village of the greatest Santiago island with capital Praia, the equipments for maintenance management, etc. are supplied.

(FY 2004 Domestic Survey)

No information to be specifically mentioned

(FY 2004 Overseas Survey)

1. Funding

1) Project Name: Ground Water Development and Other Water Source in Santiago Island

2) Finance: Grant Aid (Agreed on 21st May, 2004)

3) Amount: 622 million YEN

2. Design/Construction

1) Project Name: The Study on Groundwater Development for Santiago Island

2) Construction Period: 11th November 2004 - 31st May, 2007

3) Contents: Well digging, facilities, water tank, water irrigation system, water-purity control, education, and enlightenment

3. Benefits: Drinking water for 13 thousand people were secured by this study

(FY 2009 Domestic Survey)

Groundwater Development for Santiago Island

(Objective)

To improve situation of basic human needs

(Overview)

As water and health are two of priority areas that Japan committed in order to assist African countries at the TICAD IV in May, 2009, this project aims to build 24 water facilities in 9 parishes of the island as well as conducting training for operation and management of the facilities. With this project, approximately 17,000 residents are expected to have stable access to clean drinking water.

(Fund)

Provided grant aid: 829 million yen(2009/3)

Description :

(FY 1999 Domestic Survey)

The problem toward the implementation of the project is the conflict with Ethiopia and a truce agreement will be the precondition.

(FY 2001 Domestic Survey)

The border area is still dangerous even after the truce agreement with Ethiopia in December 2000.

The request for Japan's grant aid to implement the priority projects has been submitted. However, the project contents need to be changed because the project site environment has been significantly changed due to the conflict with Ethiopia.

(FY 2003 Domestic Survey)

Although there is a possibility that the project will be pushed forward because a ceasefire agreement has been made with Ethiopia, it has not been clarified whether the contents planned in the development studies can be implemented as it is on account of the friction. Therefore, the contents of the project need to be studied and reviewed again.

(FY 2004 Domestic Survey)

The project has not been implemented although request for the Grant Aid was submitted in FY 1998. The project needs from B/D stage, however, the details of study (period of study, number of experts) has to be considered carefully due to the socioeconomic situation caused by the war.

(FY 2008 Domestic Survey)

With the limit of 1.524 billion JPY (FY 2007: 316 million JPY, FY 2008: 1.012 billion JPY, FY 2009: 196 million JPY) Grant Aid will be provided for the implementation of "The Project for Urban Water Supply in Dehub Region". The notes were exchanged in May 2007.

(1) Contents

To provide the fund to implement groundwater-resource development and an elevated water distribution facility installment in the four cities (Debarwa, Dekemhare, Adikeih and Maidima) by the Water Resources Department in Dehub Region, south-central of Eritrea.

(2) Necessity

* Eritrea is situated on the North-East coast of Africa and the vast majority of the land is an arid or semi-arid zone. For this reason the average of national water supply rate is as low as 30% and particularly for the recent years, the condition of the water supply has worsened due to the drought that happens every few years.

Citizens have no alternative but to use the water from unhygienic rivers and subsoil flow, and even these dry up in the dry season. As a result, women and children are forced to walk to get to the water sources.

* Eritrea attained independence from Ethiopia in 1993 and since then public facilities have been destroyed by the border dispute. GNI is 220 USD and this is the one of lowest levels in the world.

The Eritrean government has addressed the issue of poverty reduction and to improve the living standards in the long-term. Specifically aiming to supply safe and stable drinking water nationally, the "National Water Supply Emergency Action Plan" was set to meet the nationwide necessity for water especially in rural area.

* However, due to serious financial conditions and difficulty in maintenance of the water supply facilities with independent efforts, the government has requested the cooperation of other countries and aid agencies. Under this background, the Eritrean government has requested Grant Aid cooperation to the government of Japan in order to implement the ground-water resource development in the above four cities in Dehub Region, construction of facilities needed to maintain water-supply facilities and maintenance of the equipment.

(3) Effect

* The rate of water supply will raise from 22% to 100% in 2015 in the four cities by implementation of the project. Hygienic conditions and living conditions are expected to be improved and water borne diseases are expected to decrease.

| | Delayed |
| | Discontinued or Cancelled |

Description :
(FY 1991 Overseas Survey)
1. Karakoro
The drilled bore hole with the hand pump donated by WUHA Committee is still functioning properly to provide adequate clean water to the local people.
2. Chirete
Water supply facilities is still giving proper service to the local people and the clinic run by Irish Concern.
3. Degan
The bore hole is not functioning due to the cable failure of the hand pump given by the WUHA Committee.
4. Kembolcha
The bore hole was not made operational because the settlement area was shifted to another site.
5. Tchaffa Weledi
The bore hole is not functional since Jan. 1990 due to the failure of the electric generator.
The drilling rig and other equipment are not used properly due to the spare parts problem.

(FY 1994 Domestic Survey)
There is not any information in details, however, RRD seems to transfer some parts of facilities to other camp site.

(FY 1995 Domestic Survey)
No additional information.

(FY 1997 Domestic Survey)
RRC was dissolved some years ago after completion of its duty. The condition and operation of facilities are not clear.

Description :
 (FY 1996 Domestic Survey) (FY 1998 Domestic Survey)
 The Govt.of Ethiopia (Oromia Water Resources Development Dept.) is on preparatory work for formal request.

(FY 2001 Overseas Survey)
 The Oromia Irrigation Development Authority which is the C/P Agency for this Study are willing to submit a request of financial cooperation to Japan in order to implement the proposed project.

Operation and Management:
 (FY 1998 Domestic Survey)
 Project office under the state government is to maintain, manage, and operate the facilities after the construction, while the agricultural cooperative association composed of beneficiary farmers is to be engaged in part of management and maintenance works.

(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)
 The Ethiopian government has prepared to request the Japanese government for a fund to implement the project. However, the request has not been submitted yet.

Description :
 (FY 1998 Domestic Survey)
 The counterpart institutions in Ethiopia have strong desires to implement the project. Technique for the study was transferred, but technique for the implementation of the project is not enough. Thus, support for technique after the end of the study is strongly demanded. This is also written in advice

(FY 2000 Overseas Survey)
 The counterpart institutions have strong desires to implement businesses proposed in the project, but it is difficult to implement them for a financial reason.

(FY 2001 Overseas Survey)
 The forest preservation plan has not been implemented concretely because of financial and other constraints.

(FY 2002 Domestic Survey)
 Based on the results of the mentioned study and Basic Study Team Ethiopian government has officially requested Japanese Government for a Technical Cooperation to implement "NFPA Forest Management Plan in Belete-Gera", proposed in the mentioned study. The objective of the project is to improve living standards of the target residents through participatory forest resource management and conservation.
 Feasibility of the project and content of the effective cooperation have been discussed, based on the results of the mentioned study and Basic Study Team. Implementation of the "Pre-evaluation Study on the Forest Management Plan in Belete-Gera, Oromia Province" have been decided to prepare a base plan, where Minute of Discussion have been concluded between Oromia Provincial Congress and JICA in December 2002. Social-economic study have been conducted from 11 January to 10 February.

(FY 2003 Domestic and Overseas Survey)
 Implemented project: Belete-Gera Participatory Forest Management Project: Phase I
 Implementing period: October 1, 2003 - September 30, 2006
 Funding:
 Funding party: JICA (Technical Cooperation Project)
 Objective: Implementing sustainable participatory forest management by farmers in Belete-Gera RFPA
 Technical Cooperation:
 Dispatch of Experts: 3 personnel (Chief advisor/information management/Participatory forest management/coordinator/ Rural development)

(FY 2007 Overseas Survey)
 Implemented project: Belete-Gera Participatory Forest Management Project (Phase II)
 Implementing period: 1 October 2006 - 30 September 2010
 Implementing institutions: Oromia Agricultural and Rural Development Bureau (OARDB), JICA
 Funding:
 Funding party: JICA(Technical Cooperation Project)
 Objective: Diffusing sustainable participatory forest management by farmers at the Belete-Gera RFPA
 Contents: 1) To formulate a guideline for WaBuBu PFM. 2) To formulate a strategies in diffusing WaBuBu PFM. 3) To enhance capacity to implement participatory forest management. 4) To enhance counterpart's participatory forest management capacity. 5) To enhance beneficiaries' capacity through systematization of WaBuBu. 6) To formulate a guideline for participatory forest management in Oromia. 7) To manage progress of the project.

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY 1999 Domestic Survey)

Priority projects will be implemented with Japan's grant aid. However, the procurement of the grant is delayed for the time being due to the low priority of flood control project compared with other sectors like water supply and road development.

(FY 2001 Domestic Survey)(FY 2002 Overseas Survey)

The government of Ethiopia has been demanding strongly to implement by the Japanese Grant Aid cooperation, however, the request for it has not been approved yet.

(FY 2002 Overseas Survey)

The government of Ethiopia requested the Japanese Grant Aid five years ago. The Council of Addis Ababa City Administration is still waiting for a positive response.

Others:

FY 1999 Domestic Survey)

The promotion of the project was suspended for a while because of the war between Eritrea.

(FY 2000 Overseas Survey)

Now the conflict between Ethiopia and Eritrea has been settled, therefore Ethiopian Government expects the response of the Japan's Grant to implement the priority projects.

(FY 2003 Domestic Survey)

In FY1997, the Addis Ababa Capital Government prepared a TOR for grant aid and filed the request for grant aid to JICA. But it was not adopted. Later the Addis Ababa Capital Government prepared a TOR with reduced study scale and submitted the request for grant aid to JICA again after JICA's experts were dispatched in 2000 but it was not adopted. No activities have been made after that.

(FY 2003 Overseas Survey)

No subsequent study has been implemented so far for the project. However, in response to serious flood problems certain measures in some selected priority areas are intended to be undertaken by own/government budget amounting to about 1.5 million Birr. To effect the same, site survey activities are being undertaken in all the ten sub-cities, three of them already completed. It was disclosed that the scale of implementation is rather limited because of capacity and budget constraints.

The department has prepared a project outline in order to continue and enhance the existing study and develop a storm water management system for the Addis Ababa city. The project outline is to be submitted to donors (JICA /Japan and BCEOM/France in particular).

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2008 Domestic Survey)

No information to be specifically mentioned.

Description :

(FY 2002 Domestic and Overseas Survey)

The study will be followed by the "Capacity Building Program for Community Based Irrigation Development in Central Oromiya Region."

JICA dispatched a preparatory study team on Dec. 2002, and S/W was signed on Dec. 17, 2002.

Subsequent study:

(FY 2003 Domestic and Overseas Survey)

Implemented project: Capacity Building Program for Community Based Irrigation Development in Central Oromiya Region

Implementing period: Apr. 2003-Aug. 2004

Implementing body: JICA

Objective: The above captioned study was followed by second phase of the Development Study of JICA which covers wider areas and activities, namely the Study on Capacity Building Program for Community-based Irrigation Development in Central Oromia Region of Ethiopia, with objectives to enhance the capacity of IDA through small-scale irrigation development and the rehabilitation of existing schemes. Within the framework of the new study, OIDA supported by a JICA study team has implemented 5 new small projects in Meki and three rehabilitation projects in Arsi zone.

(FY 2004 Domestic and Overseas Survey)

1. "Capacity Building Program for Community Based Irrigation" through trainings.

2. Program for small irrigation development program in Meki.

(1) WUA Support Programme in Meki Area

Start date: Programme II 2004/May

Completion date: 2004/Feb

3. Rehabilitation of Existing Irrigation Schemes

(1) Katar irrigation project: The rehabilitation of the project has been completed following the prepared rehabilitation programme. Rehabilitation activities conducted in the project are the maintenance of the canal, the plastering of the canal, the construction of protection walls, and the supply of basement. Construction has started on 11 July 2003 within P/S.

(2) Gedemo irrigation project: Rehabilitation is the replacement of a water gate, the excavation of waterway, the inner construction of the major canal and distribution channels, overall plastering, and the supply of basement.

(3) Sadi Sadi and Lafa irrigation project: Rehabilitation is the improvement of dams, the installment of sluice gateway and water gates, and the inner construction of the major canal and distribution channels. The project itself started on 21 June 2003 in the design construction phase started on 22 October 2003 and completed on 3 March 2004.

Technical cooperation:

1) Training: 4 experts from the HQ and offices have attended 1 month training in Japan. The content of the programme is as follows.

(1) PCM training

(2) Various field surveys

A series of field surveys were conducted to acquire practical knowledge of various projects implemented in Japan

(1) Projects in Toyokawa irrigation: discussion on water dynamics and management was conducted.

(2) Other dairy farming project and visits to farms owned by private farmers were conducted.

2) Dispatch of experts: Several experts have been dispatched.

3) Other technical cooperation: Hydrological rendering training, which eased research and design for irrigation scheme and grant of software and computers to OIDA. These technical cooperation is developing the operational capacity of OIDA.

(FY 2005 Domestic and Overseas Survey)

No information to be specifically mentioned.

(FY 2006 Domestic and Overseas Survey)

Dispatch of experts

(FY 2007 Domestic and Overseas Survey)

Implemented project: Project for Irrigation Farming Improvement

Implementing period: September 2005 - September 2008

Implementing body: Oromiya Irrigation Development Authority (OIDA), Oromia Bureau of Water Resources, JICA

Funding:

Funding body: JICA(Technical cooperation project)

Objective: The agricultural production in the project target area is increased.

Beneficiary: The following technologies have been disseminated to surrounding community: small scale pump irrigation, water harvesting technology structures (WHT), treadle pump operation and maintenance at farmers level, use of plastic sheet for WHT structures

Technical cooperation:

Dispatch of experts: long-term 3 personnel

Training: Third country training 3 personnel, GIS training, GIS training in Japan 3 personnel

Providing equipment: Surveying instruments, GPS

OIDA is presently under a process of merging with the Bureau of Water Resources of the Regional State. The Bureau will have two deputy heads in which OIDA will be integrated to the Irrigation and Drainage sector as a core unit. The projects which were under the control of OIDA will be managed as before through the new core unit.

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY 2003 Domestic Survey)

1. Short Term Plan (July, 2003 - June, 2006)

1) Facility plan

Mobile-phone: under progress

Expansion of OSP for the idle capacity of Switch: under progress

Expansion of Junction network in Addis Ababa: unknown

2) Privatization (Selling of 30 % share of ETC): not succeed

3) Improvement of Maintenance/Operation

Introduction of CIMIS: under progress

Establishment of Sub-company (mobile/ISP): under progress

4) Organization and Human Resource Development

Decentralization (Autonomy of regional office): under progress

2. F/S

1) Bahir Dar area: Grant application to Japan

2) Mekele area: no progress

3. Other

Aid from other countries or international organizations: unknown

(FY 2004 Domestic Survey)

1. M/P short-plan

1) Facility planning

Expansion of cell-phones: in progress

Expansion of idle capacity of switch: in progress

Addis Ababa relay network improvement: intention for early implementation recognized

2) Privatization (listed 30 percent of ETC shares): unsuccessful. No further progress is anticipated.

3) Operation/maintenance capability improvement

Installment of CIMIS: in progress

Establishment of subsidiary company (cell-phones, ISP): completed

4) Institution/Human development

Decentralization: time of implementation unknown.

2. F/S

1) Telecommunication network in depopulated area of Bahir Dar region (PCO): Requested Grant Aid to Japanese government. Because it is prioritized in third place (road and water in high rank), it is difficult to implement with the Grant Aid. Implementation with its own fund will further be difficult due to low earnings.

2) Telecommunication network in depopulated area of Mekele region (PCO): No progress. Because it is prioritized in third place (road and water in high rank), it is difficult to implement with the Grant Aid. Implementation with its own fund will further be difficult due to low earnings.

3) Optical cable fibre link between Addis Ababa - Nazareth (2003/Jul-2006/Jun): No progress. However, earnings from infrastructural communication link are relatively high and are the bottleneck of the network, which early implementation is anticipated by its own capital.

(FY 2005 Domestic and Overseas Survey)

Ethiopian Telecommunications Corporation prepared a five-year strategic plan. The plan aims to investigate and reconsider purpose of the JICA study, and prepare an implementation plan. Although the request for a grant aid for 3 projects of the F/S was submitted to Japanese government, the projects have not been implemented due to low priority.

Subsequently, maintenance of switch as part of telecommunication network project in depopulated area of Mekele and Bahir Dar region has been conducted with own funds, contracts for installment of WLL system, maintenance of mobile phones, Distribution line between Addis Ababa and Nazareth relay network construction were concluded.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

Description :
 (FY 2005 Domestic Survey)
 For the irrigation agriculture improvement plan proposed in the study, preliminary evaluation study has been conducted in March 2005, which a technical cooperation project is in progress.
 (FY 2005 Overseas Survey)
 R/D has been concluded between the Oromia Agriculture and Rural Development Bureau and Japan for a technical cooperation project in September 2005.

(FY 2006 Domestic Survey)
 No information to be specifically mentioned

(FY 2006 Overseas Survey)
 No information to be specifically mentioned.

(FY 2007 Domestic and Overseas Survey)
 Implemented project: Project for Irrigation Farming Improvement
 Implementing period: September 2005 - September 2008
 Implementing body: Oromiya Irrigation Development Authority (OIDA), Oromia Bureau of Water Resources, JICA
 Funding:
 Funding body: JICA(Technical cooperation project)
 Objective: The agricultural production in the project target area is increased.
 Beneficiary: The following technologies have been disseminated to surrounding community: small scale pump irrigation, water harvesting technology structures (WHT), treadle pump operation and maintenance at farmers level, use of plastic sheet for WHT structures
 Technical cooperation:
 Dispatch of experts: long-term 3 personnel
 Training: Third country training 3 personnel, GIS training, GIS training in Japan 3 personnel
 Providing equipment: Surveying instruments, GPS

OIDA is presently under a process of merging with the Bureau of Water Resources of the Regional State. The Bureau will have two deputy heads in which OIDA will be integrated to the Irrigation and Drainage sector as a core unit. The projects which were under the control of OIDA will be managed as before through the new core unit.

(FY 2009 Domestic Survey) No information.

(FY 2009 Overseas Survey)
 No progress has been seen about the following projects.

1. Rehabilitation of existing Irrigation Schemes
 The irrigation structure in the region is not stable organizationally as a result there is no clear responsibility regarding maintenance and rehabilitation of existing schemes. The level of awareness of the users also very low ate some schemes. On the other hand regarding efficiency and effectiveness of existing small scale irrigation schemes the main challenges are found enforcing policies, rules and regulations related to land ownership. These all are the constraints.

2. Training: human Capacity Development through work shops
 The irrigation structure in the region is not stable .Because of this it can be said that improving the capacity of social workers through training has been discontinued. On the other hand due to low benefits and salaries most social workers are not interested to stay in the sector and they seek for other job opportunities for the above two reasons.

Description :

(FY 2008 Domestic Survey)
 1. Educational information system improvement (Improvement of school records, Introduction of a school registration system, Development of a guideline on the AEC, and Development and dissemination of the AEC check list.
 Three British VSO volunteers have been visiting Oromia Education Bureau to support EMIS after the governmental realignment by Business Process Reengineering. The proposal of SMAPP is partly utilized by the cooperation of other countries.
 2. For the "Operation of the OEdMap (expanding the coverage to the entire Oromia state, Establishing inter-organization information sharing mechanism)", the progress listed below has been made.
 1) GIS follow-up trainings related to OEdMap were implemented. The training emphasized the operation and maintenance, and lasted more than six months using the budget of JICA Ethiopia Office.
 2) Oromia Education Bureau has implemented the operation training of GPS to the workers of Wegeda, using the budget from Italy.
 * OEdMap was utilized after the completion of the SMAPP, however, primary educational schools were constructed or reconstructed by the zone educational office using mapping information in a special millennium project.
 * During the realignment of the government by BPR, all the people in charge of the project have been moved, for this reason, the project is thought to be halted.
 3. No information on "Enhancement of the Micro-Planning (Expanding the coverage to entire Oromia region for the fair development of primary educational system, utilization of cluster resource center)
 4. No information on "Capacity development of educational system (Data maintenance, planning, strengthening organizations and networking)"

(FY2012 Domestic Survey)
 Implemented project: Oromia Region elementary school construction plan (charge-free community development assistance)
 (Amount of grant): 1.041 billion yen
 (Project outline) Constructed 38 elementary schools with a total of 240 classrooms in two districts of the Oromia Region as part of the first initiative to improve the educational environment in the region.
 (Funding items) School construction (construction company), maintenance of facilities (furniture company)
 (Planned completed) Project completed at the end of April 2010
 OEdMap operation (expanded throughout the entire Oromia Region, developed information sharing system)
 The Oromia Bureau of Finance and Economic Development has been developing GIS data for the region as part of efforts to collect data from the entire region. Data collected during the course of the project was transferred to the Bureau for further use. The BoFED received assistance from the Italian government to improve utilization of this data, and has started to allow external access to online maps. UNICEF and the U.S. Department of Education recognized the positive effects of OEdMap in 2011, and information is available announcing that they will conduct scale mapping. There have also been other reports of the development of GIS data in other regions, including those of schools, and the project seems to be expanding outside of the Oromia Region.

(FY2012 Overseas Survey)
 Proposed Project:
 1. Training workshop on EMIS data collection and management
 2. Strengthening of school records
 3. Coordination with the OEdMAP
 4. Database preparation for Micro-planning
 (Situation) Completed. During the period of implementation SMAPP project and even up to now Education sector was one of the priority areas of the country in line with infrastructure development. Rural development and health realizing the sector can play key role in the transformation of the country from the present low income category to middle income country by 2015. The Ethiopian government (and Oromia national Regional State) are also committed to achieve targets set in the MDGs.
 The project purpose and specific activities of the SMAPP Project were in line with Education Sector Development Program (ESDP) III of the Country. For instance there urgent need to strengthen the EMIS system of the Ministry of Education and Regional Governments Education Bureaus. Therefore, the Project has played a very important role. The overall utilization of the Project is reasonably high. As indicated above among the four major activities, three are well utilized. However, updating of pilot Zones and Woredas school maps was not performed after termination of the Project. During this survey it was learned that taking JICA's SMAPP Project activity as a beginning UNICEF is working to develop Oromia Education Map.

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY 2015 Overseas Survey)

- The items recommended on costal fishery management in the development study was incorporated into the national development plan.
- A JICA expert was sent (2010-2012) on aqua farming techniques development, and transferred the seeding production techniques of tilapia and walking catfish based in the Perrier aquafarming station. The proposed projects are utilized by loan project funded by AfDB.
- The proposal of participative management of fishery resources is integrated into the project funded by AfDB.
- The strengthening of seeding production capacity launched construction of Kulamoutou Seeding Center, one of three seeding centers proposed in the development study with a fund of AfDB; however, the construction is suspended because the contractors refused to continue construction work.
- As for improvement of fresh fish distribution system, the PSPA funded by AfDB constructed docking spaces at Kango and Ebel-Abanga and started improving the fresh fish distribution system to the residents.

(FY 2015 Domestic Survey)

- PDPA (the Master Plan of Integrated Development of Small-scale Fishery and Inland Aquaculture), which is the major output of this development study, has been implemented with a support from AfDB.
- The Establishment of Acuafarming Station in Lammbarene (2010-2011) is implemented by the Grant Assistance for Grass-Roots Human Security Projects. This aimed the stable supply of breeder to acuafarmers in Moyen-Ogooue Province. However, the project effects are very limited because lack of operation budget and less number of acuafarmers around the stations.
- As for Project for Capacity Building of Fisheries-Related Organizations, the assistance has been provided through sending a advisor of fishery administration from JICA (continued since 2001) , providing training (continued since 2001), and sending JICA volunteers (since 2007).

Description :
 (FY 1998 Domestic Study) (FY 1999 Domestic Study)
 Implemented project: Rehabilitation and extension of the existing irrigation facilities
 Funding:
 Funding body: 13 October, 1998 E/N
 Amount: 764 million yen
 Implementing period: March, 1999 - March, 2000
 Contents:
 (1) Ashaiman district: (Construction works: buildings such as offices and facilities for training, Engineering works: channels and drains for irrigation, rural roads)
 (2) Okyereko district: (Construction works: buildings such as offices and facilities for training, Engineering works: head works, pumping stations, channels and drains for irrigation, rural roads, development of fields)
 (3) Within Accra city: (Construction works: facilities for training)
 Benefits: Under the Japanese technical cooperation and guidance by experts of SSIAP, the facilities are fully used by farmers' organizations, and agricultural production is also increasing. Facilities constructed by grant aid will be used for improving techniques for irrigation projects in the future.
 Progress:
 (FY1999 Overseas survey) Construction works are scheduled to be completed by the end of March 2000 in Okyereko and Ashiman districts in Phase I, but 3 projects (Kpando, Aveyime, Mankessim) in Phase II are scheduled to be implemented in the future.

(FY2007 Domestic survey)
 No information to be specifically mentioned.

(FY2007 Overseas survey)
 There is no progress on the irrigation project in Kpando-Torko irrigation, Aveime and Mankessim. No changes have been made in the organization and the current system has been operated.

| <p>Description : Japanese Technical Cooperation: (FY 2001 Domestic Survey) From Apr.2001 : Dispatch of the JICA individual expert (Socio-Forestry, Period : 2 years)</p> <p>Description (FY2000 Domestic Survey) Technical transfer was carried out in the form of on-the-job training. No information on realization of the proposed projects. (FY 2001 Domestic Survey) The JICA individual expert (Socio-Forestry) has been dispatched to the SUNYANI regional forestry office (Counterpart agency of F/S study, branch office of the department of forestry) since Apr.2001 in order to study the possibility on the grant aid, project type of technical cooperation and Yen loan in the field of the environmental afforestation based on the local survey and intension survey of the Ghanaian side concerning with the contents of F/S.</p> <p>Obstructive Factors for the implementation: (FY 2001 Domestic Survey) The afforestation fund designed by the IBRD, AfDB and so on suffered a setback because the cooperation loan has been suspended as the result of debt relief action. (FY 2003 Overseas Survey) The grant aid for the proposed project was rejected in July 2002 on ground that road construction project has precedence over it. The president of Ghana started a forest rehabilitation project in September 2001 and has been promoting afforestation of 20 thousand hectares every year, with a part of investment funds from MTS and the private sector contributed to the project. The Brong Ahafo area completed afforestation of 4500 hectares in 2002 by use of MTS (the modified Tanugya System). In the 2002 program, approximately 25 Taungya Farmer Groups and three Community Forest Management Committees (CFCs), which were established at the beginning of 2002, participated in the project and performed the mission of forest resources management in cooperation with the Forestry Commission. In 2003, 64 FEG and CFCs participated in the program of the same region and completed afforestation of 5600 hectares. In June 2003, the Ghana government made a formal request to the Japanese government through the Forestry Commission for technical cooperation assistance associated with afforestation of the forest reserve in the Brong Ahafo area. In association with that request, a research group was dispatched to Ghana from September 15, 2003 to October 10, 2003 to formulate the project under the title of "Transitional Zone - Participatory Forest Maintenance Management".</p> <p>(FY 2004 Domestic Survey) Progress of "Reserve Forest Management in Transitional Zone" implementation 1) Content: popularisation of sustainable participatory forest management 2) Study Period: Five years from March 2003</p> <p>(FY 2004 Overseas Survey) Contract for Reserve Forest Management in Transitional Zone project between JICA and Ghanaian Gov. has been formally concluded on 28th January 2004. The project has then was implemented based on PO, which showed remarkable progress. 1) Provision of Equipments 5 computers, 2 printers, 2 land cruiser were provided as the first lot of equipment from JICA to conduct the duty. In addition, 3 radio transmissions, power generator, off-road motorbike, and a laptop are requested. 2) Planning and construction progress Although construction of a multi-purpose building, jointly invested by JICA and Ghanaian Gov., for project office in Sunyani started construction in March 2004 and was planned to be completed within 6 month, only 80 percent has completed. Remaining constructions are interior, air conditioning, power generator setting, and a concrete block. 3) Implemented Japanese Technical Corporations - Training in Japan Messrs Emmanuel Gay Kumah Dogbe (Regional Manager) and Paul Sowah (District Manager), whom both resides in Sunyani attended Forest Resource management Planning course in Japan from 10th August to 25th September, 2004. Officers have completed the training and are back to their duties after returning to Ghana. - Dispatch of Japanese experts 3 experts have been dispatched for a long-term to Ghana for this project. A Japanese officer is residing following the JICA internship program. On the other hand, we are waiting replies for newly requested forest management and tree seeds procurement experts.</p> <p>(FY 2005 Domestic Survey)(FY 2005 Overseas Survey) Subsequent project: Transitional Zone Participatory Forest Resource Management Project (Technical assistance project) Technical assistance: Training: Project cycle management for counterpart leaders, 4 trainees, 6 weeks Dispatch of experts: 4 for short term experts, 3 for long term experts Management plans process expert, Forest economist, Seed procurement specialist, Rural extension expert</p> | | |

Description :

(FY 2000 Domestic Survey)

The existing national base maps at scale of 1:50,000 were prepared by Canada and British Government assistance using the aerial photographs taken in 1972 to 1975. These maps passed over 25 years without updating. The present situation, especially, the expansion of urban region, mainly Accra city and changes of the land use, was not reflected to the maps. Moreover, the altitude in the existing map was indicated by "imperial system". In Ghana, they adapt "C,G,S", therefore they had to transfer "yard-pond system" to "metric system" when they use the altitude data.

Under the above background, the government of Ghana made a request to the Japanese government to produce national base maps at scale 1: 50,000 covering the southern part and northwestern part of the country.

The manufacturing, agricultural, fishery industry concentrated in the southern part, and northwestern part was mainly gold mining site. These requested area needed social infrastructural development such as the regional development and preservation of the environment with urgency.

And also necessary technical transfer to the counterpart agency was requested.

In response to request, the Japan International Cooperation Agency (JICA) sent a mission to Ghana from mid-March to early April 1995 to discuss its feasibility with officials of the Survey Department of Ghana (SDG), the Ghanaian counterpart agency.

And subsequently on March 17, 1995, the Scope of Work was agreed to between the two governments of Japan and Ghana.

Under the S/W, the survey conducted in five years starting in December 1995 to March 2000. The results is as follows:

- 1) Aerial photography of approx. 25,500sq. km at scale of 1:50,000
- 2) Topographic mapping of approx. 25,500sq.km at scale of 1:50,000 (in 5 colors and 40 sheets)

(FY 2003 Overseas Survey)

Use of Products:

JICA Topographic Maps are used for Environmental Monitoring, Military Management and Security purposes (Ghana armed Forces), Forestry and Resource Management and Monitoring (Forestry Department, Wildlife Department), Mineral Exploration (Mining Companies), Utility infrastructure Planning (Electricity Company, Ghana Telecommunication, Ghana Water Company Ltd.), Roads and Transport (Ghana Highways Authority, Feeder Roads Department, Urban Roads, etc.), Academic and Research Purposes (Universities and College)

(FY 2004 Domestic Survey)

1. Technical Cooperation

- 1) Training in Japan: 6 personnel (2 weeks - a year)
- 2) Experts Dispatched: approximately 30 personnel (8 - 10 weeks)

2. Benefits

- 1) Project Name: Topographic Mapping of Western Part of the Republic of Ghana
- 2) Beneficiary: Ghanaian, and the users of topographic mapping outside the country
- 3) Effect: approximately 3 thousand maps (1:50,000) has already been sold to specialists and the public.

(FY 2009 Overseas Survey)

FOLLOW-UP ON THE PROJECT FOR TOPOGRAPHIC MAPPING IN THE SOUTHERN PART OF GHANA 1995 ? 200

1. The current situation of the topographic maps produced by the project.

Most of the project outputs (maps) have been sold. Some sheets are still available because there is a difference in the demand for the sheets. While there is more demand for some sheets, which of course are completely sold out, there is less demand for other sheets. A technical hitch was detected in the maps. During the computer processing of the maps there was a shift in positions of features in the maps. Some features were wrongly located in the latitudes and longitudes. Since JICA presented the printed maps to the Survey Department at the end of the project completion no sheet has been printed yet. Before printing the next batch of sheets, there will be need to correct the mistakes in shifts in positions of the features. The shift in positions of features could be a result of changing the figures from the imperial system to the metric system.

2. The current situation of the mapping system which provided by the project.

At the end of the project, JICA study team provided software and computers to the Survey Department. These are still available in the same versions, but there might need to change the versions because it is now ten years since the project was completed. An improvement could be made to the original software.

3. Utilization of the project "outputs"

The project outputs are still in use. There is high demand for some topographic sheets which are sold out, while there is less demand for other sheets which are still available.

4. Contributions for the progress of the Survey Department of Ghana?

The outputs of the projects have contributed very much. The whole country Ghana is covered by 351 mapping sheets. The JICA project produced forty (40) single sheets covering the southern part of the country which is 10% of the total national needs.

Within ten years, a map in the rural areas would not need to be reviewed because less features may have been added. In the case of the urban areas maps could be reviewed within five years because new features spring up faster. Since the completion of the Project, there has not been any topographic mapping.

5. Other comments

There is no funding to review the existing maps. For now the key issues concerning the Survey Department are: the lack of modern technical equipment and lack of technical staff.

Description :

(FY 2002 Domestic Survey)
 In January 2001, Mr. John Agyekum Kufuor was inaugurated as a new president replacing ex-president Mr. Jerry Rawlings who had been at the post for 19 years. The Kufuor administration gives priority to stabilization of macroeconomics and in March 2001 the government applied for debt relief package based on the HIPC Debt initiative. Therefore new yen loan will not be supplied for a time in principle. Under this situation, GPHA (Ghana Ports and Harbours Authority) has decided to implement Takoradi Port project first with BOT system. They are now preparing for public tender and it will be called early next year.

(FY 2003 Overseas Survey)
 18 applications were received for the bidding for Takoradi Port Development Project by BOT.
 As for Tema Port, while the expansion construction for the pier is favorably under way, funds to implement short-term or long-term projects have not yet been procured.

(FY 2004 Domestic Survey)
 Among the 2 ports studied (Takoradi and Tema), Takoradi port is planning a BOT for port development
 (FY 2004 Overseas Survey)

1. Funds: 1) For the Tema port project, HSBC loan and RET Grant Aid has become definite. 2) Funds for Takoradi port is undecided.
 2. Feasibility: 1) Tema port: Subsequent study is required for dwelling and development for 10 to 12 anchor in No 1 pier. The proposal for the recruitment of expert for this study has already been submitted. Therefore, funds are required to implement the study. 2) Takoradi port: Amount of cost to implement JICA study is extensive, though it is a mid-term development. However, on-going discussions are held to secure the fund for sustainable implementation.

(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)
 Takoradi port: Plans to construct container berth with BOT scheme, though no concrete actions has been taken.
 Tema port: Inland Container Depot (ICD) has been constructed using BOT scheme and is in operation. No actions has been taken for the construction of facilities proposed in the study.

(FY 2006 Domestic and Overseas Survey) (FY 2007 Domestic and Overseas Survey)
 Tema Port:

Implemented project: Tema port 2nd dock expansion work
 Implementing period: Apr. 2003
 Funding party: Own fund, ORET grant (Dutch government)
 Content: 200m expansion, Dredging, Development of a harbor for floating craft, Marine engineering and its workshop, Additional facilities in a new harbor including management block, Constructions of 3rd Ship to Shore(STS) floating crane and 4th Rubber Tyre Gantry(RTG)
 Relation with subjected study: Despite dredging operations of several water districts for additional container handling capacity development and for transit cargo, site provision for warehouse and container wharf development, were implemented, the proposed short term development plan at the subjected study which comprises a container terminal development and etc, is not started yet due to lack of budget.

Actual condition:
 (FY2006 Domestic and Overseas survey)Concession of the container terminal administration to Meridian Port Service established by GPHA and Maersk was resolved on August 17, 2004, and carrying out an adjustment to start the project within 2006.
 (FY2007 Domestic survey) The construction of the terminal was started in August, 2006, and partial sharing was started from April, 2007. Construction completion (yard pavement 165,000sqm, completion of the office and gate will be in the end of 2007).

Subsequent project: Constructions of access roads and a bridge over railway
 Implementing period: November, 2006 - March, 2008
 Funding body: The World Bank IDA loan
 Contents: Constructing 3km of access roads from the Tema port to the Western Gate, and a bridge over railway which are scheduled to start at the end of November, 2006.

Takoradi port:
 The project implemented several facilities development which was included in short term plan such as warehouse development, container depots development, dredging work for container handling capacity development and for coping with the growing numbers of transit cargo and ship jumboization.
 APMT, Maersk affiliated terminal operator is implementing F/S of the project based on MOU with Ghanan government which is comprised of artificial island type transshipment container terminal construction and functional development of existing ports.

Ports of Ghana:
 Based on actual condition of large increase of handling cargo volume more than estimated at the master plan, technical guidance and up-date study of the master plan with a focus on marketing development and policy enforcement aiming at commercial ports and harbors which are necessary to working on not only strategically but also intensively at this moment, are necessary under the orientation of the master plan that GPHA states as base of policy.
 The study on corridor formulation including roads, railways and landlocked ports between Tema/Takoradi ports and landlocked states, has an significant outcome.

(FY2007 Overseas survey)
 Subsequent study: Feasibility study of Tema container port and revision of the master plan for Takoradi port
 Implementing period: February, 2008 - December, 2008
 Funding body: USTDA
 Objective: This study is aimed at the reinforcement of commercial activity, cost cutting of the commercial activities as well as convenience improvements for port users for commercial activity.
 Relation to the mentioned study: In the mentioned study which proposed the necessity of Tema port functioning as a container port, an annual processing capacity of 400,000 TEU by 2010 was proposed, this standard was achieved by 2004. However, no development is proceeding in Takoradi port. In addition, Takoradi port incoming improvement project is hoped as an oil field was discovered in the Gulf of Guinea.
 Other: Surveillance cameras were set up in Tema and Takoradi ports to meet the International Ship and Port Facility Security Code (ISPS) to the ships and the facilities in the harbour. In addition, possibility of the training program for hydrographic survey and dredging are expected.

Description :

(FY 2003 Domestic Survey)

There were many trivial problems, but the team completed all the survey on schedule. Technical Transfer was also executed. Especially, the training in Japan had been rewarded with good results. C/P also had been satisfied about the contents.

(FY 2003 Overseas Survey)

In spite of the extensive analyses done in the study, certain fundamental information requested by the client was not provided. The technology transfer programme was not effective as expected.

It would therefore be desirable to provide further training preferably middle level as a means of complementing the technology transfer.

Certain fundamental information requested by the client which could not be provided can be taken as a project for study in Japan. This also serves as a means of complementing technology transfer.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

1 Technical cooperation

- 1) Training: resource survey, biology and oceanography - 2 personnel
- 2) Dispatch of experts: resource survey, biology and oceanography - 8 personnel

2. Benefits

- 1) Project name: Study on demersal fish resource in Ghana
- 2) Objectives: resource situation and guideline for management in marine product industry
- 3) Benefit: Managers and fisherman were able to identify fish resource status. Department of Fisheries has adopted management guideline into an existing guideline.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

Technical cooperation:

Training:

- 1) Marine stock assessment: 2 personnel, 2 months
- 2) Biology and oceanographic observation: 2 personnel, 2 months

Dispatch of experts:

- 1 month each from 2nd survey to 5th survey, 6 personnel 4 months in total.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Overseas Survey)(FY 2007 Domestic Survey)

Subsequent study: Monitoring of fishery efficiency according to ocean floor

Implementing period: Jun/2006 - Dec/2007

Implementing body: Department of Fishery

Objective: 1) To evaluate current demersal fish 2) To prepare appropriate fisheries resource management plan

Relation with the mentioned study: Subsequent study has been conducted as a monitoring of the proposed project

Beneficiaries: The result of the study will be utilised in proving demersal fishery resource management plan

Funding:

Funding party: Own fund

Funding amount: 150 million CHC

Technical cooperation:

Dispatch of experts:

- Short term experts: 8 personnel, 1 month, Resource study, biology, oceanography.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

| 6. OBJECTIVES OF THE STUDY | (i) To make policy recommendation and plan of actions to improve rice production which will include post-harvesting and marketing through the competitiveness of rice produced in Ghana, and (ii) To carry out technology transfer to Ghanaian counterpart personnel through on-the-job training in the course of the Study. | | |
| 7. CONSULTANT(S) | Nippon Koei Co., Ltd. | | |
| 8. STUDY PERIOD | Jun.2006 ~ Mar.2008 21month(s) ~ | | |
| 9. SITE OR AREA | The Master Plan (M/P) covers the whole area of the Republic of Ghana, and the Action Plan(A/P) covers the priority areas to be selected in the M/P. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Priority Program</p> <p>1) Rain-fed Rice Promotion Program - Type 2: Semi-intensive Rain-fed Rice Farming System in Inland Valleys and Lowland -Type-2 produces 80% of domestic rice, and many farmers are engaged in semi-intensive rice farming to supply to rural area and local urban areas. -Potential inland valley and lowland are extending over large area, but remain utilized. Staple production is expected through application of proper technology under supplemental irrigation, and the development cost is not so high as irrigation.</p> <p>2) Support Program for Poor Rice Farmers - Type 3: Extensive Rain-fed Rice Farming System in Rain-fed Lowland and Upland -Upland rice is traditionally cultivated under marginal agro-ecological condition, and important, particularly in the three Savannas regions of Upper West, Upper East and Northern, where incidence of poverty is quite high. Low input rice like Nerica would be introduced for increase of home consumption and supplemental income.</p> <p>2. Development Components under Prioritized Program</p> <p>1) Rain-fed Rice Promotion Program 1 Field improvement for semi-intensive rain-fed rice farming, 2 Improvement of semi-intensive rain-fed rice farming, 3 Community-based rice seed production and distribution, 4 Capacity development of extension staffs, 5 Improvement of access to rice field, 6 Extension of Improved Postharvest Processing Technology, 7 Promotion of Postharvest Processing Equipment, 8 Rice Mill Modernization, and 9 Support for Marketing Activities</p> <p>2) Support Program for Poor Rice Farmers 1 Field improvement for extensive rain-fed rice farming, 2 Improvement of extensive rain-fed rice farming, 3 Production and distribution of quality rice seed, 4 Farm tools improvement, 5 Simple grain storage extension, 6 Livelihood improvement, 7 Extension of Improved Postharvest Processing Technology, 8 Promotion of Postharvest Processing Equipment, 9 Rice Mill Modernization, and 10 Support for Marketing Activities</p> | | |

Description :
 (FY 2008 Domestic and Overseas Survey)
 August, 2007: Request has been made to the Japanese government to implement the Project for Sustainable Development of Rain-fed Lowland Rice Production, proposed in the above mentioned development study, through Technical Cooperation Project.
 September, 2008: Study team has been dispatched by JICA to conduct preliminary study in order to implement the Project for Sustainable Development of Rain-fed Lowland Rice Production.
 March, 2009: A study, "Donor Coordination, such as AGRA, FARA, and etc, for the Rice Promotion Program in Ghana", has been conducted by JICA to consider the details of the Project for Sustainable Development of Rain-fed Lowland Rice Production.

(FY2012 Domestic Survey)
 Implemented project: Technical Cooperation Project for Sustainable Development of Rain-fed Lowland Rice Production in the Republic of Ghana
 (Cooperation period) July 2009-July 2014
 (Project goal) "Sustainable development model of rain-fed lowland rice production" will be disseminated in the target area.

Implemented Project: National Rice Development Strategy (NRDS)
 (Objective)
 . To increase domestic production by 10% annually using gender sensitive and productivity enhancing innovations for smallholders, commercial producers and entrepreneurs along the value chain
 . To promote the consumption of local rice through quality improvement by targeting both domestic and sub regional markets
 (Implementing period) 2009-2018
 (Implementing body) Ministry of Food and Agriculture

| COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | | |
| PRESENT COUNTERPART AGENCY | Ministry of Food and Agriculture, Upper West Regional/District Offices of MOFA | | |
| 6. OBJECTIVES OF THE STUDY | <p>1. To formulate a Master Plan of sustainable and environment-friendly agricultural and rural development in the Upper West Region (UW/R) in Ghana, which will be composed of an operational guideline(s) for development and extension of appropriate agricultural and rural development technology and a project proposal for future implementation of the findings of the Study.</p> <p>2. To develop capacity of Ghanaian counterpart personnel, related agencies, and local community-based organizations including Farmer-Based Organizations in the course of the Study in order to acquire the development methods of appropriate agricultural and rural technology and its efficient dissemination system.</p> | | |
| 7. CONSULTANT(S) | Kaihatsu Management Consulting, Inc. CTI Engineering International Co., Ltd. | | |
| 8. STUDY PERIOD | May.2008 ~ May.2009 | 12month(s) | |
| | May.2009 ~ Mar.2010 | 10month(s) | |
| 9. SITE OR AREA | Nadowli District, Jarapa District, Lambussie District, and Lawra District | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1) Project for Staple Food Production The project for staple food production includes the components of staple food production and post-harvest loss reduction. The components of MOFAUWR office capacity enhancement and extension improvement are also included. The objective of the project is food security of the people in the study area.</p> <p>2) Project for Cash Crop Production and Marketing The project for cash crop production and marketing is comprised of the components for vegetable production and melon production. The components of MOFAUWR office capacity enhancement and extension improvement are also included. In addition, the component for marketing improvement is also included, and the components for compost marketing and small-scale irrigation are considered, depending on the necessity of the communities. The objective of the project is to increase the income levels of the people in the study area.</p> <p>3) Project for Livestock Development and Marketing The project for livestock development and marketing includes the components for pig breeding and fattening, and guinea fowl and rabbit rearing. The big-related components are divided into two: one for community-based pig breeding and the other for household-based pig rearing. The community-based pig breeding is regarded as a community business while the household-based pig rearing is intended for the profits of the individual households. The components of marketing improvement, MOFAUWR office capacity enhancement, and extension improvement are also included as well. The objective of the project is to increase the income levels of the people in the study area..</p> <p>4) Project for Shea Nut Processing and Marketing The project for processing and marketing consists of the component for shea nut processing into soaps since it was only the processing activity identified as profitable. The components for marketing improvement, MOFAUWR office capacity enhancement, and extension improvement are also included. The objective of the project is to increase the income levels of the people in the study area.</p> | | |

Description :
 (FY 2004 Domestic Survey)
 Dispatch of short term experts (2005/1- for three months) is planned in order to undertake development plan of fishing tools and measures.

(FY 2005 Domestic Survey)
 Request for the development of fishing tools and methods were submitted to the Embassy in Conakry in September 2005.

(FY 2006 Domestic Survey)
 The Ministry of Fishery and Aquafarming of Guinea conducted detailed survey (D/S) in pursuit of reviewing the plan for the maintenance of the new catch landing site in Kaporo proposed by the survey on the title. In August 2006, they formally requested the Japanese embassy for grant aid for the maintenance plan.

(FY 2007 Domestic Survey)
 A request for a technical cooperation maintaining fishing port formulated in the mentioned study was made to the Government of Japan. (Request for implementing "The Small-Scale Fishery Development Plan in Kaporo, Conakry" was sent in August 2006).

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Subsequent Studies:
 May 1994 The Italian Consultant Group concluded the contract for the survey and D/D for two years on May, 1994.
 Oct.1997 B/D completed (financed by World Bank)
 D/D under implementation (financed by World Bank)
 Contents and its difference from JICA's proposal:
 (FY 1998 Overseas Survey)
 At the level of an extra 1.2m³/s, the Tsavo dam was not considered necessary. The study recommends that the second stage bulk supply of water will be acquired from Sabaki and Tiwi.

Finance:
 (FY 1995 Overseas Survey)
 The request was made to the World Bank to finance the project.
 (FY 1996 Domestic Survey)
 The World Bank and OECF have been discussing the possibility for the co-financing.
 (FY 1998 Domestic Survey)
 D/D will be completed soon. However, it seems difficult to procure funds for implementing the projects.
 (FY 1998 Overseas Survey)
 Appraisal of the project by WB is in delay.

Japanese technical cooperation:
 (FY 1998 Overseas Survey)
 Oct.1981 - Sep.1998 Seven experts (development plans in water supply and sanitation) in total were dispatched.

Detail:
 Prior to this survey, IDA promoted the project (Sabaki Pipeline Project) by which the present water requirement is expected to meet. In addition, the estimated project cost was too large to be funded by the government budget.

(FY 1997 Domestic Survey)
 The World Bank sounded OECF's opinion for co-financing in 1996. But OECF decided not to provide a loan to this project, because OECF had just agreed to finance other projects (Sundu-Miriu Hydropower Generating Project and Telecommunication Network Expansion Project). Therefore, water supply project in Monbasa has not been realized yet.

Related Information:
 In August 1992, the consultant services for F/S and D/D of Water Supply Project of Mombasa, including the second Mzima pipeline project, was put on tender (financed by IDA). In May 1994, the consultant was appointed.

(FY 1996 Overseas Survey)
 D/D of Water Supply Project of Mombasa, including the second Mzima Pipeline Project are still in progress. The World Bank and the Government of Kenya expect for Government of Japan to provide financial assistance.

(FY 1997 Domestic Survey)
 Italian consulting firm is undertaking D/D of water supply in Mombasa including the second Mzima pipeline financed by the World Bank.

Description :
 Maps have been used by eight on-going projects in the eastern region (agriculture, forestry, fisheries, public works, animal husbandry, etc.).

(FY1994 Domestic Survey)
 Some of topographic maps were sold out in March 1990. Papers for those maps were supplied by JICA.

(FY 1996 Overseas Survey)
 The main users of the produced output are the Ministry of Agriculture, Water Development, Research Institute, Planning and Economic Development, Ranching Companies, UN bodies, Schools, etc.

(FY 1998 Overseas Survey)
 The topographic map is used effectively in many fields such as governmental organizations, private enterprises, and aid organizations etc.

| 9. SITE OR AREA | The entire country | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1) Road: Nairobi bypass, Mombasa bypass, and trunk road development</p> <p>2) Railway: strengthening of transport capacity, container terminals, extension to Mombasa Port</p> <p>3) Port: development of the southern side of Mombasa, containerized transport, development of Lamu Port</p> <p>4) Shipping: introduction of multi-purpose carriers, freight and passenger boats for Victoria Lake</p> <p>5) Airport: development of Malindi Airport, upgrading of Kisumu and other major domestic airports, purchase of airplanes</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

As the final report was approved in the Cabinet, the improvement of the transportation facilities was undertaken according to M/P.

- (1)M/P was incorporated into the national Five-Year plan.
- (2)Budget was allocated to some projects proposed in M/P.

(FY 1997 Overseas Survey)

The results of the study have been incorporated into the 5th ~the 8th National Development Plan (1984~2001) and utilized for project formulation.

Subsequent Studies

F/S was implemented according to the recommendation.

Projects undertaken by the Japanese government

1984-87 "Integrated Regional Development Master Plan for the Lake Basin Development Area (M/P)."

1988-92 "Nairobi Bypass Project (F/S)."

1993-94 "Road Network Improvement Project (M/P)."

1.Road

Finance:

(FY 1997 Overseas Survey)

Government budget, EU, World Bank, ADB

Construction:

(FY 1997 Overseas Survey)

1985 commenced

(FY 1995 Overseas Survey)

The construction and maintenance of the various trunk roads have been completed.

(FY 1996 Overseas Survey)

Mombasa-Sambure, Embu-Kibwezi

Embu-Kangondi tarmacked

Kangondi-Kibweji not tarmacked

Nairobi-Lamu

Garsen-Lamu tarmacked as part of German fund

Garissa-Thika under construction financed by Saudi Arabia

Sultan Hamuol-Mtito Andrei under B/D funded by EU

Mtito Andrei-Bachuma Gate under construction funded by IDA

Voi-Malindi not tarmacked

Malindi-Garsen tarmacked

2.Railway

Development of the south side of Mombasa:

the crossing to the side of a new railway and road has not yet been constructed to connect it with the existing railways and roads. (FY 1995 Overseas Survey)

3.Port

Development of Lamu Port:

the project has been delayed due to the lack of finance and land.

The Nairobi Inland Container Depot was completed in 1984.

The Kisumu Inland Container Depot has been operational since 1994.

The Eldoret Inland Container Depot is scheduled to be operational from January 1996. (FY 1995 Overseas Survey)

(FY 1997 Overseas Survey)

Rehabilitation of container berths and conversion of additional berths into container berths as well as rehabilitation of equipment will be undertaken.

4. Shipping

(FY 1997 Overseas Survey)

Passenger & freight boats for Victoria Lake have not been purchased yet due to the low priority.

5. Pipeline

(FY 1997 Overseas Survey)

Oil pipeline has been extended from Nairobi to Kisumu and Eldoret. Plans are underway to extend it further into Uganda through Eldoret - Malaba route.

| | Delayed |
| | Discontinued or Cancelled |

Description :

(1) Kimusu Water Supply Project

Subsequent study:

(FY 1998 Domestic Survey)

May 1997 ~ Oct. 1998 JICA F/S 283 million yen

Finance:

Request for OECF loan is to be submitted.

*Contents:

Newly constructed: Kibue water treatment facility, water intake facilities, water distribution facilities.

Rehabilitated: Existing water treatment facilities, sewage disposal plants.

(2) Sondu River Multipurpose Development

1. Sondu / Miriu Hydro Power Project

Subsequent Study :

E/S

Sep. 1989 L/A 668 mil.yen

May. 1990 commenced by Nippon Koei, Co. Ltd.

*Contents of E/S

Review of F/S, D/D to implement the hydro power project.

Finance:

Mar. 1997 L/A 6,933 mil.yen (Phase I)

*Contents of Project

1. civil works on construction of a power plant 2. purchase and installation of steel structure (gate, etc) 3. purchase and installation of a generator and a water wheel 4. construction and extension of transmission line and exchange station.

A part of civil work and consulting service are included in Phase I.

Contractor / Kenya Power Co. Ltd.

Construction:

(FY 1998 Domestic Survey)

July 1997 ~ 2003

Contractor (for Lot I): J/V of Konoike, Veidekke, Murray, and Roberts.

Prospects of the remaining works:

(FY 1998 Domestic Survey)

The government is waiting for the approval of yen loan (phase II).

(3) Kano Plains Integrated Development Project

Subsequent Study :

Aug. 1990~Jan. 1992 F/S undertaken.

Refer to "Kano Plains Integrated Development (KEN/A 303/91)"

Situation:

(FY 1993 Overseas Survey)

1. The Kenyan government has promoted the restructuring of LBDA and other regional development authorities, based on the Structural Adjustment Program proposed by the World Bank.

2. Although LBDA did not have the capability to realize the project, the project has been promoted by the central government and the district governments.

3. Although LBDA has been in the process of the restructuring, the newly assigned director plans to request to JICA for the review study of this M/P and F/S for the following three projects, which are expected effective with a little investment cost for each expected beneficiary.

- i) Lake Shore Irrigation Project
- ii) Pig Industry Complex project
- iii) Animal Feed Industry Project

Situation and prospects of the remaining projects:

(FY 1998 Domestic Survey)

Situation:

After this study, the study on Sondu River multipurpose development was conducted, and Magmaywa Hydropower Project and Sondu-Miriu Hydropower Project were proposed. Yen loan phase I was approved for implementing the Sondu-Miriu Hydropower Project. However, Japanese government is reluctant to provide loan for other remaining projects since democratization in Kenya has not been promoted.

Prospects:

If the yen loan phase II for the Sondu-Miriu Hydropower Project is approved, E/S for Kano Plains Irrigation Project will be conducted as the next stage. The respective projects are under examination for being implemented by yen loan.

Description :

(1)Mwea Irrigation Development Project
 Subsequent Studies:
 Jan.-Feb.1989 B/D
 Finance:
 Jun.23.1989 Grant Aid E/N 1,264 mil.Yen for Mwea Irrigation Development Project Phase-I. This aims to construct a pilot farm and to rehabilitate the facilities in the area of 6,600ha.
 Jun.25.1990 Grant Aid E/N 896 mil.Yen for Mwea Irrigation Development Project Phase-II.
 Jul.12.1991 Grant Aid E/N 597 mil.Yen for Mwea Irrigation Development Project Phase-III.
 Implemented Project:
 1)New Nyamindi Headworks
 2)Link Canal I Construction
 3)Improvement of existing Thiba headworks
 4)Link Canal II rehabilitation
 5)Rehabilitation and improvement of main canal and related structures

(2)Mwea Irrigation Development Project (Yen Loan)
 Subsequent Studies:
 Oct.28.1993 L/A 572 mil.Yen for Mwea Irrigation Development Project (E/S).
 The target area is Mutithi Area (3,130ha).
 Content:
 1)Thiba dam
 2)Ruamuthambi headworks
 3)Irrigation Canals and related structures
 4)Land reclamation
 5)Farm buildings
 <Stage I>
 By Dec.1992 the review study was completed as well as the development plan was formulated. As a result Development Plan Report was submitted. The agricultural development program was formulated on the basis of the findings of the marketing research, the collected materials and their analysis. In order to prepare for EIA planned to be conducted in Stage 2, IEE has been already finished.
 <Stage II>
 Feb.1995~Mar.1996 implemented
 Designing of facilities, integration of the project costs, detailed designing and preparation of the tender documents were carried out based on DPR.
 <Irrigation Plan and Designing of Facilities>
 In order to design the dam, the outlet for flood water and the head works for overflowing water, experiments using a hydrological model were carried out. After that, construction plan and the cost estimation were drawn up.
 <Environmental Survey>
 EIA was implemented to make a plan of pursuit survey after the implementation.
 <Others>
 The project evaluation and the preparation of the tender documents, etc. were implemented.

(FY 1997 Overseas Survey)
 Implementation of Mutithi expansion has not started due to financial reason.
 Kenyan side has submitted a request for OECF loan in 1996.
 (FY 1998 Domestic Survey)
 Nov. 1998 Request for yen loan was submitted. The government is waiting for the approval.

(3)project-Type Technical Cooperation
 "Mwea Irrigation Development Project" Feb.1.1991~Jan.31.1996
 "Mwea Irrigation Development Project-Follow-Up"
 Feb.1.1996~Jan.31.1998
 Research and development on water management and planting and farming system and technical cooperation thereof.
 Long-term experts were dispatched in the fields of leader/training, irrigation and drainage and agricultural machinery.

Other:
 (FY1995 Overseas Survey)
 The Kenyan government desires to implement the project because it is projected to increase the production of rice whose consumption is expected to rise steadily in future and to increase the production of horticultural crops which is expected to contribute to foreign exchange earning. Also, the farmers' intention survey reveals that many farmers desire to produce rice and horticultural crops which will lead to the increase of income.

Situation:
 Major donors of Kenya forced the country to improve his political situation; employment of multi-parties system and protection of basic human rights, as well as proceeding economical re-structure.
 Then the donors freed their financial assistance to Kenya in 1991 because of no visible action to the above improvement.
 After that, reopening of support was agreed in consulting group meeting in November 1993.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Subsequent Studies:

Oct.1989 D/D commenced (JICA)

Mar.1991 The environmental NGO submitted a claim letter concerning the project route.

Sep.1991 The Kenyan government and the environmental NGO agreed with the partial revision of the project route.

Sep.1992 D/D completed

Finance:

(FY 1993 Overseas Survey)

The request for an OECF loan has been submitted.

The Kenyan government allocated Ksh. two million in FY 1995/96 and Ksh. three million in FY 1996/97 to the implementation of the Nairobi Southern Bypass Construction Project. The requested Japanese loan is incorporated into the FY 1994/95 budget for the project.

(FY 1998 Overseas Survey)

Waiting for the approval of OECF loan.

Detail:

(FY 1993 Overseas Survey)

The World Bank has been undertaking the long-term study on the nationwide road rehabilitation project and the urban road improvement project. The OECF Nairobi office will decide about the provision of an OECF loan after the results of the World Bank study comes out.

(FY 1995 Domestic Survey)

The Kenyan government puts high priority on the road improvement project. OECF is willing to provide a loan after the political situation improves.

*Refer to "Nairobi Bypass Project (KEN/S 401/92, JICA D/D)" about the situation afterward.

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons for Cancellation:
 The Project implementation has been delayed, pending the identification of measures to treat the expected inflow of sewage to Lake Nakuru and to control the expected fall of the water level in Lake Naivasha.

(FY1993 Overseas Survey)
 Dam Construction Project in Malewa was canceled from the viewpoint of conservation of natural environment and ecological system on Nakuru and Naibaja Lakes.

| | Discontinued or Cancelled |

Description :

Utilization of the results:
 1:50,000 topographic maps of South Kenya (43 sheets) were published for public use.

(FY 1991 Overseas Survey)
 Maps will be used in on-going projects in the Southern region.

(FY 1993 Overseas Survey)
 A quarter of printed 43,000 maps (1,000 maps for 43 sheets) has been utilized in the southern region in two years up to now. Especially, on the surrounding area of Monbasa city, 60-80% of provided maps are utilized for a beach resort development project and other mining and manufacturing industrial development projects.

(FY 1996 Overseas Survey)
 The produced maps have been purchased by various organizations including Public Works, Transport and Communications, Lands and Settlement, Health, Defense, Private Developers, Civil Engineers, Tourism, etc. Major application includes utility development, roads, mineral exploration, research, public schools, planning, hotel industry development, etc.
 The number of printed copies has been adequate, however, future demands would require more copies to be printed.

(FY 1998 Overseas Survey)
 The topographic map is used effectively in many fields such as governmental organizations, private enterprises, and aid organizations etc.

Description :

Detail:
 This project will be suspended until the Miriu project* is completed and the water source is secured for this project.
 (FY 1993 Overseas Survey)
 The study results were officially approved in the Parliament in December 1993. LBDA is planning to hold the seminar.

*Sondu Miriu Hydropower Project
 Subsequent Studies:
 1991-93 E/S financed by OECF
 (FY 1996 Overseas Survey)
 Initially, this project aimed to produce a total of 143mw and to irrigate 26,000ha of land. However, D/D has scaled down the project with a capacity to produce 60mw and irrigation potential of 15,000ha.

Finance:
 (FY 1997 Domestic Survey)
 Mar. 1997 L/A 6,933 mil. yen

Situation by Now:
 (FY 1993 Overseas Survey)
 The project is temporary suspended due to the difference in the implementation policy of the World Bank and the Kenyan government.
 The implementation of the agriculture drainage project needs close attention to protect the ecosystem in the project area, which is designated as the bird sanctuary and is the habitat of various wild animals.

(FY 1997 Domestic Survey)(FY 1997 Overseas Survey)
 The Kano irrigation project is a sequel to the Sondu Miriu hydropower project and its implementation is expected after the completion of the Magwagwa Dam (scheduled to be completed by the end of 2002). The Japanese Government is now implementing the hydropower project in collaboration with Kenya power company through the Ministry of Energy.
 (FY 2000 Overseas Survey)
 Magwagwa Dam is not yet under consideration of implementation. Diversion of the Sondu Miriu River is under implementation to generate 60 MW. The tail race of the water from Sondu Miriu Hydropower Project can irrigate 3,000 ha. LBDA is therefore scaling down the proposal to fund sources to implementation of Magwagna Dam.

Finance:

1 Aug. 1994 E/N 1,421 mil. Yen

(Nakuru Water Facilities Rehabilitation and Expansion Project 1/2)

22 May 1995 E/N 468 mil. Yen

(Nakuru Water Facilities Rehabilitation and Expansion Project 2/2-1)

Construction:

(FY 1995 Domestic Survey)

Nakuru Sewerage Project is under implementation. Refer to "Nakuru Sewerage Works Rehabilitation and Expansion Project(1993)".

(2) Meru Water Supply

(FY 1998 Domestic Survey) (FY 1998 Overseas Survey)

Subsequent study:

July 1996 ~ Sep. 1997 JICA F/S "Water Supply for Seven Towns in Eastern Province"

1999 B/D (scheduled)

Finance:

Grant aid assistance (planned)

(3) Kisumu Water Supply Project

(FY 1998 Domestic Survey)

Subsequent study:

May 1997 ~ JICA M/P + F/S "Kisumu Water Supply Project"

1999 D/D (scheduled)

Finance:

Yen loan (planned)

*Contents:

E/S, construction of a water treatment facility, rehabilitation of the existing sewage disposal plants, etc.

Japanese technical cooperation:

(FY 1998 Overseas Survey)

Dispatch of experts (Development Plans in Water Supply and Sanitation):

Dec. 1992~Dec. 1995 1 expert

July 1993~July 1995 1 expert

Oct. 1995~Oct. 1997 1 expert

March 1998~March 2000 1 expert

Provision of materials:

Installation of database system in Ministry of Water Resources.

Background:

(FY 1993 Overseas Survey)

Ministry of Land Reclamation, Regional and Water Development select projects from proposed project list on the M/P: and MLRRWD is urgently requesting a technical and financial cooperation to Japan for the selected project as follows,

-Nakuru Sewerage Project

-Kapsabet Water Supply

-Meru Water Supply (F/S including sewerage)

-Nyando River Flood Mitigation Project (F/S including sewerage)

-Pre-investment Study for Medium Scale Urban Water Supply Scheme

-Nyambene, Isiolo, Marsabit Ground water Dev't Project

Project List for mid-and long-term request

-Sotik settlement scheme water supply

-Kibirichia water supply project

-Migori-Kihancha water supply

-Maua water supply project

-National environmental reference center

Kenya side has intention to request for assistance on elaboration of District Plan to materialize M/P.

(FY 1994 Domestic Survey)

The request for F/S on Meru and Kisumu Water Supply Project was made by the Gov't of Kenya to the Embassy of Japan in Nairobi.

(FY 1996 Overseas Survey)

The Japanese Government has been requested to fund the projects proposed under this M/P.

(FY 1997 Domestic Survey)

Aftercare Study was started in Oct. 1997 and is scheduled to be completed in Oct. 1998. The purpose of the aftercare study is to review the project because no progress has been seen owing to financial problem and unsatisfactory administration of Kenyan side.

Consultant / Nippon Koei Co., Ltd., Kokusai Kougyo Co., Ltd.

Description :

Finance:

(FY 1993 Overseas Survey)

The request for an OECF loan has been submitted.

The Kenyan government allocated Ksh. two million in FY 1995/96 and Ksh. three million in FY 1996/97 to the implementation of the Nairobi Southern Bypass Construction Project. The requested Japanese loan is incorporated into the FY 1994/95 budget for the project.

(FY 1998 Overseas Survey)

Waiting for the approval of OECF loan.

Detail:

(FY 1993 Overseas Survey)

The World Bank has been undertaking the long-term study on the nationwide road rehabilitation project and the urban road improvement project. The OECF Nairobi office will decide about the provision of an OECF loan after the results of the World Bank study comes out.

(FY 1995 Domestic Survey)

The Kenyan government puts high priority on the road improvement project. OECF is willing to provide a loan after the political situation improves.

(FY 1996 Domestic Survey)

OECF local office considers that study as SAPROF by OECF is necessary to review the compensation, land acquisition and inflation after the completion of the study.

(FY 1997 Domestic Survey)

Five years have passed since F/S and D/D were undertaken. To realize the construction based on JICA's proposal would be difficult because of the change in circumstances.

MOPW plans to request for SAPROF. OECF Kenya office will possibly accept it.

As a part of road rehabilitation project in the city, World Bank is conducting a survey on establishment of long-term road system plan. In this survey, necessity of Nairobi Bypass will be examined including a grade separation plan of A104. According to the result of the survey, construction of a Bypass will be promoted or cancelled.

*Refer to "Nairobi Bypass Construction Project (KEN/S 304/87, JICA F/S)" for detail.

Description :

Upon the completion of the final report, B/D was conducted by JICA for two months and it was decided to implement the project with the Japanese grant aid. The sewage treatment plant has been reduced in size because of the environmental consideration requested by Lake Nakuru National Park.

(1) Phase I

- Renovation and expansion of the Town Sewage Treatment Plant.
- Construction of water quality testing laboratory.
- procurement of equipment for water quality testing laboratory.
- Procurement of equipment necessary for the operation of the Sewage Treatment Plant.
- Construction of stormwater retention pond.
- Establishment of water quality testing laboratory.

Subsequent Studies:

Aug.-Oct.1994 B/D

Finance:

Aug.1994 E/N 1,421mil.Yen (Nakuru Sewage Works Rehabilitation and Expansion Project-Phase1/2)

Construction:

Mar1995~Mar.1996 (Konoike Gumi)

(2) Phase II

- Renovation and expansion of the Njoro Sewage Treatment Plant
- Renovation of Mwariki Pumping Station
- Procurement of equipment for operation of the sewage treatment plant

Subsequent Studies:

June~Oct.1995 D/D

Finance:

May 1995 E/N 468mil.Yen (Nakuru Sewage Works Rehabilitation and Expansion Project-Phase2/2-1)

FY 1996 E/N 915mil.Yen (Nakuru Sewage Works Rehabilitation and Expansion Project-Phase2/2-2)

Construction:

Jan.1996~Mar.1997

Maintenance & Operation:

(FY 1996 Overseas Survey)

Management after completion will be by Nakuru Municipal Council Water and Sewerage Department. Kenya Wildlife service (KWS) and Nakuru Municipal Council will manage the Water Quality Testing Laboratory with KWS taking a leading role.

(FY 1997 Domestic Survey)

Handing over ceremony was held on the 21th of March, 1997 with participants from Kenyan Government, Japanese Embassy and JICA office.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 1996 Overseas Survey)

Upon the completion of the Study, the following action has been taken step by step.

- 1)MTW has produced "Analysis of the Final Report and Action Plan" where roles of MTW and other collaborating institutions are identified and major recommendations are included to facilitate the initiation of the implementation process.
- 2)At present, the Report has been officially circulated to all the implementing agencies for their comments.
- 3)The next intention is to call up a meeting for all the implementing agencies to discuss their respective comments plus the MTW comments in the analysis report in 1).
- 4)A more comprehensive Plan of Action will be developed after 3).
- 5)A Cabinet memorandum will be developed to seek cabinet approval for the project implementation.

The Eighth National Development Plan (1997~2001) emphasizes the importance of this M/P. This M/P is taken by the government as the guiding tool to foster a self-sustaining tourism industry in Kenya for the next fifteen years. Thus, the implementation of this projects is crucial to the tourism industry.

(FY 1997 Domestic Survey)

Kenya side expects for realization of proposed projects in early stage with Japanese grant aid assistance or yen loan. Projects will contribute to human resources development in the target areas.

(FY 1998 Domestic Survey)

Although the Kenyan government submitted the request for project implementation to the Japanese Embassy, the project has not been implemented so far. Since the counterpart persons were transferred and the Final Report was missing, the situations of the proposed projects have not been followed up.

(FY 1998 Overseas Survey)

The Cabinet approved the M/P on September, 1998 after 3 years from the day the final report of the study had been submitted. The Ministry of Tourism has already been considering detailed measures. Kenya Tourism Board was established and is expected to become the center of Kenya's tourist development. The facility enlargement of Technical Training Institute in Nairobi and the establishment of curriculum on tourism have been implemented.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

Subsequent Studies:

(FY 2001 Domestic Survey)(FY 2001 Overseas Survey)

1. Completed Study

The Study on Rural Roads Improvement in Western Kenya in Republic of Kenya (KEN/S 110/99) was implemented locally from Feb. to Nov.1999 and the report was submitted in Dec.1999.

2. Requesting Study

(FY 2001 Overseas Survey)

Requested period: in Aug.2000 to the Japanese government

Name of the Study: "Missing Link Connection Project"; Likoni Ferry Bypass (F/S on the construction of a permanent crossing to the southern coast through Dongo Kundu to Bofu)

Japanese technical cooperation:

(FY 1998 Overseas Survey)

1995 - 1997 Dispatch of a bridge expert to MOPW & H.

Provision of vehicles for road maintenance.

Profit effects:

(FY 2001 Domestic Survey)

It was linked to the project finding and implementation of two B/D study of two bridges (New NIYARI bridges and Rehabilitation of MUTOWAPA bridges)

Background:

(FY 1998 Domestic Survey)

1. Study on rural road improvement plan was requested to implement F/S by Japan after the demarcation arrangement.

2. Road improvement including the bridge to connect the missing link was requested as Japanese Grant Aid Project.

(FY 1997 Domestic Survey)

No information.

(FY 1998 Domestic Survey)

Study on Road Development in Western Kenya will be conducted soon.

(FY 1998 Overseas Survey)

Japanese team was dispatched in 31 Aug. to 15 Sep. 1998.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | Discontinued or Cancelled |
| <p>Description : (FY 1998 Domestic Study)</p> <p>An improvement of water supply system is urgently needed especially in Meru district among 7 areas in eastern parts of Kenya in M/P. The reasons are the largest number of beneficiaries, the largest urban population, the lowest construction cost per capita, and the highest potential for maintaining a project etc., and they judged that it was necessary to implement a project urgently. The characteristics of Meru district are as follows:</p> <p>1. Social condition Target areas for water supply are located in eastern provinces, and agricultural productivity is high there. And the west side of the target areas is a forest zone in Mt. Kenya with high precipitation. The east side is an arid zone with low altitude, low precipitation, and low agricultural productivity. According to results of a census, 125,000 was the population in the target areas for the water supply plan in 1989 and its rate of increase is 3.65 per annum on average, which is close to the national average of 3.4 % per annum on average. It is estimated that the population in the target areas is 165,980 in 1997.</p> <p>2. Water resource It is difficult to supply water to the target areas by gravity flow from sites where MLRRWD has a plan to take water, and therefore forests in upper streams in Mt. Kenya were selected as an alternative site where water is taken. It is estimated that the minimum amount of water in rivers running from the sources is 35,300 m³ per day (excluding uses other than water supply and water for maintaining rivers). This amount of water is enough to cover the amount of water supply by estimate of demand for water. When water is taken from the rivers for purposes other than the water supply plan in the future, it is necessary to report to MLRRWD or coordinate for water rights to secure water for maintaining the rivers. Regarding water quality, as a result of sampling and water quality analysis, they found out that it was raw water with good quality. Regarding the situation near sites for water resources, CEFA which is a NGO of Italy is now constructing intake weirs as a part of the Kiura Water Supply Plan.</p> <p>3. Water supply facilities The existing Milimani waterworks produce 3,770 m³ of drinking water per day. The water supply network from the waterworks is divided into 2 zones. In northern areas with high altitude, there is a water pipe network of 7,785 m and water was supplied by pumps. But after the construction of the pipes, they stopped using them due to the lack of their capacity and troubles etc; and as a result, water has been supplied directly by gravity flow from the Gatabora spring after 1988. But, this source of water is not enough to meet demand for water in the target areas. In areas with low altitude, there is a water pipe network of 18,310 m in total length and water is supplied directly from waterworks. In water supply areas, water supply tanks are installed in some places and the total volume of water storage is 1,100 m³. According to a survey by DWO in 1996, it is recorded that 990 households did not pay fee among 2,519 households to which water is supplied. As a result of the inventory survey conducted by F/S, among 330 households, 81% is registered and water supply meters are installed for 68%, but only 14% has working meters. Households with working meters consume water of 80-100 liters per day, but households without meters consume water of 500 liters per day. It is very difficult to understand non-revenue supplies exactly due to the lack of meters and the deficiency of its record etc. Also, non-revenue supplies are reported to be about 20% in the DWOs and about 44% in the maintenance and management monitoring report of MLRRWD (1994-1996). Also, non-revenue supplies were 70% in the result of the survey on the actual situation of water leakage of the study conducted in the center of the city. The fee collection rate is only 42% of the whole fee charged (MLRRWD monitoring report 1994-1996), which represents that proper fee collection is not implemented. About the maintenance, the activities are not sufficient because of the shortage of facilities, materials, cars, etc.</p> <p>(FY 2000 Domestic Study) (FY 2001 Domestic Study) (FY 2002 Domestic Study) (FY 2007 Domestic Study) (FY 2007 Overseas Study)</p> <p>Implementing Project: Meru City Water Supply Plan Implementing Period: Basic Design: From Nov. 2000 to Mar. 2000 Design and Construction Period: From Oct. 2001 to Mar. 2004 Funding: Funding by: Japanese Government(General gratis financial aid, First Period:E/N Date of Conclusion:Sep. 7, 2001, Second Period:E/N Date of Conclusion:Mar. 3, 2003) Funding Amount: First Period: JPY 740 million, Second Period: JPY 630 million Maintenance and Management Body: Meru Water and Sanitation Company Content: Repair of the existing Water Supply Facilities(Filtration Plant of 5000m³/Day, Exchange of several types of Water Pipes :150km) Benefit: Beneficiaries: 51,000 residents in Meru City Benefits: It is possible to provide high quality and safe water.</p> <p>(FY 2007 Domestic Study) (FY 2007 Overseas Study)</p> <p>Meru Water and Sewerage Services(MEWASS) has been expanding Water Supply area gradually since Mar. 2006. The area was expanded from 31km² to 38km²(7km²)and 50km Pipe Line(About 10,000,000 KSH) was also constructed upon the Rehabilitation Project in the "Meru County Water Supply Plan". 40,000 people out of whole population of 61,000 are consuming 3,000m³/Day(Expected Consumption 5,000m³/Day). The cost of expansion is paid by MEWASS, and their income can cover it. In June 2006, Ministry of Water and Irrigation submitted a request document of the gratis financial aid to Japanese Government about financing Meru City Sewerage System Improvement Plan, but it has not been approved yet. The constructions for Rehabilitation and Expansion of the Water Supply Facilities, which was based on an estimate of the population of 50,957 in 2005, was implemented during the period between Jul. 2003 and Mar. 2004. Subsequent Study: Preliminary study for Meru City Sewerage Facilities in Kenya Implementing Body: Ministry of Water and Irrigation, Tana Water Services Boards, Meru Water and Sewerage Services(MEWASS), JICA(Kenya Office) Implementing Period: From Oct. 2005 to Mar. 2006 Funding: Funding by: JICA(Kenya Office) Funding Amount: 1,871,500 KES(1JPY=0.66 KES) Objective: 1. To make clear the problems of Improvement of Meru City Sewerage Facilities regarded as an urgent and future prior subject 2. To make a preparation plan for Improvement of Meru City Sewerage Facilities 3. To transfer the technique of Sewerage Facilities Improvement Plan to the person in charge of Water Service Provider(ex. Meru Water and Sewerage Services). Technical Cooperation: Training Program: Maintenance of Water Supply Facilities in urban areas (1 person) Specialist Dispatch: Long Term Specialist: Improvement of management ability of MEWASS Facilities and Projects (1 person) Others: Procurement of machinery and materials</p> | | |

Description :

(FY 1999 Domestic Survey)

The government of Kenya has requested the assistance for following 3 projects to the Japanese Embassy.

- 1.Highland Malaria Control Project
- 2.District Hospital Rehabilitation Program
- 3.Rural Health System Improvement Program

(FY 2000 Overseas Survey)

1. District Hospital Rehabilitation Program

Grant aid assistance is planned to be requested for Basic Design study at FY2001.

Contents of request: Basic design for the District Hospital in Western Kenya

Difference with JICA's proposal: Additional Hospitals may be included.

2. Highland Malaria Control Project

The Kenya Government is collaboration with WHO requested donor countries and International Agencies including Japan which participate in the Roll Back Malaria Project.

3. Rural Health System Improvement Program

B/D study: Sep. 2000- Mar.2001

Construction: Aug.2001- Mar.2003

Fund: Grant aid

* Some equipment for the Health Center was reviewed.

Finance:

(FY 2002 Domestic Survey)

29 Mar.2001 E/N 137 mil.Yen (The project for Improvement of Health Centers in Western Part of Kenya 1/2)

12 Jul. 2001 E/N 653 mil.Yen (The project for Improvement of Health Centers in Western Part of Kenya 2/2)

Benefit effects:

(FY 2003 Overseas Survey)

It contributed to enhancement of the regional health care system for approximately 4 million residents in Nyanza and Rift Valley Provinces.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

- 1.The Project for the Improvement of Health Centers in Western Part of Kenya

1)Fund request: grant aid, March 29, 2001 exchange of notes(E/N) 137million yen, July 12, 2001 653million yen

2)Benefits: Health center and other health facilities in western part of Kenya. Reinforcement and improvement of District Health Referral Systems has been done.

- 2.Other progress:

New cooperation project aimed for improvement of safety of health medicare system and maternal and child health is planned to launch at March or April, 2005.

(FY 2008 Domestic Survey)

Kenya "The Study on Strengthening the District Health System in the Western Part of Kenya"

: By conducting the technical cooperation project (PROTECO) "Projects for Improvement of Health Services with a Focus on Safe Motherhood in Kisii and Kericho Districts" (from March 31, 2005 to March 31, 2008), JICA aims to improve health conditions of local residents (in particular, pregnant and parturient women) by working on improving care services for pregnant and parturient women, which are mainly provided by health centers and local communities.

: Based on the outcomes of the aforementioned technical cooperation project, JICA is now working on a new technical cooperation project "Nyanza Province Health Management Enhancement" (from July 1, 2009 to June 30, 2013), which aims to improve management abilities of provincial government's health department that supports healthcare services.

: Through the grant aid project "The Project for Improvement of District Hospitals in the Western Region of the Republic of Kenya" (detailed plan: E/N dated January 10, 2007, \ 70 million; the core project: E/N dated May 30, 2007, \ 1,263 million), JICA provided facilities and equipment for secondary medical institutions that would play central roles in the western region (two district hospitals in Kisii district, Nyanza Province, and Kericho district, Rift Valley Province). By improving the two district hospitals through this cooperation project, these district hospitals will be able to assume appropriate role-sharing with provincial hospitals that are facing way too many patients. Kisii District Hospital will be able to conduct 2,000 surgeries a year, including Caesarean sections, while Kericho District Hospital will be able to provide stable medical services for more than 80,000 emergency patients and outpatients a year. This is expected to also contribute to improvement in health/hygienic conditions and living conditions for local residents.

Description :

(FY 1999 Domestic Survey)

Kisumu is the third largest city in Kenya. It is the administrative center of Nyanza Province and Kisumu District. The city plays a strategic role in economic links between the three East African countries: Kenya, Uganda, and Tanzania. Comparing with other cities such as Nairobi and Nakuru in Kenya, the city has been suffered incomplete infrastructure facilities including water supply and sewerage systems. There has been no expansion in water supply capacity in the last ten years, though the population is estimated to have grown by more than 3% per annum, and the city is facing chronic shortage of drinking water. This has created serious water shortages with the resultant water born diseases and lack of water has constrained the growth of industry and employment opportunities. To improve this situation, the government of Kenya has requested technical assistance, and JICA conducted the study and a M/P for a long range water supply and sewerage systems in 2015 and a F/S for improvement program up to 2005 were identified. Based on the program, the government of Kenya requested grant assistance for water supply and sewerage improvement of the Phase I Project. The request has not been accepted. Later, the government of Kenya requested financial assistance by the Japanese government loan to implement the project. A loan arrangement has been suspended till today. One of the reasons was that an issue of exemption of loans for debtor nations was being discussed in G-7 Summit in Cologne, Germany, and the government of Kenya expressed its desire to be included in such debtor nations. For improvement of water supply and sewerage system, nothing has been decided yet.

(FY 2001 Domestic Survey)

The Yen loan for the water supply and sanitation facility development requested by the government of Kenya is a waiting situation for approval. And the other proposed projects are suspended to be requested as the Yen loan because of the financial situation of the government.

Subsequent Study:

(FY 2003 Overseas Survey)

Implementation Period: 2002

Financial Source: AFD(Agence Francaise de Development)

Contents of Study: Feasibility study for the rehabilitation

| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY 1999 Domestic Survey)

Kenyan side requested to the Japanese government for implementation of the construction of a new final disposal site and improvement of the collection and transportation system proposed in the F/S by Japan's grant aid assistance.

To implement these projects, NCC should carry out self-endeavoring actions to meet the preconditions. JICA will send an expert on a short-term basis to evaluate the status of the actions.

1) Human resource capacity cultivation program

(FY 2001 Domestic Survey)

There is no specific progress. It seems that this project was not implemented because of the financial problem of the implementing agency, Nairobi City and the low priority for the Waste Management Project.

2) Construction of a New Final Disposal Site

(FY 2001 Domestic Survey)(FY 2002 Domestic Survey)

The grant aid has not been approved yet.

3) Improvement of the Collection and Transportation System

(FY 2001 Domestic Survey)(FY 2002 Domestic Survey)

The grant aid has not been approved yet. One of the components of this project, "The Introduction of Waste Management at a Slum Area", was discussed and requested (date of request: Mar.2000) as the grant assistance for grass-roots projects, however it was not approved because the NGO who proposed it could not give an effective presentation.

Japanese Technical Cooperation (Dispatch of expert):

(FY 2001 Domestic Survey)

Dispatched Agency: the Environment Direction of Nairobi City

Field: Waste Control

Period: Long-term expert: from Jan.2001, Short-term expert: from Apr.11 to Jun.6, 2000

(FY 2003 Domestic Survey)

The implementation of the project is subject to self-help efforts of NCC, which is the implementation agency, and execution of the project is supposed to be considered after assessing the achievement conditions such as NCC's self-help efforts in enhancement of administrative capabilities.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2008 Domestic Survey)

It seems that there are no/little progress of the following 3 proposed projects. There is no sufficient information.

-Human resource capacity development program

-Development of the final disposal site

-Improvement of the collection and transportation system

Third Country Expert Dispatch - from the Philippines Implementing period: Short terms: January - March 2001 (two months), September - November 2001 (two months) Main objective: 1) Assess the Farmers' Organizations involved in smallholder irrigation, 2) Prepare a Farmers Organization Manual. Main activities: 1) Field data collection on Farmers Organizations, 2) Discussions with the Ministry of Agriculture technical staff, 3) Exchange of information with the main stakeholders, 4) Exchange of information through workshops for the key Irrigation and Drainage staff, 5) Preparation of Farmers Training Manual.</p> <p>5. Small Holder Irrigation Support Project (Community Empowerment Program) Implementing period: 15 August 2000 - 14 August 2003 (three years) Funding party: JICA, ECLOF-Kenya (NGO) Main objectives: 1) Strengthen Farmers' Organizations through trainings, 2) Provision of extension services to farmers, 3) Improvement of irrigation facilities. Main activities: 1) Training of farmers on leadership, group dynamics, financial management, etc. 2) Provide extension service to farmers through collaboration with Ministry of Agriculture and Rural Development, 3) Improvement or development of irrigation.</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2004 Overseas Survey) 1. Community Based Smallholder Project 1) Target: Ministry of Agriculture technical staff, Farmers Organizations, Target area: National scale. 2) Status: Three kind of documents for preparation of improvement work for the smallholders were created. 1) Irrigation guideline. 2) Framework of Farmers Organizations. 3) Human resource development guideline. 3) Benefits: Government officials are able to obtain updated information, it is possible to transmit effective information about the irrigation to smallholders. All the technical staffs in Irrigation and Drainage Department are making benefits of the project. Farmers Organizations has been strengthened by the promotion which covers throughout the country.</p> <p>(FY 2008 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2008 Overseas Survey) 1. "Promotion of sustainable community based smallholder irrigation development (mini project)" and "Farmers training for promotion of community based smallholder irrigation development (in-country training)". Implemented with Grant aid - Increasing and stabilizing agricultural production by implementing community based smallholder irrigation. Implemented training by dispatched experts - 250 participated in the training (200 farmers, 40 extension workers, 10 stakeholders in the irrigation sector) Effect: 1. Gaining the knowledge and skills of smallholder irrigation development, 2. Gaining the knowledge and skills of agricultural production, 3. Improving knowledge, skills and approach to farming, to strengthen the ability of smallholder irrigation development projects.</p> <p>2. Development of participatory smallholder irrigation (Dispatch of TCE) Implemented by dispatch of experts (1. Sustainable irrigations guidelines, 2. Evaluation of the three outputs of the mini project, 3) Completion report for the mini project.)</p> | | |

Description :
(FY 1999 Domestic Survey)
No outstanding actions are taken by the government of Kenya as not much time has passed from the completion of the study.

(FY 2002 Domestic Survey)
Projects, prepared before this Study, have nearly has eventually started. Therefore, it will require time to launch implementation of the proposed projects.

(FY 2003 Domestic Survey)
Although the implementation of the proposed project has been delayed in terms of fund raising, such projects as Raikia Undergroundwater Development and the Meru Water Supply Project were implemented under JICA Grant Aid after implementation of the studies. Priority projects proposed in the studies are aiming at implementation in one to two years and the Kenyan government has requested for implementation of local water supply projects in four prefectures including Machakos Prefecture within the framework of grant aid.

(FY 2003 Overseas Survey)
Data obtained from these studies and proposals were widely used in the preparation stage of the "Water Resources Department Investment Program" intended for water supply projects and water and sewerage repair projects.
Various reforms of the water resources department are in progress associated with establishment of the New Kenya Water Act in 2002. The New Kenya Water Act stipulates that ministries should concentrate their services on policy making and policy direction in future and newly established organizations should take over the conventional services of the ministries. Under these reforms, it will take time to completely prepare the system where projects proposed based on the studies can be implemented.

(FY 2004 Domestic Survey)
1. Proposed project: Development plan of underground water in 4 prefecture including Machakos(Local water supply plan)
2. Funding: grant aid, November 2,2004(phase-1)
3. Funding amount: 279million yen
4. Contents: construction of water supply facility, provision of related equipment, soft component about operation management

(FY 2008 Domestic Survey)
Project to be implemented: Project for Rural Water Supply Phase-2
Assisting country: Japan (grant aid), E/N concluded: May 30, 2007
Targeted area: Machakos and Makuyuni districts in Republic of Kenya
Contents: construction of hand pump at 22 sites, construction of submerged pump at 36 sites, construction of wind mill pump at 7 sites
Objective: To increase the number of population, who are supplied with water safe for drinking, from 440 thousands to 510 thousands in both districts of Machakos and Makuyuni; To increase water supply ratios from 36% to 41% in Machakos district and from 14% to 18% in Makuyuni district; To decrease water-related diseases by use of safe water; and To contribute to improvement of living environment.
Condition: Construction has not yet been implemented because of unsuccessful bidding. At present, JICA is preparing a project formulation study.

Description :
 (FY2001 Overseas Survey)
 The improvement of rural roads in Western Kenya has been completed.
 Extending Japan's Grant Aid has been requested to facilitate the improvement of key proposed projects.

(FY 2002 Overseas Survey)
 Sep.2000, Government of Kenya formally requested for Japanese Grant Aid and the estimated cost of the improvement works supply of construction equipment and capacity building through transfer of technology was 19.96 mil. Yen.

Beneficial Impact:
 Target group: the rural communities whose livelihood depends on agriculture.
 The improved roads would improve accessibility to markets, schools, health centers and other social amenities. This will go towards the country's goal of alleviating poverty and improving the standards of living of the rural people who are predominantly agriculturalists and fishermen/women.

(FY 2004 Domestic Survey)
 No information to be specifically mentioned.

(FY 2004 Overseas Survey)
 Requested Grant Aid (1.96 billion YEN) for the "Rural Road Improvements in Western Kenya" on January 2001

(FY 2005 Domestic Survey)
 No information to be specifically mentioned.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2002 Domestic Survey)

To follow up the verification projects implemented during the Study, JICA dispatched a team and the report on the follow up was made as a part of the Research on Method of Rural Development in Africa, Third Year, March 2002. JICA adviser for Ministry of Agriculture and Rural Development in Kenya has also visited the verification project sites after the completion of the Study. It is expected that further technical cooperation by Japanese government would take place.

(FY 2003 Domestic Survey)

Dispatch of Experts: one JICA expert was dispatched to provide technical guidance to the Ministry of Agriculture.

It has been reported in the newspaper of Kenya that the seed goat introduction project, which was implemented as an empirical project, has been expanding under the guidance of local diffusers. Specific numeric figures are unknown.

(FY 2003 Overseas Survey)

1) Female groups implemented small-scale industry promotion (honey, handcraft) and obtained income from local trading facilities, honey shops and hotels. 2) The vocational school was provided with support of training materials and furniture (and appliances) at the time of the empirical study of this study in order to activate the income enhancement program with the objective of reinforcement of the vocational school. This contributed to enhancement of the quality of the training project for these school and increase in supply (viz. shipping amount) of furniture to the neighboring cities including the Marigat region, Nakuru and Kabarnet. 3) The recognition became widespread among local residents that introduction of Rainfed Agricultural Technology will allow them to farm even in the arid zone, resulting in enhancement in food security. 4) The implementation of the improved goat breed introduction project will contribute to income enhancement in the region as well as securing of food through improvement of the local goat. 5) A request to JICA has been made to implement the local development project.

(FY 2004 Domestic Survey)

Dispatch of experts: We have heard that an expert is on duty for a preparation to implement technical cooperation project in 2005 at the earliest. However, this project is based in Kerio Valley, which is next to Baringo, and it is not known whether Baringo is included or not.

(FY 2004 Overseas Survey)

"Community-based Agriculture Development Project"

1. Objectives: To realize self-sustenance through environmentally sustainable method within the target community.

2. Dispatch of Experts: 1 personnel

3. The study has started when reclamation was under jurisdiction of the Ministry of Agriculture. The division is now under the Ministry of Water and Irrigation.

(FY 2005 Domestic and Overseas Survey) (FY 2006 Overseas Survey) (FY 2007 Overseas Survey)

Implemented project: Community agricultural Development project in semi arid lands of Marakwet and Keiyo districts (CASDEL)

Area: Marakwet and Keiyo districts (semi arid lands)

Implementing period: October 2005 - October 2010

Implementing body: Ministry of Agriculture, Kenya

Funding:

Funding party: JICA (technical cooperation project)

Amount: JPY 380mil

Objective: To increase agricultural production in semi arid lands in Kenya.

Contents: 1) Supporting making and implementation of plan whose main constituents are residents. 2) encouraging multi-dimensional extension service 3) popularizing adequate technique of producing field crops and livestock 4) making guidelines for community agricultural development 5) supporting community lives including crops and livestock 6) introducing crops and livestock which have tolerance to flood.

Relation to mentioned study: Government of Kenya requested for this project which aims to agricultural development by utilising residential organization, to implement Marakwet and Keiyo districts that are next to Baringo district, and to reflect knowledge acquired from master plan of the project to the design of the project.

Benefit:

Beneficiaries: Residents of farmers' villages in Keiyo and Marakwet districts.

Technical cooperation:

Training: Courses related to an approached to community organization and sustainable development

Dispatch of experts: to implement technical cooperation project

Long-term experts: 2 personnels, for 3 years

Short-term experts: 7 personnels, for 8 weeks

Status:

(FY 2005 Domestic and Overseas Survey) preparing for the implementation

(FY 2006 Overseas Survey) basic study was implemented, 3 motorbikes were purchased, several community workshops were held, top-down and bottom-up activities are going to be done.

(FY 2007 Domestic Survey) Mid-term evaluation will be done in FY 2008.

Implemented project: Sandai Irrigation improvement project

Benefits:

Beneficiaries: 300 households (Marigat in Baringo district, Sandai location)

Benefits: Improvements have been made at the 2004 project for the water ways, which have stabilized water supply. The Kenya Seed Co. has made a contract with Sandai farmers for the hybrid maize seeds, which was priced higher than the edible seeds. Approximately 300 households have profited about 600 million KSH in total.

Implemented project: Rainwater agriculture improvement

Benefits: Expanded to 8 villages, 187 farming households, and estimated land of 215 acre by diffusion activities conducted by the C/P in 2005.

(FY 2006 Domestic and Overseas Survey) No information to be specifically mentioned.

(FY 2007 Domestic and Overseas Survey) No information to be specifically mentioned.

Description :

(FY 2003 Domestic Survey)

As a result of the monitoring conducted in the final phase of this study, it was confirmed that the management of the current road maintenance system was introduced and improved based on many of the recommendations of the JICA study team, under the Kenyan Roads Board.

As a result of this Study, it was decided that the following matters should be implemented by getting appropriate support from the Donors such as JICA.

1.Updating Data of Road Inventory, Road Condition and Traffic urgently and continuously 2.Implementation of making Database for the past records and observational data 3.Design of Pavement and Proper Maintenance of Execution Quality 4.Improvement of Law and Institutions about Road Maintenance Management System including financial and technical issues 5.Improvement of the Uniformed Manual in Kenya necessary for making Work Plan 6.Improvement of Standard Contract for Simple Machine(LBES) or Implementation of Machine-based Project 7.Rationalization and Privatization of Mechanical and Transport Department (MTD) 8.Utilization of Kisii Training Center (KTC) 9.Training and Ability Improvement for nongovernmental section 10.Experimental Study Project by JICA or other Donor 11.Dispatching Long Term Specialists to KRB by JICA or other Donor

Moreover, it is worth to be mentioned that World Bank has implemented the project of classifying all roads in Kenya based on Road Inventory Study.

On the other hand, last fiscal year, request for Aid was sent to Japanese Government as a primal matter of the Government of Kenya. This request is for the Development Project aiming to ease Traffic Congestion in Nairobi City. The process was based on improving Road Maintenance System through this Project. This request was accepted by Japanese Government, and S/W Study will be implemented soon in this fiscal year(From Jan. 2004 to Feb. 2004).

(FY 2003 Overseas Study)

1.Updating Data of Road Inventory, Road Condition and Traffic urgently and continuously(Present Situation:Collecting Data of the Classified Roads 60% of Completion)
 2.Preserving Information and Data about Road Improvement by computer (Present Situation:To be implemented after the completion of proposal)
 3.Strict Control for Pavement Design and Construction(Present Situation: Completed)
 4.Improvement of Law and Institutions about Road Improvement(Present Situation:On the way of reviewing KRB Law)
 5.To structure National System in Preparation for Activity Plan(Present Situation:System Structure by KRB is in process.)
 6.Rationalization and Commercialization Plan for Mechanical and Transport Division(Present Situation:Commercialization is in process. Legal Status was obtained.)
 7.To establish Kisii Training Center for the purpose of Increasing Source of Income(Present Situation:Establishing more Training Courses for Local Residents and Attendants from Abroad)
 8.Promotion of Program for Private Company Capacity Building(Present Situation:Training Project for Small-Scale Contractors is in process. Utilization of Nongovernmental Section in the Road Improvement Project is in process.)
 9. Suggestion: Pilot Study for Observation and Evaluation of Implementation in accordance with Proposed Project in Development Study(Present Situation:Not started.)

(FY 2004 Overseas Study)

The specialist was dispatched according to the proposal in the Study.

Technical Cooperation:

Specialist Dispatch: Long Term Specialist: Instruction for the Maintenance base on the Road Maintenance Manual(1person, Feb. 2003 - Feb. 2005)

(FY 2006 Overseas Study)(FY 2007 Domestic Survey)

Implemented Project: Road Maintenance Unit Establishment and Activities (Japanese Technical Cooperation for the Specialized Road Maintenance Unit)

Implementing Period: Dec. 2005 - Dec. 2008

Funding:

Funding by: JICA (Technical Cooperation Project E/N Date of Conclusion Feb. 2005)

Funding Amount: JPY 111 million

Objective: Proposal for Rational and Effective Road Maintenance System by Making Plan and Implementation for proper Road Maintenance Project, and Improvement of Technology for Pavement Repair

Benefit:

Beneficiaries: Whole of Country

Benefits: Improvement in Pavement Repair Technology

Technical Cooperation

Specialist Dispatch:

Long Term Specialis: 1 person(For 3 years) Short Term Specialist: 1 person(3 x 3 month term)

Term: 2005/12/09-2008/12/08

Training: 3 persons: Road Project and Maintenance(Aug. 2004 - Sep. 2004)

Content: To improve an efficient and effective Road Maintenance System, by proper Plan and Implementation of Road Improvement Project and Improvement of Pavement Repair Technology, owing to dispatching Short and Long term Specialists.

Project Activities:

1. To establish Organization for Road Maintenance Management by introducing Preventive Management, Implementation of Activities
2. Recommendations and Proposal for Plan of Rational Road Maintenance Management in Nairobi
3. recommendations and Proposal for Utilization of Road Maintenance Management Manual
4. Improvement of Pavement Repair Technology

Project Outcomes:

1. Reinforcement of Structure of Road Department related to Road Maintenance Management
2. Reinforcement of Road Department by Making Road Maintenance Work Plan and Improving Ability to distribute Road Maintenance Budget
3. To implement constructions properly, based on Road Maintenance Manual
4. To improve Technology Level of Road Maintenance Construction by Road Department. Materialization of High Level Road Maintenance Management

Description :
 (FY 2006 Domestic Survey) (FY 2006 Overseas Survey)
 Grant aid of JPY 12 million was requested for Nairobi missing link construction (No.3, 6 and 7). The project designs and constructs a road of 8.4 km which connects the Westland roundabout and the Yaya center junction in Nairobi (including the construction of 3 bridges).

(FY 2007 Domestic Survey) (FY 2007 Overseas Survey)
 Implemented Project: Likoni Road Missing Link Construction Plan
 Implementing Period: May. 2007 - May. 2009
 Implementing Body: Ministry for Local Government
 Funding:
 Funding by: Own Fund
 Funding Amount: KSH 429 million(1JPY = 0.6656KSH)
 Objective: Missing Link Project(To connect Enterprize Road to Mombasa Road, To ease traffic congestion in Industrial Area) Repairing the existing Road between Jogoo Road and Lungalunga Road(1.7km), including Improvement of the drains. The existing Enterprize Road(1km) will be reorganized and become total length 3.3km.

Relevance with the Heading Study: Likoni Road Missing Link is considered as one of the priority projects in Master Plan of Nairobi Metropolitan Transportation.
 Post-Completion Maintenance and Management Body: Kenya Urban Road Authority
 Benefit:
 Benefits: Cars for Mombasa direction will not have to detour to Nyayo Stadium, so their transfer time will be drastically reduced.
 Beneficiaries: Drivers from Industrial Area
 Progress:
 (FY 2007 Domestic Survey) (FY 2007 Overseas Survey) Rate of Progress of Design and Construction 15%

(FY2012 Domestic Survey and Overseas Survey)
 No information.

Description :

(FY 2008 Domestic Survey)
 The development study proposed the method of formulating DDP through participatory approach. It was expected that this method could be applied for the preparation of DDP for the 9th period (i.e. 5 years from 2009). While it has not yet been confirmed whether it was actually adopted, there is information that the C/P agency has requested African Development Bank to provide assistance to apply this method. Farmers' groups that participated in the pilot projects for paddy production has organized CBOs (Community Based Organizations) and has been disseminating the improved techniques for paddy production to others. It seems that they conducted demonstration activities at the Agriculture-day show which were organized by a district and region.

(FY2012 Domestic Survey and Overseas Survey)

Description :
 (FY 2009 Domestic Survey)
 The following operations are in progress:
 1. Strengthening of existing dike, equipping an evacuation route that connects to the communities that were damaged by the flood.
 Funding Source: Partly raised by Kenya's own national funds.
 2. Strengthening of community flood management capacity (Nyando Catchment Community Participatory Integrated Flood Management Project)
 Summary of the Project:
 1. Structural Measure (Development Scale: 10-Year Probable Flood)
 2. Community Participatory Works with Government Assistance
 3. Community Initiative Works (Flood Management by Community-Based Organization)
 Funding Source: Targeting 24 villages, (a) community disaster prevention operation is being carried out as an environmental program that is applicable for receiving grant aid.
 Amount of Investment: 5,013 million Ksh
 Implementation Period: 2008.3 - 2012.12

(FY 2009 Overseas Survey) No information.

(FY 2013 Overseas and Domestic Survey) No information.

Description :

The coup d'etat in March 1980 resulted in the suspension of the project. The project was considered completed, when the OECF loan for the purchase of construction machinery was approved in 1979 and subsequently disbursed.

Finance:

Mar.1979 L/A 4 bil.Yen (Road Development Project)

***Contents of project**

The construction works and maintenance job of the following roads.

The Yen's Loan is used for construction equipment and management works needed for the Project.

- 1.Feeder road (1,500km).
- 2.Program of road maintenance.
- 3.Monrovia street.

Situation:

(FY1994 Domestic Survey)

The Government of Liberia declared the default of OECF loan amount to 6 billion Yen including 4 billion Yen for the road construction in 1981 after that international financial cooperation has been suspended.

The present Government has been fighting with Liberia Patriotic Front since Dec.1989.

It is considered that Liberia is not the subject country for economic cooperation.

Description :

The following projects have been implemented based on the prepared Master Plan.

The Project for Reconstruction of Somalia Drive in Monrovia (grant incl. D/D)

Total Cost: 4740 million yen
From April 2013 to May 2016

The Project for Rehabilitation of Monrovia Power System (grant incl. D/D)

Total Cost: 2071 million yen
From February 2013 to January 2015

(FY 2015 Domestic Survey)

The Project for Reconstruction of Somalia Drive in Monrovia (B/D)

Period: from January 2012 to January 2013
Implementing Organization: Ministry of Public Works

As for the water supply, the official request was made to Japan for B/D and Grant Aid; however, projects were not realized because the good quality of water resources from underground appropriate for drinking water was not secured.

Description :

(1)Southern Microwave System

Finance:

Dec.1978 L/A 4,500 million yen

(Microwave telecommunication facilities in the Southern area)*

*Contents of project

- 1.Rout:Line-of-sight in the segment of Tananarive - Finarantsoa - Tulear. Extention of 740 km.
- 2.Stations:Tertiary station, junction, relay station, transmission station (33 stations in total, 24 new stations)
- 3.Telecommunication System:2+1 system (1 telephone, 1 television, 1 reserve)
- 4.Capacity: 960CH 4GHz
- 5.Main equipment: Telecommunication equipment cable, steel tower, installation of equipment, testing

Construction:

1982 completed

(2)Reconstruction of Microwave in Southern and Northern Area

(FY 1996 Overseas Survey)

Finance:

Jan.12.1994 E/N 564 mil.Yen

*Contents of project

Reconstruction of microwave and provision of spairparts and solar power supply equipment financed by OECF loan. In the basic design study, establishment of reliable and efficient maintenance organization was recommended.

| 9. SITE OR AREA | Improvement of 230 km between Soanierana Ivongo - Maroantsetra | | |
| 10. MAJOR PROPOSED PROJECT(S) | | | |
| <p>The area of the project is located on the national road No.5(Soanierana Ivongo-Marosantsetra 230 km) in Madagascar. This project was born from the need of producing the all-weather roads to be linked with each state and points of inner state of this region. The main point of this project is improvement of the minimum requirements of the public traffic facility of existing roads in the area. In many places and times the traffic has been tied up even in dry seasons, as well as wet seasons in this area. Accordingly the traffic is open only to the motor vehicles with four-wheel drive. For effective improving of the above defects, the following was recommended as the construction method.</p> <p>(1)Emergency Measures : Betterment on the road of one lane with gravel carriage way surface will be executed for dry season's smooth traffic of trucks and vehicles with four-wheel drive.</p> <p>(2)Urgent Countermeasure : Though this implementation programme is almost the same as the Emergency Measures, passenger cars would be included in the objects of the traffic, and renovation degree would be increased according to the extent of the traffic demand for shortening blocking time of the passage of the cars.</p> <p>(3)Permanent Measures : Setting aside the stoppage of the traffic in the rainy seasons, for the purpose of shortening the suspension time of the passage of the cars, construction of the two lane all-weather roads would be carried out on the basis of the economic analysis of the project.</p> | | | |

Description :
 Subsequent Studies:
 Apr.1991 B/D commenced
 Jul.1991 Report submitted

Finance:
 Jul.1992 Grant Aid E/N 603 mil.Yen for Groundwater development in Southwestern Area, Phase 1/2
 Jun.1993 Grant Aid E/N 322 mil.Yen for Groundwater Development in Southwestern Area, Phase 2/2-1
 1994 Grant Aid E/N 187 mil.Yen for Groundwater Development in Southwestern area, Phase 2/2-2

Contents of the project:
 Excavation of well in 50 villages, construction of water supply facilities and provision of equipment.

Construction Trader:Itochu/Tone

Construction:
 Phase I Construction: Dec.29.1993 Completed and handed over
 Phase II Construction: Feb.4.1995 Completed and handed over

Maintenance & Operation:
 Because the regional office of MEM neglected its duty, the constructed facilities were not well utilized. However, the situation has been greatly improved since the personnel changes in 1996. (FY 1996 Domestic Survey)

In 1997,local water committees were organized to implement continuous monitoring of the facilities, to carry out practical training and to provide information to the villages relating to the project. (FY 1996 Overseas Survey)

Effect:
 The occurrence of water-related diseases has been reduced. Furthermore, some women were assigned to members of the management committee, which contributed to the improvement of social status of women. (FY 1996 Domestic Survey)

Detail:
 (FY 1993 Overseas Survey)
 Although OJT conducted by JICA was useful, the knowledge and skills acquired in Japan are not applicable in Madagascar because of the lack of the materials and the equipment used in the training. Therefore, the Government of Madagascar plans to request materials, with which training is conducted, from now on.

(FY 1995 Domestic Survey)
 Mar.1995 -Nov.1996 Underground Water Development Survey in Onilahy Morong Dava District, targeted area of this project.

(FY 1996 Domestic Survey)
 At present, the implementation of "Groundwater Development in Southwestern Area (Phase II)" is requested to JICA.

Description :

(FY 1996 Overseas Survey)

1994 Regarding to the urgent rehabilitation plan of the Port of Antsiranana, the government of Madagascar made request for grant aid to the Japanese government, however any reply has come yet from the Japanese government.

1995 The government of Malaysia offered to implement the Antsiranana port rehabilitation work.

1996 The government of Madagascar and the government of Malaysia failed to reach agreement because of the condition raised by the Malaysian government to lease the Antsiranana port to Malaysian companies for 50 years.

(FY 1997 Overseas Survey)

The government of Madagascar is waiting for response from Japanese government.

Description :

Financing:

(FY 2001 Domestic Survey)

Apr.2, 2001 E/N 347 million Yen "Groundwater Development Study in South-Western Region (Phase 2)

Contents of the Project: Construction of water supply facility of the foot pump (121 pumps) and rehabilitation of the deep well (8 wells) for 54 villages in Menabe Prefecture; Construction of small scale water supply facility for 7 villages, Provision of related equipment, Promotion activity and technical transfer like maintenance of the facility to the villagers concerned, Implementation of technical transfer on the groundwater development, construction of water supply facility and upgrading of maintenance capability to the governmental organization.

(FY 1997 Domestic Survey)

Existing sources of water in visited 89 villages are contaminated entirely by bacteria . 34 villages of them have ever been provided with safe water, but due to very poor maintenance service, those facilities had short life span of only 2 to 4 years. Judging from the situation, it can be determined that the resident-based maintenance and management system did not take root in the communities. The Toliara Regional Office of MEM responsible for maintenance service in this area has long neglected their duty of maintenance and management service and of education.

As a Phase 2 of the groundwater development plan in the southwest region conducted from 1989 to 1991, the study targets the northern area from the previous study area across Mangoki River. After the Phase 1 survey, water supply facilities have been constructed in 50 villages by the Japanese Grant Aid. Under the study, a follow-up survey on the implementation of the Phase 1 was carried out, and a maintenance and management plan was established based on the observation of the condition of the maintenance and management of the facilities.

The supervisory ministry of the project is the Ministry of Energy and Mine, and its local department in Toliara has been assigned to be in charge of providing services in the area. However, considering the insufficient management capacity of the Toliara local department and the inconvenience of transportation in the area, it was decided that an office for project management should be established within the study area.

The Ministry of Energy and Mine accepted this recommendation and set the project management office in Morondava. The ministry also has requested for a grant aid concerning the project, which has not been approved yet.

The government of Madagascar made a request of Japan's Grant Aid for implementation of the phase 2 project, based on the result of the study at the end of March 1996. But the request has not been accepted by the Government of Japan, as of the end of 1997.

(FY 1998 Domestic Survey)

Although the requests for the Basic Design Study were submitted to Japanese Embassy in September 1996 and in June 1998, they were not accepted.

Regarding the funds procurement, the request for a grant aid assistance was submitted in June 1998, but it was not accepted.

The amount requested: 11,132,000 USD

Contents: Construction of facilities for rural water supply (- Administrative office of water supply, - Construction of 113 wells in 60 villages: hand-pump wells in 35 villages and power pump-up facilities in 25 villages) (diesel electric power generation: 17, photovoltaic generation: 8).

The reasons why the above requests were not accepted seems to be conceived that the similar project "Water Supply Project in the Southern Region" is on-going and the capability of MEM for implementing the project is worried.

MEM is unable to implement the projects with their own fund and they intend not to submit the request to other aid agencies. Therefore, they highly expect the Japanese government to provide assistance.

(FY 2000 Domestic Survey)

South Area Water Supply Study has no relation with this projet.

Description :

(FY 2000 Domestic Survey)
 This study not only aimed to produce a 1:10,000 - scale level urban base map and construct land condition and land use database for Antananarivo City and its surroundings (250 km²), it also constructed urban facility database (roads, waterworks, sewerage, electricity, communications) for the pilot area (15km² of the study area). With the cooperation of various relevant agencies, particularly FTM, field surveys and the corresponding work in Japan were carried out smoothly in about a year, from October to November 1999.

The surveys carried out in the course of this study tried to use as much of the existing 1:500 and 1:2,000 digital data as was possible in consideration of work efficiency and to cut costs, although surveys were carried out to gain data on areas that were totally without any past records. During the conduct of the survey work, technical transfer - in aerial photography, ground control survey, etc. - was carried out in the form of on-the-job training.

Overall, FTM was highly technologically capable, a qualification that was forecast to further improve through actual involvement in the project implementation process. In contrast with analogue data, these digital data will facilitate the alteration of map scale, update of secular changes, archiving, etc., and therefore offer enough flexibility to meet the diversified needs of the users.

Being an experimental task (pilot study), the use of the facility databases may be limited at present. FTM, however, is expected to become capable of independently operating these databases for other uses through the experience and skills gained from on-the-job training, training in Japan, workshop at the site, etc., carried out under this project - activities that mainly focused on GIS data update and expansion techniques.

The GIS created in the course of this study is divided into topographic map data, infrastructure data, land condition data and land use data, and is expected to play an essential role in the formulation of urban plans for Antananarivo in the Republic of Madagascar.

(FY 2003 Overseas Survey)
 At first, a cartographic database at 1: 10,000 scale covering the area of 250km² including the capital and its surroundings was prepared in 1998 for geographic information system of Antananarivo or BD10. Later, other periphery communes that were originally out of scope of the project came to desire improvement of their geographic information for the need of their regional development. In response to those demands and for the purpose of promoting mutual development of regions, the coverage of BD10 is expected to be expanded to 1,100 km² including the communes in the Grand Tana area.
 Benefit effects: this project is bringing about positive effects to all spectrums of citizens through provision of a powerful decision making support tool in terms of various socioeconomic sectors of Dakar.

(FY 2004 Domestic Survey)
 No information

(FY 2009 Domestic Survey) No information to be specifically mentioned.

(FY 2009 Overseas Survey)
 -This project enabled capital region to bring the geographical information and the large-scale digital mapping system. They are essential tools for all public and private operators who are in the capital.
 -After the completion of this project, many users acquired digital maps and digital data at National Geographic and Hydrographic Institute, Ministry of Territorial and Urban Management (FTM: FOIBEN-TAOSARITANINI MADAGASIKARA). The FTM established the geographical information database from the digital maps which are the efforts of the project. The department of development of Antananarivo requested to the FTM to complete the data from the project. The range of the area was about 700 square kilometers (The targeting area of the JICA project was 250 square kilometers).
 -The result of the project was highly appreciated. Therefore, other required conditions in order to scale up the area of the project were established. Regarding to the reform of the data is also the same. This episode indicated that the project gave an enormous benefit to the country, or especially to Antananarivo.

| 5. | Ministry of Water and Forest in Madagascar | | |
| COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | | |
| PRESENT COUNTERPART AGENCY | Directorate of Water and Forests (title changed due to organizational reform, according to the FY 2004 Survey) | | |
| 6. OBJECTIVES OF THE STUDY | 1. To develop a watershed management plan in Mantasoa and Tsiazompaniry and assess its feasibility. 2. To transfer relevant technologies to the counterpart personnel through the Study. | | |
| 7. CONSULTANT(S) | Japan Overseas Forestry Consultants Association KOKUSAI KOGYO CO., LTD. | | |
| 8. STUDY PERIOD | Mar.1998 ~ Oct.2000 31month(s) ~ | | |
| 9. SITE OR AREA | The watersheds of Lake Mantasoa and Lake Tsiazompaniry located in the southeast of Antananarivo, Capital city of Madagascar. 90,000ha | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>In viewpoint of watershed, its self and living zone of local people, the study area was classified into two zones, and forest management plan and participatory watershed management plan were formulated in the respective zones.</p> <p>1. Forest Management Plan: Action plan of thorough management to prevent forest fire and illegal logging with a purpose for improving mainly the quality of natural environment.</p> <p>2. Participatory Watershed Management Plan: (1) The plan was formulated with the following preconditions based on the results of Pilot Study(PS) a) To prepare the plan by village types (3 types), b) Each plan contains the activities of fruits trees, compost making, hedgerow, fodder plants, seedling production, planting, ZODAFARB (the system for acquisition of land ownership by implementing afforestation) and fish farming as component of the plan, which are generalized based on response and interest of local people, c) To calculate number of participants by using the results of PS, d) The plan of one village is implemented in 3 years(1 year for planning and 2 years for implementation), and the plans by village type are initiated shifting respectively in 1 year, e) All villages in the study area are finished their plans in 5 years. After finishing all 10 villages, evaluation is conducted and the next action program will be decided. (2) The plan was formulated within labor capacity possible through a year without difficulty. (3) Plantation acreage is planned to be 620 ha per year on average at the time when the project starts in each village. If the villagers continue their efforts at their own initiatives after the implementation, the total plantation area will be 5,000 ha in 10 years. (4)As the population problem is one factor of degradation of watershed, dissemination program for family plan is included in the plan.</p> <p>3. Implementation Organization: The plan covers wide categories. Accordingly, Implementation organization consisted of the authorities concerned will be set up in the central and local offices and NGO will be responsible for field.</p> <p>4. Implementation Term: The implementation period of the project is set to 5 years for the time being.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description : (FY 2001 Domestic Survey) Situation after the study are as follow. 1. Follow-up for facilitating self-reliance of Anaramihoatra Village One village(Anaramihoatra) among the four (4) villages where the PS was implemented , has almost reached to the level of self-reliance. The village was not included in the plan but treated as a model village. As the result of the follow-up (2000/Nov/15-2001/Mar/26) for facilitating self-reliance, Anaramihoatra was evaluated that it has the ability of self-management and needs more instructional support (by the Ministry of Water and Forest) to have confidence. The village continued the activities like seedling production, planting and agro-forestry after the follow-up in 2001.</p> <p>2. Support for implementing the project When the study was completed, the Ministry of Water and Forest seemed to have difficulty in carrying out the project due to financial reason. For this reason, JICA suggested the Ministry to apply for the Gender Scheme of UNDP, and the Ministry submitted a proposal to the UNDP local office in Madagascar in May 2001 by JICA's support (JOFCA was in charge). Present situation after that is unknown because there is no information from the Madagascar side.</p> <p>3. Assistance by other organizations In addition of the above , FAO' s small scale project (budget : 50,000 USD) was approved in 2001. This fund does not include the cost for NGO to carry out dissemination activities, but only for direct expense in the field. Therefore, the Ministry of Water and Forest had considered if they carry out it by themselves, or through NGO (in July 2007). However, the present situation is unknown because there is no information from the Madagascar side.</p> <p>(FY 2002 Domestic Survey) 1. Autonomous management of river basin;It was ascertained that the project would be provided to each targeted village, only limitedly. The main points of current situations of the projects are: 1.1 Afforestation (mainly eucalyptus) and agroforestry (especially rehabilitation of agricultural land) have a tendency to expand mainly to private land in each village; 1.2 The technology of Rice field aquafarming has already expanded to more than 20 households in Angodongodona village, and alevin has distributed even among them. However, its output production is hardly high, there remain some challenges in cultivation of plans for feeding. 1.3 Since the technology of fruit farming are strongly requested, it has been expanding gradually through technology transfer by Japanese expert(s). However, there are some difficulties in responding to request in seeding. 1.4 The production of compost has been utilized in each village.</p> <p>2. Assistance to the project implementation Considering the above, the feasibility of implementing the project through the Community Empowerment Program, Grass-root grand aid, UNDP-GEE Global Climate Change Mitigation Program</p> <p>3. UNDP headquarter informed that the proposal of UNDP's gender project has not been accepted, and appointed to go for advise with JICA.</p> <p>(FY 2003 Overseas Survey) No technical cooperation projects has been executed except technological assistance provided by respective experts of domestic NGOs. Implementation of a complementary project aiming at dissemination of technological results obtained in the feasibility study was proposed with domestic NGOs. This project is intended for 11 villages scattered in the basin of both Mantasoa and Tsiazompaniry regions. Our proposal has not been accepted yet.</p> <p>(FY 2004 Domestic Survey) Status in fiscal year 2004 are as follow. In Anaramihoatra village, which the follow-up was conducted, in addition to independent activities conducted by the villagers, forestation activity, through the assistance of a expert (individual dispatch), has been continued without having discontinued.</p> <p>(FY 2005 Domestic Survey) (FY 2005 Overseas Survey) Villagers are continuously working on with forestation (nursery tree plantation, agro-forestry) with an assistance from currently dispatched experts, in addition to positive attitudes shown. On the other hand, follow-up on forestation by the Directorate of Water and Forests, and registration for land rights has not yet been implemented, which comprise potential problems, such as discontent among local residents. Additionally, though not as much as Anaramihoatra village, some villagers are continuing forestation and agro-forestry in Angodongodona village.</p> <p>Technical cooperation: Dispatches of expert to DGEF for a follow-up</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY2007 Domestic Survey)

Implemented Project : Survey of issue evaluation making by wide-area planing and research investigator(local water supply) of southeastern Africa region supporting office

Implementing Period : from July, 2007 to 0.2MM

Implementing Body : Department of Water Health and Safety in Ministry of Energy and Mine(MEM, DEA), Public Corporation of Water Supply in Southern Area(AES)

Objective : The objective is to provide safe water and improve the living environment of 278 thousand local poor that live in arid climate where daily life water is very scarce and the water supply degree in present is only 3%.

Result :

- 1) Urgent water supply : Improve water supply for about 40 thousand people by utilizing the underground water of Ambovombe city(well that succeeded test digging).
 - 2) Short-term water supply : Supply safe water for 240 thousand people in local village(well in Antanimora that succeeded test digging) to local residents that is poor in safety drinking water, by natural flow-down style pipe line.
- Others : The amount of precipitation of the southern area is only about 500mm and is in lack of drinking water. In current condition, they utilize water pooled in the road of rainy season. Urgent realization of the project is expected because environment of the area is most harsh and poor in the world.

(FY 2009 Overseas Survey) No information to be specifically mentioned.

(FY2012 Domestic Survey and Overseas Survey)

No information.

Description :

(FY 2008 Domestic and Overseas Survey)

1. Project on rural development and watershed management in the south-west region of Alaotra

Subsequent Study: Special Assistance for Project Formation (SAPROF) for watershed management and irrigation project in the south-west region of the lake Alaotra

Objective: To facilitate project formulation promptly and accurately by examining the contents and plans of projects such as of reforestation, the prevention of soil erosion and the rehabilitation of irrigation schemes

Implementing period: Aug. 2008 . Mar. 2009

Implementing body: Ministry of Environment, Water, Forest and Tourism; and Ministry of Agriculture, Livestock and Fisheries

Aid agency: JICA

* Yen loan has been requested.

2. Project for strengthening the function of irrigation schemes in PC23 southwestern area

Subsequent Study: Basic design study for irrigation renovation in the south-west region of the lake Alaotra

Objective: Basic design for rehabilitation of the existing irrigation schemes in PC23 southwestern area

Implementing period: Aug. 2008 . Mar.2009

Implementing body: Ministry of Agriculture, Livestock and Fisheries

Aid agency: JICA

* Grant aid project has been requested.

3. Project of Integrated Approach Deveopment in order to Promote Environment Restoration and Rural Development in Morarano Chrome

JICA is preparing for the project and conducted a detailed planning survey in February 2009.

4. Project for strengthening test and research on rice cultivation

Implemented project: Technical cooperation Project named as "Project for Rice Productivity Improvement in Central Highland"

(FY2012 Domestic and Overseas Surveys)

"Special Assistance for Project Formation for Watershed Management and Irrigation Project in the South-West Region of the Lake Alaotra" was conducted after this Master Plan, which has led to a proposal for Yen Loan Project including the following suggestions:

*Improved Furnace Dissemination Project

*Large-Scale Irrigation for Rice Cultivation System Development Project

*Irrigation Project in the South West PC23 Area

In November 2008, however, the Government signed the lease agreement allowing Daewoo Group of Korea to utilize the land of 1.3 million ha, equivalent to a half of the total agricultural land of Madagascar, with no-charge for the period of 99 years (Interim Government canceled this agreement in June 2009).

Rallies and demonstrations against this agreement took place, followed by the resign of the President, which halted the provision of Yen Loan.

Irrigation Project in the South West PC23 Area

*Taken into account that a large-scale rehabilitation of irrigation facilities through the grant aid and yen loan was postponed, JICA experts played a key role to strengthen the institutional capacity of water associations in Alaotra Mangoro Province, as a component of the Technical Cooperation Project for "Rice Productivity Improvement in Central Highland". In addition, a rehabilitation work of irrigation facilities was conducted. As for water management, it is considered to be one item listed in "Technical Package" which is prepared for the dissemination purpose by the Project.

*For the grant aid, an explanatory survey for the basic design summary was supposed to be prepared and submitted to a cabinet meeting in May 2009. However, in March 2009, an interim government came into office not pursuant to the Constitution, which froze the bilateral aid from Japan. Therefore, this proposal has been halted at the consideration stage. The assistance has still been waited for its recommencement, and it is expected that a study is to be re-conducted and a grant aid is to be realized.

*Summary of the Grant Aid "Project for the Improvement of the Irrigation System in Southwest of Lake Alaotra"

(Project objective) For the purpose of consolidating and strengthening the agricultural production infrastructure in the Southwest Lake Alaotra, the rehabilitation of irrigation channels of existing weirs, the provision of equipment for irrigation channel dredging, capacity development of water associations are to be conducted.

(Project summary) The consolidation of irrigation/water distribution facilities, equipment provision (construction machinery for consolidating irrigation facilities), soft component (institutional development of water associations)

(Direct beneficiaries) Farmers in PC23 Irrigation Area (approximately 7,000)

*Summary of the Technical Cooperation Project for "Rice Productivity Improvement in Central Highland"

Targeting 5 provinces located in the Central Highland of Madagascar, the Project intends to develop a production technology package of varieties appropriate for the main 3 types of rice cultivation modes in the Central Highland, comprising irrigation rice cultivation, rain-fed rice cultivation, and cold upland cultivation, as well as to improve a system of seed multiplication and seed distribution. In addition, the coordination among relevant organizations relating to rice production is to be strengthened, and the technology is to be disseminated through enhancing the textbooks regarding technical package. Ultimately, the improvement in rice productivity in the Central Highland will be aimed.

(Direct beneficiaries) Rice farmers in the model sites, people involved in the development and dissemination of the technology package, people in charge of seed testing and production

(Outputs) (For water association in Aloatra Mangoro Province) The assistance by the Project enabled the water associations which were not functional until then to collect the water fees from 55% of the total amount. Furthermore, the water fees collected and the Project's local budget were used to finance the rehabilitation work of approximately 80% of the irrigation facilities.

Description :**(1)Ground Water Exploitation Project**

Finance:

Nov.1981 E/N 500 mil.Yen (Project for Ground Water Exploitation 1(drilling rigs, 12 production wells and vehicles)

Jun.1983 E/N 600 mil.Yen (Project for Ground Water Exploitation 2(drilling rigs, 20 production wells and vehicles)

Jun.1985 E/N 500 mil.Yen (Project for Ground Water Exploitation 3(drilling rigs, more than 20 production wells and vehicles)

Construction: Nov.1983~Apr.1984 Implemented (Project 2) / Feb.1986~Jul.1986 Implemented (Project 3)

(2)Project for Subterranean Water Exploitation

(FY 1996 Domestic Survey)

Upon the completion of the 1981, 1983 and 1985 grant aid assisted projects, the demand for the construction of wells in rural area became high. Therefore, the request for the Japanese grant aid assistance was submitted to construct deep wells and to procure machinery thereof. Basically, this project is included in the National Water Development Project commenced before 1982.

Subsequent Studies: Jan.~Jun.1990 B/D

Finance:

Dec.1990 E/N 401 mil.Yen(Project for Subterranean Water Exploitation)

Content of project: Construction of 35 new P-C wells and 24 P-C wells through renovation.

Construction:

Constructors : J/V of Kanematsu and Tone

(FY 1996 Domestic Survey)

Phase 1 - Feb.1992~Mar.1994 Implemented: Originally, the construction of 11 new P-C wells was planned. However, due to the security problems the project was delayed and was implemented only in the area surrounding Gao Economic District. Eleven P-C wells were constructed.

(FY 1996 Overseas Survey)(FY 1998 Domestic Survey)

Phase 2 - Although the construction of 48 P-C wells in gao district was planned, due to the security problem in the northern part of Mali, the project implementation has been suspended.

Maintenance & Operation:

(FY 1996 Domestic Survey) The Water Agency in Bamako stated that the constructed facilities have been maintained and operated by the local agency in Gao and the local committees.

Effect:

(FY 1996 Domestic Survey) The project contributed to secure clean water, to lighten workload, to prevent urban migration, to promote livestock farming and to promote ground water development. The number of beneficiaries is 81,282.

(3)Village Well Project to Eradicate Guinea Worms

This project aims at securing clean water and, then, eradicating Guinea Worms Diseases in the administrative districts 1, 2, 4, and 5.

Subsequent Studies: Jun.~Aug.1993 B/D

Finance:

Feb.1994 E/N 921 mil.Yen (Village Well Project to Eradicate Guinea Worms Phase I)

Jul.1994 E/N 328 mil.Yen (Village Well Project to Eradicate Guinea Worms Phase II-1)

1995 E/N 910 mil.Yen (Village Well Project to Eradicate Guinea Worms Phase II-2)

Content of project: The construction of the vehicle stations, install drilling equipment and drill 500 well with hand pumps. Because of technical transfer to the counterpart, 380 out of 500 wells can be drilled by local staff and local companies.

Construction:

(FY 1995 Overseas Survey)

Constructors : J/V of Kanematsu and Tone.

March 1997 Well with hand pump were constructed.

The Phase-II of Village Well project to Eradicate Guinea Worms has not been started.

(4) Water Supply Project in Kati District

Content of Project :

Construction of a small-scale water supply facility and 40 wells with hand pumps in Kati District which is adjoining to the national capital Bamako, and have high population density and shortage of wells.

Oct.Nov. 1994 B/D

Finance : June 1995 E/N 29,100 million yen ("Water Supply Project in Kati District)

Effect : 75,000 beneficiaries

Privatization of governmental institutions :

DNIP was privatized into Mali Aqua Viva.

Description :

(FY 1998 Overseas Survey)
 The data on the situation of water, agriculture, and geology, which were acquired during this study, are utilized.

Background:
 (FY 1997 Domestic Survey)
 The implementation of the proposed projects is delayed due to the deterioration of social security.

(FY 1995 Domestic Survey)
 Scope for development groundwater resources, etc. has been ascertained by the study. But a part of Tualeg tribe living in the area which lies on boundary has scared public order, therefore after resolving the problem, water resources development and desert protection study based on basic strategy for development proposed on this study are expected to be carried out.

(FY 1996 Overseas Survey)
 No progress.
 GTZ starts "Integrated Food Security Project" from January, 1997 in the target area.

(FY 1997 Domestic Survey)
 The government of Mali expects for the detailed study.

(FY 1999 Overseas Survey)
 There are no further information.

(FY 2005 Domestic Survey)
 No information to be specifically mentioned.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2002 Overseas Survey)

The final results of this study are 1:50,000 topographical maps and the digital data of it, and the output of the topographical map is easily possible by the IGM by the use of the digital data, and the use of the printer which JICA granted. Especially, the seminar executed in the final year, was effective for the advertisement to the other Ministry of Mali. As a result, there was a contact from UNESCO of Bamako, and the topographic maps were distributed. Moreover, this region can make use of the final results from both sides of development and protection aspects in mining and raw cotton plantation, a natural protection forests, and national parks, etc.

For the power supply development executed by assistance from European nations in Manantali dam in the west of the project region, and for the plan to transmit the electric power to Kita city and descending Bamako, this topographical map, and the digital data were useful. Topographical map has been sold in IGM and there is no problem for opening the goods to the public.

(FY 2003 Overseas Survey)

Benefits:

- 1) The land survey map, which is a deliverable from the studies, has been utilized for the construction project of the roads between Kita -Dorema, Kita-Sarae and Mako-Kita
- 2) The Geographical Study Institute of Mali prepared a road map of Mali, road maps of eight regions of Mali, and a sightseeing map of cities that received the Soccer Africa Cup of Nations. In addition, the Kosant Mapping Project is expected to be implemented about for two years.

Technical cooperation of Japan:

(FY 2003 Overseas Survey)

The Geographical Study Institute of Mali desires to invite a Japanese expert to the institute with the objective of adjusting the fund raising for the study, ability enhancement in the field of fund raising, enhancement and modernization of production capability.

(FY 2004 Domestic Survey)

1. Progress:

- 1) Border determination project: Implemented as a collaborative GPS project with Burkina Faso.
- 2) Decentralization project: Implemented by IGM using geological map digitalized in the study.
- 3) Nielle regional map preparation: Not started
- 4) Sikasso region cotton farm map preparation: Not started
- 5) Kossanto region map preparation: Not started
- 6) Dogon plateau tourism map preparation: Currently requesting Institute Geographique National de France (IGNF) for assistance.
- 7) Mali map (1: 2,000,000) modification: Currently preparing to request IGNF for an assistance.
- 8) Bamako tourism map modification: Requesting IGNF for assistance.
- 9) LAN system development: Not started
- 10) GIS technology provision: Not started

2. Benefits: Scale map of 1 to 50,000 developed in the JICA study are contributing in the fields of agriculture and mineral. In addition, transferred technology are contributing to 3D map development and in using GPS.

3. Funding:

- 1) Sadiola 3D information map development: own budget
- 2) Redevelopment of measurement stations (Bamako, Segou, Koulikoro, Kayes, Koutiala, Bela): own budget
- 3) Severo-Gao measurement equipment: own budget
- 4) Measurement equipment for Senegal aqueduct: Fund assistance from (Organisation pour Mise en Valeur du Flauve Senegal) OMVS headquartered in Nouakchott.

(FY 2005 Domestic Survey)

Third country seminar on topographical map preparation technology is planned to take place in Senegal. Planned to be participated by personnel from IGM.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

Description :
 (FY 2004 Demotic Survey)
 Since August 2004, following study "village development plan study for the prevention of desertification for the whole community in the south region of Segou in the Republic of Mali", has been implemented for 42 months plan.

(FY 2004 Overseas Survey)
 This proposal expects success by stepping four phases over 22 years.
 To accomplish the implementing proposal, the National water power resources management department has requested for JICA financial support in order to build 400 wells, but no progress on this.

(FY 2006 Domestic Survey)
 No information to be mentioned specifically.

(FY2007 Domestic Survey)
 Implemented Project: Small-scale rural development project
 Implementing Period: January, 2008- December, 2009
 Implementing Body: Mali Ministry of Agriculture, Segou regional authority
 Benefit:
 Beneficiaries: 100 villages out of the 462 villages listed on the proposed action plan in the mentioned study.
 Funding:
 Amount: 16.5 million CFA
 Funding Party: Grant Aid Counterpart Fund. Official approval from the Japanese Government has not been passed.

(FY 2008 Domestic Survey)
 No information to be mentioned specifically.

(FY 2009 Domestic Survey)
 No information to be mentioned specifically.

Description :

(FY 1998 Domestic Study)

1. Present Situation and Problems of Beira Port

Beira Port is located at the estuary of Punque River which is almost in the center of Mozambique, and has a wharf of 1,632 m for containers and general cargos and an oil berth. Beira Port plays an important role as a gateway of sea transport not only for Mozambique but also for inland countries such as Zimbabwe by railways, roads and pipelines etc.

Most port facilities in Beira Port have enough capacity for an increase in cargos, but the depth of water decreases sharply because ship routes are buried. The navigation of large ships such as tankers and bulk carriers are especially limited, which is a serious bottleneck for the development of the port. An approach ship route with the length of about 28 km was dredged to the depth of water of 8 m for designed ships such as a tanker of 30,000 tons and a cargo boat. After that, they did not dredge for maintenance at all. Because of this, the depth of water decreases to about 5 m in the shallowest place at present, and large ships face uneconomical sea transport due to long waiting time for tide and a decrease in cargos for light draft.

EMODRAGA implements dredging works for maintaining all the ports in Mozambique with the budget of CFM.

EMODRAGA owns a grab dredger in Beira Port, but it became too old and does not have enough power to dredge routes in Beira Port in addition to Maputo Port.

2. Amount of Earth Dredged for Maintaining Approach Ship Routes

As a result of navigation simulation based on the predicted amount of cargos in the future, waiting time of ships for tide was about 5 hours per ship on average for the depth of water of 8 m in routes, which was in a permissible range, while it was very short for that of 5 m and 6 m. It was estimated that the annual average amount of earth dredged for maintenance in approach ship routes with the depth of water of 8 m was 250 m³.

3. Measures for Maintaining and Improving Ship Routes

It was judged that the introduction of trailing suction hopper dredgers with the capacity of a hopper of 2,000 m³ was most appropriate and valid to restore and maintain the depth of water 8 m in present approach ship routes.

It is estimated that the construction cost of the dredgers was about 3 billion yen and their annual operating cost was about 400 million yen. We can not recommend the system of 2 dredgers with the capacity of a hopper of 1,000 m³ as an alternative because construction costs and operating costs get higher.

4. Economic and Financial Evaluation

It is estimated that the economic internal rate of return (EIRR) by the implementation of the plan is 24.38%, and we can expect high economic effects. Finance was judged to be sound because it was possible to compensate enough for navigation costs of dredgers with an increase in revenues for CFM by an increase in cargos in ports.

Consequently, they judged that it was necessary and significant to maintain and improve approach ship routes promptly for the plan, taking into consideration the fact that Beira Port plays an important role in sea transport for Mozambique and neighboring inland countries.

(FY2001 Domestic Study)

Finance:

May 5, 1998 E/N 981 million yen "Beira Port Dredgers Construction Plan"

Construction: Completed in 2000.

(FY2001 Overseas Study)

A dredger was handed over on March 2000, but its capacity became half of the capacity proposed at the end of the study, and the problem that ships waited for tide has not been solved. On the other hand, the amount of cargos accepted increased by 26% in Beira Port in the past 5 years, which raised the importance of the port. And it is expected to strengthen dredgers further.

(FY 2003 Domestic Study)

There is no progress.

(FY 2003 Overseas Study)

It is estimated that necessary dredging capacity is 2,000 m³ in the study. Nevertheless, they had to operate the dredger in full capacity (even so, they can achieve only half of the necessary annual amount of earth dredged) because the capacity of the dredger supplied by grant aid was 1,000 m³ which was half of the necessary capacity (for the reason of budget for the Japanese side), leading to excessive labor of 16 hours per day and 6 days per week.

On the other hand, they can secure a channel with the width of only 150 m while a channel should originally be 250 m wide because the dredger can achieve only half of the necessary amount of earth dredged. Thus, cargo boats are stranded.

In this way, negative impacts are noticeable because of the implementation of grant aid in which the results of the study are neglected, while the situation was supposed to improve largely. They request for grant aid for the construction of dredgers which have same capacity with the dredger for which grant aid was given so that they can cope with the necessary amount of earth dredged, but it is under examination.

Description :

(FY 2002 Domestic Survey)

Of the 48 projects and programs proposed in the Master Plan, aid proposals were prepared for the following during the Study to facilitate early implementation:

Project/program, scope

1.2 Tete city water supply expansion: priority area

3.2 Secondary Road Improvement: three bridges along secondary roads

4.5 Tete District Hospital Upgrading: renewal of equipment

Related to 2.1 Integrated Rural Development Program, and 2.2 small Irrigation Schemes Development, a priority scheme, the Chiula Integrated Rural Development, was selected, and its TOR was prepared. A preliminary study is expected within the 2002 fiscal year.

Of the components of 2.7 Farmers' Associations Promotion Program, the Zambezi Agricultural Association (ZAA) was re-vitalized by local experts, involved in the study, supported by voluntary work and donations of some members of JICA Study Team. Voluntary cooperation continued after the Study, and three volunteers conducted follow-up activities in the field during January 2002. The cooperation has continued thereafter via emails.

During the Final Draft presentation, the chairman of GPZ expressed strong expectation that the Japanese cooperation would continue through the implementation phase of the Master Plan. The president representative of JICA South Africa office in charge of the Study conveyed his message to the Embassy in Maputo that the development cooperation to Mozambique will focus the target region of the Study. Subsequently, the deputy minister of Ministry of Foreign Affairs of the Japanese Government visited the region when he participated in the summit in South Africa.

(FY 2003 Domestic Survey)

ADCA preliminary study has already been conducted for FY 2002. Although selection of the project has been progressed after the visit of deputy minister, the current status is not known.

(FY 2003 Overseas Survey)

Based on the studies, a request has been made for dispatch of advising experts who will promote and coordinate agricultural development of the Angonia region.

(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)

Experts are conducting pilot studies on rural development project to make a recommendation to related government authorities, such as district agricultural departments.

The basic studies on rural development (farmer baseline study and market study on border), and low cost well dwelling have been conducted. The community coordinators who are from the supervised communities are key persons for spreading well drilling to other villages

Technical cooperation:

Dispatch of experts:

Agricultural advisor for Zambezi river basin development corporation 1 personnel 2003/3/31-2006/3/30

Description :

(FY2002 Domestic Survey)

Proposed projects have not started yet.

(FY2003 Domestic Survey)(FY 2003 Overseas Survey)

After the study completed in 2002, the request for the project implementation of road repair plan had been made to the Japanese Embassy in Mozambique and Mapto City Government, which will become the implementation agency. It would become a model plan for other local cities. However, Japan's preference on health care and education sectors to the transportation infrastructure resulted in a situation where Mozambique became less positive in efforts on it, and it seems that the local parties concerned have not been working on it. However, Arab Bank for Development in Africa (BADEA) is expected to finance the road repair works of Mapto based the result of the studies. The details are as follows:

- (1) BADEA, which is an international development bank, has provided loans amounting to 180 million dollars to Mozambique so far. Two projects amounting approximately USD 15 million are constantly in progress every year.
- (2) The Mapto road repair works is a project amounting to USD 22 million in total including USD 10 million dollars funded by BEDEA, USD 10 million funded by OPEC, and USD 2 million funded by the Mozambique Government, and is expected to be included the Package A and C as its objects - the Package B, which was excluded from the project due to shortage of fund, and hoped to be implemented under financial aid from Japan.
- (3) The terms of BEDEA loan is that initial moratorium will be given for 19 years out of the 30-year loan and the annual rate for the remaining period will be 1%. As for the terms of OPEC loan, the period will be the same as the BEDEA loan, the annual interest will be 1.5% and a service charge will be added.
- (4) As for the future schedule, after the approval of the project targeted for March 2004, the subsequent conclusion of the loan agreement and the contract with a consultant, actual commencement of the construction is expected for early 2005 with construction period of approximately two years.
- (5) The consultant and contractors will be limited to Arab companies, African companies or joint ventures between the two parties and will be selected by international bidding.
- (6) The implementation agency on the side of Mozambique will be the Mapto City Government and not ANE.

Implemented project: Restoration construction of roads in the Mapto City

Implementing body: Municipal Council of the City of Maputo

Implemented period: 29th of May. 2006 to 23rd of May. 2008 (scheduled)

Funding

Funding party: BADEA (Sudan), OPEC, own fund

Amount: total USD 22mil

BADEA: USD 10mil

OPEC: USD 10mil

Own fund: USD 2 mil

Contents: Detailed Design and construction on road restoration in industrial/commercial area, network around Mapto seaport, and No.1 and No. 3 area of Mapto City.

Status:

(FY 2004 Overseas Survey) Preparing for a tender to decide a consultant. Thereafter, constructor will be selected and will commence on road construction.

Construction is divided to phase 1 and phase 2, which phase 1 is planned to be conducted for 2 years. The sites of the construction are; 6 km of business area peripheral road; 3.5 km port area peripheral road; 18.2 km of central Mapto road extension; restoration of 23 public parking peripheral road; extension and restoration of 6 km of major road (Julias Nyerere side), restoration of 3.6 km road from inner city to the airport; 5 km of city area road development; and etc.

(FY 2005 Domestic Survey) As of 2002, Chinese constructor was improving the roads proposed by Japanese side.

(FY 2005 Overseas Survey) For package B and D, financing party and funds were in search.

(FY 2007 Domestic Survey) Mapto City ordered the design and restoration construction to local companies and the projects has been implemented by Arabian fund.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Domestic Survey)

The number of traffic accident and rapid damage of roads has been increased because of unpreparedness of paved roads, road drainage, and crossing roads. Improvement is required for these issues and guidelines regarding road maintenance management is also required.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2003 Domestic Survey)

- (1) As for village-level utilization and dissemination of a model approach for self-reliant village development (especially low-external-input agriculture techniques), a local NGO called Kulima is continuing training activities in Muniguine area, with a small grant from Embassy of Japan.
- (2) As for a nation-wide dissemination of a model approach for self-reliant village development, it is facing difficulties due to a weak coordination and linkage between Ministry of Labor and Ministry of Agriculture and Rural Development.
- (3) As for the implementation of the proposed village development programs in Munguine and Maluana, it is waiting for local administration to receive budget to implement programs under new decentralization scheme.

(FY 2003 Overseas Survey)

1. Development of a community-based organization: no data is available even in the Ministry of Labor. It is expected to be surveyed by visiting the site later.
2. Cow plowing program: cows and agricultural machinery and implements were provided to six agricultural societies during the study period. Although it is uncertain whether all agricultural societies are continuing plowing by cow, part of them are continuing it and the service is provided when other agricultural societies request for the service.
3. Low investment type agriculture program: it is not very active as a whole. While fertilizer preparation is operated among farmers who are financially in extremely difficult situations, since it is time consuming, those who are slightly better off purchase fertilizers in the market.
4. Water supply user organizations strengthening program: no data is available even in the Ministry of Labor. It is expected to be surveyed by visiting the site later.
5. Improved furnace program: with little promotion activities in progress, the coverage is small. It was explained that the reasons include a deep-seated conventional custom.
6. Poultry farming program: it is so favorably spoken that new poultry farms have been constructed and operated in addition to the poultry farms that were constructed during this study period - one poultry farm operated by village people and another poultry farm operated by and a group consisting entirely of females.
7. Grocery shop management program: the shop was once closed after the completion of the studies due to misappropriation of funds by the shopkeeper. However the shop was reopened and chiefly managed by males.
8. Dressmaking training program: completely inactive. The reasons included shortage of funds to purchase a sewing machine.
9. Local administrative organization strengthening program: the workshop provided to personnel of Manica Province, a project site, during the studies was quite favorably received. Although continuous provision of a similar workshop is expected to bring about further effects, no workshop has been provided after completion of the studies. Thus, as for pilot action plans implemented in the Development Studies, with only small number of plans continued even after completion of the studies, it can be said that the plans had a problem in terms of durability. And the reason is considered to have been lack in development of the system to secure the durability. Other projects have not progressed.

(FY 2004 Overseas Survey)

KULMA (domestic NGO) is conducting rural association strengthening assistance project as a JICA D/S follow-up targeting Maluana and Patick village in Maluana administrative district from February 2004. The project is also funded by Grant Aid for Grass-Roots Groups. The project is implemented for a year, which evaluation will be conducted one year afterwards to determine its continuation. So far, demobilised soldiers have been integrated into local community, which the project is assisting not only demobilised soldiers but the whole community.

1. Assistance targets:

- Construction of agricultural warehouse for the community for agricultural product distribution
- Construction of 2 houses for agricultural specialists
- Construction of 2 poultry farm
- Agricultural seminar and training
- Procurement of agricultural equipments

2. Benefits:

- Direct beneficiaries: 370 member from 6 agricultural societies and its families 1,850
- Indirect beneficiaries: approximately 20 thousand

(FY 2005 Domestic Survey)(FY 2005 Overseas Survey)

Resettlement of soldiers have completed and strengthening of agricultural cooperation is in progress in the project for rural cooperation strengthening assistance project in Maluana and Patick village of Maluana administrative district conducted by KULMA. The project was receiving financial assistance from Japanese Grass Root fund though the assistance was discontinued due to performance made.

(FY 2006 Domestic Survey)

Description :
 (FY 1998 Domestic Survey)
 A request for grant aid was submitted.
 The embassy of Japan in Senegal examines the request for grant aid now.

(FY 2001 Domestic Survey) (FY 2002 Domestic Survey)
 The government of Mauritania submits a request to the government of Japan every year, but requests have not been approved yet. The order of priority of a request was 4th in FY 2000. It seems that it is necessary to reexamine the content of requests to get approval in the future.

(FY 2007 Domestic Survey)
 No information to be specifically mentioned.

Description :
(FY 2008 Domestic Survey)
Around January 2008, Mauritanian government secured the budget for the implementation of the Action Plan that were proposed in this development study, before it was completed in March 2008. Since there were technical difficulties for the government to launch the Action Plan (i.e. implement the preparation phase) independently, however, the government requested Japan to provide technical cooperation. Given this request, Japan decided to conduct a follow-up study. Initially, the implementation of the study had been expected around August 2008; it was postponed to November 2008, as there was political disturbance brought by the coup that occurred in August.

Program for training local female leaders and strengthening women's organizations:
Program for strengthening the capacity of MCPFEF:
Training of village health extension officers and the seminar on livelihood development in 2 target regions were implemented by the staff of MCPFEF. These activities were proposed by the follow-up study to be implemented in the preparation phase for the Action Plan .

Training program on livelihood and production technologies:
Program for supporting activities for dissemination and empowerment:
Around January 2008, before the development study was completed in March 2008, with the results of donor meeting, Mauritanian government (MCPFEF) secured the budget to implement the Action Plan proposed in the development study. By the coup occurring in August 2008, however, the process for implementation was abandoned: this issue was not handed over to the interim government. Under such circumstance, taking into account the result of the follow-up study, MCPFEF decided to include the Action Plan proposed by the development study in its annual work plan, so that it could obtain the budget for the dissemination of livelihood technologies (e.g. income generation) through the process of the interim government.

Description :

* Please refer to JICA D/D "Port Louis City Water Supply Project (MUS/S 402/91)".

Subsequent Studies:

Mar.1990~Mar.1992 D/D (JICA) "Port Louis Water Supply Project (MUS/S 402/91)"

Because F/S confirmed the technical, economic and financial viability of this project, the Government requested the Japanese government for the implementation of D/D.

(FY 1996 Domestic Survey)

The reasons why no progress has been made since the completion of D/D are:1)the Government of Mauritius has not decided priority order of this project. 2)Because the estimated amount of loan to this project (the total project cost is approximately 10,000 mil.Yen) is considered too big, both the Ministry of Finance and the Ministry of Foreign Affairs didn't give the approval for the provision of loan.

(FY 1997 Domestic Survey)

In October 1977, when the overseas survey was conducted, the Government of Mauritius put emphasis on protection of a water leak and improvement of charging rate. No action has been taken to realize this project owing to its high cost.

(FY 1998 Domestic Survey)

The government commissioned an European consultant to conduct the study on an alternative idea which propose water supply to Port Luis City utilizing other river basins besides the Grand River North West Basin. The results of this study and the future policy, however, are not known. Situation of lacking water in Port Luis City has not changed for better. It seems that they are seeking the means of solution, but there is little possibility to request the yen loan based on the result of this study.

Description :

Subsequent Studies:

D/D and the preparation of tender documents were completed

Finance:

1.Lot-I and II

The request has been made for an OECF loan.

(FY 1993 Overseas Survey)

According to the informal comment made by OECF, it is difficult to provide US\$100 mil. for a small GNP country like Mauritius. At present, OECF provides approximately 2,000 mil.Yen for the implementation of the Land Slide Project, thus, it is unlikely that the provision of a new loan will be approved.

2.Lot-III

An AfDB loan is desired and AfDB is willing to provide a loan.

Situation:

(FY 1997 Domestic Survey)

In October 1977, when the overseas survey was conducted, the Government of Mauritius put emphasis on protection of a water leak and improvement of charging rate.

No action has been taken to realize this project owing to its high cost.

(FY 1998 Domestic Survey)

The government commissioned an European consultant to conduct the study on an alternative idea which propose water supply to Port Luis City utilizing other river basins besides the Grand River North West Basin. The results of this study and the future policy, however, are not known. Situation of lacking water in Port Luis City has not changed for better. It seems that they are seeking the means of solution, but there is little possibility to request the yen loan based on the result of this study.

(FY 2000 Overseas Survey)

The Government of Mauritius has postponed the implementation of this project.

*Refer to "Port Louis City Water Supply Project (MUS/S 302/89, JICA F/S)" for detail.

Description :

Subsequent Studies:
 Sep.1996 B/D commenced (FY 1996 Overseas Survey)
 Consulting firm/Nippon Koei

Finance:
 (FY 1997 Domestic Survey)
 Feb.25.1997 E/N 45mil.yen
 (Bwanje Valley Smallholder Irrigation Development Project D/D)
 Apr.28.1997 E/N 1,210mil.yen
 (Bwanje Valley Smallholder Irrigation Development Project)

*Contents of the project
 Irrigation project in the area of 800ha including Mudangdamra area (230ha) at the lower basin of Naminkokwe.
 Construction of irrigation / drainage system and social infrastructures (rural road, rural water supply, post-harvest facility)

Construction:
 (FY 1997 Overseas Survey)
 Dec.1997~Dec.1999
 Consulting Firm/Nippon Koei, Contractor/Kounoike
 (FY 1999 Domestic Survey)
 Construction work has completed on schedule.
 *Contents: Water intake gate(1), Irrigation canal(Trunk canal: 6.8km/ Branch canal: 14.8km), Drain(16.9km), Maintenance road(13.7km), Flood protection bank(7.84km), Farm road(2.3km), Rural water supply(13 places), Post-harvest facilities(4 places)

Operation and management (planned):
 (FY 1998 Domestic Survey)
 After the completion of the facilities, responsibility for operating/ managing those facilities will be transferred to the organization which will be extended from the farmers' organization established in 1985/86 for the purpose of operating/ managing the existing irrigation system.

Effects:
 1.Increase of productivity and farmers' income are expected by construction of irrigation facilities, wells, and farm roads.
 2.Farmers' living standard will be improved.
 3.The cooperation of farmers' organization will be promoted, which will contribute to the activation of social economy in rural society.

Dispatch of JICA Experts:
 (FY 1997 Overseas Survey)
 JICA expert attachment in agricultural extension and cooperatives formulation is to be requested for the project.
 (FY 1998 Domestic Survey)
 A JICA expert will be dispatched within the FY 1998.
 (FY 1999 Domestic Survey)
 Dispatch of JICA experts decided.
 Dispatch period: Jan.1999~ and Jun.1999~
 Specialty: Rice growing (1 expert), Water control (1 expert)
 (FY 1999 Overseas Survey)
 JICA expert in agricultural extension and cooperatives formation is on site since 1999.
 JICA expert on water management, operation and maintenance is on site since 1999.

Others:
 (FY 1999 Overseas Survey)
 Regarding Nadzipula Irrigation Project and Livulezi Irrigation Project, no request has been made to any donor.

Description :
 Dispatch of Expert:
 (FY 1998 Domestic Survey) (FY 1998 Overseas Survey)
 March~Aug. 1998
 A short-term expert (wildlife management) was dispatched to Department of National Park to review the park management plan.

(FY 1997 Domestic Survey)
 The Government of Malawi has been discussing the implementation of project.
 It seems that JICA mission was dispatched around August, 1997.

(FY 1998 Domestic Survey)
 Reserve management & operation plan was reviewed. However, due to deteriorating financial situation of Malawi government, the project has not been implemented.
 Government of Malawi expects for a financial support by Japan, but there has not been any concrete action.

(FY 1999 Overseas Survey)
 It was requested for JICA on 25 Feb.2000 to conduct the F/S on operation/management of the reserve, resource management/utilization in the reserve, research/study and extension/education.

(FY 2002 Domestic Survey)
 It has been 8 years since completion of M/P. There were small movements within this period, though due to the unwell financial condition of Malawi, it is unlikely that something new will occur for a while.

Description :
 Subsequent study:
 (FY 1999 Domestic and Overseas Survey)
 B/D (Jan.1999) and D/D (18 Jan.1999 E/N 57mil.yen) were conducted by Japan's grant aid.

Funding:
 (FY 1999 Domestic Survey)
 E/N concluded on 3rd of Mar. 1999 1,339 mil. yen "Reconstruction of Mangochi Road Bridge"

Construction:
 (FY 1999 Domestic Survey)(FY 2002 Overseas Survey)
 Sep. 1999 The bid for construction was implemented.
 Oct. 1999 Construction was carried out. Preparatory works were implemented.
 Dec.2001 Construction was finished.
 Construction trader/ Konoikegumi Construction administrator
 Cost: 1,150 mil. yen

Progress:
 (FY 2001 Domestic Survey)
 The initial plan of the completion of Nov.2001 is delayed to construct the road connecting to the Mangochi bridge and leading to the Port of Nawara in Mozambique. It seems to proceed up to 20%.

Management and Operation:
 (FY 2002 Domestic Survey)
 It is implemented by National Road Authority (NRA), which is subordinate organization of Ministry of Transport & Public Works (MOTPW).

Benefits after the completion:
 (FY 2003 Overseas Survey)
 The initial plan for the completion of construction of the connecting road to the Mangochi bridge (the Naminga - Chiponde - Mangochi road project) by November 2001 was delayed: it was completed in July 2003. The contractor for the project who commenced the construction works from the Naminga side of the road caused the delay. However, with the completion of the Mangochi bridge and the connecting road, the accessibility on the Malawi side to the Nacala Port in Mozambique has tremendously improved. In addition to the completion of the Mangochi Bridge and the connecting road, the Malawi Government has instituted another construction project connecting the Mangochi Bridge to the Central and Northern parts of Malawi. The Mangochi - Golomoti - Masasa road is now under construction and connects with the M1 road at Dedza. This development will provide smooth passage of traffic from the port of Nacala through Mozambique and crossing the Mangochi Bridge to parts of the Central and Northern Region of Malawi as well as connecting to the eastern part of Zambia and Tanzania to the north. This is in conformity with the Malawi government efforts in the economic development of the Nacala and Mtwara Development Corridors.
 The Mangochi Bridge provides a smooth accessibility to the port of Nacala, which is the outer port for Malawi. The bridge functions as the import point of contact of the international trunk road network. Already, there is an increase on the degree of utilization of the Mangochi Bridge based on the number of foreign registered vehicles crossing the bridge originating to and from Mozambique.

(FY 2004 Domestic Survey)
 Benefits:
 1) Name of the proposed project: "Reconstruction of Mangochi Road Bridge" D/D, C/S
 2) Beneficiaries: 1.3 million people, population of Mangochi and Maching districts.
 3) Degree of Utilization: Utilization of the Mangochi bridge is steadily increasing because of the completion of the M10 road and Mangochi bridge connecting to Nacala port in Mozambique which is the shortest outer port for Malawi, which is an inland country.
 4) Benefits: Direct economic effect is convenience and benefit which running vehicles gain when the plan is implemented. The items evaluated as running convenience and benefits are as follows:
 Items evaluated as convenience and benefit that running vehicles will get:
 -Savings related to time: Alternative production by saving passengers/crews/carriages' time.
 -Reduction of what related to distance: Saving costs for vehicles, fuels, oil and fat, and maintenance.
 Internal Rate of Return (IRR) was calculated from convenient and benefit mentioned above and project cost. It was estimated at 7.0% as the result of the development study of the plan. In addition, convenient and benefit are estimated at USD 135,385 in 2002, USD 174,231 in 2005, USD 1,450,375 in 2022.

(FY 2004 Overseas Survey)
 1. Benefits:
 1) Name of the proposed project: Reconstruction of Mangochi Road Bridge
 2) Beneficiaries: Traffics such as pedestrians, bicycles, and other vehicles from Malawi, Mozambique and etc.
 3) Beneficiaries: There were benefits for the improvement of traffics such as pedestrians, bicycles, and vehicles from Malawi and Mozambique. The results of the 12-hour survey on the traffic in Nov. 2004 are listed below.
 -Pedestrians: 5,851 people
 -Bicycle: 7,015
 -Motor cycle: 71
 2. Other progress and etc:
 C/P of construction of Mangochi bridge is Road Department under the Ministry of Works. However, current maintenance organization is National Roads Authority (NRA). Maintenance costs are funded by gasoline tax. NRA is practical business organization of the Ministry of Works at present.

(FY 2008 Domestic Survey)
 "Reconstruction of Mangochi Road Bridge" was completed in 2002.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2000 Domestic Survey)

A mission for project formation was dispatched to Malawi from the African Division of JICA Headquarters in January 2000. Although the dispatch of this mission was not directly connected with this development study, the mission team referred to the study outcome.

Japanese Technical Cooperation (Japanese Experts):

(FY 2000 Domestic Survey)

Period: Feb. 2001-Mar. 2001

Specialty:GIS

* Health facilities planning using GIS is conducted to upgrade the obstetrics care system which is included in the most prioritized project

(FY 2001 Domestic Survey)

It would seem that the concrete plan on the improvement of health facilities was submitted from the Ministry of Health and Population of Malawi to the Ministry of Treasury, however this proposal was not reach to the Japanese Embassy in Zambia.

(FY 2002 Domestic Survey)

After the Study was completed, the research group for the project formulation study was dispatched by JICA and discussed counterparts to implement the proposed project, however the details of the process or results of the discussion were unclear. There is little prospect to implement the proposed projects. At present, JICA has been implementing the inventory survey for the medical facilities as a Basic Study by the local consultants and the Japanese experts.

(FY 2003 Overseas Survey)

The result of the survey contributed to accurate costing of the programme of work for the Health sector wide Approach (SWAPS). It enables the MOHP to plan & carry out effective resource allocation in health facility development.

Japanese Technical Cooperation (Dispatch of Expert):

(FY 2001 Domestic Survey)

Period: one (1) month from Feb.2002

Field: Geographic Information System (GIS)

* For the purpose to strengthen the maternal health service which was the high priority project.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

1. User Interface Development for an Analytical Function to be Introduced in JICA Health Facilities Database

1) Contents:

- Preparation of 30 copies of user manual
- Software development
- Preparation of 30 CD-ROM copies of the software

2) Objectives

- Development of user interface providing simple analysis/reporting functionality, and graphical representation functionality to improve usability of the database.
- Improvement of access to general healthcare, especially for Essential Health Package
- Improvement of planning capability of the Ministry of Health and Population for an update of the health infrastructure database.

3) Period: 8th March - 31st March, 2004 (3.5 weeks)

4) Finance: 8,669 USD (local consultant fee)

5) Result: User interface and manual were prepared by the local consultant. In addition, planner and rural health management team were able to prepare rural implementation plan

2. Workshops on Rural Health Facilities Investment Plan

1) Content:

- Local health facility mapping
- Workshops in target and non-target area
- Review of the guidelines from equipment management perspective
- Submission of reports

2) Objective:

- Preparation of rural/local facility planning manual/guideline
- To conduct/promote workshops on rural health facility investment planning in selected regions

3) Period: October - November, 2003, January - February 2004

4) Finance: 3 million Kwacha

5) Benefit: Each region can individually prepare facilities plan.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

Description :

(FY 2002 Domestic Survey)

Currently, Development Study is in practice, comprised of agroforestry, small-scale industry (improved goat through breeding, apiculture, small-scale irrigation, etc.), and earthen oven in selected model areas (24 villages, 3,900ha) by M/P. This Study is to be continued by 2004, and the result will provide feasibility. The proposed projects by M/P will be updated in 2004. In the future, the counterpart agency will play a leading role in promoting sustainable development and expansion of the project in combination with such schemes as JOCV and the Community Empowerment Program.

Subsequent studies:

(FY 2003 Domestic Survey)(FY 2003 Overseas Survey)

The empirical study for the Shire River Midstream Area Forest Rehabilitation and Village Development Model was adopted as JICA Development Studies in 2002. Study period: To start in March 2002 and continue for three years. Study cost: The first year: 73,174,500 yen; the second year: 61,831,350 yen; the third year: undetermined. Details of study: A baseline survey was implemented in 24 villages in total included in the referenced target area in the form of workshop, and basic data collection and problem analysis were implemented. Based on it, a participatory execution plan for a pilot project in respective villages was formulated and a project started with residents as a nucleus. The project contents included preparation of nurseries, tree planting for formation of village forests and residential forests, introduction of agroforestry, small-scale irrigation, apiculture, poultry, and improved furnaces. In addition, a project implementation unit across three ministries was launched and a project implementation support system at site was established. It is currently in the process of interim evaluation of the project.

Technical cooperation of Japan: Acceptance of Technical Training Participants

(FY 2003 Domestic Survey)

FY2002: 3 trainees, Kenya Forestry Research Centre (accepting facility), early January - early February, agroforestry, afforestation, others (contents). FY2003 (plan: 5 trainees, Kenya Forestry Research Centre (accepting facility), early January - early February, agroforestry, afforestation, others (contents)

(FY 2004 Domestic Survey)

1 Subsequent Studies: Empirical study on Forest Rehabilitation and Village development Model in Mid-Shire River has been adopted by Forestry and Fisheries Development Study Division, Agriculture, Forestry and Fisheries Development Study Department of JICA. The Study has been started in March 2002, which will continue for 3 years and this will be the final year..

2 Finance

1 Funding Party: JICA D/S

2 Amount: (budget) - 1st year: 73,174,500 YEN - 2nd year: 61,831,350 YEN - 3rd year: 37,885,050 YEN

3 Content: Baseline survey was conducted, employing workshops, for data collection and analysis in all 24 project target areas. Based on this survey, pilot project plan has been prepared employing participatory method and has been implemented with locals taking a lead role. Content of the project consists from; seed bed construction, plantation for village and household forests, introduction of agroforestry, small-scaled irrigation system, apiculture, poultry, and introduction of improved cooking stove. In addition, project implementation support system was established by founding a Project Implementation Unit, extending over 3 agencies. Presently, draft of the final report is been prepared.

3 Technical Cooperation: Acceptance of Trainee

1) FY 2003

(1) Number of people: 5 (2) Receiving institution: Kenya Forestry Research Center (3) Period: early January - February (4)Content: Agroforestry

2) FY 2004 (in consideration)

(1) Number of people: 2 (2) Receiving Institution: JICA, Japan (3) Period: Late January - February (4) Content: Forest management/operation and related technologies

4 Benefits (as of September 2004)

1) Beneficiaries: Empirical model target are, residents of 24 villages

2) Benefits:

(1) Empirical model target are: 24 villages 4,009ha; population 10,857; household 3,052 (September 2004 estimate) (2) Participated villagers: seed bed construction 1,089; forestation, 1,358; income generation activities, 1st year 838, 2nd year 787 (3) Seed bed construction (targeted in 24 villages): 22 villages, one each; 2 villages, two each. (4) Plantation number: 336,709; 218,331 survived; survival rate 64.8% (sum of 2 years forestation, including agroforestry species), forestation still has not been conducted for the 3rd year. (5) Small-sized irrigation system: (1st year 10 villages, 2nd year 5 villages) generated 1.8ha of vegetable field. Revenue, 54,975 MK (excluding individual share) (6) Improved goat breeding: (1st year, 10 villages; 2nd year, 18 villages) 242 to 443 goats 201 increase (7) apiculture: (1st year, 7 villages; 2nd year, none) 34 bottles (500ml) harvested (8) Guinea fowl breeding: (1st year, 3 villages; 2nd year, 1 village) 456 eggs harvested (9) Improved cooking stove: (24 villages) 561 constructed

5 Other Progress: Counterpart government is preparing to request the following plans to continue and expand the forestation project, including participatory income generation activity, based on this empirical study.

(1) Continuation in the target area of the study: Acceptance of several JOCV dispatches. Aiming to expand the project by continuing and increasing the number of participants. (2) Expansion of project to M/P target area: Acceptance of several expert dispatches. Aiming to expand the project by selecting priority regions/villages within M/P target area.

(FY 2004 Overseas Survey)

1. Technical Corporation: Domestic Training, 2 personnel

2. Benefit

(1) Project Name: Community Vitalisation and Afforestation in Middle Shire (2) Beneficiaries: - Local community of 24 villages in Blantyre, and Lunzu - Middle Shire reservoir (3) Benefits: Eradication of poverty, multidimensional utilisation of the forest, and etc

3. Other progress

PIU has changed to PMU to provide beneficiaries with consultation services, techniques and technology and to monitoring participatory activity. Report will be conducted by Forestry Department due to principle focus to environmental conservation in the preliminary study.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

| | Discontinued or Cancelled |

Description :

(FY 2003 Domestic Survey)

Situation of practical using:

- 1) There is an improvement of capability of building, updating, and reviewing district education plans which were made in phase I.
- 2) Improved skills of education officers at the central & regional level in education planning of implementation.
- 3) 33 District Education Plans were created and some of them are practically used.

(FY 2003 Overseas Survey)

The project as a development study is and has been the key mover of the whole decentralization process.

Subsequent studies are dependent on results arising from this micro-planning activity. Besides, the project arising from this study is helping the Malawi Govt to have a focused intervention for local level development and change in education. Overall micro-planning has provided the different stakeholders to appreciate planning and focused implementation at local level in relation to national one. The participants are apparently appreciative of the participatory process, inherent in the micro-planning model applied in this project.

(FY 2004 Domestic Survey)

1. Subsequent Studies:

- 1) Contents: National Implementation Program for District Education Plans in the Republic of Malawi

- 2) Period: February 2002 - March 2005

2. Funding party: JICA

3. Technical cooperation

- 1) Acceptance of trainees

- Second year: 5 personnel, District education administration, January 2004 (1 month)
- Third year: 2 personnel, District education administration, July 2004 (1 month)

- 2) Dispatch of experts

- D/S 10 personnel total of 65 MM

4. Benefits and etc:

- 1) Name of project: National Implementation Program for District Education Plans in the Republic of Malawi

- 2) Beneficiaries: District and central level educational officials, 6 pilot districts

- 3) Benefit: update of district education plan for all 33 districts

improvement of capability of management planning for 144 people total (including 4 educational administrative officers in 27 non-pilot districts and 6 personnels in 6 non-pilot districts), monitoring of implementing pilot project of 36 administrative officers in pilot district, and improvement of financial management capability

(FY 2004 Overseas Survey)

1. Technical Cooperation: consultant (technical cooperation by KRI International)

- 1) Establishment of project management institutions

- 2) Development of training program and equipment

- 3) Training for instructor

- 4) Micro planning workshops in 6 target regions

- 5) Implementation and monitoring of demonstration project in target region

- 6) Implementation of micro planning workshops in other than the target regions

- 7) Holding national stakeholder diffusion seminar

- 8) Holding popularisation seminar in Zambia

2 Benefits and etc:

Evaluation by the trainee on micro planning workshop and demonstration project demonstrates that abilities and skills related to planning process, such as basic knowledge, data collection/management/interpretation/utilisation, has improved through training and demonstration project. Ones who have been trained in the project have already started using the acquired skills and is using part of the materials produced in to project. Computer training through the demonstration project too has contributed to use computers provided by the project for data management and dissemination.

Evaluation by the project participants demonstrates that the project has contributed in improving capacity for a professional planner or managers. DEP is a well confirmed development agenda in district level, which can be the basis of the national education plan by collecting needs and strategy for 33 districts.

(FY 2005 Domestic Survey)

"National Implementation Program for District Education Plans" mentioned in FY 2004 Domestic Survey has completed in September 2005.

Technical assistance project is to be implemented in FY 2006.

(FY 2007 Overseas Survey)

Subsequent study: National Implementation Program for District Education Plans (NIPDEP)

Progress: 100% Content of construction: splash toilets (1 to 4 holes each), habitats for teachers, hatchery pond, wells, classroom(1 to 2), updating of DEPs Managing and operating body after completion: Prefectural assembly

Technical Cooperation:

Training program: Japan and Indonesia implement counterpart training whose objects are core trainer and district educational administrative officers. They also implement capacity development which is developed by DEPs.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

STUDY SUMMARY SHEET (Basic Study)

Description :
 (FY 2005 Domestic Survey)
 Support in preparing documents to request subsequent project was given to the C/P at the time of the completion of study.

(FY 2006 Domestic Survey)
 No information is specifically mentioned.

(FY 2006 Overseas Survey)
 The technical cooperation project "Community Vitalization and Afforestation Project in Central Provinces" was approved in FY 2005. The project was launched in FY 2006.
 Technical cooperation
 Others: Dispatch of JOCV (rural development: 1 person, afforestation: 1 person)

(FY 2007 Overseas Survey)
 Implemented project: Project of Community Vitalization and Afforestation in Middle Shire in Malawi
 Implementing period: Nov.2007 to Nov. 2012
 Implementing body: Ministry of Natural Resources and Environmental Affairs/ department of forestry, JICA
 Upper goals: Residents of object villages verify sustainable management of forest resources through improving their incomes.
 Project goals: The goals of this project is to implement production activities, such as growing forests, considering conservation and vitalization of forests.
 Benefits:
 Beneficiaries: Direct beneficiary: Residents of object villages (Kutanja and Kapeni, Blantyre Prefecture (traditional administrative office), administrative officers of offices concerned, Residents living around low and middle Shire, and Blantyre citizens.
 Utilizability of proposed project: It is high in that the general rule of proposed project (example: growing forests and implementation of various production activities) has been applied to the implemented project.
 The objectives of this project is to improve management of forest resource and income of the object villagers through encouraging growing forests and various production activities. It adopts the training-centred approach. Object villages are chosen by the study implemented in the early stage of the project. The main components of this project are supporting follow-up for the villagers after training, capacity building through field training, and practical use of resources which can be provided at local level.
 Furthermore, upon implementing the project, JICA applied the experience of similar project implemented in Senegal and revised several points toward extension approach at proposed project. At proposed project, vitalization of forest by villagers was said be realized by organizing and strengthening nursery committee based on introduction of income creating activities. Actually the project decided to apply training-centred approach which enables to provide all villagers/individuals/organizations opportunities to join growing forests and various production activities.

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY 2005 Domestic Survey)
 Request to implement the proposed project was submitted by the Department of Irrigation, Ministry of Agriculture. Preparation for the implementation of the project is in progress.

(FY 2006 Domestic Survey)
 Small irrigation is being implemented as a JICA direct managerial technical cooperation project.

(FY 2006 Overseas Survey)
 Implemented project: 1) Pilot development study (development plan) and capacity reinforcement for small irrigation scheme. 2) Technical cooperation project (3 years from 2005 to 2008) for development of small irrigation scheme.
 Benefits:
 Targets: peasants in nation wide of Malawi
 Impact: Above cooperation had benefit to 12,600 farming households with irrigated 700 hectare land. As a result of technical cooperation project in action with 2,200 hectare irrigated land, final amount of beneficiary are estimated to reach 39,600 households.
 Funding:
 Funding body: JICA(technical cooperation, FY 2006/ JPY 102,368, FY 2007/ JPY 1.2 mil(interim), FY 2008/ JPY 1.2 mil(interim)
 Technical cooperation
 Training:
 Group training for "Irrigation and sewage for rural community development" / 6 persons from 14 Aug. 2006 to 8 Sep. 2006
 Dispatch of Experts:
 Short term experts
 Expansion of small irrigation skills: 1 expert from Nov. 2004 to Sep. 2005
 Others: Currently, the agency in charge of the project, is the ministry of irrigation and water development department of irrigation.

(FY 2007 Overseas Survey)
 Implemented project: Development of small irrigation, JICA(technical cooperation project)
 Implementing period: Mar.2006 to Mar.2009
 Implementing body: the Department of Irrigation, Ministry of Agriculture
 Objective: Popularize/diffuse/confirm small irrigation agriculture in adequate place in Malawi in order to achieve the goals of the project that to diffuse small irrigation agriculture.
 Benefit:
 Beneficiaries: All agricultural households throughout Malawi, EPAs throughout Malawi by the establishment of diffusion system of inclusive small irrigation agriculture.
 Benefits: The package of the irrigation development was diffused in 92 irrigatable districts by agricultural facilitator who were trained. As a result, 1009 irrigation sites and 2049 ha was developed (as of FY 2007). Up to now, 260 agricultural facilitators finished being trained (108 people out of them was trained in FY 2006). As of July 2007, other 251 people are trained.
 The utilization of proposed project: The efficiency of the project is quite high. The package implemented in the project includes inclusive guidelines, technical manual, poster, and leaflets. Furthermore, the Department of Agricultural Extension, Ministry of Agriculture and Food Security (MAFS) became one of the concerning organization.

Description :

(FY 2006 Overseas Survey)

After the completion of NIPDEPT in Dec. 2005, the Ministry of Education requested the government of Japan to continue support for the district education plan institutionalization project (DEPIP). The project is scheduled to be launched in Nov. 2006, following the approval of the request. The project is expected to bring the following impacts.

- 1) Formulation of DEP/budget guidelines
- 2) Institutionalization of annual DEP planning and renewal
- 3) Strengthening of capacity of regional educational administrators for budget management and DEP renewal
- 4) Assessment system establishment and DEP monitoring (clarification of each task)
- 5) Active advertisement of DEP activities

(FY 2007 Domestic and Overseas Survey)

Implemented Project: the pilot project of the Technical Cooperation Project "The National Implementation Program for District Education Plans (popular name: District Education Plan Institutionalization Program(DEPIP))

Implemented period: Dec.2006 to Dec.2010

Implementing body: Ministry of Education, Science and Technology(MOEST), JICA

Objectives: To attempt to improve the ability of MOEST through renewal and institutionalization of District Education Plan.

Technical Cooperation:

Training Program: Implementation of counterpart training for core trainer and district educational administrative official, taking place in Japan and Indonesia, implementation of capacity development for DEPs(NIPDEP), and the updating of 34 DEPs (DEPIP).

Dispatch of Experts: Short-term experts are dispatched (Dec. 2007). Long-term experts (coordinator) are going to be dispatched from Apr. 2007.

(FY 2008 Domestic Survey)

The following outputs are to be achieved mainly through the implementation of training program for the personnels of district education office, district assembly, and Department of Teacher Education and Development(DTED) under the education division.

1. The DEP formulation/review processes are clearly defined and institutionalized.
2. Skills and knowledge for the formulation/review of DEP are developed and strengthened at district and education division levels.
3. Marketing skills (negotiation, resource mobilization, empowerment, and advocacy skill) are developed in district education office.

(FY2012 Domestic Survey)

Implemented Project:

JICA Hokuriku Center: Course for Improvement of School Management in Sub-Saharan Africa II

JICA Okinawa Center: Course for Improvement on Regional Disparity in Basic Education

(FY2012 Overseas Survey) No information to be specifically mentioned.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY 2006 Domestic Survey)
 Request for the dispatch of specialist has been made.

(FY 2006 Overseas Survey)
 2 projects which were proposed at the study, has not been implemented. However, JICA is sharing some perceptions with the Malawian government (Fishery department) regarding possibility of experts dispatch. (e.g.: National aqua-cultural strategy managerial advisor for implementation of aquaculture strategic plans.)

(FY2007 Domestic survey)
 No information to be specifically mentioned.

(FY2007 Overseas survey)
 Implemented project: The Presidential Initiative on Aquaculture Development /PIAD
 Implementing period: February, 2006 - 2010
 Implementing body: Ministry of Mines, Natural Resources and Environment, Fisheries Department
 Objective: Finalize the plan to deliver the aquaculture development for Malawi's economic growth and food security. The initiative is constructed by the activities listed below.
 (1) Support to overcome the nutrition decline caused by the lack of marine resources.
 (2) Support the related bureau to introduce fish in ponds, reservoirs and reserves to provide income. This include not only the local fish breeders but also the large scale fish breeders to supply marine products for domestic and overseas markets.
 (3) Promoting the sustainable management of marine products and resources by constructing a partnership between private companies with a high interest in increasing the breeding volume production and other stakeholders.
 Funding: Amount/MWK1200,000,000, Funding body/Own fund

Dispatching experts
 First stage: 19 January, 2007 - 27 February, 2007
 Second stage: 10 May, 2007 - 5 December, 2007
 Third stage: 8 months from May, 2008 (scheduled)

Experts will give the technical advice to the Marine Department to promote the action plan of National Aquaculture Strategic Plan (NASP). In addition, some of the project plan will be experimentally conducted and reviewed. There is a possibility of the project to be added to NASP depending on the result.

Implemented project: PIAD Aquaculture Village Scheme
 Beneficiaries: Small fish nurseries and the large-scale commercial fish nurseries of Malawi
 Impact: About 80 of 500sq/m rearing ponds (4ha in total) owned by individuals will be managed jointly by villages as a project site. The annual output is expected to 16 ton and by the end of 2010, one rural village will be developed in one district.
 Usage of the proposed project: The issues pending for the project are as follows;
 (1) Will farmers offer up to 4ha of their land for use as rearing pond?
 (2) Can 80 aquafarming producers will be assembled as 1 unit?

The Marine Department was transferred from Ministry of Mines, Natural Resources and Environment to the Ministry of Agriculture and Food Security in May, 2007. By this reorganization, cooperative agriculture information dissemination system was created and as a result, a better foundation was constructed. And by using the the same method of information dissemination, Fisheries Department can prevail a fish nursery technology to the entire country effectively. Small rearing ponds owned by individuals are managed jointly led by villages with PIAD rural district development plan, and as experimental culture implementation, a hatchery and model rearing pond are built in each project site.
 The Fisheries Department will give demand-driven technological assistance from the various aspects to the participated villages.

| PRESENT STATUS | <p>In Progress or In Use</p> <p>Delayed</p> <p>Discontinued or Cancelled</p> |
| <p>Description :</p> <p>(FY 2002 Domestic Survey) There is no information available on the current situations of this project.</p> <p>(FY 2002 Overseas Survey) Status after the Study: 1) The permit conditions for water allocation within the Artesian Basin were improved, in such way that the maximum yearly permissible abstraction depends on the crop type, and the furthermore that flood irrigation is no longer allowed. By applying these conditions to those farmers who applied in 2002 for renewal of their permit, the amount of water allocated was reduced by 15%. 2) The Geohydrology Division of MAWRD was able to recruit one more senior and two junior geohydrologists. 3) Further efforts have been undertaken to study the proposed recharge area. The research project with the IAEA ended in 2002 and the final report was delivered. 4) The process of refining of the groundwater model has commenced, and once finalized, will increase the confidence and accuracy of the aquifer management plan. 5) The awareness campaign regarding the sustainable use of groundwater has commenced by informal meeting with the farmers within the Water Control Area. 6) The groundwater monitoring within the Basin with digital recorders was maintained and mal-functioning recorders have been replaced. Planned activities in the future: 1) To start with a long-term groundwater quality monitoring program in 2003. 2) MAWRD will drill additional monitoring boreholes in the vicinity of Stampriet in 2003.</p> <p>(FY 2004 Domestic Survey) 1. Subsequent Studies: Monitoring proposed in JICA D/S (groundwater level, water quality, precipitation, flow volume, pumping volume, irrigation usage volume, and crop pattern) 2. Benefits: 1) Community education for sustainable groundwater development 2) Patent system improvement for groundwater regulation 3) Reduction of irrigation area 4) Reduction of irrigation volume by conversion of crop pattern 5) Introduction of water efficient irrigation system 6) self-regulation on groundwater use</p> <p>(FY 2004 Overseas Survey) 1. Monitoring 1) Groundwater level: completed, planned for continuation. 2) Water qualities: sampling will be conducted in parallel with the excavation of surveillance boring site. 3) Precipitation: completed planned for continuation. 4) Flow volume: completed, planned for continuation. 5) Pumping volume: completed, planned for continuation. 6) Improvement of irrigation method: completed, planned for continuation. 7) Conversion of crops 2. Other Progress: 1) Enlightenment for sustainable groundwater utilization: DWA has attended various agricultural management meeting presenting groundwater situation in SEKA area. 2) Clarifying groundwater pumping volume: Pumping by irrigation farmers are observed by flow meter along with an inspection by DWA. 3) Revision of groundwater pumping permission system: By the revision of permission system in July 2002, pumping were permitted in 47 sites (of 67 sites in total). A permissible range was reduced to 22 percent within the permission system. 4) Reduction of irrigation areas: Currently, evaluation of groundwater model is to be processed by JICA. If the model indicates continuing pumping, permitted volume will be adopted to the value(adoption to the value presented by the result will be conducted in 2005). 5) Crop conversion: Although message were sent to encourage conversion of crops on various occasions, market dominates the production in reality. 6) self-regulation of groundwater pumping: After the enlightenment activity, it is acknowledged that farmers should manage and preserve groundwater resources by themselves (perhaps after 2005, local water resource committee should operate the permission system.) 7) Adoption of efficient irrigation method: Most of the farmers has already converted to much efficient irrigation system. (Flood irrigation has been forbidden.). 8) Charging groundwater: Although groundwater has not been changed yet, it will be adopted to farmers, who complies the penal regulation of the permission system.</p> <p>(FY 2005 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2006 Domestic Survey) No information mentioned specifically</p> <p>(FY 2006 Overseas Survey) Subsequent study: Extension of a monitoring program Implemented period: Study: Apr. 2003 to May 2004 Construction: Feb. 2005 to Nov. 2006 (estimation) Implementing body: Geohydrology Division Objective: Based on the initial result of the study, develop more representative ground water monitoring system. Funding: Own fund, IAEA (NAD 600,000) Content: Funded mainly by domestic fund. IAEA funded for isotope sampling analysis and equipments worth NAD 50,000. Progress: 95% 7 borehalls were made, and water pressure was inspected. Digital recording was introduced but still in the working process. Other: The already implemented project (underground water monitoring network extension) was for water users in the target area. Through this monitoring network, longer-term estimation of resources (ground water) is expected.</p> <p>(FY 2007 Overseas Survey) Subsequent study: Recharge and quantization of cross-border aquifer between Stampriet(kalahari) and Kalu, enforcement of ground water monitoring network. Implemented Period: Apr.2007 to Mar.2012 Objective:Development of the tool which can practice an adequate ground water control system, maximization of interest brought by using underground water resource. Through this system, the neighboring countries possessing common information related to ground water are expected to cooperate and to improve knowledge, and to attempt to improve using of common aquifer system. Funding: Financing of proposed project is in progress. It is a good possibility to raise NAD 5,000,000 domestically. More NAD30,000,000 is being adjusted. Benefits: Deepening the understanding of ground water supply through the implementation of the project, and making sustainable use of water resource to develop potential ability. Establish adequate Basin Management Committee, manage and observe the source of water sustainable.</p> | |

Description :

Finance:

Mar.1979 E/N 600 mil.Yen (Road Improvement Project)

Jul.1983 E/N 450 mil.Yen (Road Improvement Project)

*Contents of project

Provision of equipment and materials for construction and rehabilitation of road

Nov.1988 E/N 528 mil.Yen (Road Improvement Project)

*Contents of project

Grant aid to purchase materials for rehabilitation of road

Provision of Equipment:

(FY 1994 Overseas Survey)

Upon the conclusion of Exchange of Note between the government of Niger and the government of Japan in 1979, 1983 and 1988, the provision of equipment such as graders, bulldozers, etc. was done. 35-40% of equipment used in DMTP were provided with the Japanese grant aid. Because many of the provided are still in use according to DMTP, it is considered that the equipment has been well-maintained in general.

Description :

Utilization of Outputs of Study:

(FY 1997 Overseas Survey)

The study has been utilized for elaboration of "National Plan of Environment and Durable Development" and "National Plan against Poverty" Moreover, Ministry of Agriculture and Ministry of Environment have utilized the outputs of the study for elaboration of programs.

The Japanese grant aid was provided to implement the high-priority project (the development of irrigation facilities and wells) which was planned to be commenced in 1991.

Subsequent Studies: Oct.1989-Mar.1990 B/D

1. Rehabilitation of Ouallam Area

<Rehabilitation of Ouallam Agricultural Zone I>

Finance: Nov.1990 E/N 365mil.Yen (Project for Rehabilitation of Ouallam Agricultural Zone - 1/3)

Construction: Aug.1990~Mar.1994 implemented (consortium of Nissho iwai Co.,Ltd. and Nissaku Co.,Ltd.)

35 shallow wells and 65 complex wells were constructed in 30 villages.

Management: Village headmen have charge of maintenance and administration. Due to the lack of finance, large-scale rehabilitation has been impossible.

(FY 1997 Domestic Survey)

There is no difficulty to handle the well because water is drawn by hand not by pump. Quality of water is better than water of existing wells, but sanitary management around the well is problem.

Effect:

Beneficiary:35,766 persons (at the point of 1991)

By supplying living water stably, agricultural production and farmhouse revenue have been increased and it contributes to stabilize villagers' life.

(FY 1997 Domestic Survey)

Burden of women and children to carry water has been reduced drastically because of wells newly constructed.

In some village people grow vegetables utilizing the irrigation facilities to generate income.

<Rehabilitation of Ouallam Agricultural Zone II>

Finance:

Jul.1991 E/N 441mil.Yen (Project for Rehabilitation of Ouallam Agricultural Zone - 2/3)

Construction:

Jul.1994~Mar.1998 implementation (Consortium of Nissho iwai Co.,Ltd. and Nissaku Co.,Ltd.)

Construction of 35 wells and complex wells in 63 villages.

Effect:

Beneficiary:25,000 persons (at the point of 1995)

Stabilization of life of residents and the improvement in sanitation by supplying water of good quality.

<Rehabilitation of Ouallam Agricultural Zone III>

Finance: Jul.1992 E/N 339 mil.Yen (Project for Rehabilitation of Ouallam Agricultural Zone - 3/3)

2. Rehabilitation of Ouallam Area II

Finance:

Aug.1994 E/N 437 mil.Yen (Project for the Rehabilitation of the Rural Area of Ouallam II 1/2)

Jul.1995 E/N 908 mil.Yen (Project for the Rehabilitation of the Rural Area of Ouallam II 2/2)

The request for grant aid was submitted to Japanese Government.

Phase 1/2: Shallow Well(10); Complex Well(5); Equipment(1); Remark(digging machine etc.)

Phase 2/2-1: Shallow Well(4); Complex Well(13); Remark(National Debt B)

Phase 2/2-2: Shallow Well(19); Complex Well(27); Equipment(6); Remark(National Debt B)

Phase 2/2-3: Shallow Well(2); Complex Well(20); Equipment(5); Remark(National Debt B)

Construction:

(FY 1997 Domestic Survey) Aug.1994~Mar.1995 Phase 1/2 ; Mar.1995~Mar.1998 Phase 2/2

Contractor/ consortium of Nissho iwai Co.,Ltd. and Nissaku Co.,Ltd.

Detail:

(FY1994 Overseas Survey)

The Government of Niger decided to implement the village water project in the areas where the living basis are unstable because of desertification in order to increase the productivity through the supply of clean drinking water and the raise of vegetables which can be either for own-consumption or for sale. The project has been undertaken with the Japanese grant aid as mentioned above.

* This study will not be followed up from FY 1998. (outputs have been utilized)

| 10. MAJOR PROPOSED PROJECT(S) | <p>The Government of Niger is proceeding the agricultural development in the Niger river basin for attaining the self-sufficiency of food-stuff and for the raise of national living standard. The Government of Niger had executed the pre-feasibility study in 1985 for the irrigation development project in the Gaya area under the cooperation of the Government of France. Considering the results of study, the Government of Niger requested the Government of Japan to carry out the feasibility study on this Project from the three project sites selected in the Gaya area.</p> <p>The Project site locates on the major bed of the right bank of the Niger river about 200km south-east from Niamey. By constructing the flood prevention dike on the rim of major bed, irrigated agriculture is to be executed on the fertile major bed.</p> <ul style="list-style-type: none"> - Project area 3,888 ha - Flood Prevention Dike 42.1 km - Irrigation Area 2,905 ha - Pumping Station 10 locations - Irrigation Canal 94.6 km - Farm Land Consolidation 2,491 ha | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| <p>Finance:</p> <p>The request was made for a Japanese grant aid in 1989.</p> <p>Project Area 874 ha Irrigation Area 569 ha Embankment 7.9 km Pump Station 2 nos. Irrigation Canal 24 km Drainage Canal 29 km Power Transmission Line 30 km</p> <p>The requested amount is approximately 1,500 mil. Yen. The second request for a Japanese grant aid was submitted in July 1993. The third request for a Japanese grant aid was submitted in 1998.</p> <p>(FY 1997 Domestic Survey) Letter to promote the implementation has been sent many times after request was submitted, but the provision of grant aid has not been approved yet. Revision of application letter is necessary.</p> <p>(FY 1997 Overseas Survey) Request for financial assistance has been submitted to Japanese Government in November 1997.</p> <p>(FY 1998 Domestic Survey) They are waiting for the response from Japanese government about the financial assistance.</p> <p>(FY 1999 Domestic Survey) Submission of the request for a Japan's grant aid is under examination, considering the depressing economy of the country.</p> <p>(FY 2000 Overseas Survey) Request for Japanese grant aid was submitted in 1998 in order to implement "Hydro-agricultural developemnt project of the Ouna-Kouanza Basin". Details of the project is as follow. Project Area: 3,888ha Pumping Station: 10 locations Flood Prevention Dike: 42.1km Irrigation Canal: 94.6km Irrigation Area: 2,905ha Farm Land Consolidation: 2,491ha</p> <p>Implementation Period: (FY 1997 Overseas Survey) Dec.1997~May.1998 (schedule)</p> <p>Detail: (FY 1994 Overseas Survey) The government of Niger has been working on the Japanese government, West African Development Bank and Islamic Development Bank to finance the project. However, any positive response has not been received, yet. The government of Niger has concluded that a review study must be conducted in order to set up alternative that both farmers and the concerned authority could operate easily with reasonable investment.</p> <p>(FY 1997 Domestic Survey) Low capacity to maintain pumping irrigation in Africa and unstable politics are impediment factors. Niger side is trying to lower the construction cost and collecting information to revise maintenance system of similar project.</p> <p>(FY 1997 Overseas Survey) Review study is expected to install pumps in each village. Participation of all users is needed.</p> <p>(FY 1998 Domestic Survey) Low possibility to ensure the maintenance cost of the pump irrigation due to the economic difficulty has impeded the implementation of the projects.</p> | | |

Description :

In Niger, self-sufficiency in food, protection of desert expansion, and environment recuperation, etc. are the basic policies within the National Social Economic Development Plan. In the study area which is close to Niamey, diverse projects such as agriculture, stock raising, reforestation, ground water exploitation, are planned and being implemented with cooperations from various countries.

To establish and materialize these projects, the map drawn by the study is indispensable. Not only Japan, but also other countries utilize the map to carry out the projects.

Description :
 (FY 1999 Domestic Survey)
 It seems that the request for grant aid and dispatch of an expert was submitted to Japanese Embassy in Niger.

Japan's technical cooperation (Dispatch of a JICA expert)
 (FY 2001 Overseers Survey)
 Counterpart: Ministry of Hydraulic and Environment
 Period: May 20, 2001 - May 19, 2003
 Specialty: Desertification Prevention Advisor

(FY 2001 Domestic Survey)
 Based on the results of this Study, the government of Niger made a request on the Project for Rural Terroir Management at Tillabery Department to the government of Japan. Further, as the Seedling Production Project proposed by this Study and similar Project, the grant aid on the Strengthening of Seedling Production System, have been requested continuously several years, they are under discussion at JICA.

(FY 2002 Domestic Survey)(FY 2003 Domestic Survey)
 The Govt. of Niger made a request for project-type technical cooperation, "Rural Terroir Management at Tillabery Department" to the government of Japan. However, the project was not adopted, hampered by Niger's insufficient system to receive cooperation, and issues of local costs. "The " was continued to be requested.

Description :
(FY 2002 Domestic Survey)
Considering the pre-conditions noted earlier, the country is, allegedly implementing necessary actions, however, in terms of the progress until FY 2002, there has nothing to mention.

(FY 2002 Overseas Survey)
Request for F/S was submitted to JICA, Govt. of Iran, and that of Libya.

(FY 2003 Domestic Survey)
Although it can be said that it is not feasible in another way than a grant aid, the possibility for the immediately progress of the project is low in light of the fact that the study has just completed for the project and that it is difficult to raise the priority higher than such fields as sanitation, education, and water supply.

(FY 2005 Domestic Survey)
No information to be specifically mentioned.

(FY 2006 Domestic Survey)
No information to be specifically mentioned.

(FY 2006 Overseas Survey)
To realize the proposed projects by the study, looking for funding party.

(FY 2007 Overseas Survey)
Request for the financial cooperation has been implemented to the government of Japan, China, Iran, Libya, toward the implementation of the proposed project in the mentioned study. However, there is no reply from them.
Request amount: 1,500,000,000 CFAFranc(JPY375,000,000)Self-fund:10%
It is possible to implement preliminary study if necessary because and whole of Niamey City district is insanitary and is vulnerable to running water.

Description :
 Based on the result of the development study, "Project on Effective Utilization of Reservoirs and Auto-Promotion of Local Communities in the Sahel" Technical Cooperation Project) was implanted from 2012 to February 2015 in Maradi and Tahoua.

Overall Goal:
 1) The target reservoirs in Tahoua and and Maradi Provinces are continuously utilized.
 2) The results and the lessons learned of the project are utilized for reservoirs use in Dosso, Niamey, and Tillaberi Provinces.
 Project Purpose: The sustainable rural development is promoted through utilization of reservoirs in Tahoua and and Maradi Provinces.

Total project cost: 330 million yen.
 Implementing organization: Ministere de l'Agriculture: MGA)
 Provincial Agriculture Department in Tahoua and and Maradi Provinces

| 3. SECTOR | | Social Infrastructure / Water Resources Development | 4. TYPE OF STUDY M/P+F/S |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Federal Department of Water Resources (FDWR), Sokoto-Rima River Basin Development Authority (SRRDA), Sokoto State Water Board | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | | To evaluate groundwater potential in whole Sokoto State and to make a plan of water supply for middle and large scale villages. | |
| 7. CONSULTANT(S) | | KOKUSAI KOGYO CO., LTD. Sanyu Consultants Inc. | |
| 8. STUDY PERIOD | | Mar.1988 ~ Jun.1990 27month(s) ~ | |
| 9. SITE OR AREA | | Whole area of Sokoto State (100,000 sq.km) involving 47 candidate villages for water supply planning<M/P> 47 sites of middle to large scale villages in Sokoto State<F/S> | |
| 10. MAJOR PROPOSED PROJECT(S) | | | |
| <p><M/P> 1) About 50% each of the area concerned consists of sedimentary formations and outcrop of the basement rocks, among which older sedimentary area and basement rock area have been regarded as difficult areas for groundwater development. Therefore, it is desirable to study the hydrogeological structure and evaluate the groundwater potential covering whole area of Sokoto State.</p> <p>2) The water supply system with a source of groundwater should be planned for 47 candidate sites of middle to large scale villages. The types of the supply system should be in accordance with groundwater potential and type/dimension of the villages.</p> <p>3) Water supply facility is divided into following three types (ground water potential and type/dimension of villages)</p> <p>A. Semi-urban type: Simple water supply facility consists of motorized pumping facility well, water tank, supply piping and public hydrant</p> <p>B.Rural type: construction of plural hand pumping C.Complex type: A + B.</p> <p><F/S>- The water supply system in accordance with groundwater potential and the type/scale of the villages are to be constructed in 47 candidate villages. The project goal is not only the system construction, but also to establish the management system for the operation and maintenance.</p> <p>- Among 47 villages, the immediate implementation for the 20 higher priority villages is under consideration. The 15 water supply systems with motorized pumping facility are planned in high groundwater potential area, and the plural hand pump facilities are planned in 8 villages where groundwater potential is rather low. The project cost for 20-village system construction is estimated to be US\$6,202,900.</p> | | | |

Description :

<F/S>

Subsequent Studies:
Sep.-Oct.1991 B/D

Finance:
Jun.15.1992 Grant Aid E/N 641 mil.Yen for the Project of Water
Supply for middle to Large Scale Villages in the Northwestern Area. This targets 12 villages in Socoto state. It is considered that B/D should be implemented again in eight villages in Kebi State.

Construction:
Aug.1992 Signed with a consulting firm
Dec.1992 Signed with a contractor
Jan.1993 Procurement of equipment, etc. commenced
May 1993 Commenced
Jan.1994 Completed

Construction Trader:
J/V of Mitsui Bussan and Tone

Detail:
(FY 1995 Domestic Survey)
Due to the political instability, the grant aid project has been suspended.

(FY 1996 Domestic Survey)
Because the Kebi state was not well prepared to the project implementation, the project was not implemented although grant aid assistance was secured. Since B/D had been already completed, the JICA office was planning to conduct a study on the implementing system of the counterpart. Also, the contract was to be concluded with a consulting firm to round off the results of the above study and B/D. However, the contract was cancelled due to the disturbed peace and order in the society.

| 10. MAJOR PROPOSED PROJECT(S) | <p>(1)Programing to observe water resources : Settle 63 observation points such as base points along the rivers for continuous observation of surface water flow.</p> <p>(2)Actions for the water resources : Rehabilitation of 50 existing dams and survey works for multi-purpose dam with small/medium scale.</p> <p>(3)Public irrigation and drainage : Rehabilitation of water-supply facilities for 70,000ha, and construct water-supply facilities which are not completed yet and for 150,000ha.</p> <p>(4)Running water supplement : Rehabilitation and expansion of existing facilities, development of 70,000 of new deep wells.</p> <p>(5)Dodin Kowa hydro-power station : Install the power plant and connect to the network of transmission line of whole country.</p> <p>(6)Repairment of the erosion at Gali.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 During the period of survey works, many problems occurred that interfere the implementation of the survey such as:
 Jun.,1993 Cancellation of the result of the election of the President,
 Nov.,1993 A bloodless coup d'etat, and
 Jul.,1994 General strike.
 Because of these politically unstable situations, the survey works have been forced to postpone. Even after the completion of the survey works, the country is still ruled by state power of military government. Therefore, it becomes hard to commence (on 1996) the implementation of the Master Plan to develop the water resources settled by this survey works. At present, new foreign aids including Japan has been suspended, in principle.

(FY 1997 Domestic Survey)
 There is no change in situation.

Jul.1987 E/N 178 mil.Yen

Progress:
(FY 1991 Overseas Survey)
Phase I: being implemented
Phase II and III: B/D completd but D/D has not been implemented

Detail:
This was the first groundwater development project in Rwanda and the technology transfer conducted in the process of the study was highly appreciated. The project implementation is strongly desired.

(FY 1991 Overseas Survey)

The project was integrated into the Third Economic and Social Development Plan (1982-86). Also, the project was given high priority in the Sector Strategy of 1988 (Food, Portable Water and Health).

The eastern region fell behind the other regions concerning the water resources development. The improvement of the portable water and health sectors is given high priority in the Second UN Development Decade.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Refer to 'Rural Water Supply in the Eastern Region (1985)'

Causes for the Project Delay or Suspension:

Security problem

Detail:

The project is composed of three phases. In Phase I the Japanese grant aid was provided to install 71 hand pump wells and one small-scale water supply system. Although Phase II was planned to be implemented with the Japanese grant aid as well as Phase I, the project has been suspended due to the security problems. Phase III is planned to be implemented after Phase II is completed.

(FY 1993 Domestic Survey)

In 1993 civil war was restarted in Rwanda. Civil war also broke up in the neighboring country, Brundi and the refugees flooded into Rwanda. The situation is very much chaotic.

(FY 1994 Domestic Survey)

In 1994 the new government was established, however, the political situation is still unstable. It is considered to take time before the project is resumed.

(FY 1995 Domestic Survey)

The emergency aid is mainly conducted by NGO's. It is difficult to resume ODA projects under the unstable political condition.

(FY 1996 Domestic Survey)

The rehabilitation of damaged wells, the procurement of machinery and the implementation of Phase II have been desired. Therefore, the stabilization of peace and order in Rwanda is strongly desired.

(FY 1997 Domestic Survey)

It is expected that political disorder be solved.

(FY 1998 Domestic Survey)

Since Government of Rwanda has supported the anti-governmental troops, International institutions suspended providing assistance and are waiting for the political stability including the cease of civil war in Congo.

Description :
 (FY 2009 Domestic Survey)
 'Rural Development Project for Food Security and Elimination of Poverty in the Eastern Province of Bugesera' is currently under preparation. However, due to the policy on power decentralization, huge budget and personnel cuts are being made within the Ministry of Agriculture and Animal Resources which is the agency in charge of this project, and there are not enough personnel or funds even from other foreign organizations to carry out this project. Moreover, the majority of the project operations are being transferred to rural districts, but they also cannot follow through with the project due to the same reason.

This was the state of the project when JICA conducted a follow up mission in December of 2009.

(FY 2009 Overseas Survey)
 A request has been made for a Technical Cooperation Project; 'Project for Increasing Crop Production with Quality Extension Service in the Eastern Province' and is currently going through adjustments to implement the project.
 (Objective) To transfer the results of the pilot project that has been carried out in the development study to other areas and associations.
 (The summary of the project)The Project is going to support 34 rice cooperatives and 59 horticulture cooperatives in target area through providing training opportunity for cooperatives' agronomists and public extension workers.

Livelihood Improvement activities: This proposition came from the experience of Pilot Project named "Livelihood Improvement Project in Ntarama Sector" and Quick Projects named "Shallow well Irrigation" and "Roadside Irrigation". In the Development Study, the Study team introduced various small scale livelihood improvement activities, such as road side irrigation, shallow well irrigation and rabbit rearing. Though their easy introduction but high benefits, these activities has been gradually expanding in the areas.

(FY2013 Domestic and Overseas Survey)
 Project for Increasing Crop Production with Quality Extension Services in the Eastern Province
 Cooperation Scheme: Technical Cooperation Project
 Period of Cooperation : October 2010 . October 201
 Counterpart (C/P) : Ministry of Agriculture and Animal Resources (MINAGRI)
 Project purpose: Targeted rice production cooperatives increase production and horticultural crop production cooperatives increase benefits with quality extension services

Subsequent Study: Preparatory Study On The Hills Irrigation Development Plan in Rwanda (JICA)
 Project Purpose: Improve living of the benefit residents in the project object region. (Achieve of the grant aid concerning the constructions of the dam and the irrigation facilities.)
 Cooperation Period: From June, 2013 to March, 2014.

Description :

(FY 1991 Overseas Survey)
 The areonautical maps were provided to "Societe des mines de fer du senegal oriental(MIFERSO)". It is reported that the French team working on the mining development used the aerophoto maps during their feasibility study.
 By utilizing the map, a report was being prepared during Jan.-March of 1992 in order to obtain financing from the Trade and Development Programme of the United States Government. When the feasibility is confirmed by the study, the Government of Senegal will request a loan from the World Bank.

* In 1975, SOCIETE DES MINES DE FER DU SENEGAL ORIENTAL(MIFERSO) was established by the Gov't of Senegl(the share of investment, 28%), the consultant firms of France and Germany, and the Japanese Company (the share of investment, 24% each)

The agricultural production techniques consist of cultivation system, rice cultivation by irrigation, cultivation of legumes and vegetables, tuber crops and forage crops.</p> <p>2. The irrigated farm-land managing techniques consist of water management and irrigation, mechanization, protection of agriculture and cooperative group.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(1)The farm was transferred to the SAED in May 1990, and is now functioning as one of the SAED Demonstration Farms. Activities are jointly managed by SAED, ISRA and PNVA.

ISRA:Comparison of 8 rice varieties and seed multiplication; study of red rice and trials of 8 varieties.

PNVA:Trials of Vietnamese varieties; variety comparison of maize, sorghum, millet, cowpea, cotton, groundnut, etc.

SAED:Demonstration of agricultural machines and farming methods; training of extension workers and key farmers.

(2)Based on the findings of this project, a Japanese grant financed the small-scale rural development project.

(FY1991 Overseas Survey)

The following projects have been implemented.

1.Increase of agricultural productivity

(1)application of an early germinative variety (rice).

(2)Test culture of a rainy season variety (vegetable).

(3)3 to 3.5 tons of groundnuts cultivation as an advance cultivation in the tomato farm.

2.The control of the cultivated farm

(1)The control of the adequate water circulation achieved due to the training of waterway administrators.

(2)The cultivation operation plan is conducted and applied.

(3)The efficient operation of equipment.

3.Problems:Lack of Japanese spare parts

4.Notes:2 JOVC volunteers are working in the SAED

(FY 1996 Domestic Survey)

Because two dams have been constructed at upper Senegal River and the rivermouth of Senegal River, the shortage of irrigation water has been already solved. The guideline proposed in this M/P as well as the established pilot farm have been well utilized.

At the Debi district and Chago district in the delta area of Senegal River, the irrigation facilities have been renovated with the Japanese grant aid assistance. At these facilities the agriculture scheme based on the proposal of this M/P has been adopted. Because the results of these projects are highly appreciated, many requests for the Japanese assistance have been submitted to implement similar improvement projects. The effectiveness of the examined agriculture scheme was proved in this study and the dissemination of the scheme has been undertaken. Thus it can be said that this study well contributes to the increase of farm income.

(FY 1999 Overseas Survey)

| | Discontinued or Cancelled |

Description :

Utilization of the Study Results
 The maps were published and are being used in development projects as shown below.

- 1) Basic study for the Irrigation Improvement Plan of Northeast Tebi, St. Louis City.
 (JICA - OCEAN Consultant Agency)
- 2) The Metalliferous Vein study of the phosphate minerals in the western area of TIVAOUNE.
 (TRADING FIRM)
- 3) Prevention of Salt Damages in the Southwestern area of KAOLAK
 (Study on Field Development) (TRADING FIRM)

(FY1992 Overseas Survey)
 The maps of scale 1:50,000 were in use for the following studies in the national development plan.

1. different phases of the Cayor Canal Project
2. reforestation and forestation
3. studies for tourism development, development studies
4. military maneuvers for the National Force

All of the maps and other information provided by the project are stocked in "The Document Bank".

(FY 1995 Overseas Survey)

1. Owing to their high accuracy, the produced maps are on high demand among various agencies.
2. The produced maps have been utilized in various fields such as the natural resources management, the water, forest and soil conservation, the development of farm land and irrigation system, the implementation of public works, etc.
3. The maps are well kept. However, the budget shortage has prevented the spread of maps among the public.
4. It is desired to renew the maps.

(FY 1999 Overseas Survey)

Description :

Study in the Next Stage:
 (FY 2000 Domestic Survey)
 June 2006 B/D "Kayar Plan to Improve Facilities for the Support of Fisheries"

Background:
 (FY 1998 Domestic Survey)
 The government of Senegal prepares for the request of grant aid to implement the Kayar Project (Zone 2).
 (FY 1999 Domestic Survey) (FY 1999 Overseas Survey)
 Grant aid (1.42 million yen) for the project in the Kayar area was requested in June 1999. It is said that an official request was received by the embassy of Japan in Senegal, according to confirmation in September 1999. Since other fisheries projects are implemented with grant aid this year, the implementation of the Kayar Project is planned next year.

1. Kayar Project
 Finance:
 (FY 2001 Overseas Survey)
 1) BGI
 130 million CFA franc will be paid to fishermen as the compensation of eviction for land acquisition for the project before the end of fiscal year 2001.
 2) CEPIA
 CEPIA is a special account of the national treasury, and 10.8 million CFA franc will be paid for works of the preparation of lands by fishermen who evict from the lands for the project. The payment is to be completed within 2001.
 3) Grant Aid E/N January 16, 2002 (535 million yen) "Le Projet de Construction d'un Complexe de Perche a Kayar (Kayar Fisheries Complex Construction Plan)"
 *Content of a Project: Construction of facilities for marine distribution, facilities for marine processing and facilities for supporting fishermen etc.

Construction:
 France October 11, 1999-September 30, 2002
 Japan June 1, 2001-March 15, 2002

2. Saint-Louis Project
 2-1. Project implemented by the government of France
 Finance:
 (FY 2001 Overseas Survey)
 AFD (French Agency of Development) 2.24 billion CFA franc
 *Content of a Project
 - Collect and carry out wastes in Langue de Barbarie (50 million CFA franc)
 - Improve a site in Goksu Mubat by the construction of a landing wharf and attached facilities (311,804,328 CFA franc)
 - Improve a site in Geteau Nudar by the construction of a landing wharf and attached facilities (258,351,114 CFA franc)

Construction:
 (FY 2001 Overseas Survey)
 The completion of construction was scheduled in July 2001 (construction period: 3 years), but it was postponed 1 more year.
 (FY 2002 Overseas Survey)
 January 1999 - September 30, 2002

Future Prospect:
 (FY 2001 Overseas Survey)
 In spite of the aid of France, not all the needs for small-scale fisheries in the area are met, and a field of the hand processing of marine products is especially retarded. Because of this, the government of Senegal judged that it was necessary to request 150 million yen of a new financial aid to the government of Japan in order to compensate for the shortage which was still in hand processing in Saint-Louis. This substituted for 1.5 billion yen of the first request by the government of Senegal.

2-2. Projects Implemented in Japan
 (FY2002 Overseas Survey) (FY 2003 Overseas Survey)
 Study in the Next Stage:
 June-July, 2003 (about 15 days)
 *Content of a Study: Basic design

Financial Cooperation:
 Grant Aid (636,292 thousand yen, uncompleted)
 *Processing factories were constructed in Saint-Louis, and landing wharves, administration buildings, training centers, machinery rooms, power generation equipments, photocell energy and processing factories were constructed in Lompoul
 (FY2007 Domestic Survey)
 No information to be specifically mentioned.

STUDY SUMMARY SHEET

| 9. SITE OR AREA | Dakar Metropolitan Area | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The main purpose of this study was to develop an Infrastructure Information Management System (IIMS) by Geographic Information System (GIS) for the Dakar Metropolitan Area and transfer relevant technology to Senegalese side counterpart personnel in the course of the Study. No master plan has been formulated by this study. Main conclusions of this study are as follows;</p> <p>(1) IIMS can make an important contribution to urban development in Dakar. The consistent geographic and social database that is available to concerned agencies and that allows flexible and dedicated analysis based on the latest GIS technology, should be fully utilized.</p> <p>(2) Immediate Applicability of IIMS</p> <p>According to a survey of urban issues and the administrative situation in the Dakar Metropolitan Region, the following are the initial systems awaiting immediate application. Urban Sector information Reference, UrbanDevelopment Control, Urban Planning Support, and Residential Site Evaluation.</p> <p>(3) A great deal of effort was made in this Study to assemble and re-arrange geographic and other data suitable for inclusion in IIMS. Various available hardware and software were evaluated against the actual environment in Dakar and the most suitable ones were selected.</p> <p>(4) The Study Team found that both DTGC and DUA area capable of operating and maintaining the IIMS within their respective premises by the existing manpower. In fact, there is little prospect for strengthening manpower in either agency due to a severe restriction on new recruitment in the government sector. However, in order for the IIMS to maintain its usefulness to other agencies and general public, it is essential for both agencies to update their respective database continuously.</p> | | |

Description :

(FY 2001 Domestic Survey)

Dep. of Geographic and Cartographic has constructed a new building and accommodated the equipment which was given at the end of this study, which which they can implement the recommendations of the study. They are successful making use of the vast data which have been prepared by the study. Upon requests from the other agencies, they printout appropriate cartographies and thematic maps with IIMS which has been developed by the study. Thus the system is used as expected. However, they have still not been able to revise the database by themselves.

On the other hand, Dept of Urban Planning and Architecture, the other counterpart agency for this study, are not able to use the IIMS with its hardware in a proper way.

(FY 2001 Overseas Survey)

SGII was utilized for planning/management of urban development and evaluation of housing district. Currently, Ministry of Transportation and the Dakar Committee on Distribution technology are requesting DGTC to prepare the map indicating distribution problems in Dakar.

(FY 2003 Overseas Survey)

Japanese Technical Cooperation (Dispatch of expert):

Period: Long-term expert: 21 Feb.2001 ~ 15 Feb.2003

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

Progress:

Senegal "Geographical data set management project"

JICA expert, who had started its activity after the completion of the study, is contributing to the promotion of digital geographic data dissemination via the internet. This objective of this project is to promote accessible and more commercialised digital geographic data set dissemination, which is planned to expand its scope. For the current year, training courses are planned joining professionals from neighbouring countries and lecturer from Japan.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

Experiences on institutional strengthening of the Senegalese Bureau of Surveying and Mapping has been shared and action plans were prepared in the third country training program with a participations from Senegal, Gambia, and Mali. The training has also contributed to improvements in management skills of the Bureau, which organised the program.

Description :
 (FY2007 Domestic Survey)
 Implemented project: plan of coastal research management
 Implementing period: from 2005 to 2010
 Implementing body: Ministry of Environment, Ministry of Marine Economy
 Funding:
 Funding party: World Bank(GIRMAL)
 Funding mount: 500 thousand US Dollars
 Objective: coastal fishery resource management
 Relevance to the Survey: Due to the Development Survey had achieved satisfactory results in resource management plan, GIRMAL introduced resource management by participation of residents.
 Progress:
 (FY2007 Domestic Survey) After the termination of the Development Survey, they recruited the staffs of the Survey as consultant, and started the plan. The consultant worked on GIRMAL and coached the method of resource management until the end of March, 2008. But the results are not forthcoming because the interaction between World Bank and GIRMAL take long time.

(FY2012 Domestic Survey and Overseas Survey)
 No information.

Description :
 (FY2007 Domestic Survey)
 Financial assistance is requested about the suggested project.

(FY 2009 Domestic Survey)
 Technical Cooperation Project, 'Project on Improvement of Rice Productivity for Irrigation Schemes in the Valley of Senegal' is being carried out.
 Purpose of the Project: Human resource development and the execution of the model studies that aims to improve rice production and the earnings of rice producers in the province of Danaga and Bodoru in the state of Sanrui, which is located at Senegal river basin.
 Expected Results:
 1: Increase the productivity of rice production within the project target area.
 2: Within the project target area, repair of the irrigation facility will be performed and a new development plan will be drawn. In addition, the irrigation facility operation and maintenance will be carried out accordingly.
 3: Within the project target area, a measure to improve the administration of producers will be established.
 4: Within the project target area, rice polishing that suits consumer preference, and facilitation of smooth distribution will be performed.
 Implementation Agency: Senegal River Basin Delta Public Corporation (SAED)
 Supporting Agency: JICA
 Implementation Period: 2009.5-2013.3

Next Phase of Study: Podor Irrigation Area Project Preparation Study (Part 2)
 Type: Project formation (Grant)
 Purpose of Study: Maintenance of the irrigation facility in the city of Podor that lays on the Senegal river basin and produces approximately 70% of Senegal's rice production.
 Implementation Period: 2010.1-2010.12
 Supporting Agency: JICA
 Type of Study: B/D

For the 'Irrigation Development Program', requests for grant aid and Technical Cooperation Projects have been made, and are currently under preparation.

(FY 2009 Overseas Survey) No information.

| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | <p>1. Under the progress of dispersion and decentralization, to support the settlement of Plan for Regional Development and Education (PRDE) which is formulated by concerned educational administrative.</p> <p>2. Through the process mentioned above, to attempt to improve capability of regional education administrative regarding the implementation of Plan for Local Development and Education (PLDE) and drafting and implementing the activity plan in order to improve the quality of education and management.</p> <p>3. Being based on the result of mentioned above, to propose comprehensive and appropriate model for strengthening regional education administration to the government of Senegal.</p> | | |
| 7. CONSULTANT(S) | International Development Center of Japan | | |
| 8. STUDY PERIOD | Nov.2005 | ~ | Nov.2007 24month(s) |
| 9. SITE OR AREA | <p>1. The model, which proposes and supports the settlement of Plan for Regional Development and Education (PRDE), targets the whole area of Louga Region.</p> <p>2. Capability of regional education administrative is improved through the pilot activity in 13 cities and village communities, which are selected considering diversity of condition of Louga Region's socio-economy and education.</p> | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Micro-planning</p> <p>There was recognition that the cooperation between Departmental School Inspector Office (IDEN) (local administrative organization of the Ministry of Education which should support local primary education) and local public organization is extremely important for the activities regarding micro-planning. The pilot activity was proceeded targeting Committee of Local Education and Formation (CLEF), which is a platform of schools and local society surrounding schools, in addition to IDEN and local public organization.</p> <p>1) Support for schools, Committee on School Management (CGE) and etc in the local public organization: The number of settled PE of 13 local public organization, that are targets of pilot activities, was substantially increased. The micro-planning activity, whose platform was CLEF, contributed substantially to the support of the settlement. Especially in the small-scaled schools having 1 or 2 teachers in farming area, settlement of PE made remarkable progress. Furthermore, cooperation between schools and local public organization was strengthened though the activities such as come-to-school promotion and etc.</p> <p>2) Countermeasures for the common issues of local public organization: Plan for Local Development and Education (PLDE), which will be the common action plan for people concerned in 13 local public organizations equals to all of targets of the pilot project, was settled.</p> <p>3) Participation in educational development with department level: Consistency and cooperation of activities which should be taken were confirmed between PLDE and Plan for Departmental Development and Education (PDDE). The common issues for each department and its causes were discussed by all 50 CLEFs in the region and incorporated into the PDDE.</p> <p>2. Incumbent Teachers Training Model</p> <p>The Incumbent Teachers Training Model attempted to establish certain training system which cooperates and is integrated with Teachers Voluntary Training Organization (CAP) by adding module and tool (self evaluation list and minutes of training assembly) to by utilizing the framework of CAP, which has been applied to and is functioning in the whole of Senegal. The model attempts to raise teachers' ability through three steps that are a) to study by own with the distributed modules,b) to deepen the contents of the learning by participating training assembly, and c) apply it to lessons.</p> <p>1) Mechanism of Incumbent Teachers Training Model: All incumbent teachers can be covered as trainees by utilizing coexisted CAP.</p> <p>2) Process of Incumbent Teachers Training Model: 530 people (92.0%) in total started self learning.</p> <p>3) Support and monitoring by school inspectors: Incumbent Teachers Training Model includes monitoring and feedback system done by Departmental School Inspector Office (IDEN) through the analysis of the minutes of training assembly submitted by CAP.</p> | | |

Description :

(FY 2008 Domestic Survey)

Implemented project: Project for Reinforcement of Education of Mathematics, Sciences and Technology Technical Cooperation Project)

Implementing period: from 15th of Dec. 2007 to 14th of Dec. 2010.

Name of Counterpart: Ministry of Education

Background: While Organization for Education Promotion (CAP:Cellule d'animation pedagogique) is the only one institution at education district level, where the training of teachers have been conducted, it has not effectively been functioning as expected, given the limited support from the government. Under this circumstance, among the key factors for improving the quality of teachers is to enhance CAP activities e.g. by conducting cascading training of local trainers who implement training of others at CAP.

Objective: To improve educational capacities of teachers on mathematics, sciences and technology through INSET training at CAP

Implemented project: Project for Improving School Environment (Technical Cooperation Project)

Implementing period: from 29th of May 2007 to 28th of May 2010.

Name of Counterpart: Ministry of Education

Background: Since educational issues tend to vary from one community/school to another, it is difficult for a country/region/district to propose standardized prescription for solution. There is thus increasing tendency to rely on the positive attitude of each community/school to find and solve their own problems. With this consideration in mind, Senegal government determined to establish the Committee on School Management (CGE) in 2002, so as to facilitate the improvement of school management through active participation of local residents. In many schools, however, CGE has not yet been established and even if established, it is highly unlikely to function well. In order to cope with this situation, the government requested Japan to implement a project for support for fractionalizing CGE and thereby improving school environment.

1. Proposal and trial implementation of Incumbent Teachers' Training model which introduces modules utilizing the existing training institution of CAP

In this study, utilizing the mechanism of CAP, the task force team formed by the Region School Inspector Office (IA) has prepared about 3 training modules in a year according to training needs of newly-appointed teachers; and has introduced Incumbent Teachers' Training to CAP. There is the practical way experienced by Louga Region to introduce training modules to teachers voluntary training organization (CAP) and practice it for CAP as one of Incumbent Teachers' Training programs. This methodology has been adopted to the Project for Science and Mathematics Teachers Training (PREMST) in Senegal (i.e. Senegal version of SMASSE) and even at present, it is still being developed and applied accordingly.

2. Establishment of the mechanism for Regional School Inspector Office (IA) to organize Region Technical Team (ETR) that consists of Departmental School Inspectors, Training Schools for teachers, and headmasters so as to deal with educational issues at regional level (Louga model)

With the leadership of Regional School Inspector, Louga Region formed the task force which consisted of 15 representatives from each Departmental School Inspector, Training School for teachers, and headmaster, making the best use of limited human resources at regional level. This task force was referred to as "Region Technical Team (ETR)." ETR undertook various issues such as taking measures to solve educational issues in the region, formulating Plan for Regional Development and Education (PRDE), and preparing modules for Incumbent Teachers Training Model. After the completion of the study, the team has been continuing its activities with limited budget under the leadership of Regional School Inspector.

3. Diffusion of the above-mentioned mechanism to other regions

Description :

Finance:

June.23. 1989 grant Aid E/N 377 mil.Yen for the provision of road construction equipment

Detail:

Because EIRR for the proposed project was 14.4-15.2%, other arterial road projects with IRR higher than 15% were commenced with the financial assistance from the World Bank, EEC, etc. At present priority of this project is ranked high. The Government wishes the Japanese government to reexamine the economic viability of this project and to undertake D/D.

(FY 1994 Domestic Survey)

Because the Government requested the deferred payment, the international financial assistance to Sierra Leone has been suspended. Besides, the military force came into power in May 1992 and the political situation is so unstable that the financial assistance cannot be resumed.

(FY 1997 Domestic Survey)

No progress has been made due to the political instability.

Description :
 (FY 2009 Domestic Survey)
 The period of five years from November 2009 to October 2014, technical Cooperation Project; "Capacity Development for Comprehensive District Developments in the Northern Region of Sierra Leone" has been conducted for the purpose of establishment of the efficient and effective regional development implementing system in the Kambia District and Port Loko District, by setting the Ministry of Internal Affairs; Local Government and Rural Development, Kambia District Council, and Port Loko Council as counterparts. In this MP study, with the assistance of a counterpart; the Pre-Primary and Primary Division, Education Programs Directorate, Ministry of Education, Science and Technology (MEST), the cooperation had been implemented by focusing on the school as an entry point. However, in the technical cooperation project, it was decided to set up the Ministry of Internal Affairs; Local Government and Rural Development as a counterpart and implement the same approach (the donation of the Block Grant based on the proposal of the citizen's groups) by focusing on the village development committee and the ward committee as the entry points.

(FY2013 Domestic and Overseas Survey)
 Capacity Development for Comprehensive District Developments in the Northern Region of Sierra Leone
 Implementing Period:2009/11-2014/10
 Implementing Organization:Minister for Internal Affairs, Local Government and Rural Development, Kambia District Council
 Cooperating Agency:JICA
 Overall Goal:
 1. Disseminate the district development model to be consolidated through this project overall districts in Sierra Leone.
 2. Improve socio-economic situation in Kambia and Port Loko districts by;
 Implementation of district development projects by budget of GoSL including grants from other donors.
 Implementation of development projects with community's initiatives.
 Project Purpose:Strengthen the system to implement district development effectively and efficiently in Kambia and Port Loko districts.
 Outputs
 1. Identify issues on current practices for district development in Kambia and Port Loko districts.
 2. Formulate effective and efficient district development model through implementation of pilot activities in Kambia and Port Loko districts.
 3. Capacities of MIALGRD, district councils in Kambia and Port Loko districts, ward committee members and community are developed for district development management.

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons of Cancellation:
 10 years of blank after the suspension of the project due to financial problem seems to have decreased the value of the study findings.

Related Information:
 New Airport Development.
 The Government of Swaziland has decided to develop the airport at Matsapa Area where the old airport located, abandoning the new site plan.
 The scope of the project consists of construction of runway and procurement of communications, air nav aids and airport ground service equipment.

Subsequent Studies:
 Review of Japan-aided F/S (British consultants)
 The Government of Swaziland has been awarded a contract to prepare the F/S report for its Phase II project. (FY 1994 Domestic Survey)

Description :

(FY 2002 Overseas Survey)

Situation of utilisation (the medium-term priority fields): The digital ortho photo maps identified by the Ministry of Economic Planning & Development have been extensively used in the following medium-term priority fields.

1. Water: Ministry of Natural Resources & Energy, 2. Rural Electrification: Ministry of Natural Resources & Energy, 3. Employment creation: Ministry of Enterprise & Employment, 4. Agriculture: Ministry of Agriculture & Cooperatives, 5. HIV/AIDS: Ministry of Health and Social Welfare, 6. Gender: Ministry of Health and Social Welfare, 7) Education: Ministry of Education The other government ministries and departments also have consumed a considerable amount of ortho photo maps for various projects.

Situation of utilisation (private sector and pre-state-operated organizations): Nearly half of orthophoto maps are utilised for these sectors. For instance, 1) Telecommunication (Swaziland Post & Telecommunication), 2) Forestry Management (Sappi, Shiselweni forests), 3) Urban Development Project (Swaziland Water Service Cooperation), and 4) Rural Electrification (Swaziland Electricity Board). In general, although the orthophoto maps are used frequently, the way to use is infant and the feature of this product is still not fully exploited.

(FY 2003 Domestic Survey)

The result of the study has been applied in "Rural Waste Land Environment Improvement Master Plan", JICA study.

(FY 2004 Domestic Survey)

There was a request for dispatch of experts: 2 personnels, GPS and GIS experts.

(FY 2004 Overseas Survey)

Although formal studies has not been conducted dafter this study, Swaziland government is preparing various plans basing its plan and implementation on this study. Ministry of Agriculture and Co-operatives (MOAC) is requesting funding for the implementation of the master plan according to the proposal made by JICA/MOAC to the Public Budgeting Committee. After the implementation of the pilot project, similar requests has been made to Land Use Planning from several communities to conduct the same project. Based on the requests, several studies has been conducted as part of ordinary duty. However, due to the restriction for obtaining a fund, several activities have been taken in order to secure fund by submitting a project proposal. At the same time, it is seeking for a donor to assist in acquiring the fund for "Rural Waste Land Environment Improvement M/P". Currently, it is in the process of preparing a project proposal for the donor. The result of the JICA study team is considering that the current situation of Swaziland has been reflected appropriately and its proposals need to be progressed. We also welcome an another form of assistance from the Japanese governments taking into account the outcome of this study.

Furthermore, Land Use Planning Section is pleased to the well management of pilot project and frequent inspection of the project site. Facilitators are distributed in each area as there are 3 target areas. Buildings constructed in target areas have no problem up to now and other neighboring communities are willing to implement the same kind of project in their areas.

1. "Mliba-Madlangempisi"

1) Funding party: JBIC, Swaziland government 2) Implementation scheme: National Development Plan 3) Budget: 897 million SZL 4) Period: 2.5 years 5) Objective: Connecting capital Mbabane and main economical districts of Manzini, including centralised local connections of SADC between Johannesburg and Mapto 6) Contents: D/D and etc 7) Beneficiaries: Rural communities

2. "Urban Development Project"

1) Funding party: the World Bank, Swaziland Bank 2) Implementation scheme: National Development Plan 3) Budget: 230 million SZL 4) Period: 18 months 5) Objective: Sewage Improvement 6) Content: Construction of facilities and pipelines 7) Beneficiaries: mainly rural communities

3. "Komati River Basin Project"

1) Funding party: Swaziland government 2) Implementation scheme: National Development Plan 3) Budget: 490 million SZL 4) Period: 11 years 5) Objective: Poverty alleviation through sustainable commercial agriculture 6) Content: Construction of dam and agricultural development in lower basin 7) Beneficiaries: mainly rural communities

4. "Ngwanya-Mbabane Road"

1) Funding: Swaziland government, African Development Bank 2) Implementation scheme: National Development Plan 3) Budget: 500 million SZL 4) Period: 36 months 5) Objective: Solve a traffic congestion in Mbabane and connection between South Africa and Swaziland (Mbabane and Manzini) 6) Content: Construction, resettlement, and its service 7) Beneficiaries: Main industries in Swaziland (textile industry and sugar industry). In addition, maintenance of road will be possible with the toll.

(FY 2005 Domestic Survey)

Dispatch of experts: "Dispatch of short-term experts for the improvement of the capability related to the utilisation of the map information by GIS" 1 personnel, 5th January 2005 to 20th March 2005

(FY 2007 Domestic Survey)

Technical cooperation "Project for improving capacity of economic development plan by utilisation of Swaziland geographical information system " has been implemented Jan.2008 to Dec. 2010.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Reasons of Stoppage:

The study was submitted as a pre-feasibility study, with given uncertainty over market prospects, the production target and price setting. The annual world demand for natural soda at the time of the study was about 25 million tons, of which approximately 2.5 million tons were internationally traded. It was considered difficult for Tanzania to develop marketing outlets for its originally planned output of 1 million tons.

Due to the economic factors such as high cost to extract the unwanted soda ashes mined around Lake Natron and its low international market price as well as such environmental factor that the implementation of the project is likely to have an adverse impact on surroundings of Lake Natron, this project has not been commenced and is unlikely to be implemented in future. (FY1995 Overseas Survey)

Related Project:

*Natural Soda Factory in Lake Natron

Subsequently, the Government of Tanzania decided to scale down the natural soda development project on the basis of the F/S undertaken by UNIDO, and established a factory (annual output of 1,000 - 1,500 tons for domestic use) with their fund (50 million shillings).

*Small-scale Plant

State Mining Corporation (STAMICO) had planned to start a small-scale plant to produce about 30,000 t/year of soda ash, but the plan has failed owing to the lack of funds.

*Caustic Soda Plant

African Development Bank is financing a new techno-economic study of the project of soda ash production and construction of a caustic soda plant. A French company has been contracted to carry out the study.

| | Discontinued or Cancelled |

Description :

(FY1995 Overseas Survey) (FY1997 Domestic Survey)

45 projects were proposed on the basis of the study results. The following F/S and projects have been assisted by the Japanese government.

(1)Agriculture

-Kilimanjaro Agriculture Development Center (1978 E/N 2bil.yen)

dispatch of experts, establishment of a trial farm, training of manpower

-Kilimanjaro Agricultural Development Project

"Lower Moshi Agricultural Development Project F/S (TZA/A 301/80)"

(1987 L/A 3.3 bil.yen)

"Mkomazi Irrigation Development Project F/S (TZA/A 302/83)"

(1990 E/N 1.8 bil.yen)

"Lower Hai and Lower Rombo Irrigation Development F/S (TZA/A 303/90)"

"Kilimanjaro Post Harvest Facility" (1987 E/N 596 mil.yen)

(2)Industry

-Kilimanjaro Small-and-Middle Scale Industry Development Project

Phase I (1981~1988) Basic Industry Technology Transfer

Phase II (1988~1993) Applied Industry Technology Transfer

"Rehabilitation Project of Kilimanjaro Industrial Development Center"

(1988 E/N 657 mil.yen)

(3)Electricity

-Electricity Distribution Network Project F/S (1979)

Phase I (1980 E/N 1.6 bil.yen)

Phase II (1995~1997)

Phase III

(FY 1997 Overseas Survey)

Investment in rehabilitating existing mini hydro scheme is being discussed.

(4)Natural Resources

-Semi-Arid Forest Management Plan F/S (1987)

-Kilimanjaro Village Forestry Project

"Expanded Afforestation Work in the Same District of Kilimanjaro Region (TZA/A 601/88)"

1991 Technical cooperation started

1993 project commenced (five years)

(5)Transport and Communication

(FY 1997 Overseas Survey)

German funded assistance for road maintenance program has finished.

(6)Water Supply

(FY 1997 Overseas Survey)

World Bank program for Urban Sector Rehabilitation included Moshi Construction work to start mid 1998.

(7)K.I.A. Tourism Center Complex, Game Conservation Plan

(FY 1997 Overseas Survey)

No indication of progress.

STUDY SUMMARY SHEET

(F/S)

Compiled Mar.1986

Revised Aug.2014

AFR TZA/S 301/77

| | | | |
|--|---|-----------|-----------------------------|
| 1. COUNTRY | Tanzania | | |
| 2. NAME OF STUDY | Southern Coastal Link Road Project | | |
| 3. SECTOR | Transportation | / Road | 4. TYPE OF STUDY F/S |
| 5. | Ministry of Works, Communications and Transport | | |
| COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | | |
| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | To examine both economic and technical feasibility of the project for constructing the existing Southern Coastal Link Road into an all-weather road | | |
| 7. CONSULTANT(S) | Japan Overseas Consultants Co., Ltd. Fukuyama Consultants International, Inc. | | |
| 8. STUDY PERIOD | Sep.1975 ~ Sep.1977 24month(s) ~ | | |
| 9. SITE OR AREA | Road with 330km long from Kibiti adjacent to Dar es Salaam to Lindi in the Southern area of Tanzania | | |
| 10. MAJOR PROPOSED PROJECT(S) | | | |
| The study examined the road between Kibiti and Lindi (excluding the length covered by the Rufiji Bridge Construction Project) and its feeder road from Nangurukuru to Kilwa Masoko. The road was divided into the following five sections. | | | |
| | Road(km) | Bridge(m) | |
| No.1 Kibiti - Nyamwage | 36 | 34 | |
| No.2 Nyamwage - Nangurukuru | 100 | 1,187 | |
| No.3 Nangurukuru - Kiranjerange | 86 | 491 | |
| No.4 Kiranjerange - Lindi | 75 | 697 | |
| No.5 Nangurukuru - Kilwa Masoko | 30 | 20 | |
| Total | 327 | 2,429 | |
| The width of road is standardized as carriageway of 6.5m and shoulder of 1.2m - 1.8m. New bridges with two lanes are proposed for all bridge sites. Two alternatives of road pavement are considered. Alternative A is to construct two-lane gravel road in the beginning, which will be paved after 10 years (Cost 1) shown above). Alternative B is to construct two-lane paved road from the beginning (Cost 2) shown above). | | | |

| | Processing | Discontinued or Cancelled |

Description :
 Subsequent Studies:
 D/D (implemented with the cooperation of Japan, Germany, etc. The result is similar to what this F/S recommended, but some bridges are decided to construct with the corrugated arch pipe culverts method.)

Finance:
 May.14.1980 L/A 2,963 mil.Yen
 (1) Kibiti-Nangurukuru (156km) Paved
 (2) Nangurukuru-Kilwa Masoko (37km) Gravelled
 (3) Nangurukuru-Lindi (160km) Construction of small bridges and of drainage facilities
 1985 E/N 474 mil.Yen (Provision of machinery)
 1988 Saudi Arabian loan (US\$1,170) (Somanga-Kibiti)
 Own fund (1,224 mil. Tsh)

(1) Kibiti - Nyamwage
 (FY 1997 Overseas Survey)
 1-1.Kibiti-Ikwiriri(14km Bitumen)
 Finance:1991 Saudi Fund
 1-2.Ikwiriri~Ndundu(24km Earth)
 Finance:1995,1997 K.F./OPEC
 Construction:Ongoing rehabilitation by MOW
 1-3.Ndundu~Nyamwage(12km Earth)
 Finance:Kwait Fund(A contract has been signed for the construction of the Rufiji River Bridge plus the rehabilitation of the approach roads.)
 Construction:May.1998 to be strated (2 year)

(2) Nyamwage - Nangurukuru
 (FY 1997 Overseas Survey)
 2-1.Nyamwage~Somanga(48km Earth)
 Finance:1992 GOT
 Construction:Ongoing minor maintenance by MOW
 2-2.Somamga~Njenga(32km Gravel, 9km Bitumen)
 Finance:1992 GOT,OECF
 Construction:10 km still under construction. Ongoing minor maintenance by MOW.
 2-3.Njenga~Matandu(3.2km Earth)
 The GOT has earmarked funds for the construction of culverts to reduce areas adjacent to the road which become waterlogged during the rainy season.
 2-4.Matandu~Nangurukuru(9km Bitumen)
 Finance:1984 GOT, OECF
 The section from Nangurukuru to Kibiti (50km) was completed with assistance of two Japanese experts and seven Japanese volunteers.(1983 - 1994 Implemented)

(3) Nangurukuru - Kiranjerange(86.6km Earth)
 (FY 1997 Overseas Survey) In poor condition.

(4) Kiranjerange - Lindi(76.2km Earth)
 (FY 1997 Overseas Survey) In poor condition.

(5) Nangurukuru - Kilwa Masoko(30km Bitumen)
 (FY 1997 Overseas Survey) Finance: 1984 GOT, OECF

(6)Adjacent Road
 (FY 1997 Overseas Survey)
 Dar es Salaam~Kibiti(28km Bitumen, 98.5km Gravel)
 Finance:1997 GOT
 Construction:28 km rehabilitated and surfaced.
 Lindi~Mingoyo(25km Gravel)
 Finance: 1997 GOT
 Construction:The original bitumen surface was in very poor condition, GOT has,therefore, scarified the original bitumen surface,regavelled and recompacted to provide a new engineered gravel surface.

Remaining Project:
 The Government has been seeking for the fund to commence the construction for the remaining section. But no financial source has been identified.

Detail:
 Due to the climatic condition, the worn-out machinery and the budget constraints, the project has been only partially implemented.
 (FY 1993 Overseas Survey)
 The Government desires JICA to conduct a follow-up of this project, to finance the remaining project and advise them about the road maintenance.
 (FY 1995 Overseas Survey)
 Due to the shortage of fund, this project has been only partially implemented and the Rufiji river bridge has not been constructed yet. It can be hardly said that the overall project has been effectively promoted.
 (FY 1996 Overseas Survey)
 The construction of Rufuji bridge is scheduled to be commenced in 1997/98 with the assistance from the Government of Kuwait.

Description :

Reasons of Stoppage:

In June 1979, the OECF loan (1,700 million yen)* was pledged for the proposed project. Subsequently, the Government of Tanzania changed its policy, and decided to buy a freighter and a tanker plying between Dar es Salam and Zanzibar with the loan. After that, the project had not been materialized due to financial problem.

*Contents of OECF loan

| | Weight | Freight | Passenger | Length | Speed |
|-----------|----------|-----------|-----------|--------|-----------|
| | Capacity | Capacity | Capacity | | |
| Freighter | 1,550GT | 900cu.m | 480 | 78.5m | 14.5knots |
| Tanker | 1,000GT | 2,500cu.m | | 73.5m | 12knots |

Situation:

National Transport Corporation desires to purchase new freighter to develop transportation at southern coast but budget is in shortage.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

The proposals of the study were partly incorporated into the 3rd Five Year Development Plan (1977 - 81), and the studied area was made the 11th national park. However, the implementation of the proposed projects has been slower than envisaged. The Government of Tanzania applied for Japanese grant aid but was not successful.

(FY1991 Overseas Survey)

Mahale was gazetted as a full National Park in 1980, but the Mahale Master Plan has not altogether been carried out.

(FY1995 Overseas Survey)

This project was acknowledged as one, cost of which considerably exceeded the financial capability of then Tanzanian government, which resulted in the discontinuation of the project. However, because the presence of a large number of wild animals in this area had been widely recognized, utilizing the domestic fund and small project grants, the government made the area the 11th National Park in Tanzania in 1985. The vehicles, speedboats and their spare parts were purchased and the support to research facilities was made with the Japanese grant aid.

Description :

(1)Rau River/Mabogini System (first priority project)
 2,300 ha scheme planned and partially completed under "Lower Moshi Agricultural Development Project"
 Subsequent Studies: Jul.1982 - Apr.1983 D/D
 Consulting Firm/Nippon Koei Co., Ltd.
 Finance: Jun.6.1982 L/A 3,300 mil.yen
 Components: Construction of irrigation and drainage facilities etc. to irrigate 2,300ha for the rainy season and 950ha for the dry season.
 Construction: Jul.1984 - Apr.1987
 Contractor: Kounoike Gumi
 Consulting Firm: Nippon Koei Co., Ltd.
 Operation & Maintenance: KADP (Kilimanjaro Agricultural Development Project) is in charge.
 Effect: The project contributes to increase the income and improve standard of living of local farmers.
 After Completion:
 (FY1995 Overseas Survey)
 The implementation of this project and the introduction of HYV in the Rau River Scheme have brought about the remarkable increase of rice production, the income increase of farmers and the improvement of their living standard as well as the activation of the local economy. However, the success of the project has caused the severe conflict among farmers over the water rights. It is required to settle down this conflict.
 (FY 1997 Domestic Survey)
 Under the influence of the project, farmers in surrounding area started to cultivate rice and take water from the upper stream illegally, causing the water shortage at Lower Mosi.
 (FY 1997 Overseas Survey)
 1) Post harvest facilities, workshops and warehousing were constructed. 2)Seed Multiplication programme and Plant Protection Programme are on-going.

(2)Miwaleni Irrigation Project (second priority project)
 (FY1991 Overseas survey)
 Miwaleni Irrigation Project is put on high priority because its implementation could address the acute water shortage for Lower Moshi Irrigation Project. In 1989 the Government of Tanzania requested for the Japanese grant aid, which was not approved. The Japanese aid to implement the project is highly desired.
 (FY1995 Overseas Survey)
 Miwaleni Springs have expanded by 110ha and in 500ha paddy is now planted.
 (FY 1997 Overseas Survey)
 600 ha expansion scheme was not implemented as investment cost was considered high.

(3) Himo River Scheme
 Only 180ha of land has been irrigated.
 (FY 1997 Overseas Survey)
 Makuyuni Scheme progress rate 19%
 Ghona & Kileo Scheme progress rate 19%
 180 ha of proposed 480 ha was developed in late 1980's as improved traditional irrigation using aid from SNV (Swedish NGO).

(4) Utilization of Groundwater
 (FY 1997 Overseas Survey)
 North Grounwater Scheme and East Groundwater Scheme were not implemented as investment cost exceeded GOT limits for new surface irrigation.

Environmental Impact:
 There are positive impacts on strengthening of social solidarity among farmers and regional economy.Negative impact on environment is not critical.
 (FY 1997 Overseas Survey) 2 JICA experts visited in 1997 to assess and train staff in water borne disease mitigation methods.

Detail:
 (FY1995 Domestic Survey)
 Due to the land reclamation by farmers at the upper reach of the project area, the raise of water shortage problem has been observed in the area. To tackle this problem through the development of Kikuletwa River as a new water resource of the project area, ADCA/PF mission was dispatched in May, 1995 to conduct a survey.
 (FY1997 Domestic Survey)
 Cultivation of rice crop and irrigation technic has been transferred to local farmers. They produce the rice brand named Moshi-Hikari.
 It seems that project for expansion of irrigated rice field will be started for the sorrounding area.
 In March 1997, JICA study team was dispatched to make a plan on "Lower Moshi Integrated Agricultural and Rural Development Project (F/S)" targetting approx. 6,000ha including Lower Mosi. The study is on going.
 (FY 1998 Domestic Survey)
 JICA F/S "Lower Moshi Integrated Agricultural and Rural Development Project" reports that the present Lower Moshi Area of 2,150ha can be expanded to 4,700ha and harvest of paddy can increase by approx. 39,000t through taking and supplying water of 9m3/day in the rainy season and 5m3/day in the dry season by constructing the water intake and aqueduct (25 km) at the Kikuretowa River. This project enables small-scale hydroelectric power generation at two sites, generating the total outputs of 3,200kw and benefit of US \$1.7 million a year. EIRR of this project with and without the small-scale hydroelectric power generation project are 15.5% and 13.4% respectively. Both cases are economically feasible.

| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(1)Ndungu Area (Rice field 680ha) Subsequent Studies: Dec. 1986 - Apr. 1987 B/D Consulting Firm/Nippon Koei Co.,Ltd. Finance: Feb.1987 E/N 781mil.Yen (Ndung Agricultural Development Project I) Aug.1988 E/N 944mil.Yen (Ndung Agricultural Development Project II) Construction: Jan.1988 - Mar.1990 Completed Contractor/Kounoikegumi Consulting Firm/Nippon Koei, Co., Ltd. After Completion: JICA supplied 27 tractors in 1991. Although the Japanese government ended its financial support to the Operation and Management cost and the Japanese expert left the area in 1992, the Tanzanian government desires their resumption. Operation & Maintenance: (FY 1997 Domestic Survey) The Government of Kilimanjaro State is in charge of operation and maintenance. Local farmers established a water management association under the guidance of the State Government.</p> <p>(2)Kisiwani area (360 ha) (FY 1997 Overseas Survey) The scheme has not been implementd due to low rate of return.</p> <p>(3)Igoma area (750 ha) (FY 1997 Overseas Survey) The scheme has not been implemented due to low rate of return and high investment costs.</p> <p>(4)Gonja area (1040 ha) The irrigation project, which is similar to the JICA proposed one, has been implemented as the Hingilili Traditional Irrigation Improvement Program since 1992 with the Dutch funding. (FY 1997 Overseas Survey) SNV(Dutch Volunteers) helped to implement the project under TIP(Traditional Irrigation Practice) and have irrigated an area of 200 ha.</p> <p>(5)Kihurio area (1670 ha) The site is currently irrigated over 810 ha of land under traditional irrigation. (FY 1998 Domestic Survey) This study planned to implement the projects in Ndungu Area, which is given higher priority with a grant aid assistance. It assumes to implement the projects in other four areas by loan after implementing Ndungu Area Project as a pilot project. However, it has become difficult to implement those project by yen loan due to the crisis in the economic situation of Tanzania. It is also difficult to implement those projects with a grant aid assistance. Therefore, the projects will not be implemented in the areas of Kisiwani and Igoma unless the economic situation of Tanzania has changed for the better.</p> | | |

Description :
 Subsequent Studies:
 Dec.1990~Mar.1991 B/D was completed for the priority projects recommended in the short-term plan of M/P.
 (Project Name:Tanzania Federal Republic Metropolitan Area Road Improvement Project B/D)

(1)Category A and Category C
 1.Phase I (A part of A-5, A-6, maintenance equipment of Category C)
 Finance:
 Jul.1991 E/N 896 mil.Yen
 Consultant contract:
 Jul.1991 (JV with Japan Engineering Consultants Co., Ltd.)
 Construction:
 Dec.1991~Dec.1992 implemented

2.Phase II (A-1)
 Finance:
 Jun.1992 E/N 987 mil.Yen
 consultant contract was concluded.
 Construction:
 Dec.1992~Jan.1994 implemented

3.Phase III (A-2)
 Finance:
 Jun.1993 E/N 1,333 mil.Yen
 consultant contract was concluded.
 Construction:
 Dec.1993~Feb.1995 implemented

4.Phase IV (A-3, a part of A-4)
 Finance:
 E/N (886 mil.Yen)
 Construction:
 Feb.1995~Mar.1996 implemented

* Grant aid for 83.5km out of 104km of Category A. Construction was completed by Kounoike Co., Ltd. through phase I to IV.

(FY 1999 Overseas Survey)
 Actual works executed (road improvement):
 Bagamoyo Road 9.8km (9.8km), Morogoro Road 5.7km (5.9km), Chang'ombe Roads 7.55km (19.2km), Kariakoo Roads 10.56km (31.0km), Mwinyijuma Roads 6.08km (16.9km), Central Roads 20.712km (20.0km).

(2) Rest of Category A and Category B
 (FY 1997 Domestic Survey)
 Finance:
 World Bank (6 contracts for 1992~1995)
 Construction:
 1995 completed.
 A part of road has been heavily damaged and is now under rehabilitation.
 Consultant / North American Consultant
 Contractor / MECCO, UNICO (local)

(3) Rest of Category C
 (FY 1997 Overseas Survey)
 Establishment of New Main Depot for improvement of maintenance system was completed.
 Equipment purchased under project is now in poor condition and requires replacement.

Dispatch of Expert:
 One expert was dispatched for four years to be in charge of establishment and management of a road maintenance/administration office mentioned below and of transferred technique.

Management/Administration:
 The road maintenance/administration office, which had been proposed in the study, was newly established and daily maintenance is operating by means of technique transferred by on the job training and provided equipment. Gasoline tax proposed in the study and special budget for roads were introduced and are being utilized for daily maintenance. New provision of equipment is necessary to replace with aged ones.

Effect:
 In addition to direct effects as reduction of vehicle cost including repair and maintenance cost, travel cost saving and improvement of regional economy and citizen's life are expected. At fact, the project is highly evaluated by residents.

(FY 1994 Domestic Survey)
 During the implementation of this F/S, the JICA Survey Team recommended further development of Trunk Road Network in order to meet the future increase of Traffic demand as well as urban development.
 Following the recommendation made by the Team, the Government of Tanzania requested the Japanese Government to conduct the M/P and F/S on the Road Development, which have been implemented (Refer to "Dar es Salaam Road Development Plan").

Description :
 Subsequent Studies:
 May.1995 Preliminary study was conducted by JICA to provide a grand aid. (FY 1995 Domestic Survey)

Finance:
 (FY 1996 Overseas Survey)
 1996 World Bank 600 mil.\$

Construction:
 (FY 1999 Overseas Survey)
 2000/2001~2004/2005 (scheduled)

<Request for financial assistance to Japan>
 (FY 1992 Overseas Survey)
 The Japanese grant aid (600 mil.Yen) was requested in 1991 to implement the rehabilitation project. However, it has not been approved, yet. The provided aid would be used to procure necessary equipment. The project will be implemented from 1991 to 1995.

(FY 1994 Domestic Survey)
 In 1993 NUWA made the second request for the Japanese grant aid. Since then the Japanese government has been examining the possibility to finance the project. Also, the Japanese government and the Tanzanian government held several meetings to find out problems to be solved.

(FY 1995 Overseas Survey)
 While the request for Japanese grant aid has not been accepted, African Development Bank (AfDB) produced the study report in January 1995 on the basis of this study result and the Tanzanian government expects AfDB to provide it with the financial assistance. Also, the Tanzanian government again requested to Japanese grant aid for partial assistance in a program to complement the AfDB initiative.

Detail:
 (FY 1995 Overseas Survey)
 Because the water supply system has been severely deteriorated, the urgent implementation of this project is required.

(FY 1997 Overseas Survey)
 A part of daily O&M and the minimum measures are being undertaken as follows. Most of the proposed projects are not implemented due to lack of funds.

(1)In-house Activities
 Leakage control measure is only reactive when response to reported leaks.

(2)Contract Work
 Leakage control measures (transmission) is due to be implemented under a World Bank Project.
 Other projects are not implemented because of lack of funds.

(3)Regular O/M Works
 Alkalinity / turbidity control to prevent corrosion and red water, and motoring of chlorine levels are being undertaken.
 The National Urban Water Authority and the Sewerage Branch of Dar es Salaam City Council are to become the Dar es Salaam Water, and Sewerage Authority (DAWASA). The government of Tanzania is currently seeking Private Sector involvement with DAWASA, possible in the form of a joint venture.

Description :

(1) Kidunda Dam
 The Tanzanian government is preparing TOR for EIA on the Kidunda Dam Project. It is expected that pre-F/S on this project will be conducted in near future.

(FY 1995 Overseas Survey)
 The Tanzanian government has decided to conduct the geological survey of the concerned area as well as EIA of the Selous Game Reserve and its surrounding before implementing D/D of this study. At present, the government is searching for a donor to fund the survey and EIA.

(FY 1996 Overseas Survey)
 More than 110 mil.US\$ is estimated for a construction of dam. Own fund and fund from donor countries are potential resources.

(FY 1997 Overseas Survey)
 Funding is being sought for the pre-F/S(geological study, EIA and sociological study).
 F/S and implementation are dependent on pre-F/S.

(FY 1998 Domestic Survey)
 Coordination and cooperation with WWF is required to conduct the subsequent study. Since WWF is worried about harmful influence on the ecology in the wildlife preserve, it seems to be difficult to implement the subsequent study.

(FY 1999 Overseas Survey)
 TOR for pre-F/S on water sources development (Kidunda Dam, Mugeta Dam, Ngerengere Dam, EIA) was submitted to World Bank (cost: US\$2mil.).

(2) Mugeta Dam and Ngerengere Dam
 There is an impediment factor that even if the dams were constructed, generated energy would not be sufficient for the city demand.

(3) Water Supply to Dar es Salaam
 (FY 1997 Overseas Survey)
 Lower Ruvu Scheme 1
 Preliminary design study should be started as high priority.

Lower Ruvu Scheme 2
 Dependent on pre-F/S for dam.

(4) Irrigation Project
 (FY 1997 Overseas Survey)
 All the irrigation projects are dependent on pre-F/S for dam, but as it exceeds the current GOT guideline of US\$2,000/ha, the engineering will need to be re-examined.

Description :

Subsequent Studies:

Jul.1996 B/D (JICA) conducted.
 Central King Road (7.16km, Phase2-1, 25months) and local area road in 2 districts (15.6km, Phase1-1, 16.5months) were selected to materialize.

Finance:

(FY 1996 Domestic Survey)

Except for Japanese grant, appropriation from special budget for road is being considered for the works which are necessary to expand the road and to construct new road as land acquisition, compensation for building removal of public facility.

(FY 1997 Domestic Survey)

Jul.1997 E/N 1,089mil.yen (Dar es Salaam Road Improvement 1/2)
 D/D was undertaken. At present bidding is in process.

June 1998 E/N 1,068mil.yen (Dar es Salaam Road Improvement 2/2-1)

(FY 1999 Domestic Survey)

21 June 1999 E/N 1,436mil.yen (Dar es Salaam Road Improvement)

Construction:

(FY 1998 Domestic Survey)

Jan.1998~Jan.1999 Road improvement in 3 districts is completed.

Dec.1998~March 2001 Construction of 4 lanes at the Central Circulation Road.

Dispatch of Expert:

(FY 1998 Domestic Survey)

JICA Expert is being dispatched to MWCT.

Operation & Management:

(FY 1998 Domestic Survey)

MWCT is responsible for the Central Circulation Road, and Dar es Salaam City is responsible for district roads.

Effect:

(FY 1998 Domestic Survey)

Improvement of access to public facilities, increasing possibility of utilization of bus transportation, improvement of public health by installing the drainage facilities, dispersion of transportation inflow to the urban center, etc.

***Community Road Improvement**

(FY 1996 Domestic Survey)

UNDP and UNHABTAT undertook a study. Rehabilitation work of a part of roads is on progress, financed by World Bank. This project needs coordination with priority road mentioned above.

(FY 1997 Domestic Survey)

Design work was completed and tender is going on. The project is beyond schedule.

(FY 2000 Domestic Survey)

Finance: World Bank

Construction: Rehabilitation for the badly damaged Community Road and improvement for the drain has been completed on Apr. 2000.

***Bus Terminal Improvement**

UNDP has confirmed the importance of this project and requested Japanese cooperation.

(FY 1997 & 1998 Domestic Survey)

Request for grant aid on Bus terminal plan which was proposed in the study was submitted but not approved. Tanzanian government has acquired a land for project and is requesting to Japan again.

(FY 2000 Domestic Survey)

The Tanzanian government has already requested for grant aid on the construction of the Long Distance Bus Terminal.

***Parking lot**

(FY 1997 & 1998 Domestic Survey)

Private sector is preparing to construct a Toll Parking Lot at a central part of the city. Moreover, two grade separated parkings are under construction by private company.

Background:

(FY1995 Overseas Survey)

The implementation of this project is believed to contribute to the development of economy and infrastructure in Tanzania. After the submission of the request for a grant aid to the Japanese government, the Tanzanian government reviewed these study results, which led it to give highest priority to the rehabilitation of local roads in the low-income residential area and the continuation of ring roads.

Current Situation:

(FY 2000 Domestic Survey)

After drawing Master Plan, the population, the economy and the traffic in Dar es Salaam are more increasing beyond expectations, therefore to conduct the uncompleted highest priority projects become the most urgent tasks and it is necessary to review the long-term City Planning project and the Road Network project.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

There are many plans such as

- 1.Rural administration,
- 2.Improvement of roads,
- 3.Development of agriculture land, and
- 4.Improvement of forest and environment

However, not so much progressed due to the lack of budget allocation to the ministry concerned.

(FY1995 Overseas Survey)

This study was successfully completed and it is expected to contribute to the development of Mwanza area. However, due to the lack of fund, the maps have not been shipped to Mwanza from the capital city, Dar es Salaam.

(FY 1998 Domestic Survey)

It is hard to collect information.

(FY 1998 Overseas Survey)

This study is utilized in governmental organizations [57maps(31%) were distributed], private enterprises[184 maps(65%) were distributed], and foreign aid organizations[7 maps(4%)]. They are mainly used in development of mineral resources, engineering, and tourist industry in the area of Mwanza-Geita Block.

Description :
(FY 1996 Overseas Survey)
The organization in charge of the project already sent the application form for grant aid to the Finance Ministry of Tanzania to be handed to the Japanese Government ten months ago, however any response has come yet.

(1)Monduli Town Water Supply Project
(FY 1996 Overseas Survey)
According to the project, water will be supplied by vehicles mounted with water tanks for the first five years, and will be supplied through pipes from the year 2005.
(FY 1997 Domestic Survey)
Request for grant aid assistance has been submitted but Japanese side has not answered yet.
(FY 1997 Overseas Survey)
D/D and construction of 2 boreholes have not been carried out yet due to lack of funds.
Procurement of 4 water tankers is not considered valid because the road to the town is in poor condition and the district Council can not maintain the vehicles.
(FY 1998 Overseas Survey)
Application for grant aid has already been submitted from RDD to the Finance Ministry.
(FY 1999 Overseas Survey)
Although the request for grant aid was submitted, there has not been any response.
ADB will finance the study of Monduli District water supply starting early 2000.
(FY 2001 Overseas Survey)
Request for Japan's Grant Aid has been submitted, however, not adopted yet.
Requested amount: 15,000,000 US\$
Contents: River and 3 spring intakes, 86km pipelaying, booster pumping station, 1925m3 reservoirs, 240m3 treatment with 39 public taps, 40m3 sump.
(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)
Contents:
Phase I: F/S
Phase II: D/D
Implementation Period:
Phase I: 18 months
Phase II: 36 months (October 2005 to October 2008)
Implementing party: Norconsult Internaional A.S.
Funding:
procurement: Tunisia African Development Fund: ADF and own finance
Objective: To Clarify adequate access to sanitation and water supply while considering needs and resources. To select a project with the highest priority enabling government to procure funds immediately.
Situation:
Result of project assessment has been approved by MOF, MoWLD, ADB missions in March 2003.
2 towns and 18 villages has been selected as a prioritised sub-division. Human mobilization has been completed. Project preparation team has prepared a project implementation manual.

(2)Village Water Supply Project(Groundwater Development)
(FY 1997 Overseas Survey)
At Mswakini, the District Council has funded the extension of the supply line from the existing borehole so that the water point is nearer the village. The funds have been used up and the pipeline is only 80% finished. All other recommended works also remain undone.
(FY 1998 Overseas Survey)
It has already been implemented.

(3)Village Water Supply Project (Dam Development)
(FY 1998 Overseas Survey)
Rasharahsa Dam
Finance: USAID
Construction: Completed
Situation: Grant has been provided.

(FY 1997 Overseas Survey)
Rasharahsa dam for Lossimingori Village was built with funds from the District Council and funds, in money or in kind, raised by the villagers.
Meserani dam for Meserani Village was started but after completing 10% of the construction, the work was washed away by the 1997 floods.

(4)Village Water Supply Project(New Dams)
(FY 1997 Overseas Survey)
One new dam has been built in Lossimingori Village, but this was instead of repairing an existing one.
Construction of other dams has not been started due to lack of funds.

| 10. MAJOR PROPOSED PROJECT(S) | <p>M/P: Same as the content of F/S basically. A period was just extended by 2005.</p> <p>F/S: 1. Project for improving the collection and disposal of wastes in urban areas 1-1 Project for improving collection and transport 1-2 Kunduchi final disposal site 1-3 Project for cleaning and improving streets 1-4 Project for improving the Nyerere repair factory 1-5 Project for improving a management sector 2. Project for improving the collection and transport of urine</p> <p>[Project Period Planned] M/P: 1997-2005 F/S: 1997-1999</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 1998 Domestic Survey) 8 preconditions for the implementation of the project are wholeheartedly implemented. The progress situation is as follows. 1) DCC newly established the department of waste management as a highest department. 2) DCC newly decided and started collection fee for household garbage and fee collection system. 3) DCC changed a method for entrusting works for the garbage collection project from a special project (concession) method to an ordinary method for entrusting works (contract-out). 4) DCC has tackled with an improvement in tax collection system since July 1996 and has improved tax revenue. 5) The city officially decided that a new place for a final disposal site was in Kunduchi proposed in the study.</p> <p>(FY 2000 Domestic Survey) 1) Dar es Salaam City submitted a report about 8 preconditions at the time of the study to a JICA Tanzania office and reported that they met conditions excluding "garbage fee collection system". They request for grant aid for proposed projects. 2) In "garbage fee collection system", they did not collect garbage fee with water supply fee etc., but they introduced individual collection system, leading to good results.</p> <p>(FY 2001 Overseas Survey) Funding: Government of Japan (amount of money requested US\$800,000,000), They requested in April 2001. Construction: 1998-2001</p> <p>(FY 2003 Overseas Survey) Environmental Impact Assessment (EIA) is conducted with their own fund. It becomes possible to make a final judgment about where to construct facilities in EIA in Pugu Kinyamwezi planned in 2004. It is a duty for the commission to get funds from overseas after EIA was conducted. New Kunduchi disposal site</p> <p>(FY 2001 Domestic Survey) (FY 2001 Overseas Survey) The counterpart institution of the study requested for a project fund of US\$6 million to Danish International Development Assistance (DANIDA) in July 2001 to implement a project for improving the "new Kunduch disposal site". The content of the improvement is as follows. - Improvement in facilities in a final disposal site for waste - Improvement in machinery and materials in a final disposal site for waste</p> <p>(FY 2002 Overseas Survey) There is no reply from DANIDA (as of January 2003).</p> <p>(FY 2002 Overseas Survey) Residents in Kunduchi protested against the development of a final disposal site, sued in a high court and won the case. The city starts looking for an alternative site.</p> <p>(FY 2003 Domestic Survey) The construction of the Kunduchi final disposal site was stopped due to the opposition of residents.</p> <p>(FY2007 Overseas Survey) 2003: - Five sites selected for the development of final disposal sites are as follows. 1) Chamazi (Temeke district) 2) Mbande (Temeke district) 3) Pugu Kinyamwezi (Ilala district) 4) Kinzudi "A" (Kinondoni district) 5) Mbezi Msakuzi (Kinondoni district) - A first screening of the sites was carried out and Pugu Kinyamwezi was selected as the environmental impact assessment site.</p> <p>2004: Environmental impact assessment was carried out at Pugu Kinyamwezi and the site was approved for development as a disposal site. Subsequent project: Pugu Kinyamwezi disposal site, environmental impact assessment. Implementing period: October, 2004 - June, 2009 Implementing body: Dar es Salaam City Commission (DCC) Purpose and contents: The Environmental impact assessment (EIA) is to research, forecast and assess the impact of the project to the related area. Appropriate precautions to health and the environment will proceed for the purpose of implementing sustainable development within the construction and management period. Contents of the projects are as follows: - Improvement of the standard of disposal site. - Confirming the environmental effect of developing disposal at the project site. - Creating the foundation for the design, management and monitoring. - Remove/reduce the expected environmental effect by adequate design and management the site. Funding: Own funds. Assistance was requested to implement the project.</p> <p>2005: Environmental impact assessment report was discussed by stakeholders.</p> <p>2006: The project was approved by all at meetings (local leaders of Pugu Kinyamwezi, citizens, Pugu development commission) and written consent was given.</p> <p>2007: By surveying and evaluating the land and compensating the land owners, site acquisition was completed. An 800m access road with gravel paving was constructed. The first cell for the disposal site was constructed, however, it does not meet the standards, due to lack of funding. (The cell has begun operation from February 2007.) A bulldozer was purchased. The Pugu Kinyamwez site is situated 25km from the city, Temeke is 35km, and Kinondoni is 40km. To shorten transportation distance, the city commission is planning to construct a transportation relay station in Kipawa or Vingunguti. This station will help to increase the amount of recycling. F/S of Dar es Salaam strategic health agenda was implemented and the World Bank is interested in its support.</p> | | |

Description :

1. Mwega Area Irrigation Development Plan

Study in the next stage:

(FY 1999 Domestic Survey)

Jan. 17, 2000 E/N JPY 30 million "Small-scale Irrigation Development Plan in Mwega Area, Morogoro Region (D/D)"

Finance:

(FY 2000 Domestic Survey)

Jun. 29, 2000 E/N JPY 982 million "Small-scale Irrigation Development Plan in Mwega Area, Morogoro Region (D/D)"

*Background:

(FY 1998 Domestic Survey)

They applied for grant aid.

They are waiting for the approval by the government of Japan side.

(FY 1999 Overseas Survey)

The approval for grant aid for Mwega area is planned. They requested for grant aid for Mgongola area in 1999. They plan to request for grant aid for Mkula area and Mgeta area in the future.

Construction:

Nov. 2000- Feb. 2002 (Completed)

(FY 2000 Domestic Survey) (FY 2002 Domestic Survey) (FY 2002 Overseas Survey)

Nov. 2000: Started construction works

Feb. 2002: Completed construction works

(FY 2001 Domestic Survey)

*Content of construction: Target area of the plan: 580 ha, Channel for branch lines: 5.3 km, Channel for main lines: 25.1 km, Channel for connection: 0.6 km, Road rehabilitation works, River rehabilitation works, etc.

Management and operation after the completion of construction works:

(FY 2002 Domestic Survey)

Malolo farmers cooperative

2. Mgongola Area Irrigation Development Plan

(FY 2000 Domestic Survey)

They requested for grant aid.

3. Mkula Area

(FY 2001 Domestic Survey)

The government of Tanzania requested for grant aid for the 4 areas for which F/S was conducted in the Survey (Mgeta area, Mgongola area, Mkula area, and Mwega area) in June 4, 1998. The implementation by grant aid was approved for Mwega area in which it is evaluated that the effect of a project is the largest among the 4 areas.

Japanese technical cooperation: Dispatch of experts

(FY 2002 Domestic Survey)

Short-term expert (1 person): Nov. 2001-Feb. 2002

(Field) Water management and land consolidation

Long-term expert (1 person): Jun. 2002-

(Field) Agricultural management

Present situation:

(FY 2003 Domestic Survey) (FY 2003 Overseas Survey)

The government of Tanzania submitted a request for grant aid for Mgongola area whose priority was the second highest to Mwega area in the plan in FY 2000. The area was selected as a model area for making an action plan for the "Study on the Tanzania National Irrigation Master Plan" which is conducted now, and an action plan for the implementation of the project was made.

(FY2007 Overseas & Domestic Survey)

No information to be specifically mentioned.

Description :

Description :

(FY 1999 Domestic Survey)(FY 1999 Overseas Survey)

The Government of Tanzania requested the Japanese government to provide a grant aid for construction of water supply facilities and provision of equipment and materials. Contents of the request include; 264 of deep wells with hand pumps, 78 of shallow wells, 29 of wells with wind power pumps, 7 wells with solar pumps, 9 level 2 water supply facilities, 64 reservoirs and equipment (vehicles, workshop equipment, water analysis kit).

The Japanese government has already approved this request and B/D study team will prepare a draft report toward March 2001.

(FY 2001 Overseas Survey)

Subsequent Study:

September, 2001 - March, 2002, JICA B/D

Fund Procurement:

A request for Japan's Grant Aid was submitted. (Requested amount: 410,000,000 yen)

* Construction of water supply facilities in the two districts of Hanang and Igunga.

(FY 2002 Domestic Survey)

18 September, 2001 E/N, 410 million JPY (The project for Rural Drinking Water Supply

6 August, 2002 E/N, 375 million JPY (The project for Rural Drinking Water Supply

* Four provinces (Hanang, Singida Rural, Manyoni and Igunga Districts) will construct the water supply facility and management and maintenance organization.

(FY 2002 Overseas Survey)

Bidding: January, 2003 (planned)

Construction: April, 2003 (Phase II)

(FY 2003 Overseas Survey)

Phase I: March 2003 - December 2003

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2008 Domestic Survey)

Implemented with Grant Aid.

Description :

1. Phase I
(FY 1999 Domestic Survey)
In August 1998, the government of Tanzania submitted an application form for Japan's grant aid to the Embassy of Japan. However, Japan has suspended to proceed following required procedures due to the unsettlement of the provisional water right.
Although the provisional water right for the project belongs to the decision matter of the President, no official decision has been made by January of 2000. Thus, the promotion of the project depends on the internal matter of the government of Tanzania whether provisional water right will be acquired or not.
(FY 1999 Overseas Survey)
D/D and implementation have been delayed due to non-availability of water right for the project.
(FY 2000 Overseas Survey)
In this Feasibility Study, 9t/sec. water right for the rainy season and 5t/sec. for the dry season was proposed, and the average 3.7t/sec. per year water right was acquired. It is considered what the acquired water right influence on the realization of the proposed projects and whether any additional research items will be necessary.
(FY 2001 Domestic Survey)
The request of grant aid cooperation has not been approved yet. The provisional concession of water of 3.71 m3/sec of the KIKURETAWA river as the auxiliary water source for this plan was approved after requesting to the water office of PANGANI basin.
(FY 2001 Overseas Survey)
The followings are the contents of the request for Japan's Grant Aid.
Requested Amount: 53,629,000 US\$
Contents: 1) Construction of headwork. 2) Construction of diversion channel. 3) Infrastructure development in Lower Moshi region.

2. Phase II
(FY 2001 Domestic Survey)
The possibility of request for Phase II is depended on the progress situation of Phase I.

Future perspective:
(FY 2001 Domestic Survey)
The government of Tanzania made the request again to the government of Japan because of the settlement of the concession of water problem. Meanwhile, the Development Study of JICA of "The M/P on the Irrigation in Tanzania" started in FY2001 will review the possibility to materialize this project.
(FY 2002 Domestic Survey)
Though the Gov. of Tanzania makes request for grant aid, there is a gap between irrigation right between proposed in the study and approved one. There has no progress. This project covers: the existing Lower Moshi Project Area (2,150ha), the extended area (460ha), and the new extension area (2,090ha). Due to shortage of water in the upstream caused by open-end water intake, the existing Lower Moshi Project Area has been irrigated limitedly, covering only 1,100ha. Consequently, JICA is approaching the government to take measures for promoting local people in Lower-Moshi 1,100 ha and 460 ha, to have consultation to enable to irrigation once a year. "The M/P on the Irrigation in Tanzania" treats with this district (1560ha) as priority area.

(FY 2008 Domestic Survey)
No information to be specifically mentioned.

(FY 2002 Domestic Survey)(FY 2002 Overseas Survey)

Subsequent study: B/D

Nov. 2002 - Jan. 2003

Final report will be submitted in Jun. 2003.

(FY 2003 Domestic Survey)(FY 2003 Overseas Survey)

Implemented Project: Rural Water Supply in Lindi and Mtwara Regions

Funding:

Funding party: Yen grant aid E/N concluded: Sep.1, 2003

Amount: JPY 331 million

(FY 2005 Overseas Survey)(FY 2007 Overseas Survey)

Implemented project: The project for rural water supply and sanitation in Lindi and Mtwara regions phase II

Implementing period: 6 months, completed in December 2004

Implementing body: JICA

Funding:

Funding party: Yen Grant Aid E/N concluded: 4 June, 2004

Amount: JPY 756 million

Tender:

Winner: Hazama Corporation, Japan

Status:

2004 completed D/D

2005 construction started

Implemented project: The project for rural water supply and sanitations in Lindi and Mtwara regions phase III

Implementing body: JICA

Funding:

Funding party: Yen Grant Aid

Amount: JPY 640 million E/N concluded: 27 June 2005

Objectives and contents:

Review the plan, formulate water supply plan toward 2015, implement feasibility study of priority project.

1) Establishment of water supply facilities targeting 100 villages: Construction of facilities including new water source development in all project site. (the water supply facilities should be independent and include water source and drainage system)

2) Sites: Select 100 representative villages (50 villages from each province) that especially require house hold water out of 700 villages.

3) Cost for construction (including cost for design and operation): 1,378,000,000 JPY(USD 11,730,000)

4) Cost for providing/operating/managing necessary machineries (including operation cost) : 477,000,000 JPY(USD 4,060,000)

F/S: Pilot study (construction of water supply facilities and implementation of monitoring: level 2 water supply facilities (deep wells or origin water source) in 4 villages, level 1 water supply facilities (hand-pumping wells) in 2 villages.

1) Establishment of water committee by utilising water fund.

2) Management and operation training targeting the committee.

3) Technical support which enables efficient operation.

4) Health education throughout a year in order to make safe water drink water.

Description :
(FY 2003 Domestic Survey)
There is no information available on the current situations of this project.

(FY 2003 Overseas Survey)
Implementation status of the proposed priority project is that, efforts to get a Donor to support the implementation of the priority projects of the Fisheries Master Plan are not yet fruitful. However, the Government is still communicating with Donor agencies to support the implementation of the Fisheries Master Plan projects. Request has been sent to the Government of Japan for supporting Programme No4-Lake Victoria Fish marketing improvement. The request is awaiting approval by the government of Japan.
The goals of the Fisheries Master plan Projects are to improve the fisher's livelihoods, increase food supply and security and alleviate poverty among the fisher communities. These goals can be achieved by raising the purchasing capability of fisher communities through Fisheries cooperative.

(FY 2005 Domestic Survey)
Proposed project: Lake Victoria Fish marketing improvement programme
Funding:
Funding party: Grant Aid E/N concluded on 28 November 2003
Amount: 624 million JPY
Details: Rehabilitation of the Kirumba fish market in Lake Victoria Mwanza city. Maintenance of landing facility and warehouse.
Proposed project: Construction of the Kirumba fish market in Mwanza city
Design/construction period:
Starting period: FY 2004
Progress: 100%
Benefit: Efficiency and security of landing works in Kirumba market were made by the implementation. In addition, improvement were made for interruption occurred with raining, which stabilisation of market distribution were made.

(FY 2006 Domestic Survey)
No information to be specifically mentioned.

(FY2007 Overseas & Domestic Survey)
No information to be specifically mentioned.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2004 Domestic Survey) (FY 2006 Domestic Survey)(FY2007 Domestic and Overseas Survey)

Subsequent study: Survey for demonstratin on the small-scale horticulture development plan among farmers in poverty in the coast state.

Implementing period: January, 2001 - March, 2004

Relation to the implementing study: The result of the survey on the title proved that the technological standards of the residents in the coast state and the implementation agency on the counterpart side are lower than expected and that the capacity development is needed in order to realize smooth business operation. Therefore, it concluded that multiple projects for the residents should be proposed and allowing them to choose projects is suitable for their current situation.

In response to such status, the survey on the title suggested the need for survey for demonstration in pursuit of building capacity so as to improve their lives, and survey for demonstratin on a small-scale horticulture development plan among farmers in poverty in the coast state was conducted from January 2001 through March 2004.

Objective: 1) To evaluate the effectiveness and validity of a development plan (master program and action plan). To suggest projects meeting the capacity of the residents in the community and the implementation agency on the counterpart side by reflecting the results on the development plan and making any changes, if necessary. 2) To build the capacity for improving life through technological transfer to the coast state government, the counterpart on the side of Tanzania, agricultural engineers of the District, engineers of the Department of Agriculture Cooperative Association and the residents in the targeted areas of the survey during the course of the survey conducted.

Progress: (FY2007 Domestic survey) The contents of survey for demonstration was succeeded to the counterpart government after the completion in March 2004 and is currently on going.

Funding: 278 million JPY

(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)

Credit scheme for investment in agricultural business and private nursing schools were established in Ruvu Darajani.

Technological assistance:

Trainings: Farm village development, cooperative association and irrigation: 4 personnel for 40 days

Dispatch of specialists: Specialist dispatched for a long term/Investment, capacity building, agriculture, nursing, seeds and multi-purpose shade: 6 personnel for the period of 2001 through 2004.

(FY2007 Domestic survey)

Proposed survey in the mentioned study listed below was implemented.

(1) Input credit

Beneficiaries: Farmers in four verified survey districts

Usage of the proposed project: The fund from the government office is recognized as a free grant aid to farmers, therefore, awareness of returning duty is low and the introduction of the input credit is considered to be early.

(2) Improvement of water ring: Introduction of a pump

Beneficiaries: 5 persons x 5 groups x 3 district = 75 people

Usage of the proposed project: Repayment of pump expense for irrigation is possible in I district out of three, however, two districts could not and did not go beyond subsisting farming.

(3) Training of prefectural government employers and agricultural extension workers

Beneficiaries: Prefectural government employers and agricultural extension workers in four prefectures

Usage of the proposed project: Skills of the extension workers were improved by horticultural technology training (results of the examinations were improved).

Prefectural government employers and agricultural extension workers created a horticultural technology manual in Swahili.

(4) Group promotion using community facility: Improve sense of community (construction of community hall and flour mill)

Beneficiaries: Group: community house in three districts and gristmill in three districts. User will be from six villages.

Usage of the proposed project: Promotion of community groups went well using the facilities. However, farmers are concerned about managing the flour mills by themselves after the departure of the research team.

(5) Prefecture seedling and field program: Prefecture nursery tree and agricultural field

Benefit: Kibaha prefecture and farmers in the prefecture

Usage of the proposed project: During the project, good result were achieved by introducing new plants. However, there is difficulty in farm management because it is a self-supporting accounting system. The scale of farming will be reduced according to the ability of the Kibaha prefecturel government after the departure of the research team.

(FY 2008 Domestic Survey)

Description :

(FY 2005 Domestic Survey)

Technical type cooperation is planned to be implemented aiming to diffuse the guideline throughout the country, prepared in phase 3.

(FY 2005 Overseas Survey)

Request for a fund was submitted to JICA to implement Lower Moshi and Mgongola Irrigation Schemes. With the success achieved by Mkindo pilot scheme, the government has shown an intension to conduct irrigation development in the region between the target area and the lower reach. In response, JICA has conducted F/S of the scheme.

(FY 2006 Domestic Survey)

JICA plans to implement the irrigation agriculture technical service system building plan as a technical cooperation project aiming at improving productivity and profitability of irrigation agriculture, and building technical diffusion system for existing research, trainings, and technologies in order to develop a package of irrigation rice technology and its promotion methods in a national scale.

(FY 2007 Overseas Survey)

Subsequent study : Establishment of District Agricultural Development Plan(DADP) Irrigation Agriculture Guideline and Training Plan(Technical Support Project)
Implementing period : from February, 2007 to January, 2010

Implementing body : JICA, Ministry of Agriculture and Food Security (MAFS)

Objective : To realize reinforcement of project implementation capacity about designing, conduction, and operation management of irrigation project at targeted province, irrigation office, and technical service unit(Morogoro,Kilimanjaro, Mbeya, and Mtwara irrigation zone).

Other training program : 4 personnel in 12 provinces has been attended to training of the establishment of DADP irrigation project guideline.

Benefit target : 4 irrigation offices, and technical service unit(Morogoro,Kilimanjaro, Mbeya, and Mtwara irrigation zone). The target of the project is for 12 provinces out of 132 provinces in Tanzania. 160 personnel(irrigation experts) would attend capacity development program.

Progress : Construction work has not been started yet.(In progress of approval by irrigation association)

(FY 2009 Overseas Survey)

The implementation of the NIMP is in line with the national policy of ASDS i.e. the Agriculture Sector Development Strategy which is being implemented through ASDP, Agricultural Sector Development Programme. The ASDS focuses on undertaking three new critical interventions for innovative and practical actions towards the sustainable agricultural development including irrigation development. These are (i) focus on agricultural productivity and profitability, (ii) promotion of private sector/public sector partnership, and (iii) implementation of ASDS through DADPs.

The National Irrigation Master Plan (NIMP) aims to achieve sustainable irrigation development through effective use of national resources resulting in an improvement of agricultural productivity and profitability. Thus the development programme which implements the NIMP, targets the establishment of sustainable irrigation development system by 2017.

The Government has been working on these recommendations and positive results have been achieved on some recommendations, e.g.:

(i) The implementation of the NIMP on expanding irrigation area is still ongoing.

(ii) The Government has already promoted Irrigation Section to a Departmental level having a Director and three Assistant Directors who head Sections of Planning and Designing, Construction and Project Supervision, and Research and Technology Promotion.

(iii) As of February 2010, the National Irrigation Policy was approved by the cabinet. The Irrigation Division is now in the process of formulating the Irrigation Strategies and Legal Framework.

(iv) The Government has already begun the process of updating the National Irrigation Master Plan. Terms of References for recruiting the consultant firm to undertake the study have been prepared and invitations for express of interest to do the study will soon be tendered.

(v) As for other recommendations i.e. Arrangements of Financial Resources for NIMP Implementation, Irrigation Development in River basin Management and Need of Inter-sectoral and Inter-ministerial Coordination, these are being implemented on the basis the Irrigation Division performing its functions according to Government rules and regulations.

There is a need to update data and information on irrigation potentials as well as to provide data on irrigation potentials at district levels. Review of the National Irrigation Master Plan is in preparation.

(FY 2009 Domestic Survey)

Agricultural Irrigation Development Sector Guideline Creation Program (Phase II) of the District Development Plan (DDP) is expected to begin.

Description :

(FY 2007 Domestic and Overseas Survey)

Subsequent study: Urban area water supply project baseline design study.

Implementing period: May, 2006 - March, 2007

Implementing body: MoW

Objective and Contents: For this baseline design study, four villages out of 22 were judged not to have the ability for payment of the management, administrative and maintenance expenses for common water faucet water supply facilities (Level 2), after local study and domestic analysis. The type of the water facility has been changed to deep well with hand pump (Level 1) in three villages to ease the strain of management, administrative and maintenance expense to local residents. It was decided to exclude one village from the plan because the prospects of finding alternative water sources to install a deep well with hand pump (Level 1) were not good. As a result, 18 common water faucet water supply facilities (Level 2) in 18 sites, and 14 deep well with hand pump facilities (Level 1) in three villages will be installed. 21 villages are excluded from the development.

Along with the construction of the water supply, there is a plan for assistance by a soft component to strengthen management, administrative and maintenance abilities of related organizations and the water supply operation bodies.

Funding: Requesting grant aid.

(FY 2008 Domestic Survey)

Implemented project: Urban area water supply project (Phase I and II), (Grant Aid Project)

Funding amount: Grant Aid 1.705 billion JPY

E/N concluded: Phase I: 3 July, 2007, Phase II: 27 June, 2008

Implementing body: MoW, Coast region (provincial water resource bureau), Dar es Salaam region (city's water resource bureau)

Purpose: 1) Installation of water facilities in 21 villages, 2) enhancement of the capacity for management and maintenance of the water supply and related organizations in Coast region and Peri-Urban area of Dar es Salaam region.

Objective: To provide and consume stable and safe water to the locals and increase the rate of water supply.

Scale of beneficiaries: United Republic of Tanzania Coast region and Peri-Urban area of Dar es Salaam region; total of 21 villages and 63 thousand citizens (year 2015.)

Discrepancy with proposal: The contents were amended from the construction of 22 public faucet water supply facilities to the installation of 15 public faucet water supply facilities in 18 villages and 24 deep wells with hand pumps (level 1) in 3 villages.

(FY2012 Domestic Survey)

A Grand Aid project, Project for Water Supply Development around the Metropolitan Area, was completed in 2009.

(Involvement of Japanese companies) Company name: Konoike Construction Co., Ltd.

(Involvement) Facility construction

Description :
(FY 2008 Domestic Survey)
The proposed projects listed below show a constant progress. (A technical cooperation project is scheduled to start in FY 2009.)

1. Improvement of O&OD development method
 - 1) Improvement of the effectiveness of orientations, workshops and trainings.
 - 2) Improvement of the effectiveness of the community plan formulation process.
2. Construction and dissemination of the review backstop system
 - 1) Creation of R&B system documents.
 - 2) Dissemination of R&B system documents.
3. Improvement of facilitators' capacity.
 - 1) Enlightenment of the importance of R&B.
 - 2) Facilitation by the district and ward facilitator, improvement of the M&E capacity.
 - 3) Facilitation at community level, improvement of the M&E capacity.

(FY2012 Domestic and Overseas Survey)
Implemented project: Technical Cooperation in Strengthening Participatory Planning and Community Development Cycle for Good Local Governance
(Implementing period) October 18, 2009, to October 17, 2014
(Counterpart) Prime Minister's Office Regional Administration and Local Government
(Project objectives) Develop O&OD implementation model for effective functioning of O&OD process at community, county and provincial levels through demonstration in the target village.
(Outputs)

1. To establish effective training system of county facilitators.
2. To develop effective O&OD implementation model for enhancing independence of community in the village development process through demonstration (in the selected target village).
3. To develop a model for local governments to actively support community initiatives through demonstration.
4. To present basic conditions (financial, physical, institutional, human resources capacity, etc.) necessary for spreading the O&OD implementation model.

| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Internal Drainage Basin Water Office, Ministry of Water | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | <p>1) To formulate hydrogeological map with necessary information for development and management plan of water resources and water supply for IDB.</p> <p>2) To develop the capability of counterpart personnel of Ministry of Water and other authorities concerned in the course of the Study.</p> | | |
| 7. CONSULTANT(S) | OYO International Corporation KOKUSAI KOGYO CO., LTD. | | |
| 8. STUDY PERIOD | Sep.2005 ~ Mar.2006 6month(s) Jun.2006 ~ Feb.2008 20month(s) | | |
| 9. SITE OR AREA | The Internal Drainage Basin (IDB) , which is situated in the north-eastern part of the country. IDB is the second largest basin in Tanzania, | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Water Balance Analysis</p> <p>Water balance and groundwater recharge in each sub-basin were analyzed with meteorological, hydrological, and remote sensing data. Three kinds of water balance analyses were conducted: a) firstly, monthly macro water balance in each sub-basins in the IDB (minimum analysis unit: sub-basin), b) secondly, the analysis concentrated on grasping the distribution of the infiltration potential in each sub-basin in the rainy season (minimum analysis unit of 75 m/pixel) and c) thirdly, the analysis applied to the sub-basin G to obtain more detailed distribution of the infiltration potential under consideration of surface water runoff during rainy and dry season (minimum analysis unit of 75m/pixel). The results are as follows.</p> <ul style="list-style-type: none"> - Possible infiltration during the dry season is almost "zero" in IDB. - Annual possible infiltration (per unit area) in IDB is higher in the northern area than that in the southern area and the monthly infiltration in the northern area is unevenly distributed in April during the rainy season. However, the monthly infiltration in the southern area during the rainy season is rather stable. - There are high precipitation and high possible infiltration areas in and around Lake Eyasi and Lake Manyara. - There are areas with stable monthly infiltrations but not so much in and around Tabora region. - The runoff in the sub-basin G is around 2% to 11% during the rainy season. - The infiltration in the sub-basin G is higher in the northeast area than in the southwest area. <p>2. Groundwater Potential Evaluation</p> <p>Groundwater potential evaluation map was completed stakeholder friendly. Since one of the main purposes of this study is to evaluate groundwater potential in IDB from hydrogeological and hydrological points of view, high potential areas in IDB can be easily distinguished. Synthetic analysis with groundwater potential evaluation and social conditions with population density and rural water supply ratio indicate that five areas: i) Kondoa/Babati area, ii) Karatu/Mbulu area, iii) South Singida town area, iv) Igunga area and v) West Shinyanga area, have relatively high potentiality for rural water supply scheme.</p> | | |

Description :
 (FY 2008 Domestic Survey)Currently the development study "The Study on Tabora region Water Supply" planned by another study has just started. The Tabora region is one of the six target regions for this study. However, since this project takes IWRM into consideration, it targets at river basin, not administrative unit. The east area of Tabora, 1/3 of the region, is included in a target area of this project.

Description :

(FY2013 Domestic Survey)

Implemented project: The Project for Widening of New Bagamoyo Road (Grant Aid Project)

(1) Project Objectives: In order to ensure a smooth traffic by widening the New Bagamoyo Road targeted block (12.9km between Mwenge and Tegeta).

(2) Project Site/Name of the Targeted Area: Tanzania Dar es Salaam City (Population About 3,200,000)

(3) Project Summary: 1) Engineering works and the procurement of equipment: A maintenance for the traffic of four-lane roads with a median strip. This include detailed designs of bypass and BRT which are planned in the future. 2) The Contents of the consulting service/soft component: Detailed Design, Construction Management

(4) Total working expenses/ Approximate Assistance fund: Total working expenses: 54.51 hundred million yen (Approximate assistance fund (Japan side: 49.33 hundred million yen (including a detailed design of 0.6 hundred million yen), Tanzania side: 5.18 hundred million yen)

(5) Project Implementing Schedule (Cooperation period) Scheduled during 2010 February . 2013 March. (38 months in Total. Including detailed design and bidding period)

(6) Project Implement Structure (Implementing body/Counterpart): Responsible agency : Ministry of Infrastructure Development. Implementing body : TANROADS: Tanzania National Roads Agency

* Since the Project for Widening of New Bagamoyo Road needed additional construction works, the fund limit which was signed on 31st May 2010 had been changed from 48.73 hundred million yen to 50.95 hundred million yen (17th January 2014).

Subsequent Study: The Project for Improvement of Tazara Intersection(D/D) (Grant Aid Project)

(1) Project Objectives: This project implements a freeway of Nyerere Road at Tazara intersection. This promotes to ease the traffic congestion both at Nelson Mandela Road that starts from the intersection and at Nyerere Road. As a result, this contributes to secure the smooth traffic and logistics within Tanzania, and other neighboring countries.

(2) Project Site/Name of the Targeted Area: Dar es Salaam City (Population approximately 3,030,000 people)

(3) Project Summary: 1) Engineering works and the procurement of equipment: (Facility) To make the freeway at the Tazara intersection (2 lanes -2 bridges management) and the improvement of the intersection including to make the signals of the intersection and neighboring intersection work together. 2) The Contents of the consulting service/soft component

Detailed Design, Construction Management

(4) Total working expenses/ Approximate Assistance fund: Total working expenses: 37.48 hundred million yen (Approximate assistance fund (Japan side: 30.08 hundred million yen, Tanzania side: 7.40 hundred million yen)

(5) Project Implementing Schedule (Cooperation period) Scheduled during 2012 November . 2016 November. (49 months in Total. Including detailed design and bidding period)

(6) Project Implement Structure (Implementing body/Counterpart): Responsible agency : Ministry of Works. Implementing body : TANROADS: Tanzania National Roads Agency

*Currently tendering a bid.

Implemented project: The Project for Improvement of Transport Capacity in Dar es Salaam (Grant Aid Project)

(1) The Project Objectives: This project promotes to secure the smooth and stable traffic and therefore contributes to activate the logistics in the city by preparing the bottleneck road block between Gerezani and Bandari Road.

(2) Project Site/ Name of the Targeted Area: Dar es Salaam City (Population approximately 3,030,000 people)

(3) Project Summary: 1) Engineering works and the procurement of equipment [Facility] A maintenance for the traffic of four-lane roads with a median strip. (Approximately 1.3 km, including an overpass management). 2) The Contents of the consulting service/soft component. Detailed Design, Construction Management

(4) Total working expenses/ Approximate Assistance fund: Total working expenses: 13.35 hundred million yen (Approximate assistance fund (Japan side: 11.45 hundred million yen, Tanzania side: 1.9 hundred million yen)

(5) Project Implementing Schedule : (Cooperation period) Scheduled during 2011 September . 2014 October. (40 months in Total. Including detailed design and bidding period)

(6) Project Implement Structure (Implementing body/Counterpart): Responsible agency : Ministry of Works. Implementing body : TANROADS: Tanzania National Roads Agency

Capacity Building Project for the Improvement of Dar Es Salaam Transport (Technical cooperation project)

(Implementing period) 2010.12-2012.12

(Implementing body) Department of Policy Planning, Ministry of Transport

(Project purpose) A mechanism to coordinate transport projects of relevant organizations in Dar es Salaam and monitor their implementation is established with its capacity being strengthened.

(Outputs) 1) The Secretariat's capacity to analyze the status of transport projects in Dar es Salaam and report it to the Steering Committee is strengthened. 2) The

"Improvement of Dar es Salaam Transport" Steering Committee makes recommendations to relevant organizations. 3) Transport-related organizations have become able to utilize STRADA for traffic projections. 4) The results of traffic demand analysis are incorporated into transport policies of relevant organizations.

Implemented Project: BRT Preparation between Morogoro road and inter-CBD (Approximately 21 km between Kimara and Kibukoni)

(Project Objectives) To ease traffic congestion within Dar es Salaam city.

(Implementing Body) Tanzania National Roads Agency: TANROADS

(Implementing Period) 2010-2015

(Assistance Agency) World Bank

(FY2013 Overseas Survey) No information to be specifically mentioned.

| 1. COUNTRY | Tanzania | | |
| 2. NAME OF STUDY | The Study on the Groundwater Resources Development and Management in the Internal Drainage Basin in the United Republic of Tanzania | | |
| 3. SECTOR | Social Infrastructure / Water Resources Development | | 4. TYPE OF STUDY M/P |
| 5. | INTERNAL DRAINAGE BASIN WATER OFFICE, MINISTRY OF WATER | | |
| COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | | |
| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | <p>1) To formulate hydrogeological map with necessary information for development and management plan of water resources and water supply for IDB.</p> <p>2) To develop the capability of counterpart personnel of Ministry of Water and other authorities concerned in the course of the Study.</p> | | |
| 7. CONSULTANT(S) | OYO International Corporation KOKUSAI KOGYO CO., LTD. | | |
| 8. STUDY PERIOD | Oct.2005 | ~ | Dec.2008 38month(s) |
| 9. SITE OR AREA | The Internal Drainage Basin (IDB) which is situated in the north-eastern part of the country and the second largest basin in Tanzania, which extends over 6 regions (Arusha, Shinyanga, Manyara, Dodoma, Singida, and Tabora) with a area of 143,100km ² . | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Recommendations</p> <p>1-1. Water Resources Development and Water Quality : (1) Water Resources Development, (2) Groundwater Quality Problem, (3) Necessity of Detailed Epidemiological Investigation for Fluorosis</p> <p>1-2. Monitoring System and Update of the Study : (1) Groundwater Monitoring, (2) Restructuring Monitoring and Collection System of Basic Data for Water Resources Management, (3) Continuation and Update of the Study, (4) Use of GIS</p> <p>1-3. Organization Strengthening of IDBWO</p> <p>2. Water Balance Analysis</p> <p>1) Possible infiltration during the dry season is almost "zero" in IDB.</p> <p>2) Annual possible infiltration (per unit area) in IDB is higher in the northern area than that in the southern area and the monthly infiltration in the northern area is unevenly distributed in April during the rainy season. However, the monthly infiltration in the southern area during the rainy season is rather stable.</p> <p>3) There are high precipitation and high possible infiltration areas in and around Lake Eyasi and Lake Manyara.</p> <p>4) There are areas with stable monthly infiltrations but not so much in and around Tabora region.</p> <p>5) The runoff in the sub-basin G is around 2% to 11% during the rainy season.</p> <p>6) The infiltration in the sub-basin G is higher in the northeast area than in the southwest area.</p> <p>3. Groundwater Potential Evaluation Synthetic analysis</p> <p>with groundwater potential evaluation and social conditions with population density and rural water supply ratio indicate that five areas: i) Kondo/Babati area, ii) Karatu/Mbulu area, iii) South Singida town area, iv) Igunga area and v) West Shinyanga area, have relatively high potentiality for rural water supply scheme.</p> | | |

| 3. SECTOR | Development Plan / (Development Plan in) General | | 4. TYPE OF STUDY M/P |
| 5. | Ministry of Agriculture, Food Security and Cooperatives (MAFC) | | |
| COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | | |
| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | 1) To support the ASDP implementation process in institutional and operational aspects with focuses on disbursement of DADP funds. 2) To assist the establishment of the ASDP Basket Fund and carry out follow-up studies for the operation of the Fund. 3) To facilitate the ASDP implementation process in planning, implementing and M&E at district and field levels. 4) To support the capacity building of relevant organizations through joint studies, joint workshops, and other forms of assistance in carrying out tasks necessary for ASDP. | | |
| 7. CONSULTANT(S) | International Development Center of Japan | | |
| 8. STUDY PERIOD | Nov.2005 | ~ Jan.2009 | 38month(s) |
| 9. SITE OR AREA | Whole area of Tanzania | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Issues Experienced and Observed during Formulation (1) Formulation of ASDS/ASDP Documents : 1) Needs for close consultation and coordination, 2) Importance of dialogue between the government and DPs, and the balance between the government ownership and quality of outputs, 3) Practicality of the basic program documents. (2) Participation of DPs in Formulation : 1) Reduction of transaction costs on the government side while increase of coordination costs on DPs side, 2) Government ownership, 3) DP coordination and timing (Delay of ASDP implementation due to the effort of unifying the World Bank Project under a single basket arrangement), 4) Withdrawal from SWAp (A thought on the case of DANIDA and EU), 5) Too much focus on the Basket Fund. (3) Joint Appraisal Mission : 1) JAM is a good opportunity for stakeholders to raise issues for alignment, 2) Members for JAM should possess diplomatic skills with substantial experience of working for the country and a targeted sector, 3) Importance of the follow-up after implementation. (4) Memorandum of Understanding : 1) Importance of coordinating agency, 2) DP coordination and timing, 3) Operational issue. (5) Preparation of Documents for Implementation : 1) Need to confirm the roles of the guidelines, 2) Importance of establishing updating mechanism, 3) Practicality of the basic program documents, 4) Various guidelines to be integrated, 5) Importance of examining M&E document applicability during the formulation period</p> <p>2. Issues Experienced and Observed during Implementation (1) Operation of and Coordination within ASLMs : 1) Importance and Challenges of coordination among ASLMs, 2) Need for looking at operational issues, 3) Importance of capacity development. (2) Contribution to the Basket Fund, and Preparation of the Annual Work Plan and Budget : 1) Positive Effect of SWAp , 2) Too much focus on Basket Fund (It took some time for major international financiers to adjust to the Basket.), 3) Utilization of government system, 4) Utilization of the government system. (3) Dialogue Mechanism : 1) Positive effect of SWAp (Broadening of available resources), 2) Positive effect of SWAp (Greater information availability), 3) DP coordination (Difficulties of timely information sharing and updating), 4) Operational issue , 5) Government ownership. (4) Mainstreaming : 1) Too much focus on Basket Fund (Meaning of mainstreaming), 2) Operational issue. (5) Joint Implementation Review : 1) Operational issue, 2) Utilization of government system. (6) Thematic Working Groups : 1) Utilization of the government system, 2) Positive effect of SWAp (on the enhancement of the government ownership). (7) ASLMs Support to DADP Planning and Implementation : 1) Importance of trial exercise, 2) Training needed not only for sensitization but also for technical support, 3) DP's engagement). (8) M&E : 1) Importance of field testing and trial stage, 2) Utilization of the government system, 3) Need to consider the capacity of local government</p> | | |

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2009 Domestic Survey)(FY 2009 Overseas Survey)

1. "Technical Cooperation in Capacity Development for the ASDP Monitoring and Evaluation system"

(Objective)This project aims to establish "Regular Report System of Agricultural Data" in the framework of ASDP's monitoring and evaluation system.

(Project Overview)

1)Formulating "Regular Report System of Agricultural Data" which is integrated among various ministries

2) Training officials of Morogoro Region and Dodoma Region for managing the proposed Regular Report System of Agricultural Data to manage the Regular Report System of Agricultural Data

3)Revising the Regular Report System of Agricultural Data in the regional governments of Morogoro and Dodoma, target district governments, and wards in the district through a test installation

4)Revising the ASDP Monitoring and Evaluation System Document based on the result of the test installation and lessons learned

5)Sharing the progress and results of this project with central and local government officials as well as donors

(Implementing Period)2008.3-2011.3

(Implementing Agency)Ministry of Agriculture, Food, and Cooperatives

2. Technical Cooperation in Strengthening the Backstopping Capacities for the DADP Planning and implementation under ASDP

(Objective)This project aims to improve the DADP planning and the operational monitoring through the DADP Planning and Implementation task-force, Prime Minister's Office Regional Administration and Local Government, and regional administration, which oversee the DADP project at the central level, by supporting the local governments.

(Project Overview)

1)Enhancing the support program related to the DADP program

2)Enhancing the support program related to the monitoring of DADP implementation

(Implementing Period)2009.3-2012.3

(Implementing Agency)Ministry of Agriculture, Food, and Cooperatives

Progress has not been made in the projects listed below.

1. Improvement of the implementation structure of ASDP at national level

(Reason)the injection to the basket fund (including loans of few billions US dollars from the World Bank and the International Fund for Agricultural Development) was too big compared to the fund-receptive capacity, and implementation and management capacity of the recipient government (both at national and local levels).

2. Building the mechanism of technical support coordination related to ASDP between the Tanzanian government and donors

(Reason)there was no agreement reached between the Tanzanian government and donors because it would take a lot of time for donor adjustment and it was more feasible for the recipient government to meet its demands by bilateral negotiation.

3. Reform of agricultural training agency

(Reason)lack of strategic decision in ASLMs and qualitative and quantitative lack of human resources needed to formulate and implement the reform plan. In addition, officials involved were tied up with the crash program under the direction of president, so that the long-term reform was prevented.

(FY2013 Domestic Survey)

1. Technical Cooperation Project : The Project for Capacity Development for the ASDP Monitoring and Evaluation System Phase 2

Project purpose:ASDP M&E is conducted on the basis of national agricultural data collected through improvement of ARDS

Outputs:

1.ARDS is rolled out nationwide and operational.

2.Backstopping activities for ARDS by M&E TWG are strengthened.

3.Coordination of ASDP M&E to implement ARDS is enhanced.

Implementing period:2011.8-2015.7

Counterpart (C/P):Ministry of Agriculture, Food Security and Cooperative(MAFC)

2. Cooperation and dialogue among the government and donors

The multilateral (World Bank, IFAD, FAO etc.) and bilateral (JICA, Irish Aid, USAID etc.) assistance organizations commit to the development in Tanzania. For this reason, the cooperation and dialogue among the government and the donors were urgent issues from early 2000s. Due to this background, since after a development study project supported the implementation of cooperation and dialogue framework, this government - donor cooperation and dialogue became the basic framework and system of the development.

No further progress is seen for the following proposals at this time:

-The implementation of efficient and effective development program that the government and donors collaborate together.

-The improvement for the national level implementation system of the development program of an agricultural sector.

-Building the coordination mechanism for the Tanzanian government and donors in terms of the development program of an agricultural sector.

-Reformation of the agricultural training institution

(FY2013 Overseas Survey)No information to be specifically mentioned.

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :**(1) Agricultural Extension Institute Improvement Project**

Subsequent study:

(FY 1998 Domestic Survey)

July ~ Dec. 1997 B/D (JICA): This study targeted Masaka and Mukono areas. Mukono was selected as the preferential area.

Finance:

(FY 1998 Domestic Survey)(FY 1998 Overseas Survey)

(Agricultural Extension and Training Center Project)

28 Jan. 1998 E/N 420 million yen (1/2) ; 21 May 1998 E/N 409 million yen (2/2)

Construction:

(FY 1998 Domestic Survey) Phases I Aug. 1998 ~ Oct. 1999 (1/2)

(FY 2001 Domestic Survey) Phases II 2000 Completed

Japanese technical cooperation:

(FY 1998 Domestic Survey) Materials were provided (sofa, desk, platform, blackboard, typewriters, computers, printer, video machine, materials for examination, agricultural observation, cultivation and transportation).

Impact:

(FY 2000 Overseas Survey)

The impacts by Agricultural Extension and Training Center Project is as follow.

Awareness of the completed facilities, created among the stakeholders and awareness building is still going on.

The frequency of the use of the training facilities by farmers and other organization has increased.

Farm production in terms of vegetables and animals has increased.

(2) Agricultural Transportation and Market Activation Project

(FY 1998 Domestic Survey) 1997~ JICA Development Study "Agricultural Production and Marketing Improvement Project".

(3) Livestock Sanitation/Facility Improvement Project: As a highest priority project, the request for the JICA's assistance has been made.

Subsequent study:

(FY 2000 Overseas Survey)

A request for F/S for the improvement of the veterinary diagnostics and quarantine centre to JICA is about to be submitted. The F/S will take 12 months and cost US\$ 500,000. The contents of study will cover construction of veterinary diagnostic and quarantine centre, construction of livestock vaccine research and development unit, and capacity building of district laboratories.

(4) Paddy Field Development Pilot Project: Designated as a highest priority project

Subsequent study:

(FY 2000 Overseas Survey)

"Paddy Field Development Pilot Project" was cancelled and "Sustainable Irrigation and Drainage Project in Eastern Uganda" was planned. A request for F/S for sustainable irrigation and drainage project in Eastern Uganda to JICA is about to be submitted. The F/S will take 16 months. The contents of study will design macro- and micro-irrigation plan, plan for farmers' association, post-harvest plan, and operation & maintenance plan.

(5) Drinking Water Development Project

Subsequent study:

(FY 1998 Domestic Survey) FY 1997 B/D (Sanyu Consultants Inc.)

Finance:

(FY 1998 Domestic Survey) A grant aid assistance will be provided.

Background:

(FY 1995 Domestic Survey) It has been implemented under the name of "Cooperation to Keep Well-Qualified Drinking Water in Africa".

(FY 1997 Domestic Survey) 1) Implementation has started or is to start in all the target areas of the study except for Mpigi. 2) Masaka is covered by SWIP (South-West Integrated Project) and Mukono by RUWASA Project. 3) F/S was conducted at Luwero and fund is expected. (Organizing Ministry-Ministry of Natural Resources)

(FY 1998 Overseas Survey) Boreholes for drinking water was drilled in Mpigi district.

(FY 2000 Overseas Survey)

"Project for rural water supply - Central Uganda" has been implemented by JICA's fund as follow.

F/S was carried out in 1995-96.

B/D was done in 1997-98.

Phase I project (53 boreholes) was completed in 1998-99

Phase II project Term I was completed and also Level II water supply system in Kiboga town was completed in 1999-2000.

Phase II project Term II is on going in 2000. So far 24 boreholes were completed in Mubende district and 84 boreholes in Kiboga district.

(6) Integrated Agricultural Development Project

4 model areas were proposed.

Detail

The technical transfer was conducted to the staff of the Ministry of Agriculture, Animal Industry and Fisheries concerning the scheme to complete TOR for F/S assistance.

(FY 1995 Overseas Survey)

The produced maps will be used in determining land use pattern in the study area. The Ugandan Government hopes to receive more technical assistance for the project implementation.

(FY 1997 Domestic Survey)

Actions are being taken to materialize most of the proposed projects.

Description :

(1)Renovation of tele-com. facilities connecting Entebbe and Kampala
(FY 1997 Overseas Survey)
Finance:
1995,96 Private Fund 3.5 mil.USS
Construction:
Project is being implemented.

(2)Others
Construction:
(FY 1995 Overseas Survey)
Several projects have been implemented with the UTPC own fund.

Detail:
The Japanese grant aid has been requested for the Project No.7, renovation of tele-communication facilities at Jinja area, in early 1995.

(FY 1996 Domestic Survey)
MOF has been examining the possibility to provide grant aid for this project. The Government of Uganda intends to privatize UPTC. Presently (Dec.1996), the Government calls for investors.

(FY 1997 Overseas Survey)
The map is being utilized for field studies.

Description :
 Subsequent Study:
 (FY 1997 Domestic Survey) (FY 1998 Domestic Survey) (FY 1998 Overseas Survey)
 1997/Apr/01-May/26 B/D (JICA)
 Consultant: Sanyu Consultants Inc.

(1) Construction of facilities
 Deep well (cum hand pump, 90m) 435 (proposed 446)
 Level II water supply facility 1

(2) Provision of machinery
 Pick-up truck 4
 Service rig 1
 Equipment for work shop 1 set
 Water quality examination kit 4 sets

The project is proceeding for implementation by grant aid.

Improved springs, shallow wells, and irrigation ponds, which were proposed by the F/S, were not included due to the sanitary problem.

Finance:
 (FY 1998 Domestic Survey) (FY 1998 Overseas Survey)
 28 Jan. 1998 E/N 638 million yen "Rural Water Supply Project (phase I)"
 *Contents: Provision of machinery and materials, (4 pick-up trucks, a service rig, a set of workshop equipment, 4 sets of water quality examination kits), construction of facilities (53 deep wells).

As for this project phase II, 2,659 million yen is to be provided.
 *Contents (planned): Construction of facilities (382 deep wells, and a simple water supply facility).
 (FY 1999 Domestic Survey)(FY 1999 Overseas Survey)
 20 May 1999 E/N 2,659mil.yen.

Construction:
 (FY 1998 Domestic Survey) (FY 1998 Overseas Survey)(FY 1999 Domestic Survey)(FY 1999 Overseas Survey)(FY 2001 Overseas Survey)
 Phase I : June 1998 ~ March 1999 (completed), Contractor: JV of Nishoiwai Corporation and Nissaku Co., Ltd.
 Phase II: Term 1 (Nov.1999~Mar.2000), Term 2 (Apr.2000 ~ Mar.2001), Term 3 (Apr.2001 ~ Mar.2002).
 (FY 2002 Domestic Survey)(FY 2002 Overseas Survey)
 Phaze II: Term 1 (Jul. 1998-Mar. 1999) Construction of 105 deep wells in the west area of Mipigi District.
 Term 2 (Dec. 2000-Jan. 2002) Construction of 118 deep wells in Kiboga District, 24 deep wells in Mubende District, and water system (community system) in Kiboga Town.
 Term 3 (Apr. 2001~Feb.2002) Construction of 135 deep wells in Mubende District.

Operation and management:
 (FY 1998 Overseas Survey)
 Water and Sanitation Committee will take over the project after the completion and Water Users Group will be in charge of managing the deep wells (boreholes).
 (FY 2001 Domestic Survey)
 Approximately 80% of the wells transfered to WUG after construction, are being managed and maintained in good condition under the assistance of WSC. However, the rest 20% of the wells are not working well and it takes one or two months to repair them due to lack of finance.
 (FY 2002 Overseas Survey)
 The District Local Government through Water and Sanitation Committees have taken over the management and maintenance of the constructed facilities. DWD representing the central Government undertakes major rehabilitation, supply of spares and riser pipes, refresher training courses and monitoring.

Effects:
 (FY 2001 Domestic Survey)
 Phase I: Safe water was provided to 23,000 residents out of the whole Mipigi District population 1,200,000. The safe water supply rate of the district increased from 23% to 29.6% (as of Jun. 2000).
 Phase II: By the Term 1 construction, safe water was supplied to approximately 58,000 residents in the west area of Mipigi District. The safe water supply rate of the district increased to 38.4% (as of June 2001).

Japanese technical cooperation:
 (FY 1998 Overseas Survey)
 Acceptance of 2 trainees (4 months).

Description :

1. 5 Intersections Improvement Project

Funding:

(FY 1998 Domestic Survey) (FY 1999 Domestic Survey) (FY 2007 Overseas Survey)

November 24, 1998 E/N 736 million yen "Kampala City Main Line Improvement Plan"

Objective: To improve the severest traffic congestion in Kampala City Centre by harmonizing the project junctions with the other junctions out of City Centre that was completed in other Japan's Grant Aid Project

Background:

(FY 1998 Domestic Survey)

Based on the development study "Study on the Kampala Main Line Improvement Plan" conducted from February 1997 to November 1997, the government of Uganda requested grant aid for projects for improving intersections and roads to Japan in December 1997. But, the study only targeted the repair of intersections due to negotiation between the governments.

In a study for the project conducted from May 1998 to August 1998, we reexamined the results of the "Study on the Kampala Main Line Improvement Plan", confirmed the content of a request for grant aid and its background and verified the effect of a plan and the validity of a grant aid project.

After the study for the project, both countries exchanged memorandum for grant aid in October 24, 1998, which led to the implementation of detailed design for 5 intersections and repair works for intersections.

They signed E/N on November 24, 1998 and concluded a consulting contract for detailed design and construction management on December 24, 1998.

Construction:

(FY 2001 Domestic Survey)

June 1999-March 2000

Target intersection:

1. Natete intersection
2. Makerere intersection
3. Kibuye intersection
4. Port Bell intersection
5. Wandegeya intersection

(FY 2000 Overseas Survey)

Construction works for "Kampala City Main Line Improvement Plan Phase 1" were completed in March 2000. The content of a project is repair works for 5 intersections: Natete, Makerere, Kibuye, Port Bell, and Wandegeya.

(FY 2007 Domestic Survey)

Five intersections improving and rehabilitation project (December 1999 to March 2003): Completed.

Benefits:

(FY 2001 Overseas Survey)

Vitalization of economic activities due to the smoothing of traffic in the metropolitan area

2. Natete Road and Gaba Roads

Subsequent Study:

(FY 2002 Domestic Survey)

March 2002-November 2002 B/D

Funding:

(FY 2002 Domestic Survey) (FY 2002 Overseas Survey)

November 25, 2002 E/N 368 million yen "Kampala City Main Line Improvement Plan Phase 2"

- 1) Natete Road: Repair of roads and Bakuli intersection
- 2) Gaba Road: Repair of Kibuli intersection and Kabalagala intersection, facilities for drainage and sidewalks

Background

(FY 2000 Overseas Survey)

D/D has been implemented since March 2000 by Nippon Koei and Japan Engineering Consultants.

(FY 2001 Domestic Survey)

D/D was suspended due to an instruction by the Ministry of Foreign Affairs. There is no prospect of resuming D/D after that.

(FY 2007 Domestic Survey)

improvement and rehabilitation of Natete Road, and Bakuli Intersection, and improvement and rehabilitation of Kibuli and Kabalagala intersection (December 2002 - March 2005) Completed 100%

3. Port Bell Road

(FY 2000 Overseas Survey) (FY 2001 Domestic Survey)

There is no progress.

4. Second Nile Bridge in Jinja

(FY 2007 Overseas Survey)

Request for a Grant Aid as for a feasibility study have been made to the Government of Japan . The request have been received, though fund have not been procured yet.

Japanese Technical Cooperation: Acceptance of trainees

(FY 2002 Domestic Survey)(FY 2007 Overseas Survey)

Specialized field: (traffic signal technology, transport planning.)

Number of persons: 2 persons

Long-term expert: 1 person

STUDY SUMMARY SHEET (Basic Study)

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY 1998 Domestic Survey)
 Topographic maps made are used for making and implementing various projects by rehabilitation and development projects.

(FY 2000 Overseas Survey)
 40 topographic maps by the study are used for constructing roads, supplying electricity, installing telephone wires, and supplying water etc. The local governments use the maps in constructing schools, medical facilities, and roads, and also land registry offices are used for allocating land rights etc. In addition, the sales of the topographic maps is used for reconsidering topographic maps for areas outside the area covered by the study.

(FY 2001 Overseas Survey)
 As the follow-up of the study, the government of Uganda requested for the dispatch of experts to conduct training necessary for making digital topographic maps.

(FY 2007 Overseas Survey)
 Subsequent study: West Nile topography Mapping
 Implementing period: November 2005-March 2006
 Funding: Technical Cooperation Project (70 million UGX)
 Relation between subsequent study: Implemented to provide new/updated topography map of the target region of the mentioned study the map will be utilized as a basis map for subsequent study /regional study.

Subsequent study: Mapping of Lake Kyoga Region
 Implementing period: April 2006 - To date
 Target areas: North of Kampala - Jinja block
 Relation between subsequent study: Implemented to provide new/updated topography map of the target region of the mentioned study the map will be utilized as a basis map for subsequent study /regional study. There is no funding on the study hence field work is not yet done.

Technical cooperation :
 1) Training digital mapping, 2) Dispatch of expert digital mapping 1 personnel, 3) others: Japan Overseas Cooperation Volunteers (JOCV)

| | |
|---|--|
| PRESENT STATUS | <p>In Progress or In Use</p> <p>Delayed</p> <p>Discontinued or Cancelled</p> |
| <p>Description :</p> <p>(FY2007 Overseas Survey) Scheduled post monitoring of the plan in the pilot project "Model Project of Processing and Shipping Agricultural Product by Farmer Organization in Targeted Area of Survey", conducted in this Survey, is conducted by Ministry of Agriculture, Animal Industry, and Fisheries(MAAIF), in support of JICA experts dispatched to JICA Uganda Office and MAAIF planning department.</p> <p>(FY2007 Domestic Survey) In this Survey, model project was suggested centering on processing agricultural product by farmer organization, in model of pilot project conducted during the term of Survey. But the suggestion of final report attached the condition of support by Japan on conducting the model project that it is important that Uganda government would make proactive support and development to the conducting pilot project. The response of Uganda government to the plan is unclear in present time. Meanwhile, the rice mill(two places), cassava flour refining mill(one place), and pineapple wine and juice factory(one place) are operated by farmer groups. In two of the facilities, supporting staffs are dispatched and conducting support. The NAADS(National Agricultural Advisory Services),which is operated by cooperation of donor countries, showed big interest to the method of pilot project during the term of Survey, and there is possibility that the method would be imported in part of their program.</p> <p>(FY 2009 Overseas Survey) Commodity specific approach through collective marketing by farmers' organizations: 1. The ministry has developed the sector's development strategy and investment plan in March 2010. The plan include a programme called "Markets and Value Chain" which address capacity building of farmers' organizations in order to enhance their collective marketing ability. The JICA Study has been referred to directly or indirectly in compiling the plan. Concrete action plans for the investment plan will be developed soon. 2. NAADS has been in operation since 2001. In the monitoring conducted in 2007, NAADS had shown their interest in adopting the idea mentioned in the JICA Study. Now, the NAADS has developed the strategy paper called "Fast Tracking Commercialization of Agriculture through Public Private Partnership" which promote specific enterprises (commodities) based on suitability of each area through farmers organization or private enterprises.</p> | |

Description :

(FY2007 Overseas Survey)

The "Sustainable Irrigation Development", suggested by this Survey, has been requested as JICA technical support project, "Technical Support against Sustainable Irrigation Agriculture Development Plan in Eastern Uganda". The objective of this project is to conduct training about irrigation rice cultivation technology and conduct capacity development of relevant staffs of diffusion, and to promote irrigation rice cultivation technology to association based on small-scale farmers and their communities.

Also, preliminary survey team of JICA was dispatched at July, 2007 in view to conduct technical support project.

(FY2007 Domestic Survey)

No information to be specifically mentioned.

(FY 2009 Domestic Survey) No information.

(FY 2009 Overseas Survey)

1. Technical Assistance Support to Sustainable Irrigated Agriculture Development Project in Eastern Uganda

Project Purpose : Production and productivity of rice are increased through introduction of sustainable irrigated agriculture techniques in the Project Sites in the targeted Districts

Term of Cooperation : 2008/06.2011/06

2. Study on feasibility of Large Scale Irrigation Schemes in Uganda (In preparation)

Objective of the Study : To carry out feasibility studies to identify area with potentials for medium to large Scale Irrigation Schemes.

Term of Cooperation : 2011-2013

Cooperation Organization : JICA

(FY2012 Domestic Survey)

Implemented project: NERICA Rice Promotion Project in Uganda

(Project goal) NERICA Rice production is improved in quantity and quality in the target area.

(Output) 1) Research and extension capacity, in terms of system and personnel development, or NERICA (and paddy rice) research system and staffing in NaCRRRI and ZARDI is enhanced. 2) Appropriate NERICA rice cultivation techniques are introduced to farmers and farmers groups, etc. in the Project area.

(Implementing period) August 18, 2008 - June 30, 2011

(Implementing body) National Agricultural Research Organization (NARO)

(FY2012 Overseas Survey)

Implementing project: Sustainable Irrigated Agriculture Development Project (SIAD)

(Situation)Completed.

The study on Poverty Eradication through Sustainable Irrigation Project was successfully conducted. It was then followed by a project known as Sustainable Irrigated Agriculture Development (SIAD) Project which was also successfully implemented (2008 - 2011).The project managed to:

- Conduct training on modern rice production
- Development of training and demonstration sites
- Construction of small scale irrigation infrastructure.

It managed to increase rice yields and has been adapted by farmers in the project area.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
(FY 2003 Domestic Survey)
(1)Promotion of East Asian Tourism:
The South African Tourism is dealing with the promotion of East Asian market with utilizing the Action Plans of the Study and promotion videos. Its representative office in Tokyo organizes annual South African Promotion Seminar in Japan.
(2)Development plans for the focus areas:
The proposed priority projects/programs aimed to supplement the existing tourism development schemes in South Africa that the respective areas progress will affect the status of projects. The below indicates some progress of projects/programs after the completion of the Study.
The local government followed the concept of African Showcase in Khayalitsha Focus Area and they were preparing the plans (as of June 2002).
The meeting on the issues of tourism development plan was organized in Badplaas/Barberton/Malelane Focus Area with various stakeholders (as of June 2002).
The priority projects/programs were presented by the Trade & Investment South Africa (governmental organization) to promote the tourism investors (as of September 2003).

(FY 2004 Domestic Survey)
After the completion of the study, a letter from South African Tourism was received by a consultant, which showed gratitude towards quality output and intent to work for the implementation of the project. However, a local tourism expert, who has participated in the study, have told that there are no concrete steps, based on the out, been taken. Consultant in charge have not confirmed directly to the local government.

(FY 2005 Domestic Survey)
No information to be specifically mentioned.

(FY 2006 Domestic Survey)
No information to be sprcifically mentioned.

(FY2007 Domestic Survey)
Implementing subsequent study
(1) Implementing tourism promotion activities (April,2003 - January, 2008)
*Marketing aiming to prompt tourism from East Asia was implemented. Proposal of the mentioned study and tourism promotion video aimed at East Asia was utilized, and South Africa Tourist Authority took a leading part in this marketing. In Japan, the South Africa Tourism Office held a tourism promotion seminar and attracted tourists. An official web-site with multiple languages, which provides tourist information, is updated regularly and has been operated since.
*Results of the mentioned study made it possible to proceed with tourism promotion and used as a guidance of tourism promotion activities. Specifically, the contents of study were utilized to make videos and a web-site.
(2) Proceeding with a tourism development plan for the focus area (April, 2003 - January, 2008)
*In focus area Khayalitsha, development plan which follows the content of proposed focus project is reviewed by the related local government.
*In focus area Badplaas/Barberton/Malelane, review meeting was held to discuss proposed contents including tourism development plan for the related area.
*Promotion of development for the focus areas, the project is utilized as an information resource by related local authority.
*Since the completion of the mentioned study in 2002, the number of foreign tourists visiting South Africa has increased. The latest survey from the tourist office shows that growth rates between 2005 and 2006 were three times greater compared with world average. The number of tourists from Asia is increasing and it is believed that implementation of the mentioned study brought these results. (January, 2008)
(3) Implementation of tourism development promotion (April, 2003 - March 2004)
*Trade and Investment South Africa, which is the government body, introduced the details of the mentioned study proposed in order to promote tourist development investors. (September, 2003)

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
(FY 2007 Domestic Survey)
This Survey was aimed for small-scale project centering on small farming support, but after the termination of the Survey, the government started to place importance to large-scale project. Therefore, activities in view of the next stage survey and project, are not conducted.

(FY 2007 Overseas Survey)
Implemented Project : "Soil Conservation Project in Tjatane Village Community"
Implementing Period : from October, 2006 to December, 2007
Implementing Body : Limpopo Department of Agriculture
Contents : protect from erosion in 576ha of farm land, and improvement in production(double channel and access road=7.58km, contour agriculture=97.3km)
Condition : All construction work is completed as designed, and requested maintenance and management has been conducted.

Implemented Project : "Soil Conservation Project in Machacha Village Community"
Implementing Period : from October, 2006 to December, 2007
Implementing Body : Limpopo Department of Agriculture
Contents : protect from erosion in 134ha of farm land, and improvement in production(double channel=2.05km, dike=1.99km)
Fund Procuration : 2million Rand
Condition : All construction work is completed as designed, and requested maintenance and management has been conducted.

Implementing Project : "Soil Conservation Project in Mabokotswane Village Community"
Implementing Term : from October, 2006 to December, 2006
Implementing Agency : Limpopo Department of Agriculture
Contents : protect from erosion in 383ha of farm land, and improvement in production(double channel and access road=3.32km, dike=1.85km)
Funding : 2.8million Rand
Condition : All construction work is completed as designed, and requested maintenance and management has been conducted.

Others :
* Communication with the community is very important for making certain of the ownership.
* Due to the drought, flood, and labor-management relation problems, conduction of the project was postponed.
* The contour agriculture in two project would be conducted after the fund procurement.

(FY 2009 Overseas Survey)
The community soil conservation operation of the above three areas are continuously being carried out by LD (Limpopo Department of Agriculture) and the initiatives of the communities.

Description :

(1)Improvement of Arrival Hall of the Terminal Building and Modernization of Telecommunication Equipment
 Dec.1990 Being implemented with the financial assistance from Italy and OPEC.
 (FY 1996 Domestic Survey)
 F/S and D/D have been completed and respective development and construction work are about to be implemented. German companies and British companies are considered to be in favorable position in public tender.

(2)Renovation of Lusaka International Airport and Improvement in Airports in Ndola, Livingstone and Mufulira.
 (FY 1995 Overseas Survey)
 1994~95 Lusaka International Airport Development Study (AfDB)
 Nov.1996 AfDB loan is expected to be provided

(3)Renovation of Terminal Building and of Runway
 (FY 1995 Overseas Survey)
 It is planned to invite the tender in January 1996 after a financial resource is secured in Europe.
 (FY 1996 Domestic Survey)
 A complementary study is planned to be implemented by the consortium of international consultants.

Construction:
 (FY 1997 Overseas Survey)
 Phase I (~2000) is on-going as follows.
 <Runway,Taxiway repair>
 Improvement of runway has been partially completed. Overlay of taxiway has been suspended due to lack of fund.
 <Apron expansion>
 Improvement works of apron has been partially completed but expansion of apron was cancelled due to reduced traffic forecast.
 <Passenger Terminal Building Improvement>
 Under construction.
 <Cargo Terminal Building Improvement>
 Replacement of existing cargo building with new building has been suspended due to lack of fund.
 <VIP building construction>
 Construction of VIP building was cancelled because of insufficient VIP traffic.
 <Others>
 Over lay of shoulder, pavement of perimeter road, installation of security fence ---- Completed
 Control Building, Parking area improvement ---- Under Construction

Detail:
 (FY 1991 Overseas Survey)
 The project has been modified according to the local situation.

(FY 1993 Overseas Survey)
 There is a comment that although JICA study is very useful, the financial assistance should be subsequently provided to implement the project.

| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

The bridge is on a regional trunk road and its reconstruction is crucial.

Subsequent Studies:
 Feb.1991 E/N 52 mil.Yen
 (Kafue Road Bridge Reconstruction Project (D/D))

Finance:
 28 Jun. 1991 E/N 739 mil.Yen
 (Kafue Road Bridge Reconstruction Project -Phase1/3)
 4 Jun. 1992 E/N 912 mil.Yen
 (Kafue Road Bridge Reconstruction Project -Phase2/3)
 25 Jun. 1993 E/N 290 mil.Yen
 (Kafue Road Bridge Reconstruction Project -Phase3/3)

Construction:
 Jan. 1992 The construction contract is concluded between Ministry of Works and Supply and Shimizu Kensetsu.
 The end of 1992 The construction of the substructure was finished.
 Apr 1993 The construction of the superstructure was finished.

Situation:
 The Bridge is being used as the major traffic facility connecting the southern part of the country with the capital city of Lusaka after its opening in July 1993. The bridge has no trouble in its structure. However, it happened the floating weed to grow on an extensive scale and crowd around the piers like a weed inland. The Government took a measure to remove such weed island for the sake of the bridge stability with their own budget. (FY1994 Domestic Survey)

Description :

(FY 1992 Domestic Survey)

- 1) To establish the nation wide water master plan is one of the important targets in the Fourth National Development Plan (1989~1993)
- 2) The Government of Zambia has to take a quick action for water development policy due to the expected severe drought in the South Africa region in 1992.

(1) Recognition and enlightenment of the importance of hydrological observation

(FY 1997 Overseas Survey)

DWA recognizes the importance of the hydrological observation. TA, materials and transportation means are needed to prepare and disseminate literature for schools and villages in the areas around gauging stations and raw water sources.

(2) Improvement of the hydrological observation system

(FY 1997 Overseas Survey)

1.Reinforcement of the observation team

Appointment of 300 gauge readers was proposed in 1998 budget.

2.Adoption of annual plans and annual reports

Data is available on request but not in a book. There is a possibility of making general data available free on Internet.

3.Improvement of the system for hydrological analysis

SADC countries adopted HYDATA software as a standard since 1990. Original data held on spreadsheet was transferred to HYDATA and the use of JICA funded software was discontinued as duplication is not required.

4.Periodic observation of water quality

Currently it is partially being undertaken for DWA by Ministry of Mines.DWA will need equipment and transport as well as training of technicians.

5.Reciprocation of hydrological information with international agencies

This information exchange is to take place through the upgraded Water Development Board which will be independent of DWA.

6.Sufficient staffing and introduction of a systematic training program

Training and equipment are required.

(3)Formulation of a Comprehensive Water Resources Development Plan

Nov.1993~Nov.1995 "National Water Resources Development Plan (M/P)"

(JICA)

Backgrounds:

(FY 1992 Domestic Survey)

This project produced the rough estimation concerning potential water resources in Zambia. As a next stage, the Zambian government desires the Japanese government to provide the technical cooperation to Zambia in order to formulate nationwide, comprehensive and long-term M/P on urban water development, irrigation water development and hydropower development projects.

(FY 1992 Overseas Survey)

Department of Water Affairs increased its budget allocation to improve the system of collection and analysis of hydrological data. The Ministry of Energy and Water Development has concluded the contract with the consultant to redefine and clarify the duties and the responsibilities of the Ministry. They have been seeking a donor, which can provide the technical and the financial assistance to improve the water resources management system.

(FY 1997 Domestic Survey)

"National Water Resources Development Plan (M/P)" was undertaken subsequently.

Refer to "National Water Resources Development Plan (M/P)" for detail.

Description :

Subsequent Studies:

Feb.1994-Aug.1995 F/S on Mongu Rural Development Project in Zambezi River Flood Plain Area

Detail

Upon the completion of this study, the counterart was provided the equipment and the apparatus used in the study, with which the implementation of various study has been continued.

(FY1995 Overseas Survey)

The study output resulted in the Mongu Rural Development Project Proposal.

(FY1996 Domestic Survey)

Based on the "Mongu Rural Development Project in Zambezi River Flood Plain Area(1995)", B/D has been implemented. E/N was concluded during FY 1996 (830 mil.Yen) and the construction is scheduled to be finished in 1997. Upon the completion of the construction, the farm activity will be started referring to the guideline formulated based on the study results.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(1)Urgent program(Package 1)
(FY 1995 Overseas Survey)

The Tariffing policy has been reviewed. Tariffs are now reviewed quarterly against the fluctuation of the Zambian currency. Also the computer has been introduced to improve the efficiency of ZAMTEL.

(FY 1997 Overseas Survey)

Task Force Teams were formed for each program.

1. Reinforcement of maintenance for subscriber's external plant and elimination of waiting applicants

1-1.Enhancement of fault correction work to eliminate repeated occurrence of faults on the same line
Some minor improvements. The plants are rather old and needs funds to repair or replace.

1-2.Elimination of waiting subscribers due to no availability of lines

The spare capacity is made up of minor increases in capacity due to new equipment (8,864 lines in 1996 giving a total of 123,338 lines)

2. Improvement of the billing work and reviewing the tariffing policy

2-1.Collection of unpaid charges for telecommunication

Still, the major non-payer of bill is GOZ but in the recent past the outstanding have decreased.

A new billing software(TELCASE) is being currently tested. If tests are acceptable, the system will be installed.

2-2.Charging methodology

Under the new Performance Contract issued by GOZ, a new formula for calculating the tariffs was prescribed to ZAMTEL.

3.Vehicle survival operation

No task force set up. Due to lack of funds it has not been possible to buy spares. The number of non-running vehicles exceeds 20% of the fleet.

(2)Urban Telecom Network Expansion (Lusaka, Kitwe, etc.)

(FY 1995 Overseas Survey)

Lusaka City

Finance:

8 Oct.1992 E/N 881 mil.Yen

(Rehabilitation of telephone Cable Network in Lusaka-Phase1/2)

*Contents of project

Renovation of aged cables to latest cables at Lusaka main area and ridgeway area. Out of 8 areas of Lusaka City.

25 Jun.1993 E/N 51 mil.Yen

(Rehabilitation of Telephone Cable Network in Lusaka-Phase2/2-1)

25 Jun.1993 E/N 555 mil.Yen (to provide in FY 1995)

(Rehabilitation of Telephone Cable Network in Lusaka-Phase2/2-2)

(FY 1997 Overseas Survey)

Switching system, transmission systems and external plant at Lusaka, Kitwe and Kabwe

Finance:own fund

Construction:40% has been completed.

(3)Rural Telephone Expansion (FY 1995 Overseas Survey)

Due to the lack of fund, the project has not been implemented.

(FY 1997 Overseas Survey)

Package 10 (Rural External Plant)

Finance:own fund

Construction:30% has been completed.

Package 23 (Earth Station)

Mwembeshi I

Finance: own fund, INTELSAT loan 2.2 mil.US\$

Construction:Mar.1998 to be completed

Dispatch of Expert:

(FY 1996 Domestic Survey)

Apr.7.1996-Apr.6.1996 Dispatch of one long-term expert of M&O of telecommunication facilities.

Others:

(FY 1997 Overseas Survey)

Other Packages have not been implemented due to lack of fund.

The telecommunications sector of the PTC has been separated to form ZAMTEL.This separation of the businesses will be of great assistance when the GOZ sell off the telecommunications sector to private investors.

Description :**I. Urgent Projects****(1) Water Supply**

(FY 1997 Overseas Survey)

1. Northern Lusaka Production Wells: A sum of 74,000US\$ has been proposed for inclusion in the DWA 1998 budget for monitoring. Lusaka Water and Sewerage are promoting an alternative scheme funded by EU at north west Lusaka.
2. Chongwe dam and Water Supply Project: A sum of 185,000US\$ has been proposed for inclusion in the 1998 budget but it is insufficient for the study and design. Request for F/S on Chongwe Multi-purpose Dam is being prepared to procure Japanese Grant Aid.

Detail: The project will be delayed for some time as future water supply is assured by the EU funded project for wells in NW Lusaka.

3. Drilling Center Project: This proposal will be re-examined in view of the possible involvement of commercial drillers.
4. Groundwater Development Training Center Project

Finance: Request for Japanese Grant Aid to implement Ground Water Development Training Center Project, is on preparatory. The contents of request are 1) the construction of Training Center 2) Enforcement of initial training.

As project 2) surpasses the usual Grant Aid limit, reconsidering on method is necessary according to local Japanese side.

(FY 1997 Domestic Survey) Ground Water Development Training Center Project will be requested as FY 1999 project.

Detail:

<Establishment of Center> Location has now been changed to Kabwe due to it being more centrally located in the country and that DWA already owns an existing depot with space for development. A sum of 74,000US\$ has been proposed for inclusion in the 1998 budget.

<Training of Zambian trainers by foreign experts> Due to commence in 1999 but will be delayed. No external funding in place.

<Training of Zambian trainees> Due to commence in 2004 but will be delayed.

(2) Agricultural Sector

(FY 1997 Overseas Survey)

1. ASIP Rehabilitation Projects: Finance: IFAD 5.34 mil US\$ Detail: DWA involvement is limited to monitoring.
2. Chongwe Dam Irrigation Project: The irrigation project is dependant on the Chongwe Dam.
3. Zambezi Left Bank Flood Plain Rice Irrigation Project: Ministry of Agriculture considers this project as an over ambitious project.

(3) Institutional Establishment Programmes

(FY 1997 Overseas Survey)

1. General Preparation for the Implementation of the Programmes: Restructuring of DWA, Formulation of multi-sector Consultive Committee
2. Formulation of Human Resources Development Plan and conducting training

Background:

(FY 1996 Domestic Survey) As for Energy Water Development, out of urgent projects proposed by JICA study, Ground Water Development Training Center Project and Chongwe Multi-purpose Dam Project are desired to promote immediately with Japanese assistance.

(FY 1998 Domestic Survey) Continuous efforts have been and will be made for realizing the proposed projects, especially the groundwater development center project.

II. M/P proposed projects

(FY 1998 Domestic Survey)

18 Aug. 1997 E/N 644 mil. yen (Water Supply Project around Lusaka City) * Construction of simply water systems and provision of the materials.

26 Aug. 1997 E/N 662 mil yen (Water Supply Project in the Southern Province) * Provision of materials to construct 220 deep wells.

(FY 2005 Domestic Survey)

In the study, ground water development training center project, Northern Lusaka Water Supply Well Project, and Chongwe Multi-Purpose Dam Project has been proposed as a prioritised project. The Infrastructure Development Institute have dispatched a mission to Zambia in year 2000 to prepare TOR for the above projects with the C/P.

However, the projects has not been realised.

(FY 2005 Overseas Survey)

5 year strategic plan focusing on prioritised districts has been approved. Current MEWD strategic plan is focusing on year 2005 to 2007. Fifth national development plan is in progress as proposed in the M/P. Dam construction and groundwater development training center project has not been implemented due to financial constraints.

- Subsequent project: Water supply and waste water sub-sector reorganisation

Implementation period: 1994-1996

Implementing party: Water Sector Advisory Group

Objective: To facilitate transfer of jurisdiction related to water supply from DWA (Department of Water Affairs) to local authorities through establishment of institutional framework to implement public projects by founding National Water Supply and Sanitation Council (NWASCO) to supervise water supply and sewage services.

- Subsequent project: Community management monitoring unit

Funding: Ireland, UNICEF

- Subsequent Project: Establishment of public entity and NWASCO

Norway, Ireland, Germany

- Subsequent project: Southern district water supply project

Funding: Yen Grant Aid 1,364 million JPY Implementation period: January 1997 to 1999 Progress: Completed

- Subsequent project: Northern district groundwater development plan

Funding: Yen Grant Aid 777 million JPY (expenditure till 2005) Implementation period: June 2004 - 2006

- Benefits:

Beneficiaries: distant residents

- Technical cooperation:

Training: OJT on project management, leadership skill, team building training, dwelling techniques, physics, and etc.

Dispatch of experts: project planning, planning and implementation, training of local members, and etc 3 personnel each 1-3 months

Description :
(FY 2002 Domestic Survey)
The proposed Action Area Plan, particularly priority projects and soft component support such as community empowerment, is to be implemented by Japanese grand aid.
Subsequent study :
(FY 2003 Domestic Survey)
B/D study was conducted.
(FY 2004 Domestic Survey)
Subsequent study: The Study on the Environmental Improvement of Unplanned Urban Settlement in Lusaka
Relation with the study: The study report suggests the Action Area Plan comprising various projects, such as water supply system improvement, health and hygiene education, waste disposal, community school construction, income increase program, in the 8 planned areas. Under the subsequent project, however, three projects out of the Action Area Plan projects, water supply system improvement, the community center-related project, and health and hygiene education will be implemented.
Funding
Requested period: 2001/Aug
Amount: JPY 460 million
Funding Party: Grant Aid, E/N concluded: 2004/Jun/09
Implementing Body: government of Zambia
Implementing Period: Feb. 2003 - May 2005
Construction: Dec 2004 - Oct. 2005
Objective: To contribute to improving living environment in the unplanned areas, the project is planned to construct and smoothly operate water supply systems and community centers in three areas: Ng'ombe, Kalikiliki, and Freedom. It also implements Soft Component Support such as the enhancement of operation and maintenance-related community organizations and health and hygiene education.
Contents: construction of water supply facilities, construction of community centres, community development, health/sanitation education
Future schedule:
*2004/Dec-2005/Sept (10 months): construction period:
*2004/Dec-2006/Feb (15 months): soft component implementation period.
Details:
2003/Mar-Jul B/D
2004/Jun-Aug D/D
2004/Jun/09 E/N
2004/Jul/12 Consultant contract
2004/Aug/26 Confirmation by the Japanese government (confirmation No., No.16-VGJ-K-26)
2004/Nov tender for construction
2004/Nov/09 Constructor contract concluded
2004/Dec-2005/Sept Construction
2004/Dec-2006/Feb Soft components implementation
2005/end of Sep Completion
2005/Oct/14 Delivery ceremony
Status:
(FY 2004 Domestic survey) D/D and tender were completed (winning tender: Shimizu Co.) and construction was started in December, 2004.
(FY 2006 Domestic and Overseas survey) Completed projects in three unplanned residential areas are as follows,
1) Construction of community center
2) Construction of water supply center
3) Health education
(FY 2007 Domestic survey) From July 2004 to March 2005, constructions (improvement of water supply and construction of community center) and soft components (community empowerment and health education) were implemented in three areas.

| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | The Study aimed at the formulation of a comprehensive urban development master plan of Greater Lusaka and master plans of sub-programs for urban transport development, water supply and sewerage development, and living environment improvement. | | |
| 7. CONSULTANT(S) | KRI International Corporation Nippon Koei Co., Ltd. | | |
| 8. STUDY PERIOD | Aug.2007 | ~ | Mar.2009 19month(s) |
| | | ~ | |
| 9. SITE OR AREA | Greater Lusaka | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1-1. Inner Ring Road : For the purpose of decongesting the inner city roads and the development of alternative access to LS-MFEZ, a 23-km length road is proposed as the urgent road project. Traffic volume for inner ring road is estimated at 9,000 to 60,000 PCU (passenger car unit) per day in 2030. Total development cost of inner ring road is estimated at USD 51 million (equivalent to ZMK180 billion). Based on the assumption that travel time and vehicle operating time (VOT) savings were the economic benefits of the inner ring road, the Economic Internal Rate of Return (EIRR) and Net Present Value (NPV) were calculated respectively at 23% and USD73 million, assuming a 10% discount rate, therefore the inner ring road project can be feasible.</p> <p>1-2. Outer Ring Road : The outer ring road is proposed not only for the purpose of bypassing the international and intra-regional through-traffic but also to support the satellite towns' development. Eightysix km length outer ring road is planned to circle Greater Lusaka. 20,000 to 54,000 PCU per day is projected on the outer ring road in 2030 and it can be said that the road should be four-lane for all sections. However, full opening of the outer ring road in the early stages is not feasible and a two-lane road can be workable until the medium term period. Development cost of the outer ring road is estimated at USD 500 million (equivalent to ZMK 1,800 billion). EIRR is calculated at 11.2% and the project become feasible, in case of stage-wise construction is taken.</p> <p>1-3. Water Supply and Sanitation Improvement : To deal with the water demand increase caused by the population increase and economic growth in Lusaka, water supply capacity in Kafue water works should be augmented with water leakage improvement. The Water Supply and Sanitation Improvement Project consists of (a) intake facility on Kafue River, (b) raw water main pipeline, (c) new water treatment plant with 50,000 m³/day, (d) booster pumping station and transmission main pipeline with 66 km length, (e) sanitation pilot plant and (f) reduction program of UFW (unaccounted-for water). Project cost of the Water Supply and Sanitation Improvement Project (Phase-1) is estimated at approximately USD 92 million (equivalent to ZMK 330 billion). Financial Internal Rate of Return (FIRR) of the project is estimated as 3.33%. In case that soft loan mobilization is possible (i.e. 1.92% average cost of capital), the project will be feasible. Further, the EIRR is estimated as 15.35% which is above the hurdle rate of 10.0% generally accepted for similar types of water supply projects. Therefore, both FIRR and EIRR confirm the feasibility of the project. However, sensitivity analysis on the FIRR calculated under a different UFW rate shows that the FIRR will be lower than 1.92% and the project will not be feasible under the delay of UFW improvement. Therefore, UFW reduction is crucial to ensure the projects' viability.</p> | | |

Description :
 (FY 2009 Domestic Survey)) No information to be specifically mentioned.
 (FY 2009 Overseas Survey) No information.
 (FY2013 Domestic and Overseas Survey)
 "Lusaka city office system strengthening" and "Ring road construction" were executed.

Implemented Project: Improvement of the living environment in the Southern Area of Lusaka (Grant Aid Project)
 Project Outline: In order to control the disorderly development with the expansion of the city in capital Lusaka City in Zambia, construct the new ring road newly to improve the living environment of peripheral poor inhabitants, and promote the development of the economy and the industrial exploitation. Moreover with construction of the roads, set up drainages to in adequate areas and implement to improve the peripheral hygienic conditions.
 Grant of the Amount up to: 2 billion 776 million yen
 Implemented year: Fiscal year 2011

Description :

(FY 1993 Overseas Survey)

Proposed project was partially implemented and coordinated with a electrification project from Harare to Gwera. Because the Structural Adjustment Program by the World Bank recognized electrification project for major reason of deficit operation of National Railways, the project was cancelled. At present, National Railways puts priority on CTS system, telecommunication system and purchasing 50 new coaches, which are requested for economic cooperation.

(FY 1995 Domestic Survey)

Additional informations are not available since Japan National Railway, which were in charge of this project, had been divided to several private companies. (learnt from JR Eastern Japan)

Description :
 (1)AOR Earth Station
 Subsequent Study:
 Jul.1983 D/D undertaken
 Finance:
 Apr.12.1984 L/A 2,536 mil yen
 (International Telecom Expansion project)
 Implemented: AOR Earth Station at Mazowe (US\$10,048 thousand)
 *Contents of the project
 1)The construction of INTELSAT Standard A Earth Station for the satellite on the Atlantic Ocean whose capacity is 300 channels and television circuits.
 2)Employment of consultants for the purpose of the assistance and recommendation on the data evaluation of the examinations at the factory and sites.
 Construction: 1995 Operation started

(2)Communication Facilities Improvement in Harare
 Finance:
 Oct.1989 L/A 6,021 mil yen (Communication Facilities Improvement)
 Construction:
 1993~Oct.1994 implemented
 (FY 1993 Overseas Survey)
 IOR Earth Station was constructed inside the existing earth station by mainly Sumitomo Trading Co. Cost down is expected to communicate with eastern hemisphere via London.

(3)Communication Facilities Improvement in Bulawayo
 Finance:
 Aug.31.1993 L/A 9,523 mil yen
 (Telecommunication Development in Matabeleland)
 Construction:
 (FY 1997 Domestic Survey)
 Final evaluation of tender document is on going. (contract will be signed within this year)

(4)IOR Earth Station
 Finance:
 Japan Export-Import Bank Finance (1,122 mil.yen)
 1994 Operation started (utilizing digital equipment)

Dispatch of the Experts:
 (FY 1993 Overseas Survey)
 Mar.~Apr.1985 O/M expert
 Sep.1986~Sep.1987 JICA expert
 An expert was dispatched for Trunk Junction Tandem Exchange

Effects:
 (FY 1997 Domestic Survey)
 -increase of traffic and betterment of quality
 -reduction of relay

Description :

The medium-size dams projects is one of the most important projects of the Zimbabwean Government. The project aims to alleviate the poverty of the farmers in communal land. It is worth to be implemented by Japanese Grant Aid.

Subsequent Studies:

May 1989 B/D completed

Finance:

Oct.1989 E/N 1,251 mil yen

Construction:

1990 Phase I Supply of Machines and Equipment completed

1991 Phase II Dam 1 and 2: construction completed
(998 mil yen)

1992 Phase III Dam 3: construction completed (536 mil yen)

1993 Phase IV Dam 4 and 5: completed (985 mil yen)

Mar.1995 Phase V Dam 6: completed (665 mil yen)

Effect:

(FY 1995 Overseas Survey)

The attainment of self-sufficiency and the improvement of the living standard in the communal lands are expected.

 1995 E/N 711 mil.Yen
 (Nyakomba Irrigation Development project-Phase1/2)
 *Contents of Project: Construction of canals, pumping stations, roads and axillary facilities

Construction:
 (FY 1996 Domestic Survey)
 1995~96 Implemented (Nishimatsu Construction)

(2)Phase II (Section B)
 Subsequent Studies:
 (FY 1997 Domestic Survey)
 B/D conducted (JICA)
 Finance:
 (FY 1997 Domestic Survey)
 27 Jun. 1996 E/N 602 mil.yen
 (Nyakomba Irrigation Development projectPhase2/2)
 *Contents of Project: Construction of canals, pumping stations, roads and axillary facilities

Construction:
 (FY 1998 Domestic Survey)
 1996~Mar.1998 Completed (Nishimatsu Construction)

(3)Phase III (Sections D)
 Subsequent study:
 (FY 1998 Domestic Survey)(FY 1999 Domestic Survey)
 Jul. 1998 - B/D.
 Finance:
 (FY 1999 Domestic Survey)
 24 Mar. 1999 E/N 34 mil.yen.
 11 Jun. 1999 E/N 771mil.yen.
 *Contents of Project: Construction of canals, pumping stations, roads and axillary facilities.

Construction:
 (FY 1999 Domestic Survey)
 1999 ~ 2000 (Nishimatsu Construction).

(3)Phase IV (Sections A and E)
 Subsequent study:
 (FY 1998 Domestic Survey)(FY 1999 Domestic Survey)
 Jul. 1998 - B/D.
 Finance:
 (FY 1999 Domestic Survey)
 Under requesting.

Effects:
 (FY 1999 Overseas Survey)
 -Average income for one household has increased.
 -With irrigation facilities, double cropping became possible.
 -More children are going to school because the farmers can afford to pay school fees.

Detail:
 (FY1993 Overseas Survey)
 This project will be one of the candidates for a Japanese grant aid project after the completion of the Masvingo medium scale irrigation grant aid project.

Description :

The completion of the project is important to facilitate faster and easier implementation of the government development programs in the rural area where 70% of the population reside.

(1)KEZ

Finance:

(FY 1998 Domestic Survey)

31 Aug.1993 L/A 9,523 mil.yen "Telecommunication Network Development Project in Matabeleland"

KFW grant aid assistance (14 mil.DM)

JICA F/S proposed to select one station in respective district in order to implement the project. This was because this project was proposed from the viewpoint of the formulation of model telecommunication system. However, kfw grant aid assistance has been used for several stations in Matabeleland.

Construction:

1.Japan's grant aid

Sep.1995~Dec.1996

*Contents: Switch System, Transmission System

2.kfw grant aid

Construction Trader:TRT (France)

Sep.1995 Commenced

Dec.1996 Completed

(2)NKI

(FY 1996 Domestic Survey)

The project is to be implemented with the balance of kfw grant aid provided for KEZ project.

(3)GTU/CHS

Although a request for Japan's ODA Loan was submitted to the Japanese embassy, it has not been accepted, yet.

(FY 1999 Domestic Study)

A request for Japan's ODA Loan hasn't been submitted to Japan yet.

(4)BTR/MRB

(FY 1997 Domestic Survey)

The objective of this project is to improve telecommunications service in Mashonaland province and Manicaland province.(Installation of 125,800 lines)

Finance:

Jul.11.1996 L/A 11,451 mil.Yen

(Mashonaland Manicaland Digitalization Project Phase II)

*Contents of project

-24 switch stations, 125,800 lines

-Transmission system of Harare~Luwa, Lusape~Mutare and optic fiber cable in Harare

-Subscribers cable 131,364

(FY 1999 Domestic Survey)

Loan agreement(L/A) is not yet concluded.

Description :
 (FY 1996 Domestic Survey)
 Formal request has been submitted with top priority to carry out F/S. But the Gov. of Japan hasn't started F/S due to the lack of perspective to implement the project because its scale is too large.

(FY 1997 Domestic Survey)
 Implementation of F/S has been decided.

(FY 1998 Domestic Survey)
 F/S on Lower Munyati Basin Agricultural Development is being implemented.

(FY 2005 Domestic Survey)
 No information to be specifically mentioned.

Description :

Subsequent Study:

(FY 1997 Domestic Survey)

Feb.1998 E/N 9,700 million yen

"Chitongwiza City Sewage Facilities Improvement Project (D/D)"

*Contents: D/D on construction of waste water treatment plant (20,000cu.m/day) and renovation of machinery and electric facilities at pumping station was carried out in order to improve Zengeza waste water treatment plant in Chitongwiza City located in Nyatume basin.

Finance:

(FY 1998 Domestic Survey)

7 May 1998 E/N 2,142 million yen

*Contents:

Construction of waste water treatment plant (20,000 cu m/day) at Zengaze sewage at Chitongwiza in order to control water quality and to supplement water quantity. Appurtenant work, rehabilitation of the existing pumping facilities, provision of vehicles for maintaining the treatment plant and instruments for examining the water quality.

Construction:

(FY 1998 Domestic Survey)

29 Jan. 1999 - 31 March 2000

Contractor/ Shimizu

(FY 2002 Overseas Survey)

Although the construction was originally scheduled as above, implementation progress was delayed. The construction was started in April 1999 and completed in March 2001.

Apr. 1999 - March 2001 completed.

Description :

(FY 2001 Domestic Survey)

There is no concrete information since this study was completed short time ago.

(FY 2002 Overseas Survey)

The reasons for the situation of "Delayed": Delay in securing funds for the proposed projects.

Prospects for the future progress: The Government of Zimbabwe will process using its own resources. The time frame has not yet been determined.

(FY 2003 Domestic Survey)

The project has not reached the implementation due to political unrest and deterioration of economic situations.

(FY 2003 Overseas Survey)

Because procurement of exterior funds is too difficult, the government intends to implement the project on the domestic funds. Specific plans, however, have not been prepared yet.

(FY 2004 Domestic Survey)

Realisation of the project is difficult due to political anxiety.

(FY 2005 Domestic Survey)

No progress due to political factors, such as civil war and regime changes.

| 6. OBJECTIVES OF THE STUDY | A forest survey and other surveys were conducted to identify the volume of forest resources and other information such as soil condition and existing woody coverage necessary for the formulation of a forest management plan. The subject forests are Gwaai Forest Land (144,000 ha) and Bembesi Forest Land (55,000 ha) totaling some 200,000 ha, which are located in western part of Zimbabwe. In addition, the transfer of and guidance on technologies/techniques was provided to the counterparts of Forestry Commission (FC) regarding individual survey items, planning procedure/principles and other. | | |
| 7. CONSULTANT(S) | Japan Forest Technical Association KOKUSAI KOGYO CO., LTD. | | |
| 8. STUDY PERIOD | Jun.1999 | ~ | Mar.2001 21month(s) |
| 9. SITE OR AREA | 1) Survey Area: The Survey Area covered approximately 200,000 ha consisting of the Gwaai Forest Land(144,000 ha) and the Bembesi Forest Land (55,000ha), both of which are located some 150-200 km northwest of Bulawayo City (some two hours by paved road towards the Victoria Falls). 2) Intensive Area: An Intensive Area (some50,000ha) has already been established along the Falls Road. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The present survey is aimed to support the forest conservation plan to be formulated by the Zimbabwe Government based on the data and information about forest resources and soil distribution provided by this survey and the results of the socioeconomic survey conducted by DFID.</p> <p>The forest survey and soil survey were conducted in the Intensive Area. Therefore, the recommendations assume the Intensive Area as the subject area while mentioning the Survey Area when necessary.</p> <p>The necessity of categorization by function and forest division in terms of forest resources was emphasized for forest conservation plan. The each function category was referred to the corresponding target stand type accompanying yield regulation criteria including allowable cut volume. On the other hand, fire protection measures and future research topic were shown.</p> <p>Necessary conditions for implementation of the recommended forest conservation plan are summarized by the following issues:</p> <ol style="list-style-type: none"> 1) Creating a common understanding between the forest residents and the inhabitants from the surrounding communities 2) Improvement of social infrastructure 3) Extension 4) Job creation for the inhabitants 5) Promotion of forestry <p>The present survey is forest resources survey without planning including cost estimation.</p> | | |

| | |
|---|--|
| PRESENT STATUS | <p>In Progress or In Use</p> <p>Delayed</p> <p>Discontinued or Cancelled</p> |
| <p>Description :</p> <p>(FY 2001 Domestic Survey) Zimbabwe still suffers from political instability and economic stagnancy caused by white farmer's farm occupation by war veterans and sequential incidents since January in 2000.</p> <p>At the time of May in 2000, the SFM project(Shared Forest Management), which was supposed to link up with the present survey, was suspended at the stage of "preparatory phase". Reportedly the DFID and Forestry Commission sought a solution on the cooperation unofficially. However there's no resumption. Apart from that the Forestry Commission started its own effort of planning without waiting for the support by DFID. The planning contents seemed to trend toward traditional woodland management with the initiative of the government while the participatory approach or measures for local inhabitants are not weighed so much.</p> <p>After March in 2001 no correspondence has been made with the officials in charge.</p> <p>Japanese Technical Cooperation (FY 2002 Overseas Survey) Acceptance of Trainee: 2 personnel Dispatch of experts: 4 personnel</p> <p>Benefit effects: (FY 2003 Overseas Survey) Technical transfer to the counterpart, which was implemented through these studies, enabled acquisition of information regarding efficient management of forest resources and forest resources assessment.</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Domestic Survey) No information to be specifically mentioned.</p> | |

| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons for Cancellation:

COPUAP (Deepsea Ports Construction Commission) was disbanded in 1987, and the construction of new ports has been frozen since then.

Situation:

After the suspension of the construction project of new ports, emphasis was shifted to the strengthening of the existing ports, and it was decided to deepen Bahia Blanca and Quequen Ports. In late 1991, the dredging was completed to the depths of 40 - 45 feet at Bahia Blanca, while Quequen is being dredged to the depth of 40 feet.

The Government has been promoting the decentralization of administration, and the port facilities have been gradually transferred from the national government to provincial or local authorities. According to the new Port Law now under parliamentary deliberations, only five ports (Buenos Aires, Quequen, Bahia Blanca, Santa Fe and Ushuaia) will remain under AGP. The operation of the five ports will be eventually privatized in the future.

The economic policy of the present Government has been emphasizing the privatization of public enterprises, deregulation and decentralization. Investments in port facilities along Parana, Paraguay and La Plata Rivers will be undertaken increasingly by the private sector.

Description :

Dispatch of Experts:

Based on the recommendations of the study, a number of Japanese experts in various fields of industry and fisheries have been sent to Argentina.

Subsequent Studies:

1993~96 Economic Development II (M/P) which aims to conduct the examination in order to promote industry, trade and investment from the viewpoint of the reinforcement of economic relations with the East Asian Region.

Finance:

1988~92 Project-type technical cooperation for packaging technology.

Detail:

(FY1991 Overseas Survey)

In Sep. 1991, the Planning Secretariat, the counterpart agency of the JICA study, was reorganized into the Economic Planning Secretariat under the Ministry of Economy. The functions of the new Secretariat are compilation and analysis of the economic trends rather than the identification and promotion of new projects / programs.

The improvement of administrative efficiency, privatization and other general policy measures, which were discussed in the JICA study, have been proceeding rapidly under the policy package adopted in accordance with the Currency Exchange Law of April 1991.

The Government has been pushing various measures of the fiscal reform and administrative reorganization and rationalization in adherence to the IMF conditionality.

Accordingly, specific recommendations of the study (such as institutional credit, infrastructural development and preferential taxation) are yet to make impacts on policy makers.

The report of the study has been utilized extensively when and where various issues of long-term development are discussed.

(FY1995 Domestic Survey)

Taking into consideration that the political package since 1991 was very effective to stabilize the economy, 2nd phase of the study on Economic Development is requested for sake of the economic growth continuing much longer term. At present, the survey works are carried on two years by JICA since 1994. The counterpart is the Investment and Trading Secretariat, Ministry of Economy. The major object of the project is the exportation to and the investment from Eastern Asia.

(FY1995 Overseas Survey)

The fundamental targets of this project are to privatize the enterprises, to cut the state subsidy for the public enterprises and to improve the profit distribution system, in order to activate the national economy and to promote the exporting business, and try to create the economic atmosphere which is competitive in the world market by means of cost saving for production and improvement.

Based on the experiences obtained, final recommendations of the project report and the recent trends of economical growth, forecasting the situations at March, 1996, a part of the contents of the OKITA-I project has been changed, aiming at the maximum effects for the Government and the enterprises concerns.

* Refer to Economic Development II (M/P) 1996 for further information.

| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

The electrification of the General Roca Line was commenced in 1981 and completed in 1985. The system (25kv. 50Hz) was new in Argentine Railways(FA), and there was no facility for inspection and repair of the introduced railcars. FA thus planned to establish a new inspection and repair facility by Japanese technical assistance.

Owing to the worsening of the economic situation, the electrification program was scaled down and the construction of the new facility was de facto cancelled. The rehabilitation and improvement of the existing facilities was subsequently proposed as an alternative.

(FY1991 Overseas Survey)

In order to simplify the process of privatization, FA was divided in April 1991, and FEMESA was created for metropolitan railways. Subsequently, preparations have been going on for the privatization of each railway line. To date, tenders have been called for the Mitre, Uguiza and Sarmiento Lines. Preparation of the tender documents has not been completed for the Roca and San Martin Lines.

Therefore, it is yet hard to know what will happen to the inspection and repair functions after privatization. However, Escalada Plant still remains the center of inspection and repair and appears likely to remain as such in the future.

Description :

Subsequent Studies:

(FY 1991 Overseas Survey)

Based on the proposed M/P, the provincial government is planning to undertake F/S of the telephone network development.

Detail:

The provincial government of the Mendoza uses the study results as guidelines for the private sector.

In 1989, the provincial government requested for technical assistance on finance and demand forecasting, income and expenses forecasting for the local staffs of the study. Therefore, the technical guidance had been conducted.

(FY 1991 Overseas Survey)

Telecommunication is still operated by CAT, but the negotiations have been going on between CAT and Telefonica. Before long, telecommunication will be transferred to Telefonica.

(FY 1995 Overseas Survey)

The result of similar survey works carried by the third country is also the same as the result of JICA's survey at the main points.

The plans and the recommendations of this survey works will be adopted as the political targets for long time at this province and also as the model of the development plan in the future.

(FY 1997 Overseas Survey)

Telecommunication in whole country including province of Mendoza was privatized in 1990, and supervising work has been transferred to the central government. The report of the study was utilized as a reference for drawing speck of privatization. Thereafter, the final report has not been utilized.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Project Implemented:

(FY 1991 Overseas Survey)

Based on M/P, the provincial government of Corrientes implemented the projects as follows.

Drainage Project: For the expansion of the farmland, 12km drainage canal had been constructed jointly with a producers group in Roreto area.

Vegetable cultivation mini-project: JICA has been implementing technical cooperation at the vegetable cultivation center since 1990.

(FY 1996 Overseas Survey)

Farmers and technicians take part in the training course, and productivity has increased.

(FY 1997 Overseas Survey)

Ministry of Agriculture uses the agricultural models for production (rice-livestock rotation, rice, natural and artificial grassland, etc.)

Effects:

(FY 1996 Overseas Survey)

Sanitation improved at northern part of Corrientes.(approx.250000 ha)Improvement of drainage facility enabled the barren land to produce.

Subsequent Study:

(FY 1997 Overseas Survey)

Oct.1997~Mar.1998 Review

*Contents of the study

Actualization of land distribution, drainage / irrigation channel, electricity system, roads survey.

Consultant / PALMEYRO Y ASOCIADOS

Cost / 0.06mil.US\$

Detail:

(FY 1991 Overseas Survey)

The provincial government desires keenly F/S on drainage canal project related to M/P, but lack of fund for implementation makes it difficult.

(FY 1995 Domestic Survey)

By the modification of the design and the completion of construction, it becomes necessary to reinvestigate the Yacyreta Dam.

(FY 1995 Overseas Survey)

The performances of this survey works such as maps and data are utilized widely for the other projects for the development of the Province of Corrientes.

To continue this kind of survey work is very important to prove the activation of industrial economy and to make it easier to draw up various secondary plans.

(FY 1996 Overseas Survey)

F/S of irrigation, drainage and despatch of experts to CE.TE.PRO were requested to Japan.

Description :

(FY 1996 Overseas Survey)

This study, carried out with LANDSAT, clarified the actual situation of land use and forestry resources at the range of 2.1 mil. ha. Local government makes effort to reinforce local institution which is in charge of forest. Local Forest Law is being reviewed.

After the completion of study, pre-proposal for West Formosa Model Forest was submitted to Department of Natural Resources and Environment. In accordance with that, Department of Natural Resources at Formosa University started inventory work. In Sep.1995, dispatch of 2 experts for formulation of West Formosa Integrated Management Project was requested to JICA.

(FY 1997 Overseas Survey)

The intensive area(200ha) has still neither concessions nor forest licenses. Argentine side is waiting for the implementation of model area to have real experience.

(FY 2001 Overseas Survey)

Based on the study results, Formosa State realized the necessity of residents (most of them are native inhabitants) participation for endangered forest conservation and multi-purpose utilization, and set up 800,000ha of the study area as model forest.

Environmental Policy Department of the Central Government, Formosa State Government, National Formosa University and concerned municipalities formulated community participation sustainable forest management plan under the cooperation of residents organization. As a result, the model forest was certified as a member of International Model Forest Network, Canada.

Also, the south model area of the study area has become a part of Reserva Biosfera Riacho Teuquito, a natural life sanctuary selected by MAB (Man and Biosphere Program), UNESCO.

Concerning the management of the model forest, a request for expert dispatch and development welfare support project has been submitted. Also, the Ministry of Production is considering organic meat production as a sustainable production model as well as emphasizing the necessity of technical transfer by Japanese experts.

(FY 2005 Overseas Survey)

No information to be specifically mentioned.

Description :

(FY 1997 Domestic Survey)

In Argentina:

- The Ministry of Economy, the counterpart organization of this project, created a Japan Office, and a counterpart staff has been assigned to the post.
- Counterpart team has carried out several seminars in Argentine cities where the study team did not hold seminars in order to disseminate the study outcome by using Spanish materials made from the study report.
- With the request from the counterpart team, the study report is now on a Homepage of Internet.
- In an effort to expand export to East Asia, Argentina's strategy is in line with the recommendations.

In Japan:

- International Development Center of Japan held seminar in August 1996 on Argentina to the private sector to introduce the recent development of the Argentine Economy.

(FY 1998 Domestic Survey)

Export of beef for Japanese market, which was discussed in the issue 2 (Expansion of Export Capacity), will be realized.
ALIC (Agriculture & Livestock Industries Corporation) of Japan is preparing for establishing the local office in Argentina.

(FY 1998 Overseas Survey)

In accordance with the proposal of this study, Subsecretary of Commerce has been implementing a)formation of the program for promoting the export; b)fund provision by BICE to export industries; c)insurance for export loan; and d)development of comprehensive information system.

In addition, ADI was established in Aug.1997 for promoting the foreign investment toward Argentina.

Regarding the sea transportaion and ports, the following activities have been conducted, in relation to the proposal by this study.

- a)Buenos Aires Port Administration Company: preparing for the establishment;
- b)Coordination with other ports: categorization and registration of other ports in whole Argentina.
- c)Canals and port space: dredging of canals. extension of port space, and development of land transportation.
- d)Promotion of trading of the port: staff were dispatched to several overseas ports for promoting the trade.
- e)Dredging of rivers: under implementation.

(FY 1999 Overseas Survey)

The report of this Study has been/is utilized by the companies, the chamber of commerce, and different domestic institutions/organizations both in public and private sectors which desire to expand the relations with other countries in the process of liberalizing the Argentine economy and establishing the new trade relation with other countries.

The recommendations of this Study on the participation in the market are utilized as the practical guideline for those institutions. Moreover, the recommendations for making Argentine products adjust to the requisitions of the overseas market have been implemented or are under implementation.

(FY 2002 Domestic Survey)

1. Dispatch of senior volunteer.
2. JICA-JETRO Joint seminar on trade and investment in Argentina.

Description :

Utilization of the study:

(FY 1991 Overseas Survey)

Maps have been served as a basis to construct new roads in Chapare Area.

(FY 1995 Overseas Survey)

The results and performances of this study are utilized for

- Planning the route of trunk roads,
- Agricultural development plan,
- Development plan of new coca farms, and
- Provision of the land ledger of coca farms.

(FY 1996 Domestic Survey)

The produced maps have been widely utilized such as the forestry survey, the underground resources survey, etc.

Detail:

(FY 1991 Overseas Survey)

Equipments provided by the Japanese Government have been well utilized even after more than ten years, except for a part.

The IGM desires Japanese assistance for another topographic mapping project in the Northern La Paz area.

Description :

(FY1995 Domestic Survey)

On March, 1980, when the SW Mission and the Survey Team visited Bolivia simultaneously and commence the practical discussion with Bolivian side, it was disclosed that the project was already being carried on by the Government of Bolivia. Therefore, the Mission and the Survey Team quitted the planned survey works and made an evaluation and some of advice for the implementation of the project, and left back to Japan following to the instructions given by JICA's Headquarter.

(FY1995 Overseas Survey)

The results and performances of this study are utilized for:-

- to grant the state qualification for engineers,
- to grant the right to utilize the forest for private firms and to settle the rate of commission, and
- to settle the preventive measures for the transportation within the region.

The maps and the various technological data are utilized at various schools and enterprises.

Description :

(1)First Phase

Subsequent Studies:

Jan.1989 D/D completed (Consulting firm: Central Consultant)

Finance:

Dec.1989 Request was submitted to IDB for the construction of road.

IDB has been providing the fund for the improvement of Route 3, which includes the San Borja-Trinidad section. It is planned that the construction of the Cotapata-Santa Barbara section will be commenced in 1991 and the construction of the San-Borja-Trinidad section is expected to commence after this project. IDB requires EIA as a condition for its loan approval.

(FY 1991 Overseas Survey)

SENAC expects to commence the project sometime during 1995-1998.

The total project cost is estimated to be US\$ 89 mil. , 80% of which will be funded by IDB (US\$ 57 mil.) and 20% from the government fund (US\$ 32 mil.).

The project will be implemented as proposed by F/S and D/D of JICA.

(FY 1993 Overseas Survey)

Hereafter, refer to the Improvement of San Borja-Trinidad Section (D/D).

1.Road

Finance:

(FY 1997 Overseas Survey)

Government budget (approved in 5-years Investment Plan) and credit from international organization. (schedule)

Total Cost -- 74.3mil.US\$

(Local -- 59.44mil.US\$, Foreign -- 14.86mil.US\$)

(FY 1998 Domestic Survey)

Funds for pavement for up-raising: FNDR 80%, TGN 20%.

Construction:

(FY 1998 Domestic Survey)

Aug. 1997 Paving for up-raising of Trinida-Mamore was completed.

2.Bridge

(FY 1997 Overseas Survey)

San borja ~ Puerto Ganadero

Finance:

IDB, TGN

Construction:

Maniaui, Matos, Chevejecure, Museruna, Apere, Cuberene, Ibare ---- constructed.

San Borja ~ Puerto Almacen

Construction:

Amistad, Sicuri, Tajibo, Tigre, Mururita ---- constructed

Curiraba, Curirabita ---- bid in 1999 (planned).

(2)Second Phase

(FY 1997 Domestic Survey)

Financial source is BID, but detail is not clear yet because First Phase is still going on. Review of F/S will be necessary to implement.

| <p>Description :</p> <p>Subsequent Studies: Mar.~Aug.1988 B/D</p> <p>Finance: Oct.19.1988 E/N 1, 1,693 mil.Yen (Project for Development of Groundwater in El Alto City-Phase1) Feb.1989 Bidding (Successful bidder:Taisei Kensetsu) Jun.22. 1989 E/N 2, 691 mil.Yen (Project for Development of Groundwater in El Alto city-Phase2) Oct.1989 Bidding (Successful bidder:Taisei Kensetsu)</p> <p>Construction: Phase 1 Apr.1989 started Feb.1990 completed Phase 2 Dec.1989 started Jun.1990 completed</p> <p>Main Constructed Facilities: Phase 1 - 16 intake wells, conveyance pipelines 27.6km, 5 pumps, 1 distribution pond, distribution pipes 9.35km, etc. Phase 2 - 14 intake wells, conveyance pipelines 11.2km, distribution pipes 9.6km, etc.</p> <p>Situation: (FY 1994 Domestic Survey) Nowadays, SAMAPA is continuing the construction works of water service pipelines by its own budget, and the number of population served and the required amount of water supply are gradually increasing. The planned water supply amount in 2009, the year of target, is 30,000 cubic meter a day, compared with 5,800 in 1994. However, at present, actual supply amount is only about 3,000 cubic meter a day, equivalent to only 50 percent of planned figure and it seems to be very hard to improve. As the result of the operation of this facility, the stringent situation of the water supply for the City of El Alto has been rather mitigated. But, it would be still necessary to improve furthermore by means of extension of service pipelines to increase the water supply amount and to dissolve the non-service area in the City. On the other hand, the Cities of La Paz and El Alto, which are with SAMAPA's service, are still suffering from the serious water shortage due to the delay of development of the water resources, except for this project area. Therefore, it is considered that it may be about the time to establish supporting water supply facilities in the other areas, which has been recommended by the F/S, in order to increase the water supply amount.</p> <p>(FY 1997 Overseas Survey) The lack of water in La Paz city and El Alto city is continuing mainly because of the rapid population growth. Therefore, the request for aftercare study was submitted and JICA accepted it. But soon after that, SAMAPA in El Alto was privatized and implementation of the aftercare study has been suspended.</p> | | |

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| <p>(FY 1997 Overseas Survey) Projects as shown below were implemented. (1)Rural Electrification Completed in Santa Ana, Disel, etc. (2)Road Improvement Finance: Provision of machinery from JICA. Several roads have been improved at Santa Ana area. (3)Improvement of Educational Facility Finance: Social Investment Fund.</p> <p>The priority of Tarija province is put to the areas of road, irrigation and energy.</p> <p>Situation by Now: (FY 1991 Overseas Survey) The part of the infrastructures such as electric facilities, and health organization will be implemented by the Government of Bolivia reducing the scale of the project. It was learnt by another survey that the number of beneficiary is only 400 families, 2000persons. Since the original plan seemed to be too big, as the result of the study, the plan has been scaled down to reduce the irrigation area 650ha from 1,100ha, and the costs for project becomes from \$15 million to \$6 million.</p> <p>(FY 1992 Overseas Survey) CODETAR is paving the road Tarija-Santa Ana, which is the main access to the project area. CODETAR expect dispatch of study mission from Japan (for 1~2 months), and will request to Japan repeatedly. CODETAR has the necessary domestic resources for the counterpart of the Final Project. Before the implementation of the project, technical training of counterpart financed by JICA is expected.</p> <p>(FY 1993 Overseas Survey) Hoping to earn the grant aid from JICA, revised final design has been submitted to Japanese side. The cost for project becomes less than \$3 million.</p> <p>(FY 1996 Overseas Survey) As the enactment of decentralization act, the Regional Development Corporation of Tarija was resolved and the Municipality of Tarija has taken over its works. Due to the above-mentioned reason, no step has been taken for the finance procurement. The priority order of the development project in this region is (1)Road, (2)Irrigation and (3)Electrification.</p> <p>(FY 1997 Domestic Survey) Tarija Development Corporation had submitted request every year until it was dissolved. No request was made after the works had been taken over to Tarija Province.</p> <p>(4)Agricultural and Rural Development Perspective: (FY 1997 Domestic Survey) The new political power puts high priority on agriculture and rural development through decentralization of authority. For that purpose, Ministry of Agriculture, Livestock and Rural Development has been established.</p> <p>(FY 1997 Overseas Survey) Up-date study and modification of target area scale are scheduled. Italia is implementing Agricultural Development Study in the area including a part of target area of this study. Study is in the second or the third phase at present.</p> <p>(FY 1997 Overseas Survey) *Related Project "San Jacinto Dam" Definition of the areas to be irrigated by water taken from the San Jacinto Dam, was started in parallel with this study and the areas were selected after the completion of the study. As a result, out of 1,000 ha of recommended area by the study, 500 ha was included into the irrigation area. (Irrigation area-3,600 ha, 1,000 households) Finance: Argentine government Construction: Phase I 1981~1982 Phase II May.1990~mid.1992 Phase III mid.1992~1998</p> <p>Situation after completion : (FY 1998 Domestic Survey) Construction of the dam was completed. Part of the project area has been irrigated.</p> <p>Perspective for the remaining project : (FY 1998 Domestic Survey) There has not been any progress and has no exact plan to realize the project.</p> | | |

| <p>Description :</p> <p>The Background of the project: The project section is a part of the National Road 3 which connects La Paz and the province of Ben, the province of Bando which are lowlands and have great potential for development. On the National Road 3, except the section between Santa Barbara and Bella Vista, all other road sections have already improved or are just about to start the improvement works. Once these road sections will have improved, the road section between Santa Barbara and Bella Vista will obviously become the severe bottleneck for traffic. On the other hand, this road section is very notorious for its disaster occurrence and risky road section in Bolivia.</p> <p>Subsequent Studies: (FY 1996 Domestic Survey) Jan.1993 Bolivian Government requested to the Japanese Government to conduct D/D on the road and technical assistance for EIA. 1997 Implementation of D/D is said to be mentioned at the Bolivian IBD Project. However, it has been unconfirmed. (FY 1997 Overseas Survey) As of the end of 1997 F/S review, final design, EIA are being carried out for Santa Barbara ~ Bella Vista ~ Quiquibey (118km) Study Period / 15 months Consulting Firm / Contegral-Grimaux Study Cost / 1.05mil.US\$</p> <p>Finance: (FY 1997 Overseas Survey) Estimated Cost / 200mil.US\$ IBD 700mil.US\$ Another financial resource is being procured.</p> <p>Construction: 1998 - 2000 Scheduled to be implemented (FY1996 Overseas Survey)</p> <p>(FY 1997 Domestic Survey) BID puts higher priority to San Borja~Trinidad and considers that starting a construction on Santa Barbara~Bella Vista is difficult unless Cotapata~Santa Barbara section is not completed.</p> <p>(FY 1997 Overseas Survey) The road was divided into two sections. The first section is Santa Barbara - Caranabi (66km) and its construction cost is 112mil.US\$. The second section is Caranabi - Bella Vista (52km).</p> <p>(FY 2000 Domestic Survey) Contegral Selaya Jhonson, one of the local consultants, conducted F/S and D/D for the two sections and the provincial agency is considering the result of studies.</p> <p>Maintenance & Operation: The provincial road service agency will be assigned M&O.</p> <p>Situation: (FY1996 Overseas Survey) The machinery provided by the Japanese Government has been utilized for the road maintenance of this section.</p> | | |

Description :

Subsequent Studies:

Railway Improvement between Oruro and Cochabamba, F/S

Oct. 1995 the final report to be submitted

Major points of the planned improvement are the route change for about 33km which should be done urgently, the improvement of the railway for about 69km where many derailed accidents had been happened, and a section between Aguas-Calientes - Irpa-Irpa with a distance of about 55km, the major disastrous segment.

Other implementations:

(FY 1992 Overseas Survey)

The M/P is being executed by ENFE according to the possible economic resources. The maintenance of the whole railway line is kept up. In several sections the track has been improved. Four new stations have been constructed. The repair of locomotive engines and equipment of workshops are being carried on.

Others:

The master plan should be implemented as early as possible, since its implementation is considered significant from the standpoint of national economy. As for the urgent projects, it is necessary to draw up an optimum plan by comparing various alternative plans through feasibility studies and the like. It is also necessary to promote railway reinforcement in terms of both hardware and software.

(FY 1992 Overseas Survey)

\$500 million will be needed for the equipment investment from now on. Dispatch of Japanese long term expert for the management plan is required.

(FY 1993 Overseas Survey)

Bolivian National Railways wishes to make a Master Plan including construction of railway network connecting Aiquile and Santa Cruz.

Description :

Utilization of the study:

The basic idea of this study would be applied to formulate the Master Plan and to conduct feasibility study in other area in Bolivia.

(FY 1993 Overseas Survey)

The results of JICA's study are very useful for the establishment of new plan and the settlement of new areas for borrowing as the basic data of afforestation.

Others:

(FY 1992 Overseas Survey)

The deterioration and loss of resources are steadily increasing in the tropical zones or areas.

On the forest field, project formation study is planned considering grant aid and project technical cooperation.

(FY 1993 Overseas Survey)

Looking for the financial resources to conduct survey works, GOB has requested the fund for Phase 2 survey to JICA.

In order to implement the recommended items, further technical and financial cooperations are requested.

(FY 1996 Overseas Survey)

*Sustainable Forest Management Project for Tropical Forest in the Northern La Paz

This project was formulated in order to address the rapid deterioration of resources in the tropical zone covering more than one million ha in the northern La Paz, based on this study result. The financing from the International Organization of Tropical Forest is desired.

(FY 1997 Overseas Survey)

Based on the study, Ministry of Agriculture formulated "Northern La Paz Sustainable Forest Management Project". OIMT has pledged 50,000 US\$ for the project but not disbursed yet.

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY1994 Domestic Survey)
 In order to implement the project, it is required to arrange budget enough to maintain the facilities. At present it seems not to be promoted from the standpoint of cost/benefit.

(FY1995 Overseas Survey)
 The regulations regarding to the quality of residual water drained into river have been proclaimed. No other particular progress.

(FY 1996 Overseas Survey)
 Because this study proposed the water treatment project, which targetted only the rivers in the suburb, the residents in the urban area would be unable to benefit from the project. Thus, the city of La Paz has an intention to implement a water quality improvement measure with the construction of small-scale waste water treatment plants which can be applicable to various areas in the city in order to increase the number of beneficiaries. Presently, the City of La Paz considers the implementation of the Phase II Study for it. The construction of the Small-scale plants will be easier to be implemented than that of the large-scale central treatment plan, which was proposed in this study, because of the small initial investment.

(FY 1997 Overseas Survey)
 Election of a mayor was held in 1997 in La Paz where the former mayor was positive to adopt a module-type plant. As a result of election, no officers who is acquainted with the matter remained in the city hall of La Paz.

*Module type --- The small-scale plant to distill waste water in place of draining to river directly.

SAMAPA (Aqua dil Illimani: JV of French, Argentina, and Bolivian companies), a counterpart of the project, was privatized into a consession company in 1997. This company will be responsible for operation and management of water supply after July 1997 and be responsible for sewerage treatment after 2001. SAMAPA, consisting of seven staff, is in charge of managing the lease fee.

(FY 1998 Domestic Survey)
 Since the site for the water treatment plant was unable to be acquired in and around the city area, it will be high if waste water is transported to 10 km downstream. Therefore, it becomes difficult to implement the proposed project. Regarding the module-type plant, it is difficult to treat the large amount of waste water due to the constraint of the site. Although it is possible to partially install this module-type, there is little impact on Choqueyapu River. The installation of the waste water treatment plant was conditioned in the concession contract when the SAMAPA was privatized. However, it will be unable to be implemented unless a large amount of subsidies is provided.

(FY 1998 Overseas Survey)
 The cost of the proposed project is approx. 46 million dollars and cannot covered by the budget of city. It is also in the difficult situation to be financially assisted by Japan and other donor countries.
 When JICA follow-up study team visited to Lapaz City in March 1998, the city submitted the request for the additional study for construction of the module-type sewerage treatment plant.

| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | 1) To formulate the improvement plan on the distribution system of green grocery in Santa Cruz Province. 2) Technology transfer. | | |
| 7. CONSULTANT(S) | System Science Consultants Inc. KOKUSAI KOGYO CO., LTD. | | |
| 8. STUDY PERIOD | Jan.1994 ~ Jan.1995 12month(s) ~ | | |
| 9. SITE OR AREA | Santa Cruz City (Santa Cruz Province) Cochabamba and La Paz, greengrocery-producing district | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1.Short-term plan 1)Improvement in related organization and legislation system. This plan includes various plans as organization/legislation improvement, facility service. To implement the project, development committees at central level and regional level will be established. And also gathering and forwarding association and greengrocery corporation are to be founded to administrate the Distribution Centers in producing/consuming districts. 2)Test improvement plan for existing distribution facilities. As a preparatory phase to establish association and corporation, association establishment preparation committee will be founded at producing district and elaborate the management plan and outcome report. At consuming district, market management council will be established in existing Abasto market to make improvement plan about market management and its implementation outcome report. 3)F/S on distribution center in producing/consuming districts. 2. Medium-long-term plan 1)Construction of gathering and forwarding facility and market facility in consuming district. Establishment of management system, Distribution center at Producing District:3 main center, 4 sub centers. Gathering and forwarding association: management system. 2)Stabilization of improved distribution system at wide area of Santa Cruz Province. 3)Nationwide promotion of distribution improvement model case: Distribution center at Consuming District, Greengrocery corporation.</p> | | |

Description :

subsequent study:

(FY 1998 Domestic Survey)

June 1998~June 1999 JICA F/S

Backgrounds:

(FY 1995 Domestic Survey)

The Govt. of Bolivia recognizes the importance of the project plan and considers the F/S as the first phase of implementation.

(FY 1996 Domestic Survey)

The Govt. of Bolivia has requested for F/S to the Govt. of Japan in 1996 based on the proposal and conclusion of M/P.

(FY 1996 Overseas Survey)

1.Short-Term Plan

In July 1995, the Master Plan Follow-Up Regional Committee was organized in the urban area and promoted the improvement of infrastructure in the wholesale market. Compared with the condition of 1994, the present market condition is better in sanitation. The legislation is expected to be announced officially next year. Also, the ordinance will be put into force to promote the decentralization of the wholesale market. In order to commence the operation of new marketing system, F/S and the construction of main facilities are to be implemented from 1996 to 2000.

2.Medium and Long Term Plan

The expansion of the marketing system at the regional level will be undertaken between 2000 and 2010.

The technical cooperation is requested for the reinforcement of organizations and the improvement of the marketing system.

(FY 1997 Domestic Survey)

D/D will be conducted next year.

(FY 1997 Overseas Survey)

JICA is to carry out F/S from FY 1998. To materialize the projects to be proposed by F/S, grant aid assistance from Japan and fund from FDC are expected.

The results of the study have been utilized for elaboration of Metropolitan Plan, Market Improvement Plan and so on.

(FY 1998 Domestic Survey)

Jul.1998 - Jun.1996 JICA Development Study (F/S) 'Agricultural Marketing Systems in Santa Cruz'.

(FY 1998 Overseas Survey)

The request for dispatch of two technical experts (one from the third country) in 2000 and procurement of a grant aid was submitted in 1999.

* Refer to BOL/A 316/99 'Improvement of Agricultural Marketing System in Santa Cruz' (F/S)

(FY 2001 Overseas Survey)

Present Situation: Preparing for implementation of the project.

Puroduction Zone:

1, Committee (organized by the government organization in the targeted area.) was established at every collection center.

2, Farmers organization which maintain and operate the pilot collection center, was established and offer seminars with INALCO on farmers organization activities to the organization officers and all the producers in each municipalities. The topics of the seminar includes bale package works and the Center's role, etc.

Urban Zone:

1, Land for wholeale market construction is being prepared.

2, Offered seminer two times for wholesale dealers in the supply market.

3, Tried exams on wholesale market and circulation.

4, Finished bidding for yard of the construction site

Priority among the projects was unanimously determined as follows by the seminer participant organizations.

First Priority: Market System Improvement in Santa Cruz Province.

Second Priority: Establishment of a coordination committee among organizations.

Third Priority: Establishment of experimental wholesale market.

Japan's Technical Cooperation:

(FY 1999 Overseas Survey)

A request of two exparts (including one from third country) and Japan's Grand Aid for 2000 was submitted in 1999.

(FY 2001 Overseas Survey)

Oct. 2000~ Short term expert.

Nov. 2000~ Long term expert.

(FY 2005 domestic survey)

Although a request for the Yen Grant was submitted, it has not been selected.

Description :

Beni Province of La Paz is essential area to proceed the new economic policy based on natural resources exploitation and agriculture promotion. Therefore, the Bolivian Govt. seems to utilize the study to establish the Social Infrastructure Installation Project (road, electricity, water supply, drainage, irrigation canal, etc.) to step up the regional development of this area.

(FY 1996 Overseas Survey)

This Study was completed and the produced maps were handed over to the Bolivian Government from JICA on Sep.26.1996. These maps are sold at present, 30% of which have been purchased by agencies in charge of the development of this region.

(FY 1999 Overseas Survey)

40% of the maps were delivered by JICA to S.G.M and to private enterprizes in the fields of mining, electric power, timber processing, telecommunications, exploration of oil wells.

(FY 2005 Overseas Survey)

Technical cooperation: Dispatching 12 experts for 4 months.

Description: Preparation of La Paz, Provincia de Beni topographical maps from 1992 to 1993. 64 1:50,000 scale maps were prepared.

Others:

Beneficiaries are 1,500 square kilo metres of Alto, Provincia Beni and 100,000 residents. Of 50,000 people resides in rural area.

Construction of neighbouring roads and improvements in agricultural productivity. Supply of basic services such as electricity and water. However, these benefits can not be quantified due to financial constraints.

Description :

(FY 1996 Domestic Survey)

A part of segments are under construction and it is expected to commence the construction of the rests utilizing this study. But, the implementation is not scheduled as yet because of large-scale reorganization of SNC this year.

(FY 1997 Domestic Survey)

Rehabilitation of this road is to be funded by IDB. IDB is now reconstructing the section of National road Cotapata-Santa Barbara, but the progress is very slow, and cost will exceed the allocated amount. Construction of this section must be started after completion of Catapata-Santa Barbara anyway. SNC is repairing damaged sections little by little with own fund, based on the proposal of this study.

(FY 1998 Overseas Survey)

F/S on the Rurrenabaque - Yucumo - Trinidad section was reviewed by CAF(Cooperacion de Fomento). The Trinidad - Puerto Varador section was paved by BENI - ENDR Department.

(FY 2000 Domestic Survey)

The local private sector is operating the maintenance for the road of San Borja - Puerto Ganaderc, however, the full-scale construction has not been conducted. It is said that IDB has no intention to fund this section and instead of IDB, World Bank will finance this construction. World Bank considers,

- 1) F/S, EIA, Final Design for the section of Rurrenabaque-Yucumo-San Borja: 200 mil\$
- 2) Review for F/S and D/D for the section of San Borja-Trinidad: 200 mil\$.

(FY 2001 Domestic Survey)

The organization in charge for this Study, SNC requested the survey expense amounting about 2 million US\$ to the WB for the purpose of the F/S, D/D and EIA on the area of Rurrenabaque, Yucumo, San Borji, Trinidad (Pueto Ganadero) as a link in the road construction between San Borja and Trinidad, however, the answer by the WB was that it was impossible to finance to the new project in road sector due to the following reasons:

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| (FY 1997 Domestic Survey) | | |
| <p>1. Average water supply coverage in the Study Area, in the urban area with a population of 2,000 or more, amounts to 87.7%, while the level of water supply service availability is only 23.3% in the rural communities with a population of 2,000 or fewer inhabitants. There are as many as 3,023 blocks totally without water supply, a level equivalent to 71% of all 4,269 water blocks in the Study Area.</p> <p>2. Safe potable water is seriously short, and the available water sources are dug wells, springs, reservoirs and rain water. In most cases, the water is not suitable for drinking.</p> <p>3. This lack of water supply service is due to a)the natural-geographic conditions, b)the lag in the water resources development c)shortage of technology, manpower, and funds for the water supply and the water resources development d)the lack of operation and maintenance for the existing facilities.</p> <p>4. The authority responsible for water supply service projects in Bolivia at national level is DINASBA, the National Direction of Basic Sanitation of the National Secretariat of Urban Affairs at the Ministry of Human Resources Development. In the rural areas, each Regional Development Corporations (CORDES), municipalities, municipal enterprises, international cooperation agencies of various countries and NGOs have been promoting projects. These projects have included shallow wells, springs, and surface water. In view of sporadic development efforts, service volume is deficient in absolute terms.</p> <p>5. Prefecture of Oruro and Chuquisaca own Well drilling equipment, which is of an obsolete type.</p> <p>6. Following to Popular Participation Law promulgated in 1994, the Decentralization Law was promulgated in July, 1995, by which CORDES were dissolved and all assets and staff were transferred to each Prefecture. The financial resources were shifted from central government to rural authorities in proportion to the size of population, which is promoting the activation of rural communities.</p> <p>7. Bolivian side declared that the on-going foreign aid projects will be taken over without change by the Prefectures which already indicated their intention to give priority to the implementation of ground water development projects.</p> | | |
| (FY 1998 Overseas Survey) | | |
| <p>A grant aid assistance for La Paz was requested, however, it was not accepted. Since there are no other donors which can be expected to provide the excavators, the government of Bolivia is still expecting the implementation of Japanese grant aid assistance.</p> <p>The counterpart agency of development study was reorganized to Department of Basic Sanitation, Ministry of Housing and Social Infrastructure due to the change of the government. This ministry is the major counterpart agency for the implementation of a grant aid assistance and the respective provincial governments are the implementing agencies.</p> | | |
| (FY 1998 Domestic Survey) | | |
| <p>Grant aid assistance ("Provincial Groundwater Development")</p> <p>April 1997 E/N 1,777 million yen</p> <p>Sep. 1997 E/N 1,325 million yen</p> <p>- Contents of the project: provision of excavators and equipments for examination, and construction of model water supply facilities in Chuquisaca and Santa Cruz.</p> | | |
| (FY 1998 Overseas Survey) | | |
| <p>1998 B/D for a grant aid assistance (Provincial Groundwater Development II) is underway in Oruro and Tarija.</p> <p>1999/Mar/25: E/N 1,173 million JPY, "Provincial Groundwater Development (II), Phase 1"</p> <p>1999/Aug/26: E/N 700 million JPY, "Provincial Groundwater Development (II), Phase 2"</p> <p>- Contents: provision of excavators and equipment for examination, and construction of model water supply facilities in Oruro and Tarija.</p> | | |
| (FY 1999 Domestic Survey) Completed. | | |
| (FY 2001 Overseas Survey) | | |
| <p>The water resource under the four site, where water supply systems were constructed, was evaluated as the best in quality and quantity and has enough amount of water to cover the present and future water demand.</p> <p>Public health education program and system maintenance/operation/upgrading training contributed significantly to improve the residents' health and life standard. Hygienic environment including toilet facilities has been improved significantly. The water supply rate of the area highly exceeded the ratio of neighbor provinces. Childrens are in good health after the epidemic disease was terminated completely.</p> | | |

Description :
(FY 1998 Domestic Survey)

Since December 1997, a coordination institution for rural and agricultural development in Achacachi area (Alias; "Project Achacachi") has been established at La Paz Economic Development Bureau. The institution has carried out the following works with JICA experts: 1) Requested for grant aid for a short-term development plan of the project to the government of Japan; 2) Secured budget for officially establishing the institution at the Department of La Paz Office (since fourth quarter of 1998); 3) Fund raised to construct the Community Revitalization Center (CRC) and the Area Center (AC), which was proposed in a mid-term development plan, because their construction was effective for the project in the short-term development plan; 4) Concluded an agreement between Achacachi City and Batallas City on the implementation of the project; 5) Concluded an agreement on cooperation with technical and financial support institutions for implementing of the project; 6) Promoted activities for farmers in the target area and established a CRC steering committee represented by communities; 7) Held seminars for farmers in the target area.

Thus, JICA dispatched short term experts from May 15 to August 15, 1998. Activities of the experts in Bolivia were as follows: 1) Grant aid was requested to the embassy of Japan by the government of Bolivia in August, after making a sustainable O&M plan on agriculture, rural infrastructure, CRC, AC, and technical transfer; 2) For securing budget for the coordination institution in the Department of La Paz, effectiveness of the project, support system for implementation, required staff, and their costs were explained. Accordingly, the budget was approved during the fourth quarter period in 1998; 3) Regarding the construction fund of CRC and AC, construction by Farmers Development Fund (FDC) which receives 2KP fund was basically agreed with support of the embassy of Japan and a JICA office in Bolivia; 4) Achacachi City and Batallas City concluded an agreement on cooperation in agriculture, the rental of machinery for construction, and the entire plan with a governor; 5) As a technical support institution of the project, the Department of Agriculture, San Andres University (UMSA) concluded an agreement with a governor on cooperation in the utilization of its staff and facilities of the Belen experiment station in the target area and technical instruction and transfer for farmers. The fund will be raised by FDC and the university; 6) Members of a steering committee of CRC were officially selected from 30 communities in the target area and participated in an oath-taking ceremony in July, and a seminar for the implementation of the plan for the members was held at the end of July; 7) Seminars for farmers was held in April with supports from Japanese experts.

Agricultural infrastructure development (rehabilitation of a main irrigation canal), improvement of main roads (roads, bridges, maintenance equipment for infrastructures, agricultural equipment), technology transferring infrastructures (by Agricultural Development Fund) will be handed over to CRS in downstream, middle stream and upstream.

FDC (USD 512,000) was agreed in November 1999 for the construction of CRC and CA as well as for the implementation of an agricultural support project. Construction will start in April 2000.

Subsequent study: Achacachi Area Agricultural Development Plan: Basic Design Study
Implementing period: September - October, 1999

Implemented project: Achacachi Area Agricultural Development Plan (Phase 1/2)
Funding:
Funding party: Japan's grant aid (submitted in August 1998, E/N concluded in June 2000)
Funding amount : 817 million JPY
Implementing period: 8 October, 2001 . 20 January 2002
Contents: Irrigation facilities (sluice gate, water channel, division works, crossing works), Machinery and materials (for supporting a center, for training, for supporting agricultural management, for demonstration paddy fields)
Operation and maintenance body: Achacachi Project User Cooperative (APUC) will implement through the cooperation from UCPA
Progress:
(FY 1999 Overseas Survey) Construction will be started on April 2000
(FY 2001 Overseas Survey) Chachacomani Community Activation Center 73.5%, Kelani Area Center 72.2% Kela Kala Community Activation Center 70.47%, Ptuni Area Center 72.63%, Belen Community Activation Center 72.72%, Haueritaka Area Center 72.66%
(FY 2002 Domestic Survey) Constructing period was extended to March 2002
(FY 2003 Domestic Survey) Defect tests were conducted for construction in Phase 1 on March 2003.

(FY 2001 Overseas Survey)
Technology generation (development) and transfer project (training and infrastructure construction): April 2002- (12 months). Various activities are in progress with the cooperation of NGOs in order to operate the community center properly and to assist members of a AUPA user organization in project operation, accounting, document processing, and machinery operation. The community center is expected to play an important role in the enhancement process of AUPA.
(FY 2002 Domestic Survey)
Concerning the construction in Phase 2, the Ministry of Foreign Affairs of Bolivia submitted a formal request for grant aid to the embassy of Japan in Bolivia. The Ministry of Foreign Affairs of Japan is examining a possibility to provide grant aid, taking into consideration the use situation of facilities constructed in Phase 1 and security situation.
(FY 2003 Domestic Survey)
There is no prospect for the implementation of the second phase as of October 2003 because of the deterioration of security situation. A possibility for new grant aid cooperation will be examined by conducting a feasibility study, including an improvement of machinery for social development in the region

(FY 2007 Domestic Survey)
Implemented project: Project for Development Plan in Achacachi Area
Implementing period: June 2005 - May 2008
Implementing institution: JICA (Technical Cooperation Project)
Funding party: The Government of Japan (S/W concluded: 1 June, 2005)

Implemented project: Project for procuring equipment for village development in La Paz
Funding party: Japan's Grant Aid (E/N concluded: 7 July, 2005)
Funding amount: 683 million JPY

APC accepted two irrigation system constructions (La Pas, GM Achacachi, APC Fund), which have been implemented been FY 2007 -2008.

Description :

(FY 2000 Domestic Survey)

The Bolivian Government requested grant aid of the project to Japanese Government.

Request for a grant aid assistance (US\$17mil.) for the construction of the road cum embankment and bridge and the improvement of drainage was submitted in Aug. 1999.

(FY 2003 Domestic Survey)

The grant aid requested in 1999 has not been determined yet.

While the measures for structures proposed in the M/P have made little headway, Santa Cruz Province has been pushing forward with what it could such as new construction of the "organization in relation to improvement of flood and drainage", proposed as measures for structures, and preparation for water level designing in terms of the "flood prediction and warning system".

(FY 2004 Domestic Survey)

Although the requests have been made for flood control in Okinawa area and San Juan, Antofagsta area, it has not been implemented.

(FY 2004 Overseas Survey)

In 2003 and 2004, Department of Santa Cruz has submitted an application, described below, to the Bolivian Gov. regarding implementation of the Japanese corporation project.

1) Grande River Disaster Prevention Project

2) Study on Flood Control and Basis Management of Grande River in the Republic of Bolivia

In addition, draft of structured and unstructured measure plans were submitted by the study conducted with Japanese corporation. Along with the study results and comments, hydrological, field information, and socio-economic data are mainly used for the promotion of unstructured measures. Structured measures will be started in 2005 or after 2006 as the project to improve both Chane and Pirai river conducted by SEAPRI, by responding to overseas investment.

(FY 2005 Domestic Survey)

Project has been implemented focusing on institutional preparation and soft component measures, such as disaster prevention system. In addition, request has been made for Lio Grande river basin development.

(FY 2005 Overseas Survey)

Hydrological data gathering and analysis has been conducted in 19 observation sites of SENAMHI with own funds. The objectives of the study are to predict El Nino and La Nina, and to establish early prevention networks for annually and suddenly occurring floods in target areas.

In addition, hazard maps were prepared by identifying flood prone areas with satellite pictures acquired during the year 2001 and 2004.

Furthermore, observation sites have been established at several water level observation sites.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2003 Domestic Survey)

There is no information available on the current situations of this project.

(FY 2004 Overseas Survey)

1. Cause of delay

Since Bolivia has faced economic crisis, it is difficult to allocate the national budget of health sector to rural areas in the country. In addition, it is impossible to adopt design adjustment to M/P since it has own principles and policies.

2. Other status

1) Dispatch of Japan's Senior Volunteer (SV) and Japan Overseas Cooperation Volunteers (JOCV)

- One SV specialised in hospital management (December 2003 - December 2005)

For improving management capability of 2 hospital and medical centre in Trinidad.

- Two JOCV members (- 2006)

For regional development and maternity medical affairs at obstetrics departments, medical centre in Nueva Trinidad.

2) Approval of the grant of medical equipment to Trinidad city

- The request was approved in September 2004

- Procurement for installation aiming to complete in 2005 is now in progress.

3) Approval for Economic Grant aid for the improvement in health team in southern Beni region.

- The B/D team was dispatched in January 2005.

- There is a possibility of coordinating with other international agencies to cover southern area extensively.

(FY 2005 Domestic Survey)

Currently, the grant aid project, SV and JOCV programmes are conducted, and the dispatch of JOCV teams is also planned.

(FY 2005 Overseas Survey)

Following activities has been conducted.

1. Cooperation from provinces, municipalities, SEDES (Provincial health service department), local residential organizations, and local residents 2. Improvement of health management system, hospital management, maintenance of medical facilities, and capacity development of families and local medics. 3. Implementation of sustainable P/S

4. Establishment of offices for survey and research 6. Improvement of following targets: local authorities at municipalities which have responsibilities for rehabilitating medical infrastructure and building capacities of the staff that are covered by the development study; basic services towards local residents such as electricity; neighborhood roads.

(FY 2006 Domestic and Overseas Survey) (FY 2007 Domestic Survey)

Implemented project: Planning of the improvement of medical and health facilities in the south of Beni Department (Proyecto de Mejoramiento para las Unidades de Salud en la Zona Sur de la Prefectura del Beni)

Implementing period: September 2005 - August 2007

Implementing body: JICA (grant aid)

Funding:

Funding party: JICA (E/N concluded: 24 August 2005)

Funding amount: 847 million JPY (Constructing cost: 508.7 million JPY, equipment cost: 216.8 million JPY, design supervision: 122.2 million JPY)

Purpose: Based on the survey of the study, the Government of Bolivia constructed hospitals, health centres and clinics and purchased medical equipment in order to establishing the district health and medical network for 3 provinces of Cercado, Moxos and Mamore in the south of Beni Department in June 2003.

Contents: Targeting 25 facilities (1 auxiliary nurse school, 7 health centres, 14 clinics and 3 hospitals) in the three provinces

Building planning:

1) 1 auxiliary nurse school (RC two-stories, 780sq. m), 2) 5 health centres (RC one-story, 324sq. m), and 1 clinic, 3) 2 new clinics (RC one-story, 182sq. m) 4)

Building extension: 2 hospitals (RC one-story, 283.5sq. m)

Equipment planning:

1) To auxiliary nurse school: nursing practicing equipment, treatment practicing equipment, and general equipment

2) To health centre: general diagnostic equipment

3) To 14 clinics: general treatment, medical checkup equipment, dental procedure equipment, communication equipment, and general equipment

4) To 3 hospitals: general treatment equipment, medical checkup equipment, special examination, transporting devices equipment, and general equipment

Beneficiary: local residents in 3 provinces of Cercado, Moxos and Mamore in the south of Beni Department.

Technical cooperation

Trainings: medical checkup and nursing (37 people, 21-25 September 2006, 4-18 February 2007)

Other: Dispatching JOCV team (nursery staff, nurses and teachers of Japanese language)

Progress:

(FY 2006 Domestic and Overseas Survey) 49.6% as of September 2006 (projected: 54.29%)

(FY 2007 Domestic Survey) While the project supposed to finish in March 2007, the flood on February had cut off equipment distribution channel for 5 facilities, and one facility was flooded above water level. The project was approved by Ministry of Foreign Affairs as incidental carryover till August with waiting period from March to June. The project completed on July 2007, and facilities are now in operation. After the project implementation, necessity of implementing the project at Vaca Diez was became clear.

Others:

The request of contributing medical equipment to Trinidad City was approved in September 2004.

On September 9, 2005, the medical equipment (maternal medical devices, basic medical devices for maternal health, medical devices for house visit, medical devices used in treatment and examination rooms and inspection devices for throat: 128,938.48 USD) were delivered to following hospitals: German Busch Hospital; Infantile Bolivian-Japanese Maternal Hospital; Pedro Marban Healthcare Center; San Vicente Healthcare Center; and Pompeii Healthcare Center.

On May, 2006, condition of medical equipment were checked, reported to JICA for problems, and have been repaired by the supplier.

| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | ADMINISTRADORA BOLIVIANA DE CARRETERAS (ABC) | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | 1) Building an appropriate road inspection and maintenance system 2) Cultivating the necessary human resources through the following activities: a) road disaster hazard diagnosis, b) formulation of slope repair and disaster countermeasure works, c) design supervision, estimation and construction supervision of slope countermeasure works and road structures | | |
| 7. CONSULTANT(S) | Central Consultant, Inc. Earth System Science Co.,LTD | | |
| 8. STUDY PERIOD | Oct.2005 | ~ | Oct.2007 24month(s) |
| 9. SITE OR AREA | The study area is located in mountainous and hilly terrain, and covers a total length of 948km, being, from the north, 164km along Route 16, 275km along Route 3, 172km along Route 4 and 337km along Route 7, where there is risk of slope disaster. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p><Project-1: Project on Establishment of Road Disaster Preventive Department (unit)> The department or the unit is chiefly expected to play an important role as a leader in execution and one of the information centers for disaster preventive management in ABC. It is necessary that some experts and engineers including project manager, geological/geotechnical engineers, and hydrologist, and design/cost evaluation engineers, financial and judicial experts participate in the project.</p> <p><Project-2: Project on Road Disaster Preventive Technology Improvement> The main activities of the project are technology transfer, provision of basic information and building up database in road disaster preventive management to ABC personnel concerned.</p> <p><Project-3: Project on Establishment of Road Disaster Preventive Management System> After completion of the system building, risk sections along all national highways will be identified and proper countermeasures against road disasters will be clarified and carried out before occurrence of disasters. Moreover, disaster records and inspected information on road slopes will be compiled as a database in the project.</p> <p><Project-4:Project on Improvement of Emergency Response in Disaster Prevention> In establishing the warning / evacuation system, it is considered that introduction of early warning system and setting up cooperative relation with military, police and local entities concerned, etc. are the most important matters to do immediately. On the other hand, emergency response includes quick adoption of the private sectors, selection and proposal of proper measures, strengthening relation with SEPCOM, and development of legal system on declare of disaster emergency.</p> <p><Project-5: Project on Road Information Enhancement and Discloser> The major tasks are wide dissemination of information to the public through the bulletin and Website of ABC, holding seminars and training courses in cooperation of societies and universities, and communication with stakeholders, and so on.</p> <p><Project-6: Project on Improvement of Tender Procedures in Road Disaster Prevention> At present, owing to some overseas technical assistant projects, such as the ISO9000 achievement project by WB and the administrative improvement project by CIDA, the part of the above .mentioned problems have been improved gradually rather than before.</p> <p><Project-7: Project on formulation of Strategy Program of Disaster Prevention Budget> National Annual Budget (TGN), National Road Maintenance Budget (CNCV), Local Contribution Budget, and Overseas Assistance Fund, etc. are considered as target budgets and funds. On the other hand, new additional financial resource, for example, "Road Disaster Preventive Fund" is conceivable to be one of the promising funds to be obtained. In promoting the project, adequate judgment and proper action taking into account political and social conditions are strongly required.</p> | | |

Description :

(FY 2008 Domestic Survey)

Implemented project: The Project for Capacity Development for Road Disaster Prevention and Bridge Management and Maintenance (Technical cooperation project)

Cooperation period: 1 January, 2009 - 31 March, 2012

Counterpart body: Bolivian Administrator of Highways (ABC)

Project Purpose: ABC improves its technical capability of road disaster prevention and management and maintenance of bridges.

Background: The development study proposed 1) "capacity development plan," which indicated various measures that Bolivian government must take, specially for disaster prevention, and 2) an appropriate institutional arrangement to implement those measures. Based on these proposals, the Disaster Prevention Office was established in the implementing body (ABC) to enhance its operational capacity. However, it is still difficult for the government to implement its policies due to lack of experience and technical knowledge regarding disaster prevention. Hence technical cooperation was requested to assist the government in attaining self-sustained management and maintenance skills.

Description :

(FY 2009 Domestic Survey)

The Grant Aid, for the implementation of the water resource development based on the MP proposal and the installation of the equipments for the water purvey of the rural area, was requested for the government of Japan. In such a context, the Preparatory Survey; "Preparatory Survey for the Project for Drink Water Provision in Rural Area of Beni & Pando Prefectures in Bolivia" (from March of 2010 to January of 2011) has been implemented in order to consider the validity of the Grant Aid implementation.

(FY 2009 Overseas Survey) No information.

(FY2013 Domestic Survey)

Implemented project: The Project for Drinking Water Supply in the Rural Areas of Beni and Pando Prefectures. (The Grant Aid Project)

(1) The Objectives of The Project

By doing the maintenance of machinery and equipment for well digging and technical guidance for well digging and maintenance of water supply facilities in Beni and Pando Prefectures, the project promotes to increase the village water supply pervasion and therefore contributes to improve hygiene environments in both prefectures.

(2) Project Site/ Targeted Area : Beni Prefecture and Pando Prefecture

(3)Project Summary

1)The contents of engineering works and the procurement of equipment

a.The machinery and equipment for well digging and spare parts: Track-mounted excavators, digging tools etc.

b. Aid Vehicles (One set per one prefecture each) : 3t Tracks with cranes, water tanker trucks, vehicles (One vehicle each for operation, research and management)

c. Test and measuring instrument(equipment for geophysical exploration, equipment for probing holes and layers, water quality analyzers and equipment for testing pumps).

d. Machinery and equipment for well construction (casing, screens and air lift pumps etc.)

2) Main contents of the consulting service/soft component

a. Technical guidance for well digging and construction of water supply facilities

b. Technical guidance for each studies required for hydrogeological survey, groundwater development such as geophysical exploration.

c. Technical guidance for operation maintenance management and hygiene education

(4)Total working expenses/ Approximate Assistance fund total working expenses : 9.01 hundred million yen (Approximate assistance fund Japan side : 5.66 hundred million, Bolivia side: 3.35 hundred million yen)

(5) Project Implementing Schedule (Cooperation period) Scheduled during 2012 October . 2014 September (24 months in Total. Including detailed design and bidding period)

(6) Project Implement Structure (Implementing body/Counterpart)

Responsible Agency : Ministry of Environment and Water Resources

Implementing Body : Beni prefecture and Pand prefecture

(FY2013 Overseas Survey)

Since the drinking water is extremely important for our community especially in the dry season, Ministry of Interior have done maintenance on water supply facilities considering its limits, in parallel with JICA s Grant Aid Projects.

Description :

Construction:

A U.K. firm was appointed at the international tender in 1976. However, the financial constraints caused the project a long delay. The project was completed and the operation started in 1989.

Revised point:

The initial plan to construct the 900km-long double-track line connecting Belo Horizonte and Rio de Janeiro was modified to the 320km-long single-track line connecting Jeceaba and Barra Mansa.

Effects:

Upon the completion of the project, the capability to transfer cargo between Belo Horizonte and Rio de Janeiro has increased by 70%.

Description :

Reasons for Cancellation of the project:

Based on the proposals of the JICA study, OECF pledged a loan of about US\$100 million for the construction of Praia Mole Port. However, at the 2nd Brazil-Japan Ministerial Meeting held in August 1979, the Brazilian Government requested that the loan be used for the construction of Tubarao Port, and the request was accepted. The loan agreement (11,985 million yen) was duly signed in Dec. 1981.

Situation:

(FY 1991 Overseas Survey)

The Brazilian Government realizes that the construction of Praia Mole Port will be necessary in the future, but that it will be implemented by the private sector participation in accordance with the policy of privatization.

Description :

Utilization of the Study:

Based on the findings of the study, the improvement and development of inland transportation facilities and the port facilities are under way in order to facilitate the agricultural development in the central region.

Others:

For instance, the production of soybean in Brazil reached 20 million tons in 1989, and the contribution of the Cerrado Area has been growing. As of August 1990, the staff of Rio Doce is following up the improvement of the export corridor to transport soybean and other agricultural products to Vitoria Port.

| | Discontinued or Cancelled |

Description :

On the basis of this study made by the JICA team, the Brazilian Government undertook D/D and completed the construction of the training building, the annex training building and the diving pool.

(FY 1995 Overseas Survey)

A laboratory, a complex for oil fire fighting, an auditorium and a gymnasium are to be constructed (A complex for oil fire fighting will be constructed during 1996).

Effect:

(FY 1991 Overseas Survey)

The Training Center was inaugurated in 1985, and the training of fire fighting squads commenced in 1986, utilizing the curriculum suggested by the JICA study. By 1991, 536 professional firemen were graduated from the Center.

During the period of 1987 - 1991, JICA sponsored the third-country training program, inviting a total of 125 trainees from other Latin American countries and Portuguese-speaking African countries.

The training courses have been highly acclaimed by the participants, especially with respect to its primary emphasis on preparedness rather than fire-fighting techniques and its safety precaution during the training sessions.

(FY 1997 Overseas Survey)

After the completion of the project, courses for training of trainers are held at new center.

(FY 1998 Overseas Survey)

The construction of the facilities proposed by this study have almost completed. In addition, the project have contributed to the enhancement of the fire-fighting skills of the firemen in Brazil as well as those in other country who participated in the third-country training course.

| 10. MAJOR PROPOSED PROJECT(S) | <p>The study was undertaken in two phases:</p> <p>In the Phase I, the study examined the supply and demand trends in the world market up to the year 2000 over twenty-eight agricultural, livestock and forestry products and thirteen mining and manufacturing products which were considered to have high production potentials in the Greater Carajas Program Area.</p> <p>In the Phase II, the study ascertained development potentials of the selected commodities and products in the priority sub-regions of the Program Area.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

The findings of the Phase 1 study were utilized as basic data for policy formulation by the Ministries of Planning, Mining and Energy and Agriculture.

The private sector has been active in the development of mineral resources (e.g. iron ores), and of agricultural potentials (e.g. cereals, oilseeds and beef cattle).

JICA financed the afforestation project along the Carrajas railway.

Valle de Rio Dose, the counterpart company of the study, has been active in environmental conservation and is promoting eucalyptus planting and other measures.

(FY 1991 Overseas Survey)

The master plan was incorporated into the National Development Plan, and the following studies were undertaken.

1) Carajas Railway Development

2) Integrated Development in the Northern and Eastern Carajas

External assistance is needed in the following areas.

1) Industrial development (metallurgy & wood processing)

2) Agricultural development (tropical forests and cereals in serrado)

3) Social development for low-income households (small-scale agriculture and labor-intensive industries)

(FY 1995 Overseas Survey)

Agriculture: Cereal Production at Balsas and Pedro Afonso.

Mineral Development: Development of iron ore, manganese and copper in the near future.

Paper Industry (Forest Development): CELMAR will be running by the year 2001.

(FY 1997 Overseas Survey)

Studies as follows have been conducted by SEPRE / MPO at the region.

1986~1990 Carajas ~ Sao Luis Region along the Railway Line M/P

Components / Regional infrastructure, Agriculture, Steel manufacture

Cost / 2mil.US\$

1993~1994 Study of Alternative Energy for Metallurgical Industry

Components / Metallurgy, Reforestation, Charcoal, EIA (special emphasize on EIA)

Cost / 0.6mil.US\$

1990~1993 Serrado Grain, Pole Study

Components / Investment promotion for grains for export

Cost / 0.1mil.US\$

Situation:**(FY 1997 Overseas Survey)**

The economic crisis in 1985~1995 had caused decline in public sector investment.

Rising concern to environmental problem in Amazon area has prejudiced against investment for export-oriented private projects.

Description :

Reasons why the project has come in to practice:

(FY 1998 Overseas FU Survey)

- 1.The government has shown a clear policy toward flood control.
- 2.Itajai River Channel Committee was established.
- 3.An environment was developed for implementation of the project due to the organizational reform inside executive of Santa Catarina State Government.

Subsequent Studies:

(FY 1997 Domestic Survey)

Aug.1997~Feb.1998 EIA

Fund of Santa Catarina State Government approx. 1.5 mil.USS\$.

Finance:

(FY 1997 Domestic Survey)

26 Aug. 1996 E/N Japan's ODA Loan 17,596 mil.yen (Flood Control Project in the Lower Itajai River Basin)

(FY 1997 Overseas Survey)

Government budget R. 129.970 mil

* Contents: Construction works for rehabilitating Itajai River.

Construction:

(FY 1999 Domestic Survey)

Construction has not been commenced yet.

Detail:

(FY 1991 Overseas Survey)

The project implementation is somewhat delayed owing to the on-going reorganization of the Federal Government. The priority of the project remains high and the urgent need of implementation is recognized. The Government is working on the budget allocation to facilitate the implementation.

(FY 1994 Overseas Survey)

The Santa Catarina provincial government has been expecting the financial assistance by the Gov't of Japan, and examining the request taking into account the domestic economic and political situations.

(FY 1995 Overseas Survey)

The priority of this project remains high among Federal Government and the provincial government. The negotiation between the provincial government and related NGO has been started.

(FY 1997 Overseas Survey)

Some proposed countermeasures have been taken through projects of Santa Catarina State.

(FY 1998 Domestic Survey)

It is planned to decide the implementation of the project, on a basis of the results of EIA.

(FY 1999 Overseas Survey)

The new state government that took place in Jan. 1999 has clearly manifested its political will on project implementation.

| | Processing | Discontinued or Cancelled |

Description :
 Finance:
 (FY 1999 Overseas Survey)
 1.6 mil. US\$ were spent from 1994 to 1998 for dredging works.

M/P
 (1) Non-structural Measures such as hazard maps development
 (FY 1998 Overseas Survey)
 Implemented

(2) Sediment Run-Off Prevention Plan
 The Brazilian government is now considering the possibility to receive the financial assistance from either the World Bank or the Japanese government.

(3) Flood Prevention Plan
 The Brazilian government is planning to implement the project with own fund.
 (FY 1998 Overseas FU Survey)
 Improvement of Moji River is proceeding faster than as scheduled.
 (FY 1999 Overseas Survey)
 Dredging of 739,000m³ of Moji River, Piacaguera River and Cubatao River were implemented from 1994 to 1998.

(4) Forest Restoration Plan
 (FY 1998 Overseas FU Survey)
 Afforestation works are proceeding as scheduled, however, landslide prevention measures are still important as current measures are not prudential.
 (FY 1999 Overseas Survey)
 Implantation of 3 experimental forests are implemented for research and studies(1992-2004) on atmospheric pollution influence.

Detail
 (FY 1991 Overseas Survey)
 Secretaria de Meio Ambiente (SMA) and relating agencies have been making efforts to implement the projects proposed by M/P.
 Although priority of this project is high, the financial arrangement for the implementation has been delayed due to the political and administrative reasons.

Description :

(FY 1997 Overseas Survey)

Review study is necessary because seven years have passed since the completion of the study and territory composition of RMB Belem Metropolitan Region has been changed in 1996.

Data and information obtained through the study have been utilized for formulation of RMB strategy and so on.

The urban transport is one of the top priority matters of the Government because of aggravation of traffic problem in big cities.

Reasons that F/S has not been carried out are 1- extinguishment of EBTU which was responsible for urban transport at national level, by administrative reform, 2- CTBel was established when administration of RMB transport system was transferred to Belem Municipality, but CTBel did not incorporate the projects proposed by the study into its action plan.

(FY 1998 Overseas FU Survey)

Although the finance of Para State is stable at present(as of May 1999), it is impossible to implement the project with only the urban development fund and CTBel fund. Therefore, financial assistance by BINDES(Social and Economic Development Bank) is required. However, as a measure against recent economic crisis, the budget for plant and equipment investment in public sector is tighten and as a effect the possibility of implementing the project is low in medium term. At present, BINDES is considering to implement this project as a loan by private initiative. In order to realize an early implementation of main projects, the Brazil Cooperation Agency is requesting JICA to conduct a review survey on PDTU.

(FY 2000 Domestic Survey)

It is expected that the Review Study by JICA (Jun. 2000- Mar. 2001) will promote new development.

Construction:**1.Trunk Road Construction & Improvement**

The Construction of Belem Highway was started after its name was changed to "Workers Highway" and a little modification was made to the initial plan like the utilization of the existing stretches.

(FY1994 Domestic Survey)

The movement for implementation of the study is not yet realized, although the improvement of some road sections, that the M/P recommended, were carried out by the Local Government's efforts.

(FY 1998 Overseas FU Survey)

The construction of flyover in Almirante is about to start at last after the discussion with state government.

The extension project of Purimeiroddzenburo Street is under construction by CTBel under FY 98 budget.

(FY 1999 Overseas Survey)

A Part of Belem Highway was developed.

Pedro Miranda Road(Pedro Alvares Cabral-Mendara residential area): implementing

Coqueiro Road, Tapan Road, Bengui Road: implemented

2.Construction of Public Bus Facilities

It is considered difficult to implement the proposed Terminal projects due to financial/political reasons. There is a perspective that a private firm will establish a terminal at the place near one proposed in this Study.

The first Terminal is located on BR-316 Highway and will be operated by Marituba Enterprise.

The assistance of JICA is desired for the smooth implementation of the project.

(FY 1999 Overseas Survey)

4 integrated bus terminals were constructed by bus company.

1.Two platforms were constructed on both sides of Ananindeua City and BR316 Highway.

2.Coqueiro station was constructed near 40HORA Road in Ananindeua City.

3.Marex station was constructed on Julio Cesar Ave., which is near to Belem Airport.

Background:

Para State and Belem Municipality are anxious to execute the feasibility study continuously. However, the Department of the Central Government as for the urban transport is not yet determined. The request for feasibility study has not arrived at the ABC, the window for technical cooperation.

Because of the change of the Brazilian Central Government Administration, the Government policy for technical cooperation might change. However, no movements are observed until now.

(FY 1995 Overseas Survey)

The executing agency has been changed to CTBel (Urban Transport Company of Belem). However, due to the improper Transference of the duties concerning this project, there are some difficulties to continue the project.

Description :

(1) Pre-condition project: Sewerage System Construction (IDB/OECF)

1. Western Basin

Finance: Mar.1994 L/A 31,475 mil.Yen (Guanabara Basin Sewerage System Construction Project)

Construction:

(FY 1996 Domestic Survey) Jun.1994~1999 Construction of three primary STP. Consultant / PCI

2. Eastern Basin

(FY 1997 Domestic Survey)

Finance: IDB

Construction: under construction. (IDB plans to fund Phase II. OECF has not decided yet to fund Phase II.)

Effect:

(FY 1996 Domestic Survey)

1) Improvement of sanitary condition in the target area. 2) Recuperation of ecosystem inside the Bay 3) Upgrade of the value of target area as tourist and recreation area.

Impact on Surrounding Area:

(FY 1996 Domestic Survey)

If this project is concluded with the improvement of Sewerage system and the primary treatment, the sewage will be released to the Bay. As a result, the worsening of water quality will not be halted. Thus, it is predicted to be difficult to recuperate the ecosystem, which was the primary aim of this Project.

Remaining Project:

(FY 1997 Domestic Survey) Primary STP in the north-western basin will be constructed within Sewerage System Construction Phase II.

(2) JICA proposed projects

Subsequent Study:

The Study Team recommended to FEEMA to implement the F/S for the countermeasure examination to reduce inflow load and stored load of the Eastern Basin.

FEEMA presented the planning form of F/S based on the recommendations in June, 1994 to ABC (Brazilian Cooperation Agency). ABC requested to JICA to implement the F/S planned by FEEMA in July, 1994.

(FY 1995 Domestic Survey)

The Embassy of Japan in Brazil conveyed above-mentioned official request to the Ministry of Foreign Affairs of Japan. However, the Ministry has not taken up this project as yet as the Ministry worries about some conflict with the Sewerage Project of IDB which is implementing at the eastern basin of the Guanabara Bay.

Kokusai Kougyo Co., Ltd. have explained to JICA that there is no such a kind of problem about the conflict on the occasion of JICA's hearing held on May, 1995. On the other hand, the Local Government of Rio de Janeiro had requested to Japanese side to implement the project in early stage.

(FY 1997 Domestic Survey)

Department of Construction, Rio de Janeiro State has submitted a request to Japanese Government for a subsequent study. Target area has been enlarged from eastern basin to the whole basin.

(FY 1998 Domestic Survey)

The request for F/S by JICA has not been approved since it is afraid that this F/S will compete with the phase I of the IDB/OECF project which is under implementation.

Background:

The Province of Rio de Janeiro plans to become a candidate of the 2004 Olympic. At present, it gives the first priority to the improvement of the sewerage system in Rio and the surrounding area and desires to realize it in Phase II of IDB/OECF Project. Phase II is planned to be commenced in 2000. Therefore, a development Study to determine the project content in Phase II must be implemented in 1998~1999. The Provincial government is presently examining possibilities to implement it with the JICA assistance. While IDB plans to finance the Phase II, OECF has undecided.

(FY 1995 Overseas Survey)

This Study was utilized to establish the strategy plan for recuperation of the Guanabara Bay ecosystem. Especially the result which says the control of insolubility is important for water improvement suggests the review of the project. In the Phase I of IDB project, removal of Phosphours has been considered, then removal of insoluble material will surely be included in the Phase II.

(FY 1997 Domestic Survey)

Even though the Phase I of Sewerage System Construction (IDB/OECF) is completed, 39% of sewerage will be primary treated and 17% will be secondary treated out of whole sewerage produced in the basin, leaving 44% untreated.

Moreover, both primary and secondary treated sewerage will be discharged into the bay causing rather deterioration of quality of water.

Therefore, Phase II to reduce the area where sewerage is not treated and raise the ratio of second and third treatment is necessary.

JICA study (M/P) team recommended that treated sewerage must be discharged into out of the bays and examined about construction of facilities. In addition to these recommendations, measures against the sources of emission such as factory, slums and so on must be examined by F/S.

IDB understands the effectiveness of the pollution simulation model used by JICA M/P survey and requested to prepare the Phase II plan utilizing the model.

(FY 1997 Overseas Survey)

The state government of Rio has started negotiation with international financial organizations, especially IDB and OECF, for the implementation of the Phase 2.

(FY 1998 Overseas Survey)

The outputs of this study is utilized since it corresponds the policy of the government of Rio de Janeiro.

| Description : | | |
| 1. The Pilot Project | | |
| <p>On March, 1995, when this survey work completed, it has been requested to implement the pilotage works, which was recommended by the survey report, before the commencement of full-scaled ship transportation. In order to implement the pilotage works, an organization for the ship-transportation along the Parnaiba River is going to be established. A VIP, who has been interested in this ship-transportation, has been elected and established a good connection with the Central Government. According to some information, he already got some of budget allocation for this project. However, more details are not available.</p> | | |
| (FY 1995 Overseas Survey) | | |
| The Pilot Project is on approval stage by the Federal Government. | | |
| (FY 1996 Domestic Survey) | | |
| The Brazilian government has approved the implementation of the pilot project. The counterpart has an intention to request a loan to the Japan Export and Import Bank. | | |
| (FY 1996 Overseas Survey) | | |
| The request was submitted to JICA to implement a study to determine ships suitable to the operation in the Parnaiba River Basin. | | |
| (FY 1997 Domestic Survey) | | |
| <p>Federal Government considers that the project is indispensable for Serrado agricultural development. Therefore, the project will be implemented under cooperation of Piaui State, Maranhao State and Tocantin State.</p> | | |
| The Government has requested a loan to Japan's Ex.Im.Bank for the pilot project (construction of a pilot vessel) | | |
| (FY 1997 Overseas Survey) | | |
| Request for loan with amount of 14.8mil.yen for Pilot Project was submitted to EXIM.Bank. of Japan in Sep.1996. | | |
| 0.5mil.US\$ will be allocated from the government budget. Implementation period is 2 years. | | |
| (FY 1998 Overseas FU Survey) | | |
| <p>Not only the economic development of Piaui State can be expected but also cost reduction in transportation by water, and improvement of social environment in the area of approx.1,500km2 are expected. However, the project has not proceeded as state budget is not allocated yet.</p> | | |
| (FY 1999 Overseas Survey) | | |
| In Sep. of 1999, the government of Brazil has decided to appropriate the pilot project expenditure in the national budget of 2000. | | |
| The government of Brazil has not yet received an answer of financing from Japan's Ex.Im. bank. | | |
| 2 The Rout Arrange in River Basin | | |
| (2000 Domestic Survey) | | |
| Piaui State requested the governmental budget (395mil US \$). | | |

| | Discontinued or Cancelled |

Description :

Subsequent Study:

(FY 1998 Domestic Survey)

Although "Londorina Water Supply/Drainage (F/S)" was requested as a JICA development study project that was given first priority by Brazilian government, it was not adopted. After that, there has not been any concrete progress.

Utilization of the Outputs:

(FY 1997 Overseas Survey)

This M/P will be referred for new model of water resources management. Moreover, the results of the study have been incorporated into Critiba Metropolitan Regional Plan.

(FY 1998 Overseas FU Survey)

Many organizations are related to this project as it is a large-scale project that includes various water resources utilization plans. The project is proceeding in good order and the followings are the main reasons for that:

- 1.The current policy of Parana State government will be continued until 2002.
- 2.The positive correspondence of Parana State government's staffs.
- 3.The existence of CCPG
- 4.The state government's positive policy toward industrialization and its effects.

(FY 1999 Overseas Survey)

The study results are utilized as a basic reference for water resources related activities with high credibility.

Other:

(FY 1997 Overseas Survey)

Re-evaluation of the project and continuous technical cooperation are necessary to elaborate plans in other areas. The experience obtained through this project will be utilized by other states that have requested for similar project.

(FY 2001 Domestic Survey)

The government of Brazil submitted the request on "Londorina Water Supply/Drainage (F/S)" which was the proposed project by the Study, as the Development Study by JICA in 1998, however, the Japanese government did not adopt.

Related project:

Parana State Environment Improvement Plan (PARANASAN)

Finance:

8 Jan.1998 L/A 23.7 bil yen (Parana State Environment Improvement Plan (PARANASAN))based on M/P formulated by Parana State.

*Contents of project

- 1.Water Supply/Drainage Improvement at Critiba Metropolitan and its suburb
- 2.Construction of noxious agricultural chemicals waste disposal facility

Construction:

(FY 1998 Domestic Survey)

- Oct.1998 Consultant contract was concluded.
- Oct.1999 Contractors are to be selected.

(FY 2005 Domestic Survey)

Consideration for an implementation of the project is planned, taking into account the result of an election of provincial governor scheduled on Oct. 2006.

L/A has been concluded on January 1998 for a project related to the project proposed in the study.

PARANASAN implemented by a Yen loan from JBIC is still in progress.

Description :

(FY 1999 Overseas Survey)

Three-month prohibition of commercial fishing during the summer where was proposed by this Study is under discussing in IBAMA. Studies on growth and fisheries of other species besides the seven species of this Study are on-going.

(FY 2000 Overseas Survey)

Based on proposal in the study, the following issues are examined for ministerial ordinances. After a discussion with CONEPE, these ordinances would be proclaimed.

1. Three-month prohibition of commercial fishing during the summer
2. Prohibition of commercial fishing beyond 15,000 ton of fish catch

As to researches, CEPNOR has been monitored commercial fishing in the estuaries of Amazon and Para River. In 2000, 8 field surveys were carried out to check volume of fish catch, waste volume, and fish length. In 2001, CEPTOR will enforce its research activities focusing on piramutaba fishing.

(FY 2001 Domestic Survey)

The Study has been implementing continuously. The proposed contents were the promotion of fisheries education, the education and management of fisheries community, the organization and management of fisheries administration and the socio-economic infrastructure improvement on the fisheries industry. However, the progress situation is not known.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2000 Domestic Survey) The State of Sergipe submitted a consultation letter to SEAIN (Secretariat of International Affairs, the Federative Republic of Brazil) to promote the implementation of the F/S project. At Jan. 2000, the State has not yet accepted the approval from SEAIN. The PROAGUA project (Improvement Project of Water Supply Facilities) loaned by World Bank has been implemented in Itabaiana and Lagarto areas. Besides, the State also plans to promote Xingo Dam Pipeline Project, which was listed up as priority project in the Master Plan but does not included in the F/S project.</p> <p>(FY 2001 Domestic Survey)(FY 2002 Domestic Survey) Although the State Government established the organization to promote the project and commenced to take the necessary procedures for loan by OECF (present JBIC), the Federal Government denied the loan because of the financial situation of the State.</p> <p>(FY 2003 Domestic Survey) Application procedure for the JBIC Loan, which had been launched by the Sergipe State government in FY 2001, was rejected by the federal government on the ground of the poor financial condition of the state. On the other hand, there are moves for construction of the San Francisco Pipeline (a project proposed in the master plan) with the objective of water supply in Aracaju City, the state capital, with the change of governor of Sergipe State in 2003 as a turning point. While the need of the project is large, improvement of the financial condition of the Sergipe State government is the first prerequisite for the implementation. The PROAGUA project implemented by the financing by the World Bank is expected to improve the water shortage condition in Itabaiana - Lagarto region slightly but it will not bring about a radical improvement of a water shortage condition. Therefore priorities of the Vaza Barris "Water Resources Development Project" and the Sinngo Dam Pipeline Project", which are JICA's proposed projects, are extremely high. However, when considering the financial condition of the state, continuance of smaller scale projects such as the "municipal independent water supply system improvement project", which has been proposed in the JICA's study, needs to be considered.</p> <p>(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)1 According to the project report, projects mentioned below are being implemented for water resource planning, proposal for basin areas, river scheme, and etc. 1. Water resource plan by the state, January 2006-July 2007 2. River scheme by the state in the CONAMA resolution 20/97, January 2006-January 2008 3. Basin plan of the Piaui, Sergipe, and Japarutuba river, July 2001-May 2006 4. Renewal of water balance of the state, May 2001-December 2002 5. Instalment of water resource information system, March 2001-December 2007 Part of the projects has been financed by the IBRD.</p> <p>(FY 2009 Domestic Survey) No information to be specifically mentioned.</p> | | |

Description :

(FY 2001 Domestic Survey)

Rio Grande de Sul State submitted the terms of reference for F/S of the said project to ABC/Brazil in March 2001. The F/S was nominated by ABC to Embassy of Japan at the fourth rank in the priority order. However, it was not adopted by the Government of Japan in 2001.

Rio Grande de Sul State changed its organization structure and Mar de Dentro Project Office, the receiving agency of the study, was dissolved.

As a result, there is no special agency for Mar de Dentro Project in Rio Grande de Sul State.

Incidentally, the governor of Rio Grande de Sul State visited Japan after submission of the terms of reference for the F/S and requested its implementation to JICA and JBIC by himself.

Description :
 (FY 2001 Domestic Survey)(FY 2003 Domestic Survey)
 SEPLANDES (Secretariat of Planning and Social Development), State of Pernambuco intended to submit the request for Japanese Yen Loan to the SEIN (State Secretariat of Infrastructure), however, it was delayed because the Government of Brazil was very strict against the debt.

(FY 2001 Domestic Survey)(FY 2003 Domestic Survey)
 The request for the coordinated D/D supported financially by JICA has been submitted to the Japanese embassy by ABC. However, due to the condition that the execution of the D/D supported financially by JICA requires the submission of request for Yen Loan, it will also be delayed.

(FY 2004 Domestic Survey)
 No information to be specifically mentioned.

(FY 2005 Domestic Survey)
 Provincial government of Pernambuco has requested the Japanese government for a coordinated D/D on Recife Metropolitan Area waste water treatment facility construction proposed in the F/S conducted in 2001 and 2002. However, request has not been progressed due to unmade coordination between regional and central government.
 SEPLANDES has shown its intention to implement the program.

Description :

(FY 2007 Oversea Survey)

The Executive Secretariat of Science, Technology and Environment (SECTAM) was divided into Special Secretariat of Environment (SEMA) and the secretariat of science and technology. A staff of the SECTAM is now the director of the department in charge of protective zones in SEMA. Since the organization has been recently reformed, it is unclear which department will be following-up the study. One of the potential candidate is the department of forest development, consisting of 42 staff which conducts restoration of degraded land and reforestation. Mine companies are responsible for degraded land restoration from judicial point of view. In fact, the major mine companies in the State of Para and other municipalities have been implementing restoration of degraded land.

Description :

(FY2002 Domestic Survey)

There is no information after this project.

(FY2002 Overseas Survey)

After the study, followings were selected as a priority project to be implemented by IDAM, the organization in charge

- 1.Setting up information networks for keeping in close touch between IDAM and each region,
- 2.Building system of aqua farming production (to be dealt by expert),
- 3.Supporting commercial center in Manaus (to be dealt by expert),
- 4.Promoting environmentally sustainable agricultural technology,
- 5.Introducing and producing new variety of a vegetable in Iranduva City,
- 6.Supporting agricultural cooperatives,
- 7.Implementing trainings for farmers and technicians through IDAM, and
8. Procuring material and equipment for evaluation.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

No information to be specifically mentioned.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Overseas Survey)

The proposal is not implemented despite the subjected research paper is useful for an operational plan of IDAM from 2003 - 2006. Reasons for that, because of 2002 newly elected administrative agencies prioritize governmental project implementations which cover whole state, and therefore governmental project is partly opposed to proposals of the subjected research which concentrate on Manaus ,Itacoatiara and Iranduva as target areas. Also, 6 elements of the subjected study(Training for engineers of IDAM, Assistance to producers agencies, Environmental support, Support for establishment of scientific technology targeting environmentally sustainable agricultures such as guarana, tropical fruits/ vegetable /aquacultures, Assistance for process/logistics of products, Supports for monitoring/assessment project and market) comprise a part of action plans of present government for agricultural/graziery fields therefore IDAM get involved in monitoring, implementing and planning the proposed projects as a SEPROR related agency. At the same time, IDAM has 64 regional organizations as a result of expanded nationwide activities of IDAM. Doubled state government budget for agricultural/graziery fields compared to former state government, a reason of those IDAM's comprehensive activities in terms of implementation of agreed activities with NGOs, City/ municipal/ communal agencies, other federative agencies and government agencies, and implementation of governmental programs.

(FY2007 Domestic Survey)

No information to be specially mentioned.

(FY2007 Overseas Survey)

Proposed project in the mentioned study has not been implemented. Agricultural product agency was established in 2003, with ministry of rural development. 1,225 technicians and 13,663 farmers were trained between 2003 and 2007. Discussions about IDAM activities and digitalization of the plan are in progress.

Description :

(FY 2004 Overseas Survey)

Counterpart is preparing for getting fund from JBIC to undertake the schemes suggested in this study.

(FY 2004 Domestic Survey)

After completion of this study, although preparation of this project was proceeded by COHAB, Para province's governor and mayor of Belem were antagonistic, it was difficult to receive cooperation from the mayor of Belem. However, after the city's mayoral election in November 2004, the mayor belongs to the same political party as Para province's governor was elected so this project would be transferred for implementation in coming days. Para province wishes to receive yen loan, the procedure will be planned to concrete.

(FY 2005 Domestic Survey)

Implemented project: Pedro Cabral - Senador Lemos road improvement project

Implementing period: In progress in FY 2005

Implementing body: Belem city

Contents: Expansion and improvement of road and improvement of paths are in progress in order to introduce trunk line bus system.

Funding:

Funding party: BNDES

Status: Belem city and the bus association are discussing on establishment of the consortium for bus association in order to introduce trunk line bus system.

(FY 2005 Overseas Survey)

Subsequent study: Via Metropole (EVDTU corporation) complementary road project

Implementing period: June 2005 - December 2005

Implementing body: Belem city hall

Objective: Draw up basic design of Via Metropole (EVDTU corporation) complementary road.

Status: Completed in December 2005.

(FY 2006 Domestic Survey)

Projects proposed in the study have not been realized, although actions have been taken for implementation.

(FY 2006 Overseas Survey)

Within the proposed projects, part of the project for Independencia street between Quarenta Olas street and August Montenegro street has been implemented by budgets of Para region.

(FY 2007 Domestic Survey)

There are no specific activities on the bus system. Among the projects of road system, Avenue Primeiro de Dezembro construction/expansion plan has been implemented.

(FY 2007 Overseas Survey)

The Government of Para Province has strong interest on the project recommended in the mentioned study, and are considering it for the implementation during the current regime (The Labor Party took over the government on January 2007, and the tenure is till the end of 2010). Although JBIC is considered as a candidate of the loan, other methods have been planned.

(FY 2008 Overseas Survey)

Implement project: A portion of the civil engineering work for the trunk bus system of the Belem City (introducing an integrated public transportation network with adoption of trunk bus system centering on articulated buses in priority lanes)

Funding: State counterpart resources through the "Banco do Brasil" funds

*The remaining portion is expected to be funded by JBIC. Basically, this project has been classified into "Part I" for the State counterpart, and remaining "Part II" for JBIC. The works for the "Part I" might be started up separately from the "Part II" scheduling process.

Subsequent study: Review of the feasibility study

Implementing body: JICA

Implementing period: from April, 2009

To reset an objective to a technically achievable one, on condition that water quality improvement will be achieved by sewage development. <p>Review of CEDAE M/P</p> <ol style="list-style-type: none"> 1. Conventional activated sludge process applied by CEDAE is an appropriate way to reduce pollutional load to the bay that utilizes a method with high elimination rate stability. 2. Sewage pipe will be laid in underground below roadways. In the CEDAE M/P, it is planned that in situations where there are no roads, main line will be laid in rivers, however, this must be avoided upon implementation by using measures such as to change drainage district boundary. 3. Several of planned sites for treatment plants have been urbanized, of which some cannot even be identified. It is essential to find alternative sites. | | | | | | | | | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| (FY 2004 Survey) Since the study was completed only short while ago, it is unknown if the government has implemented a project, though the reaction to recommendation seems to be considered. | | |
| (FY 2005 Domestic Survey)(FY 2005 Overseas Survey) In October 2003, the "Study on Management and Improvement of the Environmental Conditions of the Guanabara Bay in Rio de Janeiro" was proposed as a short-term prioritized measure. In May 2005, Rio de Janeiro province has requested SEAIN of the Federal Government through ABC for the implementation of second period of PDBG (previously requested in 2004). The request aims to obtain 10,000 million JPY worth loan from JBIC and IDB for drinking water, solid waste, as well as waste water proposed in the study. The request will be decided after being considered deliberation in COFIEX. | | |
| (FY 2006 Domestic Survey) Regarding a priority project for sewage treatment plants in additional districts in Pavuna and Sarapui and in Acre and Bangu basins proposed by the mentioned study, a request for Detailed Design (D/D) for implementation toward the second phase of the purification plan in Guanabara Bay was submitted to the Japanese government/JICA via Brazilian Cooperation Agency (ABC: Agencia Brasileira de Cooperacao). A project in the next phase will be possible if the first phase of the purification plan in Guanabara Bay which is implemented under yen loan at present is in progress in the fiscal year 2007 and 2008. | | |
| (FY 2008 Overseas Survey) "Sewerage facility projects in priority areas: Pavuna additional area, Acari, Sarapui additional area, and Bangu", will be implemented after the completion of the phase I of PDBG. The Government of Rio de Janeiro State has requested, in March 2004, through ABC - Agencia Brasileira de Cooperacao, that JICA prepare the Detailed Design (D/D) for the recommended sewerage systems in the report "The Study on Management and Improvement of the Environmental Conditions of Guanabara Bay". A confirmation from JICA has been expected. As for the urgent measures, the rehabilitation and extension of the 7 sewerage systems have been identified in the JICA Study as priority projects and expected to be implemented as early as possible. * The first phase of Guanabara Program has been implemented through JBIC and IDB loans. The remaining are to be implemented through local funds step by step, due to the economic conditions of the State. | | |
| (FY 2008 Domestic Survey) No information to be specifically mentioned. | | |

Description :

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Overseas Survey)

Construction works for the multipurpose terminal will be implemented with finance from BNDES and budget funds of the National Financial Department and the Federal Department of Finance. A source of funds in subsequent phases has not been decided yet.

(FY 2007 Domestic and Overseas Survey)

For construction of multipurpose terminal (Dock 3) and breakwater extension work, which were in the mentioned development study and need urgent maintenance, its detailed design study will be implemented between July, 2008 and July, 2010 by CERAPORTOS and SEINFRA (Funding for dock construction project will be raised by BNDES (80%) and Ceara local government (20%)). This project is currently evaluating construction of multipurpose terminal and breakwater extension work.

The recipients of the benefits from this project are; industrial estate behind Pecem port, citizens of Ceara province (new employment), light industrial companies in Ceara state, export promotion of agricultural produce e.g. soya, fruits in Ceara state and neighboring states (entire states located in north east). (Population of the north east of Brazil is 47million (28% of Brazilian population), area is 1.55 million km/sq (18% of Brazil), expected cargo handling amount is 6.9 million ton).

(FY 2008 Overseas Survey)

After the completion of the study, new projects on iron mills, refineries and ZEP in the State of Ceara have been resolved. However, some adjustments were made on the layout because cargo needs a different kind of infrastructure from containers.

Currently, CEARAPORTOS is preparing for the tender of the engineering projects for installation of the new facilities which were adjusted from the ones once suggested in the mentioned study.

The urgent project contemplating the short term development plan has currently been implemented with own funds. Financing by the Brazilian Development Bank (BNDES) was authorized in the end of 2008 and the works started in January 2009, after the bidding process.

The expansion of the Pecem Port Complex began in January 2009, divided into three steps:

- (1) Breakwater extension (1,220m) - length of the breakwater extension was changed from 300m to 1,000m
- (2) Mooring pier construction
- (3) Elongation of the access bridge

* The works of breakwater extension and the construction of the mooring pier will be implemented simultaneously. The last phase work of elongation of the access bridge will be started according to the condition and progress of phases one and two works.

Dimensions of the multipurpose terminal have been changed to 760m x 115m, and the work will be completed by December, 2010.

Description :

(FY 2007 Overseas Survey)

Among the recommendations in the mentioned study, the Companhia de Saneamento Basico do Estado de Sao Paulo (SABESP) requested the Yen Loan for implementing the following projects has been done by : 1) Consulting services, 2) Sewerage construction in the urban areas, 3) Sewerage construction in the isolated communities.

(FY2012 Domestic Survey and Overseas Survey)

(1) Environmental Improvement Project in the Basin of Lake Billings (Yen Loan)

(Project objective) By developing the SBC sewer system in the northern basin of Lake Billings in Sao Bernardo do Campo, a city in the Sao Paulo State, the Project aims to improve the quality of the source of water supply in the Sao Paulo metropolitan area, to improve the living environment for residents living in the basin, and to preserve the surrounding natural environment.

(Project implementing body) Companhia de Saneamento Basico do Estado de Sao Paulo (SABESP or the Basic Sanitation Company of the State of Sao Paulo)

(Expected completion period) July 2016 (with a termination of the consulting services)

(Signing date of loan agreement) October 14, 2010

(Loan amount) 6,208 million yen

(Loan conditions) (i) Annual interest rate: 1.2% (Priority conditions) (0.01% for consulting services), (ii) Repayment period: 25 years (including 7 years of deferment period), (iii) Procurement conditions: Untied

(Participation of Japanese company) Name of company: NJS Consultants CO. LTD

Contents of the participation: As a part of CONSORTIUM COBRAPE.HIDROCONSULT.NJS, composed of the following companies: Cobrape Cia Brasileira de Projetos e Empreendimentos . Joint Venture Leader (Brazilian Company), Hydroconsult - Consultoria Estudos e Projetos S.A.(Brazilian Company) and NJS Consultants CO. LTD. (Japanese Company) which is the consortium in charge of the Program Management contract.

(Other) Training program to promote the implementation of Yen Loan Projects: November 2009

Group Training "Workshop on Administration of Environmental and Social Consideration Process for Implementation of Yen Loan Projects": May 2010 and January 2011

Description :

The proposal made by this Study was utilized to formulate the operational policy of the Chilean State Railways.

Background:

The financial constraints prevented the improvement of trains and infrastructure, which resulted in the weakening of the competitive power of the State Railways. As a consequence of the reduction of passengers caused by inferior facilities, the total revenue was slashed by 50% during FY 1993 to 1994.

Finance:

Nov.1992 L/A 6,412 mil.Yen

*Components of project
rehabilitation of railway facilities and vehicles

Construction:

1994 Phase I commenced (focused on the improvement of the infrastructure)
(estimated cost was US\$ 70 mil., 75% of which will be provided by OECF)

Phase II will cover wider area and make it possible to run the passenger's trains between Santiago and Puerto Monto with an average velocity of 100km/hour. Quick assistance from Japan is eagerly expected.

Detail:

(FY 1991 Overseas Survey)

The proposal made by this study was also utilized to formulate the Rehabilitation Plan for the State Railways. The State Railways have been implementing the improvement of the Communication facilities, etc. with the own fund. The Railway Reconstruction Plan (estimated cost of US\$ 48 mil.) is under deliberation at the legislature.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Sewage Treatment Pilot Plant (FY 1998 Domestic Survey) Finance: Source of fund is unknown.</p> <p>Construction: May 1994 ~ 1999 *Contents: construction of a full-scale sewage treatment plant.</p> <p>Japanese technical cooperation: Project-type technical cooperation ("Environmental center project")</p> <p>*Related Study: June 1998 ~ JICA Development Study "Agricultural development project in the suburban area with consideration of the environment".</p> <p>Situation: (FY 1991 Overseas Survey) It is reported that the quality of water has deteriorated three-fold after the completion of the JICA study, and it will be necessary to update basic data and review the design, and also to clarify the issue of hygiene. The outbreak of cholera in 1991 served to highlight the importance of the project, and the follow up for drainage management has been requested.</p> <p>(FY 1991 Overseas Survey) Another feasibility study was undertaken by the EMOS, but it was found out that the proposals of the JICA study were more economical and could be implemented in the shorter period of time. The Ministry of Agriculture wishes to start the implementation as early as possible because of the importance and urgency of the project.</p> <p>(FY 1997 Domestic Survey) The Government of Chile was going to request grant aid assistance for the sewage treatment project but requested to other donor due to the several reasons.</p> <p>(FY 1998 Domestic Survey) Since the proposed projects included not only agricultural development project as the major objective but also sewage treatment project to be implemented by a different agency, there was difficulty in coordinating the different agencies and project implementation was delayed. Regarding the agricultural development, it is required to coordinate with the on-going JICA Development Study.</p> <p>(FY 1998 Overseas Survey) A part of water quality improvement, San Carlos Channel improvement, and El Carmen Channel improvement were implemented. However, since the priority of the government's policy has changed to industrialization, the implementation of other projects is interfered. In order to put the project into practice, several works such as soil survey, drawing of farmers' support plan, development of agricultural production method in view of environment, diffusion of product's quality and its security are required.</p> | | |

Description :

Subsequent Studies:
 (FY 1991 Overseas Survey)
 The proposed project is expected to be implemented by the private sector. A private firm has undertaken a feasibility study, which proposes the development of 200ha for igerilla (oilseed) production at the cost of US\$1 million. Another proposal suggests 500ha for tuna production.
 Concerning the sale of the land, the Ministry of National Assets is currently reviewing the related laws. The Government expects to implement the projects after legal issue are cleared. A part of national land has sold and the farmer who bought the land will start to produce grape and tuna.

(FY 1998 Domestic Survey)
 There is no information regarding the implementation of the projects by private sector.

(FY 1998 Overseas Survey)
 The study results were utilized in establishment plan of afforestation center in Canto del Agua area(Tololo Pamp), Asuko Province, and Atacama River area. The production of high quality lumbers will be possible if the proposed project, which is the afforestation of trees that adjust arid region, is done. At the present, the government is promoting the review of land selling law. A part of national land was sold for the use of grape planting.
 The study results are very effective not only in utilizing the lands that aren't practically used for the time being but also to restore the deteriorated environment that are damaged by drought in the nothern region and over-exploitation of natural resources

Description :

In "The Study on the Rehabilitation and Conservation Program of Bridges in the Republic of Chile", the detailed survey was conducted on 10 bridges and their renovation plan was proposed.

(1) Rehabilitation of Bio-Bio Antiguo Bridge (constructed in 1930)

Subsequent Studies:

Oct. 1993 F/S conducted by JICA upon the request from the Chilean government
1995 D/D scheduled to be implemented with the government fund

(FY 1999 Overseas Survey)

Construction was completed.

(2) Claro Bridge

The new bridge was constructed with the government fund.

(FY 1999 Overseas Survey)

Old bridge was rehabilitated and the new bridge was constructed on the Second Road.

(3) Amolanas Bridge, Pullally Bridge, etc.

Subsequent Studies:

D/D implemented for repair and reconstruction (the government fund).

(FY 1999 Overseas Survey)

Old bridge was rehabilitated and the new modern bridge was under construction on the Second Road.

(4) Other bridges

(FY 1999 Overseas Survey)

Pullally: Old bridge was rehabilitated and the new bridge was constructed on the Second Road.

Maipo: rehabilitated.

Peuco: reconstructed.

Loncomilla: A modern bridge was constructed.

Ramadillas: reconstructed.

Malleco: rehabilitated.

Pichoy: reconstructed.

Cayumapu: reconstructed.

Detail:

(FY 1995 Overseas Survey)

In total, 250 bridges throughout the nation were investigated and were registered with photographs. Among them eleven bridges need to be repaired immediately. It is planned to repair them with the equipment provided by Japan and some of them have been already implemented.

(FY 1998 Overseas Survey)

The study results are utilized in the national development plan. This is because the government of Chile considers the development of national road network as well as the development of regional economy essential for the solution of poverty. Also, as Chile is often damaged by natural disasters, bridge improvement is necessary. In case of bridge improvement the utmost cost effect must be considered.

STUDY SUMMARY SHEET

(Basic Study)

Compiled Mar.1994

Revised Aug.2014

Description :

Utilization of the study:

(FY 1995 Overseas Survey)

Various maps, basic data, criteria, etc. come out as the performance of this survey works are widely utilized for the research works of natural forest not only in the model area but in the other areas, for the land use and vegetation analysis of the satellite images and for the environmental improvement.

Experimental works to promote the production of the edible fungus are also carrying on with supports by the experts concerned with the model area.

(FY 1999 Overseas Survey)

Data base made by this Study has been utilized for formulating the regional action plans such as Melleco National Reserve Management Plan.

Dispatch of the experts:

(FY 1995 Overseas Survey)

The government of Chile requested to dispatch the Japanese expert on the forest policy who also coordinates the project. Receiving this request, the Government of Japan dispatched one expert to Chile in 1994.

| 7. CONSULTANT(S) | Pacific Consultants International | | |
| 8. STUDY PERIOD | Mar.1993 ~ Mar.1995 24month(s) ~ | | |
| 9. SITE OR AREA | San Jose and Yuda river basins, Pampa del Tamargal and Salar de Huasco Area | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1)Water supply for city of Iquique (estimated population on 2015: 273,000): Develop underground water at Pampa del Tamargal basin by 16 wells, supply the water from the filtration plant at the basin to the city through pipeline with a length of 68km and the water distribution tank which will be constructed at the city. This project will be implemented by two(2) stages, first one is up to 2005 and second one is up to 2015. Facilities will be constructed half and half for each stage.</p> <p>2)Water supply for city of Arica (estimated population on 2015: 215,000): Develop underground water at Yuda River basin by 26 wells, supply the water to the city through water filtration facility utilizing the reservedly permeating film (RO).</p> <p>3)Investigation for development the underground water at Lauca River basin: The water supplying capacity of Yuda River basin will be only good for the demand until 2005. Therefore, another water resources are necessary to develop . So, neighboring Lauca River basin should be investigated from the points of view of hydrogy, hydrogeology, physical exploration, trial boring and pumping tests.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>These projects should be carried out by the water supply and sewage service corporation (ESSAT) of Tarapaca State. At present, the corporation is studying how to realize these projects.</p> <p>(FY 1996 Domestic Survey) The request has been made to implement a project which aims to formulate a groundwater development plan of Lauca River. ESSAT has been implementing small scale development projects with own fund. It is not planned to procure fund from the Japanese Government. It is reported that the water shortage in the target area is getting severe, however, there is no plan to implement effective measures immediately to solve the problem.</p> <p>(FY 1998 Domestic Survey) Proposed projects were to be implemented with OECF loan. However, since there has been the tendency toward a strong yen, the projects are being implemented with their own fund.</p> <p>(FY 1998 Overseas FU Survey) ESSAT conducted the additional survey on water resources development in accordance with the present and future demands for water. Ministry of Public Works implemented the water resources management plan for San Jose River Basin. Ministry of National Planning conducted the comprehensive survey on six river basins including San Jose in the critical situation.</p> <p>(FY 1999 Overseas Survey) (1)Iquique City: 8 pumped wells, distribution channel, pumping station were constructed. Under operation. (2)Arica City: 11 pumped wells, water treatment plant, water transmission system were constructed. Under operation. (3)Development of the underground water at Lauca River Basin: F/S is being implemented by ESSAT.</p> <p>(FY 2000 Domestic Survey) The feasibility study for the development of the underground water at Lauca River Basin has not been implemented. Contents of F/S: 1) To evaluate the potentiality of the groundwater and the surface water development of the Lauca River Basin 2) To consider the quantity of the supply water for the Arica City based on the evaluation Situation in progress: At the completion of the Study, both the counterpart and JICA expected to implement the proposal by Yen Loan, however, Chile Government showed their policy not to compensate for the Loan because of the exchange risk. Therefore, Ministry of Public Works had not submitted the request and ESSAT dug some wells on the outskirts of Arica City to increase the quantity of the pumping water.</p> | | |

Description :

Utilization of Outputs:

(FY 1997 Overseas Survey)

The results of the study have been utilized for elaboration of National Plan for Industrial Solid Waste Management (1997~).

Moreover, National Environment Committee (CONAMA) and National Environment Center (CENMA) are using the data and so forth obtained by the study.

Out of the priority projects proposed in the study, institution system will be in charge of public organization and technology system (gathering transportation facility, intermediate/final disposal plant) will be handled by private sector including F/S.

(FY 2001 Overseas Survey)

The study results with an analysis of industrial solid waste management in the metropolitan area, enabled the government to formulate waste management policies.

Subsequent study:

(FY 1997 Domestic Survey)

F/S and construction are to be implemented by private sector including investment from foreign companies.

Situation:

(FY 1997 Domestic Survey)

The study introduces adequate means for administrative organs to guide and administer industrial solid waste disposal by private sector.

The Government of Chile is establishing the system to implement the projects.

Related Project:

(FY 1997 Domestic Survey)

Construction of poisonous solid waste disposal plants is in process by European and North American companies.

(FY 2005 Domestic Survey)

No subsequent study has been conducted since the M/P. However, proposal made in the study has been adapted and referenced in various occasions.

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 1999 Domestic Survey)

There is no information about the utilization of the sample bridge design made by CADD system, even though the fund procurement for construction was supposed to be started soon after the study.

(FY 1999 Overseas Survey)

The results of this Study are utilized.

(FY 2001 Overseas Survey)

Maintenance and rehabilitation of some bridges recommended in the study have been already included in the regional development project under the consideration of priority, social needs, and financial situation. Maintenance and rehabilitation of 45 bridges (total extension: approximately 3km) have been already completed. The bridges were included in regional development projects or urgent construction projects in accordance with the priority of urgency because final design and plans for investment/fund procurement were not prepared in the study and there was no fund procurement to start construction.

(FY 2001 Domestic Survey)

The study aims to transfer techniques of bridge maintenance methodology. No implementation of construction was proposed in the study.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2008 Overseas Survey)

Replacement of the bridge was implemented with own funding. A part of the bridge which is in a critical state has been left as it is. The final recommendation was the replacement of the majority of the bridge and is usually considered in the majority of cases.

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| Subsequent Study: (FY 2000 Domestic Survey) The Chilean government is examining for the realization of this project. | | |
| (FY 2001 Overseas Survey) Maipo River Third District and Yali/Aruue Basin Irrigation Optimization Integrated Study was implemented for prereminary survey to realize the project. In the study, especially the irrigation channels in the south riverside of Maipo River and other elements were analyzed as proposed in JICA's proposal. Study period: Approximately 13 months. Financial Source: Chili Industry Field Foundation. Fund Procured: 200,000,000 peso. | | |
| (FY 2003 Overseas Survey) Study results: affirmative economic indices have been suggested in most of the proposal, and national fund or transfer of business rights to the private sector has been proposed as funds for implementation of the project. In the case of the water channel improvement construction of the third sector of the Maipo River, subsidization to private investment in small-scale construction and financing managed by the national irrigation committee have been proposed. | | |
| (FY 2002 Overseas Survey) Procurements: there has no plan requesting for financial assistance. Ministry of Public Work has decided to implement detailed study, according to institutional priority and contents of proposal. | | |
| (FY 2003 Overseas Survey) The "Diagnostic Study on Current Condition of Reuse of Sewage Plant Effluent in the Capital Area" is expected to be started within 2003 and completed at the beginning of 2004. This study integrally aims at strengthening agriculture in the Capital Area by using the treated effluent for irrigation in districts where regulated effluent is currently used for cultivation of various vegetables. Quality improvement of agricultural products irrigated by higher quality water will contribute to larger effects in economic fields and enhanced export advantage in overseas market. | | |
| Projects that have been implemented so far are as follows: 1) Implementation of meetings with farmhouses in regions targeted for the study with the objective of obtaining their recognition about the study results and proposals. 2) The initiative of the private sector especially in a more detailed investigation of the Puange Swamp region in a tributary of the Maipo River. 3) The initiative of the Ministry of Public Services in order to implement a more detailed study based on the organizational priority and the related budget in near future (the irrigation facility construction bureau and the business right adjustment unit). 4) Adjustment with the irrigation promotion unit with the objective of implementing small-scale projects proposed in the sewage utilization study. | | |
| (FY 2004 Domestic Survey) No information to be specifically mentioned. | | |
| (FY 2004 Overseas Survey) 1. Subsequent Studies 1) Completed Studies: "Status Diagnostic Study of Rural Sewage Water Utilisation in the Capital" has completed in early 2004. Valuable report was brought for sewage utilisation for irrigation system in the capital by the study. Fine irrigation water can improve the quality of agricultural products. Detailed analysis was also conducted for related regulation in the study (irrigation and drainage regulations). Existing disputes on water property rights and a rental fee of water and irrigation were scrutinised. 2) Future Prospect: Results of F/S of the above proposed projects are presented in the beginning of 2004. Further study will include an analysis for proposed constructions. Scale of the construction which are considered ranges from small to medium facilities. 2. Other progress status So far, following activities have been conducted: 1) Meetings held with farmers in target area to present research results and its proposal 2) Detail study by private entity in Puange region, where there is a tributaries of Mapio River. 3) Detail study to be conducted by Ministerio de Obras Publicas (hydrological construction department and commission adjustment team) in the near future, according to priorities of the projects and budget. 4) Adjustment by irrigation promotion team to implement small-scaled construction project presented in water source utilization study. | | |
| (FY 2009 Overseas Survey) No information to be specifically mentioned. (FY 2009 Domestic Survey) No information. | | |

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2002 Domestic Survey)

1. JICA's cooperation has continued: After the study, the government has requested Japan's cooperation in developing information technology, which is recommended as a result of the Study. JICA has already conducted project formulation study at the early time of 2002, who advised that the IT center should be established in Valparaiso. JICA has dispatched a specialist for formulating IT center building plans. The Center is to be opened in 2003, and additional specialists are expected to be dispatched.

2. Chile government: Responding to the recommendation by the Study, the government has launched effort to promote export and private investment in Northern, Central and Southern regions. CORFO (Chilean Economic Development Agency) is playing the leading role.

(FY2002 Overseas Survey)

The projects are in practice, emphasizing on the followings:

1. Regional development of Tarapaca:

- 1.1. Developing Port of Arica: The study on financing method of private investment by setting conditions for investment is to be conducted.
- 1.2. Developing infrastructure and strengthening function as a gateway: Corridor construction.
- 1.3. Developing infrastructure in the Region of Tarapaca: Renovation and construction work of 4 bridges along the Arica, Tambo, Macedo line was implemented on budget of Ministry of public work.

2. Valparaiso Region

- 2.1 Demand expansion of gateway: Export promotion for commercial services: local government organized management meetings of Argentina and Brazil.
- 2.2 Strengthening logistic support: Global system of General Port Operation and tourism
- 2.3 Study for regional integration: Research Center was established, responding to regional integration.
- 2.4 Tourism development: In FY2002, M/P and promotion program were conducted on the budget of local Govt.. Tourist information was established on Robinson Crusoe Island.

2.5. Infrastructure development: infrastructure development, aerial development as logistic support, garbage disposal system were invested. Metro construction and national highway construction, bridging Argentine and Chile are to be implemented.

3. Los Lagos: In 2002 there was no activities implemented, shown in the project plan.

(FY 2004 Overseas Survey)

All strategies indicate that important progress degree up until now and its degree depend on the situation where the action plan was planned. In terms of public organs, respond to the demands of this survey perfectly. MOPTT, CORFO, PROCHILE, PROCHILE, and SERNATUR did their duties at medium and high level. Private sectors are not active enough. In most cases, implementing action plans, although public sectors raised a partial or total results, demanding for the governments financial measures. Small scale firms are built up on the basis of a single strategy, and are lack of action capacity along with competitiveness to respond to challenge the globalised world. In most of all, the strategies which are progressing at high speed; the southern part, middle part, and ITC fields. On the other hand, the northern part and manufacturing cluster strategy is relatively low.

(FY 2005 Domestic Survey)

"IT development center" was pre-operated for a year, with Santa Maria University as a counterpart (2004). Whether the project would be implemented or not depends on the result of operation. However, there is no information on this subject.

(FY 2005 Overseas Survey)

Subsequent study: Territorial integration of salmon cluster

Implementing period: 2004 - 2007

Implementing body: CORGO - INSTITUTO TECN. DEL SALMON - CODEPROVAL.

Objective: 1) Enhancement of internal relations within salmon farming cluster between producer, processor, feed produces, fund/service providers, research/educational organizations, and related public organizations. 2) Establishment of working committee to prepare salmon farming industry development strategy for the industry's overall sustainable development (standards and laws related to diving, delivery, logistics, fish farming administration and fish net production). 3) Public advertisement of technologies related to development of the industry's logistics, management, biotechnology, and new product/process method development was assisted.

Status:

Although salmon cultivation industry were seemed to be extremely positive, several issues exists especially on environment, human capital development, and production environment, which need to be solved in the near future.

Even though development of XI region is expected in the future, the region is inferior in infrastructure (number of supplier, waste disposal system, fishery method, hygiene control, fodder supply, logistics of human and resource capital), which requires efficient logistics system for future development.

Several research development projects are implemented with an assistance from CORFO (Corporacion de Fomento de la Produccion). These projects focuses for a solutions to the energy problem (carbon fund), and waste recycling (forest/agricultural soil, construction material, biotechnology products and etc.) to make products, in order to establish waste processing method for wastes from few particular manufactures.

In addition, based on eco-regionalization proposed together with JICA and EPIE, institutionalization of clean production has progressed, which established a committee for clean production to formulate an "Agreement of clean production (acuerdos de produccion limpia: APL)" described below.

- Salmon cultivator APL: completed, In second stage for certification
- Fishing net producer APL: Formulating an agreement
- Merluza producer/exporter APL: In final stage for signature
- Constructor APL: Formulating an agreement
- Cheese producer APL: Formulating an agreement
- Lumberer and timber processor APL: Formulating an agreement

Committee for a Clean Production has demanded CORFO to survey current situation of Fat PL (technical assistance fund) and Pag PL (company assistance fund) of their situation for delay and termination.

CONICYT, CECTA, and University of Chile Austral will jointly establish "Institute of sustainable nutrition and provision" in Llanquihue and to contribute 2.7 million CLP for a budget.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

Description :

(FY 2009 Overseas Survey)

Afforestation effort of 500 ha was carried out using private funds. Inspection by the DOE is progress. After completion, procedures for DNA approval are expected to begin for registering in the latter PK (Kyoto Protocol).

(FY 2009 Domestic Survey) No information.

(FY2013 Domestic Survey) No information to be specifically mentioned.

(FY2013 Overseas Survey)

-Out of two planned pilot projects, only the project held in Aysen area developed from PDD, afforestation and evaluation phase. Currently, this sanction is not approved by DOE because of additional required conditions mainly for forest projects.

-The project in Los Lagos area was refused due to lack of related participants, a breakup of owners, and insufficiency of coordination for the title deed.

-The several capabilities transferred to the national agencies are the following; REDD + mechanism, voluntary market, establishment and development of work line related to the participation of Santiago Climate Exchange, new public policies related to natural resources considering environment services of forests regarding the themes of climate change and the mitigation effect.

Description :

The Study report has been highly valued and the proposal made by M/P has been implemented.

Subsequent Studies:

1981 F/S implemented with the own fund upon the completion of this Study

Finance:

Own fund

Construction:

1988 Commenced

(FY 1991 Overseas Survey)

Memorial square, water supply facilities, etc. have been completed. At the end of 1990, the park complex was opened to the public. Other facilities are planned to be constructed.

(FY 1995 Overseas Survey)

Construction works of ponds, drainage channels, surrounding promenades and bridges are being carried on. Also, there are plans to construct restaurants and icecream stands.

| | Discontinued or Cancelled |

Description :

Based of the recommendations of the study, the following actions have been taken.

- 1)Adoption of short-term measures(e.g. traffic control).
- 2)Endorsement by the city council of the land use plan
- 3)A feasibility study by JICA on the urban renewal of CBD
- 4)Establishment of a planning unit in the city government
- 5)Dispatch of a Japanese long-term expert
(FY 1998 Overseas Survey)

1996 Secretary of the Tourism and Transportation was established.
1998 Policy of Urban Transportation was introduced.

Project implemented

(1)Barranquilla Renewal / Development of the Central District

(2)Public Transportation Improvement Project

(FY 1994 Domestic Survey)

*By the year of 1994, the constuction of bus terminals in suburbs and re-routing of bus routes going toward to the central parts of downtown are being implemented.

(FY 1995 Domestic Survey)

*Various road construction projects are being implemented by their own budget.

(FY 1995 Overseas Survey)

*Regarding to the drainage of rain water from the main facilities of transportation in the city, the regulations concerned were proclaimed on August, 1995, and an agreement of the construction works was signed on October, 1995 with a contractor.

(3)Others

(FY 1998 Overseas Survey)

Subsequent study:

Apr. - Nov.1998 F/S and D/D, 720mil.pesos (FONADE credit), Construction of Avenida del Rio.

May - Sep.1994 D/D, 90mil.pesos (EDUBAR S.A.), Expansion of 30th District.

May - Oct. 1995 F/S, 300mil.pesos (FONADE credit), Drainage project for Barranquilla.

May - Aug. 1997 F/S, 70mil.pesos (FINDETER credit), Construction of the terminal for inter-municipality buses.

Implementing projects:

1998 - 1999 Construction of Santo Domingo River Canal (concrete canalization).

1990 - 1999 Installation of traffic signals at 96 intersections.

1994 - 1996 Construction of bridges/roads at 45th District - Circunvalar Ave.and 51B road - Circunvalar Ave.

(4)Acceptance of trainees

(FY 1998 Overseas Survey)

Jun.1987 One trainee (urban transportation).

1987 One trainee (urban drainage).

Others:

(FY 1991 Overseas Survey)

30 million Peso is budgeted for the duration of 10 years, and the related ministries are in the process of budget finalization. The state government is requesting to the World Bank for financial assistance.

(FY 1997 Domestic Survey)

No additional information.

Description :

The Colombian Government established EDUBAR (Empresa Desarrollo Urbano de Barranquilla, government 51%, private sector 49%) in April 1990.
(FY 1998 Overseas Survey)

The proposed project has been included in the pilot macro project on national urban policy started in 1994.

Subsequent studies:

(FY 1998 Overseas Survey)

Nov.1996 - May 1997 Revision, 180mil.pesos (FINDETER credit).

Apr. - Oct.1998 F/S and D/D on Rio Ave., 720mil.pesos (FONADE credit).

Oct.1997 - Feb.1998 F/S on the development of Ahuyama Canal, 150mil.pesos (CORMAGDALENA, Barranquilla).

Jan. - Mar. 1998 Design of the sewage network, 50mil.pesos (EDUBAR fund).

Project Implemented:

(1) The expansion of road

EDUBAR undertook F/S, on Nov.1991 the construction commenced.

(2) Bus terminal

(FY 1991 Overseas Survey)

EDUBAR undertook F/S, one of terminals completed on Mar.1992, the construction of another one will be started on Jun.1992.

(FY 1995 Overseas Survey)

Inter Municipal Bus Terminal: The construction commenced on Jul.1996, will be completed on Feb.1997.

(3)Others

(FY 1998 Overseas Survey)

Jan.1997 - Nov.1998 (completed) Expansion of the 30th district between 46th St. and 38th St., 6,400mil.pesos (FINDETER credit).

May - Dec.1998 (completed) Environmental improvement of Cano del Mercado Ring Road, 1,300mil.pesos (Barranquilla, Ministry of Environment: FONAM).

Feb.1998 - Jan.1999 (completed) Improvement of inner roads, 7,600mil.pesos (FINDETER credit).

Jan. - Dec.1996 (completed) Establishment of Cano del Mercado, 6,000mil.pesos (Central government fund).

Oct.1998 - Pump station for sewage system, 300mil.pesos (FINDETER credit).

Jan.1997 - Jan.1999 Construction of the markets (Mercado El Playon, Mercado Plaza Ujueta, Mercado La Magola, Mercado Edubar, Mercado E.P.M., Mercado Cafetero), 550mil.pesos (Central government fund and FINDETER credit).

Operation & management:

(FY 1998 Overseas Survey)

EDUBAR S.A. is engaged in managing the markets.

Public works projects (roads, bridges, canals) have been taken over to Barranquilla.

Dispatch of Experts:

Upon the request of the municipality of Barranquilla, JICA dispatched a short term expert to the EDUBAR (Empresa Desarrollo Urbano de Barranquilla) from Nov.1994 to Jan.1995.

Acceptance of trainees:

(FY 1998 Overseas Survey)

May - Jun.1996 One trainee (urban development).

Oct. - Dec.1998 One trainee (land readjustment).

Detail:

(FY 1992 Overseas Survey)

Total investment costs \$79,500 million pesos (US\$103.5 million).

The projects are being implemented according to the F/S.

(FY 1995 Domestic Survey)

As the project for Yen Credit, the priority is low. Therefore, this project has been excluded from the list of requesting projects.

(FY 1995 Overseas Survey)

Every project consisted this survey work have been commenced to implement about the same time and are going to complete until June,1996.

| | Discontinued or Cancelled |

Description :

(FY 1989 Domestic Survey)

The agricultural development project which includes measures for small farms corresponds with the national policy for improving regional differences. The change from the coffee monoculture also has been proved important in activating the area's agriculture, leading to the development of the area.

Utilization of the study

(FY 1989 Domestic Survey)

A request was made to the Japanese Government by the DNP regarding technical assistance on the F/S of this project.

The F/S was carried out from March 1990. The final report will be made in January 1991. During the F/S, the model plants of coffee waste water treatment were constructed.

The maps of the study were incorporated with the following development plans.

- National integrated agricultural development
- Disaster prevention projects
- Water supply management etc.

Others

(FY 1992 Overseas Survey)

1992.11 Asamblea departamental del Quindío approved the Integrated Agricultural Development Project at the state level by the No.5 order. The investment plans of the First Phase are as follows:

1993 \$23.1 million, 1994 \$43.6 million, 1995 \$68.2 million,
1996 \$123.9 million, 1997 \$23.1 million

(FY 1995 Domestic Survey)

Providing for making this coffee waste water treatment plan as a grant aid project.

(FY 1995 Overseas Survey)

C.R.Q. is implementing the survey works of disaster protection plan and the analysis of the agricultural land soil from hydrological and geological viewpoints.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Air Pollution Control

- Regulation of exhaust gas (CO, HC concentration by car type): Implemented
- Improvement of public bus system: Implemented
- Reconstruction of trolley bus system: Delayed
- Construction of passenger train system: Delayed
- Installation of mechanical coal-feeder: Implemented
- Fuel improvement: Implemented
- Installation of dust collector: Implemented

Others:

(FY 1995 Overseas Survey)

Regulations of the air pollution control were proclaimed on June, 1995, and additional regulations will follow in succession. In future, it is planned to investigate the performances of air pollution control activities in every 3years by the specialists' group established by Japanese cooperation.

(FY 1996 Domestic Survey)

An IBRD project (US\$40 mil.), which aimed to assist to formulate a nationwide environmental policy targeting Bogota, Cali, Medellin etc. and to establish an environment information system to carry out the assistance, was implemented and, consequently, the nationwide air quality monitoring system seems to be established (yet to be confirmed). Around 1993, the Ministry of Environment was newly established. (Project in Bogota was proposed by this study)

(1)Air Pollution Control in Bogota

(FY 1997 Domestic Survey)(FY 1998 Overseas Survey)

Finance: World Bank/ DAMA

* Contents of the project

Establishment of air pollution monitoring system (32 stations)
Stage I: 9 stations, II:11 stations, III:12 stations.

Construction:

9 stations were opened at the time of Jan.1997.
12 stations have been installed and 2 stations were under installation as of 1999.
Operation of the network is commissioned to APCYTEL Ltd. and that of the additional 2 stations is commissioned to ESC Sanambiente.

(2)Countermeasure for whole country

(FY 1997 Domestic Survey)

- Control of exhaust gas of vehicle
Makers were obligated to install system to check exhaust gas when register new car.
- Promotion of exclusive lane for buses
- Promotion of use of gas in household
- Control of evaporation of HC (executed in 1996)
- Reinforcement of control over exhaust gas from factories (executed in Jul.1996)

(FY 1999 Overseas Survey)

Being implemented: emission control, new vehicle control, gasoline car control, fuel measurement, introduction of gasoline peroxide, improvement of trolley bus, introduction of passenger train, improvement of bus transport system, education for citizens/drivers, improvement of incineration way, improvement of the quality of fuel, evaluation of height of chimneys, training for technicians, etc.

Being implemented/Will be implemented: air monitoring/networking, introduction of technology for cleaning, implementation of public campaign for improving the conciseness on environment, etc.

Delayed: strengthening of registration system, countermeasurement for diesel vehicles, review of tax on cars, treatment of exhaust gas, etc.

(3)Other implemented projects

(FY 1998 Overseas Survey)

- 1.Follow-up and monitoring the source of air pollution in Bogota industrial estate (completed in Jul.1998): \$400,300,000 (CORPODIB:\$72,300,000, ELDAMA:\$328,000,000).
- 2.Strategy for the training the mechanics for controlling the pollution (Jul.1997 - Dec.1998): \$145,000,000 (DAMA).
- 3.Evaluation of the relation between the air pollution and the respiratory disease of the children in Puente Aranda (Dec.1996 - Sep.1997, by Colombia Medical School):\$40,000,000 (DAMA).
- 4.Study on the relation between the air pollution and the respiratory disease in 5 areas in Santa fe de Bogota (Mar.1998 - Sep.1999, by Javeriana Univ.):\$142,400,000 (Javeriana Univ., Dep. of Health, DAMA).

Others:

(FY 1997 Domestic Survey)

Several gas fields have been exploited at Casana province. Provision of gas for users including households is going on. If gas supply for lower income group increases, exhaustion of substances derived from coal which cause air pollution will be reduced.

| 7. CONSULTANT(S) | Pacific Consultants International | | |
| 8. STUDY PERIOD | Mar.1990 ~ Aug.1991 17month(s) ~ | | |
| 9. SITE OR AREA | 7 areas in Dept of Quindio(7,600ha, population 3,400) and Cristales River Watershed (9,400ha) | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The project is divided in two sub-project:</p> <p>(1) Agricultural Development - Road improvement (New 134km, Rehab 153km) - Irrigation improvement (112ha) - Agro-industry (5 locations) - Research center (1 locations)</p> <p>(2) Coffee waste water treatment Model area 1,000 ha (52 Farm households)</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| (FY 1992 Domestic Survey) | | |
| 1) The project is important for providing the solutions to the coffee monoculture and natural water deterioration. 2) A reduction of coffee export damaged the local economy. Hence, the local government is aiming at development of local economy with corporation of this project. | | |
| (1) Agriculture Development | | |
| Subsequent Studies: | | |
| (FY 1992 Overseas Survey) 1993 D/D implemented by Gobierno Department with its fund. | | |
| Construction: | | |
| *Rural Road: | | |
| (FY 1997 Domestic Survey) Based on the proposal of this study, rural road is being rehabilitated by own fund. | | |
| (FY 1998 Domestic Survey)(FY 1999 Overseas Survey) Completed. The road damaged by earthquake was rehabilitated. | | |
| *Irrigation facilities: | | |
| (FY 1998 Domestic Survey) Since, irrigation development project has not been implemented. Some large-scale farmers developed the irrigation facilities by their own funds. | | |
| (FY 2000 Domestic Survey) It is said that some large-scale farmers developed the irrigation facilities by their own funds, however, there is little possibility to procure public fund. | | |
| Others: | | |
| (FY 1998 Overseas Survey) | | |
| "Development project with the community participation in the forest sector (FACOFOR Project)" is under implementation based on the Dutch fund with the coordination of UN organizations, FAO, Regional Autonomous Cooperation of Quindio, Risaralda, Caldas, Tolima. | | |
| In addition, the forest program and rural forest program for production and conservation are introduced in Quindio. | | |
| Data on land utilization has been renewed/improved after the F/S. | | |
| Data on land utilization and distribution of the vegetation are digitized in the Regional Cooperation of Quindio. | | |
| (2) Coffee waste water treatment | | |
| (FY 1995 Domestic Survey) The preparation is in progress to request the Japanese grant aid to finance the Coffee Waste Water Treatment Plan. | | |
| (FY 1995 Overseas Survey) | | |
| Due to the participation of the other governmental organizations, this project has not been implemented, yet. And the original plan was modified on the treatment method and on the location where the first test will be conducted. The water treatment facility aims to remove 90% of contaminating materials with high efficiency. However, it seems to be difficult to proceed the construction at the marshland in the project area due to its topographical characteristics. The application of the air-exposing method is considered to be hard because of the instability of agents and the high energy costs while it is expected to be effective. | | |
| The treatment with erobic bacteria, which could oxidize the contaminated water and remove methane gas, is effective from the viewpoint of the improvement of water quality and the cost saving. | | |
| (FY 1996 Domestic Survey) | | |
| It is reported that the constructed model facilities have been well operated. Although there are some opinions to expand this model project and to submit a request for Japanese grant aid assistance to implement it, no step has been taken for its realization. | | |
| (FY 1998 Domestic Survey) | | |
| There was a demand for implementing the project with a grant aid assistance since the coffee farmers have to shoulder the high cost of the project. However, since a grant aid assistance is not applied for Colombia, the project has not been implemented. Implementing agency reported the operational situation of the pilot plant in 1995. The situation after that, however, is unknown. | | |
| Impeding factors: 1) Coffee waste water causes troubles only twice a year; 2) Urban waste water recently causes more troubles than coffee waste water; 3) Expenses for the coffee waste water treatment plant may put pressure on the farmers; and 4) It is difficult to organize the farmers. | | |
| (FY 1998 Overseas Survey) | | |
| National Coffee Center (CENICAFE) has developed a new technology with consideration of the environmental aspect which can apply coffee processing. | | |
| (FY 1999 Overseas Survey) | | |
| Most of the coffee refinery facilities were damaged by the earthquake occurred on 25 Jan.1999. Through reconstructing these facilities, the introduction of the coffee refining system considering the environmental aspects became possible. In the basin along the Cristales Fall, the target area of this Study, 73 households introduced the coffee refining systems considering the environment. Another 84 households will introduce these systems. | | |
| (3) Improvement of farm technology | | |
| (FY 1998 Domestic Survey) It was reported that technology was extended through the activities of JOCV. | | |
| (4) Others | | |
| (FY 1998 Overseas Survey) | | |
| Improvement of the pollution by the domestic waste water. | | |
| Waste water treatment plants were constructed in Salento and La Tebaida, and sewage was constructed in Monte Negro in 1998. Designs for the treatment plants and sewage in Quimbaya, Cordoba, Buenavista, Calarca were made. EDAR company was established for improving the pollution by the domestic waste water in Armenia. | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

The improvement of the public transport system has been given high priority in Cartagena.

(1) Public Transport System and Water Transport System

(FY 1998 Overseas Survey)

Subsequent study:

1994 F/S for Cartagena urban transportation (\$505mil., funds from District and FINDETER).

1996 Design for the route of public transportation in Cartagena de Indias (\$80mil., District fund).

1997 F/S for the installation of signals at 29 intersections in Cartagena de Indias (\$7mil., District fund).

Finance:

1996 District fund (\$7mil.) Installation of signals at 29 intersections and construction of the pavement.

Construction: 1997 - 1998 (Spanish ETRA).

Operation & Management: DATT

Effect: Improvement/alleviation of traffic congestion at the peak time in commercial and residential areas.

(2) Improvement of Road Network

The Colombian government is in preparation for TOR to request the Japanese government to conduct F/S.

(FY 1994 Domestic Survey)

The Colombian government requested the Japanese government to implement F/S. However, it was not successful because it was not given high priority.

(FY 1995 Overseas Survey)

In 1995 a part of the improvement project of the existing road network has been implemented.

(FY 1998 Domestic Survey)

Improvement of the road network is underway with their own fund. However, detail information is unknown.

(FY 2000 Domestic Survey)

The Road Network project between the center of Cartagena and the north area of Cartagena where the large-scale development project is planned was being implemented in 1998. The local consultant in Bogoda carried out this Road Network project by private fund.

(3) Others

(FY 1998 Domestic Survey)

Cartagena city expects Japanese government to conduct F/S.

(4) Other projects implemented or under implementation

(FY 1998 Overseas Survey)

Local roads:

2-lane Ring road (Pontezuela - Bayunca): constructed.

Variante Mamobal - Gambote - Cordialidad (2 lane): constructed.

Manzanillo del Mar Ring road: bid was made.

Punta Canoa Ring road: bid was made.

Baru crossing road: under examination.

Perimetral road and Cienaga de la Virgen (C9): financed.

Marginal Sur road and Chambacu road (C20): under bidding.

Urban arterial roads:

Cargo road: under implementation.

Pavement of Consulado Ave.: changed to 2 lanes.

Pedro de Heredia Ave.: changed from 4 to 6 lanes.

Pavement of St.46:changed to 2 lanes (Ceballos - Espana).

Pavement of St.51:changed to 2 lanes (Nuevo Basque - Costa Linda).

Expansion of St.41:changed from 2 to 4 lanes (Av.Santander - India Catalina).

Pavement of St.71:changed to 2 lanes (Biffi - El Socorro).

Pavement of St.15:chaneged to 2 lanes (Santa Clara - Sn Fernando).

Bridge

Romero Aguirre Bridge (Canapote)(Br11): constructed.

Description :

(FY 1997 Domestic Survey)

Based on the short-term project proposed by this M/P, some projects have been implemented in the Bogota city. Recognizing the importance of trunk bus system and construction of highway, the city has requested a technical cooperation to conduct F/S to the Japanese government. Preliminary study team will be dispatched in Dec 1997.

(1) Traffic Management Project (15th avenue)

(FY 1998 Domestic Survey)

On-going.

(FY 2000 Overseas Survey)

Finance: Bogota City budget (45 million USD)

Construction: 1997 ~1999(Completed)

Contents: Bus Route Development Project(2 Routes)(Bus Route Development, Extension of the sidewalk and improvement of parks)

(2) Bus Route Development Project

Subsequent study:

(FY 1998 Domestic Survey)

1998/Apr - 1999/Jun F/S by JICA

(Study on the Construction of Highway and Bus Lane in Bogota City)

Cost/ approximately 300 million JPY.

Bogota City expects Japanese government to further conduct D/D.

Finance:

(FY 1998 Domestic Survey)

OECD loan is to be provided.

(FY 2001 Domestic Survey)

Bogota City budget.

Construction:

Completed

Refer to COL/S 310/99 Feasibility Study on the Project of Highway and Bus-lane of Santa Fe de Bogota (1999)

(3) Railway Development

Subsequent study:

(FY 1999 Overseas Survey)

F/S in under implementation.

(FY 2000 Domestic Survey)

F/S of the Subway Construction Project in Bogota City was implemented.

(FY 2001 Domestic Survey)

Contents of F/S : This Railway Development Project was studied as the F/S by the consultant group composed of the American, French and Colombian with the completion target in 2007 after the agreement between Bogota City and Central Government on the implementation of Study and Planning (SITM) concerning to a mass-transportation in Sept.1996. This Project was proceeded by the Ex-President and does not seem to be progressed well.

(FY 2006 Overseas Survey)

The concerned Master plan study has not been utilised due to lack of financial resources of the Bogota City Government. However, the study has been referred in 3 of the Master Plans prepared by Bogota City Government.

Master plans prepared by the city:

- 1) Traffic flow survey
- 2) Vehicle traffic flow survey, 2006
- 3) Vehicle traffic flow master plan, 2006

Description :

(FY 2001 Domestic Survey)

At the end of the Project, continuous study was requested by Colombian side. JICA notified that Japanese small scale local grant aid could be possible to continue the study. However the present situation of the subsequent Project has not been updated.

(FY 2003 Overseas Survey)

The following projects have been implemented or in progress of implementation.

- 1) Irrigation between Fuquene and Kukunuba and maintenance of equipment for the drainage system.
Subsequent Study: 6 months from 2003/Jul to 2004/Jan
Funding: Own financial resources of the Cundinamarca CAR Municipality (303 million COP)
Construction: 2003/Jul - 2004 /Jan
- 2) Cleaning of Lake Fuquene to Suarez River and removal of aquatic plants in the Suarez River by machinery
Subsequent Study: 8 months from 2003/Jul to 2004/Mar
Funding: own financial resources of the Cundinamarca CAR Municipality (882 million COP)
Construction: 2003/Jul - 2004/Mar
- 3) Recovery of the water surface level of the Lake Fuquene
Subsequent Study: for 3 months from 2003/Nov to 2004/Jan
Funding: own financial resources of the Cundinamarca CAR Municipality (4.2 million COP)
Construction: 2003/Nov - 2004 /Jan
- 4) Optimization of water resources operation of the Lake Fuquene
Subsequent Study: 4 months from 2003/Jul to 2003/Nov
Funding: own financial resources of the Cundinamarca CAR Municipality (30 million COP)
Construction: 2003/Jul - 2003 /Nov
- 5) Optimization of the sewage disposal system in the municipalities of Ubate, Lengwasake, San Miguel de Sema, and Saboya
Subsequent Study: 13 months from 2003/Oct to 2004/Dec
Funding: own financial resources of the Cundinamarca CAR Municipality (113 million COP)
Construction: 2003/Oct - 2004 /Dec
- 6) Prioritizing of the construction of the disposal systems of sewage generated from villages located in the basin of the Lake Fuquene
Subsequent Study: 13 months from 2003/Oct to 2004/Dec
Funding: own financial resources of the Cundinamarca CAR Municipality (36 million COP)
Construction: 2003/Oct - 2004 /Dec
- 7) Reduction of pollutants exhausted from the dairy product industry existing in the basin of the Lake Fuquene
Subsequent Study: 13 months from 2003/Dec to 2004/Dec
Funding: own financial resources of the Cundinamarca CAR Municipality (22 million COP)
Construction: 2003/Oct - 2004 /Dec
- 8) Study of impacts on the environment of grass-eating carp introduced for the sake of controlling propagation of aquatic plants in the Lake Fuquene
Subsequent Study: 12 months 2004/Jan to 2004/Dec
Funding: own financial resources of the Cundinamarca CAR Municipality (11 million COP)
Construction: 2004/Jan - 2004/Dec
- 9) Study on composting, application and disposal methods
Subsequent Study: 11 months 2003/Aug to 2004/Jul
Funding: own financial resources of the Cundinamarca CAR Municipality (71 million COP)
Construction: 2003/Aug - 2004/Jul
- 10) Validation Study on water channel construction toward control of emerging plants
Subsequent Study: 12 months from 2003/Oct to 2004/Oct
Funding: own financial resources of the Cundinamarca CAR Municipality (49 million COP)
Construction: 2003/Oct - 2004/Oct
- 11) Birds inhabiting within the region, surviving individuals and unexplored habitats - study on habitat of birds
Subsequent Study: 6 months from 2003/Jul to 2004/Jan
Funding: own financial resources of the Cundinamarca CAR Municipality (10 million COP)
Construction: 2003/Jul - 2004 /Jan
- 12) Ecological preservation in the basin of the Lake Fuquene
Subsequent Study: 9 months from 2003/Jul to 2004/Apr
Funding: own financial resources of the Cundinamarca CAR Municipality (5 million COP)
Construction: 2003/Jul - 2004/Apr

| 3. SECTOR | Transportation | / Meteorology & Seismology | 4. TYPE OF STUDY M/P |
| 5. | Bogota City Government, Direction of Emergency Prevention and Attention | | |
| COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | | |
| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | <p>(1) To formulate the plan for disaster prevention such as earthquake, landslide and flood.</p> <p>(2) To carry out the technology transfer to Colombian counterpart personnel in the course of the Study.</p> | | |
| 7. CONSULTANT(S) | Pacific Consultants International | | |
| 8. STUDY PERIOD | Mar.2001 | ~ Mar.2002 | 12month(s) |
| 9. SITE OR AREA | Bogota Metropolitan Area | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Development of governmental organizations, specialized in disaster countermeasures: The government of Bogota City, the government of Cundinamarca Prefecture and the National Government are required to arrange the government entities for disaster prevention and emergency response immediately owing to the responsibilities in preparedness for disaster prevention and in emergency response required before, in and after a seismic disaster.</p> <p>2. Sharing disaster information and database within the government sector: The database, information and disaster management information systems for the Bogota Metropolitan Area developed in the study should be held in common among the related agencies, and it needs to be maintained properly because the database is a basic tool for disaster management.</p> <p>3. Strengthening of emergency and strategic public building: A large part of the buildings in Bogota Metropolitan Area are required to be seismic resistant in order to mitigate seismic damage. In order to achieve the objective, raising public awareness of disaster prevention, quake-proofing buildings and responding illegal constructions are considered to be prioritized issues.</p> <p>4. Seismic design and construction standard for masonry buildings shall be reviewed duly based on the actual conditions: In the Bogota Metropolitan Area, out of 950,000 buildings, more than 80% of them are masonry. It is recommended for the Bogota metropolitan Area to review the seismic design and construction standard for masonry buildings duly considering the building damages estimated and the assessment of the building damages in earthquake.</p> <p>5. Developing a Disaster Management Information System (DMIS): The Bogota Metropolitan Area is required to comprehensively review the decentrally-organized existing information and communication systems in order to promote the development of a DMIS as a basic management tool for disaster prevention and emergency responses.</p> <p>6. Preparing public or service entities' emergency response plans: Public service providers are required to prepare disaster prevention, strengthen the facilities for emergency response in a disaster and restore of the damaged facilities after a disaster.</p> <p>7. Public education for disaster prevention: The residents and communities are recommended to be enhanced of public awareness to follow the regulations related to disaster prevention in general, and for the necessity of seismic design and strengthening the building structures, though generally they do not have any penalty cords in building construction, land development and housing development.</p> <p>8. Early execution of a pilot study: In order to promote the Basic Plan for disaster prevention of the Bogota Metropolitan Area, the pilot study on disaster prevention to include organization of local communities, emergency response facilities and restoration plan and for the pilot area to be selected from the vulnerable localities and municipalities selected from disaster prevention aspects in Bogota and Cundinamarca.</p> <p>9. Promotion of further study the existing conditions of the Bogota Metropolitan Area: "Development study on disaster prevention for pilot areas in the Bogota Metropolitan Area", "Geophysical study on Cundinamarca", "Geotechnical study on Cundinamarca", "Study on Water Resources and Environmental Management for the Upper Rio Bogota".</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2002 Domestic Survey)

Based on the Study, the government of Bogota City have launched management of earthquake disaster. At the initial stage, preparation of the emergency response plan is in progress. However, due to lack of necessary skills and human resource, the government still needs Japan's technical assistance.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

One of the recommendations in the implemented study is enhancement of quake-resistance in Bogota Metropolitan Area. The government of Bogota City allocated 1.2 trillion COP for the city's development aiming quake-proofing public buildings (educational facilities, hospitals, public transportation organizations, vehicles and pedestrian bridges, and athletic facilities) and easing crisis activities, and enhancing the cooperation between concerning authorities.

The request, which was formulated on the basis of the earthquake measurement plan by the Administrative Department for District Planning (DPAE), and aimed monitoring areas having high risk of earth slide and flood, early alarming system and early damage prediction survey after earthquakes, have been submitted to JICA. The collected information through the study is utilized for the building Bogota City's earthquake measurement plan and the project submitted by the UNDP.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

No subsequent study/project has been implemented. In September 2005, S/W will be signed for the study of monitoring and early warning system for land slides and flood and disaster assessment.

Technical cooperation:

Training: System and infrastructure for disaster relief. (1 person, 14 May, 2005 - 30 July, 2005)

Other cooperations: A follow-up mission, "The Study on the Disaster Prevention in the Bogota metropolitan area", in response to observation and anxiety of AIS and DPAE, in relation to a signing of memorandum concerning damages in basic plan or meetings.

(FY 2006 Domestic survey)

No information to be specifically mentioned.

(FY 2006 Overseas Survey)

Signed S/W for "The Study on the Disaster Prevention in the Bogota metropolitans area", in September 2005.

(FY2007 Oversea Survey)

Subsequent study: The Study on the Disaster Prevention in the Bogota metropolitan area

Implementing period: May 2005 - March 2008

Implementing institution: Administrative Department for District Planning (DPAE), Soacha

Objectives:

- 1) Preparing the development plan of monitoring systems and early alerts for landslides and floods at the river basin of the Tunjuelo River and the Soacha River.
- 2) Enhancing disaster preventing capability of C/P authorities and communities through implementing the pilot project of establishing, operating and maintaining the monitoring systems and early warning systems for flood and landslides, that will be done by the initiative of the community.
- 3) Transfer technology to Colombian.

Technical cooperation:

Training: 4 people, 15 days (Japan, 13 -28 April, 2006)

Progress:

(FY2007 Oversea Survey)

While the study needed to be discussed and adjusted, formulation of hazard maps recommended by the study group was considered useful and economically possible. It is considered beneficial and supportive to the DPAE, and should be implemented promptly. So far, following activities have been implemented: implementing the research covering monitoring district; analyzing the zones affected by landslides and floods community-participating seminars for installing and utilizing equipment (rainfall sensors and water-level sensors).

Others: There are possibilities the sensors to be included by the DPAE in the telemetric system of monitoring the district. The installed sensors, like all the others, would work automatically, and as the agreement based on the engineering specifications requested from the DPAE during the purchase of the equipment, the sensors can be integrated to the telemetric network, adding systems of transmission via radio. The District considered the project important because one of city's policies is to improve, update, automatize and make telemetric the hydrometeorological stations. Since the JICA study group recommended that the equipment should not be telemetric at least in the beginning of operating the system, the DPAE accepted installing both automatic sensors. It is expected that these sensors would be improved and integrated to the monitoring systems which support the warning systems covering the Chiguaza Valley and river basins of the Tunjuelo River and the Bogota River.

| 10. MAJOR PROPOSED PROJECT(S) | <p>(1) Groundwater Development and Conservation Project in Eastern Hills of Bogota Plain (Eastern Project): Purpose of the project in Eastern Hills is i) water supply to Bogota City and neighboring cities and ii) improvement of water environment of Bogota Plain. By this project, groundwater will be newly developed from 63 wells, amounting to 2m³/s for ordinary water supply and 4m³/s for emergency water supply. On the other hand, total volume of 0.45m³/s should be artificially recharged into the aquifers from 13 wells for groundwater conservation of Eastern Hills. Areas for water supply are: (a) Cerros Norte, (b) Santana/Chico, (c) Suba, (d) Soacha, (e) Vitelma, (f) San Diego, (g) Hills of Yerba Buena .</p> <p>(2)Groundwater Conservation Plan of Area of High Groundwater Use in Bogota Plain (Western Project): Groundwater resource is to be conserved in areas of high groundwater use for floriculture, irrigation and industry. This project will enable the current water use to be continued sustain ably. Areas for artificial recharge are: i) Subachoque River Basin, ii) Chicu River Basin, iii) up-stream of Frio River Basin. Groundwater recharge will be carried out amounting to 0.5m³/s though 28 recharge wells that will be drilled in 14 sites of above three river basin. Items for research and development of technology of groundwater use are: (a) Reuse of drained water of irrigation, (b) Use of rainwater for irrigation, (c) Use of water of Bogota River for irrigation, (d) Change of sites for new flower production, (e) Improvement of irrigation efficiency.</p> | | |

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2003 Domestic Survey)

The objective of mentioned study is formulating the sustainable use of ground water at the Bogota Plane, and implementing the F/S was requested from the Government of Colombia to the Government of Japan during 2001-2002. The aim of F/S is to develop and preserve the eastern mountain region of the Bogota Plane and equivalent to the project recommended at the M/P study. The Government of Colombia acknowledges vulnerability of the water supply system at the Bogota City and has strong request to improve it. The government also welcomes the shift of the water source from river water to underground water since it will improve river environments and the financial condition of the Company of Water Supply and Sewage Service of Bogota (EAAB).

(FY 2003 Overseas Survey)

After the completion of the study, underground water level monitoring and meteorological weather stations are maintained at Bogota channels. Every month, meteorological hydrologic office produces records. The executive committee consisting of NGEOMINAS, Administrative Department of the Environment (DAMA), Institute of Hydrology, Meteorology and Environmental Studies (IDEAM), Regional Autonomous Corporation (CAR), the Colombian flower growers trade association (ASOCOLFLORES) and Acueducto de Bogota which covers 70% of the Bogota Plane is still operating. In August 2002, the Acueducto requested to the Government Japan for its continuing support to the company in order to implement the F/S of underground water and is now waiting for the reply.

(FY 2004 Domestic Survey)

As for the F/S of prioritized project proposed in the Study on Ground Water Development in Bogota Plane, request has been made for an implementation of Study on Bogota city ground water development/preservation plan by the Colombian government to Japan. JICA has conducted P/S of the above study in November 2004. Currently JICA is considering for the implementation of the project.

(FY 2004 Overseas Survey)

Following projects has been completed or in progress using Bogota Water Supply and Sewerage Company's capital.

1) Monitoring of meteorological observation station: bimonthly one-issue-completion. 198,000 USD 2) Maintenance, mowing, coating, oiling, and repair. 99,000 USD 3) Groundwater level monitoring: phase 4 well and Guadalupe: data recording of automatic observation equipment, mowing 116,160 USD. 4) Water quality of phase 4 well and Guadalupe: sampling and chemical analysis 5) Cleaning of well and groundwater quality physical chemical and microbiological analysis 47,040 USD 6) Continuance of well monitoring on drinking water, agricultural water, industrial water in 100 sites. Special research on contaminant, which may have effect to the treatment of major water source. 7) Continuance of refilling, supply of water vain and rehabilitation pilot project: Cooperative project follow contract 43,077.76 USD period: May - November 2003 8) Bogota plain water vain lists. New basin: Contract to improve cooperation project information 122,438 USD period December 2002 - September 2003 9) Management of Bogota plain water vain lists. New basin: Contract to improve cooperation project information 6,000 USD period: December 2002 - April 2003 10) Ground water project and coordination assistance contract: Consulting, assistance, coordination, budget planning, documentation. 1,197,740 USD period 2002-2003, 2004-2005

Benefits are as follow:

1) Improvement of knowledge of groundwater resource in savannah. 2) Identification of important themes to sustain water resource balance improvement, such as water resource lists. 3) Able to conduct activities within and with institutions and to increase the efficiency from technical and economical perspective in researching same theme from a different perspective. 4) To identify availability of groundwater use in emergency and to search for a measure to improve living cost in the highland of the city. 5) Able to understand environmental technologies, which were previously not understood. 6) Although the actual beneficiaries has not been calculated, it is now able to correspond to emergencies in the city, improvement in living cost, and water shortage in northern and southern Bogota area.

(FY 2005 Domestic and Overseas Survey)

Groundwater development in Bogota was proposed in the Study. F/S was requested by the Colombia government, which a preparatory study was conducted by JICA in December 2004. The study team was re-dispatched, and S/W of "Sustainable water supply programme based on comprehensive water resource management in Bogota" was concluded in April 2005. The objectives of the Study are as follows. The Study has not been conducted, though possible to be implemented in 2006.

Objectives: Water resource management/sustainable water supply programme in Bogota, considering the following points

1. Poor area in Bogota (security of minimum water supply)
2. Human security and disaster prevention
3. Environment and sustainability
4. Organisation/system

(FY 2006 Domestic Survey)

Sustainable water supply plan based on comprehensive water resource management in Bogota metropolitan city has been pre-announced by JICA though not been publicly announced yet, as of September, 2006.

(FY 2006 Overseas Survey)

JICA acknowledges that the precondition which the study team has established have been fulfilled. In addition, it has been mentioned that there is a possibility of dispatching study team around early January, 2006. Company of Water Supply and Sewage Service of Bogota (EAAB-ESP) has responded to the above statement that are ready to welcome Japanese team and have requested for number of study team, requirement of office space or staffs. However, official response from JICA has not been made yet. EAAB-ESP is prospecting that the Japanese study team will be arriving around November 2006 and be concretely making decisions on target of the project, scope of work, cost, and funding to decide on the details of the activities.

(FY 2007 Domestic and Overseas Survey)

Subsequent study: Study of Sustainable Water Supply based on comprehensive water resource management in Bogota Metropolitan Area in the Republic Of Colombia.

Implementing body: JICA, Acueducto de Bogota

Implementing period: November 2006 - March 2008

Funding party: JICA (development study)

Objective: Formulating the M/P and F/S of water supply plan among the prioritized projects of underground water development. The M/P improves water supplying efficiency at high-ray and poor zones and securing water supply for emergency. The Acueducto, taking the role of supplying water to Bogota Metropolitan Area faces two challenges. 1) To supply water to high-ray and poor zones is increasingly difficult due to squeeze pumps' cost and illegal access and stealing water. 2) Even though the Acueducto enhances earthquake safety of water pumps to prepare natural disaster, capacity building and other preparations are not enough.

In order to overcome these problems, the Government of Colombia requested the Government of Japan for technical cooperation. The study implemented by ACUEDUCTO and accomplish following objectives by utilizing underground water: 1) improving water supplying efficiency at high-ray and poor zone, 2) securing water supply at emergency. It also formulates the M/P of the water supply plan. After collecting and analyzing existing documents in the field study, and implementing research on current situation, water condition, social and economic situation, projects with higher priority will be selected and F/S will be implemented.

Contents: Five wells out of 62 proposed wells will be test-drilled.

Beneficiary: The Acueducto, governmental organizations, the institute of alpine topography, IDEAM, the government of Cundinamarca, and other participants of the project.

Impact:

Technical cooperation: - Geophysical instruments such as transient electromagnetic (TEM) surveying, numeric analysis simulation software of underground water.

OBJECTIVES OF THE STUDY | 1)To support making POT aimed at the urban planning for the 103 municipalities in Colombia and as for three Atlantic coastal cities where urban area is spreading and therefore making reliable urban development plan is given high priority, the JICA Study Team made basic GIS data based on the 1/2,000 scale digital topographic maps. 2)Carrying out self sustainability analysis of IGAC s 1/2,000 scale map and basic GIS data making program for the remaining 100 municipalities.3)Transfer technologies required in modern digital mapping to IGAC through the activitiesdescribed in item 1 and 2 above. | | |

Description :

(FY 2008 Domestic Survey)

Sustainability of IGAC:

JICA concluded that IGAC has technical capacity to create topographic maps of the remaining 100 cities through this study, if there is enough budget. IGAC hopes to create a cadastral map again with cooperation of JICA Study Team, utilizing the data created and technology transferred in this study.

(FY 2008 Overseas Survey)

The study to create the geographic database of the major cities of the Atlantic coastal areas will include the creation of a detailed map of urban areas. The map will be used for the cadaster, public service, urban planning, environment, study on infrastructure.

The map will be created to promote the usage of the geographic information system and Japan and Colombia exchanged the experience about the management of the map creation outcome. This is the reason that Japanese experts go to the inspection with the staff in Colombia.

The project has achieved the expectation and the outcome was satisfied by the experts.

Three major cities of Colombia will receive the benefit and these cities will be able to use the updated maps for the implementation of the technical projects as well as use them as a foundation for updating the cadaster.

(FY2012 Domestic Survey and Overseas Survey)

| 1. COUNTRY | Colombia | | |
| 2. NAME OF STUDY | Study on Sustainable Water Supply for Bogota City and Surrounding Area Based on the Integrated Water Resources Management in the Republic of Colombia | | |
| 3. SECTOR | Social Infrastructure | / Water Resources Development | 4. TYPE OF STUDY M/P+F/S |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | BOGOTA WATER SUPPLY AND SEWAGE COMPANY (ACUEDUCTO) | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | <p>1) Master Plan for emergency water supply by use of groundwater will be formulated, with target year of 2020.</p> <p>2) Feasibility Study will be implemented for high priority project proposed in the Master Plan Study.</p> | | |
| 7. CONSULTANT(S) | Yachiyo Engineering Co., Ltd. | | |
| 8. STUDY PERIOD | Dec.2006 ~ Sep.2008 21month(s) ~ | | |
| 9. SITE OR AREA | Bogota City and Surrounding Area | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Outline of Project</p> <p>(1) Prior Project (Pilot Project for Groundwater Use) : Pilot project has important purpose to resolve technical problem of emergency water supply by groundwater. Pilot project should be implemented at 8 sites within Bogota urban area, prior to the other projects. Pilot project, as sample facilities for emergency water supply, will promote implementation of proposed projects throughout Bogota city. (2) 1st Period Project (Eastern Project) : In Eastern Project, facilities for emergency water supply was planned to be constructed in the Eastern hills. The centre of Bogota city is near the Eastern hills, from which groundwater of wells can be quickly delivered to the city centre. Easy access from Eastern hills to the city centre make Eastern Project as main project of emergency water supply. Number pf emergency well is thirty three, and planned yield is 685,000m³/day, which can provided water to 4,565,000 persons with unit consumption rate of 15./person/day. (3) 2nd Period Project (Southern Project) : In Southern Project, facilities for emergency water supply was planned to be constructed in the Southern hills. The epicentre of large earth quake is assumed in the Southern hills, where there are many houses on the slope of the hills. Damage by earthquake, including damage to water supply facilities, is expected more serious than other area of Bogota city. Number pf emergency well is fourteen, and planned yield is 13,100m³/day, which can provide water to 872,000 persons with unit consumption rate of 15./person/day. (4) 3rd Period Project (Yerbabuena Project) : Yernabuena area is located to the north of Bogota city, in Chia and Sopo municipalities. In case of emergency, groundwater from wells in Yerbabuena area can be delivered by water wagons or be conveyed through pipelines to Bogota city and the surrounding area. Yerbabuena area is located relatively far from the center of Bogota urban area, so that priority of Yerba Bueba Project is lower than the other projects, though groundwater development potential of this area is high. Number pf emergency well is seventeen, and planned yield is 34,000m³/day, which can provide water to 2,266,000 persons with unit consumption rate of 15./person/day.</p> <p>2. Project Cost : Total cost for proposed three projects (EasternCol\$67,500Million, SouthernCol\$23,000Million and Yerbabuena ProjectCol\$32,800Million) was estimated 122,300 million pesos. Average annual cost for the projects implementation was estimated 15,400 million peso, under assumption that construction works for the entire projects will be completed in 7 years.</p> <p>3. Economic Evaluation : Appropriateness of the proposed project was proved by three advantages of the projects below: a) Dispersion of risk of water source failure, b) Lower water resource development cost, c) Development of water sources near water consumption area</p> | | |

Description :
 (FY 2009 Domestic Survey)
 The project; disaster management of water supply in Bogota City, is planned to dig around 60 new wells in the Bogota City and the neighboring cities, and to use them as the water resources of the acute situation. This is a preparation for the earthquake and when the disconnection of the water from the distant dam reservoir happened. At the moment, Company of Aqueduct and Sewer System of Bogota (ACUEDUCTO: Empresa de Acueducto y Alcantarillado de Bogota) has been implementing the emergency water supply pilot project by using the existing and the newly drilled wells; a total of seven. The pilot project has been conducted for the purpose of investigating the technical problems of the main project. After the verification of this implementing pilot project, the decision for the main project will be made.

(FY 2009 Overseas Survey) No information.

(FY2013 Domestic Survey)
 The implementation of the project is currently delayed because the environment authorities current judgement has not reached a conclusion yet at national, regional and local administrative level.

(FY2013 Overseas Survey)No information to be specifically mentioned.

| <p>Description :</p> <p>(FY 1996 Overseas Survey) Subsequent Studies: Mar.1991 MOPT contracted with North American consultant to conduct "Study for Grain Control at Cardera Port" In this study, it was conducted that Cardera Port is the only port which has a capacity to import grains. Jul.1995 MOPT examined "Study of Fiscal and Economic Situation at Cardera Port" and concluded that the Second Expansion Plan is not feasible. To utilize the port efficiently, MOPT proposed 1)transformation of passenger terminal to Puntarenas Port (under implementation financed by the Govt. of Taiwan) 2)construction of breakwater, 3)construction of grain terminal, 4)installation of crane. Nov.1995 "National Port Development Plan"was executed by OCDI with fund from World Bank. The proposal on Cardera Port was almost same as proposal of "Study of Fiscal and Economic Situation at Cardera Port"</p> <p>(1) Construction and Transfer of Breakwater (362 m) Finance: unclear for the part of 282 m already completed own fund for remained 80 m</p> <p>Construction: A part of 282 m was completed and the rest of 80 m scheduled to be completed in the end of 1997</p> <p>(2)Dredger and Related Equipment MOPT decided not to purchase equipment but to contract with dredging company. (FY 1998 Overseas Survey) Two front loaders for container, two headers with carrier for transferring container, Two 30-ton forklift, a 2,400 HP tugboat, 6 vehicles have been procured.</p> <p>(3)Dredging of inner port (FY 1998 Overseas Survey) It is to be completed by June 1999. A total cost of US\$230 million is demanded. 83% of the expenditure will be beared by INCOP, whereas the remaining 17% by MOPT.</p> <p>(4)Grain Terminal (FY 1998 Overseas Survey) INCOP made a contract with IMNSA HOSKONING, a consortium of Costa Rica and Holland in Dec. 1996 to comission the market survey, project draft formation, technical survey for the development of port infrastructure. Sincе INCOP did not have their own budget and financial sources, they decided to adopt the participation of private enterprizes for fund procurement, implementation, and operation of the project. Documents for bid and technical documents were already submitted to MOPT.</p> <p>Background: Negotion is on going with World Bank and the Govt. of Finland.</p> <p>(5)Tuna Terminal (FY 1998 Overseas Survey) INCOP made a contract with BEL INGENIERIA in Dec. 1996 to comission the market survey, project draft formation, technical survey for the development of port infrastructure. INCOP decided to adopt the participation of private enterprizes for fund procurement, implementation, and operation of the project. Documents for bid and technical documents were already submitted to MOPT.</p> <p>(6)Others (FY 1998 Overseas Survey) Reconstruction of floor of the pier: completed. 3-ton bucket: completed. Reconstruction of corridor and access road: under construction. It is to be completed by April 1999. Installation of 52 defenses on the pier: completed. Modernization/improvement of buildings and facilities: completed. Afforestation of the port: completed. Improvement of electoric system and illumination: Reconstruction of illumination and installation of new electoric system.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Reasons for Delay or Cancellation: The change of circumstances at the target area, financial problem and lower priority given. (FY 1997 Domestic Survey) It is difficult to find finance newly for the implementation of the project from international organizations because economic structure adjustment is on going</p> <p>Finance: SENARA requested the OECF loan, but agreement has not concluded yet.</p> <p>Situation: (FY 1992 Overseas Survey) The revised F/S is necessary in order to adjust the project to new circumstances. The project in B block focusing the flood protection schedule should be implemented. Finance of the project is pending until the M/P and the study of B block are completed. (FY 1993 Overseas Survey) SENARA requested MIDEPLAN to provide necessary cooperation for final plan. However, it has not been realized yet.</p> <p>Other Situations: The object area located in coastal zone of the Atlantic is left behind the agricultural development though suitable area for agricultural development still remains in and around the object area. Qualitative improvement and quantitative enlargement of the agricultural production are the urgent subjects in the nation. Accordingly, implementation of the project is strongly anticipated. (FY 1991 Overseas Survey) The project is being implemented by the fund of banana producer who own nearly 90% of the target area. (FY 1993 Overseas Survey) This study played an important role as a base of banana plantation development in the area. (FY 1995 Domestic Survey) At present, the local peoples are improving the drainage system and facilities at this area by private base. However, it seems to have no possibility to materialize this project as there are no way to get the fund and no improvement of the surrounding circumstances at the target area. (FY 1995 Overseas Survey) Many canals and rivers had been improved with a total length of 37.5km during FY 1991 to 92. Since 1992, the price and the other conditions with banana export, the traditional exporting agricultural product, had been improved considerably. So, it became an urgent matter to renovate the farmland which is impossible to cultivate due to the floody water. It becomes possible to invest for development of the drainage channels in order to protect the flood. (FY 1996 Domestic Survey) The improvement of the drainage system has been undertaken in a part of area on private base, referring to the report of this Study. However, it is unknown how the project has been implemented in a whole area. (FY 1998 Overseas Survey) The rehabilitation of drainage project etc. (new construction/rehabilitation of principal drainage canals) has been undergoing with the national committee fund, SENARA fund, America's PL-480 fund. Other proposed projects need to be reconsidered including the fund-raising device.</p> | | |

Description :

Request for Assistance:

Mar. 1989 MAG and CIMAR submitted to the Japanese Embassy in Costa Rica for assistance on the following proposals.

1. Construction of a pier, a processing plant and the related facilities including a trading center at Coco beach.
2. Building of an Oceanographic Research Vessel.

Utilization of the Study:

(FY 1991 Overseas Survey)

CIMAR seems this survey as academic research not as development study and is utilizing the data as such.

(FY 1996 Overseas Survey)

According to the result of JICA study, the importance of statistics was recognized and data collection system was established. The Costa Rica government requests for implementation of fisheries resources survey of which results can be available for the local fishermen engaging in small scale fishing.

Description :

Utilization of the Study:

The outputs of this project (aerial photography and maps) are managed by the Instituto Geografico Nacional and widely used in the public planning.

(FY 1992 Overseas Survey)

The outputs of this project are distributed to the governmental, academic and private organizations. The digitalization of the maps (three layers) is working for establishment of geographic information system.

(FY 1995 Overseas Survey)

The performances of this project distributed to many organizations and are being utilized for various planning works such as

- Urban Planning,
- Plan for Public Transportation,
- Plan for Treatment of the Wasted Materials,
- Plan for Main Road Network,
- Plan for Communication Network,
- Plan for Network of Water Supply & Sewage, etc.

(FY 1996 Domestic Survey)

After the completion of the Study, a long-term expert was dispatched for the technical transfer on the production of atlas.

(FY 1996 Overseas Survey)

Digitalized maps for other 50 cities are to be made. Request for financial aid is supposed to be submitted to JICA in 1998.

(FY 1998 Overseas Survey)

The maps have been digitized from 1992. Digitized maps in the fields of roads, rivers, and buildings are already completed. Digitized maps of air photographs, renewal of the present map, and drawing of topographic map of 1:10,000 are expected in the future with the cooperation from Japan.

(FY 1999 Overseas Survey)

First printings of some maps are out of stock.

| | Partially Completed | Delayed or Suspended |
| | Implementing | Discontinued or Cancelled |
| Description : | | |
| <p>(1)Improvement of Juan Santamaria International Airport The Costalican government was determined to implement a part of the short-term development project (the expansion of the passenger terminal building and the construction of new apron)upon the completion of a draft final report.</p> <p>Subsequent Studies: B/D completed 1993 D/D (government fund)</p> <p>Finance: Government fund</p> <p>Construction: *Phase I (FY 1995 Overseas Survey) The government approved to allocate US\$ 12 mil. for the project implementation. (*US\$ 7.5 mil. for the improvement of dormitories, radar facilities and a control tower) -Construction of Fuel Storage Facilities Completed (location was changed from the place designated in M/P) -Expansion of Passenger's Terminal Building Scheduled to be implemented Phase I: for 18 months commencing in May, 1996 Phase II: for 12 months commencing in September, 1996 -Construction of Air Cargo Terminal Building(US\$ 2 mil.) -Construction of Platform for Air Cargo (US\$ 1.3 mil.) -Construction of Radar Facilities Scheduled to be implemented for eight months commencing in Feb.1996</p> <p>(FY 1997 Domestic Survey) After 1994, a part of new apron which has been included in F/S short term plan, was constructed as international apron. Moreover, a remote terminal building was constructed accompanying the apron. The terminal is used as a waiting lobby for passengers. These facilities will compose a part of a future main terminal.</p> <p>*Phase II Finance: (FY 1998 Overseas Survey)(FY 1999 Overseas Survey) BOT Model (20 years of concession), AGI (Airport Group International), US\$180mil. Construction: (FY 1998 Overseas Survey) Tenders are now made. *Content Maintenance of airport and its management. (FY 1999 Overseas Survey) Construction of the passenger terminal building is to be started in June 2000. AGI will start managing the airport in Apr. 2000. Expansion of the platform and rehabilitation of the concrete of the existing runway are to be started in Nov. 2000. Expansion of the boarding gates (11 gates) is to be started in Nov. 2000. AGI will continue improving the facilities by 2020.</p> | | |
| <p>(2)Liberia International Airport (FY 1998 Overseas Survey) The enlargement of the passenger terminal etc. is scheduled in 1999. The maintenance issue of the Airport has been remarked in the view of tourist development on the Pacific Ocean side. The reconsideration of the present M/P and its implementation of F/S are looked upon. The government looks forward to Japan's cooperation. (FY 1999 Overseas Survey) Expansion of the existing platform and improvement of the passenger terminal are to be implemented during the year of 2000.</p> | | |
| <p>(3)Limon International Airport (FY 1998 Overseas Survey) The rehabilitation of landing strip and passenger terminal is scheduled in 1999. The project has been put off as the number of Airport users turned out to undergo the expected number in M/P because of the delay of tourist development . (FY 1999 Overseas Survey) Rehabilitation of the runway and platform and improvement of the passenger terminal are to be implemented in the year of 2000.</p> | | |

Description :

(FY 2001 Domestic Survey)
 ICT, the counterpart agency, seriously considered taking actions recommended by the JICA study, immediately after the interim report. However, ICT felt some technical limitation to pursue the recommended actions immediately. Therefore, ICT decided to make another request to the Japanese government and JICA to conduct a project for increasing ICT's preparedness for taking actions recommended by the JICA study. In response to this project request, Professor Nishimura and JICA task manager suggested to ICT that ICT should make another study project request to the Japanese government and JICA.

Although the proposed project is in the scheme of a development study, the project consist of a technical assistant project and a development study, which has been discussed recently among related bodies. The approach utilise the C/P, such as ICT and concerned parties, to take actual steps in implementing the proposed project, while the study team for the project is that ICT and local parties concerned will take a lead to implement the projects proposed through the M/P, while the study team supports the implementation by preparing for the implementation (preparation of detailed action plan).

(FY 2001 Overseas Survey)
 Requests for 4 Development Study were submitted to Japanese Embassy in Costa Rica, mid-Atlantic ridge and Punta Arenas and Ministry of National Planning, aimed at promoting sustainable tourism development in shore frontage and islands. Approval by JICA is currently pending.

(FY 2002 Overseas Survey)
 The current situation was diagnosed on the basic infrastructure in the target regions of plans. In addition, field activities were waged toward the follow-up based on this plan through the Sustainable Tourism Development Areas Association (ALDETUS). The aforementioned activities at the stage of this plan were implemented by research institutes and funds provided by the funds contributed by member organizations from ALDETUS - an organization established under the support of Costa Rica Environmental Studies.

Condition of request:
 (FY 2002 Overseas Survey)
 In September 2002, four development studies were requested to the Japanese Embassy in Costa Rica and the Ministry of Planning and Economic Policy for the purpose of promoting sustainable tourism development in coasts and islands of Costa Rica, deep water of the Atlantic Ocean, Punta Arenas Bay. The studies are awaiting approval from JICA at present.

(FY 2003 Overseas Survey)
 Based on the result of the studies, the Costa Rica National Tourism Development Plan and a utilization plan of Caribbean land for development were prepared. In addition, based on the technology transfer through the studies, land utilization plan and tourism development plan of the coastal area were implemented. The National sustainable Tourism Development Plan (2002 - 2012) was pushed forward by use of a similar technique.
 At present, four studies have been requested to JICA on the coastal region coordination plan and its implementation for the purpose of tourism promotion.

(FY 2004 Domestic Survey)
 No information to be specifically mentioned.
 (FY 2004 Overseas Survey)

ICT has prepared a D/S on use of lands in northern Caribbean, southern Caribbean, northern fields, Carthage canyon, and middle Pacific Ocean and tourism with its own fund, based on the concept model of this study. It is planning to continue the project with concerned departments in Punta Arenas, northern Guanacaste region, and central canyon.
 Although it has submitted subsequent plans to JICA for several times, replies have not been made.

(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)
 The follow-up study was implemented for a development plan of the study, which the Committee for the sustainable development was established in Drake, Jimenez port, and Sanata Teresa-Mal Paris. In addition, partnership between the mentioned institution has been maintained to conduct the study.

For the human development, the National Vocational Training Bureau has been increasing technical training opportunities for people in tourism sector. ICT has submitted requests for a technical assistance to JICA for several times.
 For the macro-level regional planning has become possible from the experience, knowledge, and techniques acquired in the mentioned study, though experience is still to be gained for subsequent micro-level planning and pilot project implementations.
 For the infrastructure development, discussions has been held with the representatives from the related institutions, which an involvement from such institutions are requisite in reflecting individual tourism development plans to comprehensive action plan, as well as a necessity of investments.

Subsequent Study: The detailed land utilisation plan in the coastal zones of Ossa Peninsula, and the detailed land utilisation plan in the coastal zone of Nicoya peninsula.

Funding:
 Funding party: Own funds
 Implementing body: The Costa Rican Tourist Agency
 Implementing period: 2000/Jan - 2001/Jan

Study Area:
 Phase I: Northern and southern Caribbean (Caribe Norte, Caribe Sur), northern Llanurace, Pacifico Medio
 Phase II: Valle Central, northern Guanacaste, Punt Arenas, costal zones of Nicoya peninsula and islands

Objectives: To prepare and to partially implement a detailed land utilisation, tourism development, environmental preservation, and community development plan based on the macro land utilisation plan in the coastal zone.

1) To prepare land utilisation plan in order to facilitate sustainable development in the coastal area, while preserving the environment. 2) To prepare measures required for sustainable tourism development plan. 3) To implement transfer of technology and knowledge to increase domestic competitiveness.

Contents proposed: The mentioned study has proposed establishment and capacity development of sustainable development centre, development of information system to assist decision making, land development to facilitate efficient use of natural resources, strengthening of individual project to attract tourists, and to foster implementation of investment plans until the year 2012. 1) Tourism development, 2) natural environment management , 3) economic development in regional society, 4) infrastructure management , 5) land use management.

| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | Review of the existing master plan for the Arenal Tempisque Irrigation Project (PRAT) and formulation of a new plan relating to implementation of FS for 35,000 Ha of the basin of Tempisque River, Guanakate Province. This plan intends to formulate an agricultural system by irrigation aiming at prevention of regional floods and sustainable development of small and medium farmhouses in consideration of the environment including the national park located upstream and downstream of the aforementioned river. Technology of the study technique will be transferred to the C/P. | | |
| 7. CONSULTANT(S) | Pacific Consultants International Naigai Engineering Co., Ltd. | | |
| 8. STUDY PERIOD | Jun.2000 ~ Aug.2002 26month(s) ~ | | |
| 9. SITE OR AREA | Approximately 35,000 Ha lying astride counties of Liberia, Santa Cruz, and Carillo of Guanakate Province. A part of the area is included in three counties out of 11 counties of Guanakate Province, and the area targeted for the study. On the other hand, in terms of the district level, the following places are included in the study target area: Liberia and Nacascolo districts in Liberia County, Sardinal and Philadelphia districts in Carillo Palmyra County, and Guanakate district in Santa Cruz County. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>Project plan for each zone:</p> <p>All zones: Developing multiple farming units by grouping small/medium size farms and improving farming management, as well as diversity of farming products and developing intensive farming for specific zones.</p> <p>Zone A: There is not much hope for the effect of the irrigation. Converting grazing land to mango farming partially to develop multiple farming products and improve management.</p> <p>Zone B: Irrigation from rivers is not efficient. Improve groundwater irrigation on some farm land and convert farming products from sugarcane to vegetables to develop multiple farming types and improve management.</p> <p>Zone C: Improve irrigation of some farmland from river. Convert from grazing land and sugarcane to vegetables and melons for dry season, and in rainy season, plan for recritual irrigation to develop multiple farming types and improve management.</p> <p>Components to achieve development project:</p> <p>Component 1 (Irrigation and drainage): Due to a shortage of water to irrigate all the farmland, only zone C, which has advantageous conditions for irrigation water, will be maintained by a pumps. Facility plan was designed with a condition of possible usage of 3.0CBM/s irrigation water. In addition, zones with abundant ground water, irrigation facility will be improved using ground water. This project will proceed with particular care not to negatively change or adversely impact the condition of the local land conditions.</p> <p>Component 2 (Flood control) Purpose of this project is not for preventing floods to local area but to reduce the flooding damage for farmland conservation for 10 years. The effect will be great, if improvement to farming is made by stabilizing incomes of small/medium size farms, which have been affected by flooding every year. Therefore, for these proposed measures, construction to widen the River Tempisque and Las Palmas, and bank rising work for the main road to upgrade emergency access in flooding period will be implemented.</p> <p>Component 3 (Environment conservation): For continuous improvement of small/medium farms, convey and monitor environmental awareness for local citizens.</p> <p>Component 4 (Strengthen assistance for farmers): Strengthening the assistance to farmers is needed to improve small/medium farms currently. Particularly, strengthening and restructuring is essential for a farming organizations. In addition, cultivation techniques and dissemination of agriculture knowledge, mediation of financial credit to farmers and supporting women in rural villages.</p> | | |

|---|--|--|
| <p>Description :</p> <p>(FY 2003 overseas Survey) Based on the proposal, a possibility in relation to construction of a weir and a dam in La kyruba and Piedras is under consideration. These were proposed in the study as a long-term plan and are regarded as projects that should be prioritized from the perspective of being priority project of SENARA, present condition of the basin of Tempisque, and the tourism development of the coastal area. Therefore, these plans were reviewed in the extensive regional plan toward the water resources management of the basin of Tempisque and the coastal region. This plan will be pursued based on the agreement between SENARA and Costa Rica Water and Sewerage Bureau.</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2004 Overseas Survey) Recommendation for a study to research utilization of water resource for coastal tourism development was made from SENARA and AyA. Amount of funding and the funding party depends on the project plan and the output of F/S.</p> <p>(FY 2005 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Overseas Survey) Construction of bank to protect urban area is considered by Philadelphia city, Department of construction and transportation, and National Committee of Disaster Prevention and Urgent Measures. Subsequent study: Tempisque river midstream basin coastal area water sources increase plan Implementing period: Progress in FY 2005 Implementing body: SENARA and AyA Objective: To determine and analyze an alternative plan to be implemented for next 20 years in order to supply drinking water to residents in coastal area in northern Nicoya peninsula and irrigation water to agricultural area through a feasibility study. Relation with the report: Used the implemented Master Plan. Progress: (FY 2006 Overseas Survey) Using the cross section alongside with Tempisque river, the flood prevention measures were implemented every 500m in 20km interval area.</p> <p>(FY 2006 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2006 Overseas Survey) SENARA has requested BCIE for a FS on Pietos Dam by document No.2006GE-665-06 on September, However, formal reply from BCIE has not been made yet.</p> <p>(FY2007 Overseas survey) Implementation of the project was planned but details of progress is not known.</p> <p>(FY2007 Overseas Survey) The project implementation by ADB was under consideration, however, the detailed information is not known.</p> | | |

| 3. SECTOR | Administration / Environmental Problems | | 4. TYPE OF STUDY M/P |
| 5. | GTE | | |
| COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | | |
| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | A baseline survey concerning measures for pollution source in Havana Bay where water pollution becomes serious is to be conducted and the formulation of a master plan concerning sewage (target year: short-term goal 2009, long-term goal 2020), the implementation of F/S survey aiming mainly the improvement in sewage system and the capacity building of staff of the counterpart agencies through this study are also aimed. In addition, the interest of concerned parties including donors involved toward this study is to be cultivated through workshops and seminars, and also environmental education activities on the purification of Havana Bay are to be provided to the public. | | |
| 7. CONSULTANT(S) | Nihon Suido Consultants Co., Ltd. | | |
| 8. STUDY PERIOD | Jun.2002 ~ Mar.2004 21month(s) ~ | | |
| 9. SITE OR AREA | Havana Bay basin of the study has the total area of 68km ² and the population of 800 thousand. Havana Bay (5.0km ² , volume of 47 million m ³ , average depth of 9m) is a part of tourist spots of Old Havana registered as a World Heritage, as well as an important commercial and industrial port of Cuba, and the improvement of its water pollution is an important issue. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>Outline of M/P: Sewage development plan targeted the year 2020 (M/P)</p> <p>1. Improvement plan of existing sewage facilities (Central Sewage System): detailed survey and measures for misconnected pipes, detailed survey of siphon, repair of screening facilities, repair of the Casablanca pump station, installation of new sewage main line system (Matadero pump station, discharge pipe, new sewage pipe Colector Sur Nuevo, connecting pipe to existing main sewage pipe), repair of Colector Sur, installation of Colector Sur A, installation of re-suction pump station, repair of tunnel waterways.</p> <p>2. New sewage facilities plan for the mid- and down-stream of the Luyano River and the Martin Perez River: installation of new main sewer line (Colector Luyano Left, Colector Luyano-Martin Perez), installation of service lateral, construction of sewage treatment plants (secondary treatment, treatment capacity 53,700 cubic meter, conventional activated sludge process, anaerobic digestion for sludge treatment process, mechanical dehydration, final disposal site is landfill) in the treatment plant site to be constructed by GEF/UNDP. Meanwhile, common facilities are being coordinated.</p> <p>Outline of F/S: 1. Improvement plan of existing sewage system (Central System): detailed survey and measures for misconnected pipes in the area related to Matadero drainage canal, detailed survey of siphon, repair of screening facilities, repair of the Casablanca pump station, installation of new sewage main line system (Matadero pump station, discharge pipe, new sewage pipe Colector Sur Nuevo, connecting pipe to existing main sewage pipe)</p> <p>2. New sewage plan for the sewage treatment district in the mid- and down-stream of the Luvano River and Martin Perez River: 1) Sewage collection facilities: partial maintenance of newly installed main sewer line (Colector Luyano Left, Colector Luyano-Martin Perez), installation of service lateral 2) Sewage treatment plant: sewage treatment plant facilities (secondary treatment, treatment capacity 17,900 cubic meter/day, conventional activated sludge process, anaerobic digestion for sludge treatment process, mechanical dehydration, final disposal site is landfill)</p> | | |

Description :
(FY 2006 Domestic Survey)
Given that reinforcement of production of the certified seed of free trade rice and its provision is required, the Japanese government receives a requests of the projects of technical cooperation.

(FY2007 Domestic survey)
Implemented project: Project of reinforcement production of the certified seed of free trade rice and its diffusion
Implementing period: From November, 2007 (3 years)
Implementing body: Ministry of Agriculture Rice Research Institution, JICA (Technical Cooperation project)
Objective: Establish cultivation technique for free distribution rice with quality seeds.
Relation to the mentioned study: The necessity of some action plans are being under consideration in the headed study. For production expansion of free distribution rice, in particular, it transpires that the introduction of a variety of rice which coincide with regional characters is an urgent need and its immediate effectivity holds promise. However, the production and distribution system of seeds suitable for the local cultivation system, and certified seed with guaranteed germination rate have not been established as of the moment. Therefore, taking an immediate action for this matter is considered to be the issue of high priority for the action plan based on the proposal of development research. The PPI, a counterpart organization of development research, is willing for the early launch of the production and establishment of free distribution rice and establishing the cultivation technique. Japan was requested technical cooperation as part of the development study follow-up.
Benefits: 1) Easy access to seed certificate, 2) Expanding the usage of quality seeds, 3) Dissemination of free distribution rice cultivation technique by introduction of quality seeds, 4) Establishment of free distribution rice cultivation technique by introduction of quality seeds, 5) Expectation of production expansion of free distribution rice and increasing production.

(FY 2008 Domestic Survey)
The four programs proposed in the study are under organic coordination and are being implemented. In addition, the expert of project management/ paddy cultivation and the short-term expert of agricultural machinery (paddy seed production) were dispatched in 2008.

(FY2012 Domestic Survey)
The following Technical Cooperation Projects have been implemented.
1. Reinforcement of Certificated Seed Production System in Popular Rice
(Project objective) Certified seeds are to be regularly distributed.
(Project summary) The production of certified seeds for freely distributed rice, its dissemination and cultivation technology are established.
(Project period) March 17, 2008 - November 30, 2010
(Implementing body) Grain Research Institute, Ministry of Agriculture (former Rice Cultivation Research Institute)
(Outputs) 1) The production and distribution of certified seeds of attractive kinds have become more planned. 2) The production of certified seeds has increased and become easier to obtain. 3) Knowledge of varieties has improved.
(Participation of Japanese company) Name of company: Yammar, Contents of the participation: Small machinery for seed production
2. Project for Extension and Diffusion of Technologies for Certified Rice Seed Production in the Central Zone of Cuba
(Project objective) The production of certified rice seeds by the trained leaders among seed growers is to increase in the 5 Provinces of the Central Zone.
(Project summary) The Project intends to support the production expansion of the certified seeds (seeds for ordinary farming households) produced by the leading farmers who are trained in the previous Project and their improvement in the cultivation technologies, which is expected to contribute to the increase in the production of certified seeds.
(Project period) April 12, 2012 - April 10, 2016
(Implementing body) Grain Research Institute, Grains Agro industrial Group
(Outputs) 1) The production of certified seeds increase and its quality is improved. 2) Diffusion activities of rice cultivation is strengthened. 3) Production technologies of leaders among seed growers is improved. 4) Technical knowledge of seed inspectors and certification service inspectors on the rice cultivation is enhanced.
(Participation of Japanese company) Name of company: Yammar, Contents of the participation: Purchase of agricultural machinery and rice huller was applied.

(FY2012 Overseas Survey)
1. Program for research capacity development of Institute of Rice Investigation (Instituto de Investigaciones del Arroz) and technical transfer
(Program summary) Scientific research basis of the institute is to be strengthened, through improving the institutional capacity of research/technical transfer, which enables relevant programs to be implemented for the purpose of producing Cuban Rice as well as reducing the import products. The infrastructure for one laboratory building and 3 research rooms is to be consolidated.
(Goal)1) The research infrastructure is strengthened and the rice genes are improved. 2) The institutional capacity of transferring advanced technologies and diffusing agriculture is enhanced. 3) Knowledge level of researchers in the institute is enhanced.
(Outputs) 1) The implementation of better research services is aimed, for which 3 research rooms are consolidated. 2) 10 laboratory buildings equipped with necessary research equipment items are constructed. 3) Well-equipped greenhouse and fields are constructed.
4) Facilities are improved for agriculture diffusion activities. 5) 4 researchers with Master Degree in Science and 2 researchers with PhD in Science are trained. 6) 24 Cuban engineers conducting research are trained through short-term training programs.
(Project period) January 2010 - January 2015
(Implementing body) Grain Research Institute, Ministry of Agriculture
(Supporting body) Ministry of Agriculture and Regional Development in Vietnam
The following suggestions have not been realized.
1) Agriculture Machinery/Facilities Mutual Operation Project by Producer Groups of Freely Distributed Rice 2) Research Trip for Diffusion Project 3) Project for Small-Scale Machinery Production/Assessment in Freely Distributed Rice Production Demonstration Areas 4) Project for Supporting Bio-preparation Production at CREE Center in Each Municipality 5) Project for Formulating Units of Earthworm Compost Production/Distribution for Producers of Freely Distributed Rice in Each Municipality 6) Project for Water Management Capacity Development in Rice Fields 7) Project for Strengthening Water Users Association 8) Project for Improving Dry System for Producers of Freely Distributed Rice

Description :

(FY 1997 Overseas Survey)

The results of this study were incorporated into "Rural-Urban Water Supply and Sanitation National Plan (1995~2000)". Moreover, INAPA is utilizing the outputs of the study.

Subsequent Studies:

B/D (Implementing organ / INAPA, Consulting Company / Kokusai Kougyou)

The following projects were formulated:

- | | |
|--|-------------------------|
| 1) Hand Pump system | 37 villages (93 wells) |
| 2) Motor Pump System | 7 villages (7 wells) |
| 3) Reservoir, Water Distribution Facilities | 7 villages (2 systems) |
| 4) Cooperative Water Reservoir Facilities | 4 villages (11 sets) |
| 5) Facilities for Maintenance and Administration | 1 set |
| 6) Equipment for Maintenance and administration | 1 set |

(1)Dahabon Province

Subsequent Studies:

Jun.13-Jul.17, 1994 B/D

Finance:

- Feb.1995 E/N 391 mil.Yen (Project for Water Supply in Three Western Departments)
 Sep.1995 E/N 121 mil.Yen (Project for Water Supply in Three Western Departments 1/2)
 Sep.1995 E/N 983 mil.Yen (Project for Water Supply in Three Western Departments 2/2)

*Contents of the project

Hand pump, motor pump, purification plant, reservoir, etc.

Construction:

Jul.1995~Mar.1996 Implemented
 Contractor / Fujita

(2)Monte Christy and Elias Pina

Finance:

- 5 Sep.1995 E/N 121 mil.Yen (Project for Water Supply in Three Western Departments 1/2)
 5 Sep.1995 E/N 983mil.yen (Project for Water Supply in Three Western Departments 2/2) (provided in 1996)

*Contents of the project

Hand pump, motor pump, purification plant, reservoir, etc.

Construction:

Feb.1996 started
 Mar.1997 completed
 Contractor / Fujita

Effect:

(FY 1997 Domestic Survey)

Standard of living of rural area (approx. 5,300 households, 25,000 persons) has improved greatly by stable pure water supply. As a result, decrease of epidemic infected by water and respiratory disease, and prevention of depopulation are expected. Moreover participation of female in economic activity and increase of school attendance rate are expected because the hard work of women and children to carry water will be mitigated.

Description :
At present INDRHI has been requesting that the Japanese government should implement the following project components among the agricultural development projects in the lower Yaque Del Sur river as Japanese grant aid projects, 1) Improvement of irrigation facilities of Viellarpand headworks,2) Improvement of Santana headworks,3) Improvement and rehabilitation of irrigation and drainage facilities in the existing Tawayo irrigation system,4) Installation of telemeter system.

(FY 2002 Domestic Survey)(FY 2002 Overseas Survey)
The government submitted the request for grant aid but there has seen no progress. Moreover, it is allegedly known that the government approached to JBIC for loan aid. Therefore, the government launched procedures for loans from the Export-Import Bank of the United States however, there has no progress.

(FY 2003 Overseas Survey)
The proposed project is regarded as an extremely high priority plan among the nation's agricultural development plans due to the deteriorated poverty of the target region. The Dominican government filed a request for grant aid with the objective of obtaining financing for this plan in 2002 but it has not progressed yet.

(FY 2004 Domestic Survey)
No information to be specifically mentioned.

(FY 2005 Domestic Survey)
The counterpart government desires the actualisation of the project.

(FY 2005 Overseas Survey)
Subsequent study: Phase-I
Implementation period: 2 years
Objective:1) Design and construction of Yaque Del Sur River water resources management centre, establishment of urgent warning system, and technical training ,2) Design and construction of Santana diversion bank improvement and Yaque Del Sur River (Tawayo irrigation facilities) irrigation infrastructure improvement, 3) To strengthen the function of water users association in the Tawayo irrigation area, 4) To prepare ownership registration maps of Tawayo irrigation area and to provide necessary services in order to provide land rights for peasants using the irrigation, 5) To strengthen information system on land partition in the target area, 6) To prepare irrigation infrastructure improvement project in target area.
Relation with the report: The study has proposed several projects for comprehensive development of Yaque Del Sur River basin area. Comprehensive development project is a large-scale project, which takes two years for Phase-I and three years for Phase-II five totalling five years.
Situation: Rural development project is part of the national policy, which INDRHI has an intention of implementing the project soon. However, presently, there have been no requests. While financing method is planned to be discussed during the planning phase of the subsequent study, Dominican government has an intention to finance EIA, road maintenance, and costs for administration, logistics and technical support in preparing land registration map and determining land rights regarding the project. However, although INDRFI has an intention to conduct comprehensive development of the Yaque Del Sur River basin, loan limits of IMF and policies of CAFTA, joined by United States, Dominican Republic, and Latin American countries will affect the implementation of the project.

(FY 2009 Domestic Survey) No information to be specifically mentioned.
(FY 2009 Overseas Survey)
Integrated Rural Development Project Yaque del Sur River Basin
Present Condition: Tendered
Purpose of the Project: To improve the irrigation condition in areas that have no fair and just distribution of water. By attempting to improve the production and productivity through strengthening the use of land, the amount of disposable food will increase and will become more convenient for the consumers. Additionally, this will also reduce the costs of production.
Summary: Construction of a new irrigation system that will enable 6,960ha of irrigation and rehabilitation. 2,000ha out of the 6,960ha will be pressurized and the efficiency rate will increase by 50% through elimination of 20 irrigation system pumps. The use of land through this project will be strengthened, and the introduction of an improved manufacturing technique will be promoted. Preparation/maintenance of the regulating pond will also be performed.
Period: 2010.1 - 2012.12
Funding Sources: Financed by international organizations

Construction of Kanoa Water Divider, a Flood Outlet and a Snake Basket for Shore Protection (Olga and Noel Project)
Present Condition: Tendered
Purpose of the Project: The project is to protect the communities; Kanoa, Haquimelles, Palo Alto, Pegnon, Fundacion from floods and is to construct an approximately 9.5km, spillway with a capacity of 4,000m³/s. By creating a tributary to the caribbean sea, it will alleviate the Yaque del Sur River's high water level during the flood season.
Summary: Extension of river by 9.5km, and the construction of a spillway with a capacity of 4,000m³/s.
Period: 2010.1- 2012.12
Funding Source: Private bank financing

Restoration of Kano Toruhillo and the irrigation of Rincon lake.
Present Condition: Under implementation.
Purpose of the Project: The content of the project is to restore the Kano Toruhillo natural drainage canal. As it previously did during the time of Hurricane George and tropical rainstorm Noel which caused flooding in the Yaque del Sur River, this canal works to drain excess water from the river. Since Rincon lake is to be used as not only a discharge destination of flood water, but it will also generally function as a regulating pond, which will affect the stability and the recovery of the lake's ecology both positively and negatively. This will propose an environmental impact assessment that is in line with the laws of the Dominican Republic. Moreover, this project supposes an examination of the impact on the Enriquillo lake with Cristobal waterway running through the lake.
Summary: Target of construction; a water divider with the capacity of 1,000m³/s, preparation/maintenance of Rincon lake for a reservoir with the capacity of 20,000 million m³, flood outlet and a drainage canal that connects to the Yaque del Sur River, a 7.5km extension to the waterway, Mena dam, and two branch line waterways of 16km and 19km long. In addition, preparation/maintenance of the drainage net of the underground and surface water that spills into the Enquillo lake will be performed.

| Description : | | |
| (FY 2002 Domestic Survey) The Government of Dominica Republic is currently being under consideration on the application for JBIC loan. | | |
| (FY 2002 Overseas Survey) Policy for institutional capacity building was introduced. Based on the proposal of the Study, request financial Yen Loans to the Japanese government was submitted. | | |
| (FY 2003 Domestic Survey) The implementing body has been favorably responding to this project and applied for the JBIC loan. JBIC appears to be waiting for the final confirmation of Presidency of the Dominican Republic on the loan. | | |
| (FY 2003 Overseas Survey) Funding of 52,235USD was requested to Northern European countries. Contents of projects are as follow. Phase I: Improvement and expansion of PTAR Rafey, improvement of PTAR Cienfuegos, improvement of PTAR Tamboril, and supply of pipe equipment for sewage system. Phase II: Construction of southern PTAR, rehabilitation of PTAR Los Salados, and construction of sewage system | | |
| In the master plan of Sewage sanitation, recommendation concerning Environment and Water Supply department was submitted, which was implemented from January 2003. | | |
| (FY 2004 Domestic Survey) From the implementing body of public water and sewer corporation in Santiago, applied to the central government to request yen loans for the project implementation. | | |
| (FY 2005 Domestic Survey) The Dominican government will be requesting for a Yen loan to JBIC. Currently, it is being under consideration within JBIC. | | |
| (FY 2006 Domestic Study)(FY 2006 Overseas Study) Mission team have been dispatched from JBIC in September 2006, and this project is supposed to be implemented as a Yen Loan service. In addition, requests mentioned below has been made dated on 17th March 2006; 1) Plan for revision of general law concerning sewage sector 2) Merger/Integration plan for sewage sector for improvement and modernization 3) Analysis on sewage sector in Dominica Republic 4) Comprehensive evaluation on sewage business in FY 2000 | | |
| (FY2007 Domestic survey) JBIC planned to conclude LA in 2006 and proceed with the project to improve sewage system in Santiago City. However, it became clear that there is no funding plan on the Dominican side. Therefore, as of December, 2007, the loan cannot be given with the situation of no prospect of the local fund. | | |

Description :

(FY 2003 Domestic Survey)

After finishing the Study, a community project with agroforestry activities supported by JOCV volunteer was conducted to follow up the study results in the northern part of Study Area. We have not yet received the feature information.

According to some internet homepages published in Dominican Republic, Secretariat of State for Environment and Natural Resources The Dominican Republic and Fundacion Sur Futuro Inc. have made an agreement on implementation of this project.

(FY 2003 Overseas Survey)

- 1) A village project based on agroforestry was implemented in the northern part of the region targeted for the study as a follow-up of this study.
- 2) An office was established for forest management and operation.
- 3) A plantation with cultivation capacity of 4 million seedlings per year was established.
- 4) An activity to strengthen community-based organizations was commenced.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Domestic Survey)

Subsequent study: Sustainable management programme of upper Savanna Yebuadam basin

Implementing period: 2006/Jan

Implementing body: Ministry of Environment and Fundacion Sur Futuro Inc.

Funding: Own fund

Objective: To develop capacity of C/P organisations' staff regarding basin management by introducing simple irrigation agroforestry and activities of forestry fire prevention in 14 villages of the Kwavas and the El Grande river basin

Progress:

(FY 2006 Overseas Survey) The study was conducted on the establishment of basic social and economic criteria for 14 areas, selection of sites for allocating compartment, preparation of documented proposal on agricultural and forestry production, selection of 9 potential sites for the construction of irrigation system, designing of 3 irrigation systems, planning of reforestation and delivery of tools for fire control at worksite.

(FY 2006 Domestic and Overseas Survey)

Technical cooperation:

Training: 1 personnel, during the period of September 24 through October 7, 2006

Opinion exchange and facility inspection tour were conducted in pursuit of having a meeting with the related parties of JICA in regard to the project operation and management by expanding understandings and knowledge of forest conservation, controlled administration and watershed management through participation.

Dispatch of specialists: 5 personnel for 143 days at maximum and 30 at minimum, responsible operations: 1) Chief advisor, watershed management and forest fire, 2) Agroforestry (including coordination work), 3) Development through participation, 4) Irrigated agriculture and 5) GIS.

(FY 2007 Domestic Survey)

Implemented project: Sustainable management programme of upper Savanna Yebuadam basin

Implementing period: 21 April 2006 - 31 March 2009

Implementing body: Ministry of Environment and Natural Resources, JICA

Funding party: JICA (Technical cooperation project)

Objective: To improve technical and management capacity of staffs of Sul Futuro Foundation and Ministry of Environment and Natural Resources in order to maintain the river basin and operate the project

Target: 14 villages alongside of Las Cuevas River and Grande del Medio River in the city of Padre Las Casas, upper Savanna Yebuadam basin

Dispatch of expert: Five experts: Chief advisor/watershed management/forest fire, agroforestry, participative development, irrigated agriculture

Progress:

(FY 2007 Domestic Survey) Since the Hurricane Noel (October 2007) hit the project site, construction of simple irrigation facilities was halted for one month. The facilities under construction was also damaged and need to be repaired.

1) Agroforestry: By 2007, demonstration farms of 20 families were established
 2) Simple irrigation agriculture: Two villages (2006/ 61 families, 36ha); One village (2007/ 32 families, 14ha); One village (2008 planned). The families signed the agreement to abandon slash-and-burn agriculture and conduct reforestation.

3) Reforestation: By September 2007, 18ha of area were forested at the villages which applied simple irrigation agriculture. The seedling farm of the Sul Futuro Foundation produced 195,400 seedlings in 2007 and is producing 816,600 trees. FSF engineers measured the area for forestation planned in spring of 2007 using GPS and prepared the draft. The forested area will be maintained using GIS.

4) Forest fire: Agreed to organize fire fighter groups and three villages already established the group.

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | Discontinued or Cancelled |
| Description : | | |
| <p>(FY 2004 Domestic Survey) At the submission meeting of the draft final report in August, 2003, JICA Dominican Republic office showed an intention in supporting the Farmland Agency in planning, implementing, and M&E for the implementation of a regional plan prepared in the development study. A basic design study of a grant-aided water supply project targeting at beneficiary areas of the land reform conducted by the Farmland Agency has started in 2003. This project was intending to cover a part of the M/P. In addition, although it is unconfirmed information, the lawsuit filed by the Japanese immigrants to Dominican Republic against the Japanese government seems to be reconciled.</p> | | |
| <p>(FY 2005 Domestic Survey) Subsequent study: Water supply B/D Implementing period: 2003 Implementing body: JICA Relation with the study: Rural water supply project, consists part of the sub-project of "securing safe drinking water". Status: In March 2005, selection of local consultant is planned for an investigation of the necessity of technical cooperation based on the evaluation study planned to be conducted by local JICA office. As for renovation of former public plantation area which includes plenty of lands on the margin of cultivation, in addition to living environment improvement component such as improvement of water supply, M/P for small scale comprehensive agricultural rural development and the concrete methods to implement the plan are proposed. At the time of development study, the targeted former public plantation area for the renovation was about 64,000 ha, including 60,000 ha in total which could be allocated for landless farmers although it was not registered officially at that time. The most part of the land is considered to be the former sugarcane plantation area. It is regarded to be important that under the initiative of the government of Dominican Republic, the local offices of the Farmland Agency play a major role to formulate a study plan on the renovation of the former public plantation areas and implement the survey, monitoring and evaluation on their own, in cooperation with the local offices of the Ministry of Agriculture and Ministry of Water. If necessary, they should also involve local governments and NGOs and establish a coordination framework for such activities.</p> | | |
| <p>(FY 2005 Overseas Survey) As for the income increase project proposed by the study, it was decided to be a priority project of the Farmland Agency in fiscal 2005. (Decision No.006) The comprehensive groundwater development plan to expand the living environment improvement project proposed by the study is under consideration for implementation. Until 2009, 200 wells are planned to be constructed. The expected effects are; to increase beneficiaries of drinking water supply by 30,000, improve drilling technology of IAD staff, improve water supply system at a national level, enhance the function of drinking water users associations and establish new associations, and decrease the number of patients contracted diseases by using contaminated water. In addition, the follow-up survey of this study was conducted by the JICA Dominican Republic Office through local consultants from February to March in 2005. The purpose of the survey was to investigate the possibility of continuous implementation and development of the pilot project carried out under the study.</p> | | |
| <p>(FY 2006 Domestic Study) As the Dominican Republic is already excluded from eligible countries for Japanese Grant Aid (Per capita GNI exceeds the level of grant eligibility), the next phase project using Japanese grant scheme will not be realized. 3 years have passed since the submission of the final report and the possibility of new projects using other resources also seems to be low. As the Dominican Agrarian Institute (IAD: Instituto Agrario Dominicano), which is the C/P agency at the time of development study implementation, is an agency whose main objective is the transfer of land to landless farmers. And there is an aspect that the system to provide support to farmers after land transfer is quite weak, and as cooperation and collaboration with other agencies for the implementation of planned various projects were essential, it seems unlikely that next phase projects other than the abovementioned grant project are implemented by the Institute alone.</p> | | |
| <p>(FY 2006 Overseas Study) Evaluation of present situation, continuity and progress of the Integrated Rural Development Plan for Former Sugarcane Plantation Area in the Dominican Republic is implementing. Purpose: To follow up pilot projects (sugarcane reaping machine/instrument) implemented in a number of communities focusing present situation, continuity and the degree of progress of the results of this integrated plan in the framework of the "Integrated Rural Development Plan for Former Sugarcane Plantation Area". Relation to the study: To focus on the evaluation of the actual situation of authorization to the Dominican Agrarian Institute (IAD) which is an implementing agency concerning recommendation about the report, maintenance and expansion of results gained by pilot projects carried out during the implementation period of the study report.</p> | | |
| <p>Others: Although a request for technical cooperation of JICA on follow-up was requested to strengthen the authority of the Dominican Agrarian Institute (IAD: Instituto Agrario Dominicano) for the application of activities and suggestions based on the study, it was not approved by JICA. As a concrete activity suggested in this report, they implemented JICA grant aid to the Dominican Agrarian Institute (IAD) in the form of donation of machinery and equipments amounting 5.5 million dollars for the "Integrated Rural Development Plan of Groundwater in Former Clearance and Former Sugarcane Plantation Area" (from 2003 to 2007) to supply groundwater to 15 arable lands in reclaimed lands. The Dominican Agrarian Institute (IAD) has also adopted the internal resolution (No. 006) dated on July 29, 2005. Accordingly they formulated an integrated rural development program in reclaimed</p> | | |
| <p>(FY 2007 Domestic Survey)(FY 2008 Domestic Survey) No information to be specifically mentioned.</p> | | |

Description :

(FY 2009 Domestic Survey)

The following strategies that were proposed during the development study have been adopted in the National Development Policy Midterm Project:

- 1) Maximum use of border markets, joint priority ranking with the neighboring countries, environmental protection, formation of core cities and strengthening of communal production capacity.
- 2) The construction and propagation of Local Initiative Capacity Development Model. However, this strategy which focuses on the economical relations with its neighboring nation, Haiti, is currently not being carried out as proposed due to the damages from the earthquake in Port-au-Prince. Japan overseas cooperation volunteers were dispatched.

(FY 2009 Overseas Survey)

This project satisfies the national development project, and the proposed strategy became the basis of the Haiti reconstruction project. The project became the basis of national development project design because the proposal applies to the border areas between Dominican Republic and Haiti, the areas that were affected by the earthquake. This proposed strategy meets the basic policy that is needed in order to develop a model city, which will become the paradigm of the development of Haitian cities that are near the border, and will contribute to the implementation of a similar project on the Haitian side of the border in the near future. The experiences gained through the implementation of this project will not only serve as future reference to the states near the border, but also for Haiti to build a paradigm, both within its borders and abroad.

In addition, the following projects have been carried out:

The capacity development for effective development projects in la provincial de Elias Pina.

(FY2013 Domestic Survey)

Project on the Capacity Development for Efficient Planning and Development Management in the Province of Dajabon

Implementing period:2011.12-2015.3

Implementing body:DGDF, MPEyD

Project Purpose: To establish a mid-term development plan that reflects needs of local people, and to secure budget and to implement the plan.

Outputs:

- 1) To strengthen the institutional capacity to establish and implement the development plan at the city and prefecture level.
- 2) Under the cooperation of central government and each ministry, city and prefectural development councils of the targeted area work together with ministries, and the framework among the stakeholders is built for the development project formulation and implementation.
- 3) The challenges, successful examples and lessons to be compiled from the output 2) of the process establishment, and to be shared among the related agencies.

(FY2013 Overseas Survey)

Implemented project:Local Development in support of the Binational Border Programme

Summary of the project:Boost cross-border local development of Dominican - Haitian border people-centered, building capacity, dialogue and cooperation entities and Dominicans and Haitians in that territory local actors, in coordination with national agencies with responsibility for relations exchange between the two countries

Implementing period:Phase1(2011-2012), Phase2(2013-)

Implementing body:Ministry of Environment and Natural Resources, the UNCCD focal point, and the director of the GTI (Dominican Republic .Undersecretary of Soils and Water) and CIP (Haiti has a combined UNCCD focal point for the UNCCD CIP) as well as UNDP, FAO, and CIDA Programme Officers.

Organization supporting implementation:EU

Implemented project:Reducing conflicting water uses in the bi-national Artibonite River basin through development and adoption of a multi-focal area Strategic Action Programme

Summary of the project:To ensure ecosystem stability, integrity and functionality, and the continuity of ecosystem services that support global benefits and sustainable livelihoods in the bi-national Artibonite Watershed.

Implementing period:2012-2016

Implementing body:Ministry of Environment and Natural Resources, the UNCCD focal point, and the director of the GTI (Dominican Republic .Undersecretary of Soils and Water) and CIP (Haiti has a combined UNCCD focal point for the UNCCD CIP) as well as UNDP, FAO, and CIDA Programme Officers.

Implemented project:Program support for traditional farmers

Summary of the project:Establish a mechanism for interagency collaboration for sustainable development and competitiveness of the productive sector in order to increase competitiveness and socio-economic development of the border region

Implementing period:2012-2016

Implementing body:General Directorate of Border Development (DGDF)

Organization supporting implementation:National Council of Competitiveness (CNC), Dominican Agrarian Institute (IAD), Special Fund for Agriculture Development (FEDA), National Grape Institute (INUVA), National Institute of Hydraulics Resources (INDRHI)

Description :

(FY 2009 Domestic Survey)

Since it has not been long since the termination of the project, concrete activities with the proposed contents are to be implemented henceforth, but the promotion of an action plan, which is based on the proposed content is currently being planned.

There is a person in charge of ecotourism within the Ministry of Tourism and Ministry of Environment and Natural Resources, whom are the counterpart organizations, and a system to put the proposed "National Ecotourism Strategy" into effect has already been prepared. Furthermore, due to the preparation of a system called "Tourism Cluster" which is an organization that incorporates the local residents, opportunities are rising for the development of sustainable tourism on a local level.

(FY 2009 Overseas Survey)

The following activities have been executed:

- Implementation of the guideline that has been stated in the study results
- Implementation of the training courses funded by international organizations
- Establishment of 31 protected areas (2009) for the preservation of natural resources, historical and cultural resources, and the transformation of public space into an entertainment space.
- Evaluation and provision of support for proposals related to ecotourism initiatives requested by entrepreneurs and community business operators.
- Observation of the RAMSAR pact (Convenio RAMSAR) and the restoration of the wetland by making it into a protected area
- Signing of a resolution for cooperative management for the development of ecotourism in the community and within local organizations.

(FY2013 Domestic Survey)

After the completion of the project, the technical cooperation project "Sustainable Tourism based on Public-Private Partnership"(2009-2013) had been implemented in the Republic of Dominica. In order to pursue tourism development that enables enough return of profits to its local people, the project had supported making the framework of regional development in the area of Puerto Plata, the second largest tourism city. This was realized by involving the local people and the private sectors so that the region as a whole can actively join the tourism projects. The recommendations offered by the project has been partially adopted in the tourism development of the project site, Puerto Plata Prefecture, regarding each category except for legal and institutional framework preparation.

(FY2013 Overseas Survey)

Implemented project:Development program for eco-tourism areas: Improvement the eco-tourism offers based the activities for community development.

Summary of the project:

Created the program to support and coordinate different eco-tourism project. Planning program, implementation and follow up of new eco-tourism offers, based in activities for community development, local and urban. Elaboration of new routes and theme fairs. Listed are some of the projects developed in different areas of the country:

- Salto del Limon: Signposting, promotion and divulgation of its attractions through informative materials.
- Creation and support of the Guide s Association.
- Boca de Nigua (Humedales): Development of products and promotion for the increase of national visits and others.

Type of fund: Own fund

Implementing period:2010-

Implementing body:Ministry of Environment and Natural Resources and Ministry of Tourism

Implemented project:Training program for personnel: Implement qualification and formation of technical personnel.

Summary of the project:

Campaign for technical personnel qualification and operative of the Environmental and tourism ministry, for the strengthening of the capabilities and management of people, guide, planner and supervisors of the project developed in the country, related to ecotourism.

- Visitor security
- Environmental interpretation course
- Tourist guide course
- Rural ecotourism and community guide course
- Language capacitation
- Bird interpretation course
- Planning and management of ecotourism..

Type of fund: Own fund

Implementing body:Ministry of Environment and Natural Resources and Ministry of Tourism

Implemented project:Monitoring system: Maintain protected areas under supervision controls, for the security, visitors flow count and impact to the ecosystem.

Summary of the project:

At moment, the partnership office has not established, but anyway MITUR and MARENA has good teamwork together. Regarding ecotourism projects should be based on consultation and complimenting with the strategic plan. Monitoring system: Maintain protected areas under supervision controls, for the security, visitors flow count and impact to the ecosystem.Each of the programs and projects developed for MARENA, taken into account the participation and involvement of the Tourism and Culture ministries and other collaborators.Teamwork between MITUR and MARENA, with the support of other instances is overseeing the security of visitors, visitors statistics, care of the ecosystem and environment, providing awareness and empowering communities about the importance of the preservation and improvement of their surrounding improving the way of life.

Description :

Utilization of the study:

(FY 1992 Overseas Survey)

The study prepared 36 plate of maps with three different scales (1:20,000 , 1:50,000 and 1:100,000), which are being used as bases for planning forest resources utilization, forestry project, afforestation program etc.

(FY 1996 Domestic Survey)

This Study report has been well utilized on the development of roads to transfer the extracted oil and on the overall forestry development. In particular, this Study fully investigated the situation of forestry resources in this area. So, the existing state of forest became clear.

Situation:

(FY 1994 Overseas Survey)

The administration and development plan for the emphasized area was not materialized due to the difficulty of financing. However, the authority concerns about the possibility of new technical cooperation on this subject.

Description :

The Government of the Republic of Ecuador has keen interest to implement this project by Japanese Yen Credit. However, the present situation is not clear as the authority concerned (INERHI) has been dissolved.

(FY 1996 Domestic Survey)

The Water Utilization Committee has taken over this project after INERHI was resolved.

(FY 1997 Domestic Survey)

The Government of Ecuador puts lower priority to this project than the projects on port, road, power plant, etc.

(FY 1998 Domestic Survey)

No detailed information at present.

Description :

(FY 2008 Domestic Survey)

There has been no progress except for some recommendations that have been materialized to some extent.

When the study was completed, the director of the counterpart agency has changed. With the new director, there was limited understanding of the master plan at institutional level. There was also not/little information sharing among counterpart officials. This institutional situation made it difficult for the counterpart agency to take actions for implementation of the recommended projects. Although the request for assistance was made to the embassy of Japan after the completion of the study, it was found that it did not follow the contents of the master plan.

While there was a tendency of declining the scale of business undertaken by the counterpart agency and the amount of budget for it under on-going decentralization policy, SENPLADES (National Secretariat of Planning and Development) articulated, through the development study, the importance of this organization. However, with the decrease in human resources and the deterioration of physical resources remaining in the counterpart agency, there appeared the inevitable question of whether it was an appropriate entity to receive the assistance. According to the recent information received, the institutional position of the CREA has been reviewed, which results in the gradual increase of the budget over years.

Just prior to the completion of the study, the requests for Grass-root Grant Aid and Japan Overseas Cooperation Volunteers had been made. As for Grass-root Grant Aid, the proposal for small-scale irrigation projects were approved. At present they are being implemented with community participation.

In addition, "Study on the Reorganization plan of the Poverty Reduction Support System for Small Scale Farmers in Sierra Regions of Ecuador" is also conducted based on the experience of the previous project in the southern part of Sierra. The study has taken into account the contents of the the previous project since the starting-point of the study formulation. This is because there has been an attempt to replicate the experience in the southern part of Sierra to other provinces and higher priority has been put on assistance to poor and/or native people in rural areas.

(FY 2008 Overseas Survey)

The central government promulgated laws and regulations to launch the reorganization of the central organizations and their jurisdictions based on the law of "Modernization of the State and Privatization/Provision of Public Services with Private Enterprises" that was enacted in December 1993, in order to restructure the system, attain efficient administration, and decentralize and simplify public services.

Against this background, it was proposed to "transfer the authorities of the central government to govern the economy and administration and collect tax to the local governments through cooperation with ANME (Association of National Municipal of the Ecuador) and CONCOPR (Consortium of Provincial Councils of the Ecuador) in the promotion of decentralization. With the establishment of this framework, the central government has launched the transfer of the administrative function, authority and responsibility to the local administrative organs. As has been observed in the case of CREA (the Center of Reconversion of Azuay, Canar and Morona Santiago), however, this transfer does not take into account the planning and development levels of the local development entities. The policy was finally reflected in the constitution enacted in 2008: the authority concerning irrigation has been handed over to INAR (the state irrigation administration) since then; CREA had concentrated its financial, human and physical resources into this transfer program until 2007.

This political context led to the reduction of budget for investment and the shortage of funds for proceeding with international economic cooperation, which resulted in the limited capacity of the counterpart agency for institutional management. This management limitation, in turn, created disturbance in materializing the main frame of "the Master plan for the Economic Reinvigoration and the Poverty Alleviation in the Central Southern Region of Ecuador" which had been formulated with the cooperation of Japanese Government.

CREA and the delegation of Japan handed over the materials of the master plan to the authorities of central/regional/local governments from June to August in 2005. However, the negotiation to acquire financial resources through international cooperation for the master plan has not yet been held so far.

Following are the major projects undertaken by CREA in relation to the recommendations made in the master plan.

1. Improvement of agricultural and livestock production

-Increase of production for home consumption (e.g. technical assistance to small-scale farmers, implementation of small-scale irrigations, and development of aquaculture fields)

-Increase in farmer's income (e.g. the development of farming areas to cultivate cacao trees, the livestock of small animals)

-Increase in farmer's income (e.g. the development and maintenance of pasture lands and the production and marketing of stud bulls)

-Processing of agricultural products (e.g. design and construction of cacao processing factories and implementation of training)

2. Promotion of handicraft industry in rural areas

-Training for improvement of handicraft skills

-Rolling and extension of metal materials

-Training to support for production of fiber, lumbering, dairy products, food processing and service industries

3. Improvement of living condition

-Maintenance and construction of waterways and irrigation channels (e.g. coating and repairing of waterways, establishment of water pipes, development and maintenance of farm roads, and construction of reservoirs)

-Maintenance and construction of walking bridges and passing baskets

4. Promotion of reforestation

(FY2012 Domestic Survey)

Presidential Planning Department (SENPLADES) has considered the restructuring of public corporations responsible for local development such as Center of Reconversion of Azuay, Canar and Morona Santiago (CREA), a counterpart organization for the Development Study. Presidential Decree No. 1689 was issued on the 8th of May, 2009 and this center was abolished.

Following the revision of the Constitution in 2008, together with the decentralization in the country to be launched from 2009 and the introduction of territorial approach, agricultural projects have come under the jurisdiction of the provincial government as an implementing body. Accordingly, Local Department of MAGAP, INAR (Instituto Nacional de Riego), and INIAP started to receive technical assistance by the state government on project implementation, which has continued up to present.

Since 2007 when the preparation for the revision of the Constitution started, and before roles and functions of each organization were clarified, there was a noticeable tendency that proposals of new projects were postponed, which forced INIAP to focus on the extension of existing projects and their follow up activities and disabled this proposal to be realized. The direction of INIAP after 2010 is not clear yet.

The following projects and tasks were implemented before the transfer of the roles of CREA to other relevant organizations.

*Excellent kinds of seeds of basic grains such as wheat were produced in the farm (Granja) owned by CREA, and limited number of seeds were distributed.

*Follow up activities on the improvement of livestock sanitary techniques (technical assistance)

*Exhibition of excellent seeds and producing and selling seedlings at Granja owned by CREA

*Consolidation of the irrigation system for agriculture and stock raising purposes on the land of 1,100 hector in Azuay and Canar Provinces.

*Forestation activities were conducted on the land of 1,500 ha in the deteriorated soil district for the purposes of restoration of deteriorated soil, ensuring water source,

| 9. SITE OR AREA | Archiguate and Pantaleon Rivers | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>[Sediment Control Works]<M/P>The design sediment discharge of 30-year(M/P),10-year (F/S) return period is 1.94 million cu.m(M/P), 710 thousand cu.m(F/S) in the Achiguate river basin and 3.25 million cu.m(M/P), 1,206 thousand cu.m(F/S)in the Pantaleon river basin. The sediment control plan is made up of sediment control dams of cobble stone concrete type. It is proposed that three dams for the Achiguate river basin and five dams for the Pantaleon river basin be conducted to fully regulate the design sediment discharge:<F/S> Sediment control can be accomplished at a limited number of sites by high dams which have the highest sediment regulation effect. Sediment control is made up of two dams of cobble stone concrete type for Achiguate river and one dam of the same type for Pantaleon river.</p> <p>[Flood Control Works]<M/P>To protect the target assets from flood damage, partial river improvement works are employed for the project.</p> <p>For Achiguate river, the flood control works consist of river channel improvement in two stretches for the CA-2 road bridge and the railway bridge and for the urban area in Finca La Trinidad, respectively, and a ring levee around the urban area in Finca La Barrita. For Pantaleon river, river channel improvement will be undertaken for the protection of the CA-2 road bridge and the national railway bridge. The total length of river improvement are 11.0km and 3.4km in the Achiguate and the Pantaleon rivers, respectively. The ring levee is constructed over 5.0km around Finca La Barrita. Riparian facilities such as revetment, ground sill, etc.,will be installed to maintain the function of the proposed improvement works. The design flood discharge are 1,200m³/s(M/P), 950m³/s(F/S) for the Achiguate river and 1,150m³/s(M/P),900m³/s(F/S) for Pantaleon river, respectively. <F/S>Flood control can be accomplished by river improvement works. For Achiguate river, the river improvement works are composed of channel excavation with wet masonry revetment and concrete ground sill, and construction of foot protection groyne. For Pantaleon river, river improvement stretches to 3.4km, and river improvement works are of excavation with wet masonry revetment and concrete ground sill.</p> | | |

| PRESENT STATUS | Completed or In Progress Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
|--|--|--|
| <p>Description :</p> <p>The reasons for delay or stoppage: Low priority</p> <p>Detail: Regarding M/P, since the arterial road and railway cross the two rivers, it is crucial to ensure the safety of the bridges through effective flood control measures.</p> <p>Regarding F/S, owing to the budgetary constraints, it is difficult to allocate government funds to the proposed project which would not have an immediate impact on the productive sectors.</p> <p>Because of the low EIRR, the Government of Guatemala assigned lower priority to the proposed project. The Government reviewed the study and applied to Japanese Grant Aid in March 1991, but was not successful.</p> <p>(FY 1991 Overseas Survey) The Ministry considers that the proposed project is high in urgency and hopes to obtain financial assistance from Japan. The Ministry expects that the project be implemented in conjunction with the conservation of the upper basin of Achiguate River.</p> <p>(FY 1993 Overseas Survey) Application for Grant Aid was made in March 1991, however project cost was far beyond the limit of grant aid of Japanese Government and the implementation of the project was suspended. Annual budget of the agency is approximately 6.5 million US\$ and almost all annual budget is spent for maintenance and repair work of existing road. Moreover serious flood damage of other rivers, such as river Samara of Retalhueu province has been observed, so the priority of this project has been ranked low.</p> <p>(FY 1996 Domestic Survey) In 1996 a request was submitted to the Japanese government for a grant aid assistance in order to implement a part of the proposed project.</p> <p>(FY 1997 Domestic Survey) Request was submitted to Japanese Embassy in Guatemala.</p> <p>(FY 1998 Domestic Survey) Although request for a grant aid assistance was submitted in 1997, the project has not been implemented due to the shortage of government fund allocation.</p> <p>(FY 1998 Overseas Survey) Application for grant aid over Achiguate River water control was submitted in Sep. 1997, but was not accepted. Hurricane Mitch has done harm in '98 and countermeasure to flood control is urgently needed. The government looks upon the grant aid assistance from Japan.</p> | | |

Description :

Subsequent Studies:

May.2.1994 D/D+S/V (49 months)
 Sep.19.1994 Consulting work started

Finance:

Jun.16.1992 L/A 4,711 mil.Yen
 (1)Construction of 38 deep wells and related facilities.
 (2)Renovation of the existing 22 wells.
 (3)Fee for the consulting services.

Contract with a Consulting Firm (Chuo Kaihatsu International Corp.)

Related Implemented Projects:

(FY 1993 Overseas Survey)

- (1)Installation of water level meters and implementation of regular water check-up tests at 64 wells, 80% of 80 wells owned by EMPAGUA.
- (2)Digging of 17 new wells with domestic fund of 18 mil.Q.
- (3)Study on water supply and distribution system in the North with French loan of US\$ 1 mil.
- (4)Organizational restructuring of EMPAGUA.

Utilizing a part of US\$ 120 mil. loan which was provided by the World Bank for the economic modernization, EMPAGUA concluded a contract with the consortium composed of TAHAL (Israel), E.T.ARCRER (U.S.A.), SANEPAR and COMSIP (both Brazil) (US\$ 2.15 mil.) and formulated the organizational restructuring plan covering 21 areas, such as management, financial affairs, investment, public fare system, staff training, etc. from 1989. Also, the installation of 40,000 domestic water supply pipes and the procurement of seven vehicles were carried out.

Description :

Projects with their own fund:

(FY 1993 Overseas Survey)

Dec.1992 ~July 1993 Dredging of inland channel and grounding of terminal completed with the own fund of 110 mil.Q

The construction of the oil terminal with the domestic fund of 15 mil. Q has been under consideration to be commenced from mid-1995.

Background:

(FY 1991 Overseas Survey)

The study report has been utilized in the Planning Unit and the Engineering Department of EMPORNAC. The project is given high priority, therefore, it is likely to be implemented in future.

(FY 1993 Overseas Survey)

The 1989 OECF Loan Appraisal Mission proposed a loan on the condition that the project scale be reduced: (1)Installation of two gantry cranes instead of three, (2)Installation of four strand carriers instead of six, (3)Reduction of the forklift capacity by half and (4)no construction work on the waterways because of the environmental consideration. However, the Minister of Finance did not approve the acceptance of the loan in fear that the Port of Santo Thomas Authority be unable to repay. As a result, there will be no possibility to implement the project with an OECF loan.

(FY 1993 Overseas Survey)

In August 1993, the Central American Bank of Economic Integration (BCIE) decided to provide loan (45 mil. Q) for expansion of container terminal, the construction of container yard, the improvement of navigation aid facilities and the installation of cranes. The construction was planned to be completed by Dec. 1997 (total construction cost: 525 mil. Q, including 45 mil. Q of the foreign currency).

(FY 1993 and 1998 Overseas Survey)

Since D/D and EIA was conditioned prior to the provision of BCIE loan, EMPORNAC conducted EIA in Nov. 1993 and started D/D in July 1994 with their own fund (2.5 ~ 3 mil. Q). However, the provision of BCIE loan was postponed.

| PRESENT STATUS | Completed or In Progress Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
|---|--|--|
| <p>Description :</p> <p>Subsequent Studies: (FY 1994 Domestic Survey) Due to change of laws, environmental assesment study is required before the implementation of the project. The DIRYA has completed the environmental assesment study. (FY 1997 Domestic Survey) An expert of a consulting company which conducted F/S accompanied JICA short-term expert in FY 1993 and made a draft on EIA.</p> <p>Finance: *Process (FY 1989 Domestic Survey) In view of the high priority of the proposed project, the Government of Guatemala applied for Japanese Grant Aid in March 1989, but it was not successful due to huge project cost of US\$46.85 mil.</p> <p>(FY 1991 Overseas Survey) The ministry assigns high priority to the proposed project and plans to revive the request for Japanese Grant Aid in 1992.</p> <p>(FY 1993 Overseas Survey) 2 JICA experts were sent for 1 month to conduct complementary study and to find out measures to reduce the project cost. The agency is still planning to apply grant aid and loan aid for the implementation of the project.</p> <p>(FY 1993 Overseas Survey) Priority of the project is stil ranked high and is the top priority project among agricultural projects of Guatemelan Government. The agency considers that project cost of 70,000q/ha is almost 3 times as compared to standard project cost of 20,000q/ha.</p> <p>(FY 1994 Domestic Survey) According to the result of project cost review by JICA experts, the total cost of the project was US\$63 million. The Government of Guatemala hasn't decided to implement the project.</p> <p>(FY 1996 Domestic Survey) The project implementation has been hindered because the project cost is too big for grant aid assistance and the adaption of an OECF loan is likely to burden farmers. Unless the government decides the allocation of more fund to this project, it is unlikely that an OECF loan is approved.</p> <p>(FY 1997 Domestic Survey) While the expert was in Guatemala, "Conference for Urgent Implementation of the Project" was held by beneficiaries and local public organizations, requesting realization of the project to the Government. It seems that the development project which needs large-scale investment is difficult to approve because of the Government's policy not to increase foreign debt.</p> <p>(FY 1997 Overseas Survey) In the period of change of regime, the management was stopped and priority of the government was changed. Therefore, the project was postponed also because of its high cost. According to the policies of MAGA, the project referred to development of irrigation areas had high priority during 1991 from now on. It was informed that the Ministry of Agriculture is willing to support the Monjas Project into an investment average of 36,000 per ha, but it is necessary to review the study.</p> <p>(FY 1998 Overseas Survey) The enlargement of irrigation area is an important agricultural policy, whereas MAGA continues to put high priority on this project and is willing to implement it. Because of the private management policy of irrigation which started from 1987 (management of facility by farmers etc.), it is necessary to review the survey.</p> | | |

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| <p>Project implemented</p> <p>Even with the reduced scale and cost, some feasible projects are being implemented by their own budget.</p> <p>(1)Aurora Airport</p> <p>1. Renewal of radar system (FY 1998 Overseas Survey)</p> <p>New radar system was ordered. Primary radar and single-pulse radar were purchased. They are to be installed by the Paytheon-Indran enterprise within this year. The construction of a new control tower which is included in this project was started. (FY 1999 Overseas Survey)</p> <p>Regarding the renewal of primary radar ELTA, conventional secondary model COSSOR, primary radar system PYTHOEON ARS 10SS, secondary radar mono pulse INDRA IRS20MP-L, radar data processing AIRCON2000 system, voyage plan data processing, 80% of civil work and 10% of installation have been completed.</p> <p>2.Recording system and VHF telecommunication of the control tower were purchased from AEROCOM Co. (USA) with the cost of 2 million Q. Installed on Jun.1993.</p> <p>3.Visual fright support system was purchased from CROUISE HANDS Co. (USA) with the cost of 5 million Q. It will be installed on Mar.15.1994.</p> <p>4.Modernization and expansion of terminal building: A contract agreement has been signed with COGUSA Co. However, due to the rapid increase of demands, the cost estimation is not come out as yet. Various facilities are provided already, but the periods of installation are not fixed because of the lack of infrastructure for security. (FY 1998 Overseas Survey)</p> <p>Improvement works of customs, baggage conveyor, bank services, rent-a-car, hotels, VIP room, baggage room was conducted. Regarding the JICA-proposed projects, the transfer of the baggage conveyor to the north part was implemented. North satellite plan proposed by JICA as a short-term project is under consideration.</p> <p>The construction is suspended because the plan to transfer the concession of developing the airport is under consideration.</p> <p>5.Repavement of the arrival runway at the La Aurora Airport was implemented by the successful bidder. Not only the methods suggested by JICA, but some other convenient methods are considered to apply on this project. (FY 1998 Overseas Survey)</p> <p>Construction works were conducted by Sigma Construction for five months in 1994. Paving work of the part of taxiway was conducted. (FY 1999 Overseas Survey)</p> <p>Improvement of the taxiway is on-going.</p> <p>(2)Santa Elena Airport</p> <p>1.Renewal of radar system (FY 1998 Overseas Survey)</p> <p>New radar system was ordered. Single-pulse radar were purchased. They are to be installed by the Paytheon-Indran enterprise within this year. The construction of a new control tower which is included in this project was started.</p> <p>2.Visual fright Support System at Santa Elena Airport To renew within FY 1994, budget for the installation has been presented to the Diet.</p> <p>3. Improvement of the terminal building (FY 1998 Overseas Survey)</p> <p>It was improved recently. However, it has not been expanded.</p> <p>Pending Problem</p> <p>The DGAC has not yet decided on the schedule of implementation of large-scales projects due to economic reason. (FY 1993 Overseas Survey)</p> <p>1) DGAC attempted to request an OECF loan for the short-term development program, but the Ministry of Finance turned it down because of the high project cost, and no further development along this line partly due to the policy change that places more emphasis on social sectors.</p> <p>2) The GOG made a request for a 1000mil.yen Japanese Grant on the renovation of CFR facilities in 1990, but it has not been realized. Although studies were conducted by two Western engineering companies : by Westinghouse in late 1993 and Electronics in Feb. 1994, DGAC has concluded that the project is too large (\$10 mil. to 15 mil.) to be carried out with domestic fund. (FY 1998 Domestic Survey)</p> <p>All the projects proposed in the emergency development program and the short-term development program have not been completed. The government has been promoting the projects, while some political parties have been opposing them. Therefore, progress has been made with very slow pace.</p> | | |

Description :

Based on the Study results, 31 projects, which belong to any of (i) Road Network Plan, (ii) Public Transportation Plan or (iii) Traffic Management Plan, were proposed to be implemented by 2010.

(1) Projects for East-West Corridor, Ave. Petapa, Busway, Bus Centers for Each Zone, Extra-Urban Bus Terminal and Bus Weight Inspection Center.

These six projects were interated into one project. The Japanese government was requested for the implementation of its F/S.

In Apr. 1995 a preliminary survey mission was dispatched and S/W was concluded.

Aug. 1995-Feb. 1997 JICA F/S "Comprehensive Urban Transportation System in the Metropolitan Area (S 313/96)"

(2) Improvement of Intersections

The construction is scheduled to be commenced from 1995 with 30 mil. Q. financed by central American Bank of Economic Integration.

*Initially, F/S for this project was requested to JICA. (Although M/P proposed to construct an underground multi-level crossing at four intersections, due to the cost consideration, it was revised to the construction of flyovers).

(3) Three Projects out of 14 projects in Phase I and II

Finance: Own fund of the City of Guatemala

-Improvement of 15 streets in six districts

(Budget: 6 mil. Q/Implementing Period: Nov. 1992-Apr. 1994)

-Improvement of 250 bus stops

(Budget: 3 mil. Q/Implementing Period: Jan.-Dec. 1994)

-Improvement of road signs

(Budget: 0.7 mil. Q/Implementing Period: two years commencing in Jan. 1994)

(4) Improvement of Traffic Control System

A bill was submitted to the legislature in order to change the jurisdiction of the traffic control from the Police Department to the City of Guatemala. After the bill is passed, the budget will be allocated and the project will be commenced in the first half of 1995.

(5) Ave. Hincapie Project (Frequent occurrence of traffic accidents are observed in this avenue)

A part of the projects such as the construction of a bridge and the improvement and the widening of road have been implemented by the Ministry of Traffic, Communications and Public Works. (Budget: 20 mil. Q/Implementing Period: May-June, 1992)

(6) Middle Ring Road Plan (one of four mid-term projects)

(FY 1993 Overseas Survey)

The construction of a part (3km) of the ring road is scheduled to be commenced from November 1994 with the budget of the City of Guatemala (7 mill. Q).

| Construction/Realized Project: | | |
| *Equipments | | |
| Mar.1993 Delivety ceremony (The instructions in operation and maintenance of bulldozers and those in operation of truck/ wheel loader were given by experts for 10 days and 2 days respectively.) The central vehicle maintenance factory which handles protection and maintenance of vehicles and heavy machines, electric circuit and lathe-procession of repair parts has been set up separately from the solid wastes section. Condition of staff and finance has been much improved. Constant supply of parts, under this grant project, is expected to improve operation of the vehicles and machines considerably. | | |
| *Dispatch of Experts | | |
| Nov.-Dec.1993 Two experts on landfill were dispatched and their guidance contributed to improve the treatment. | | |
| *Guatemala City, Local Fund | | |
| Four truck slopes, two office buildings and four truck scales were prepared by its own budget. Now, the landfill is collecting garbages from all public area and 75~80% domestic area. | | |
| *Others | | |
| Rooms for heavy machines,storehouse for parts and workers' houses have already been set up at the El Trebol landfill and the scavengers have been living in the newly completed houses. | | |
| (2)El Guacamaya Landfill | | |
| Land acquisition trouble caused this project to delay. | | |
| (FY 1999 Overseas Survey) | | |
| This site is no more candidate site for the project due to the people's movement against the project. | | |
| (3)Privatization of Garbage Collection | | |
| The project was once implemented,but it is unsuccessful. Flowing step is not decided now. | | |
| (FY 1999 Overseas Survey) | | |
| Area classification system and route were proposed for the management of the waste collection and transportation. | | |
| (4)Approval System for Garbage Collection | | |
| The City introduced approval system on 239 private garbage trucks. The trucks have annually periodical inspection and area restriction. | | |
| (FY 1999 Overseas Survey) | | |
| 307 private trucks were checked and approved. These trucks were divided into 286 routes for waste collecting services. | | |
| (5)Sanitary Education | | |
| Video software provided by JICA was useful to enlighten adults and pupiles. Almost 250 thousand persons already have seen it. | | |
| (6)Metropolitan Garbage Committee | | |
| Established. However, unsuccessful function brought the Committee to discontinue. | | |
| (7)Restructuring of Public Cleaning Department | | |
| The City established Advisory Committee. The Department will be restructured in 1995. | | |
| Others: | | |
| (FY 1998 Overseas Survey) | | |
| Environmental plan regarding the solid waste management in the city has been formulated since Nov.1996 with IDB finance of US\$360,000. | | |

Description :

Finance:

(FY 1996 Domestic Survey)

The Government of Guatemala made application for Grant Aid in Sep.1993 for the implementation of Santa Catarina Integrated Rural Development Project and Montufar Integrated Rural Development Project.

Both Santa Catarina Mita Project and Montufar Project were on the list of the projects for which B/D is expected to be implemented. However, no progress has been made for the realization of B/D.

(FY 1997 Domestic Survey)

There is no progress in the situation.

Situation:

The agency puts the higher priority on Santa Catalina Mita Project because it is planned to utilize the existing facilities. The agency is negotiating with SEGEPLAN for the implementation of Montufar project to start after the implementation of Santa Catalina Mita Project.

(FY 1997 Domestic Survey)

At Santa Catarina Mita Integrated Rural Development Area, a part of rural road project is being implemented.

MAGA has desired for early realization of both projects.

(FY 1997 Overseas Survey)

The implementation of the project has been delayed because of politic changes during 1992 from now on, change of investment priorities besides the high cost of the project and the economic situation the city went in through that period.

According to the Agriculture Ministry the project is not feasible to execute as it was originally stated, and it will be necessary to check it and to bring up to date to search the possible alternatives to carry out.

(FY 1998 Domestic Survey)

The government changed their development target area and contents due to the change of political regime, policies, and peace agreement, following the cease of civil war. Therefore, the project has not been implemented.

(FY 1999 Overseas Survey)

Ministry of Agriculture implemented the project on irrigation infrastructure and pump equipment. The National Assembly approved the implementation of the development project in the north-east part of the country including Department of Jutiapa.

(FY 2000 Domestic Survey)

The project on irrigation infrastructure and pump equipment that was implemented by Ministry of Agriculture is one of the proposed projects in this Study. There is no information about the reason why the Santa Catalina Mita Project and the Montufar Project did not realize the request for the Grant Aid.

Description :

(FY 1997 Domestic Survey)

1. Reorganization

Based on the New Forest Law put in force on January 2, 1997, DIGEBOS, the counterpart organization for the Study has been re-established as INAB (National Institute of Forests). Although there has been substantial staff turnover, the key counterpart personnel, Ing. Noengry has kept his office at Regional Office II.

As a technical for Regional Office II which controls the Study Area, Noengry is preparing for the implementation of the Plan. Recently, "Junta Directiva" has been established as the highest decision-making body with an authority over the Director of INAB. He advised that the Japanese side need to consult Junta Directiva, at diplomatic level, for smooth implementation of the Plan.

2. Utilization of the outputs

The outputs of the Study, such as aerial photography and thematic maps, are now utilized for operation of INAB, as well as in the implementation of UNEPROCH project (This project is being implemented by the Ministry of Agriculture, Livestock and Food for the purpose of natural resource management and rural community development. It covers an area of 5494 km² in the upstream of Chixoy river including Baja Verapaz). The outputs of the Study are also used for PLV (Regional Development Program "Las verapaces" implemented by SEGEPLAN/GTZ) for local development.

(FY 1998 Overseas Survey)

Sub-projects for San Jeronimo National Forest have not been implemented due to the lack of finance. Although the request was submitted for the provision of a grant aid assistance and dispatch of two Japanese experts (inventory and forest conservation), there has not been any response so far.

The training in Japan regarding natural resources was given to an expert of DIGEBOS.

INAB is presently in charge of San Jeronimo National Forest. However, it is under consideration that the concession of development of the Forest will be transferred to the private sector.

(FY 1999 Overseas Survey)

Due to the change of the forest policy, INAB provides incentives to the land owners who are engaged in afforestation and management of the land used as the forest. As a result, the land owners participate in forest management and afforestation.

San Jeronimo Farm Project:

(FY 2001 Overseas Project)

Regional members of farms, concerned organizations, and schools participate in the project activities such as forest fire control education and farm regional members group formation.

This project is supported by engineers of INAB which offices locate in each municipality and San Jeronimo, Baja Verapaz.

Content(s):

1. Feasibility of the forest concession under the forest act No.12 is to be researched by forestry consultants.
2. Management of national farms: Organizational/technical forestation, Forest control and observation, Conservation of natural resources.

Objectives:

1. To transfer the concession of National San Jeronimo Farm to the private sector under the Forest Act and to implement conservation of natural resources.
2. To complete the procedure of concession of National San Jeronimo Farm in Baja Verapaz.
3. To promote participation of the neighbor farm district for the feasible utilization of natural resources in the National San Jeronimo Farm.

(FY 2002 Overseas Survey)

At present, control of illegal logging, prevention and control of forest fires, and monitoring and management of resources within farms have been continuously implemented.

|--|--|--|
| <p>Description :</p> <p>(FY 1997 Domestic Survey) As recommended in the F/S, EMPAGUA started to execute the South-3 project with an external loan, but the recent unfavorable economic condition of Guatemala and the priority of the Guatemala City for the external loan which was focused on the purchase of public buses, etc., made difficult to arrange a loan for South-3 project. However, the increasing wastewater generated in the South-3 area would degrade rapidly the water environment and living environment, and also would contaminate very important ground water (Water source of Guatemala Water Supply), if no wastewater management projects start. Since it is urgent to start the wastewater management project in South-3 area, EMPAGUA prepared an application for grant-aid to Japanese Government and submitted to SEGEPLAN for the approval. It has been reported that recently SEGEPLAN approved the application and informed EMPAGUA to proceed.</p> <p>(FY 1998 Domestic Survey) (FY 1998 Overseas Survey) Although the request for OECF loan was supposed to be submitted, another project was given higher priority. However, the negotiation is undergoing through SEGEPLAN, and the request is planning to be submitted in coming Jan.1999. *Contents of the request: - OECF loan - Planned implementation agency: EMPAGUA - Planned implementation schedule: year of around 2000 - Contents: Construction of sewerage/ sanitation facilities in the priority area in F/S and its relating D/D, S/V (Supervision), and C/S (Consulting Services).</p> <p>(FY 1999 Domestic Survey) Government of Guatemala is in the process of selecting one project for requesting Japan's ODA loan out of three projects, one of which is the project proposed by this Study.</p> <p>(FY 1999 Overseas Survey) Government of Guatemala (SEGEPLAN and Ministry of Finance) decided that the proposed project by this Study should be put first priority in requesting Japan's ODA loan. EMPAGUA submitted the document to Ministry of Finance in Dec.1999. Amount to be requested: 128,460,000 USD Contents: sewage collecting channel, sewage treatment plant, etc.</p> <p>(FY 2001 Domestic Survey) Although this project has a high priority, it is difficult to implement by the financing under the Yen loan because of the financial problem of EMPAGUA.</p> <p>(FY 2002 Overseas Survey) The implementing agency is collecting information on the current or planned projects.</p> | | |

Description :

* This project is derived from JICA M/P "Comprehensive Urban Transportation System in Guatemala Metropolitan Area (S101/91)".

(FY 1998 Overseas Survey)

Construction of Naranjo Bridge and supplement construction work of the East-west Corridor have been implemented with own fund of Guatemala City. The renewal of signals, traffic signs, bus stops, and other equipment which was proposed by JICA has been completed by 40 % and transferred to the Public Transport Management Institution.

The subsequent study (D/D) regarding East-west Corridor and Atanasio Tzul Project is planning to be conducted in 2000 ~ 2001 and the request for the loan is to be submitted by the end of this year.

Japanese technical cooperation:

(FY 1998 Overseas Survey)

1999 ~ (1 year) Acceptance of 4 trainees (public transport).

(FY 1998 Overseas Survey)

The project is proceeding satisfactorily because

- raising finance became within the range of possibility with establishment of regulations from 1995.
- the government became to understand the importance to carry out the proposed plan of the comprehensive urban transportation system in metropolitan area .
- the present president makes good use of his experience as a mayor.

(FY 1999 Overseas Survey)

Construction of the followings has been completed: La Paz Calzada (5km), Atanasio Tzul Calzada (5km), Rafael Landivar Boulevard (5km), acquisition of buses, level crossing, network of signals, etc.

Request for Japanese government's cooperation for "Centralization and automatization of the signal system in Guatemala City" was submitted.

F/S for "" is under implementation with own fund. Request for BCIE (Central American Bank for Economic Integration) is suspended.

(FY 2000 Domestic Survey)

(1) Petapa Road: Public Project Agency improved the part of the Road, there has been little progress.

(2) FEGUA exclusive bus road: No progress

(3) Bus inspection and service center: The request for Japan's grant aid was submitted in 1997 but not adopted.

(FY 2001 Domestic Survey)

Out of the proposed projects, part of the one for the East-West Corridor was implemented financed by the Central American Bank for Economic Integration (BCIE). As for the development of public transportation, a new arterious route was constructed with the introduction of large buses and the bus networks were reorganized, based on the concept of the M/P of the study.

One of the unimplemented projects is the construction of exclusive bus lanes. The obstacles are as follows;

- 1) Lack of coordination with the reconstruction of FEGUA (railways)
- 2) Lack of prospects of financial source

To promote the project further, a policy change is necessary, from the one to focus on introducing new-type buses to the one to develop infrastructure and bus system at the same time.

(FY 2001 Overseas Survey)

1) Petapa Road: The traffic in the south part of the town was improved by the project. At present, as a part of road integration of this area, Atanasio Tzul Project is being integrated. Atanasio Tzul was planned as a busway along FEGUA Railroad.

2) FEGUA busway: Busway is not included in the extension road of Atanasio Tzul.

3) Bus Inspection and Service Center: No application has been submitted. 300 buses of 800 city transportation authority buses are in service. Operation application was planned for improvement of air quality and maintenance standards.

(FY 2002 Domestic Survey)

Out of 13 km of the proposed road construction project for the East-West Corridor, 8.3 km of the suburban part including a 300-meter bridge across Baranco Valley has been completed and placed in service.

(FY 2002 Overseas Survey)

Atanasio Tzul arterious road: Progress of the construction 90 %

South extra urban bus terminal (transfer station for long-distance routes): At the stage of planning. Operation is planned to be started in July 2003 (BOT scheme)

Urban exclusive bus lane (arterios road, South Corridor Aguilar Batres): At the stage of planning. Operation is planned to be started in July 2003 (BOT scheme)

Description :

(FY 2005 Domestic and Overseas Survey)

Technical cooperation:

Dispatch of experts: 1 personnel, 2002/Sep - 2005/Oct

Beneficiary of technical cooperation through dispatch of agricultural policy experts is MAGA. This project aims to establish and review MAGA's agricultural policy, to determine the main strategy, and to give some advice regarding the indication of prioritised projects and programmes. Support for the staff and the Ministry of Agriculture and overseas cooperation project section played an effective role in promoting the cooperation projects that the Ministry requested from Japanese government in the past 3 years. The ministry is requesting Japanese government to continue technical cooperation, but it has not been determined.

(FY 2006 Domestic and Overseas Survey)(FY 2007 Domestic and Overseas Survey)

Implemented projects (progress of small-scale project)

Xeatzan Bojo District

1. Program for promoting of sew business:

(FY 2006 Overseas Survey) All of revolving funds, stock and supply of threads are in shortage. Beneficiaries of the project purchase threads in Patzun (in Chimaltenango Prefecture) and are not interested in rescuing shops.

(FY 2007 Overseas Survey) The threads shops drew up capital investment and the project was closed in Dec. 2005, due to delays of payment of debt.

2. Small-scaled irrigation project:

(FY 2006 Overseas Survey) Contract agreed with engineers in order to implement vegetable market investigation, to support cultivation management technology, to make irrigation schedule, and to sustain the project. We also input 72,000 GTQ.

(FY 2007 Overseas Survey) The number of beneficiaries was increased to 100 households. The project contributes to improving income since it is possible to cultivate in dry season. Also, the project contributes to making the way of account various and to expand the cultivation area.

3. Program for improving quality of drinking water:

(FY 2007 Overseas Survey) Since the demand for water was increased, the plan to use other water source, which is near to the village, has already been submitted.

MAGA have conducted a guidance for forestation of water resource areas in order to afforest in water source area.

Panyevar District

4. Program to increase coffee production:

(FY 2006 Overseas Survey) The greenhouse is not used and wooden basic construction part is remaining. Corn seeds are sown in the place of greenhouse.

(FY 2007 Overseas Survey) Since the greenhouse was damaged by a strong wind in 2002, neither investment nor negotiation have been conducted to rebuild the greenhouse.

5. Program to introduce processing facilities to coffee production

(FY 2006 Overseas Survey) There are 4 coffee beans separators. According to beneficiaries, the quality of coffee beans extracted by the separator are poor and only 7% of them are used. The custom of selling the remaining 93% to brokers has been continuously practiced.

(FY 2007 Overseas Survey) People now do not have to go far, because they are now working within the area. Currently, work and marketing are conducted in the area.

6. Program to rehabilitate drinking water facilities

(FY 2006 Overseas Survey) Greenhouse was built with chlorine treatment system installed. However, the basic construction part remains unused, since the community does not purchase chlorine.

(FY 2007 Overseas Survey) Sustainability has been maintained since concerning organization still exists. Chlorine treatment has now been implemented and waste water has also decreasing.

Pachum District

9. Program to breed breeding cormorants by women group

11. Program to improve quality of stove range/promotion of sauna/sweating-bath

(FY 2006 Overseas Survey) As the use and stockpile of firewood are limited, improved kiln is used for festivals and special occasions and during the cold season. Sauna was removed. A few existing units are used twice a month (exclusively used by the old). The young generation tends to use other types of system with more practical functions.

(FY 2007 Overseas Survey) 130 stove and 10 saunas were produced, which reduced at least 50% firewood. However, materials which were initially used have already worn out.

Palestina District

13. Program to establish model farm for Potatoes production

(FY 2007 Overseas Survey) The potato production is implemented by the producer organization. Therefore, the producers organization itself, which achieved to sustain its activities, can be thought as the main beneficiaries.

14. Program to improve Potatoes reservation system

(FY 2007 Overseas Survey) the silo mentioned above became unused since storage method have changed.

16. Program to improve quality of drinking water

(FY 2006 Overseas Survey) Chlorine sterilization of drinking water by utilizing the difference of elevation are in operation in the communities of Los Perez, Los Morales and Los Dias.

(FY 2007 Overseas Survey) Impact of the project in the municipality's responsibility for chlorine treatment. The degree of utilisation is low since residents did not allow to dig wells by machines.

17. Program to improve health care service in municipalities

(FY 2006 Overseas Survey) Among 3 drug stores operated by the community in the city, two are still in operation. One was closed due to the shortage of manpower. The mobile toilet plan was cancelled.

18. Program to formulate immigrants control plan in southern region

(FY 2007 Overseas Survey) Beneficiaries established local chemists in 3 places. These chemists is in function not only in the small villages of Los Dias and Los Cabrera, but also in the center of the city.

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| (FY 2003 Overseas Survey) | | |
| The following papers were prepared based on the studies under the support of San Carlos University, Faculty of Architecture. | | |
| 1) Priority Tourism Development Region in Peten: Improvement of El Seibal Archaeological Site for sightseeing purposes, improvement of Soyassye Local Culture Center, improvement of Dos Pilas Archaeological Site for sightseeing purposes. 2) Tourism Development Region in Berapesesu: Rehabilitation and regulation for use of the Historical Center and tourist hotels in Koben city. 3) Southwest Tableland Priority Tourism Development Regions: Development of the Traditional Toy Museum and improvement of hot spring facilities in Zunil and Tikobikkusu (Kettuarutenan), ponchos and exhibition shops for the Textile Museum, and hot spring baths and accommodations (Totonikakan) | | |
| (FY 2005 Domestic and Overseas Survey) | | |
| Construction of visitor centre has been conducted in Verapace region, supporting Semuc Champey project. In addition, through the cooperation program targeting 6 local entities, customer service and cookery training were conducted, as well as assisting in funds and equipment for infrastructure development (supported by international agencies and NGO). In South-West region, assistance to Comité de Autogestion Turistica de Totonicapan comprising Momostenago were given. Guatemalan tourist department financed 240 million GTQ to support a project to strengthen competitiveness of small or medium-sized corporation in the area of tourism. With its four pillars, skill training, technical assistance, accreditation of skills, financial assistance, the project has been implemented in Flores, Peten, Copan, Alta Verapace, Livingston, Izabal, Antigua Guatemala, Sacatepequez. | | |
| Implemented project: Sustainable tourism development for Maya civilisation | | |
| Implementing period: 2002-2003 | | |
| Funding party: INGUAT, USAID (a program on sustainable tourism), the French government | | |
| Objectives: 1) To develop local communities and to establish tourist routes (focusing on tourist sites in Peten Department) in the area of Maya civilization 2) To prepare technical survey report for reconstruction of Mundo Maya Airport 3) To prepare technical survey report for reconstruction of Melchor de Mencos custom office 4) To prepare technical survey report for reconstruction of Tikal visitor center. | | |
| Relation with the report of the study: While the JICA's study targets at the whole country, this study on Maya civilization targets only at Peten Department. However, the study on Maya civilization is to implement a strategy derived from the study by JICA as a base, aiming to promote tourism and social development with the participation of local people through Comité de Autogestion Turistica de Totonicapan. | | |
| Status: The USAID has stated to support the project and is planning to dispatch a study team from December 2005 to January 2006. In addition, the financial support from the department of public financing under the Ministry of Finance is also expected. However, to receive such assistance, it is necessary to gain recognition from the Secretariat of Planning and Programming and approval from the Bank of Guatemala, and then to seek approval from the Diet. | | |
| Implemented project: Improvement of tourism conditions in Yaxha Nakum historic site | | |
| Implementing body: INGUAT | | |
| Contents: a) construction of access road and visitor center; b) Improvement of tourism conditions in Nakum historic site (restoration, securing of finance for the construction of access road and visitor center, preparing interpreters in archeological park, financing small amount of loans and human resource development for Comité de Autogestion Turistica de Totonicapan, formulation of a preservation area management plan and assistance to guards) | | |
| Implemented project: Improvement of tourism conditions in Ceibal and Aguateca | | |
| Implementing body: INGUAT | | |
| Contents: restoration of stone monuments, restoration of models of historic sites, and reconstruction of visitor center which is planned to be implemented in 2006 | | |
| Implemented project: Improvement of tourism conditions in Uaxactun | | |
| Implementing body: INGUAT | | |
| Contents: assistance for a local eco-tourism guide program, financial support for restaurants for tourists. | | |
| (FY 2006 Domestic and Overseas Survey) | | |
| Request has been made to BID concerning Peten department for Maya biosphere reserve. | | |
| Activities in 2004: | | |
| 1) For 2 month during September and October, several seminars on technical assistance and financial assistance were held to construct cooperative relationships between implementing bodies of each plan, technical advisory institutions, and financial institutions. 2) Implementation of prioritized project/study in prioritized tourism development area. | | |
| Activities in 2005: | | |
| 1) Peten prioritized tourism development: 7 projects, 3 studies 2) Verapaz prioritized tourism development: 1 project 3) Southwestern highlands prioritized tourism development: 1 project | | |
| Activities in 2006: | | |
| 1) Peten prioritized tourism development: 4 project, advocacy, environment management, and etc: 7 program 2) Verapaz prioritized tourism development: 1 project 3) Southwestern highlands prioritized tourism development: 2 project in preparation | | |
| (FY 2007 Domestic Survey) | | |
| Implemented project: Enhancing Committee of Tourist Self-management (Comité de Autogestion Turistica/CAT) | | |
| Implementing period: 11 September 2007 - 10 September 2010 | | |
| Implementing body: INGUAT | | |
| Objects: Enhance capacity of the CAT in Las Verapaces and El Peten in order to promote tourism using communities' resources. | | |
| Contents: 1) Enhancing organizational capability of the CAT, and establishing and maintaining cooperation system between public sectors, communities and small-scale tourism industries; 2) Development of tourism commodities: Identifying tourism commodities and packages; 3) Tourism infrastructures and services: Improving services and infrastructures to receive visitors including preserving tourism resources; 4) Marketing and promotion: Promoting identified tourism commodities and packages. | | |
| Relationship with the mentioned study: Implementing the strategies to build capacity of tourism administration which were recommended in the development study. The project was the result of the technical cooperation request from the Government of Guatemala. | | |
| (FY 2007 Overseas Survey) | | |
| Activities in 2007 | | |
| 1. El Peten PTDA: Tourist facilities in the Remate Beach, etc (5 measures). | | |
| Activities in 2008, 2009, 2010 (plan) | | |
| 1. El Peten PTDA: Improving El Petencitio Zoo (2009-2010) 2. Las Verapaces PTDA: Tourist facilities of Chilasco Waterfall (2009-2010), etc. (2 measures) 3. The Southwestern Highlands PTDA: Improving the tourist facilities at Riscos de Momostenango, etc. (2008) (2 measures) | | |

Description :

(FY 2004 Overseas Survey)

1. In the survey, making a hazard map is under consideration, the work has been completed. In future, although we desire to take consideration of other important areas where has potentiality of being damaged by natural disasters, to implement it, capital is needed.
2. IGN has taken 10,000 km² aviation photographs by its own found in 2003. Then in 2004, 4,100 km² aviation photograph is being taken. Continuing digitalization of the scale of 1 to 50,000 basic maps and photographing the scale of 1 to 100,000 in other area.

(FY 2005 Domestic Survey) (FY 2007 Overseas Survey)

Subsequent study: Field database improvement for hazard map preparation

Implementing period: January, 2004 - 6 January, 2006

Implementing body: INSIVUMEH

Objectives: 1) To gather new data in areas damaged by hydrologic and atmospheric phenomenon, such as hurricane, tropical shower, land slides, and flood. 2) To gather field data for hazard map preparation. 3) To improve and update the database acquired through field works of JICA study and for newly targeted regions.

Contents: Data gathering has been incorporated in FY 2004 activity. Information and maps developed has been distributed to related regional municipality and institutions.

Technical cooperation:

Training program: Seminars for technical transfer on GIS system and hazard maps (300 personnel / 19 - 20 June, 2003)

Others: 1) Skill training for the project, 2) Procedures of hazard map drawing (February, 2001), 3) Skills for interpretation of geographical photograph (June, 2001), 4)

Analysis method for disaster history (June, 2002), 5) Examination of hazard map (June, 2003)

Benefit:

Beneficiaries: the city authority, CONRED, and other institutions concerned

Benefits: Municipalities in target area of the project now possess hazard map (in both paper and digital). In addition, CONRED has worked on with early warning system in the target area. Many of the institutions concerned including the road department and SEGEPLAN utilize the outcome of the project, for example by introducing the hazard map in their own development plans. JICA also used the project results for the study on the construction of a new airport in Masagua, Escuintla. In addition, the hazard map is released on the website of INSIVUMEH (www.insivumeh.gob.gt) so that it can be widely used among the public, and the images are also available free of charge. Furthermore, INSIVUMEH accepts inquiries from high school or university students at its office or on its website through the Internet (www.insivumeh.gob.gt).

Progress:

(FY 2005 Overseas Survey) 75%

(FY 2007 Overseas Survey) CONRED has operated early warning systems at targeted areas of the study. (FY 2007 Overseas Survey)

Subsequent study: IGN modernisation

Implementing period: January, 2006 - June, 2007

Implementing body: IGN

Objective: To improve correspondence and implementation skills.

Funding:

Funding party: Own fund, Switzerland Grant Aid

Amount: 200 million USD, half of the amount from Grant Aid, and other half from low rate loans to procure equipment

Content:

First phase: Procurement of equipment (January, 2006 - June, 2006)

Second and third phase: contract and construction (January, 2006 - August, 2007)

Output: 1) Improvement of technical skills, 2) Also graphic for land registration map preparation

Progress:

1. Technical transfer concerning aerial triangulation, digital elevation model (DEM), contour drawing, 2. Technical transfer concerning distortion correction of topographical survey and drawing ortho image map (Part 1), 3. Technical transfer concerning distortion correction of topographical survey and drawing ortho image map (Part 2), 4. Technical transfer concerning vectorization, correction mapping, and DEM creation., 5. Technical transfer concerning structuration and application of GIS data, 6. Technical transfer concerning structuration and application (correction) of GIS data, and data conversion for printing, 7. Technical transfer concerning legend and digital map editing (Part 1), 8. Technical transfer concerning legend and digital map editing (Part 2)

Progress:

(FY 2006 Overseas Survey) Number and specification of the instrument has already been divided, which is now in negotiation for procurement in Switzerland.

(FY 2008 Domestic Survey)

Implementing project: Wide digital orthophoto map maintenance

Funding body: Loan from World Bank

Implementing body: MAGA

*The project was implemented based on the advice of IGN. This multipurpose database will be used not only for agricultural development but also for a cadastral survey purpose.

Subsequent study: Disaster Planning Program Preliminary Survey

Implementing body: JICA

Implementing period: March, 2009

* Necessity of the repair of rivers and bridges at highly prone to accidents and road accident prevention was confirmed. The project is expected to be conducted with a Yen Loan.

Implementing project: Weather Observation Radar maintenance

Implementing body: IDB

Implementing period: 2009

* Details are unknown.

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2006 Domestic Survey) The Guatemalan government announced that the current airport would be extended in August 2005, the last year of this study. The government has had a contract with ICAO since April 2006 and a reform construction has been resumed (40 million USD). On the other hand, the MCIV selected local companies to implement the Environmental Influence Assessment so as to acquire environmental license for a new international airport construction project. The study has been implemented and is still in process. However, once the improvements of the current airport are completed,</p> <p>(FY 2006 Overseas Survey) UNEPR and MCIV have conducted the evaluation of the mentioned study by surveying the Improvement and Construction of the Guatemala International Airport.. However, decision for airport construction has not been planned before 2009.</p> <p>(FY 2007 Domestic Survey) The Ministry of Communications, Infrastructures, and Housing is implementing EIA on construction site proposed for the new airport. While the Civil Aviation Bureau changed the policy to expand the existing airport. From 2006, civil aviation department, consulted by on expert from ICAO, started expansion works using own fund, which phase 1 have completed. Thus, with a extension work in progress, construction of a new airport is unlikely to the realised. the expand work started by own fund consulted by ICAO experts and phase one of the construction was done in December 2007. From above-mentioned reasons, the construction of new airport seems unlikely.</p> <p>(FY 2007 Overseas Survey) With a new regime established in late 2007, implementation of proposals will be considered by the new regime. The decision of implementing recommendations in the mentioned study is up to the new administration (2007-). However following supplementary works were conducted during 2007: 1) The Ministry of Communications, Infrastructures, and Housing and the municipality of Masagua, Escuintla Department concluded the agreement about protecting the project site of constructing the new airport; 2) The border stone was set to the project phase one and two construction site; 3) The EIA of the project was completed and approved by the Ministry of Environment and Natural Resources.</p> <p>(FY2012 Overseas Survey) As a policy regarding the airport construction, a considerable amount of fund reaching 112 million quetzal was invested into the rehabilitation of the current airport facilities, causing a delay in the Project analysis. Nevertheless, the land of 35 caballeria (1,575 ha) which is considered necessary is accessible and comprises a significant input (The financial allocation for the site acquisition in the Project is not a prioritized matter at this stage).</p> | | |

Description :

(FY 1993 Overseas Survey)

Although the request for an OECF loan was approved, the object of spending of the loan was re-examined as the result of the change of the Government, and the loan was applied to other public investment. A research financed by Spain was conducted between 1987 and 1989, and concluded that the other proposed site was better sited than Talanga. To date, the other site has still been the most important candidate for the airport, and proposal are submitted from each of a British and a American engineering companies, and under appraisal of the Chamber of Commerce and Industry, SECOPT and Tegucigalpa city.

(FY 1994 Domestic Survey)

Anglo-American contractors consortium named Lehrer McGovern Bovis won a contract from Blivian Government to construct New Tegucigalpa Airport on the built-operate-transfer basis. the 3-year contract includes construction of a 3,500m-long runway and other facilities in the contract amount of US\$120 million.

(FY 1997 Domestic Survey)

Implementation of project would be difficult because it is said that cost for construction of new airport is more than 10bil.yen.
BOT project seems to have no progress.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Utilization of the Study:

(FY 1993 Overseas Survey)

The results of this study such as the aerial photographs, the topographic maps, forest type maps, etc., are used by the authorities concerned.

In recent years the Government of Germany implemented a technical cooperation project using this forest management plan.

At the donor conference held in 1989, the Government of Germany showed the interest in implementation of Forest management and Reserve protection project of Rio Platano. F/S for [Proyecto de manejo y Proteccion de la Reserva de la Biosfera del Rio Platano] has been completed and the agency is now negotiating with GTZ and KFW for the implementation of the project.

Situation:

Application of the Grant Aid for the implementation of sawlumber project was made in 1983 however the application was not approved. Wood chips production project near Nicaragua border was intended in 1986 but it was not implemented.

(FY 1996 Overseas Survey)

Because more than ten years have passed since the completion of this Study, the renovation of outputs is necessary. The Government of Honduras, however, has no fund to allocate to it or have no concrete national forest plan.

(FY 1997 Overseas FU Survey)

Finance:

Lps 12 mil. in 15 years

The investment made by AFE-COHDEFOR (Corporacion Hondurena de Desarrollo Forestal) in 1997 was more than \$ 100,000 less than that of 1983.

Situation of Progress:

1. Wood utilization

Out of 240,000 feet of sawed wood per year recommended, 37.0% was achieved. (89,000 ft/year)

2. Forest Road

57 km were built, which represents a 48.6% of the programmed 130.3 km.

3. Forest Protection

Fire Fence - 115km of fire fences (12% of recommendation) were built.

Fire detection towers - In addition to the existing 5 towers, construction of 10 towers was recommended, of which 1 was constructed and is in use.

Fire Control - Reduction of burned areas by fires in a 43.0% of the identified area in 1983.

In general, application level of the recommended measures is not superior to 20% of the five-year planned goals of the inventory.

Currently the private development institute (MOPAWI) is doing management in more than 3,000 hectares of the Dursura forest supported by VIDA foundation, WWF of Germany and the Tear Fund of Canada.

Causes for the unaccomplishment:

-Lack of political clarity, related to the kind of management that should be keeled on the zone, if as a protected zone of the Rio Platano Biosphere reserve or as a forest production zone

-Refugees presence and armed civil groups from Nicaragua

-Occupational personnel instability, due to the difficult condition of the zone such as accessibility, housing and nourishment

-Nonexistence of sectorial politics which are responsible for integrating the zone in a national development plan

-The limited public diffusion provided by the information about the management plan

| | Discontinued or Cancelled |

Description :

Utilization of the Study:

(FY 1993 Overseas Survey)

Among recommendations of the study, improvement of long line fishery of shark was not implemented because of low economic value of shark, Fish harbour improvement and commercialization of products are implemented at several locations of Atlantic sea coast utilizing JICA Mini Project at Trujillo as a model project. The agency is planning to initiate small scale fishery development project at La Mosquitia, province of Gracias a Dios, however lack of social infrastructure such as road and communication system causes difficulty for the implementation of the project.

Situation:

(FY 1991 Overseas Survey)

The Ministry of Natural Resources is requesting Japanese assistance for similar studies in other areas (Cortes, Atrantida, Colon, Bahia islands, Gracias a Dios).

(FY 1995 Overseas Survey)

Trying to materialize the modernization of the fishing port of Trujillo as a mini-project to make it the basement to carry on new test and investigations at the Caribbean Sea Coast.

The Master Plan Study on Small Scale Fisheries Development Project on the North Coast of The Republic of Honduras is being implemented from December 1995.

(FY 1996 Overseas Survey)

It is desired to conduct a study on the impact of fish catchment, the regional and seasonal resource availability, the lifecycle and fish behavior in order to renew this Study result.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>*Refer to "Agricultural Development in the Choluteca River Basin (1978)".</p> <p>Subsequent Studies: Dec.1985 -May 1988 D/D (Consulting firm/Nippon Koei Co., Ltd.) Aug.1985 L/A 1,651 mil.Yen (E/S)</p> <p>Finance: The request was submitted in March 1987 for an OECF loan, however, due to the high project cost, it was not accepted.</p> <p>Detail: (FY 1993 Overseas Survey) After the completion of D/D funded by the OECF loan, the World Bank, which had been promoting the Structural Adjustment Program in Honduras, reviewed various development studies implemented there. Concerning this project, the World Bank made several recommendations for the environment protection and for the reduction of the project cost. As a response to those recommendations, OECF conducted SAPROF study, however, since then, no progress has been made to implement the project.</p> (FY 1994 Overseas Survey) No problem was found by SAPROF conducted in 1992, to implement the project. After that negotiation is being held between the World Bank and Honduras. (FY 1997 Overseas FU Survey) Causes for Suspension: The financial constraint such as allocation of a large amount of money to another priority project (El Cajon Hydroelectric Project) and existence of external debt is main cause. After the change of regime, priority to this project has been lowered. Moreover, the lack of clear policy of water resources management, appropriate legal framework for irrigation and multipurpose water use development, and intersectoral coordination framework has caused the delay. Perspective for Implementation: There is a low possibility to implement the project. However, hydroelectric generation and agricultural development are important because there is a growing interest in irrigation schemes and increasing demand for energy. To promote the implementation, participation of private sector and review of F/S in accordance with a new natural resources management policy are necessary. (FY 1998 Domestic Survey) There is little possibility to implement the projects by Japanese ODA. | | |

| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

After the completion of F/S, the economic situation of the country was worsened, foreign debt was accumulated. The other project (Choluteca River Basin Agricultural Development) was suspended after the D/D, and there has been no progress regarding this project.

Reasons for Cancellation:
(FY1993 Overseas Survey)

Since the study was conducted, no effort for financing of the project implementation has been made. Reasons why the project is cancelled are

- (1) huge project cost;
- (2) no financial arrangement is planned; and
- (3) allocation of government budget is getting difficult due to the Structural Adjustment Programme.

Moreover, situation of the project site has been changed and beneficiary farmers of the project site sold their farm land to Standard Fruit Corporation.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

In November 1989 the Government of Honduras made a second request for the Japanese grant aid.

Subsequent Studies:

Mar.1990 B/D

(1)Phase I

Subsequent Studies:

Jul.1990 D/D

Finance:

28 Jun.1990 Grant Aid E/N, no more than 1,108 mil.Yen for digging of 53 wells and construction of water supply facilities

Construction:

Feb.1992 Completed

(2)Phase II

Subsequent Studies:

Aug.1991 D/D

Finance:

9 Jul.1991 Grant Aid E/N, no more than 394 mil.Yen for digging of 36 wells and construction of water supply facilities

Construction:

Jul.1992 Completed

Total project cost of Phase I and II was 1,529 mil. Yen, 1,502 mil. Yen of which was financed by the Japanese grant aid and 270 mil. Yen was the own fund of the Government of Honduras.

(3)Phase III-1

Subsequent Studies:

Feb.1988~Oct.1989 D/D (JICA 20 mil.Yen 1&2)

Finance:

Dec.1993 Grant Aid E/N, no more than 520 mil.Yen (Local Cost: equivalent to 50 mil.Yen, budget of Ministry of Public Health) for digging of 200 wells and construction of water supply facilities: 30wells in Phase III-1, 30 wells in Phase III-2 and 140 wells to be constructed with the government fund.

Construction:

Dec.1994 Commenced Mar.1995 Completed

(4)Phase III-2

Subsequent Studies:

Feb.1988~Oct.1989 D/D (JICA 20 mil.Yen 1&2)

Finance:

26 Jul.1994 Grant Aid E/N 205 mil.Yen

(Own fund:1,174,705Lp/year)

(Local Cost: equivalent to 50mil.Yen, budget of Ministry of Public Health)

Construction:

Apr.1995 Commenced Dec.1998 Completed

Construction Trader:Itochu

Situation:

(FY 1996 Domestic Survey)

In Phase III, a total of 105 wells was constructed by Mar.1996 (64 wells with grant aid assistance and 45 wells with local fund (21 constructed between Aug. and Dec.1995 and 20 constructed between Jan. and Mar.1996). Because problems about the maintenance and operation of machinery arose, the Government of Honduras again submitted a request for grant aid assistance (1,500 mil.Yen). The Government of Honduras is supposed to undertake the remaining construction works of uncompleted wells. However, the change of the president in Dec.1996 and the own-out machinery may become an impediment of the project.

Effect:

A total of 154 wells (53 in Phase I, 36 in Phase II, 30 in Phase III (1) and 34 in Phase III (2)) have been constructed since 1990. It contributes to the well-being of residents, the social stability and the strength of Water Users Associations. The rate of water supply has improved from 20% to 60%.

Impact on surrounding Environment:

-Higher demand on the well digging and the well improvement

-Participation of municipality governments in the decision making process about places where wells are to be constructed and in their construction

-Consensus among residents concerning the project implementation

-Enlargement of water supply area in the Area 2

-Change in the traditional way of water usage and water consumption

(FY 1996 Overseas Survey)

The handling of the basin is realized by AFE-COHDEFOR in cooperation with the farmers of the District of the Flores, Villa de San Antonio and surroundings.</p> <p>Effect: The valley of Comayagua supplys an excellent contribution to the agriculture sector of Honduras, especially in the production of vegetables. Vegetables are supplied to the national market and also exported to United States and surrounding countries. With the rehabilitation of the dam, a very important source of water for irigation in the district of Flores and Villa de San Francisco, 11% and 19% of land that is not cultivated by the lack of water during the season of rain and dry, has been recuperated. With the production, the standard of living of the farmers can be bettered avoiding the migration to the cities.</p> <p>Situation: (FY 1997 Overseas Survey)(FY 1999 Overseas Survey) Stage I (Rehabilitation of the Coyolar Dam): 1995~1996. Stage II (New irrigation system): completed. Stage III (Small-scale hydropower generation plant (2Mw)): 1999 ~ Mar. 2000. Stage IV (construction of administrative building and other constructions and a demonstration farm): 1998 ~ 1999.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Reasons of Cancellation:

(FY 1994 Domestic Survey)

This project was discontinued because the American firm, AT&T, started providing the exchanges to main towns and villages holding a mortgage on the change for international call.

Situation before Cancellation:

The Government of Honduras has given high priority to developing a telecommunications network because it is indispensable for social and economic development. The state-owned enterprise responsible for telecommunications services in Honduras (HONDUTEL) also has made great efforts to expand telephone services in rural areas. However, HONDUTEL cannot afford to set up telephone services in rural areas because of technical and financial difficulties. As the economy in Honduras depends on primary products, development of primary industries is of vital importance for the nation. However, there is a great difference in the standard of living between rural areas and urban areas. The government, therefore, is actively promoting the development of rural areas.

1. Feasibility Study on Telecommunications Network Expansion Project

No request was submitted in FY 1993 on F/S by HONDUTEL and Ministry of Planning.

2. Rural Telecommunications Network Expansion Project

The proposed project had been revised throughly by the technical planning department of HONDUTEL by October 1993.

The proposal of the revised plan is to provide 7227 lines for 17 prefectures (212 districts). The project divides the country into four regions (Southeast, Northwest, Midwest and North) and is implemented as four sub-projects.

*South-East project

Under implementation (ECU 2.9 mil. Grant from EC and ECU 2.059 mil. domestic fund). It is scheduled to provide 1,511 lines to three prefectures (49 districts).

*Other 3 Projects

As for other sub-projects, requests for grants or long-term soft loans have been made to Japan, Mexico, Canada, and international organizations.

| Description : | | |
| <p>Among the master plan of the Choloma river, following urgent plan was formulated by the feasibility study.</p> <p>Urgent Plan of the Choloma River :</p> <p>Total cost: US\$22,890 X 1,000 (F/C: US\$14,197 X 1,000) (L/C: US\$ 8,693 X 1,000)</p> <p>1) River improvement 3.4km, embankment 6.9km, revetment 3.4km etc 2) Check dam 2nos., consolidation dam 2nos., training levee 1no. 3) Replacement of railway bridges</p> <p>The urgent plan of this project covers an area of 712 km2 including river basin of Choloma, San Pedro Sula and Cortes conforming an industrial center of the country with a total population of approximately 330.000.</p> <p>Situation:</p> <p>(FY 1995 Overseas Survey) This project is now providing to commence the implementation on 1995 and planned to complete on 1997, however, there is no progress due to the difficulty to find the financing.</p> <p>(FY 1996 Overseas Survey) The Government of Honduras requested the JICA's grant aid to the Government of Japan for implementation of the above urgent plan.</p> <p>(1)Improvement of the hydrologic information system (FY 1997 Overseas FU Survey) 11 pluviometers donated by the study team were installed in the area of study, San Pedro Sula, Valle de Sula in 1996. They are under administration of Municipal Division of Waters(DIMA) and SERNA(Secretary of Natural Resources and Environment).</p> <p>(2)Elaboration of Maps of Risk (FY 1997 Overseas FU Survey) Financial Source: National funds Administration and Handling: Copeco Year: 1994</p> <p>(3)Canalization of the Choloma River (FY 1997 Overseas FU Survey) Scale: 8 km of length and 60 m of width in average Financial Source: External Funds Amount: US\$ 100,000 Implementing Organ/Executive Commission of Valle de Sula Year: 1995</p> <p>(4)Construction of Consolidation Reservoir in the Choloma River (FY 1997 Overseas FU Survey) Amount: US\$ 100,000 Implementing Organ: Executive Commission of Valle de Sula Year: 1996</p> <p>(5) Choloma River Check Dam Construction (FY 1998 Domestic Survey) Period: Oct. 1998 ~ Feb. 2001 Contractor: Hazama (FY 2000 Domestic Survey) Sabo works in the upstream reaches from Choloma City, which are the 1st stage implementation, have been completed in October 2000. The 2nd stage implementation of the river improvement works in the downstream reaches from Choloma City has been started and will be finished by March 2001.</p> <p>(6)Alarm System (FY 1997 Overseas FU Survey) Finance: External Funds Amount: US\$ 5,000/year Administration and Handling: Copeco Year: 1990~1997</p> <p>(7)Urgent Plan (FY 1997 Overseas FU Survey) Subsequent Study: Based on the result of the basic study conducted by JICA, detailed design study is being undertaken. Finance: Jan.20.1998 E/N 60 mil.yen (Flood Control and Sabo in Choloma River) Construction: 2000 scheduled to be completed (FY 1999 Domestic Survey) Finance: 15 Jun.1999 E/N 587mil.yen (FY 1999 Domestic Survey) Construction: Construction of the Choloma water transmission weir was started at the end of 1999.</p> <p>(8)Others (FY 1997 Overseas FU Survey) The results of the study are utilized by the institutions related to environment, agriculture and civil works, and universities. Long-term Plan is planned to be executed from 2001 to 2010.</p> <p>(9) Remaining projects relating to El Sauce River and Blanco River (FY 1998 Domestic Survey) Shortage of the budget has impeded the progress of the projects. Since the decline of the river bed of Blanco is serious, SOPTRAVI realizes the importance of countermeasure. It seems that the budget will be gradually allocated for the project and the construction will be started. (FY 1999 Overseas Survey) There has not been any progress in the project on El Sauce River.</p> | | |

| Description : | | |
| <p>(FY 1994 Domestic Survey) The development plan proposed by this study has three steps as follows.</p> <p>(FY 1995 Overseas Survey) It will be settled the medium term plan during 1996 to 1999 for the whole tasks of the improvement of the ports.</p> <p>(FY 1999 Overseas Survey) "Development Plan for 21st Century" was formulated in 1998, where the investment for the port infrastructure was proposed. Based on the proposals of this Study, the following projects were planned: Cortes Port cargo terminal (2000~2001), Cortes Port dry grain terminal (2000), Castilla second wharf(75m)(2000), Lempira concrete wharf (50m)(2001).</p> <p>(1)Urgent improvement of ports and harbors The improvement works of civil facilities and loading/discharging facilities which should be treated as the daily maintenance, and the improvement of management of port have been completed or processing with the responsibility of the port manager.</p> <p>Construction in Progress: (FY 1996 Overseas Survey) May.1995~May.1997 Construction of wharf in Port of Cortes Construction Trader: COTIZAR (FY 1997 Overseas FU Survey) <Administration> As a consequence of modification in the laydays prices, the shipowners will not lay the ships more than necessary. Moreover, efficiency improvement in cargo handling and reduction of labor work accidents have been achieved. On the other hand, the cut of working hours resulted from introduction of two shift basis, caused the decrease of salaries of workers, then the government had compensated the salaries. The decentralization of ENP is being discussed in Congress. Concession period: 25 years <Urgent Rehabilitation> Equipments of importance, with durability and which require low investment cost and are simple to repair will be rehabilitated firstly. (FY 1999 Overseas Survey) Five container ships were acquired. No.1 crane, P&H crane, dredger, tag boat, chassis were rehabilitated. Radio communications at the container terminal of Cortes Port was improved. Inspection/control of the ships going through the Cortes Port No.11 gate was strengthened, Protector of the wharf of Castilla Port was renewed. Cortes Port No.4 wharf was renewed. Yard of Cortes Port and Castilla Port was improved.</p> <p>(2)Development Plan for Port of Cortes (short-term: target year of 2000; long-term: target year of 2010) (FY 1996 Overseas Survey) Subsequent Studies: Jan.~Jun.1996 Scheduled to be implemented by ENP Finance: Finance source is to be determined in 1998 Content:Construction of a new container terminal Construction: 1998 Scheduled to be commenced (FY 1997 Overseas FU Survey) <Construction of basic infrastructure> 3 unit load berths, dry bulk load terminal, refrigerating warehouse terminal, cabotage terminal, alternative route Finance: ENP US\$ 7 mil. (total expenses up to present)</p> <p>Situation of Progress: 1.Refrigerating Warehouse Terminal Financial sources: Spanish government and BCIE Total amount: US\$ 11.75 mil. Constructed and in operation 2.Terminal Unit Urgent projects are not started yet because ENP is waiting for decision making by the government on the privatization (maintenance and expansion of public facilities). Urgent project cost / 28,948.9 Ls (47.5% for construction of unit) 3.Cabotage Terminal Cabotage terminal was constructed in East Free Zone at Cortes Port. - "L" shaped, 200m in length, 4.5m in depth (scaled-down due to the financial constraint) Completed in 1997 cost: US\$ 1.5 mil. Mitigation of congestion of general berth and efficiency improvement of cargo handling were achieved. Extension up to 200m is planned. 4.Coastal Traffic Jetty (La Ceiba) Completed in 1994 cost / US\$ 5.6 mil. 5.Alternative Route (Stage 1) Road from the Laguna Bridge to Cortes Port cabotage terminal was completed in 1999 (660m in length, 12m in width). Breakwater was also constructed. The project contributes not only to the mitigation of traffic jam in Puerto Cortes city but also to tourism development improving the landscape. The new road (850m) from the cabotage wharf to the new container terminal is to be constructed in 2000.</p> | | |

|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| <p>The final report of this survey works has been submitted in March 1994. Based on the report, the Honduran Government officially requested to the Government of Japan during the fiscal year of 1994 to implement this project by Japanese grant aid.</p> <p>(FY 1995 Overseas Survey) The negotiation regarding to the financial cooperation is carrying on among both government of Japan and Honduras.</p> <p>(FY 1996 Overseas Survey) The Japanese Government was requested for the provision of grant aid assistance for the implementation of the Irrigation and Drainage Project targetting 460ha of area covering the left bank of the Yucanguare.</p> <p>(FY 1997 Domestic Survey) The Government of Honduras is preparing to request a grant aid. The regime has changed soon after the completion of the study. Therefore, all the projects were checked. The Government has decided to request a grant aid for this project but difficulty in allocating national budget and outflow of C/P at that time due to the change of regime and delayed payment of wages are impeding factors.</p> <p>(FY 1998 Domestic Survey) It seems that the request for a grant aid assistance for irrigation/drainage development project in Yucanguare Area will be submitted.</p> <p>(FY 1999 Overseas Survey) 1997-98 The request for Japan's grant aid for "Irrigation and Drainage Plan for the Right Bank of Yucanguare" was submitted. Amount: US\$4,200,000. Contents: construction of facilities, procurement of equipment/materials, technical assistance.</p> <p>(FY 2000 Domestic Survey) No information.</p> <p>(FY 1997 Overseas FU Survey) Causes of Delay: The Honduran government defines in its Agricultural Politics(1995-1998) the Valley of Jesus de Otoro as one of the areas with an urgent need for the development of irrigation. However, up to now, actions have not been made in order to reach the project execution. Among the reasons found are, -the high total cost of the project and a low number of families who would be benefitted in a direct way -the plan proposed a high percentage participation on the part of the Honduran government, which represent 47.5% of the total cost -absence of an appropriate legal framework for the hydrological resources.</p> <p>Actual Situation of the Areas: *Possession of the land The legal possession of the land is related to getting credit. All the organism that provide credit in rural areas demand a mortgages.This requires submission of the land title. The government of Honduras developed a plan of expropriation and distribution of land within the framework of agrarian reform with the objective of strengthening families with less than 5 ha. *Farmers' organizations The farmers in the zone are organized in groups, associative enterprises and cooperatives with the object of administering and working the land in a collective way. At the same time, this grouping makes technical assistance, credit and commercialization of the products. *Infrastructure The road system in the Jesus de Otoro Valley is the same as mentioned in the study. In the last 5 years, 3 communal centers were built in the communities of Aro, San Francisco, and Tatumba.</p> <p>Consideration for the Implementation of the Project: (Recommendation by the FU consulting company) For implementation of the project it is necessary to consider aspects such as the number of beneficiaries, the project cost, the chronogram of execution and others. Firstly, sub-projects which benefit a high number of families of small and medium produce with a high EIRR, namely sub-project of right bank of the Yucanguare river, left bank of the Grande de Otoro river, Naranjo, Mixcure, Aro, right bank of the Grande de Otoro, need to be implemented. The sub-project right bank of the Yucanguare river must be done as a high priority. It is suggested that this sub-project be established as a demonstration center, in which the experiences of the project may be evaluated. At the same time, it can be used to check the changes of attitude of the participating producers, and to give training to other producers of the zone. The zone of the project is located not far from CEDA (Agricultural Development Training Center) and FHIA (Honduran Agricultural Investigation Foundation), so that the importance of building a development center only for a short period of time in the zone is not clear. Making use of CEDA and FHIA is recommended for the training of technicians as well as producers in the zone. There are 12 Associative Enterprises of Farmers (EACP) and 18 farmers' groups among farmers' organizations, which is one of the important aspects of the project. This shows that the producers have seen the advantages of being organized. The next step must consist of an organization of the farmers's groups in EACP and of encouraging the non-associated producers. Also the creation of groups of water users will be necessary in each region. The creation of the legal framework is necessary for the smooth functioning of the irrigation project. The approval of the law of waters by the National Congress is of an urgent because it is necessary to establish a national plan of hydrological resources. The new agenda of the Honduran government has programed for the next 4 years the implementation of 16,000 ha of irrigation. The bilateral cooperations and support from international organizations are fundamental to achieve the goals.</p> <p>Other Organizations: The World Bank is conducting the Rural Land Administration Program (US\$ 3.4 mil for 3 years) and Environment Development Project(US\$ 11 mil), and BID is supporting drainage and water supply project. Both banks have no plan to assist irrigation project near future.</p> | | |

Description :

(FY 1997 Domestic Survey)

Teguchigalpa City is carrying out an intersection improvement project with a loan from Mexico.

Teguchigalpa City requested to carry out a bridge construction project over the middle to long-term with a Japanese grant.

(FY 1998 Domestic Survey)

The review of the project is required due to the damage by hurricane on Oct. 1998.

(FY 1998 Overseas Survey)

Study regarding the proposed projects (1),(2), and (4) were conducted;

(1) Improvement of the traffic toward and the ring road around the National Stadium;

(2) Improvement of the intersection of Cabanas Blvd. and Santa Fe; and

(3) Installation of the traffic signs at the intersection of Blvd. Jose Cecilio Valle and Golan Street.

(FY 1999 Overseas Survey)

Training on the transportation/traffic projects was held in Sep. 1997 with financial assistance from Mexico. Twelve experts from the Tegucigalpa Road Committee participated in this training.

The Government of Honduras constructed the bridge connecting from Comayaguela Sixth Street to Tiloarque.

(FY 1999 Domestic Survey)(FY 2000 Domestic Survey)

Finance:

1. Project for Reconstruction of Bridges in Teguchigalpa Metropolitan Area

Finance:

1999/Dec/17 E/N 73 million JPY

2000/Apr/26 E/N 2,233 million JPY

Construction:

Constructor: Konoike Construction Co., Ltd.)

Consultants: Central Consultant Inc., PCI

2. Project for Construction of Choluteca Bypass Bridge

Finance:

1999/Dec/17 E/N 68 million JPY

2000/Apr/26 E/N 2,116 million JPY

Construction:

(FY 2001 Overseas Survey)

Description :

(FY 1997 Domestic Survey)

No progress at the moment, although the project is being promoted. It is also because the change of the government is expected due to election results.

(FY 1998 Domestic Survey)

Higher priority is given to projects in other sectors and the priority of the project became lower accordingly.

(FY 1998 Overseas Survey)(FY 1999 Overseas Survey)

Integrated Development Model Program in Olancho is to be included in the M/P that would be approved by Japanese government within FY 1998.

The request for implementing the Project of Strengthening the Hospital Networks in San Pedro Sula (five emergency clinics, one maternity hospital, their equipment) was submitted to Japanese government.

(FY 2000 Domestic Survey)

As for the projects in San Pedro Sula city, the B/D was said to be started in 2000. No detailed information was available however.

Subsequent Study:

(FY 2001 Overseas Survey)

Study period: 2002/Mar (B/D)

Contents: Regarding the project to enhance the network among urban hospitals (construction of medical facilities and equipment including obstetrical facilities)

Description :

(FY 1998 Domestic Survey)

The grant aid project "Project for Modernizing Small-scale Fisheries in the Northern Coasts" (18th of Mar. 1997) has already finished handing over facilities to the government. However, the damage of the hurricane which hit the country in 1998 was devastating, and its follow-up has been examined. No other movement concerning proposed project is specifically mentioned.

(FY 2001 Overseas Survey)

There is no project in Trujillo district implemented with the finance of other international institutions, and the only project implemented is the Japanese Plan for Modernizing Small-scale Fisheries.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Overseas Survey)

In 2006, discussions for the cooperation of the 'Plans of Small-Scale Fisheries Modernization on the North Coast of the Republic of Honduras (Phase III)' were held. The project sites include the fishing villages mentioned in the study, namely Tela and the three villages located next to Tela (Puerto Cortes, Omoa with two fishing villages, Santa Rosa de Aguan). The village Mosquitia, was included in the study, but was excluded from the project.

| 10. MAJOR PROPOSED PROJECT(S) | <p>As a F/S project, Los Laureles II Project was selected.</p> <p>Los Laureles II Project comprises the following two components;</p> <ul style="list-style-type: none"> - Construction of Los Laureles II Dam - Sediment Excavation of existing Los Laureles Dam and the planned river channel of the new Los Laureles II Dam | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description : (FY2001 Overseas survey) Service for the expansion and improvement of system, for the improvement of life environment for its inhabitants in Tegucigalpa, SANANAA has been working for the concretion and assessment of this survey.</p> <p>Finance: (FY 2001 Domestic Survey) The construction of Los Laureles II Dam project was officially applied in August 2000. Since it was not adopted as projects for fiscal year 2000, applicaiton was re-submitted in August 2001. Awaiting for the acceptance.</p> <p>(FY 2003 Overseas Survey) A request for grant aid was made to the Japanese government with the objective of constructing the Los Laureles II Dam in the urgent plan for supplying potable water to Tegucigalpa. SANAA implemented field consulting in relation to the hydrological survey and the geological survey in Gwaserike River that is a dam site in the upstream of Los Laureles Dam.</p> <p>(FY 2004 Domestic survey) Honduras government has been requesting for JICA grant aid cooperation every year since 2001.</p> <p>(FY 2004 overseas survey) About the final designing of the emergency project for the water supply to Tegucigalpa, Los Laureles II, requested the grant aid cooperation in 2003 July 16 via SETCO. The total sum was 3 billion yen. Also based on the domestic finance, SANAA had a consultation on the conformation of geological features for hydrology and land of Los Laureless Dam on Gwaserike River. More over, SANAA had a survey on the private property and houses of the residents who would be harmed by its effects as a transitional preparation. Today, the Honduras government is judging that drawing up of an emergency project for the Teguchigalpa water supply in the same are as Los Laureles II survey area. Also, if the necessary amendments would be done, the capacity of water tank would be expanded. Water tank would be constructed, dividing its work into several phases.</p> <p>(FY 2005 Domestic Survey) Subsequent Study: The quantity survey of emergency water supply plan in Tegucigalpa and the study of its environmental and social consideration Implementing period: the beginning of July 2005 - the end of January 2006 Implementing body: JICA Objectives: To confirm the contents of the request and the intention of the Honduran government concerning the plan based on the studies mentioned above, to consider feasibility and validity of implementing a grant-aided cooperation by reviewing the result of development study with necessary information particularly focusing on environmental and social consideration</p> <p>(FY 2005 Overseas Survey) In August 2005 - JICA has dispatched a pre-study team to confirm the contents of the request made. Study team has evaluated information. conducted site survey, and analysed the importance of Laureles II with the SANAA.</p> | | |

|---|--|--|
| <p>Description :</p> <p>Causes for Delay or Cancellation: (FY 1994 Domestic Survey) At first, the project was suspended due to the high construction cost. Later, the government has changed its agricultural development policy to export oriented agriculture following the change of regime.</p> <p>(FY 1997 Overseas Survey) Environmental protection of wet land is necessary. Study to show benefits of draining lands when idle lands are remained untouched, must be carried out.</p> <p>(FY 1998 Domestic Survey) It seems that there is little possibility to implement the projects by Japanese ODA. Approximately 14 years have passed since the completion of this study, and the social and environmental situations have been changed. Therefore, it seems the proposed projects will not be implemented without being reviewed.</p> <p>Situation: It was subject to establish a holding company who would be responsible for construction of civil engineering works, development and operation of the pilot farm, land lease and management as well as recruitment, training, selection and settlement of farmers. However, due to some reasons such as rather expensive cost per unit area, etc., some agency (National Investment Bank) refused to establish the holding company, as of November, 1985. Proposed membership of the Board of Directors to be appointed by the Government was, Permanent Secretary of the Ministry of Agriculture or his nominee, Commissioner of Land, a representative from the Ministry of Finance, a representative from the Jamaica National Investment Bank, a representative from the National Water Commission, and two other nominees.</p> <p>Related Project: (FY 1997 Overseas Survey) "National Irrigation Development Plan (NIDP)" (overall development of Jamaica's irrigation sector) Consulting Company / HARZA International Imp. Period / Feb.1997~Mar.1998 Cost / US\$ 900,000 (IADB)</p> <p>Request for financial assistance will be submitted to IADB in Nov.1998. Implementation is scheduled in 1998~2003.</p> | | |

Description :

This project has been given high priority in the "Food and Agriculture Policies/production Five-Year plan (1983/84-1987/88)" of the Government.

Finance:

Own fund and USAID fund

Detail:

Because the allocated fund was considerably small, the project was partially implemented. The implemented projects were the improvement of a small-scale reservoir and the small -scale land consolidation.

(FY 1997 Overseas Survey)

All the irrigation projects in Jamaica are to be implemented within the framework of National Irrigation Development Plan (1998~2003).

Financial sources are government budget, IADB, FAO, Japanese grant and so on.

Within the Rio Cobre project, canals have been modernized under the Government budget.

Description :

Reasons for Cancellation:

This study was to review, from the technical and economic standpoints, the basic plan for new suburban railway lines which was being prepared by the Mexican Government as part of the overall urban transport improvement policy for Mexico City, and to undertake a pre-feasibility study of the construction plan.

Based on the results of this study, Mexican Government came to the conclusion that the estimated costs of construction would be too large for the already financially-strapped National Railways to bear, and decided on the alternative of subway construction which was being promoted by the Federal District Government.

In other words, the proposals of this study were not adopted for implementation, but served as one of the bases for the important policy decision by the Mexican Government.

Related Information:

Subway Construction in Mexico City

| Fiscal Year | Line | Length | Passenger |
|-------------|------|--------|---------------|
| 1977 | 2 | 37km | 1.81 mil./day |
| 1988 | 8 | 141km | 4.04 mil./day |

As for the railway connection between Mexico metropolitan and suburbs, the construction plan of 6 radial railways with a radius of 100km is on process.

| 10. MAJOR PROPOSED PROJECT(S) | <p>As part of the railway modernization policy, the Mexican Government is planning the electrification of the entire railway system. The Government requested Japanese technical cooperation concerning feasibility studies on two of the high priority sections selected for electrification: Namely, the section between Mexico City and Queretaro (244km) and the section between Mexico City and Irapuato (95km).</p> <p>In response to the request, the Japanese Government sent a team of experts to assist the undertaking of the feasibility studies. The process are the following;</p> <ol style="list-style-type: none"> 1. This study took the following into account. <ol style="list-style-type: none"> (1) Several sypes of electrification are widely applied in the world. (2) Electrification is considered not a simple aggrigation but a "united system" integrating the related factors. 2. This study compared the following types <ul style="list-style-type: none"> - Types of electric generations ; a. AT type, b. direct type - Types of aerial line ; a. multiful type, b. arranged-T type <p>This study investigated electric characters of each type, and tried to clear the relation between signal systems and each type.</p> 3. At last the study suggested gov. of Mexico the following issue be very important. A type of electrification, being the most suitable to the whole situation of the nation, should be selected from many types. | | |

| 10. MAJOR PROPOSED PROJECT(S) | <p>The Japanese expert team provided technical advice and guidance on the port development necessary for coastal industrial growth, covering such areas as planning of physical facilities(including cargo facilities at multi-purpose wharves), cargo handling operations, and alternatives of physical development.</p> <ul style="list-style-type: none"> -Plan and design of basic port facilities of major ports. -How to develop and manage industrial ports. | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 The progress of development in the selected ports has been as follows:
 (1)Altamira Port
 1985 Multi-purpose berth (No.1 Berth) completed for use
 Feb.1990 No.2 Berth completed for use
 May.1990 Construction of No.3 Berth to be started and to be completed in 1992.
 (Infrastructural development to be financed by own funds, and necessary equipment by World Bank.)

(2)Lazaro Cardenas Port
 1985 General cargo berth completed for use No.3 Berth (multi-purpose) will be constructed dependent on the future increase of cargo throughput.

(3)Oschon Port
 Development is suspended due to problems in land acquisition

(4)Salina Cruz Port
 The construction of the breakwater was completed, but the development of the port is suspended. However, the development of oil-exporting port facilities has been under way.

Maintenance & Operation:
 (FY 1996 Overseas Survey)
 The private trading company, which is responsible for the comprehensive port management, has been conducting the management of the completed project. Also, the container terminal in the Altamira Port was transferred to a private corporation through concession.

Effect:
 (FY 1996 Overseas Survey)
 The project implementation results in the growth of the cargo volume handled in the Port. Between 1985 and 1995, the handled volume grew by 46% in the Altamira Port and by 22.7% in the Lazaro Cardenas Port.

Progress in the Port Development Plan:
 (FY 1996 Overseas Survey)
 The capacity of volume, which can be handled in each port, is projected as follows:

| | Present volume | Projected capacity |
|----------------------|----------------|--------------------|
| Altamira Port | 12mil.ton/year | 330mil.ton/year |
| Lazaro Cardenas Port | 18mil.ton/year | 160mil.ton/year |

Description :

Reasons for Cancellation:
 The implementation of the proposed project was suspended in October 1983, when the Governor of Guanajuato was replaced together with his technical staff.

Because the construction of highways and the electrification of national railways are currently under way, the present Government of Guanajuato State is unlikely to reconsider the project. Therefore, the project is judged as cancelled.

(FY1991 Overseas Survey)
 After the election in 1991, the opposition party took the political power. As a result, the personnel who knows the background of this project left the state government.

| | Processing | Discontinued or Cancelled |

Description :

Reasons for Cancellation:

The project was suspended after the completion of the F/S.

The project was identified as part of the industrial port development plan by the Mexican Government. The Tuxpan Port was considered as one of the development projects to support and expedite the petroleum development plan in Chicontepepec Basin. Because petroleum-producing strata in the Basin were found to be very deep, the petroleum development was suspended in 1982.

In response to the onset of severe economic crisis in 1982, the President De la Madri announced in January 1983 that the industrial port development would be limited to the Altamira Port and the Lazaro Cardenas Port. This policy has been continued by the President Sarinas who took power in December 1988.

Under the circumstances, the development of the Tuxpan Port as an industrial port is currently suspended.

(FY1991 Overseas Survey)

The development of the Tuxpan Industrial Port must be suspended presently, as far as the transportation problems (railway and roads) can not be solved.

| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons for Cancellation:
 SOMEX initially expected to select one of its 117 subsidiary enterprises for operation and management of the proposed dockyard. However, privatization of those enterprises was completed in October 1988.
 Along with the election of the new President in December 1988, top management of SOMEX was also replaced, necessitating the suspension of the proposed project.

(FY1991 Overseas Survey)
 Furthermore, the privatization of the SOMEX itself was determined in 1992 and the necessary procedure is being taken including personnel transfer. The project is now judged cancelled.

Description :

Utilization of Study:

The Study results have been incorporated into "the Integrated Air Pollution Control Program" which was commenced in 1990 and "Air Pollution Improvement Program in Mexico Valley 1995-2000" which has been implemented since Mar.1996.

Subsequent Studies:

Feb.1989-Sep.1991 "Air Pollution Control Plan of Stationary Sources in the Metropolitan Area (F/S)" (JICA)

Jun.1993-Jul.1995 "Survey Works for the Introduction of Combustion Technology for Air pollution Control at the Federal District (M/P)" (JICA)

Finance:

Nov. 7.1990 L/A 69,338 mil.Yen

(The Mexico City Sulfur Dioxide Emission Reduction Project)

*Content of project:

1)Desulfurization of heavy oil

2)Desulfurization of diesel oil

Sep.27.1994 L/A Japanese Import & Export Bank(Untied Loan)

21,400 mil.Yen

. (Air Pollution Control Plan of Stationary Sources)

Project-Type Technical Cooperation:

Jul.1.1995~Jun.30.1997 "National Center for Environmental Research and Training in Mexico"

Others:

(FY 1996 Overseas Survey)

As anti-air pollution measures, some of the following projects have been implemented or will be implemented.

1.Regulation on the source of air pollution

a)Production and supply of improved fuel,

b)Countermeasure program against exhaust.

c)Hoy no circula "No driving Day" program.

2.Enactment of legislation

3.Monitoring on air pollution

4.Monitoring and inspection on the stationary source of air pollution

5.Inspection on vehicles

6.Reinforcement of organizations (Establishment of Metropolitan Area Environment Committee and Ministry of Environment of Federal District)

Description :

The Govt. of Mexico is preparing to submit a request for assistance to implement a part of proposed projects to Japan.

(FY 1996 Overseas Survey)

According to the proposed project, 8 cities have been implementing the investment project in the year of 1996/1997.

1."Farm Products for Export Promotion Program"

The Products Improvement Program was formulated for the production of banana, sesame, mango, melon, watermelon, sugar cane and papaya as well as the Dried Fruits Program for papaya, lemon and banana.

2."Agricultural and Stock Farm Products Distribution Improvement Program"

The collecting place for the stock farm products was constructed and the market information system for producers was established.

3."Agricultural and Stock Farm Products Processing Facility Project"

The packing facility for mango, melon and papaya was constructed.

4."Small-scale Irrigation Project"

Various irrigation facilities are to be constructed in the second unit as the Fertilizer Irrigation Project is implemented.

5."WID Organization Reinforcement Program"

The Domestic Works Training Program, including sawing, cooking, first-aid treatment and sweets making, and the program to integrate women into the producers groups are to be implemented.

(FY 1997 Domestic Survey)

JICA Expert dispatched to SAGAR is examining a realization of priority projects. T/R is being prepared to request assistance from Japan for small-scale irrigation project.

(FY 1998 Overseas Survey)

During the period of 1996-98, the following activities have been made.

1."Farm Products for Export Promotion Program"

Principal component of the project is the application of fertilizer and irrigation technology to horticulture (water melon, melon, chile). Seeded area has been enlarged and the number of cultivations and production per hectare has been increased. Municipalities such as Cihuatlan, Casimiro Castillo, La Huerta are participating this activity. Cultivation of eggplant, cabbage, tomato, okra, macadamia for export is being introduced. Small-scale horticulture has been started in Puerto Vallarta. Seeding technology was firstly applied to Casimiro Castillo, and La Huerta from 1996 to 98, then to Tomatlan, and Cihuatlan from 1998 to 99.

3."Agricultural and Stock Farm Products Processing Facility Project"

Two plants for processing mango for export were constructed in Tomatlan and Cihuatlan. Training regarding operation is being conducted.

Others:

SAGAR is implementing the extension of irrigation and training to the concerned producers under the program of "Alliance for Rural Area".

(FY 1999 Overseas Survey)

1. "Farm Products for Export Promotion Program"

220 Tractors equipped with harrow and plow, 40 irrigation equipment (sprinklers), 250 sprayers, 250 tracks were introduced. Advanced technology of fertilizer and irrigation are applied for 2,000 ha and the new way of sowing is used for the cultivation of water melon, melon, papaya. Therefore, quality, quantity, and productivity of the agricultural products have been greatly improved and enhanced. Okura, beans, squash for export are able to be cultivated.

2."Agricultural and Stock Farm Products Distribution Improvement Program"

Communication network model on agricultural/livestock activities connecting both public and private institutions through the artificial satellite is under examination.

3."Agricultural and Stock Farm Products Processing Facility Project"

The packing machines for mango, lemon, water melon, papaya, and banana were introduced. A milk collecting center and the centers for livestock shipping were constructed. Those projects are financed by federal and state government, and producers.

4."Small-scale Irrigation Project"

Irrigation system (sprinklers) were installed at 40 sites, 25 of which are financed by both the federal government and the producers and the rest 15 of which are financed by only producers. The total investment is US\$12,000,000. Benefited area is 2,000ha and the number of beneficiaries is 300 producers.

The irrigated area development program (US\$10,000,000; first unit for 5,000ha and second unit for 5,000ha) is to be completed.

5."WID Organization Reinforcement Program"

The training of domestic works such as including sawing, sweets making, handicrafts is conducted.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

Senior Volunteers (SV) were dispatched from October 28th 2001 to October 27th, 2004 for a follow up of the development study. SV facilitated soil conservation and improvement, farming technology improvement, and farming management improvement.

Although the activities does not mean a realisation of the prooject proposed in the D/S, which requires huge investments, part of the projects have been revised to posses a higher feasibility.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 1997 Domestic Survey)

- The Ministry of Tourism reviewed the results of the JICA study for incorporating its recommendations and action plans into the new policy of tourism development and promotion.
- The Municipal Government of Benito Juarez in Cancun requested to the Federal Government the implementation of the Nipcute Lagoon Comprehensive environment improvement project.

(FY 1998 Overseas Survey)

(1)Cancun

Documentes and information are utilized as the base of development promotion activities.

(2)Los Cabos

South Baja California Tourist Service Promotion Program was formulated based on this study.

(3)Puerto Vallarta

This study is utilized as the base for formulating the tourist promotion plan in this area.

Tourist promotion activities in this area are as follows.

- Reinforcement of regionalization strategy in the context of tourist route.
- West San Sebastian: development of accomodation for the tourists of the route of Puerto Vallarta - San Sebastian, commercialization of the same route by Tron Airline, development of infrastructure of Vallarta - mountain, road development of Mascota - Puerto Vallarta.
- Air route of Puerto Vallarta - Guadajara: commercialization of package tour for tourists from overseas.
- Start of promotion of convention center, golf courses, ecology park.
- Rural tourism in this area and neighboring area.

(FY 2000 Overseas Survey)

(1)Puerto Vallarta

The results of this Study have been utilized as the base for formulating the tourist promotion plan in this area. 45% of proposed projects has been implemented. After the next election, the government would continue to realize the proposed projects.

(2)Los Cabos

The results of this Study have been utilized as the base for formulating the tourist promotion plan in la Paz and Cabo del Este.

(3)Cancun

This study is utilized as the base for formulating the tourist promotion plan in this area.

Tourist promotion activities in this area are as follows.

- Cancun City Center: Expansion of Pedestrian Area in Tulum and Uxmal Avenue, Redevelopemnt of Las Palapas Park.
- Cancun TouristCenter: Partial Redevelopemnt of Punta Cancun Area, Tourism Promotion by Private Sector named Corazone, Accommodation-140 Hotels and 24,610 Rooms (1999),141 Hotels and 25,368 Rooms (2000) .
- Route of Mayan Culture: Tourists Agencies run 3 day trip and 7 day trip along the route of Mayan ruins.
- Investment and New Projects in Sourthern Part: Service Center in Kohunlich Archeological Site, Oxtankah, and Dzibanche. Development of Mahahual Port, Expansion of Roads(Chetumal-Bacalar(constructed), Bacalar-Mahahual(planned)).

(FY 2002 Overseas Survey)

The projects for promoting tourism and development, implemented during the period between 2001- 2002 are following:

1. Cancun1.

- 1-1.Training programs on tourism, targeted for tourist agents and civilians,
- 1-2.Establishing the Caucun Visitor Center and the Conference Center, aimed at attracting conference and activating tourist industries,
- 1-3.Modernizing transportation network,
- 1-4.Improving environment for the lake system, etc.

2. Los Cabos

- 2-1.Opening new hotel
- 2-2.Increasing domestic and international fright in Loreto, etc.

3.Cancun

- 3-1.Developing eco-tourism in several areas,
- 3-2.Implementing government-financed training programs for staff, etc.

| 2. NAME OF STUDY | Sustainable Development Plan of Forests at Villages in Oaxaca | | |
| 3. SECTOR | Forestry | / Forestry & Forest Conservation | 4. TYPE OF STUDY M/P+F/S |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | |
| | PRESENT COUNTERPART AGENCY | Direction General of Forestry, Undersecretariat of Natural Resources, Secretariat of Environment, Natural Resources and Fisheries (SEMAENAP). | |
| 6. OBJECTIVES OF THE STUDY | 1) To prepare a sustainable development plan (M/P) to make possible the conservation and sustainable use of forest resources of the Study area of 160,000ha which was defined in the Sierra Juanrez Region in the State of Oaxaca, 2)To prepare forest management plans for the villages located in the Pilot Area of 20,000ha, which locate around the San Pedro Yolox, and to execute a F/S according to the prepared plans, and 3)To transfer related technology in the course of the Study to C/P personnel. | | |
| 7. CONSULTANT(S) | Japan Forest Technical Association Pasco International Inc. | | |
| 8. STUDY PERIOD | Jan.1997 ~ Oct.1998 21month(s) ~ | | |
| 9. SITE OR AREA | <p><M/P> Study Area of 190,000ha (at the beginning of the Study, the Study Area was approx. 160,000ha, but in the course of the Study, that area has extended to 190,000ha in consideration of administrative boundary).</p> <p><F/S> Pilot Area of 13,000ha (at first, the Pilot Area was defined in 18,000ha, but this area needed to be changed due to the forest fire. For 5,000ha, affected by the fire, a Forest Management Guideline, which indicate measures to rehabilitate the damaged area, was prepared).</p> | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p><M/P> A M/P was prepared as a Sustainable Forestry Development Plan for the Communities (indigenous communities of Mexico) located in the Study Area of steep mountain region in which the forest resources are practically the only natural resources. The objective of the Plan is to accomplish development of these Communities through the promotion of forest management and production. The principle of the M/P is to execute forestry operations to maintain the sustainability of various forest functions such as public and economic utilities. Based on this principle, the Plan indicated how the Communities should take measures to develop forestry operation and production. This Plan should be considered and used as a model for cases of which the Communities develop their forestry operation and production. In the M/P, some model cases are analyzed comparatively depending on forest conditions and other geographical conditions, by estimating cost, income, and profitability, And also the perspective of Communities' development is mentioned.</p> <p><F/S> For three Communities which were selected in the Study Area (at first, four Communities had been selected, but one of them was damaged by forest fire, and therefore, it became impossible to prepare Forest Management Plan. So, for this Community, a guide on forest rehabilitation of damaged area was prepared), the Forest Management Plans were prepared for each individual and independent implementation by themselves. These Plans took various conditions of Communities into consideration, such as forest resources' situation, location, socio-economic situation, and inhabitants' opinions, in order to suggest the principle and measures on their own forestry operation. Furthermore, next ten years' operation plan was arranged based on forest classification by their functions and long term perspective of forestry management. However, it needs very long term till the wood products are obtained through the forestry management. Therefore, Feasibility was examined taking into account 90 years, that is the sum of 60 years, which is the period to start to yield from the forest renewed by this plan, and more 30 years, in which it will be able to yield stably. The judgement of feasibility was done by Present Net Value. Main contents of the forestry operation are: 1)tending (weeding, improvement cutting, and thinning), cutting (thinning and final cutting), regeneration (mainly by natural regeneration), and forest improvement in commercial forest, 2)forest improvement in fuel wood's forest, and 3)construction and maintenance of forest roads. Furthermore, the environmental impact consideration on forestry operation was conducted.</p> | | |

| | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY 1999 Domestic Survey)

Major part of the Sierra Juarez Region, in which the Study Area located, has no relevant natural resources but forest resources, therefore, the inhabitants of the Communities earn by only agriculture in steep lands and going to foreign or domestic cities to work. However, the communities are found in poverty situation. Scales, qualities, and other conditions of forest resources that form most important resources in this region differ by each communities. But, to considerable measure, forest resources have contributed to improve living basic conditions and to generate income for inhabitant. Nevertheless, in the past, private forestry enterprises operated devastating cuttings without consideration to sustainability, therefore, pine trees, that have high commercial value, have been reducing. Consequently, it is very difficult for major part of communities to execute continuous forestry production.

Under such a situation, Oaxaca Office of SEMAENAP is making effort to improve communities' situation of this region through the forestry development. Therefore, this office expects the Forest Management Plans, prepared by this Study, will be carried out to accomplish that objective, and will contribute as a model of adequate forest management. In case of implementation, Oaxaca Office of SEMARNAP will take responsibility to offer communities technical and administrative support. However, this office has shortage of technical staff and finance to give sufficient support. So, SEMARNAP is desiring Japanese cooperation for continuation of this project. After the Study terminated, SEMAENAP has requested Japanese short term experts, and two Japanese experts (Forest Management and Forest Fire Prevention) were dispatched in relation with this project.

(FY 1999 Overseas Survey)

SEMARNAP Office in Oaxaca State now revises the plans of study and search the possibility to support the communities for the operation of the project. Direction General of Forest will negotiate the support of JICA.

Dispatch of expert:

(FY 2001 Domestic Survey)

Short-term expert (one, Participatory Forestry Management): From Mar. to Apr.2001

Long-term expert (one, Technical Advice on the Rural Forestry Diffusion): Two years from Oct.2001

(FY 2003 Domestic Survey)

Target of the request for funds:

JICA Time of request: August 2002

Condition in relation to the realization of the request: A project to realize the plan formulated in the development studies was proposed by a local NGO, and was adopted (requested by NGO, subject to application of Development Welfare Support Project). Because the scheme of Development Welfare Support Project was abolished, the project will be implemented as a Technical Cooperation Project and is now prepared for signing of R/D.

Fixed contents (amount) in the case that the fund raising is realized: Amount of approximately 15 million yen

Description :

(FY 2000 Domestic Survey)

No information is available because the political situation was changed by the election after the completion of this study.

(FY 2002 Overseas Survey)

Alteration of regime has thrown the society into confusion. However, the factors, hampered the project from progressing as planned were economic/financial problems. Despite this, it was determined to construct a laboratory at headquarter of Northern region, as continuing project, operated by CAN. There also comes possibility of building facilities for the water quality monitoring center in Altamira city of Tamaulipas state before long. Water quality monitoring program in Tampico has continued to be implemented, based on basic principles, presented in the final report of National program. The criteria, proposed by JICA experts have been adopted in National program.

(FY 2003 Overseas Survey)

Part of the observation of water quality in Altamira and Tampico city of Tamaulipas state have been conducted using there own budget. Improvement and expansion have been conducted for local water quality institution in northern port area in Altamira of Tamaulipas state.

(FY 2004 Domestic Survey)

1. Proposed Project: National Water Quality Monitoring Program
 2. Funding Party: the World Bank, and Mexican Gov. budget
 3. Amount: Loan from the World Bank through "Water Quality Resource Management Project" is planned to total to 186.5 million USD from 1996 to 2005 period (part of the fund will be used for renewal, alteration, and purchasing of evaluation equipment of water quality evaluation laboratory).
 4. Content: The project plans for national wide comprehensive water quality monitoring not only for coastal water but including surface water and groundwater.
 5. Design/Construction progress
 - 1) Project Name: Coastal Water Quality Monitoring Reference Laboratory Construction
 - 2) Construction Period: Start 2000 End November 2003
 - 3) Content: Based on the proposal of this D/S, Project-Type Technical Cooperation is planned to be implemented in improving capability of Costal Water Monitoring Reference Laboratory, as a new FY 2004 project.
 6. Progress of the Implemented Projects
 - 1) Project Name: "Coastal Water Quality Monitoring Network Empowerment Assistance Plan"
 - 2) Benefit:
- Direct Beneficiaries - local water quality analyst of CAN (13 location nation wide)
Indirect Beneficiaries - All Mexican nationals

(FY 2005 Domestic Survey)(FY 2005 Overseas Survey)

Subsequent study: Study on Development of the National Water Quality Monitoring Programme in Coastal Areas (JICA Technical Cooperation Project)

Implementing body: Mexican government State Water Committee

Situation:

August 2005: Preparatory study was completed.

Early 2006: The programme is to be started.

Relationship with the study: The Mexican government State Water Committee would implement this technical cooperation project by utilising the world bank loan funds, targeting State Water Committee Northern Coastal Area Reference Laboratory built in the Tamaulipas Altamira city in 2003.

Description :

(FY2000 Domestic Survey)

Two Japanese experts (Short term experts; Sustainable agriculture specialist and small animals specialist) were requested by SAGAR to Japanese Government on 1999, however there is no information about the progress after the request.

(FY 20002 Domestic Survey)

Dispatch of experts has not been realized. Furthermore, there is no progress for the implementation.

Japanese Technical Cooperation

(FY2002 Overseas Survey)

Training experts in Japan: 1 trainee, Oct - Nov, 2002,

Dispatching experts: staying in Tapachula.

(FY2002 Domestic Survey)

The local Govt. requested for project-type cooperation, and JICA conducted contact mission in Aug 2002. However, no information is available on the status of projects.

(FY 2004 Domestic Survey)

1. Finance:

1) Proposed Project: Project on Assistance Plan for Small Producers in El Soconusco, Chiapas

2) Funding Party: Project-type Technical Cooperation

3) Amount: Approximately 150 million YEN (1st March, 2003 - 28th February, 2006)

4) Contents:

(1) Project Objectives: To become cable of conducting new projects for village development, where municipal taking a leading role with corporations from the SDR and the SAGARPA.

(2) Outcome: the following can be considered as an outcome

- New organisations to be established in 4 villages (Tapachula, Pavencul, Acagoyagua, Union Juarez) to promote new businesses.

- New businesses to be established by local initiatives in 5 villages (Pevencul, Tuzantan, Jaramillo, Los Cacaos, San Rafael), taking into account individual situations.

- Assistance will be given by SDR and SAGARPA in establishing organisation for new businesses in 4 villages.

(3) Japanese Implementation Structure

- Long-term consultants: 2 personnel (organisational management, project management/operation)

- JOCV: 3 personnel (Community Development)

(4) Short-term dispatch of experts

- August 2002 Short-term experts (Village Study)

- August-September 2004 Short-term experts (Community Development)

2. Other Progresses:

1) Project Name: Project on Assistance Plan for Small Producers in El Soconusco, Chiapas

2) Beneficiaries: Residents in Chiapas, Soconusco district

Soconusco district has 16 municipalities with 5,500 square km of land. Population is 920 thousand (1995).

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2009 Domestic Survey)

Integrated Agricultural, Livestock and Rural Development of the Soconusco Region (the Rural Development District No. 8 in Tapachula) in Chiapas (PAPROSOC- 2)

(Project Objective) This project aims to implement rural development in 16 municipalities in Soconusco region by utilizing official assistance programs and meeting demand of the local residents along with the Sustainable Rural Development Act.

(Project Period) 2006.9-2010.9

(Forms of Cooperation) Technical cooperation project

Description :

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

Although infrastructure development is in delay compared to infrastructure development plan noted in the MP, water distribution management plan is in progress according to proposal made in the M/P, which CAPA officials has utilized knowledge and techniques gained through the study.

For the urban solid waste disposal management, while majority of executive officials has been replaced in SEDUM, technical staffs participated in the study has remained. On the other hand, for the regional level, majority of staffs from prior regime has been replaced, which the outcome of the study has not been passed on with low acknowledgement.

For the model project for waste water disposal, waste water disposal system has been constructed in other village utilizing experience gained from the model project joined by CAPA as a CP.

Comprehensive solid waste management system developed with SEDUM and 3 province as a CP is still in operation, which SEDUM intends to publicise the system on the homepage in the near future.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Domestic Survey)

Conduction of "Reinforcement of Underground Water Management Capacity in Yucatan Peninsula", which is a technical support project in aim to take in the contamination of underground water and to strengthen the management capacity of underground water, has been considered by JICA. The objective is to conserve underground water and to utilize it in sustainable manner.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

| Description : | | |
| <p>The municipality of Managua desires the implementation of the project including the construction of disposal plant. Existing disposal plant in Managua city will be filled within 4-5 years.</p> <p>Technology guidance by the study team has been highly evaluated owing to the success on pilot project implemented in this study.</p> <p>Dispatch of experts is expected.</p> <p>(FY 1997 Overseas Survey)</p> <p>Municipality of Managua has carried out activities as follows. Fund has not been procured yet for remaining projects.</p> <p>(1)Improvement in gathering and cleaning system at public area Expansion of collection service area by introducing new route Installation of containers(15 cu.m)</p> <p>(2)Construction of Acahualinca new final disposal plant Legalization of land for construction of disposal plant</p> <p>Subsequent Study: (FY 1997 Overseas Survey) B/D implementing</p> <p>Finance: (FY 1997 Overseas Survey)(FY 1999 Overseas Survey) Request for financial assistance was submitted to Japanese government in January 1996. *Contents of the request: provision of equipment/materials for operating the system, construction of the new final disposal plant, the improvement in existing Los Cocos workshop, promotion on community consciousness and participation. (FY 2001 Domestic Survey) Own fund (2 million Cordoba)</p> <p>Japanese Technical Cooperation (Dispatch of Expert): (FY 2001 Domestic Survey) Period: From Apr. to May 2000 Dispatched agency: Managua city Fields: Waste Treatment Planning (1) Geological Evaluation / Civil Planning (1) Environment Evaluation (1)</p> <p>Detail: (FY 1998 Domestic Survey) Japanese government pointed out that financial inability caused the failure in privatizing the collecting system, and proposed that the project contents should be changed and environmentally re-assessed. Priority of the project is reviewed, considering the rehabilitation of the damage by hurricane.</p> <p>FY 1999 Overseas Survey) Since Acahualinca was flooded by the hurricane Mitch, it was excluded from the candidate sites. Three JICA experts are to be dispatched for selection/evaluation of the candidate site for a new disposal plant.</p> <p>(FY 2001 Domestic Survey) Three experts were dispatched to Managua city from Apr. to May 2000. As the result of survey by the experts, the location of future disposal plant was selected in CHILITEPE-SOUTH among 5 proposed sites. They said that the proposed site for the disposal plant was far from the city center and needed a large investment like a relay site, therefore, the proposal was made to develop sanitary conditions of the exist plant in order to make the present function longer for the time being. As the reaction to this proposal, Managua city secured 2 million Cordoba for the betterment of exist Acahualinca disposal plant and the betterment works are scheduled to start in Oct.2001. Moreover, Managua city made a request on dispatch of Japanese experts for the purpose of the technical advice, however, the request was not adopted because of the delay of its submit.</p> <p>(FY 2005 Overseas Survey) Municipality of Managua has requested the Japanese Government for a technical and financial assistance for small-scale enterprise development, assistance, and strengthening as well as improving living standars on health, employment, and sanitation aspects.</p> <p>Several subsequent projects and studies has been conducted. For an examples, improvement of solid waste collection system has been implemented with a Yen loan, construction of gas well in Acahualinca final disposal plant has been implemented with a loan from IADB, and improvement of Los Cocos disposal plant is made with own fund.</p> | | |

| Description : | | |
| (FY 1998 Domestic Survey) The Ministry of Environment approved environmental impact assessment for a final treatment plant proposed by the project in 1998. | | |
| (FY 1999 Overseas Survey) (FY 2002 Overseas Survey) They requested for grant aid (JPY 435.72 million) for the "Provision of Machinery and Materials for Garbage Collection in Granada City, Leon City, and Chinandega City". | | |
| (FY 2001 Domestic Survey) The government of Nicaragua thinks that the "Managua City Waste Treatment Plan" implemented by Japan in 1995 is a top priority project. Thus, in the situation in which the project has not been implemented, it is difficult to implement projects proposed by the study. | | |
| (FY 2002 Overseas Survey) Granada City tries to strengthen organizations to implement the Waste Treatment System Improvement Plan. As a part of it, the city plans to organize environment teams in 2003. Also, it constructed garbage collection points in Villa Sandino district. | | |
| (FY 2003 Overseas Survey) Based on the result of the study, they requested for a fund for conducting a "Review and Revision" study in the first quarter of 2004 to the "Casa de Tres Mundos (3 worlds)" fund. At the time when the review and revision finish in April 2004, they will make a formal request for the implementation of this important project in Granada City and Nicaragua to the government of Japan in order to facilitate the introduction and implementation of the project. | | |
| (FY 2007 Overseas Survey) The Nicaraguan government is appealing the following activities for the implementation of the mentioned study. | | |
| <ul style="list-style-type: none"> - Creating the master plan of solid waste synthesis processing for Leon City - Cleaning the nonhazardous solid waste and a review, public notice and enforcement for general waste processing ordinance. - Creating the environmental plan for the city. - Collecting solid waste and support of the transportation vehicle. - Improvement of the city cleaning by obtaining a cleaning machine with three wheels. - Removing scrap depot in the Historic Center of the city. - Installing 353 containers in the History Center of the city. - Concluding a cooperation agreement with UNI. - Updating the database of solid waste synthesis processing master plan for Leon City. - Concluding cooperation agreement with Polytechnical University of Nicaragua (UPOLI). - Implementing impact study affect to the environment (EIA). - Acquiring environmental permission for constructing of the first phase of urban back-filling site. - Creating backup design for the first phase of the urban back-filling site. - Creating back up F/S history for the constructing first phase of the urban back-filling site. - Participation of the second phase of fund tendering for the Nicaraguan state implemented by FISE, and conducted the first phase of construction of the urban back-filling site and closure of El Fortin disposal site. - F/S for the first phase of construction project of the urban back-filling site and closure of El Fortin disposal site. (Tendering in progress) - Physicochemical analysis of the spring water. - Physicochemical analysis of the seeping water. - Physicochemical analysis of chlorine and phosphoric processing material. - Analysis of the air pollution. - Soil investigation. - Hydrogeological research. - Social hydrogeological research. - Social economy research. - Surveying the first phase of the urban back-filling site (Altitude and grade level). - Surveying the current El Fortin disposal site (Altitude and grade level). | | |
| For operation and maintenance of the back-filling site, probation of the fund raising and obtaining construction module are in progress by the Japan Embassy. | | |
| (FY2007 Domestic survey) No information to be specifically mentioned. | | |

Description :

(FY 1999 Domestic Survey)

Dispatch of an urban transport expert from Japan was planned for follow-up study of the mentioned study (as of Nov. 1998). However, no candidates are found and it has been suspended. As for the proposed projects, the interest of donors including Japan Embassy, World Bank, and Inter-American Development Bank is currently directed toward the restoration of the country which was deeply damaged by Hurricane Mitch that hit Nicaragua in November 1998, and therefore no progress has been made yet.

(FY 1999 Overseas Survey)

Municipality of Managua has implemented the intersection improvement project. 18 signals were installed at the municipal center.

Experts are to be dispatched from Japan. They will support Municipality of Managua to plan the priority projects (from Apr. 1999).

As for the public transportation management, financing from IDB was proceed for implementing the F/S on busway.

(FY 2000 Overseas Survey)

Municipality of Managua constructed 5 circular arch roads (Centoamerica, Universitaria, Larreynaga, Jean Paul Genie, Periodista) to interconnect 5 main roads. In order to expand road network and to reconstruct bus network, F/S on municipal busway system has been implemented.

(FY 2002 Overseas Survey)

The activities of General Plan of City Maguana are as follows:

1. Transportation.

1) Implementation of F/S for "Urban development program, and improving public transport"

It was implemented by Spanish Funds and was confirmed on the JICA's proposal (especially on specific transportation roads). Study on technical, economic, financial, legal, environmental feasibility was conducted. Utilization of alternative roads for cars and reorganization of lines including these roads were examined.

2) Implementation of technical survey on reformation of bus transportation route.

3) Construction of terminal facilities for Maguana City

3 terminals for Municipal transportation were constructed by Grant Aid. Fund; USD 11 mills, Contractor; Hazama Corporation

4) Construction of bridges for cars' exclusive use in Maguana City

11 bridges for only motor vehicles were constructed by Grant Aid. Fund; USD 4.68 mill, Contractor; Hazama Corporation

5) Renovation of transport vehicles

To be carried out on domestic funds.

2. Construction of roads:

Under practice.

(FY 2003 Overseas Survey)

The study in relation to the FS of the "Busway Road No.1 (North Street)" was approved in the framework of strengthening and modernization of ALMA, commenced in 2000 and completed in February 2002. The project obtained financing of 450,000 US dollars worth of funds from Spain. Based on the result of the studies, construction has been implemented in succession on its own funds.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

1. Name of project: Supporting prevention of traffic accident, improvement of distributor system in Managua City (1st) (Signal installation)

1) Beneficiaries: 1.3 million people, residents of Managua City

2) Benefits: Total 267 signals (252 signals for vehicles/automobiles and 13 signals for pedestrians) were installed. Central control has been implemented in each street by the computer system. It was installed in the North Street. This installation of new signal network contributes to dissolve traffic jam.

(FY 2008 Domestic Survey)

With respect to 1) road maintenance, 2) installation of traffic signals, and 3) construction of bus terminals, projects have been launched and completed one after another in line with the recommendations of the study. As regards the construction of bus-way, which was the most significant proposal made by the study, the F/S was completed in 2002 with the support of Spain; there seems no progress since then, however, because of financial difficulties (the comment of a World Bank consultant).

[Nic.1] (Total 6 sites) Junquillal(Gabion mat), San Nicolas(Gabion mat), N001AA280 (Horizontal drainage), Las Chanillas(Concrete Block), San Ramon(Gabion Ma), N001A290 (Removal of loose rocks, installation of netting and drainage) [mNIC.3](Total 3 sites) N003B400(Cutting and drainage), N003B370(Cutting and drainage), N003B320(Retaining wall and fill, drainage and re-vegetation [NIC.26](Total 3 sites) N026B160(Remoal of loose rocks), Papalon(Gabion mat and riprap with mortar), Solis(Gabion mat and riprap with mortar) Package 2 [NIC.3](Total 1 sites) El Guayacan(New bridge [NIC.5](Total 1 sites) N005A010(Cutting and drainage) [NIC.26](Total 5 sites) N026A060(Cutting, shotcrete and drainage), La Banderita (Masonry wall and Gabion mat), N026B140(Cutting, shotcrete, horizontal drainage), N026A150 (Cutting, drainage, and lateral carriageway drainage), San Juan de Dios(Gabion mat) Package 3 [NIC.1](Total 7 sites) N001A240(Removal of loose rocks, installation of netting), N001B230(Removal of loose rocks, installation of netting), N001B170(Cutting and drainage), N001B150(Cutting, shotcrete and drainage), N001B120(Cutting and drainage), Rio Inali(Gabion mat and stone masonry), Rio Tapascalí(Gabion mat) [NIC.3](Total 4 sites) N003C230(Cutting and concrete protect with vegetation, and lower down embankment plus drainage), N003E170(Cutting, drainage, concrete dam and culvert beneath road), N003C150(Cutting and drainage above road, embankment, Vegetation and drainage below), N003C140(Cutting with drainage and horizontal drainage above road, embankment, vegetation, and drainage below) | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2003 Domestic Survey) In order to implement counter measure project against disaster critical spots, which are consisted of 7 spots for slopes, and 1 spot for scouring of bridge foundation, on the NIC3 proposed by the study, Nicaraguan government requested Japanese government in 2003 to provide the necessary assistance.</p> <p>(FY 2003 Overseas Survey) The Japanese government determined to dispatch two Japanese volunteers in order to allow the person in charge of the organization in question of Nicaragua to acquire the knowledge about utilization of the road disaster prevention manual.</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2004 Overseas Survey) 1. Fund request: Grant Aid of 9.2 million USD. This includes construction of dam and land slide prevention and maintenance. Although the request has been made for disaster prevention for a major road in 2002, there has been no reply.</p> <p>2. Progress: 1) Due to a restrictive finance, MTI is conducting a construction to mitigate the disaster only for a site which requires immediacy. 2) Accepted 2 JOCV in 2004. They have visited major road site included in the fragility survey target area and has prepared a inspection manual for irrigation, slope, and bridge. All of these activities have been conducted with a corporation with traffic department of MTI. In the first year's activity with the MTI, they have prepared the following report. - Identification of road disaster and its cause: Inspection of Sebaco-Jinotega (NIC. 3) km135+433 promo hill site and reclaimed hill. Inspection of irrigations between Telica - San Isidro (NIC. 26) km 167km to 171km. Slope inspection between El Espino - San Benito (Nic. 1). Inspection of major site between Sebaco - Matagalpa (Nic. 3). Inspection of 69km point in Nan Daime - beniaus Brankas (Nic. 2). Preparatory inspection of major road. Inspection of 6 bridges.</p> <p>(FY 2005 Domestic Survey) The study team was working to realise the project, but it was not selected. Parts of the project road damaged by the Hurricane "Mitch" were rehabilitated with a financial support from other countries. In addition, 2 volunteers (involving rivers and roads) were dispatched in this project in 2003.</p> <p>(FY 2006 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2007 Overseas Survey) Funds for the subsequent study "Natural disaster measures in the main roads", which aims to reduce risk indexes of natural disasters for road users and national roads, has been requested (amount: USD 9,269,815.00 (currency rate in Aug.2002: 1JPY= 118.60 USD). While we put efforts into funding toward the implementation of grant aid cooperation and BOT, the outlook is still vague. Contents to be implemented: Natural disaster measures in slope according to NIC-3 (3 rock-collapse spots, 3 slip surfaces, 1 muddy slope), prevention measure for bridge collapse according to NIC-3, disaster measures in slopes according to NIC-5 (1 spot in danger of rock collapse)</p> <p>(FY 2007 Domestic Survey) Regarding Priority project of disaster measurement maintenance for selected areas (3 packages of disaster measures concerning fragile slopes and structures), materialisation of the project is difficult at present. Treatment for funding of project cost is remaining as considering issue. The implementing body requests financial cooperation in form of general grant aid, it has not been adopted.</p> | | |

Description :

(FY 2005 Domestic Survey)

Participatory forest management plan is planned to be implemented in 3 cities and 9 villages in Leon. The objectives of the project is to improve living standard of local people and to increase water conservation capacity of the forest through sustainable activities of the local people by building capacities for forest management techniques, utilising the experience gained in the study.

(FY 2005 Overseas Survey)

Subsequent study: Disaster prevention forest management B/D

Implementing body: JICA

Objective: To introduce and implement activities for disaster prevention forest management action program proposed in the study, participated by local people, local authority, and officials from regional experts of Forestry Department Master Plan project, and to decide implementation method in accord with the plan.

Funding:

Funding party: JICA

Amount: 200 million USD

(FY 2006 Domestic Survey)(FY 2007 Domestic and Overseas Survey)

Implemented project: Forest management plan by the residents (JICA technical cooperation project)

Implementation period: Jan.2006 to Jan.2011

Implementing body: INAFOR, Achuapa City, El Sauce City, Santa Rosa Del Penon City

Objective: The objectives of this project is to promote sustainable forest management activities by participating residents, to improve the object villagers' capability of implementing forest management activities of object villagers, and to improve the technical experts' capability of leading residents in city and INAFOR.

Funding: JICA technical cooperation project (amount of contracting consultant: FY 2005:JPY 20,469,000 FY 2006: JPY43,708,000 FY 2007 37,607,000), the amount of self fund in recipient country is known.

Technical cooperation:

Training: Training was implemented in 3rd countries at sustainable environmental development center in Panama, whose objects are 7 counterparts of technical cooperation project (4 people of INAFOR, 3 staffs of city environmental issue room)(Jan.2007). Counterpart training was also implemented concerning "participating forest management project in Nicaragua" in Nov.2007. The objective of this training was to strengthen project management by adjusting with Japan, and the objects of this training was a 1 person of the technical team of master plan project.

Dispatch of experts: 10th of Jan. 2007 to 3rd of Mar. 2007: dispatched 3 experts, 7th of May to 25th of June: dispatched 2experts, 5th of Sep. to 22nd of Sep: dispatched an expert

Beneficiaries: Achuapa City: villagers of the 3 villages El Sauce City: villagers of the 3 villages, Santa Rosa Del Penon City: villagers of the 3 villages

Benefits: Number of beneficiary residents in 9 villages: 320 people, area (9 villages): estimated 5,000 ha

Utilisation of the proposed project: Following to the guidelines for formulating operating plan of disaster prevention forest management, the forest management operating plan of each village was formulated. Also, instructing residents is implemented by utilising "residents instructing manual", which was made by verification study.

Other progress: Forestry promotion activities and community afforestation in vulnerable and extreme-poor area were introduced with concerning offices, regarding the improvement of sustainable forest management method which is based on the prior item of forest promoting principle. The master plan project technical team is negotiating with town hall of La Paz Centro and Nagarote Ciry on community forest management project, whose beneficiaries are 2 districts, as part of forest promoting principle, based on the operating plan proposed in the final report of the main study.

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | Discontinued or Cancelled |
| Description : | | |
| (FY 2006 Domestic Survey) No information to be specifically mentioned. | | |
| (FY 2007 Overseas Survey) To implement the prioritized activities which have been identified by the study, the application of grant aid to a subsequent study relating to "the study on improvement of water supply system in Managua in the Republic of Nicaragua," has been requested to Japanese government. If this request is approved, Basic Design and Detailed Design could be started to implement the project. Funding: Japan Government U.S.\$11,735,000 the World Bank U.S.\$34,000,000 Current Condition and Funding Possibility: Japanese government is yet to approve the finance. The World Bank's project is in progress towards entrance to directory in July 2008. Nicaragua government approved the project and completed the procedure for finance. As a result of this procedure, the World Bank is planning to provide U.S.\$45,000,000 in total. \$34,000,000 out of this amount is applied to the construction component as indicated by the development study. The World Bank is to finance this project with the Japan PHRD fund. | | |
| (FY 2007 Domestic Survey) No specific activity plan is settled. Initially, it seemed that Nicaragua government intended to implement a Grant Aid Project in line with the recommendation made by the study. There has been no updating on this issue these days, however. It is thus yet needed to confirm the latest intention of the government. | | |
| (FY 2008 Domestic Survey) No information to be specifically mentioned. | | |
| (FY2012 Domestic Survey) The following Project has currently been implemented. 1. Optimizacion del Sistema de abastecimiento, Mejora de los indices de Macro y Micro medicion, Planificacion y Mejoramiento Medio Ambiental (Project objective) Establishment of water supply control/management system in Managua City (Project summary) Realizing the water supply record in water supply network extending to 800 km in Managua City, identifying leaked points, quantitative modeling, and sectorization. Rehabilitation of leaked points, installing sluice rooms for the sectorization, establishing GIS (Geographic Information System), implementing training sessions to ENACAL (the Nicaraguan Water and Sewerage Enterprise) personnel. (Financial source) Spain (Project starting period) 2005 2. Water and Sanitation Project in the Metropolitan Area of Managua in Nicaragua: Supervision of the Construction of Sanitary Sewer Networks in Bello Amanecer and Wastewater Treatment Plant at Zone 7 in the City of Sandino (Project objective) Improving access of residents to safe water and better sanitary environment in the Metropolitan area (Project summary) The Project is to be implemented based on the 3 components. (1) Drinking water is provided to 285,000 residents and sewerage facilities to 190,000 residents, through expanding and improving the scope of drinking water and sanitary services provision in lower income districts. (2) Water supply system is enhanced and its effective utilization is promoted in the target districts, through the increase of water sources and water amount as well as the improvement of water delivery pipelines, water storage, living drainage collection, and treatment system. (3) Monitoring and evaluation system of the Project is improved. (Financial source) World Bank (Project starting period) 2008 3. Water Supply Program for Managua (Project objective) Enhancing the quality of life among Managua residents through improving and expanding drinking water/sanitary services (Example 1. Improving drinking water quality service; Example 2. Expanding the scope of drinking and sanitary services provision; 3. Enhancing efficiency and sustainability of the services provision). (Project summary) The Project is summarized in the following 3 components. (1) Drinking water and sanitary facility infrastructure 1) Updating and optimizing the drinking system in at least 20 districts through installing 8,342 connecting pipes with flow meters and 54.6 km-long pipework 2)The scope of sewerage facilities provided is expanded in at least 16 districts. Consolidation work is to be implemented for 40.4 km, with additional services provided to 5,495 households. 3) Drinking water production capacity is enhanced through rehabilitating 50 existing boreholes and drilling 11 new boreholes. 4) A water power facility is constructed for the coordinating drinking water service in the 3 macro sectors 5) A comprehensive plan for non-revenue water reduction is formulated in macro sectors, through the preparation of user ledgers, macro sectorization, leak management, replacement of pipes. 6) Central control and management of Managua City drinking water system is implemented. (2) Plan of effective utilization of energy (3) Strengthening operation management of ENACAL (Financial source) IDB (Project starting period) 2010 4. Mejoramiento de macro sectores Zona Baja y KM 8 CM Bombeo (Pumping) del acueducto de Managua (Project objective) Improving drinking water infrastructure, Effective utilization of water supply/distribution sub-system (Project summary) Macro Sectorization of Managua City Water Supply Low Land Drainage District is to be completed, from which 376,000 residents are able to benefit. In addition, facilities for water production, storage and treatment are to be consolidated in Km8CM-P District, which enables sufficiently to satisfy the water demand of 32,000 residents and to improve the water supply services. (Financial source) A request for grant aid from the Japanese Government has been submitted (2012). | | |

Description :

(FY2007 Domestic Survey)

No information to be specifically mentioned.

(FY2007 Overseas Survey)

Implemented project: Strategy of diffusing and commercializing the map

Implementing period: from January, 2007 to December, 2008

Implementing body: Nicaragua Geographic Laboratory Geodetic Map Building Department

Objective: Provision of utilizing formal map built by the nation in order to assure the quality of the data of information that is utilized for national development plans.

Progress: Already purchased equipments and accessories.

Funding: Own fund of aid-recipient country. INETER earmarked to ordinary budget of 2008.

Implemented project: Convert from NAD27 to WGS84 in 1/50,000 scale size of topographical map

Implementing period: from March, 2007 to July, 2007

Implementing body: Nicaragua Geographic Laboratory Geodetic Map Building Department

Objective: Design geo-reference in basis of WGS84 spheroid, in page 303 of 1/50,000 scale size of topographical map built in 1988.

Progress: completed

Implemented project: Training plan

Implementing period: from January, 2007 to December, 2008

Implementing body: Nicaragua Geographic Laboratory Geodetic Map Building Department

Objective: Cultivate situation analysis capacity about algorithm of technical staffs. This capacity would be the tool for analyzing and designing soft application that is necessary to solve the problem in real world.

Progress: completed

Implemented project: Establish the method of building 1/50,000 scale basic map

Implementing period: from January, 2007 to December, 2010

Implementing body: Nicaragua Geographic Laboratory Geodetic Map Building Department

Objective : By the establishment of the method of building basic map, it would be possible to revise 1/50,000 scale size of topographical map of Nicaragua, and it would be possible to built maps that would interest the nation.

Progress : in primary step

Funding: Own fund of aid-recipient country(110,520.00Cordobas). INETER earmarked to ordinary budget of 2008.

Implemented project: Analysis of flood in Maravilla river watershed

Implementing period: from May, 2006

Objective : reinforcement of credibility and perfectibility(without leaks) of flood forecast in Cuencas watershed area

Progress : Full-time monitoring has been conducted in the research targeted area.

Funding: Own fund of aid-recipient country. INETER earmarked to ordinary budget of 2008.

Implemented project: Measures against earth physics component

Objective: building hazard map of earthquake, volcano, and tidal wave, and utilization and development of GIS technology

Progress: now in progress

(FY2012 Overseas Survey)

1. Personnel's application of acquired knowledge

Over the past few years, the technology acquired through the Project has been transferred by the personnel at Nicaraguan Institute of Territorial Studies (INETER:

Instituto Nicaraguense de Estudios Territoriales). Updating a basic map on a scale of 1/50,000 has been continued, though the methodology taken is the most time-consuming one due to the lack of necessary fund. In addition, hazard maps for various kinds of disasters, such as volcanic explosion, earthquakes, floods and so forth.

2. Equipment procurement for updating the basic map

INETER in recent years, for the purpose of regular updating of the national basic map, has endeavored to obtain aerial photographs and satellite images with a high resolution. It is quite difficult as aerial photographs and satellite images require high cost. However, updating work has been maintained within a possible scope of the basic budget.

Description :

Utilization of the Study:

The result of the study is utilized especially in electric communication, broad casting and social infrastructure. The map will be utilized for the future development planning of the area.

(FY 1995 Overseas Survey)

In December 1995, Instituto Geografico National was Provided the equipment necessary to produce Topological maps by JICA.
The production of Topological maps are strongly desired in Panama because many of the existing maps are considered inaccurate.

Description :

Utilization of the Study:

(FY 1993 Overseas Survey)

This study drew international attention to the fisheries resources of the Atlantic Ocean. Three groups of private firms including Japanese firms are interested in investing in the fishery. The result of the study is fully utilized.

The final report is well utilized as an explanation note to these groups and as basic document for authorization of fishery right in the Department of Commerce and Industry.

(FY 1995 Overseas Survey)

The fisheries resources of the Atlantic Ocean needs to be developed. The study report is considered to be very useful for its development.

| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

The reasons for Cancellation:
 (FY 1991 Overseas Survey)
 The hearing of the project was impossible owing to the political and economic disorder caused by the American invasion.
 (FY 1995 Overseas Survey)
 Since the break-down of the military government there has been no need to broadcast the propaganda to the world with short-wave.
 Because the latest technology, such as the optic fiber, is on higher demand than short-wave, the resumption of the proposed project seems to be unlikely.

Description :

Utilization of the Study:

(FY 1991 Overseas Survey)

Technology and methods which were transferred to Panama during the study are utilized in the formulation of guidelines for forest resources development.

(FY 1995 Overseas Survey)

Because the Panamenian Government is satisfied with the JICA study, it desires JICA to conduct new surveys in other areas.

(FY 1997 Overseas Survey)

The results of the study were utilized to draw up "Panama Forestry Action Plan". Moreover, the study is used as reference for several types of surveys undertaken by INRENARE, Fundacion PANAMA, CONFOREC S.A., Simons Reid Collins, etc.

"Sustainable Forestry Development in Donoso District"

(FY 1997 Overseas Survey)

Subsequent Study:

Jul.1996~Dec.1997

"Forest Inventory" and biodiversity / socioeconomic information have been actualized.

Implementing Organization / INRENARE

Finance:

Nov.1995 Government budget B.372,800 (including a cost for survey)

| <p>Description :</p> <p>By the Final Report of the commission (Sep.1993), existing canal will be available until 2020 and after 2020, improved canal by this project will be necessary. The project shall be completed by 2020.</p> <p>The canal is to be transferred from USA to the Republic of Panama in Dec.31,1999. This project has been suspended and the Commission was closed after completing the study.</p> <p>(FY 1995 Overseas Survey) In October 1995, the Ministry of Foreign Affairs of Panama produced the tentative report with which it is planning to request foreign donors to renew this study. In order to renew the study the Panamanian government has decided to allocate 34% of total cost (431,500US\$/year) while it expects foreign donors to contribute the remains.</p> <p>(FY 1997 Domestic Survey) In september 1997, International Panama Canal Conference was held by government of Panama and management method after the handover was discussed. Panama Canal Committee reported larger amount of services than estimated by the F/S and asserted that implementation of project should be earlier than as it planed.</p> <p>(FY 1998 Domestic Survey) The projects proposed by F/S have been implemented. The government established Panama Canal Bureau. M/P is under formulation with the idea of "School, Technology and Science City Development Project" as a development. This is planning to be financed by IDB.</p> <p>(FY 1997 Overseas Survey) Related Study: "Transit Project" Executing Organ / Ministry of Foreign Affairs, International Canal Conference Consulting Firms / Advanced Logistics, Europroject, World Ltd. Imp.Period / 7 months Study Cost / US\$ 400,000 (EU fund) Components of the study / evaluation of the Panama Canal development alternative plan, study for long term plan</p> <p>Based on the results of above mentioned study, new department was founded in the Canal Committee for preparation of the construction of the third locks.</p> <p>Related Private Investment Project:</p> <p>1.Port Projects such as privatization of Mansanillo Port and Coco Solo Port, are being implemented by ARI (Interoceanic Region Authority) and private sector. Construction of a container terminal at Colon Port has been started in September 1996 by the Taiwanese company. Negotiations on investment are being held in the area of tourism and other areas.</p> <p>2.Road North Corridor 1998 opened South Corridor 1997 construction started Panama-Colon Highway construction started Railway Transistmico 1998 rehabilitation started</p> <p>3.Canal Widening of Culebra Cut 1995~2002 Capacity Increase Program(Canal Committee) 1996~ Gaillard widening</p> | | |

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| (FY 1996 Overseas Survey) As of Dec.1996, the revision of No.22 of Sep.15, 1960 Law is under deliberation. The promotion of tourism, the formulation of tourism development project, the human resource development of the concerned departments and the financing for the preservation of historical, cultural heritages are on agenda. Other than that, the proposals have been presented with respect to legislations and systems. Also, Project financed by private sector is being carried out at the M/P target area. | | |
| (FY 1997 Overseas Survey) There is no plan for public investment. | | |
| (1)Panama Canal Tourism Development (FY 1996 Overseas Survey) API has concluded a contract with a private company, "Empresa Interarib" and has ordered the formulation of the Land Utilization Plan and the Investment Promotion Program of this Project. (FY 2000 Domestic Survey) A private hotel enterprise bought the right as a concession to use the restored facilities in a canal area with the Panama Canal and runs some resort hotels. (FY 2001 Overseas Survey) Concerning special legislation applied to the Canal district, API is in charge of development projects promotion while ACP is in charge of integrated control in the restoration area. | | |
| (2)Flower and Green City Project (FY 1997 Overseas Survey) This project has been partially implemented by the City of Panama, the main implementing body. (FY 2000 Domestic Survey) The Panama City shows interest in the plan and is seeking for available fund sources. (FY 2001 Domestic Survey) Main reason of interruption: Lack of finance for infrastructure improvement. Subsequent study: Necessary design work has not started yet. Fund procurement: Interested in yen loan. (FY 2001Overseas Survey) This project has not been implemented as planned, however, the municipality of Panama is implementing Green Area Project with their own financial source and fund from private enterprises. | | |
| (3)Portobelo Tourism Development (FY 2000 Domestic Survey) Spanish Government has completed the restoration of the Customs House, the main building in Portobelo Remains. Some private enterprise shows the interest in the tourism development. Fund Procurement: (FY 2001 Overseas Survey) Financial source: Agency for International Cooperation, Spain. 1. Tourism facilities construction/improvement (Construction of visitors center, craft house, two harbors and Christbelo Museum, Signs for tourists in Portobelo, Pavement, Rehabilitaion of Portobelo Plaza, etc.), 2. Formulating tourism strategy plan, 3.Waste water treatment, 4.Training, etc. | | |
| (4) Chame Tourist Center Development (FY 2001 Overseas Survey) Utilized as a reference for planning of Escondia Resort and Malina Project (private investment project). The project application for institutions such as Panama Tourist Board and Authority of National Environment is being processed. | | |
| (5) Carribean Coast, Costa Aliba Road Improvement on Caribu and Aliba Coast (FY 2001 Overseas Survey) Portobelo-Palenque Road: Asphalt pavement Improvement was implemented. San Antonio-Guaira Road: Soil pavement Improvement was implemented. There's a tourist disgnated area based on laws. The area has developed its relimitazationto Santa Izabel and Grande Island. (Grande Island Standard Project is being formulated. Portobelo is integrated into local municipalities tourism project. | | |
| (6) Superspeed Boat Route Development (FY 2001 Overseas Survey) Only Farageon Tourism Development Ploject was implemented. Farageon Port is one of the ports of shipping route development. Utilization of the study results: (FY 2001 Domestic Survey) Fully utilized as a guideline of tourism development. | | |
| (FY 2005 Domestic Survey) Private sector financed development is in progress along the Panama Canal centring American military base. Especially, tourism development of the Pacific side proposed in the study has become a district to be developed by private sector. | | |

| Description : | | |
| <p>(FY 1998 Domestic Survey)</p> <p>In Panama, there are more than 20 ports, most of which are owned and administrated by APN (Autoridad Portuaria Nacioal). Major ports such as Balboa Port, Christbal Port, Coco Solo Norte Port and Vacamonte Port (fishing), are located around the Panama Canal.</p> <p>In recent years, fully-equipped container terminals have been constructed in the scheme of BOT. Close to Cristbal on the Caribbean Sea, MIT (Manzanillo International Terminal) was opened in 1993, and they made a contract that a part of Coco Solo Norte Port would be developed as a container terminal by Evergreen in 1995.</p> <p>On the other hand, in the Pacific side, a BOT contract to develop Balboa Port was signed with Panama Ports Company, S.A.(PPC) in December, 1996. This study was used as a reference to the development contract from the implementation stage, and including it they made a long-term plan of the port with the target year of 2015. It is expected that ports are developed appropriately based on the master plan in the future.</p> | | |
| <p>(FY 2001 Domestic Survey)</p> <p>The new terminal of Balboa Port which has been constructed with USD 120 million, Balboa Container Terminal (BCT), was completed constructed and opened in November 14, 2000. The Panama Ports Company (PPC) operates the new terminal and now operates terminals in both Cristobal Port and Balboa Port. The contract period with the government of Panama is 50 years (25 years plus 25 years) for each.</p> <p>BCT has the length of quay of 350 m, the depth of water of 12.9 m, the area of yard of 8.4 ha, 3 Super Panax Gantry Cranes, 9 RTG cargo handling equipment in yard, and the annual container handling capacity of 600,000 TEU. According to a projection of demand by the company, demand has been stable. Therefore, when phase 3 starts and the terminal is completed in November 2002, the capacity of 300,000 TEU will be added.</p> | | |
| <p>(FY 2003 Overseas Survey)</p> <p>The funds come from the governmental funds and private funds (national and foreign), and the amount of USD 119 million was invested by November 2003.</p> | | |
| <p>Progress situation of construction:</p> <p>(FY 2001 Overseas Survey)</p> <p>Phase I and II are implemented as scheduled.</p> <p>1) Activities completed: 350m wharf, 3 cranes, 16 cranes for yard, 8.4 ha container yard, 16.5 m deep water berth, 12.9 m water channel, 468 connection point for freeze container, Port shipping movement management house, Custom and immigration office, Access road to a port and the wharf 14 and 15</p> <p>2) Activities being implemented: 270 m additional wharf, 16.8 ha container yard (Phaze III), 12.1 ha container yard (Phaze IV), Ship route dredging, Mastanijo River branch (outlet channel)</p> <p>3) Activities to be implemented: 1,500 m wharf, 12 cranes, 27 cranes for yard, 50 ha container yard</p> <p>Phase III: June 2003-December 2004 (progress of 20%)</p> | | |
| <p>Difference with a JICA Study</p> <p>(FY 2001 Overseas Survey)</p> <p>The railroad improvement project was implemented without affecting the port development, and both of the means of transportation came to be used effectively. The Farfan district is not considered as the expansion area of Balboa Port at present. There is a possibility that the area is commissioned to an enterprise which starts the operation of new shipping lines. However, Panama Port Authority has not received the application.</p> | | |
| <p>(FY 2007 Domestic Survey)</p> <p>No information to be specifically mentioned</p> | | |
| <p>(FY 2007 Overseas Survey)</p> <p>The national port strategy proposed at mentioned study is the base of project which Panama Port Authority will implement in domestic port in this fiscal year. Furthermore, the analysis in mentioned study was useful as a framework of making concession contract on Balboa Terminal. Also, some activities such as international transportation utilisation, rural preparation development on port project, and provision/restoration of ships in Balboa District and etc became starting point for national port concession.</p> <p>In addition, the project is in progress for completion of plat form and investigation and design about passengers/cargo terminal in Bocas del Toro, Almirante, Kaliki, Kokila, and La Balma sea port.</p> <p>Progress Status: Designing term: from 1997 to 2008, constructing term: from 2004 to 2008</p> | | |
| <p>Technical cooperation:</p> <p>Training program: Methods and outline about making plan on trade and marine transportation, technical support program in processing information, estimation of transporting cargo, and etc.</p> <p>Dispatch of experts:15 people (modernization of trade and port, port maintenance development project and marketing plan, preservation of sea water, environmental effect, and etc.</p> | | |

| 10. MAJOR PROPOSED PROJECT(S) | <p>M/P:</p> <p>Goal FY: 2015</p> <p>Objective: Building sound system of solid waste management in Panama City, which is the centre of economic activities and population of Panama. Components: 1) collection improvement whose purposes are to improve collection efficiency and to maintain the service standard, 2) introducing a transfer and transport system in order to improve the rate of collection and transportation. 3) introducing separate collection and building resource recovery facilities in order to encourage recycling. 4) Justification and expansion of existing final disposal site and improvement of collecting charge system which support finance and strengthening institution of organization, that are necessary for administrating projects, and etc.</p> <p>Implementation plan (goals):</p> <p>Phase 1 (short-term target for: 2005) : 100% collection rate (the current: 92%), introducing transfer and transport system (targeting eastern city district, Phase 1: 300 tons/day)</p> <p>Phase 2 (mid-term target for: 2010): launch of separate collection, expansion of transfer and transport system (targeting eastern city district, Phase 2: 600 tons/day), introducing resource recovery facilities (25ton/day in 2007), expansion of final disposal site (to approx. 6,400,000 m3)</p> <p>Phase 3 (long-term target for: 2015): 50% collection rate, expansion of resource recovery facilities (220ton/day)</p> <p>Evaluation: B/C is 1.002 and the EIRR is 0.47% (when the citizens' willingness to pay obtained from the public opinion survey is regarded as the benefit)</p> <p>Pre-F/S (as land for constructing facilities cannot be confirmed):</p> <p>Construction of transfer station (Phase 1: 30ton/day, Phase 2: 600ton/day, evaluation: B/C 1.25, EIRR 17.5%)</p> <p>F/S:</p> <p>Expansion construction of Cerro Patacon Final Disposal Site (Construction area is approx. 28 ha, landfill operation period: 2006-2015, landfill capacity: 6,400,000m3 (Phase 1: 2006-08, 1,300,000m3; Phase 2: 2008-10, 1,200,000 m3; Phase 3: 2010-11, 1,00,000 m3; and Phase 4: 2012-2015, 2,800,000m3), impact: the sanitary level of the final disposal site will be improved and the negative impact on the surrounding environment will be mitigated, evaluation: B/C is 1.2 and the EIRR is 8.9%.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| (FY2003 Overseas Survey) | | |
| Formulation of the master plan and organization of the development unit (execution unit) are in progress at present. The following plans have been pushed forward. | | |
| 1)Review of collection routes. | | |
| 2)Review of cleaning routes. | | |
| 3)Preparation of condition document for grant of business rights to operate the Cerro Patacon Landfill. | | |
| 4)The condition document for grant of business rights of the transfer plant in the eastern part of Panama area was prepared. | | |
| 5)The city's measures for administrative adjustment of the Civic and Household Health Office have been implemented. | | |
| (FY 2004 Domestic Survey) | | |
| There has been a request for the project-type technical cooperation. | | |
| (FY 2004 Overseas Survey) | | |
| 1. Progress description of proposed project: | | |
| 1) Garbage landfill: | | |
| - Construction of fourth stage, and expansion of the one in progress (2005 summer) | | |
| - Disposal of effusion. Construction of pump lake as the second stage of the existing pond. Public project pending (2005 summer) | | |
| 2) Transfer and transport: | | |
| - Transport station: Searching for a place, making a contract with the estate agency is planned. Designing and Construction are expected against JICA. | | |
| 3) Machinery facilities: | | |
| -Collection cars: Based on necessity of an acquisition of the collected machines as indicated in the survey, supplied 30 trucks in 2004. During 2005, because 15 would be supplied as addition to 30, number of the vehicles would be secured in advance. | | |
| - 20 yards long packer vehicles (20 cars) | | |
| - 16 yards long packer vehicles (10 cars: purchase chassis) | | |
| 4) Construction: | | |
| - Facilities and infrastructures: Anticipate for a transfer of central office to reclaimed land for the improvement in working condition and space. JICA technical cooperation is anticipated for site preparation (dumping area, diversification plant, and treatment plant) and selection of a site. | | |
| 2. Feasibility of subsequent studies: | | |
| Requested JICA for an expansion of the study on solid waste management plan for municipality of Panama in August 2004 | | |
| 3. Request for funding: | | |
| 1) Landfill disposal site: Own fund, DIMAUD Investment | | |
| 2) Equipment preparation: Investment from regional banks | | |
| 3) New facilities construction: Own fund | | |
| 4. Other progress: | | |
| 1) Strengthening, analysis, selection of the site, economic feasibility, financial improvement for construction/establishment of transfer station pilot project. Introduction of implementing team, a JICA technical cooperation as part of the request on August 2004. | | |
| 2) Rout improvement program has continued by installing a new equipment for the for waste collection in 21 site. | | |
| 3) Conducted discussion with related agencies, such as ANAM and MINSAs, for recycling reusable waste, using waste diversification plant. | | |
| 4) In addition to the commercialization program, improvements in environmental education in school and communities during school terms. | | |
| 5) In addition to commerce programs, reinforcements of environmental education taught at schools and regions during learning terms | | |
| (FY 2005 Overseas Survey) | | |
| Several measures have been taken in order to develop capacity by implementing the output of the result of the study and the data configured. In addition, improvements for additional plan is being considered. | | |
| (FY 2007 Domestic and Overseas Survey) | | |
| Implemented project: "Project for strengthening solid waste management in Panama administrative district (JICA Technical Cooperation)" | | |
| Implementing body: JICA, Municipal Bureau for Urban and Household Cleansing (DIMAUD) | | |
| Implementing period: Dec. 2006 to Nov. 2009 | | |
| Funding: | | |
| Funding party: JICA (technical cooperation project) | | |
| Contents: | | |
| 1) Improvement of route management: Purchase software for setting route. Implemented staff training for using the software. Purchase geographical database to improve setting collecting route. The improvement will start in mid of Jan. 2008 at the plan of "Correction in Bethania and Bella Vista". Purchase new collection cars. 25 cars were purchased directly and the other 27 cars were purchased through bidding. Prevention maintenance of the 25 cars will be implemented in every 2 years by sale agency. | | |
| 2) Strengthening of transfer and transport system: 1) The final step that to purchase approximate 5ha in Cabra district. The land is extremely successful to provide collection service in new area, since rapid development has been seen in throughout from Manianita district to San Martin, La Mesa, and Pacora district. 2) Considering possibility of purchasing second land in Fan Dias district which is owned by IDAAN. The area of land is 37ha and is planned construction of disposal plant of sewage project in coastal area. 3) Discussion with MIVI in order to analyze the land for moving capital city based on national land use plan. | | |
| 3) Improvement of collection car management: The tender was implemented in 18th of Jan. 2008 to move the facilities of DIMAUD from Carrasquilla to Cerro Patacon. | | |
| 4) Strengthening of final disposal site: Tender regarding management of final disposal site was implemented. | | |
| 5) Improvement of organization: The new map of organization was submitted to the mayor. Function manual of DIMAUD has now been reviewed. In addition, calculating machine was purchased with 30,000 Balboa and same amount will be put into another investment in 2008. | | |

Description :
 (FY 2005 Domestic Survey)
 As of 2005, of the proposed 4 projects, AMP is conducting a tender utilising BOT scheme for Bocas del Toro Port and Almirante Port.

(FY 2005 Overseas Survey)
 No information to be specifically mentioned.

(FY 2006 Domestic Survey)
 Autoridad Maritima de Panama (AMP: La Autoridad Maritima de Panama) is planning and designing restoration works in Bocas del Toro Port as a part of restoration works in existing ports. AMP is the agency to implement works including construction and management and funds them on its own. According to AMP, the bidding is scheduled for contractors in the near future.

(FY 2006 Overseas Survey)
 Survey is conducted in pursuit of establishing strategies for ports in Panama, preparing port and harbor expansion plans at a national level targeted for 2024, preparing a basic plan to expand ports and harbors chosen and reviewing the feasibility of preferential projects.

(FY 2007 Domestic Survey)
 Out of the 4 proposed project, Panama government is willing to implement tender in form of BOT, targeting private companies. The tender is on Bocas del Toro Port Almirante Port. However, no private companies is interested in, as of Dec. 2007.

(FY 2007 Overseas Survey)
 At present, AMP is preparing for the public tender on maintenance of Bocas del Toro, Kaliki, Cocle, Los Santos, and Darien sea port. The study is useful for preparing domestic sea port infrastructure and strengthening operating body of AMP. Also, the study was useful for preparing local right division program and rural preparation development plan in national/local level.

Technical cooperation:
 Training program: Methods and outline about making plan on trade and marine transportation, technical support program in processing information, estimation of transporting cargo, and etc.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

|---|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| Subsequent Studies: 1991~92 Pre-F/S conducted by ENAPU based on the short-term plan proposed by this Study. (FY 1994 Domestic Survey) Oct.~Dec.1994 F/S | | |
| Finance: Upon the request of the Peruvian government,OECD implemented SAPROF study from October 1994 to the end of 1994. (FY 1994 Domestic Survey) Mar.1996 L/A 16,624 mil. Yen (Collao Port Improvement Project) *Contents of Project (D/D included) (1)Improvement of one wharf of container and grain (2)Take measures against environment impact by Counterpart Agency (FY 1996 Domestic Survey) (FY 1997 Overseas Survey) The location of a grain terminal was modified to be constructed in parallel with No.1 terminal. The total project cost is US\$ 221,212,000. Government budget is allocated in addition. Depending on the result of D/D, construction of second container terminal will be considered. (fund will be procured separately) | | |
| Construction: (FY 1997 Overseas Survey) Under implementation Jul.1988 D/D to be finished 2001 Civil works to be finished 2002 Equipment to be installed | | |
| Detail: (FY 1991 Overseas Survey) The Peruvian government still puts high priority on this project and, after modifying the project scale, plans to request the Japanese government for the financial assistance again during 1992. (FY 1992 Overseas Survey) The capacity of the port facilities to handle cargoes is likely to far exceed the expected volume of cargoes in future. The request for the budget allocation submitted to the National Planning Authority was turned down. (FY 1993 Overseas Survey) The revision of M/P in order to make it more applicable to the present situation and the implementation of F/S have been under consideration. (FY 1994 Domestic Survey) After the completion of F/S, during the 1980's, no progress was made for the project implementation. However, the Fujimori administration still gives high priority to this project. (FY 1995 Overseas Survey) The request was submitted to the Japanese government for the financial assistance. The Peruvian government is expecting an OECD loan. (FY 1996 Overseas Survey) Proposals of M/P have been modified in some aspects as parallel berth proposed at SAPROF. After SAPROF short-term plan was recommended as follows. -Construction of container terminal with the length of 270 m (silo and equipment included) -Dredging of access area and new terminal (14 m) | | |
| Reasons for Delay: -F/S was evaluated by special unit at Ministry of Economy and Finance. -Min. of Economy and Finance proposed the participation of private sector for implementation. -Responsible agency has altered to Min. of Transport,Communication,Housing and Construction. -It took time to fill in the english questionnaire prepared by OECD. -Negotiation for contract delayed. | | |

Description :

Utilization of the Study:

(FY 1991 Overseas Survey)

The maps are highly appreciated.

(FY 1995 Overseas Survey)

The performances of this study project are enrolled into the map of whole country and are utilized for the planning for the works of enterprises concerned by the Presidential Office, the Ministry of Agriculture, etc. The aerial photographs are utilized to draw the map of the whole country in scales of 1 & 50 and 100 thousand. The measures are taken to make it possible to print these maps automatically.

(FY 1996 Overseas Survey)

The output of study is utilized for petroleum exploration.

Prospect for the Future:

(FY 1991 Overseas Survey)

Cooperation is desired to computerize these mapping works from now on.

(FY 1995 Overseas Survey)

The National Geographic Institute hopes for further Japanese assistance in land use mapping, automated drawing system, and so on.

Description :

Owing to the political destabilization and the serious constraints in public finance, it is extremely difficult to find funds for implementing the proposals of the study.

Subsequent Studies:

Oct.1995, a project conforming team of JICA visited Peru and conformed a F/S project of disaster protection at the upper stream of Atarjea.

*Contents of F/S

F/S includes water treatment of Rimac river basin (from drainage to the junction of San Mateo river and Santa Eularia river. It also includes control system of 7 rivers at Chosica area.

Detail:

(FY 1991 Overseas Survey)

The process of specifying areas for feasibility study was suspended after the Japanese expert who had been assigned for this purpose left the country because of the political and social destabilization. The National Institute of Civil Defense assigns high priority to the implementation of the proposals of the study.

(FY 1992 Overseas Survey)

The maps and basic data have been utilized in the determination of priority for emergency works.

(FY 1993 Overseas Survey)

Under the present economic situation, there will be no possibility to implement this project unless divide into several stages and carry out one by one, since it is too expensive to repair the collapsed portion according to the recommendation made by Japanese Side.

The maps and basic data, which come out as the results of the survey works, are very useful for the disaster prevention in this river basin.

Dispatch of experts who will manage and administrate the desaster prevention in this river basin are requested.

(FY 1995 Overseas Survey)

- Following to the indications of this master plan, INDC is implementing the disaster protection works at the dangerous points by their own detailed plans since this project did not provide any detailed designs. These works were designed and requested to INDC by each autonomies.

- The technologies introduced by this project is very high in the costs. So, it is difficult to apply. After that, in Peru, a new bank protection method has been developed, and this method is very effective, even now.

(FY 1996 Domestic Survey)

"Improvement of Rimac River Basin" may be implemented as the 1997 development study.

(FY 1997 Domestic Survey)

F/S on Rimac River bank protection is supposed to be implemented in FY 1998.

(FY 1997 Overseas Survey)

The materialization of project has delayed due to financial problem and higher priority of other projects.

In case of implementation, M/P needs to be up-dated in accordance with the change of circumstances.

Description :

In spite that Air-Photographs and Topographic Maps have already completed, the Land Use Mapping is still suspended due to the unexpected tragic accident (three JICA experts were killed by terrorist).

Utilization of the Study:

Air-Photographs and Topographic Maps will be applied for promoting various urban developing project or land preserving project.

(FY 1995 Overseas Survey)

The topographic maps with a scale of 1/10,000 are utilized for the urban planning works to expand the metropolitan area, and the aerial photographs are used to grasp the circumstances at neighboring areas of the metropolitan area.

(FY 1996 Overseas Survey)

Sectors like education, mineral resources, agriculture and energy are benefited by this study. (Especially public and private institutions which carry out infrastructure projects.

Request:

(FY 1995 Overseas Survey)

In future it is desirable to computerize the drawing works of topographic maps and to draw up the land utilization maps.

(FY 1996 Overseas Survey)

Update of 1/10,000 map and technical assistance are important.

Description :

(FY 2000 Domestic Survey)

The German government (KfW) will offer a financial assistance for the urgent sewerage improvement project(target year: 2008). The detailed design has been to adjust the project cost to the fixed budget.

The Peruvian side has requested the Japanese government for grant aid of solid waste collection vehicles. The Japanese government has given no answer to the request. Water Quality monitoring will progress in collaboration with the Ministry of Health.

(FY 2001 Overseas Survey)

The completion of this Study made the local authority an implementation agency of each project so that duties of the National Institute of Development (INADE) as the implementation agency were handed over. The cooperation on water and sewerage system improvement by GTZ was materialized. INADE does not indicate its intention for continuation and make any request for concretization of the project because INADE was already out of responsibility.

(FY 2003 Overseas Survey)

1.Sewerage improvement project

Funds: 20 million Deutsche mark

Details of construction: improvement of water and sewerage system including expansion of water and sewerage facilities

2.Establishment of commission: with the objective of improving the water quality of Puno Bay of Lake Titicaca, a commission consisting of the Lake Titicaca Bilateral Project, Ministry of Tourism, Ministry of Trade and Industry, Puno City Government, the Ministry of Sewage of Punoju and other private enterprises was established and is in operation.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Domestic Survey)

Subsequent project: Urgent Sewerage Improvement Project in Puno city (Tentative name)

Implementing period: 2004-2008

Implementing body: Puno city

Funding:

Funding party: Germany KfW

Amount: 20 million DEM

Objective: To improve water/sewerage system in Puno city, including expansion of water supply system

Relationship with the study: Sewerage improvement, extension of drainage network, and improvement of sewage disposal were proposed in the report as water quality improvement measures in Puno. Subsequent project aims to implement these measures.

Progress: D/D was conducted since 2003, and it seems that the construction has been nearly completed.

Others: There is a movement of Ministry of Health in cooperation with a proposal of water quality monitoring of the lake and sewerage.

(FY 2005 Overseas Survey)

10 million USD was funded by Japanese government as Grant Aid for machinery and equipments procurement solid disposal treatment management in Puno city to improve Puno city environment and quality of life of more than 120,000 residents.

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2001 Domestic Survey)

Official presentation of the Final Report of the study was conducted by Ministry of Tourism, Industry, Integration, and International Trade (MITINCI), the counterpart organization of the study, in Trujillo City on July 20, 2001. During the presentation, Vice-Minister of Tourism of MITINCI and an advisor of MITINCI officially expressed their will to implement the project funded by JBIC. However, new Toledo administration started in August 2001 demanded the extradition of the former president Alberto Fujimori, which complicated the diplomatic relationship between Japan and Peru. As a response, JBIC has not started any new project since then.

(FY 2001 Overseas Survey)

The new request for implementing the projects which had 2 components was submitted from the Ministry of Tourism, Industry, Integration and International Trade to the JICA office. Although the one of two was to implement the similar Development Study at the other area, the request on dispatch of individual expert to guide the project implementation has been under discussion in preference to the new Development Study because of the higher priority on the project implementation based on the result of the Study (Contents of the study is to be said F/S although it was named as M/S.).

Playa Elmosa Tourist Base (a part of Tumbes - Piura Tourism Corridor Development Plan)

(FY 2003 Overseas Survey)

This project intends to develop a tourism infrastructure along the coast of Tumbes Province positioned in a coastal region established as a domestic tourism conservation area (all the coast in Tumbes Province from KAPONESU Promontory to the border with Piura Province). Out of the conservation area, a district called Playa Elmosa was selected and it will be prioritized in the tourism project within the framework of the National Tourism Development Master Plan. Fund raising: Peru government (at least 12 million US dollars is expected to be invested in its Phase I) Construction: The coastline of approximately 6 km in length and 70 hectares in area will be improved in the first place and such facilities will be constructed as accommodations, bed and breakfast, hostels, restaurants, ecology lodges, fishing clubs. The master plan to develop Playa Elmosa has been completed and the bidding is expected to start in the end of October 2003. This project consists of the following three phases. (Phase I: tourism development of 630 rooms, Phase II: tourism development of 660 rooms, Phase III: tourism development of 525 rooms). Benefit effects: The conservation area including Playa Elmosa is positioned in the south of mangrove ecosystem of Tumbes and the water temperature fluctuates from 28 degrees in March to 25 degrees in August. This area is optimum for offshore fishing and marine sports. In addition, there are other tourism resources including a game preserve such as El Angolo, SEROSU de AMOPETA National Park, National Reserve of Tumbes Mangrove. Thus, this project is expected to play a role as a socioeconomic base of the Tumbes region.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY2005 Domestic Survey)

Regime change is predicted with the presidential election to be held in 2006. Current regime was against the policies prepared under President Fujimori. However, the project may have a possibility of a realisation due to Peruvian customary to deny previous policies.

(FY 2005 Overseas Survey)

Subsequent Study: Chan Chan archaeological complex development

Implementing period: 2005-2006 Implementing body: COPESCO, The Ministry of Culture

Objectives: 1) Comprehensive study, conservation, and rehabilitation of Velarde Palace 2) extension works of drainage No. 12, 3) Conservation and Maintenance of Museum

Funding:

Funding party: Own fund Amounts: 441,922.55 PEN

Construction period: September 2005

Beneficiaries: Domestic and overseas tourists

Subsequent Study: Huacas del Sol y La Luna tourism improvement

Implementing period: 2004 - 2006 Implementing body: COPESCO, and the Ministry of Trade and Tourism

Objective: 1) Road improvement between both pyramids, 2) road signs on access roads, and 3) technical training, awareness raising and tourism promotion

Funding:

Funding party: own funds Amount: 2,540,397.00 PEN

Construction period: July 2005 Progress: 35%

Beneficiaries: : Domestic and overseas tourists, 3,315,304 residents

Subsequent Study: Tourism improvement of El Brujo archaeological site

Implementing period: 2004-2006 Implementing body: COPESCO, the Ministry of Trade and Tourism, Ministry of Culture

Funding:

Funding party: own funds Amount: 247,476.63 PEN (Ministry of Trade and Tourism - 247,476.63PEN)

Construction period: October 2005 Progress: 15%

Contents: Reinforcement of ruins, preservation of coloured decoration

Beneficiaries: 35,275 tourists

Subsequent Study: Tourism Improvement of Batan Grande Reserve Zone

Implementing period: 2004-2007 Implementing body: COPESCO, Regional Government and Ministry of Trade and Tourism

Objectives: 1) Sign establishment, 2) utilization of tourism resources, 3) rehabilitation of an access road to the historical holy places

Funding:

Funding party: Own funds Amount: 427,022.69 PEN (Ministry of Trade and Tourism - 327,022.69 PEN, and 100,000 PEN)

Construction period: October 2005 Progress: 15%

Beneficiaries: Domestic and overseas tourists, 13,731 residents

Subsequent Study: Amazon river tourism corridor development

Implementing period: 2004-2005 Implementing body: COPESCO, the Ministry of Trade and Tourism

Objectives: Tower construction

Funding:

Funding party: Own funds Amount: 1,648,339.37 PEN (Ministry of Trade and Tourism - 778,669PEN, and 397,730.33PEN, local government - 472,749.9PEN)

Beneficiaries: Domestic and overseas tourists, 35,275 residents

Description :

(FY 2015 Overseas Survey)

The Peru government started the subsidy program of "Bono de Proteccion de Viviendas Vulnerables a los Riesgos Sismicos" and strengthening the existing houses. 199 households are already used this program.

The Peru government also started the financial program, "Programa Presupuestal 068 de Reduccion de Vulnerabilidad y Gestion de Riesgos" and has promoted the construction of safer buildings through capacity building of provincial staff.

Description :

Finance:

Sep30.1977 L/A 1,850 mil.yen

*Contents of project: Road improvement for the section between La Colmena and Acaai (28.5km)

Construction:

Apr.1979 Commenced

Apr.1982 Completed

Situation after Completion:

(FY 1994 Domestic Survey)

As of 1994, no serious damage was observed on the paved road, however, some repair works should be implemented on several points. Currently, the renovation of the arterial roads has been implemented throughout the country. Therefore, this route may be renovated as a part of the arterial road renovation project.

(FY 1995 Overseas Survey)

In 1995 the reinvestigation works on this route was completed. As a result, it is concluded that connecting major agricultural and livestock farming areas, this route promote the supply of foodstuff from these areas to the capital city of Asuncion. Furthermore, it is expected to encourage the orchard industry at the area along this route. The extension of this highway further down south from the Capital is under consideration.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons for Delay or Suspension:
 (FY 1995 Domestic Survey)
 Difficulty in procuring fund
 (FY 1992 Overseas Survey)
 Department of National Park Wildlife founded in the Ministry of Agriculture and Livestocks, legistered the area as "Lake Ypoa National Park" in 1992. The size of the area is 100,000 ha covering Lake Ypoa, Lake Cabral and Lake Bela.
 (FY1997 Domestic Survey)
 A part of target area is inside a national park, therefore the realization of project is difficult unless the plan is revised.
 (FY 1997 Overseas Survey)
 The implementation of the project seems difficult because the target area was designated as a national park in 1992.
 The reasons for discontinuance is that the Paraguayan government did not understand the scheme and schedule well and did not procure fund for the project.

Situation:
 (FY1995 Overseas Survey)
 Reinvestigation and the official notice of the "Lake Ypoa National Park" have been carried out based on the regulations of RAMSAR Treaty signed on 1994. In order to develop this area successfully, it is necessary to fulfil almost all of the public opinions concerned, to examine the land owners or representatives carefully, and to ask the participation of the local organizations from the planning stage.
 For the implementation of the F/S, it should be made arrangements and negotiations among the Government, the financing authorities and the local organizations.

Description :

Utilization of the Study:

Afforestation projects are being encouraged particularly among the cattle ranchers, because of the serious deforestation reported by the study.

(FY 1995 Overseas Survey)

The results of this study work are utilized for certain purpose at the limited area.

Especially, the data of retaining volume of forest resources are very useful and used to make administrating, managing and utilizing plans for the forest of target area.

(FY 1997 Overseas Survey)

The results of the study have been incorporated into the National 5-year Development Plan.

*This study will not be followed up from FY 1998. (the outputs of study are being utilized)

Description :

Construction of the Yacyreta Dam

(FY 1993 Overseas Survey)

It is planned to commence to pour water into the dam in fiscal year of 1994 or 1995. The feasibility study of the plan for utilization of dam water is required.

(FY 1995 Overseas Survey)

The environmental effects of the dam construction for surrounding area are now under investigation.

Dispatch of Expert:

(FY 1997 Overseas Survey)

Mar.10~Mar.31.1995 Study on drainage and road at the area of 5,000 ha acquired by IBR was carried out by a short-term expert.

Utilization of the Study:

(FY 1992 Overseas Survey)

In 1992, Instituto de Bienestar Rural purchased the farmland (5,000ha) adjacent area to Ayolas and commenced settlement of small farmers. This plan is to be expanded in the future.

(FY 1993 Overseas Survey)

Farmers resided at the site are migrating and/or trying to get new area to live under the guidance of the authority concerned.

(FY 1996 Overseas Survey)

The outputs of this study has been utilized for surrounding area development. IBR reflected information and proposals obtained in this study for the 5000ha of residence area. Private sector which produce rice at San-Cosmel and Carmen del Parana analyzed the study's data to utilize water from Yacyreta.

(FY 1997 Overseas Survey)

The results of the study have been utilized as basic data by both private and public sector.

Similar M/P was elaborated in Argentine side.

Other Situations:

(FY 1993 Overseas Survey)

At the time of JICA's development survey, there were no participation of beneficial inhabitants. However, in future, it will be recommended to let these people participate according to the changes in surroundings.

(FY 1995 Overseas Survey)

The data obtained by this M/P are old, however, they are still very useful. In order to study the agricultural development in case of the paddy cultivation is commenced at this area it becomes necessary to research the way of irrigation, drainage, and to evaluate their environmental influences.

Paraguay side desires to establish a center to transfer Japanese technologies.

(FY 1997 Overseas Survey)

This study has contributed to increase consciousness about low land agriculture.

Description :

Subsequent Studies:

"Transportation Facilities Improvement Project of the Asuncion Metropolitan Area (F/S) (1988)."

*Components of Study

- Improvement of East-West and North-South Corridors
- Improvement of streets and traffic signal control in Minicentro area
- Construction of a bus terminal near the market No.4

*Refer to "Transportation Facilities Improvement project of the Asuncion Metropolitan Area (F/S) (1988) " for detail.

Detail:

(FY 1993 Overseas Survey)

Due to the coup d'etat, the change of the national economic policy, etc. the project has made little progress except for a part of the construction works.

On the other hand, some construction works, which had not been included in the initial plan, were implemented as an alternative to address the urgent problems. Its reevaluation must be conducted.

(FY 1995 Domestic Survey)

MOPC has officially requested to provide the assistance for the improvement of the road surrounding the urban area of Asuncion.

(FY 1995 Overseas Survey)

This project needs to be implemented, referring to the environment improvement plan of Asuncion and the surrounding area. The construction works proposed in the M/P report have been implemented only partially.

(FY 1997 Domestic Survey)

Trunk roads in Metropolitan area except for Asuncion federal district, were rehabilitated by Ministry of Public Works.

Finance:own fund (108,853,794 G)
Construction:Sep.1996~Nov.1996 Drainpipe and drain
- 8.Madame Lynch Av
Finance:
Construction:to be started in 1997 Expansion and rehabilitation of M.L Av, construction of 3 overpasses, surface drainage system
- 9.Tender for 7 projects proposed by M/P on Storm Drainage System Construction/Rehabilitation is planned.
Total investment:96 mil. G

(2)Extension of drainage facilities and attached facilities
(FY 1998 Domestic Survey)
It was partially completed with their own fund.

Situation:
(FY 1991 Overseas Survey)
CORPOSANA has been in preparation for the implementation of a part of projects, cooperating with the City of Asuncion and the Ministry of Public Works.
(FY 1993 Overseas Survey)
CORPOSANA has been working to finance the urgent projects in cooperation with the municipalities in the project area.
Due to the financial constraints, CORPOSANA has been transferring the project to the concerned municipalities. Or, the project implementation would depend on the fact that how much of funds will be allocated to CORPOSANA by the central government.
(FY 1995 Domestic Survey)
Although the City of Asuncion will be in charge of the management of the drainage facilities, CORPOSANA has been requesting the Japanese government for the grand aid to procure equipment and materials for this project.
(FY 1995 Overseas Survey)
It is considered effective to shift the construction works under the control of the beneficial municipalities, which can finance the project with the collected tax.
CORPOSANA resumed the negotiation with the concerned municipalities to discuss about this matter and the establishment of a branch office of CORPOSANA in each municipalities.
(FY 1996 Domestic Survey)
It is said that the municipality will take over this project. Because of that, the project has been suspended.
(FY 1996 Overseas Survey)
Technical committee composed of municipality and CORPOSANA was established. The committee discuss about actual problem and implementation of projects. A law, including the transfer of execution body to municipality, was submitted to Parliament. Discussion on this matter will be continued this year.
Financial problem has caused a delay. In spite of the effects of CORPOSANA to expand water service nationwide, its coverage rate is in the lowest level in Latin America.
(FY 1997 Domestic Survey)
There is a possibility that dredging and improvement of drainage canal be a grant aid project.
(FY 1997 Overseas Survey)
The project has been delayed due to financial shortage of CORPOSANA. Paraguayan side expects for financial assistance from Japan, and at the same time is preparing for requesting fund to other international organizations.
Review study and expansion of target area are needed because more than 10 years have passed since the completion of the study.
The importance of drainage system improvement has arouse influenced by El Nino phenomenon.

Description :

Utilization of Outputs:

This project has been utilized by public organizations, private sectors and international organizations as a reference to grain production projects.

(FY 1997 Overseas Survey)

The results of the study have been incorporated into Agricultural Development Policy (1990-1997).

(1) Project-Type Technical Cooperation

"Main Grain Crops Production Project" (June 1, 1990 - May 31, 1995)

The Project aims to conduct a research over the following subjects and to provide an advice to increase the production of main grain crops, such as soybeans, wheat, etc.

1) Breeding and management of improved varieties

2) Development of suitable technology to produce certified seeds

3) Improvement of cropping system for soil conservation

(FY 1995 Overseas Survey)

This project is expected to finish in 1995. However, the beneficiaries desire to continue and expand these kind of technical cooperation, especially the supply of seeds, for the next ten years, until the project bears its fruits, because this project is considered highly effective.

(FY 1997 Overseas Survey)

Technology has been utilized by CRIA, cooperatives, private companies and farmers.

(2) Road

Finance

Apr. 94 E/N 982 mil. yen. (project to Improve Rural Roads in Itapua Department.)

Aug. 94 E/N 627 mil. yen. (project to Improve Rural Roads in Itapua Department II.)

(FY 1995 Domestic Survey)

Construction of Road in the targeted area

It has been implemented with the machinery provided by the OECF loan.

(FY 1996 Overseas Survey)

Construction and rehabilitation of roads have commenced. The construction is now on going in the segment of Carmen del Parana - Pirapo (127km)

(3) Completed Projects

(FY 1995 Overseas Survey)

Supply of seeds, drawing of the agricultural experiment plan, cultivation of soybeans, maize and sunflower at the Local Agricultural Research Centers and the construction of rural roads at the surrounding area have been already completed. Any other project has not been commenced.

Effects:

(FY 1996 Overseas Survey)

New varieties of soy bean, wheat and sunflower have been developed. Now they are diffused to local producers.

As a result of increase of grain production, storage facility, road, transportation facility, agricultural machinery, infrastructure for agro-industry were built.

| | Discontinued or Cancelled |

Description :

The first study was utilized as a base for a new F/S on analysis of water pollution and its decrease. It was also utilized for elaboration of land readjustment plan at central provinces and waste disposal plan of Asuncion City and peripheral areas.

Dispatch of Experts:

An expert of solid wastes management was dispatched by JICA to the City of Asuncion.

Although the dispatch of an environment policy expert was requested every year, the Japanese government was unable to respond favorably due to the shortage of suitable manpower.

In April 1995, an expert of water quality analysis was dispatched from a private firm to SENSEA for two years.

Cooperation with U.S.A.:

The Study results will be utilized as the basic data for F/S, which will be financed by TDA-USA and implemented under the Ministry of Natural Resources and Environment for six months commencing in April 1994.

The Ministry of Natural Resources and Environment has been observing and examining how the water quality in the Lake Ypacarai and the surrounding area has been improved. This water quality improvement program, for which the results of the JICA study are utilized, has been implemented by two American consulting firms with USAID fund.

In case an American consultant is appointed, not only will the financial assistance be provided but also the study on various problems concerning this Lake will be conducted.

(FY 1995 Overseas Survey)

Effect:

To secure water resources.

To upgrade the value of target area as the tourist and recreation area.

Reinforcement of pollution control at Lake Ypacarai.

Others:

The Government of Paraguay was determined to follow the recommendations proposed by this M/P, which resulted in the establishment of the Basin Management Authority.

(FY 1993 Overseas Survey)

The Government of Paraguay requests the Japanese government for the participation of more local staff in these survey works in future.

(FY 1995 Domestic Survey)

The Technical Planning Secretariat moved the equipment in a laboratory to the Ministry of Natural Resources and Environment.

(FY 1996 Domestic Survey)

In case the improvement of sewerage is undertaken, it is necessary to determine in advance where sewage is to be released and how it would be treated.

Description :**(1) Road Network Improvement**

The short-term (-1995), mid-term (-2000) and long-term (-2010) road improvement plan were approved by the Cabinet. Various financial assistances are requested to implement the plans.

eg.) To improve the National Highway No.3 Limpio-San Estanislao (127km), the Government requested the World Bank for the financial assistance in October, 1991.

1. Arterial Road Development

(FY 1997 Domestic Survey)

Subsequent Study: Feb.1996 - Mar.1997 JICA F/S (Arterial Road Development Project)

This aims to formulate a project to improve the secondary national roads, Marumena-Villirorica and Paraguari-Villarica.

Finance: 10 Aug.1998 L/A 19,428 billion yen (Road Development Project (II)) (a part of the loan (approx. 5 billion yen) is for this project)

Contents of project: Development of arterial Road (approx. 25km including Paraguari-Villarica)

2. Improvement of National Highways No.2,3,5,6 and 7

(FY 1996 Domestic Survey)(FY 2000 Domestic Survey)

Subsequent Study: Mar.1999 - Mar.2000 JICA F/S

Finance: BID, FONILATA

Construction:

(FY 1998 Domestic Survey) Completed

(FY 1998 Domestic Survey) Contents: Road improvement with widening the road (4 lanes) and overpass .

3. Situation of development/rehabilitation of the national routes

(FY 1998 Overseas Survey)

1) Rehabilitation and paving of Route 1 (Paragurari - Yaguaron - Ita): 1997.1 ~ 2000.1

2) Repairing and paving of Paraguari - San Juan Bautista: 1993 ~ 1995 (completed)

3) Repairing and paving of San Juan Bautista - Encarnacion: 2000 ~ 2003

4) Rehabilitation of Coronel Oviedo - Caaguazu y Eusebio - Itacurubi: 1993 ~ 1995 (completed)

5) Rehabilitation and paving of Route 3 (Limpio - Emboscada): 1998 ~ 2000

6) Rehabilitation and paving of Route 3 (Emboscada - Santani): 1998 ~ 2001

7) Rehabilitation and paving of Route 3 (Tacuara - Santa Rosa): 1992 ~ 1995 (completed)

8) Rehabilitation and paving of Route 3 (Santa Rosa - Yby Yau): 1992 ~ 1995 (completed)

9) Rehabilitation and paving of Route 4 (14km - 29 km): 1995 ~ 1996 (completed)

10) Rehabilitation and paving of Route 4 (29 km- Pilar): 1995 ~ 1998

11) Rehabilitation and paving of Route 5 (Cuero Fresco - Concepcion): 1995 ~ 1999

12) Rehabilitation and paving of Concepcion - Pozo Colorado: 1997 ~ 2000

13) Repairing and paving of Bella Vista - 149 km (Route 6): 2000 ~ 2003

14) Rehabilitation of Coronel Oviedo - Caaguazu: 1993 ~ 1996 (completed)

15) Rehabilitation of Route 7 (Itaipu 323km - 183 km): 1998 ~ 25 years

16) Rehabilitation of Numi - Caazapa: 1992 ~ 1994 (completed)

17) Rehabilitation of Caazapa - Cornel Bogado: 2000 ~ 2003

18) Repairing and paving of the term 1 of Transchaco: 2000 ~ 2003

19) Rehabilitation of Puente Rio Negro - Pozo Colorado: 1995 ~ 1997 (completed)

20) Rehabilitation of Pozo Colorado - Puente Rio Verde: 1995 ~ 1997 (completed)

21) Rehabilitation and paving of Mcal Estigarribia - Sgto. Rodriguez : 1999 ~ 2003

22) Rehabilitation and paving of Route 10 (Santani - Pto. Rosario): 1999 ~ 2002

23) Rehabilitation and paving of Route 10 (Tacuara - Saltos del Guaira): not yet decided

24) Rehabilitation and paving of Route 12 (Chacol - Gral Bruguez): not yet decided

(2) Strengthening of Transportation & Information Division

(FY 1998 Overseas Survey) Dispatch of Japanese experts to Ministry of Public Works and Communication (~ Dec. 1998).

(3) Railway Improvement

(FY 1995 Domestic Survey) The implementation with BOT scheme has been under consideration.

(FY 1998 Domestic Survey) There is still desire to implement the project with BOT scheme.

(FY 2000 Domestic Survey) As the demands for rail transportation in Paraguay has been decreasing year by year and the facilities have become too old for use, only the service in the section Asuncion- Ypacarai (once a week) and the section Encarnacion-Pakuwa(cargo) are under operation. Moreover, to replace the rail between Gral althigus and Encarnacion was compensated for the completion of the Yashiren Dam, however the replacement was not started because the section has not been submerged yet and the service has been already stopped.

(4) Water Transport Development

(FY 2000 Domestic Survey) The increase of the yield of soybeans rapidly made the transport volume large. In this fiscal year, the improvement of Concepcion port will be completed and the improvement plan concerning to the Pilar port will be decided.

Detail:

(FY 1995 Overseas Survey) Various projects proposed in M/P were integrated into the National Plan of Transportation Policy. And the Department of Integrated Planning of Transportation was newly established in OPIT of the Ministry of Public Works and Communications to decide the implementing order of the Projects.

Each project is given high priority by those who are in charge of road, marine and railway transportations. Upon the completion of each construction, the evaluation will be conducted and reported.

| <p>Description :</p> <p>Background: The Minister of Education approved to request the cooperation for this Project to the Government of Japan on 20th June, 1994. And the officers in charge of the Ministry of Education explained the necessity and the Priority of this project to the Parliament and asked to allocate national budget to materialize a part of the Project. Simultaneously, negotiations with the investors are also commenced.</p> <p>Finance: A large initial investment will be required to implement the Master Plan to create an educational television broadcast network. However, in light of the current development budget of the Government and the expansion of the ANTELCO's investment, it will be difficult to obtain such a large amount for capital investment. Particularly, the implementation of the Priority Project should be financed by grants or very soft loans, so as to ease the repayment burden as much as possible.</p> <p>Situation: (FY 1995 Overseas Survey) The Priority Project is most essential in establishing the educational television broadcasting service in Paraguay. In particular, the implementation of Work 1 to construct transmitting facilities in Asuncion has an important meaning in securing the TV channel, which the Paraguayan Government has retained for years for educational television in the capital city. With the Asuncion station put into service, some 40% of the entire population of the country will be able to receive education through the television service. Consequently, Work 1 of the Priority Project should be taken up for implementation at an earliest possible date.</p> (FY 1997 Overseas Survey) Request for a grant aid assistance was not submitted to Japanese Government in 1994 since Ministry of Technical Planning did not select this project as a project requesting for grant aid assistance. (FY 2000 Overseas Survey) There has been no progress for materialization due to various reasons of Paraguay Government. | | |

Description :

Subsequent Study:

At present, 1.5 years after the completion of this survey works, it seems to be on the stage of that an official request for implementation of the Feasibility Study in connection with the integrated agricultural and livestock farming development plan for Pozo Colorado District and Campo Azeval District is going to be submitted to the Government of Japan.

(FY 1996 Domestic Survey)

No request has been submitted by Ministry of Agriculture and Livestock.

(FY 1997 Domestic Survey)

F/S for integrated agricultural and livestock farming development plan for Pozo Colorado District and Campo Azeval District is requested to Paraguayan Government. Now, it is under examination of General Directorate of Planning.

(FY 1998 Domestic Survey)

The request for F/S has not been submitted.

Situation:

(FY 1995 Overseas Survey)

In order to obtain various data, a dam has been constructed and reserved water during rainy season.

The pilot farm has been irrigated by the water from the dam to cultivate winter wheat and other crops.

This test was planned to complete on 1995, however, due to environmental and ecological cautions, it will be extended until 1996. It is planned to continue various experimental works including the research for the other crops under this Project.

(FY 1996 Overseas Survey)

Information obtained by this project (soil, water, flora, infrastructure, population, development strategy, etc) is utilized for policy making and formulation of projects by Govt and international organizations. Materialization of this project has not realised yet. Govt, cooperating with Ministry of Agriculture and Livestock, emphasizes small scale projects, for example apiculture, horticulture, milk production to generate job opportunity and income.

(FY 1997 Domestic Survey)

This project is considered as a Paraguayan version of Serrado Development in Brazil.

(FY 1997 Overseas Survey)

The results of the study have been incorporated into Rural Agricultural and Human Resources Development Strategy(10 years).

(FY 1999 Overseas Survey)

Data and information acquired in this Study have been utilized in both public and private sectors for the policy decision and the formulation of bajo chaco development plan.

| <p>Description :</p> <p>Subsequent Study: (FY 1997 Domestic Survey, Overseas Survey) Nov.1997~Jan.1998 B/D Consulting Firm/Kokusai Kougyo After B/D is approved, D/D is to be started on April 1998. (FY 1998 Domestic Survey) Provision of machinery was completed by March 1999.</p> <p>Finance: (FY 1996 Domestic Survey) Among the proposed projects, the request is submitted for 800 mil.Yen grant aid assistance to procure waste collection equipment, which is considered the most urgent. (FY 1998 Domestic Survey) Machinery Development Project for Solid Waste Management for Metropolitan Area of Asuncion. *Contents: Provision of machinery for waste collection and reclamation for Asuncion. 22 April 1998 E/N 799mil.yen</p> <p>Background: Authorities concerned in Paraguay (Ministry of Health and Welfare, SENASA and 15 autonomies of the city of Asuncion and the surrounding area) eagerly wish to implement this project.</p> <p>(FY 1995 Overseas Survey) The implementing schedule of this project is now drawing. SENASA will settle the regulations with regard to this issue, and AMUAM will establish the Urban Cleaning Office. Additionally, SENASA will join with a consultation organization of the Presidential Office to research the socio-economical impacts of this Project, and will construct a disposal treatment facility for wider area at Chaco-i. SENASA is going to publish a manual book for reduction and recycling of the disposals and the wasted materials from families, and distribute the manual book for each families in the municipality.And also to research the components of disposal in order to apply the results to this project and to introduce to the other cities and districts of the country. Above actions are considered as for a part of the National Plan. At present, it is still on the promoting stage such as designing, financing and providing the tender documents.</p> <p>(FY 1996 Domestic Survey) Because the Japanese Government considers to end the provision of grand aid assistance for Paraguay, the early implementation of this project is desired.</p> <p>(FY 1998 Domestic Survey) The metropolitan area consisted of 15 municipalities including Asuncion city when this study was conducted. After reorganizing the administrative district, the present metropolitan area consists of 23 municipalities including Asuncion city. It was proposed that a new disposal treatment facility would be constructed in Chaco-i. However, the substitute site is presently under selection since the policy has changed.</p> <p>(FY 1999 Overseas Survey) There has been little progress in finding the new final disposal site. The systems have been utilized in Asuncion, San Lorenzo, Capiata. Luque will utilize it soon. In Asuncion, the agency is collecting garbage on 2 - 3 shift basis. Therefore, the rate of collection is kept high. The Cateura disposal site has been remarkably improved.</p> | | |

| | Delayed |
| | Discontinued or Cancelled |

Description :**Situation:**

(FY2001 Overseas Survey)

The main objective of the project is to enhance the domestic agriculture through technological and financial aids to small-scale farmers in the Eastern Area. The project also includes introduction of training farms, construction of water supply system, and improvement of rural roads.

Finance:

(FY 1998 Domestic Survey) (FY 1998 Overseas Survey)

10 Aug.1998 L/A (Agricultural Reinforcement Project II) 15,525 million yen

***Contents:**

- (1) Public works: development of infrastructure such as rural and irrigation and drinking water.
- (2) Development Loan through Banking System such as BNF, CAH, FDC (two step loan).

Construction:

(FY 2001 Domestic Survey)

Imp. Period: from 2001 to 2004 (until Feb.2005 according to the L/A)

Contents:

The Department of Promotion selects "Finca Escuela" and implements the simple F/S regarding the management to be exhibited. The necessary infrastructure and seeds are to be provided, and then the cultivation and management are to be exhibited. FY2001(2 Departments, 38 places), FY2002(6 Departments, 47 places), FY2003(6 Departments, 39 places), FY2004(All Departments, 39 places), FY2005(All Departments, 50 places)

Road : The manual is under preparation. The construction will be completed with total expansion of 50 km in Feb.2002.

City Water : The manual is under preparation. The construction will be completed in Feb.2002. The World Bank has been implementing the similar Rural Water Supply Project and ironing out the proportion of residence burden.

Development Loan through Banking System such as BNF:

(FY 2001 Domestic Survey)

BNF: After the first disbursement, they have been disbursed satisfactory with the achievement of 317 times till June.

CAH: The first disbursement was made in Sep.2001. By the criterion of owned land area (about 20 ha) and income (37 thousands US\$), the subjects to financing were selected.

FDC: The manual was prepared by the draft level and is to be completed until mid-Feb.2002. Although the funds are from IFAD, there is much balance to be financed. The advisor of Yen loan has been directing FDC to increase the amount of loan.

(FY 2001 Overseas Survey)

BNF: Started to provide the loan since FY 2000. The amount of the loan provided to farm producers until now occupies 13.1% of the total allocation.

CAH: Procuring financial resources for the first disbursement which will start from Nov. 2000.

FDC: Specialized for loans to farm producers organizations. Currently DINCAP technical team is reviewing the operation manual.

Background:

(FY 1997 Domestic Survey)

12 projects were selected as the most favorable projects in the M/P.

The government of Paraguay (The Department of General Planning in the Ministry of Agriculture and Livestock) is planning to request two projects among the most favorable projects to Japanese government as a technical cooperation project. Those projects are the Projects for the enhancement of irrigation facilities in dry fields and the Project for the development of environmentally accountable agriculture.

On the other hand, in January 1997, the government of Paraguay submitted the request letter of the second phase of agricultural reinforcement project to the Japanese government as a loan.

This loan funds for important and urgent fields(farm management, distribution, agricultural support system, environment and WID, etc) to a financial institute of the Ministry of agriculture and livestock. The amount of loan is estimated to be 97,540,000 US\$ which corresponds to about 11% of total costs of all the proposed projects of M/P in the cash basis.

(FY 1998 Domestic Survey) (FY 1998 Overseas Survey)

Development studies (F/S) related to the proposed projects ("Irrigation and Soil Conservation Project in Coronel Oviedo" and "Development Project in Ybycui National Park") were examined. Considering the priority, the former project was requested in 1998.

Project-type technical cooperation is also being requested.

(FY 1999 Overseas Survey)

MAG submitted requests for Japan's technical assistance in 1997 and 1998 for the implementation of 1)Irrigation infrastructure improvement and soil conservation project in Cnel Oveido District; and 2)Project for strengthening the Ybycui National Park and its surrounding areas. Although these projects have not been concretized, they are to be requested occasionally as the priority projects.

(FY 2001 Domestic Survey)

The following projects which have been requested to Japan in 1997 and 1998 were not adopted. The assistance by the Japanese government are under discussion because the possibility to be adopted is low: the Irrigation Infrastructure Improvement, the Soil Conservation Project in Coronel Oviedo District, the Reinforcement Project in Ybycui National Park and around it.

Jan. 1996 ~ Jan. 1998 Dispatch of a Japanese expert (road consultant)

(ii) Tebicuary - Villarica: Completed in March 2003.

(iii) La Colmena - Tebicuary: Completed in March 2003.

(2) Rehabilitation and re-paving:

(i) Yby-Yau - P.J.Caballero: Completion scheduled in September 2004.

(ii) Bella Vista - (Route 6): Completion scheduled in March 2005.

(iii) S. J. Bautista - Encarnacion (including the enlarge of the bridge): Completion scheduled in March 2006

(iv) Cnel. Oviendo - Santani: Completed in January 2003.

(v) First term of the route (across Chaco): Completed in March 2003.

(3) Enlarge of the width of the bridge:

(i) Paraguari - S. J. Bautista: Completion scheduled in March 2006

(ii) Carapegua - Acahay - La Colmena: Completion scheduled in March 2006.

Background:

(FY 1997 Domestic Survey)

The project proposed by this survey was expected to be implemented by the onerous financial cooperation of Japan together with similar other works.

Although a little delay has been observed from the initial schedule, the Japanese Government has pledge on October 1997 a yen credit of approximately 20 billion yen for the total amount of approximately 25 billion yen for this work.

The L/A was signed on Aug.1998 and is scheduled that the implementation design started on Jan. 2000, and the Tender of the work opened on Sept. 2000 (first group).

The duration of construction is planned for 3 years.

The Study will propose improvement measures for traffic signal control using the central control scheme, taking into account current problems, future traffic demand, and the new trunk bus project. | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2000 Domestic Survey)

The municipality of Asuncion has so far no intention of applying for a new loan and has not approached the Government of Japan.

The CETA office still exists within the municipality, and municipal employees(4 former counterpart members and three new persons) work for transportation issues.

A public transport bill to empower transport operators is under discussion in the Diet, and the proposed projects will be discussed further in detail once the bill is passed.

(FY 2001 Domestic Survey)

The government of Paraguay enacted a new law in 2000 for the preparaton and implementation of the proposed project in F/S.

The municipality of Asuncion and mayers of the vicinal municipalities established SETAMA (Secretaria de Transport del Metropolitana de Asuncion) for fund procurement, land utilization, and interest adjustment among concerned bus enterprises.

The government is seeking overseas financial aid because of its financial deficit.

The activities of SETAMA have been stopped for a few months due to the coming mayoral election on Nov. 18, 2001.

(FY 2001 Overseas Survey)

Establishment of the National Transport System and a new management organization:

- DINATRAN, a nation-wide management organization, and SETAMA, a local-level management organization in Asuncion, were established on Dec. 29, 2000.

SETAMA formulated a M/P for Asuncion metropolitan area, however, the implementation of the plan has been suspended with many issues to be solved.

Because there are no concrete fund procurement plans to start activities of DINATRAN (budgeted from the Diet) and SETAMA (budgeted from the municipal council), an application for Japan's Technical Cooperation and Yen Loan for the implementation of the M/P is being prepared.

(FY 2002 Domestic Survey)

The delay of fund procurement is contributed from the following factors:

1. Lack of budget within govt. And borrowing from WB suspended (nearly in default).
2. Political instability and preliminary election, expected Apr. 2003, prevents govt. from concentrating on the primary duty.
3. Due to World recession of the World economy and peripheral countries (i.e. Argentine and Brazil), foreign currency inflow remains insufficient. The repair work on Palma st. in the Center of Asuncion City has been commenced, and width of roads has expanded.

(FY 2003 Overseas Survey)

The following projects were implemented on its own funds.

1. Of the four yards on the Mariscal Lopez scheduled to be constructed, three yards were constructed.
2. A bypass was constructed between Espana and Mariscal Lopez through a railbed
3. While the road width of the section between the Peru Avenue on the Artigas Street and Espana has been expanded, the section between the Peru Avenue and General Santos remains unfinished (approximately 750 m).
4. The construction to expand the both sides of the Palma Avenue had been expected in relation to the conversion plan of the downtown to a pedestrian avenue and partial expansion of the northern sidewalk of the Estrella Avenue were implemented.

(FY 2004 Domestic Survey)

- Construction of roads (able to enter directly to Centro from Altigas via Paraguayo Independinte)
- Increase in number of people using public transportation due to economic deterioration.
- Traffic congestion by the bus has reduced due to a bankruptcy of several Bus companies, which entity with stable management survived.

(FY 2004 Overseas Survey)

Tender was made for expansion and re-pavement of 1km long section in Eusebio Ayala street. This is the section between Choferrel de Chaco and San Martin, where construction is in progress. This street is the major road from Eastern arterial road to the centre of capital. This road connects major cities in metropolitan area, which connects to Route 1 and Route 2. 21 thousand motor vehicles transits Eusebio Ayala street daily, which vans and public vehicle consists 24 percent.

On the other hand, implementation of the introduction of bus route has not yet been made till 2004.

Request for a YEN Grant Aid was mad for CETA 98 implementation through Ministry of Finance BID special team of BID conducted in May, 2004. However, chairman of SETAMA received in approval.

Although the budget of SETAMA for FY 2004 was 2 million USD, the Supreme Court judged allotting 15 percent of fixed asset tax of Ascention to SETAMA. Therefore, budget in FY 2005 was reduced for 75 percent.

(FY 2005 Domestic Survey)

1. Expansion construction of Choferrel de Chaco is being implemented with own funds.
2. Land procurement has been made for construct of bus terminal in San Lorenzo city.
3. Discussion is in progress with bus companies on bus route reallocation.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

Description :

(FY 2001 Overseas Survey)

1) Based on EDEP, the government of Paraguay formulated the short and long term Socio-Economic Strategy Plan to double the income per person in 20 years. PEES is an integrated, concrete, and the first national plan for national socio-economic development and was announced by the Presidential Order in March 2001. All the concerned ministries and public organizations are obliged to formulate more concrete implementation plans and schedules and to take financial measures for the fiscal year 2002. EDFP/PEES proposed a strategy and a policy of high value added agricultural/industrial production and export for MERCOSUR and the world market. PEES is planning more than 40 urgent projects (for 2001-2003) to achieve the long-term objectives.

2) The cluster strategy proposed by EDEP/PEES has been institutionalized since March 3, 2002. ONPEC (National Organization for Promoting the Strategy of Competitiveness) was established for the whole nation in July 2001. The promotional organization of ONPEC held more than 8 conferences for regional cluster formation, financial planning, regulations and acts, formulation of action plans, creation of home pages, and establishment of regional organizations. ONPEC implemented various surveys related to government projects, such as improvement of agricultural/industrial quality control in national level, export promotion, transportation infrastructure development, and elimination of obstacles against national products competitiveness promotion. Permanent Secretariat of ONPEC established as a part of STP is facilitating organizational integration of ONPEC and promotion of cluster formation. ONPEC makes efforts to establish regional cluster organizations in the related areas as well as to enhance the organizational power of ONPEC itself. A JICA expert has joined the ONPEC meeting as an advisor.

3) Since the PEES's announcement, STP has made efforts to procure fund and technologies from overseas including Japan, EU, Spain, Canada and international banks such as IDB and WB.

As for JICA's assistance, the government is requesting, for the fiscal year 2002, a F/S on cluster formation, road development for export promotion, four experts for national system improvement in products quality control, a long-term expert for cluster formation support, and two senior volunteers for agricultural/industrial products export promotion. The government has also requested cooperation programs for enhancement of national products competitiveness in the world market.

(FY 2003 Overseas Survey)

The following projects were implemented.

1) Strengthening of competitiveness in the processing agriculture sector

Fund raising: EU(13,000,000 euro),IDB-FOMIN(US\$640,000)

Description:(EU)

-Strengthening of the national certification organization (ONA), the national committee of weights and measures(INTN) of the national technology standardization office, and the national quality system by the standardization bureau of INTN.

-Development and certification by ISO standard in the zoo sanitary inspection service and the phytosanitary inspection service

-Adoption of a trace system to constantly identify cows and pigs.

-Implementation of National Survey on Agriculture and Livestock Farming (MAG).

-Operation of modern integration process of the national quality system by providing strategic standardization means, plans, budgets and management(STP and CONACYT).

-Adjustment of the development process of legal frameworks of respective concerned organizations based on systematic and comprehensive viewpoints. (Vice President's Office)

-Promotion of investment, production and export through implementing collective strategies by the National Organization for Competitive Strategy Promotion (OMPEC) under the supervision of MIC

(IDB):

-Facilitation of export procedures for non traditional items with many participants from the small and medium enterprise sector.

2)Technical cooperation of Japan: professional engineers

-Instructor fosterage plan to activate small and medium enterprises in Republic of Paraguay Period: 2002 - 2005

-Management improvement plan of small to medium sized farmhouses through dairy in Republic of Paraguay

Period:2002 - 2004

Description: formulation of appropriate dairy management models adequate for small to medium size producers. 3)Support of agricultural school

3)Support of agricultural school

Fund raising: Spanish government (:US\$104,000)

Description: Improvement and expansion of the education service on the processing agriculture sector in Paraguayan agricultural schools, the dairy product sector in San Pedro, and the sausage sector in Itapua. Repair of classrooms, improvement of equipment, operation of processing agriculture school, fosterage of engineers and ability development of regional producers.

4)Cotton production support project: results have been yielded by intensive activities of Ministry of Agriculture and Industry.

This project is implemented on its own funds though PRODESAL.

Description :

(FY 1997 Domestic Survey)

A change of organizations concerned was carried out after completion of the study. The most part of DGRNR, which was an actual counterpart agency was organized into the Secretaria Ejecutivo de Medio Ambiente (SEMA) (Forestry, Meteorology, Hydrology, etc.). And the director of Sectional Office for Agricultural Planning (OSPA) who was a direct responsible person was relieved.

Under such conditions, considering the importance of the Project, the Ministry of Agriculture and Livestock is preparing the request to Japanese Government for Grant Aid.

Situation of the request:

(FY 1998 Domestic Survey)

Although the request for a grant aid assistance covering B/D was submitted in Jan. 1997, no progress has been made.

The amount requested: USD 15,003,000

Contents: Environmental conservation model projects (1. Basin conservation model project, 2. Agricultural Development model project, 3. Agricultural supporting model project).

Governmental organizations were reorganized in Aug. 1997 after the completion of this study, and the director of Sectional Office for Agricultural Planning (OSPA) in charge has been changed. His work had not been well handed over to the successor; follow-up for the project had not been conducted. Although the successor started conducting the follow-up, the above request is kept in Japanese Embassy since grant aid assistance cannot to be applied to El Salvador.

(FY 1998 Overseas Survey)

MAG submitted the request for financial assistance to MIREX in Jan.1998. However, there has not been any response so far.

The request for the project-type cooperation including soil conservation, afforestation, forest agriculture, flood control, water management, monitoring system for water management is to be submitted to Japanese government.

(FY 2001 Overseas Survey)

There is no cooperation from another country and no plan for the completion of any project regarding this project, due to the prioritization of projects from the Government.

(FY 2002 Overseas Survey)

No progress has been regarding this project. No plans exist in the near future for the financing of the project and no other cooperation agency working this project.

(FY 2001 Domestic Survey)

El Salvador is not the object country for a grant aid. As to the loan aid project, the priority on agriculture is low in the national level, therefore, this project is unlikely to be realized.

Japanese technical assistance:

(FY 1998 Domestic Survey)

An expert is dispatched to CENTA which is in charge of research and extension of the agricultural technology.

Situation of utilization:

(FY 1998 Overseas Survey)

The outputs of this study was utilized for the formulation of the National Plan of Economic & Social Development (1999~2004),

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| (FY 1998 Domestic Survey) The government of El Salvador requested OECF loan via the embassy of Japan in September 1998. | | |
| (FY 1999 Domestic Survey) (FY 1999 Overseas Survey) The government of El Salvador requested OECF loan to the embassy of Japan in September 1998, but an official request for yen loans has not been submitted yet after that. | | |
| (FY 2001 Domestic Survey) The National Development Commission (CND) established in 1997 made a proposal to implement the project. Also, according to the Agriculture and Livestock Office, the government gives priority to the implementation of the project. However, we get unofficial information that they plan to implement the project 2 years after the implementation of the Cutuco Project for budgetary constraints. | | |
| (FY 2001 Overseas Survey) There is no progress in the proposed projects. The government of El Salvador requested OECF loan to the embassy of Japan in September 1998, but an official request for yen loans has not been submitted yet after that. Detailed design in cooperation with JICA and a request for the implementation of construction by JBIC loan are prepared now. | | |
| (FY 2002 Overseas Survey) There is no progress. The Ministry of Agriculture has an interest in the implementation of the project proposed, but it is difficult to implement it for financial difficulty since the earthquakes which took place in January and February 2001. According to the General Director of the Direction of Natural Renewable Resources in the Ministry of Agriculture, the Rio Grande Project is the priority project of the present government and the loan is planned after the implementation of the La Union Port vitalization project. JICA and CND conduct a master plan survey for economic development, focusing on the eastern region. The Ministry of Agriculture promotes the project continuously as one of the most important component for the development of the eastern region. | | |
| (FY 2003 Overseas Survey) The government of El Salvador thinks that the project is an extremely important project for the development of agriculture and livestock farming in the eastern region and that they need finance by Japan for the implementation. | | |
| (FY2007 Domestic Survey) The government of El Salvador is pursuing proceeding vigorous activities for the comprehensive flood control project for the river Grande de San Miguel, which is in the mentioned study. The activities include: risk diagnosis and devising a risk management plan for the downstream basin of the river Grande de San Miguel and the river Paz, lowering the risk (reconstruct the structure to lower the risk as well as adapting the risk productivity), installation and enhancement of an early warning system, and enhancement of other related systems. (Requested amount: 1 million USD, requested body: IDB). The Ministry of Agriculture in the El Salvador government, Ministry of Interior and Ministry of Environment and Natural Resources (National Service of Territorial Studies (SNET)) are preparing for a mutual cooperation agreement which is aimed for January. | | |
| (FY2007 Overseas Survey) Implemented project: Hurricane damage rehabilitation equipment and material procurement Objective: Improvement of road infrastructure (access roads to productive zone) and reconstruct the production base of agriculture and stock farms by progressing protective works e.g. river bank restoration, against natural disaster. Funding: Funding party: Japanese government (non project Debt Relief Grant Aid) Amount: 965 million USD Progress: (FY2007 Overseas survey) Application for funding to the Japanese Embassy, April 2005. Additionally, the Ministry of Agriculture applied to Japanese Government for the donation of a new machinery which can maintain the machinery donated 7 years ago (1 backhoe (320c), 1 tractor (D6R), 4 10m/sq dump truck and spare parts). Reconstruction of neighboring roads (more than 300km) and riverbank (more than 50km) between January, 2001 and September, 2005. | | |
| Implemented project: Flood control on river Paz, Jiboa, Lempa, Grande de San Miguel. Objective: Improvement on road infrastructure (access roads to productive zone) and reconstruct the production base for agriculture and stock farms by progressing protective works e.g. river bank ruin, against natural disaster. Funding: Amount: 1 million USD (3.3 million is for he river Grande de San Miguel) Funding party: IDB Progress: This project was started on 3 December, 2007 and is expected to finish in 5 month time. Estimate of percentage complete is 5%. | | |

Description :
Subsequent Studies:
(FY 2002 Domestic Survey)
Jul.2001 ~ Oct.2002 B/D (JICA D/D)

Funding:
(FY 2001 Overseas Survey)
Date of the obtaining of the loan : 25, Oct.2001, Amount of the loan : 11,233 million Yen
Contents of the Project :
-Treating general/bulk cargo for the eastern region
-Treating containerized cargo at the national level
-Treating international containerized cargo
-Developing socioeconomic activities of the eastern region
The plan for the utilization of the loan is as follows :
-Civil works 7,030 million Yen
-Equipment 2,333 million Yen
-Consulting 678 million Yen
-Physical contingency: 1,192 million Yen
-Total : 11,233 million Yen
The loan still has to be ratified by the legislative Assembly on the session of 8, Nov.2001.

Construction:
(FY 2001 Overseas Survey)
No civil works have been started yet. The D/D is in execution and the M/P was modified. Modification was about the place where soil supposed to be obtained. Soil was collected from the ford instead of the scheduled place whose bedrock was too steep. The progress of the D/D during the month of Sept. is as follows:
- Review of cargo and passenger traffic forecast
- Review on characteristics of calling ships
- Bathymetric and seismic profiling survey
- Environmental survey
The civil works are planning to be initiated in the year 2003 to accomplish in 2006.
(FY 2002 Domestic Survey)
Pre-qualification: Feb. 2003
Tender and tender evaluation: Aug. - Sept. 2003
Construction (Civil works and building): Nov. 2003- Sept. 2006
(FY 2002 Overseas Survey)
CEPA is preparing a plan for the rescue of the wild fauna that are estimated to be affected by the construction. The plan consists in the capture of wild fauna in the project site and the transfer of such fauna to a designated area approved by the Ministry of Environment. Additionally, it is planning utilize the cut trees to desks or any other tools for rural education in the area.
(FY 2003 Domestic Survey)
-As of August 2003, the main unit of civil engineering works is under evaluation for preliminary qualification examination.
-In the present plan, the terms of work for the main unit of civil engineering works (civil engineering and construction) is expected to last for 36 months.
-Operation and management of the target harbor (La Union Harbor)
The infrastructure will be improved by CEPA by Yen loan and the terminal operator who will subsequently execute operation and management of the facilities will be selected by CEPA from private companies based on concession method.
Consequently, since cooperation and coordination between the construction of infrastructure and the concession contract will become indispensable, the Japan Bank for International Cooperation entrusted the "Operation and Management Studies on the Harbor Concession" to the Overseas Coastal Area Development Institute of Japan with the objective of advising CEPA on how to proceed with the concession contract in future (April 2003 - August 2003).
Based on the suggestion in the said study, CEPA and the Japan Bank for International Cooperation are preparing for employment of a consultant in order to prepare and supervise the concession contract.

(FY 2004 Domestic Survey)
1. Subsequent study: "Study for D/D of La Union Province Port Reactivation Plan" had been implemented from July 2001 to Feb. 2003, as JICA project.
2. Funding request: L/A on Yen loan was concluded on 25th of Oct. 2001.
3. Other progresses:
The tender for civil engineering and construction works (Package A), which is the main package, was implemented on 13th of Apr. 2004. Contract is under procedure at present and will be signed by the Mar. 2005. The construction is scheduled to be started in the end of Mar. 2005. Moreover, PQ for Package B (Cargo Handling Equipment) and Package C(Tugboat) are going to be started after a year since the construction is started.
Apart from Yen loan, the tender for concession will also be implemented.

(FY 2008 Domestic Survey)
After the tender for construction work, El Salvadorian side modified the layout and deepened the depth of the terminal as compared to the original plan. This is because the size of container ships became inclined to be larger than before. With the modified designs, it has been proceeding with the construction work.
Regarding the privatization, there was a public bidding on master concession (i.e. undertaking development and management of the whole part of the port with one concession). However, the tender ended in failure and still has not yet been put out though it was changed to the concession including La Union port.

| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | 1) To conduct a Feasibility Study for the improvement of the National Road Route 2 and Route 7 with a target year of 2010 2) To transfer relevant technology to the Paraguayan counterpart personnel in the course of the Study. | | |
| 7. CONSULTANT(S) | Yachiyo Engineering Co., Ltd. | | |
| 8. STUDY PERIOD | Mar.1999 ~ Mar.2000 12month(s) ~ | | |
| 9. SITE OR AREA | The study area covers the section between San Lorenzo (km 14) and Caaguazu (km 183) of the National Road Route 2 and 7 (approximately 169 km) | | |
| 10. MAJOR PROPOSED PROJECT(S) | | | |
| <p>1) Mini-bypasees The road width in these cities is narrower than that on the inter-city sections and often causes accidents resulting from mixed traffic of inter-city high-speed vehicles and local traffic. Since it is necessary to separate them to ensure safety, it is proposed that bypasses be constructed to circumvent the built-up area.</p> <p>2) Provisions of Climbing Lanes Ascending sections with along, steep gradient slow down the traveling speed of heavy vehicles and reduce the road capacity as a result. In such sections, many traffic accidents occur, involving those trying to overtake slow vehicles. Based on the AASHTO design standard, another lane will be provided for slow heavy vehicles to travel in sections with a gradient of over 3% continuing for more than 500m.</p> <p>3) Construction of Flyer Intersection At the existing intersection near the town Coronel Oviedo, many traffic accidents occur. In order to realize smooth traffic from Coronel Oviedo, where urbanization is taking place, and Route 2 and 7, the rotary intersection will be grade separated, and a flyover will be constructed.</p> <p>Implementation period: 1. Road Improvement, Urgent maintenance (Jan. 2003- Dec. 2004) 2. Bypass Construction (Jan. 2005- Dec. 2009)</p> | | | |

Description :

(FY 2000 Domestic Survey)

The Study team explained the summary of this project to JBIC in Paraguay. The study team has unofficially obtained the intention that JBIC will take up this project as a superior issue. Paraguay government has requested the proposed projects to JBIC.

(FY 2001 Domestic Survey)

The Paraguay government is planning privatization of maintenance, management, rehabilitation and operation of trunk roads by concession.

(FY 2002 Domestic Survey)

Road improvement projects such as national highway construction between Paraguay-P roads are in progress as a loan project. The govt. of Paraguay seems to examine the progress of ongoing projects.

(FY 2003 Overseas Survey)

The total length of the Roads No. 2 and No. 7 is 325 km. The business right for privatization has been granted to the section of 184km between Caaguazu and Ciudad del Este. There is a plan to grant a business right for the remaining sections, which needs a case study.

(FY 2004 Domestic Survey)

Within the total length of 325 km of Road No. 2 and No. 7, construction of 184 km road between Caaguaz and Ciudad del Este has completed. Although further investigation is needed for the remaining sections, there is a plan to commission this.

(FY 2005 Domestic Survey)

The Paraguayan government is considering conducting national highway maintenance with concession scheme. Specifically, the highway placed as an important road maintenance link in southern recurrent road axis has the highest possibility. However, there are some downsides, such as greater risks of investment. On the other hand, Road No. 7 adjacent to the road was actualised by concession, and is operating from 2000.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

Description :

(FY 2001 Domestic Survey)

Execution Unit, which deals with Solid Waste Management issues over the Metropolitan Area, has been established in Planning Office for San Salvador Metropolitan Area.

(FY 2002 Overseas Survey)

Execution Unit is taking steps forward the project for the construction of Echo Stations in order to establish the separate waste collection. Such project is being negotiated with private companies and consists in the construction of collection centers for recyclable materials in several communities.

The objectives of the project are;

- 1) Diminish the transport costs
- 2) Elimination of final disposition costs
- 3) Prolonging the life of Sanitary Landfill Site
- 4) Employment generation

The project consist in the establishment of 8 echo stations, it is planned to attend 516 houses per stations in a total area of 72.75 ha, the total beneficiaries are estimated approximately in 16,500 inhabitants.

(FY 2002 Domestic Survey)(FY 2002 Overseas Survey)

Japanese Technical Cooperation

Dispatch of expert (Short-term expert) : from Aug.10 to Aug.29, 2002 for 'Database Management for Manucipal Solid Waste Management'
Training in Japan: from Aug.13 to Sept. 29, 2002 for 'Waste Management Techniques for Central American Countries'

(FY 2003 Domestic Survey)

Environmental education has been in progress by use of the instructional material proposed in the studies.

Enhancement of the organizational capability is in progress.

(FY 2003 Overseas Survey)

1) Projects expected to be implemented from June 2001 to 2010:

- Master plan for solid waste disposal
- Optimization of solid waste collection routes
- Recommendation on the transfer station
- Management of the solid waste disposal service
- Collection of the service fee for solid waste disposal

2) Implemented projects and projects in progress:

-Efforts were made on optimization of solid waste collection routes. At present, a report was submitted to San Marcos City and a report to AYUTWOKUSUTEPEKE City is under preparation. On the other hand, requests for support from other municipalities are invited.

-A software to establish appropriate tariffs intended for four municipalities - Delgado, Santa Tecla, AYUTWOKUSUTEPEKE and San Marcos - called "COCEPRE" is in the process of installation .

-Projects to reduce recyclable resources such as the eco station and the accumulation center, an auxiliary facility of the eco station, are in the process of introduction.

3) Benefit effects:

Approximately 2.3 million people in the metropolitan San Salvador area enjoy the benefits.

(FY 2003 Overseas Survey)

1 personnel each in 2002 and 2003.

(FY 2004 Domestic Survey)

Acceptance of trainee: 1 personnel for specially established "Solid Waste Management in Latin America". 1 personnel for training in Mexico (third country training).

Description :

(FY 2002 Overseas Survey)

IGN has been generating income from the sales of the digital maps.

The major problem IGN is facing in the upgrading the maps. One of the recommendation of this Study is upgrading maps because the conventional 1/25,000 maps used were not updated. Though technology transfer was done to the staff in the IGN, some of them no longer belong to the IGN and this is causing blanks in the operation of Ark/View and Ark/Edit.

The director of IGN has been changed. A reinforce to the Cartography Division was done by adding more members and establishing the quality control unit, besides more people has been trained over the subject of digital mapping.

Status of Utilization:

The digital maps have been widely used by the Ministry of Agriculture, Ministry of Environment, Ministry of Finance and Technical Secretariat of Presidential House.

IGN is negotiating with French Government for a loan of US\$ 12 million for the project, ' Modernization of Cadastre and the National Geographical Institute'. This project intends to include technical transfer, equipment, training in a variety of fields as Geodesy, Flights, photogrammetry, cartography, etc.

The IGN has established contact with the NIMA (National Imagery and Mapping Agency of the United States), in order to digitalize the 1/50,000 maps using as base maps the 1/25,000 topographic maps, product of the propose project.

Though IGN is having progress in the utilization of the maps, there have been certain problems with the equipment, regarding the lack of spare parts and technical service available in the courtly for CALCOM.

(FY 2003 Overseas Survey)

Beneficial effects:

The whole country will enjoy the benefits from this geographic information. Even the current incomplete geographic information has been utilized by various organizations and groups including the Ministry of Environment & Natural Resources, the Ministry of Agriculture and Livestock, the Ministry of Economy, the Ministry of Public Works, the Ministry of Foreign Affairs, the civilian police, the National Energy Board, Social Investment Fund and the State Planning. It is also utilized by NGOs and private companies.

| 3. SECTOR | Fishery / Fishery | | 4. TYPE OF STUDY M/P |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Ministry of Agriculture and Livestock, Fisheries and Aquaculture Development Center | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | <p>In El Salvador, the majority of artisanal fishers (total population approximately 14,000) are war refugees and live in poverty. The Republic of El Salvador requested the Government of Japan to draw up a Master Plan (M/P) for coastal fisheries development. In 2000, an IC Net team carried out a series of field studies on subjects including the socio-economics of fishing communities, fisheries production, fisheries management, fish processing and marketing, aquaculture, fishers' organizations, and the institutional reform of the Fisheries Department (CENDEPESCA). Based on the findings of these studies, the IC Net team drafted a M/P for the promotion of artisanal fisheries. In 2001, the team presented CENDEPESCA with the contents of the Draft Final Report, including the M/P and proposal for four pilot projects. The team also successfully held a "technology transfer seminar" presenting the outline of the M/P and introducing the pilot projects.</p> | | |
| 7. CONSULTANT(S) | IC Net Ltd. System Science Consultants Inc. | | |
| 8. STUDY PERIOD | Aug.2000 ~ Sep.2002 25month(s) ~ | | |
| 9. SITE OR AREA | <p>Western Region:Auhachapan Province(Garita Palmera, Barra de Santiago), Sonsonate Province(Acajutla, Los Cobanos), La Libertad Province(Puerto de La Libertad), La Paz Provinc(San Antonio Los Blancos, San Marcelino) Eastern Region:Usulután Province(Isla de Mendez,Puerto El Triunfo, Puerto Parada), La Union Province(Isla Zacatillo,Isla Meanguera,Isla Conchaguita, El Tamarindo)</p> | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1) Fisheries Statistics Improvement Project:The project aims at collecting, organizing and analyzing of reliable statistical data by introducing a practical and effective Fisheries Statistics System, within the budget scale of CENDEPESCA (Problems) a) Although a statistical system has been introduced, there is no budget b) Lack of data (especially on coastal fisheries) c) CENDEPESCA is not capable make plans for effective fisheries management</p> <p>2) Project in Support of the Formation of Fishermen's Organizations: The objective is formation and development of the organization of fishermen, by voluntary resource management by fishermen themselves, who use coastal resources. The project aims at building successful examples by fishermen groups with high awareness and formulating model cases which could be disseminated throughout the country. (Problems) a) The only organization -Fishermen's Union- is dysfunctional b) It is impossible that cooperatives develop by themselves. c) Most fishermen are not organized d) Lack of entity to manage fishery resources and to develop market</p> <p>3) Women's Income Increase Project in Fishing Communities: It aims at the realization of women's independence and development by supporting women's groups which are recently growing.Demonstration projects aim at creating model cases which could be disseminated throughout the country by supporting women's groups with active participation. (Problems) a) Lack of employment opportunities for women in fishing communities b) Due to the reduction of the catch, fishing family income is decreasing. c) Women do not have a measure and skill to improve such situation and there is very few organization to support them.</p> <p>4) Artisanal Fisheries Diversification Project:By making use of underexploited fishery resources, catching efforts on targeted species will be relaxed to achieve the goal of well-balanced coastal fishery. Demonstration projects will be conducted to test the validity of the fishing method, which will be introduced as a trial, and the possibility of the distribution and processing of underexploited resources. (Problems) a)Limited fish species are caught b) Target fish resources have been depleted c) There are underexploited fish species</p> | | |

Description :

(FY 2003 Overseas Survey)

MAG reported on the traditional fishery development fund to the legislative assembly through CENDEPESCA under the support of FACOPADES. As a result, this program was approved by the assembly as FIDEICOMISO PESCAR and the traditional fishery project will be implemented with annual contribution of 800 thousand US dollars. The research data of the master plan was useful as the material that supports the validity of this fund.

A request was made to JICA for follow-up of the pilot project for the sake of statistics and short-term dispatch of experts toward the training held for the purpose of formation of fishermen's union. As a result, support could be obtained from two experts, Mr. Noriaki Suzuki and Mr. Yasushi Wada. As for the pilot project for the purpose of statistics improvement, a request was made to JICA for assistance to the follow up with amount of 18,816 USD.

During Mr. Wada's stay in El Salvador, the first artificial reef was set up in El Salvador.

(FY 2003 Domestic Survey)

1. Artificial fish reefs set by artisanal fishermen (2003.09): In September 2003, artificial fish reefs were set by artisanal fishermen's initiative. The artificial fish reefs were funded by the Grass-roots Grant Aid of Japanese Embassy. With cooperation of the Navy, the artificial fish reefs were supplied to a resource conservation zone by using a warship. After one and a-half years past from the completion of the Pilot Project, fishermen and CENDEPESCA have continuously worked.

2. Fisheries Statistics System Technical Transfer, Short-term Experts (1.5 months from 2003.07): Technical training has been conducted for the practical use of new fisheries statistics system which was introduced by the Pilot Project.

3. Support the Creation of Fishers' Organizations, Short-term Experts (1.2 months from 2003.09): A short-term expert was dispatched for the creation of fishers' organizations to promote the effective implementation of the Master Plan proposed by the Study. The expert gave advice on the way to manage the Artisanal Fishery Promotion Fund which was approved during this period. At the same time, the specialist examined the current conditions of fishers' organization at the time of the pilot project implementation and made suggestions for the future.

(FY 2006 Overseas Study)

Implemented project: Development of aquafarming in the estuary region of El Salvador.

Implementing period: March 2003

Objectives: To increase the production of Anadara, local oyster and a new type of oyster introduced to the community in the Jiquilisco Bay. To establish basic technology for aquafarming of Anadara, local oyster and the introduced type of oyster and to improve technology of technical personnel of the El Salvador Fishery Development Bureau (CENDEPESCA) on aquafarming of moluscos.

Funding:

Funding party: Japan, self-fund

Japan

Operating cost: USD 176,102.00 Special expenses: USD 81,336.00 Facility provision: USD 435,136.0

Total: USD 692,574.00, which does not include the costs for training experts for long- and short-term in Japan and Chili.

El Salvador side

Operating cost: USD 113,529.73 Wages for technical staff: USD 160,214.51 Infrastructure: USD 767,200.00

Total: USD 1,040,944.24

Status: The implementation of the second phase was agreed with Japan at the completion of the survey on December 20, 2004. An institutional infrastructure for seedling production of moluscos was established, technology on aquafarming and survey of biologists on the counterpart side of the project was improved and basic technologies on seedling production of Anadara and local oyster and on aquafarming of Anadara, local oyster and the introduced type of oyster was established. The operation was conducted in cooperation with the model communities of oyster and Anada production in the regions such as Las Tunas and Negras en Playas in La Union Prefecture and Isla ded Mendez, La Pirrayita, RancyoBiejo, and Los Mancornadosin the Jiquilisco Bay. The social and economic survey of the project estimated that approximately 600 oysters and 2400 Anadara inhabit.

Technical cooperation:

Trainings:

Management of fishery resources, organization of women, oyster (bivalve) aquafarming method, invitation to the course specialized in the Science of Fisheries in Nagasaki University Graduate School, and trainings on aquafarming and commercial transaction of moluscos.

Dispatch of specialist:

Long-term experts: 4 personnel for 3 years

Short-term experts: 8 personnel

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Overseas Survey)

The utilisation of the proposed project is 100%. The government of El Salvador established "PESCAR trust" aiming to the development of artisanal fishery workers, based on the master plan. The Ministry of Finance provided USD 800,000.00 (as grant aid) annually as capitals for seeds to the production project of artisanal fishery organization.

Description :
 (FY2007 Domestic Survey)
 This Survey was conducted with a view of direct link to yen loan, but the opposition party is making objection against foreign loan with political consideration, and the request of the loan is stopping. There is possibility of necessity to wait until the result of the election in 2008 would outcome. Be that as it may, the foreign loan of the government of El Salvador is in competition between donor countries, and it is necessary for Japan side to argue against the government of El Salvador.

Description :

Subsequent Studies:

"Five-Year Plan of National Reforestation"

1989-1990 Upon the request of the Government of Uruguay, the Japanese government conducted F/S based on this M/P.

Finance:

Based on the findings of this Study, the New Reforestation Act was enacted and most of the proposed project was implemented with the World Bank loan and Japanese fund in 1987.

Oct.9.1989 L/A 7,166 mil. yen (Comprehensive Regional Development Project)(FY 1994 Overseas Survey)

A JICA expert (tree breeding) was dispatched.

Project Type Technical Cooperation Mar.10.1993~Mar.10.1998

Effect:

(FY 1996 Overseas Survey)

Institutional development of Department Forestry in terms of technic and equipment.

The forest zone is growing significantly. Total area of 178,681 ha has been afforested during 1989~95.

New technologies for nursery and afforestation have been introduced.

The growth of forest sector contributed to increase investment and export and create employment.

Major development components are as follows:</p> <p>1)Improvement of main runway, taxiway and apron(rehabilitation of deteriorated portion by means of overly during unoperational night time hours);</p> <p>2)Improvement of secondary runway(day-time pavement overly, Grades 1 and 2);</p> <p>3)Extension of the secondary runway(to meet the take-off distance of the short haul aircraft (from 1,750m to 2,050m) Grade 1 only);</p> <p>4)Renewal or upgrading of navigation facilities; and</p> <p>5)Installation of terminal equipment such as metal detector, etc.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| Subsequent Studies: | | |
| Studies on expansion, remodernization, reinforcement and rehabilitation of runway were undertaken. | | |
| 1) F/S on technic, economic, finance, environment | | |
| 2) Basic study on navigation aid facilities | | |
| 3) Final design | | |
| 4) Preparation of international tender document for construction | | |
| 5) Study on passenger terminal, cargo terminal, maintenance(on-going) | | |
| Finance: | | |
| Financial source will be procured during preparation of the study report. | | |
| Situation: | | |
| The project has been suspended after the completion of F/S. The country's GNP per capita rises to US\$2,620 in 1989, which prohibited official development assistance from DAC foreign governments such as Germany, Italy and France. | | |
| Project has been suspended since the completion of F/S in March 1990. The worst economic situation has virtually prevented the Government from seeking a new loan from the developed countries. | | |
| The following procurement works have been conducted in an extremely small scale: | | |
| 1) There was no duty-free shops inside the terminal building, and the Government has acquired these shop facilities in January 1991 through competitive tendering method. | | |
| 2) Direccion General de Infraestructura Aeronautica (DGIA) invited tenders for procurement of ground support equipment such as passenger and cargo handling equipment and airport support vehicles in February 1992. | | |
| (FY 1993 Overseas Survey) | | |
| The term of reference for the consultants has been made with the cooperation from UNDP and ICAO. | | |
| The government approved to allocate some of particular financing. Additionally, financial support from FONPLATA will be available. | | |
| It is very urgent to repair the access roads. | | |
| (FY 1994 Overseas Survey) | | |
| The work proposed by this F/S is consisted of 3 grades. Each of them was not implemented, however, F/S, detail design and preparation of tender documents, concerning with arrangement works of the main runway 06/24 for the year of 1994 (in 70% scale of grade 3), are ordered to a consultant. It is planned to commence the designing at the beginning of 1995 and the construction in January, 1996. But the financial resources are not disclosed. | | |
| (FY 1995 Domestic Survey) | | |
| For this project, it has been learnt that the Government is eagerly trying to materialize by means of invitation to the BOT tender and so on, however no news of success come out as yet. For the development of Punta del Este Airport, located at a tourist resort, Canadian cooperation has been decided by the group which promoted the privatization of Tronto Airport. It is also by means of BOT process. Under the present situation that there are no official foreign financial aid including Yen Credit, it will be inevitable to try to find private financing. | | |
| (FY 1996 Domestic Survey) | | |
| According to the information obtained in June 1996, SEA Technical SpA, the management body of Milano Airport, would undertake the modernization and expansion project of the Carrasco Airport based on M/P formulated with the UNDP fund. The project cost is expected to be US\$ 62mil.(US\$ 35mil.for the modernization of technical infrastructure, US\$ 27mil.for the expansion of a runway, a taxiway and an apron and US\$ 4mil.for installation of the navigation aid facilities). This expansion will result in the 89% increase of air cargoes by 2000 and 11.3% increase of passengers to 1.26 mil. Because nothing has been heard about the adoption of BOT scheme, it seems that various reasons prevented the Government from promoting it. | | |
| (FY 1997 Domestic Survey) | | |
| Modernization and Expansion Project will be funded 60% by IDB and 40% by the government of Uruguay. | | |

| 10. MAJOR PROPOSED PROJECT(S) | <p>The study proposed the reforestation of some 100,000 ha during five years, by planting eucalypti, pines, poplars and willows. Annual planting targets are as follows.</p> <p>1991 10,000 ha 1992 15,000 1993 20,000 1994 25,000 1995 30,000</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| Finance: World Bank loan | | |
| Detail: The newly elected President doubled the target of the National Reforestation Plan from 100,000 to 200,000ha. To response the recent increase of the Eucalyptus export to Europe, the Government of Uruguay tries to find new financial resources, such as bilateral assistance or private investment, other than the present World Bank loan. | | |
| (FY 1993 Overseas Survey) The reforested area during 1990 to 1992 was 18,000ha per annum in average and in 1993 it reached to 26,000ha. For the last four years the increase of the reforested area was remarkable. The capital investment for forestry has been considerably expanding and the export of high value added timber was started. | | |
| (FY 1994 Domestic Survey) The Government expects the expansion of foreign investment under the above-mentioned situation. | | |
| (FY 1994 Overseas Survey) Under the Five-Year Reforestation Plan covering 200,000ha, the reforestation project has been steadily promoted. The Government received the fund from the World Bank for the administration of this project. | | |
| (FY 1995 Domestic Survey) The concerned authority has been trying to introduce more foreign fund to promote the project further. The implementation of F/S for the conservation of the natural forest is under consideration. | | |
| (FY 1998 Domestic Survey) The total area of 120,000 ha was reforested during 1990 to 1994, according to year 1996 survey. Domestic companies have mainly conducted reforestation, while foreign company have also conducted reforestation (17,000 ha) in the afforestation promoting area. | | |
| (FY 1999 Overseas Survey) The total of 373,376ha was reforested during 1989 and 1998. Most of the reforestation have been done by domestic companies and foreign companies (in the last two years). | | |
| Effect: (FY 1998 Domestic Survey) Supply timber has been increased. The project for examination of forest products is planned to be started in 1998 with Japanese assistance, for the purpose of promoting forest industry based on the increasing timber products. | | |
| *Project-Type Technical Cooperation "Project for Examination of Forest Products" Nov.1996 preliminary Study Team dispatched 1998 Implementation consultation | | |

Description :

Subsequent Studies:

M/P review study is scheduled to be carried out.

Financial source: World Bank and Japan Import and Export Bank

Contents of study: Formulation of development strategy including a revision of JICA project.

Finance:

BOT scheme and investment from public sector (plan)

Situation:

(FY 1993 Overseas Survey)

Foreign fishing terminal should be reconsidered based on the expected number of vessels in and out from the terminal.

For Grain terminal, it was suggested to be implemented through out the private investment or joint venture according to the new Port's Policy.

After a new Port's Law approval in 1992, the most of the authorities' energy was devoted to increase the port efficiency with the private sector participation and internal reorganization rather than to develop new infrastructure.

(FY 1994 Overseas Survey)

The Government of Uruguay wishes to develop a new port with a deep draft along the Atlantic Coast, and sounded the possibility to get the technical transfer of concerning technologies to the Government of Japan.

(FY 1996 Overseas Survey)

Fishery terminal project is more promising than Grain terminal project. Because in Argentine, improvement of transport facility is in progress.

(FY 1999 Overseas Survey)

It seems that the review study on M/P was conducted.

Description :

(FY2007 Overseas Survey)

This project had been completed with the cooperation of CTI consultant mission at December, 2006. Several activities are continued afterward, and the each progresses are in different condition. DINAMA suggested to continue the activities, and therefore applied for new project that would be conducted in same region last year. DINAMA has been utilizing the experience and information gained by this project to national-wide activities.

(FY2007 Domestic Survey)

The water quality management capacity of Oriental Republic of Uruguay has been strengthened through the Survey. But in order to make it more effective of the Development Survey, it is necessary to conduct the Master Plan established for strengthening water quality management capacity, steadily. The Uruguay side has consciousness to conduct the Master Plan in independent-minded stance, but there is still necessity of external input, and there is a request for effective input of technical support by Japan. Specifically, technical support project about pollution source management is necessary. The objective of pollution source management is to strengthen the water quality management capacity of DINAMA and relevant agencies in Montevideo metropolitan area. The achievement is to strengthen the pollution source management capacity in Santa Lucia river basin, and to develop pollution source comprehensive GIS information system and water quality simulation model, as politic measure supporting tools.

Progress : RD mission has been dispatched.

(FY 2009 Domestic Survey)

Technical Cooperation Project "Santa Lucia River Pollution Management Project/ Water Quality Management Project"

(Implementing Agency)Ministry of Housing, Land Planning and the Environment, the National Environmental Directorate (DINAMA)

(Implementing Period)2008.4-2011.3

(Project Overview)1)Capacity building of the strategic part, 2)Enhancing pollution source management capacity and modular, 3)Enhancing environmental water quality monitoring modular, 4)Promoting spreading enlightenment, education, and citizens participation

(Project Objective)This project aims capacity building of the Santa Lucia River Pollution Management Project/ Water Quality Management Project.

(FY2012 Domestic Survey)

No information to be specifically mentioned.

(FY2012 Overseas Survey)

*One of the Technical Cooperation Projects has succeeded in improving some products which originated from the Project as mentioned in the document. Furthermore, as an important additional achievement for the Basin Area, large-scale researches on the contamination sources started to be undertaken.

*Meanwhile, within the framework of EU-funded Whole Uruguay Program (Programa Uruguay Integra), projects tackling with issues including water quality management and contamination management in the Basin Area were launched. Excellent results were achieved thanks to fund and efforts committed to the Project and long-term cooperation with stakeholder municipalities, which enabled an advancement in environmental issues relating to water.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Reasons of Cancellation:

The Project was cancelled as a result of the negotiations between the INP and the dockworkers union in that the improved cargo handling operations would cause unemployment.

(FY1994 Overseas Survey)

It already passes more than 15 years after completion of this M/P.

The project had been cancelled as the organization in charge had been privatized and changed, and without any support of the locals.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :**(1)Channel Stabilization Plan**

Because the M/P for the navigation financed by IDB was not progressed as expected, this study was unable to utilize its results. Therefore, F/S for the navigation project should be implemented after the completion of the IDB-financed M/P.

(2)Flood Mitigation Plan

The environmental issues have been widely discussed in Venezuela. Therefore, EIA shall be an integral part of F/S.

Detail:

It is likely that the government of Venezuela will request the Japanese government for the implementation of F/S for the Channel Stabilization Plan and the Flood Mitigation Plan after the completion of IDB-financed M/P because it is interested in the Apure River Navigation Project.

(FY 1994 Overseas Survey)

Because M/P for Orinoco Apure Plan is scheduled to be completed in June 1995, the government of Venezuela believes the implementation of the projects proposed by this M/P should be suspended by then. The construction of the waterway, a part of the proposed projects, was implemented with the own fund.

| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | -To formulate a Master Plan for integrated river improvement of the Orinoco River for vessel navigation. -To conduct the feasibility study on river improvement for the priority project identified in the Master Plan. -To transfer technology to the counterpart personnel. | | |
| 7. CONSULTANT(S) | Pacific Consultants International Pasco International Inc. | | |
| 8. STUDY PERIOD | Sep.1998 ~ Oct.2000 25month(s) ~ | | |
| 9. SITE OR AREA | M/P: The area at the downstream of Ciudad Guayan City surrounded by Rio Grande and Manamo Channel in Orinoco Delta (approx. 22,000km ²). F/S: The area is in the reach of Guarguapo-Barrancas-Ya-Ya located at the apex of the Orinoco delta where sandbanks and islands are formed and channels are divided due to the deposit of sediment from upstream of the Orinoco River. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>M/P and F/S: (In the M/P, the comprehensive study on river improvement including dredging aspect was conducted, and in the following F/S, it is evaluated and confirmed for the works identified in the M/P by utilizing the semi-dimensional hydraulic analysis. As the result, it is concluded that the structural measures of river improvement is not feasible.)</p> <p>(1) Structural Measures: It is technically feasible to minimize the periodic dredging requirement in the Rio Grande channel with the provision of structural measures according to the results of two dimensional hydraulic analysis. However, these structural measures are evaluated as economically and financially not viable due to the high construction cost.</p> <p>Moreover, as a result of the closure of Tortola channel, potential adverse environmental effects on the social environment and ecosystem due to stagnation of water body, sediment deposition in both upstream and down stream of the dike, disturbances on the waterway transportation and fisheries industry of local people are also evaluated as significant.</p> <p>Furthermore, as the Orinoco river is a huge river in terms of scale and discharge, unforeseen phenomena in long-term view such as river course changes and morphological variations due to the large-scale improvement measures could not be analyzed by presently available tools of hydraulic analysis and remained as unsolved problems. Therefore, it is risky to propose any structural measures without having considerably high benefit compared to the cost.</p> <p>Consequently, in all overall sense, structural measures to deepen the navigation channel in the Rio Grande are evaluated as not feasible.</p> <p>(2) Dredging Improvement Measures: The periodic maintenance dredging in the channel is evaluated as the only viable means to meet the navigation requirement from the overall viewpoints of technical, economic, financial and environmental aspects. In order to achieve efficient maintenance dredging and to ensure navigational safety, the following dredging improvements are recommended within the scope of work of this study.</p> <p>- Provision of RTK/GPS with precision location recording system and drag head positioning system, to locate precisely high spots and shallow reaches required to be dredged in the navigation channel (the feasibility of navigation route recording system: EIRR 493%, FIRR 61%).</p> <p>- Discharge of dredged material away from the channel by means of barge system introduced, to minimize return of disposed materials. As a result, the deterioration of water quality caused by the present method of agitation dredging would be reduced (the feasibility of barge and pusher boat: EIRR 53%, FIRR 18%).</p> | | |

Description :

(FY 2001 Domestic Survey)
 In order to susustain the maintenance dredging continuously in the future and to ensure the safe, efficient and reliable waterway transportation system in the Orinoco river, it is recommended to carry out the following. In response to this recommendation, INC has requested to Japanese Government to provide JICA technical cooperation (fiscal year of 2000).

1. Comprehensive Dredging Study:
 Implement an integrated dredging study including the executing methods, dredging system, dredging constituent etc., together with the following items.
 - 1) Review of institutional structure for maintenance dredging (Administrative Measures).
 - 2) Dredging system including dredging methods and techniques, dredge types etc. (Technical Measures).
2. Fluff Characteristics Analysis:
 Execute and integrated study to examine the physical properties of fluff in order to determine the most appropriate method of dredging operation at the outer channel as there were no studies previously made on fluff properties in Boca Grande. Moreover, investigate the reaches where fluff is easily deposited and the period when fluff deposition is high, for proper planning of maintenance dredging.
3. Establishment of a committee to study the private consignment of maintenance dredging activities under the planning, management and supervision of INC.
 Establishment of cooperative framework for organizations which manage either waterway or port in an integrated manner, to deal with future transport cargo volume and vessel traffic volume as well as promoting development of Orinoco River basin.

(FY 2004 Domestic survey)
 INC, actual implementing body for this project, showed interests to the proposed project and will continue its preparation for the request, says the source.

(FY 2005 Domestic Survey)
 No information to be specifically mentioned.

Description :

*Refer to "Coastal Protection and Port Improvement (M/P+F/S 1992)".

Results of the Additional Study:
 It suggests implementing the protection project covering the important facilities only, instead of the whole northern coast.

Detail:
 (FY 1994 Domestic Survey)
 It is unknown how the Government of the Cook Islands will implement the project.

(FY 1997 Domestic Survey)
 There is no plan for implementation of the project so far.

(FY 1997 Overseas Survey)
 A private consulting firm has constructed wave dissipating free flow breakwater named Coped Max as an experiment.
 After this, the government of Cook Islands has constructed above mentioned breakwater at the edge of the runway for the length of 100 m. The installation of the breakwater seems to be useful as the site had less damage from the hurricane compared to the site where there is no breakwater.

Description :

Utilization of the Study:

As to the pine plantation in Koroutari District, the stand density control diagram presented on this study has been utilized for forest planning.

As to Nukurna District, the results of this study have been utilized for forest planning.

Expansion for other districts has delayed due to a lack of basic data, personnel, and the fund.

(FY 1997 Overseas Survey)

The study was utilized for privatization of the Fiji Pine Ltd. in 1991.

Description :

Utilization of the Study:
(FY 1995 Overseas Survey)

The findings of the study have been utilized to prepare for the management guideline. And it is proposed to set up a resource management unit.

Effect:

Following the result of the study, Governments of Fiji and Tuvalu promoted the bottom line fishing method to fishermen who were taking the traditional fishing method, and gave them assistance.

The use of this fishing method contributes to the development of fisheries in both countries, by enabling the exports of long tail bream to Hawaii and U.S. mainland.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| (FY 1996 Overseas Survey) | | |
| (1)Vutuni Creek | | |
| No major progress has been made. Funding for the implementation seems to be the major problem at present as bulk of government resources has been directed at other areas. | | |
| (2)Vatuyaka | | |
| The scheme will involve connecting the borehole to the existing supply and extending the supply to include more consumers in the area. The project implementation will come after the completion of Vanua Levu project. | | |
| (3)Rabulu | | |
| The water source has been sold to a private company for the packaging of mineral water for export. | | |
| Situation: | | |
| (FY 1996 Overseas Survey) | | |
| Technical transfer was the major output from the project. The equipment and expertise learnt is being used at present for the groundwater development project, which is being implemented with funds from the French Government in Vanua Levu, the second of the two largest islands. Because the implementation of this project is considered urgent, it is given high priority, which is one of reasons for the delay of the proposed project. The Vanua Levu project will be undertaken for another year. A request to continue similar work elsewhere in Fiji was also submitted. Vanua Levu was identified as the next needy area. Southwest Viti Levu is also in similar category. | | |
| (FY 1997 Overseas Survey) | | |
| Many other areas also need similar studies. | | |
| (FY 1998 Domestic Survey) | | |
| Since Japanese grant aid assistance is not applied for Fiji, it is planned to implement the proposed projects with their own fund. It seems that other donors have not conducted subsequent studies. | | |
| Related projects: | | |
| (FY 1998 Domestic Survey) | | |
| This study is about water supply project for villages in the northern part of Viti-Lebu. M/P study on water supply in urban area is being conducted with their own fund. | | |
| Viti-Levu island Water Supply Project | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 1999 Domestic Survey) Fiji government has submitted the Implementation Program(I/P) to Japan in April, 1999. However, no reply has been made.</p> <p>(FY 2002 Domestic Survey) 1.Constraints :policy change- project's priority within the development plan has been shifted Ministry of Agriculture, Fisheries and Forests primarily focuses on drainage and agricultural development, being in charge of dredging work at the estuary region, became C/P of this project. Altogether, the Ministry has no experience of disaster prevention, and the proposed project by F/S was targeted for urban water control of Nadi city. Considering this, the Ministry seems to give lower priority. 2.The prospects: more than 5 years is needed for project implementation. At the end of the Study, Ministry of National Planning, City of Nadi, and Fiji Tourism Association were enthusiastic about its implementation. However, situations changed afterwards. In May, 2000, armed gunmen seized the Parliament, blaming the political superiority for indigenous Fijians. The administration which took office by the General elections of 2001, is currently under deliberation against a sentence to the effect that the formation of a Cabinet is unconstitutional. Political chaos continues. Accordingly, it is necessary to postpone its implementation pending a more stable political situation.</p> <p>(FY 2002 Overseas Survey) Constraint: lowering priority, scale of the project The higher priority of national budget had been on other development plans. It would take more than 5 years to implement the proposed projects.</p> <p>(FY 2003 Domestic Survey) When the development studies were completed, Ministry of National Planning, Nadi City, Fiji Travel Association were keen on implementation of the project. As a result of the general election held in May 1999, the prime minister of Indian decent took office for the first time in its history and the constitution was revised to permit representatives of Indian decent to occupy a half of the legislative seats and thus the political system turned to the advantage of Indian decent. Nadi City and Fiji Travel Association intended to positively promote the implementation of the project at the time when the bureaucratic organization settles in the new system after the general election. However, in May 2000, the congress was occupied by an armed group who advocates political precedence and the later established interim government was determined to be unconstitutional. Furthermore, the administration born by the general election in 2001 was also accused to be unconstitutional and the justice is on trial at the supreme court. Thus, the political system of Fiji is in a chaotic situation. Therefore, the implementation of the project needs stabilization of politics. On the other hand, the Ministry of Agriculture, Fisheries and Forests of Republic of Fiji, who basically places its nucleus on irrigation and agricultural development, became the agency in charge of the project because it was the implementation agency of dredging at estuaries. Thus, because the ministry has no experience in disaster prevention projects and the project proposed in the feasibility study is an urban-type water control project for Nadi City, it is probable that the priority of the project in the Ministry of Agriculture, Fisheries and Forests of Republic of Fiji has been lowered.</p> <p>(FY 2003 Overseas Survey) Constraint: The priority in the government policy shifted to education and health care. The project does not satisfy the needs because while the flood control policy has been mentioned in the study, the study lack proposal of measures against anti-drought measures, and thus it does not meet the country's needs.</p> <p>(FY 2004 Overseas Survey) It is difficult to realize the project as written due to flood and dry weather in the area. Though, study report has been helpful for other projects of the area.</p> <p>(FY 2008 Overseas Survey) Constraint: decline of priority, politics, economy and measures The government has intention to continue integrated approach of water resource management in the priority area(Nadi river basin) of the project. "Integrated Water Resource Management in Nadi River Basin" has been conducted as relevant study.(Objective : To improve flood preparedness and integrate land and water management plans of Nadi River Basin using an Integrated Flood Risk Management Approach) As more than 10 years have passed since the impact and survey of climate change, JICA is requested to review its survey results on flood control watershed management for four major rivers in Viti Levu.</p> | | |

| | Discontinued or Cancelled |

Description :

(FY 1999 Domestic Survey)

1. The Fiji Nautical Charts Nos. F52, F53, and F54 produced and their 200 printed copies each furnished to the Fiji Hydrographic Office as the results of this Project are providing the navigating vessels in the region with up-to-date hydrographic information thus to contributing their safer and more economical navigation. This situation is clearly proved by the fact from the amount of sale of these charts as follows (as of 28 Dec. 1999):

Chart F52: sold since May 1996. 200 copies have been sold. Out of stock and additional 250 copies are being printed in Fiji.

Chart F53: sold since May 1997. 137 copies have been sold.

Chart F54: sold since May 1998. 67 copies have been sold.

2. Following the recommendations reported by the Project, the requests for provision of the following equipment have been submitted by the Fiji Hydrographic Office, which are currently under consideration by JICA: (1) Co-ordinategraph and associated software; (2) Portable type narrow multi beam echo-sounder.

3. As for the organization and staffing of the Fiji Hydrographic Office, improvement thereof have been partially executed in line with the recommendations concerned.

(FY 2001 Domestic Survey)

1. Provision of equipments

The Provision of co-ordinategraph and associated software and portable type narrow multi beam echo-sounder was determined. These equipments were budgeted for the fiscal year 2001 by JICA, however, it has not been implemented yet because the resubmitted budget for the equipments was over the original budget.

2. Organization and staffing of the Fiji Hydrographic Office

One more senior hydrographer's post has been set up.

3. Situation of progress

Concerning the tidal current observation and forecast, a survey for collecting information and a project formation study were implemented in Dec. 2000 and Nov. 2001 by a grant from JTCA (Japan Transport Cooperation Association). The project is currently under consideration to be implemented as a technical assistance project. Based on the study results, the Fiji Hydrographic Office submitted a request for JICA experts dispatch in tidal current observation/forecast which is currently under consideration by the Japanese government.

4. Survey vessels

The Fiji Hydrographic Office is requesting the provision of survey vessels. They comments even used 20 ton vessel can be used for coastal hydrographical survey.

5. Survey equipments provided to the Fiji Hydrographic Office

The provided survey equipments in the study are working in good condition and utilized for hydrographic survey.

(FY 2002 Domestic Survey)

The Project of development of tidal observation/forecast, as follow-up cooperation of the project, will be required to accept as the wide-area project covering neighboring countries, therefore, the Govt. of Fiji appears to request for dispatch of experts and provision of equipment and facilities.

(FY 2002 Overseas Survey)

After this study, no further studies have been conducted. The hydrographic service in order to fulfill major proposed projects need assistance, but it has not been possible due to the political problems.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Utilization of Outputs:

(FY 1997 Overseas Survey)

The results of the study had been utilized for elaboration of National Development Plan (1979~1982, 1983~1986, 1987~1990)

Subsequent Studies:

Nov. - Dec. 1979 B/D

Oct.~Nov.1985 Fisheries Channel Survey

Consulting Company / Nippon koei

Finance:

Based on the findings of the study, as for the Fisherly Resourcers Development around the Btaritari Island, fishing training boat (1982), fishing mother boat (1984), expansion of refrigerating facilities in Becio Port (1988) were provided and the exploitation of the unutilized fishery resources is being prepared.

(1)Fishing Training Boat

Mar.21.1980 E/N 500 mil.yen fishing training boat

May.28.1982 E/N 500 mil.yen fishing training boat

May. 3.1983 E/N 200 mil.yen fishing training boat

*Contents of the project

Provision of 3 training boats.

(2)Fishing Mother Boat

Sep.26.1984 E/N 580 mil.yen fishing mother boat

(3)Fisheries Channel

Sep.30.1985 E/N 939 mil.yen channel development for fishing boats

Aug.26.1986 E/N189 mil.yen channel development for fishing boats

*Contents of the project

Construction of the Betio-Bairiki causeway and fisheries channel

Construction:1986~1987

(4) Extension of Refrigerating

Apr.27.1988 E/N 253 mil.yen expansion of refrigerating facilities

(5)Afterward

Nov.11.1988 E/N 130 mil.yen training of fishermen

Apr.30.1990 E/N 90 mil.yen (Outer Island Aquaculture Development)

May.14.1991 E/N 145 mil.yen (Outer Island Artisanal Fisheries Development)

Apr.10.1995 E/N 224 mil.yen (Fisheries Resources Development II)

Jun.26.1995 E/N 209 mil.yen (Fisheries Resources Development III)

Effect:

The Governments of both countries commenced to exploit the bonito resources using the fishing training boats provided by Japanese Grant Aid, and contribute to obtain the foreign currency by exporting the catches.

Situation:

(FY 1995 Overseas Survey)

As a result of the study a Pole and Line Fishing Company was established to exploit the wild bait fish resources.

(FY 1997 Overseas Survey)

Restoration work of vessels had been carried out in Jan~Mar.1996 financed by OECF. Three vessels provided are used not only for training but also for commercial fishing.

The fishing mother boat is currently used by the company TML for transshipment of fish for a foreign company.

The refrigerating facilities are used for storing fish. Evaluation of cold storage is necessary.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2001 Domestic Survey) New administration after the election in Oct. 2000 had decided to reduce 25% of governmental expenditure, and is implementing it. Japanese government has provided three large-economic scale of Palau.

(FY2001 Overseas Survey) The U.S. is to provide US\$ 412 million through the Compact of Free Association (COFA) but lasting by 2009.

(FY2003 Overseas Survey)

M/P:

1) Agriculture:

1-1. Projects in progress:

(i) Improvement of seedling providing facilities: The Ministry of Agriculture has launched this project with the department in charge relocated to the Nekeen Farm region and is implementing it continuously. However, priority projects and fund allocation is being reviewed inside the government in light of the prospective decrease in revenues. The transfer of facilities to the Nekken Farm is expected to be completed in the middle of 2004. (ii) Extermination of fruit flies: Financing and other supports have been implemented from USDA and other US organizations for the sake of extermination measures against fruit flies and mealy bugs. In October of last year, experts were dispatched from USDA to provide training on extermination of mealy bugs. This project is expected to be continued until the extermination is completed. (iii) Strengthening of quarantine: The Palauan Congress (OEK) moved a bill to permit import of vegetables and fruits from Japan, Philippine and other countries with its quarantine system modified. At present, Palau permits import of vegetables and fruits from the United States and its territory. The bill is expected to pass at the beginning or in the middle of 2004.

1-2. Delayed projects

(i) Construction of sanitary slaughter house: It is inevitable that the current economic situation and the prospective shortage of local budgets in future (difficulties in fund raising) will hinder the progress of the project. It is expected that this program will be implemented in FY2005 at earliest as a result of the review of expenditures and priorities in fund allocation by the government and among ministries. M/P correspondence: PNCC service improvement program, radio antenna improvement and maritime safety facilities Present condition: delayed. Fund shortage resulted in the delay of the project. While PNCC intends to resume the aforementioned project, planned execution periods have not been determined at this point.

2) Tourism: Improvement of tourist bases in ARUKORON, Peleliu, Kayangel (delayed): Three tourist base improvement projects have been delayed due to the following reasons: 1) While the development needs vast expense, the financial resource of the government is insufficient. 2) The transportation and the access to those regions are extremely difficult. 3) ARUKORON remains developing with the "Compact Road" under construction. These regions are supposed to need the largest time for development in five to ten years from now on.

3) Land utilization: integrated basin management (delayed): Due to lack of revenue source, financing from donors is required. Under the current economic situation, securing of revenue source within 4-8 years from now on is difficult.

4) Sewage disposal: project for improving sanitary situation of local regions (in progress): A new sewage disposal system that purifies sewage by providing mechanical treatment will be constructed by use of aids from US organizations. The project is expected to be completed at the beginning of 2004.

5) Society: integration of elementary schools in Babeldaob Island (delayed): While Aimeliik and Ngatpang reorganized and integrated schools in FY2000, the construction of compact roads is retarding the integration of the schools. The integration is expected to be resumed after the construction of the compact roads is completed in 2006 - 2007.

6) Improvement of roads and highways (in progress): Inspection teams from Japan visited the sites in August and October and implemented an assessment and various studies on the road condition.

7) Airport: extension of international airport runways (in progress): Although the runway extension project has not been incorporated into the development program of recent years, a loan from China will be borrowed to allocate the fund to pavement of the runways and the project for rehabilitation of the mains with the objective of improving the safety within the runway. A public tender for design proposals will be invited in October with the contract conclusion expected to be announced around the beginning of December 2003. The construction is expected to be implemented around the beginning of 2004.

8) Harbor: extension of Malakal Port : (1)The grant aid was requested to the Japanese government in 2002; (2)Awaiting a response from the Ministry of Foreign Affairs of Japan

9) Urban development: Marine Center Development Project :The application was rejected by the Japanese government (refer to "Embassy of Japan-Koror", Diplomatic Note No.116/03 dated July11, 2003). Predictable problems in maintenance and management on the side of Palau were indicated.

10) Fishery: (1) Construction of small-scale fish processing plants: Procurement of additional funds is difficult. The schedule is expected to be delayed for 3 - 5 years. (2) Training of repair technology of small fishing boats: Procurement of additional funds is difficult. Fund shortage is expected to result in delay for 4 - 5 years.

F/S:

1) Projects in progress

(1) Solid waste disposal: construction of final disposal sites in Koror and Babeldaob: In November 2003, JICA's experts and a representative of Japanese Embassy visited a final disposal site in Aimeliik State. The project is waiting for the result of field analysis survey implemented by JICA and the Ministry of Foreign Affairs. (2) Tourism: Peleliu Island Tourism Development Project: Awaiting the result of the field analysis survey.

(FY 2004 Overseas Survey)

1. F/S for Palau market: 1) Content: Research and review on consumer demands for sustainability of the target area. 2) Period: July 2004

2. New Palau National Museum: 1) Funding request: Grant Aid (China) October 2001 Amount: 2.6 million USD. 2) Content: Improvement of entrance road and parking, design and construction of new Palau National Museum including other improvements.

3. Airport-Ngerikiil Connecting Road (improvement of connecting road including missing link) 1) Funding request: Grant Aid (China) Amount: 2.6 million USD. 2) Contents: Design and construction of all weather bidirectional one side two lane road with the same design standard and quality of compact road including paving, hill excavation, dam construction, pavement display, road sign, irrigation of crossing and sidewalks, guardrail construction along steep hill, and others.

4. Palau International Airport Navigational Aid Facilities and Runway Pavement Improvement (Ocerlay of Runway at Palau International Airport) 1) Funding request: ICBC June 2004 Amount June 2004. 2) Content: Project to improve existing runway by paving appropriate amount of asphalt on the surface of runway and conducting F/S for the feasibility of introducing airport navigational aid facilities to improve safety of the aircraft.

(FY 2005 Domestic Survey)(FY 2005 Overseas Survey)

No information to be specifically mentioned.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons for delay or stoppage:

The project is considered as lower priority than the others (schools and hospital) by the Japanese Ministry of Foreign Affairs. The project is unlikely to be implemented in the foreseeable future.

(FY 1995 Overseas Survey)

Because the development plans on communications network was changed and this project is considered not to be suitable for the PNG environment, it is unlikely that this project will be implemented.

(FY 1996 Overseas Survey)

It is unlikely that this project will be implemented.

(FY 1997 Overseas Survey)

It is unlikely that this project will be implemented.

(FY 1998 Domestic Survey)

It is unlikely that the request will be submitted for the time being. However, since the situation that there are no telecommunication facilities has not been improved, this project is not cancelled.

(FY 1999 Overseas Survey)

Technological innovation in telecommunication in 1990's has made the ten-year old project concept obsolete and irrelevant. Therefore, the project is virtually cancelled.

Description :

The government is keen to develop the Transport Infrastructure as a means of Economic and Social Development.
 An Australian consulting company conducted technical survey and B/D on crossing road construction between Bereina ~ Mararaua, from Dec.1980 to Sep.1982. As a consequence of the studies above mentioned PNG Government had requested a D/D study to Japanese Government, and this study was carried out.

Proposed Projects:
 Bereina-Malalaua Construction of 81km-long road and nine bridges

Subsequent Study:
 Feb.1990 D/D (JICA)
 Aug.1994 The contract for E/S was signed.
 (Consulting firm: Nippon Koei Co.,Ltd)

Finance:
 19 Mar. 1991 L/A 4,691 mil.Yen (Trans-island Highway Project (I))
 19 Mar. 1991 L/A 5,461 mil.Yen (Trans-island Highway Project (II))

*Contents:Bereina-Malalaua(1)road construction (81km)
 (2)bridge construction (9 bridges)
 (3)consulting service

Construction Trader: COVEC (China)
 Consultant: Nippon Koei

Construction:
 Dec.1994 Scheduled to start bidding
 May.1995 Commenced (scheduled to be completed in May, 2000).
 (FY 1999 Overseas Survey)
 Lot 1 of the highway was completed in 1999. It gives the region socio-economic benefits.
 Construction of the Lot 2 is on schedule.
 (FY 2000 Domestic Survey)
 Lot 2 of the highway was completed in May 2000.

Impact:
 (FY 2000 Domestic Survey)
 Due to the completion of the highway, it is expected to ensure the stability of the transportation service between the Capital city, Port Moresby and the western seaside area. The completed highway is the part of the traverse road of PNG, furthermore, in case of extending this highway to the north, the comprehensive road network throughout the mainland of PNG will be completed.

Maintenance & Operation:
 (FY 1996 Domestic Survey)
 DOW is to be in charge of M&O.

Description:
 (FY 1996 Overseas Survey)
 Awaiting further studies to connect from Malalaua to Lea. The connecting Link will enable a comprehensive road network throughout the mainland of Papua New Guinea.
 Feasibility studies and design funds are sought.
 (FY 2000 Domestic Survey)
 PNG government expects JICA to conduct Feasibility Studies of the comprehensive road network throughout the mainland of PNG.

Description :

Subsequent Studies:
 Aug.~Nov.1995 B/D
 Jan.1996 E/N 60 mil.yen (Upgrading of New Rabaul Airport D/D)
 Feb.~Sep.1996 D/D

Finance:
 1996 E/N 2,537 mil.yen (Upgrading of New Rabaul Airport)
 (due to the volcanic eruption that devastated Rabaul in 1994)

Construction:
 Nov.15 1996~Mar.15 1998
 Construction Trader:Fujita Kogyo Consultant:Nippon Koei

Components:
 Runway extension and upgrading to cater for F28 jetliner.

(FY 1997 Domestic Survey)
 A runway started its operation in Sep.1997. 4 flights of F28-4000 have entered service. There is no schedule for further rehabilitation so far.

(FY 1999 Overseas Survey)
 The airport started in full operation in March 1998.

Effects/Impacts:
 (FY 1999 Overseas Survey)
 New Rabaul (Tokua) Airport substitutes the function of old Rabaul Airport which was abandoned in 1994 due to volcanic eruption disaster. The project is significantly contributing to rehabilitation and revitalization process of Rabaul Region.

Remaining Projects:
 (FY 1997 Overseas Survey)
 Phase 2 (design for airbus standard), Phase 3 (international B747 standard) have not been realized because of the lack of direction from Dept. of National Planning & Implementation. Government policy direction is required. Revision and update of M/P is necessary also.

(FY 1998 Domestic Survey)
 F/S initially includes the construction of a substitute airport for the purpose of avoiding the risk of damage by volcanic eruption. However, Rabaul Airport was damaged by the volcanic eruption occurred in Sep. 1994. Therefore, New Rabaul (Tokua) Airport Development Project had been implemented with a grant aid assistance from Japan from Aug. 1995 to March 1998.
 Old town of Rabaul is still buried in the volcanic ashes and the state government (East New Britain) seems to give up rehabilitating this old town of Rabaul. Since it takes further time to rehabilitate this area although the transfer of the airport has completed, it is not necessary for the time being to develop the airport for international use.

| | PRESENT COUNTERPART AGENCY | National Capital District Water & Sewerage Ltd. (EDA RANU) | |
| 6. OBJECTIVES OF THE STUDY | 1)To formulate a M/P for the target year 2015 for improving wastewater management and upgrading the sanitary and environmental conditions of Port Moresby with the view of reviewing existing plans. 2)To conduct a F/S on priority project(s) selected from M/P. 3)To transfer technology to the C/P. | | |
| 7. CONSULTANT(S) | Tokyo Engineering Consultants Co., Ltd. Nippon Jogesuido Sekkei Co., Ltd. | | |
| 8. STUDY PERIOD | Mar.1997 ~ May.1998 14month(s) ~ | | |
| 9. SITE OR AREA | <M/P> The study area (coastal and inland areas) is 15,000ha based on the land use plan in 2015. <F/S> The study area is 5,600ha given priority mainly due to the degradation of the water quality along the coast. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <M/P> (Phase 1~4 below) The study area is geographically divided into two catchment areas, viz., coastal and inland. The inland sewerage system of the 3 existing zones has to be upgraded and improved to meet the increased wastewater volume. The existing smaller catchments along the coastal areas will be incorporated into two zones. The collected sewage from the two zones will pass through a primary treatment process before discharge through an outfall into the lagoon. <F/S>(Phase 1~2 below) As a result of the study on the M/P, the F/S of the Coastal Region was given priority mainly due to the degradation of the water quality along the coast. The sewerage collected from the Paga Point Zone will be successively pumped (8 stations) towards Paga Pint STP intercepting locally gravitated load. Similarly, the sewerage collected from the Kila Kila Zone will be successively pumped towards the Kila Kila STP. Phase 1 (2000~2002): 1 sewage treatment plant (STP) at Kila Kila Zone, 11 pumping stations, Trunk sewer & force main in Coastal Area. Phase 2 (2003~2005): 1 STP at Paga Point Zone, 7 new PS and 6 improved PS, Trunk sewer & force main in Eastern Coastal Area. Phase 3 (2006~2010): Improvement of 3 STP in Inland Area, Improvement of 1 PS, Extension of trunk sewer in Inland Area. Phase 4 (2011~2015): 3 STP, 8 PS, Extension of sewers in Inland and Coastal Areas. | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 1999 Domestic Survey) EDA RANU started the operation of both the water supply and sewerage systems for the NCD on 1 Nov. 1996. Investment fund is assumed available at an interest rate of 2.7% annually payable in thirty years (with ten years grace period). The depreciation is calculated using the straight-line method (no salvage value). The life of machine and electric equipment are assumed at fifteen years whilst the civil works are assumed at fifty years. The FIRR of the investment plan for the FS period is 6.21% until 2015 and eventually improves thereafter. The cause of the improved FIRR is the change of the sewerage charge systems based on water consumption and control of O/M cost within affordable level. If the condition mentioned earlier are met, the proposed investment of the F/S will be financially feasible and desirable. Therefore, Government of Papua New Guinea has requested Japan's grant aid for implementing the projects for the area along the coast. However, the projects have not yet realized.</p> <p>(FY 1999 Overseas Survey) EDA RANU, through PNG Government, is seeking financial assistance for the project from the Government of Japan. As GOJ's negative response to this request for a grant aid, EDA RANU is considering to submit ODA loan.</p> <p>(FY 2000 Overseas Survey) Government of Papua New Guinea has requested Japan's grant aid for implementing the projects for the area along the coast. However, as the negative response to this request for grant aid, they are preparing the ODA loan application.</p> <p>(FY 2002 Overseas Survey) Subsequent Study: Sewerage System Development in Port Moresby (F/S) by JETRO (Itochu Copr. & NJS Consultants.) Contents: Follow up study for the changes of socio-economic conditions in PNG such as depreciation of the local currency, rapid deterioration of the living environment etc. have been taken into account after the JICA's Study. To identify and screen candidate areas/ zones and development F/S toward and application of project loans for the JBIC. Period: Oct. 2002- Jan. 2003 Major proposed projects: Priority 1: Paga Point STP & Trunk sewer, Ocean outfall Priority 2: Kilakila STP & Trunk sewer, Ocean outfall Implementation Schedule Pre-construction stage: mid 2004 - mid 2006 Construction: Start late 2006 Target completion: 2010 (all facilities)</p> <p>(FY 2003 Domestic Survey) Condition of request for funds: Requested to: JBIC (yen loan) Time of request: the request was made in 2002, which has been under coordination and consultation with JBIC .Details of request: (Amount) approximately 28 billion yen (Details) sewage treatment plant, relay pump, sewer Condition of request realization: raise of the priority is groped for on the side of Papua New Guinea</p> <p>(FY 2003 Overseas Survey) Although implementation of the priority project is progressing at a pace slower than the schedule due to delay in fund raising, the procedure for land acquisition started in November 2003 in regions of the project sites.</p> | | |

Description :

(FY 2002 Domestic Survey)

The Study was consist of 2 phases as follows commenced from March 2000 in Japan and was completed in February 2002.

Phase-1: Investigation of Groundwater and Formulation of Water Supply Plan(M/P)

1)Work in PNG(1): Formulation of Water Supply Plan and groundwater development including physical investigation and trial digging.

Phase-2: Improvement plan of Water Supply System was a pilot project

1) Work in PNG (2): Pilot Project

2) Analysis work in Japan (1): Preparation for Draft Final Report

3) Work in PNG (3): Explanation and Discussion on Draft Final Report, Implementation of the Seminar for Technology Transfer, and Evaluation for Pilot Project.

4) Analysis work in Japan (2): Completion of Final Report.

The M/P, Phase-1 for Water Supply Plan was completed at 2 provincial towns and 6 district towns on September 2000, and the Pilot Project, Phase-2 involved a new concept, with 3 particular aspects.

1) Experimental and trial studies of District Water Supply at Bereina, Kwikila and Mutzing consisting of construction and rehabilitation of existing water supply facilities and operation, management and maintenance by the PNG Waterboard.

2) The trial studies of a Water Vending Unit system supplying clean drinking water for lower income groups on Daru Island as part of the Provincial Town Water Supply.

3) The involvement and participation of villagers in a water supply project as part of the Rural Water Supply Project.

The pilot project, consist of construction and restoration of the water supply facilities, were successfully implemented from Dec.2000 to July,2007 and implemented evaluation and monitoring management/maintenance management. The project was handed over to the counterpart, regarding PNG Japanese ambassador and head of PNG-JICA in order to dependent management and maintenance by PNG Waterboard and villagers. This made it clear that several issues such as community-based organization, residents' willingness to pay for water, establishment of capable management of water supply services and subsidy from Provincial Government were exist in current management system. The Study Team provided coordination and facilitation to seek solution with managerial and financial viewpoint including organization and institutional reinforcement. The Study Team conducted the Seminars for Technology Transfer introducing the results of the Study.

(FY 2005 Domestic Survey)

There is no project proposed in the study, since the restoration and construction of water facilities were implemented as pilot projects.

(FY 2005 Overseas Survey)

Subsequent study: The Study on Ground Water Development for Water Supply System in Papua New Guinea

Funding:

Funding party: Yen Grant Aid Cooperation

Amount: 435.633 million JPY

Content: Implementation of water supply in 3 regions; Berenia, Kwikila, and Mutzing.

Design/Construction progress: 100% (to be completed in December 2002)

Status: Great efforts were put to solve the problem that many system in the pilot projects in Bereina, Kwikila and Mutzing have water leaking. The financial aid has not been provided as financial aid by MOA, local government, and LLG are not effective. PNG Water Utilisation Committee has helped the management cost of these 3 centres.

Technical cooperation:

Training: project related water supply development training (2000, 2 personnel)

Dispatch of experts: (1) Water supply master planning and design, (2)Ground water investigation and development, (3) Environmental and socio-economic analysis, (4) Finance, legal, and institution

(FY 2006 Domestic Survey)

At the World Water Forum of last year, implementing agencies explained that there was progress regarding self-reliant water projects which provincial governments and inhabitants were involved in and 3 types of water supply for rural cities (1. solar power, 2. commercial power, 3. diesel power generator). Also, the implementing agencies indicated that a follow-up study should verify outcome of participatory assistance for environmental reform in Pinaturi.

(FY 2007 Domestic Survey)

The subsequent study related to (1) water supply improvement for rural city residents by implementing projects in 3 object sites which are proposed at development study, (2) improvement of follow-up for 4 sites in which pilot projects were implemented, (3) construction of sustainable maintenance management system by collecting water charge, and etc. These are related to improvement of pilot project implemented at the development study and of water supply in new sites in which project has not yet launched.

| Description : | | |
| <p>In this study, a lot of national and regional level strategies and alternative plans for the fish marketing system improvement were proposed. In the national level, organization improvement plan for the effective management of fish marketing system was presented, and in the regional level, the whole country was divided into three types (Type 1 Honiara economic area, Type 2 regional promotion zone, Type 3 isolated islands promotion zone) depending on 1 the natural, geographic social and economic circumstances and infrastructure installation, 2 fish production, fish marketing, inter-islands and inside island transportation structure, 3 future potential. And out of each types, most feasible and effective areas were selected as a model area.</p> <p>The reasons for realizing the proposed projects are as follows: 1)Big socio-economic impacts are expected by the improvement of environments not only for products but consumers; 2)Promotion of the fishery port development as for the basepoint of the widespread commercial area; and Because there has been no proper fish market in the studied area, the government has given top priority to this project.</p> <p>(1)Honiara Central Market Improvement 1.Unloading Facility Subsequent Studies: Oct.~Nov. 1993 B/D Finance: Jan.1994 E/N 248 mil.yen (Honiara Fish Market Improvement Plan) *Components: Improvement of Fish Market to promote coastal fishery. Unloading pier improvement for the 1st stage. Construction: May.1994~Mar.1995 Pier and unloading facilities completed. Contractor/Toyo Construction</p> <p>2.On-shore facilities (Market hall, ice manufacturing, freezing facilities) Subsequent Study: Jun.1995 B/D Finance: Dec. 1995 E/N 785 mil.yen (Honiara Central Market Improvement Plan) Construction: May.1996~Mar.15.1997 (completed) Contractor/Toyo Construction and CRC Management & Operation: Honiara town council will take over the management of the market facilities.</p> <p>(2)Remaining Projects (FY 1996 Overseas Survey) While the project implementation has been yet decided because new proposals have come up, the Japanese government has shown keen interest in financing future fisheries development projects. (FY 1997 Overseas Survey) No action has been taken to materialize remaining projects (Model Zone 2, 3, 4)</p> | | |

Description :

(FY 1998 Domestic Survey)

It is difficult to implement the project with loan of Japan since FIRR is -4.2%. Financial assistance from other countries is examined.

(FY 1999 Domestic Survey)

The planned facilities were cut down to "Public Sewer Pipe and Drain Facilities and Cleaning Equipment" excluding construction of sewage facilities in order to apply the Japan's Grant Aid Cooperation Project, and the preparation of request has been on going.

Project Impact: Improving river water quality at the metropolitan area and reducing flood damage by intercepting sewerage and releasing at downstream of rivers.

(FY 2007 Domestic Survey)

Subsequent study: the Study on the Development Plan for Sewerage System and Sewage Treatment Plant for Greater Tirana in the Republic of Albania.(ALB/S 201/06)

Implementing period: July 2005 - October 2006

Implementing institutions: General Directorate of Water Supply and Sewerage (Ministry of Public Works, Transport & Telecommunications), JICA

Funding:

Funding body: JICA (development study, S/W concluded: 15 February 2005)

Objective:

The objectives of the Study are:

1) To prepare a M/P for improving the sewerage system for Greater Tirana by reconsidering "Greater Tirana Sewerage System Maintenance Plan" refunding "Strategic Plan for Greater Tirana (2002)"; up-stream plan, and other sewerage system plan.

2) To conduct a F/S for priority project(s) identified in the M/P

3) To transfer technology to the Albanian counterpart personnel

MAJOR PROPOSED PROJECT(S) | <p>Following projects are selected and recommended as for the projects with priority for sake of improvement of the urban wasted material treatment of the city of Sofiya :</p> <ol style="list-style-type: none"> 1)Improve collection of waste (collection service in whole area) 2)Construction of final waste disposal in Katina 3)Promote the recycle of wasted materials 4)Establish cleaning corporations <p>The Master Plan has recommended the introduction of incinerator as for long-term plan.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| <p>(1)Improvement of waste collection (proposed project 1) (FY 1998 Overseas Survey) Services of waste collection in four regions (Lulin, Vitosha, Ovcha Kupel, and Triaditsa) were given by a competition at a concession. Forthcoming is a concession to maintain the cleanness in the rest 20 regions. (FY 2000 Domestic Survey) No information.</p> | | |
| <p>(2)Recycle of wasted materials (proposed project 3) (FY 1998 Overseas Survey) This project is an element of the development of the National Strategy of the recycling. The examination of the quantity and morphological composition of the solid wastes was conducted. (FY 2000 Domestic Survey) No information.</p> | | |
| <p>(3)Establishment of cleaning corporation (proposed project 4) (FY 1998 Overseas Survey) A municipal company "cleanness-Sofia" Jsc. was established. Impact: (FY 2000 Domestic Survey) Decrease the personnel expense and the effective use of facilities Strengthen of the financial basis for the waste collection service by increasing charge</p> | | |
| <p>(4)Construction of final waste disposal (proposed project 2) The reasons for the delay or the stoppage: The project is suspended because the inhabitants of surrounding area and the concerned authorities have not given the consent to the construction of final waste disposal in Katina. (FY 1997 Domestic Survey) The site of waste disposal plant has not been determined yet. (FY 1997 Overseas Survey) Social reason and administrative reason. (FY 1996 Domestic Survey) An alternative site must be determined. However, no possible site has been named. (FY 1996 Overseas Survey) The counterpart has an intention to implement a project for a thermal method (combustion of waste) for making solid waste harmless, which was proposed in this study. Also, as new projects, the closing of solid waste disposal site in Sophia with the minimum environment risk, the elimination of biogas and the total recultivation of the land have been proposed. (FY 1997 Domestic Survey) At present, waste is disposed in Rudinata, which is one of alternative sites for waste disposal plant. (FY 1998 Overseas Survey) It was planned that parts of the two waste disposal in Dolni Bogrov would be gathered in one body. Preliminary study on the technology for sanitation and recultivation of the solid waste disposal will be conducted in 1999~2000. Regarding the project implementation, the request for finance will be submitted after the decision of the expert council on the environmental impact evaluation (March 1999). (FY 1999 Overseas Survey) The provisional cost to implement the development of Dolni Bogrov landfill is 25 mil. Lv. and Bulgarian side is looking for investment.</p> | | |
| <p>Related project: (FY 1998 Overseas Survey) Regarding the conceptions and design of the regional management of the solid waste (transfer station, separation of the useful components, etc.), the request for financial assistance was submitted to the EU.</p> | | |

Description :

(FY 1998 Domestic Study)

This study proposed that BDZ should conduct accounting separation as soon as possible, shift to organizational separation (at the latest by 2005), prepare for institutional separation, and make efforts to reduce their staff from current 51,000 to 23,000.

The government of Bulgaria was recommended to have financial responsibility for the maintenance and development of railway infrastructure from the moment of open access; clarify road user charge and equilibrate the burden between railways and roads; and make efforts to make the BDZ' passenger service financially independent.

The government of Bulgaria is making efforts to restructure and modernize public enterprises, especially BDZ, in order to correspond to transition into market economy and joining into EU. Affiliated organizations of BDZ, a concrete sleeper factory, a signal and communication factory, and an institute of railway technology are under privatization.

(FY 2003 Overseas Study)

Subsequent Study: Rationalization of railroads transportation networks and management, establishment of POC contract and research for marketing improvement.

Funding amount: USD 200,000

Objective: 1) Rationalization of BDZ network and operation 2) Establishment of PCO contracts 3) Strengthening of the commercial and marketing capacity of BDZ

Beneficiary of the project: BDZ

Implemented project: Turkey/Greece (Plovdir-Dimitrovgrad-Svilengrad) Cross border railway line electrification and 160km/h operating speed upgrade project

Implementing period: October, 2004 . June, 2009

Beneficiaries: State railway infrastructure company

Objective: 1) Improvement of railway operating speed, 2) Improvement of efficiency and quality of transportation service, 3) Improvement of safety and environment.

Contents: Improvement of railway function between Plovdir-Dimitrovgrad-Svilengrad (Turkey and Greece cross border line) and upgrade the standard operating speed to 160km/h by electrification and axle load will be improved to 22.5 tons. There is a consideration for further upgrading operating speed in the future. There will be an extension of the railway in five zones.

Implemented project: Technical cooperation for improvement of function on Vidin-Mezdra railway line.

Implementing period: January, 2005 . January, 2007

Beneficiaries: State railway infrastructure company

Objective: Provide technical cooperation needed to establish construction, regulation and procedure of railway transportation infrastructure within the EU policy regulations. Preparation of the document for bidding procedure and analyze alternative procedures for the railway along with Vidin-Sofia-Kulata. This alternative proposal will specify the location and method of Vidin-Mezdra railway construction.

(FY2007 Domestic Survey)

No information to be specifically mentioned.

(FY2007 Overseas Survey)

Project aiming to improve travelling time, reliability, cost efficiency and support service by increasing transportation volume of BDZ, in which the EU funding was utilized. This project corresponds to transportation management project proposed in the mentioned study.

Description :

(FY 1998 Domestic Survey)

1. Economic Situation and Aid Type

Economic situation is deteriorating further in 1996. The monthly rate of increase in consumer price leaped to 23.3% in July 1996 from 2.4% in April 1996 because of a hike in fuel price of 17-20% in a month due to the depreciation of BGN to USD. On the first of June, the value added tax increased from 18 % to 22% and power and heating prices were raised in line with arrangements with international financial institutions. The government introduced an import tax of 5% and raised excise tax for tobacco and alcohol to increase revenue. According to a report of the National Statistical Institute (NSI), the annual inflation rate reached 311% in 1996. But, inflation has been accelerated more and more after that, and the monthly inflation rate jumped to 43.8% in January 1997 and 243% in February 1997, which is the highest inflation rate after the transition into market economy of Bulgaria.

After the formation of a new cabinet, economic situation is rather stable, but economic situation in the future depends on policies taken by a new government in the future and the establishment of a currency board of IMF. With measures for the stabilization of exchange rates and the adoption of the Currency Board Arrangement (CBA), the inflation rate is expected to decline to monthly rates below 2% in a month at the end of 1997.

The lev, which is the currency of Bulgaria, is losing value for dollar rapidly, reflecting the extensive and unstable financial situation of Bulgaria. 1 dollar was traded with around 156 levs at the end of July 1996, but the exchange rate reached 500 levs/USD in December 11. It depreciated to 3,000 levs/USD in the middle of February 1997 and appreciated to 1,500 levs/USD in the middle of March 1997.

Judging from such economic situation, it seems that it is very difficult to implement the project with loan and grant aid is the only way for the implementation. Yet, Bulgaria is not a target country for grant aid now. It meets sufficient conditions for target countries for grant aid, but it can become a target country for grant aid if a category for DAC countries changes from the perspective of economic situation stated above.

2. Trend of the Implementation of the Project

For these backgrounds, the Ministry of Agriculture and Food Industry of Bulgaria strongly requests to implement the project as a grant aid project and announced to a mayor of Nova Zagora in a pilot district that it would cooperate actively for the implementation of the project.

Considering the economic crisis of Bulgaria, the embassy of Japan in Bulgaria will examine the implementation as general grant aid if they request grant aid.

For this, it seems that the Ministry of Agriculture and Food Industry immediately makes a request for grant aid for this project and starts preparing for bringing it to the embassy of Japan.

Progress situation of the proposed project:

(FY 2001 Overseas Survey)

Agricultural extension centers were established in the area. These centers give advice to farmers at free of charge and assist them with the preparation of business plans and their applications to different programs.

Request situation:

(FY 2001 Overseas Survey)

At present, there have been no requests made for a grant aid project.

(FY 2003 Overseas Study)

Japanese technical cooperation:

1) Acceptance of trainees: 1 person

2) Dispatch of experts: 2 persons (Oct. 21, 2002-Dec. 6, 2002)

(FY 2007 Domestic and Overseas Survey)

No information to be specifically mentioned.

Description :
Subsequent Study:
(FY 2003 Domestic Survey)
Detailed design for the construction of waste water treatment plants for the three priority towns (Pazardjik, Dimitrovgrad, Stara Zagora) was implemented.

Funding:
(FY 1999 Domestic Survey)(FY 1999 Overseas Survey)
Financial assistance for the implementation of the first priority towns of Stara Zagora, Haskovo, Dimitrovgrad and Pazardjik was requested to EU in May 1999.
Stara Zagora, Haskovo, Dimitrovgrad: Financial assistance was promised.
Pazardjik : Financial assistance was postponed.
(FY 2001 Domestic Survey)
Stara Zagora, Dimitrovgrad: Joint finance of EIB (concluded in 2000)
Pazardjik: Finance of ISPA
(FY 2001 Overseas Survey)
1) Stara Zagora: Instrument for Structural Pre Association (ISPA) 75% (17,890,208 EUR), European Investment Bank 18% (4,293,360 EUR), National budget 7% (1,669,640 EUR). Total: 23,853,208 EUR.
2) Haskovo: European Investment Bank 100%, Total: 18,013,494 EUR.
3) Dimitrovgrad: ISPA 75% (14,659,558 EUR), European Investment Bank 18% (3,556,562 EUR), National budget 7% (1,330,360 EUR) . Total: 19,545,480 EUR
4) Pazardjik: ISPA 65% (12,400,000EUR), National budget 35% (6,700,000 EUR), Total 19,100,000 EUR

Construction:
(FY 2001 Domestic Survey)
Stara Zagora, Dimitrovgrad: D/D and T/D were completed and to be commenced construction from early 2002.
Pazardjik: D/D and T/D were completed and to be bidding from early 2002.
(FY 2001 Overseas Survey)
1) Stara Zagora: 2002 - 2005. The tender of full engineering of the WWTP will be held in 2002. Construction is expected to start in the same year.
2) Haskovo: 2002 - 2005. The tender ful engineering of the WWTP will be held in 2002. Construction is expected to start in the same year.
3) Dimitrovgrad: 2002 - 2005. The tender of full engineering of the WWTP will be held in 2002. Construction is expected to start in the same year.
4) Pazardjik: 2002 - 2005.
(FY 2003 Domestic Survey)(FY 1999 Overseas Survey)
Bidding for the construction for Dimitrovgrad City and Stara Zagora City were completed.

Status of Utilization:
(FY 1999 Domestic and Overseas Survey)
* The recommendations by the study were taken into account in the formulation of new Water Act. The new Water Act was adopted by the parliament in July 1999 which will be implemented from January 2000.
* National monitoring plan is now under formulation and the proposed study is been taken into account.
(FY 2001 Domestic Survey)
* Although the draft plan of national monitoring was under the consideration is included in this study, the exact monitoring has been conducting by the previous manner.

Trend of the Related Study:
(FY 1999 Domestic Survey)
The implementation of the following two studies were requested to the Government of Japan.
1. Study on Integrated Water Resources Management in Bulgaria (requested by the Ministry of Environment and Waters)
2. Study on Agricultural Development in Upper-Middle part of Maritza River Basin (requested by the Ministry of Agriculture, Forestry and Agricultural Reform)
(FY 2001 Domestic Survey)(FY 2003 Domestic Survey)
1. Study on Integrated Water Resources Management in Bulgaria: S/W was visited in March 2000 and signed in October 2000.
2. Study on Agricultural Development in Upper-Middle part of Maritza River Basin., S/W was visited in May 2000 but was ended in failure because of the consensus between persons in charge.
(FY 2004 Domestic Survey)
After the implementation of the F/S, construction of waste water treatment plants for the three towns (Pazardjik, Dimitrovgrad, Stara Zagora) are planned to be implemented with the assistance of the EU.
1) Pazardjik: October 2004 agreement with consultant, INFILCO Espanola, S.A and Bulgaria
2) Stara Zagora: November 2002 agreement with consultant, Haitkamp, Germany
3) Dimitrovgrad: November 2004 agreement with consultant, Haitkamp, Germany
(FY 2008 Domestic Survey)
Related Study: The Study on Integrated Water Management in the Republic of Bulgaria
Objectives:
1) River basin management plans which meet EU-WFD's requirements are prepared through collaboration with the counterpart personnel for two basins (East and West Aegean Sea River basins).
2) Guidelines for developing GIS system, monitoring, planning and basin integration analysis method are formulated through collaboration with the counterpart personnel.
3) Technology is transferred to the counterpart personnel in conducting the two tasks above.
Cooperation Period: 5 June, 2006 - 15 March, 2008.

| 9. SITE OR AREA | East Aegean Sea River Basin and West Aegean Sea River Basin | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1) Structural Measures</p> <p>(1) EABD Areas: 22 towns Construction of New WWTPs (18 towns) and rehabilitation of sewer networks: Maritsa River: 13 towns, Tundzha River: 4 towns, Arda River: 1 town Rehabilitation of existing WWTPs (4 towns) and rehabilitation of sewer networks: Maritsa River: 3 towns, Tundzha Rivers: 1 towns</p> <p>(2) WABD Areas: 9 towns Construction new WWTPs (6 towns) and rehabilitation of sewer networks: Struma River: 3 towns, Mesta River: 2 towns, Dospat River: 1 town Rehabilitation of existing WWTPs (3 towns) and rehabilitation of sewer networks: Struma River: 3 towns</p> <p>2) Non-structural Measures</p> <ul style="list-style-type: none"> . Review and improvement of water use permission for optimum water intake and use, and also water transfer to the other river basins; . Monitoring of water intake volume by installing measurement devices by water users for intake sides as well as Basin Directorate at key locations in the rivers; and, . Improvement of quality of data required for water quantity management, including collaboration with NIMH as well as other relevant institutes. <p>3) Groundwater Management Plan</p> <ul style="list-style-type: none"> . Main ore mineralization is concentrated in EABD. There are old tailings that present threat to ecological safety. Database and GIS-map of old pollutions, especially tailings, is necessary. Abandoned mine sites inventory and cleanup program for remediation are especially important for EABD. An appropriate cleanup program will improve water quality and enhance public safety. . The problem with arsenic in drinking waters in Poibrene village is not yet solved. Urgent measures are required to solve this problem. . Application of good agricultural practices is necessary to reduce nitrate content in the region of Stara Zagora. . A plan for regional model of the groundwater flow in the region of Yambol-Elhovo area is needed. . Special attention should be paid to quantitative monitoring of Blagoevgrad GWB . At risk . . Assessment of specific natural groundwater quality in mountain regions impacted by ore mineralization . for reference should be conducted. . It is necessary to carefully control groundwater abstractions in the region of the winter resort Bansko. | | |

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2008 Domestic Survey) No information to be specifically mentioned.

(FY2012 Domestic Survey)

1. The reduction of water supply loss of more than 60% due to the improvement in water supply system: Replacement of the clean water supply pipes reaching 21,450 km in total length (16,564 km of the pipe belonging to East Aegean Sea River Basin Directorate, 4,886km of the pipe belonging to West Aegean Sea River Basin Directorate)
*Within East Aegean Sea River Basin Directorate: Replacement of clean water pipes (86.8 km in 2010 and 20,502.3 km in 2011) has been implemented, which was financed by the water company.

*Within West Aegean Sea River Basin Directorate: Replacement or rehabilitation of the 83.7 km water pipe will be implemented to complete by the water company and municipality authority before 2011.

2. Improvement of irrigation area: Total area of 367,202 ha (82 irrigation systems inside East Aegean Sea River Basin Directorate reach 316,468 hector in area; 41 irrigation systems inside West Aegean Sea River Basin Directorate reach 50,738 ha in area)

*Within East Aegean Sea River Basin Directorate: The Irrigation System Corporation financed to implement the improvement work of 9 irrigation systems in this countermeasure program in 2011.

*Within West Aegean Sea River Basin Directorate: The Irrigation System Corporation has completed conceptual designs for 7 projects covering 4,100 ha in area. These projects are likely to be financed through EU-funded Rural Area Development Program (2007-2013).

3. Construction of new sewerage treatment plants in 18 towns within East Aegean Sea River Basin Directorate (including rehabilitation or new establishment of sewerage pipelines)

*Though there are no towns equipped with sewerage treatment plants, most of the towns have approved the implementation budget under the EU-funded on-going program "Environment 2007-2013".

4. Rehabilitation of existing 4 sewerage treatment plants and sewerage pipelines in East Aegean Sea River Basin Directorate

*Though there are no towns where their sewerage treatment plants were rehabilitated, one of these towns has approved the implementation of rehabilitation work. As for other 3 towns, rehabilitation projects are under the preparation.

5. Construction of new sewerage treatment plants in 6 towns within West Aegean Sea River Basin Directorate (including the rehabilitation of sewerage pipelines)

*As for 5 towns with the population of more than 10,000 residents out of the 6 towns, draft schedule plans of the projects have been prepared and waiting the application for the approval of the project implementation.

*Consolidation of the sewerage system infrastructure including sewerage treatment plants and sewerage pipelines for the towns with more than 2,000 residents is to be implemented within the responsibility of the towns.

6. Rehabilitation of 3 existing sewerage treatment plants and sewerage pipelines in West Aegean Sea River Basin Directorate

*One site (160,000 residents as target population) has been at the stage of conceptual design, accessing the environmental fund committed by EU. Another site (targeting 81,926 residents) has approved the rehabilitation project, (which will be financed by EU environmental fund). There is also a site (targeting 23,800 residents) where the construction of new sewerage treatment plant is approved and will be financed by EU-funded "Environment 2007-2013".

7. Strengthening the water management system at the central government and local level (4 River Basin Directorate)

*Central Government: Water management policies and so forth were (are to be) implemented in accordance with the water law.

*East Aegean Sea River Basin Directorate: The number of staff increased from 58 to 68.

(JICA Study had proposed approximately double increase).

8. a) Water quality control, b) water use permission, c) underground water control and d) enhancement of legal system regarding the river and flood plains

a) Water quality control: The new decrees were issued in accordance with EU Water Framework Directives, including 1) categorization of water body, 2) water quality monitoring, 3) prevention of the water pollution with the nitric originated from the agriculture, 4) water quality control for bathing, 5) environmental water quality standards regarding prioritized substances and other specific substances.

b) Water use permission: The issuance of water intake permission of surface water and underground water in light with EU Water Framework Directives and the implementation of adjustment (modification) based on the water law

c) Underground water control: The issuance of new decrees regarding 1) survey, utilization and conservation of underground water (prevention of water quality pollution, etc) and 2) prevention of underground water pollution with the nitric originated from the agriculture

d) Strengthening the legal system on the river and flood plain control: The tender regarding preliminary assessment of flood risk was conducted in November 2011 by West Aegean Sea River Basin Directorate. A draft flood risk preliminary assessment was prepared in January 2012, which was followed by the implementation of public hearing sessions to residents in 4 towns and the uploading of this information on the Department's website.

9. Improvement of surface water monitoring system

*Improvement proposals for surface water monitoring by JICA and the National Surface Water Monitoring System Development Direction (2009) are considered in establishing a surface water monitoring network. The establishment of the monitoring network has completed in its implementation by East Aegean Sea River Basin Directorate and EEA, an agency of Ministry of Environment and Water implementing monitoring and other tasks, with their own fund.

*East Aegean Sea River Basin Directorate improved their monitoring program in 2010 and implemented it between 2010 and 2015.

10. Maintenance and updating of GIS data model

*West Aegean Sea River Basin Directorate has applied GIS data model to establishing GIS database for the purpose of various analyses based on it. Since the establishment of Aegean Sea River Basin Directorate, GIS database has been regularly updated.

| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | 1) To conduct a feasibility study for the rehabilitation of the Sarajevo WWTP that contributes to the recovery of the sanitary and environmental conditions. 2) To transfer technology on planning methods and skills to counterpart personnel in the course of the study. | | |
| 7. CONSULTANT(S) | Tokyo Engineering Consultants Co., Ltd. Nihon Suido Consultants Co., Ltd. | | |
| 8. STUDY PERIOD | Jan.1999 | ~ | Dec.1999 11month(s) |
| 9. SITE OR AREA | Sarajevo Treatment Plant Central, Bogska and Iridja Zone | | |
| 10. MAJOR PROPOSED PROJECT(S) | The first and second field assessment survey of the WWTP has identified the following matters; 1) If the project is implemented, the treatment capacity of the WWTP may return to the condition before the War and can correspond to the planned sewage volume in 2015. 2) It became clear after applying calculation model that the civil and architectural structure of the wastewater treatment facilities has sufficient capacity. Repairs of construction joints, expansion joints, reinforced concrete protection, partial structural reinforcement are required. It is also concluded that most of the existing mechanical equipment can be used provided that cleaning, overhauling, and replacement of damaged and missing parts are done. Moreover, it is impossible to use electric facilities at all. 3) From the point of view of structural aspects, the sludge treatment facilities can be utilized provided that appropriate repair measures are applied in the same manner as the wastewater treatment facilities. Except for a total replacement of the sludge dehydration and boiler facilities, most of the existing mechanical equipment can be used provided that cleaning, overhauling and replacement of damaged and missing parts are done. However, total replacement of the electrical equipment is required. | | |

Description :

(FY 2000 Domestic Survey)

1. The WWTP Rehabilitation Project and Costs

Based on the assessment work, the fundamentals for WWTP rehabilitation were formulated as follows;

- 1) Installation of new pre-treatment and pre-screening facilities that will remove heavier grit particles before they are lifted by the screw pumps.
- 2) Existing facilities would be basically rehabilitated and improved to bring them back to the pre-war condition.
- 3) All mechanical equipment and electric facilities, except some parts of the clarifies would be newly replaced.
- 4) As an architectural work, a new boiler room and generator building will be constructed, and the others will be rehabilitated.

Based on these improvement fundamentals, the preliminary design of the Project is formulated with the estimated cost as follows;

- 1) The Total Project Costs is estimated at DEM 76 million, consisting of the construction cost, and engineering plus contingency cost at DEM 64 million and DEM 12 million, respectively.
- 2) Annual O&M cost is estimated at about DEM 6.1 million.

2. Economic and Financial Evaluation

Economic and financial evaluation is done with some assumptions in consideration with preliminary design and estimation, and O&M cost. The calculation shows Financial Internal Rate of Return (FIRR) of 5.9%. The result indicated that the project is feasible as a loan project, provided that revenue collection of the improved by raising tariff rates. The economic benefit of the Project is justified by the calculation of the Economic Internal Rate of Return (EIRR), which is 17.6%. According to the result of questionnaire survey done on the domestic and non-domestic water uses in Sarajevo, recognition on the improvement of the environment and the water quality of Bosna and Miljacka Rivers was considerably high. The survey resulted to a relatively high amount of Willingness to Pay (WTP) at KM 3.0 to 4.1 per household per month.

(FY 2003 Domestic Survey)

Bosnia and Herzegovina is negative about fund raising by other means than the grant aid.

(FY 2005 Domestic Survey)

No information to be specificary mentioned.

Description :

(FY 2001 Domestic Survey)

Special Training of "Development of Personnel in Transport Sector" for Bosnia and Herzegovina is to be started by the end of FY2001. It is to be held once every year, and 3 persons are invited from each Entity and the State, totaling 9 persons per year. It continues for five year and currently the details of the first-year program are being created.

(FY 2004 Domestic survey)

No information

(FY 2005 Domestic survey)

Subsequent Study: By-pass, Motorway and Support Regional Integration Program and Rail Rehabilitation Project

Implementing period: 2003 - 2005

Implementing body: EBRD

Objective: For a peaceful development in Bosnia Herzegovina, rehabilitation of infrastructural facilities and maintenance in the transport and traffic sectors are required where various sized transport and traffic infrastructural projects are in progress by EBRD, EU, and WB, etc. The M/P is referenced as a guideline to enhance rationalisation.

Funding:

Funding party: EBRD

Amount:

Road sector - First stage: 70 mil EUR

Railway sector - First stage: 21 mil EUR

Content: Rehabilitation projects of infrastructural facilities in the road and railway sectors.

Technical cooperation:

Training: Part of special country research programme in transportation sector.

Number of dispatched trainees: 8-9 people each from 3 ethnic groups and 3 governments.

Period: 2002, 2003, 2004, and 2005 (suspended due to coordination)

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

In accordance with the recommendations of the study, GNTO has increased their promotional budget in Japan, and various promotional activities are being implemented mainly in Tokyo metropolitan area. As a result, 130 thousand Japanese tourists visited Greece in 1989, exceeding the record 129 thousand in 1979 (the Aegean boom). GNTO Tokyo office continues their efforts to promote Japanese tourists to Greece. In addition to their efforts, the official schedule flights directly to Greece from Tokyo was opened by Olympic Airways from 1990, and a desirable increase of Japanese tourists is observed in 1991.

(FY 1994 Domestic Survey)

The number of Japanese tourists visiting Greece has been increasing except for that in 1991, because of Gulf War.

Tokyo office of GNTO continues their efforts for tourism promotion through advertising Greek attractiveness by large pictures at railway stations, etc. However, as the representative of GNTO in Tokyo was replaced in mid of this year, it is not clear whether they are willing to change the promotion strategy or not.

(FY 1995 Domestic Survey)

Once GNTO Tokyo Office unofficially sounded to JICA about a request for the new promotion survey for this project, after that, however, no activity is observed as yet.

(FY 1995 Overseas Survey)

The recommendations of the study have been in use to formulate the tourism promotion policies. However, because of the termination of the direct flight between Athens and Tokyo, it is expected to be difficult to increase the number of the Japanese tourists.

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

F/S includes all the projects proposed by M/P.

*The reconstruction of the flue gas treatment system installed in the existing incineration plant.

Prior to the first priority project execution, the reconstruction of the existing flue gas treatment system was politically decided to satisfy the new national environmental regulations which were legislated during JICA study was still being carried out (As a matter of course the first priority project was designed to meet the new regulations).

Reasons for Delay or Suspension:

The reconstruction of the flue gas treatment system in the existing incineration plant is the precondition for the implementation of the proposed project (construction of a new incineration plant). However, financial constraints have hindered the implementation of the reconstruction project. Therefore, no action has been taken to implement the proposed project.

(FY 1997 Domestic Survey)

One of factors caused delay is cost sharing problem.

(FY 1997 Overseas Survey)

Change in policy.

Detail:

The reconstruction (new construction) of the existing flue gas treatment is still under the status of promoting for materialization. The Hungarian Government has submitted the formal request to the Japanese Government for raising loan to materialize the construction of the flue gas treatment facilities for the existing incineration plant.

(FY 1995 Domestic Survey)

The City Congress of Budapest will decide again to promote the wasted gas treatment project at the end of August, 1995. Responding to this decision, OECF will begin the implementation of SAPROF.

Simultaneously, the City Congress will start to take measures in order to construct new wasted materials combustion plant based on the results of this survey works.

(FY 1996 Domestic Survey)

The Ministry of Environment and Regional Policy and the Budapest Capital City government consider this reconstruction project urgent and important. Thus, they concluded I/P (draft) of SAPROF with the dispatched OECF mission in June 1996. However, the central government and the Budapest Capital City government has not agreed how to secure the local fund to implement the project, which will be equivalent to 40% of total project cost. Because they are reluctant to undertake SAPROF before they confirm the financial source for the project, it has been suspended.

Others:

(FY 1999 Overseas Survey)

The construction of new controlled landfill is in progress. It is very likely that the construction of a new incineration plant will be needless in the next 5-10 years.

Perspective:

(FY 1997 Domestic Survey)

There is possibility to realize the project in case that ODA's interest for environment projects lower.

(FY 1997 Overseas Survey)

To materialize the project, Procurement of fund is necessary.

(FY 1998 Domestic Survey)

If the flue gas treatment system is established, implementation of the proposed project will be considered (probably after 2-3 years).

(FY 1999 Overseas Survey)

A tender for the reconstruction of flue gas treatment system in the existing incineration plant will be implemented. in 2000.

Description :

(1) Steam Power Plant

Subsequent Study:

Hungarian side requested to a JICA a F/S for reconstruction of the boilers at Borsod Power Plant to control air pollution. Mining and Industrial Department of JICA has dispatched a contact mission to carry out the preliminary survey for the implementation of F/S on July, 1995.

(FY 1997 Overseas Survey)

1995~July 1998 F/S on facility improvement and environmental protection of Borsod Power Plant was undertaken.

(FY 1998 Domestic Survey)

This steam power plant was sold to AES on an American private company when F/S was conducted. Therefore there is no possibility to implement the project with an assistance from Japan.

(2) Factory

Subsequent Study:

(convert the heat treatment furnace to Rath type)

1995~96 own fund

(3) People's Life

(convert the fuel from coal to natural gas)

1995~97 3300 mil. Forint (consumers' own source and governmental financial aid, 67.9 mil.Forint)

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2000 Domestic Survey)

The counterpart of this Study said that the Macedonian government newly requested to the Japanese government. The major contents of that are requested are as follows;

- 1) 2 monitoring stations are to be increased in capital Skopje City. Then, it will have 6 stations which has already been supplied by JICA project.
- 2) Introduction of 2 new monitoring stations in Bitola City where the coal thermal power plant is being operated.

1. Establishment of air quality monitoring station system

(FY 2001 Domestic Survey)

The grant aid was requested to the government of Japan but not adopted yet. The Ministry of Environment of Macedonia is willing to proceed establishing the air quality monitoring station system under the decision by the government of Japan and JICA in Dec.2001 or Jan.2002.

Contents of request:

Procurement source: Japanese grant aid is expected.

Procurement amount: 45 million Yen is demanded.

Loan project content:

- 2 additional installation of the monitoring stations in Capital Skopje City and 2 establishments of them in Bitola City where the coal thermal power plant is located.
- Version up of the computers and other equipment at the central station (The Ministry of Environment and Nature Planning, Environment Information Center)

2. Personnel Development Planning

(FY 2001 Domestic Survey)

The expert by JICA (Mr.Okuno from Institute of Environment of Hyogo) has been giving a technical transfer, the young and middle experts on environment have been participating in the JICA training and the ministry itself has been also promoting the human resources, however there may possibly be shortage of them.

3. Organization and Institution Planning

(FY 2001 Domestic Survey)

Organization reform: Oct.2000, The ministry of Environment has changed its name to the Ministry of environment and Nature Planning.

Environment related laws: The Act on Environment and Nature Protection and Promotion came in force in Oct.1997 is still in force. Although it does not stipulate the measure to proof the control standard, the related laws have been introducing positively according to the latest information.

4. Suggestion about the maintenance and management plan such as the monitoring equipment

(FY 2001 Domestic Survey)

1) Maintenance and management of the provided equipment:

- Equipment at the Air Pollution Monitoring Station (4 stations): They are maintained well under the maintenance contract with the Australian Firm.
- The other equipment are also frequently utilized and operated well.

2) Inauguration of the Air Pollution Monitoring Center with the Data Bank System:

Although the EIC of Ministry of Environment are representing to it, more development on staff, equipment and technical level are necessary. It seems that the request on version up of the computers at EIC and dispatch of experts are one link of it.

Furthermore, the proposed projects like, the installation of continuous emission monitoring stations, and mobile monitoring system, the introduction of auto-exhaust gas inspection system, up-grading analytical instruments of the Institute of Environment, are under discussion based on the proposed projects, however they faces difficulty to make them forward because of the financial problem.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

Description :

(FY 2000 Domestic Survey)

It is informed that some procedure for implementation of the Zletovicha Dam Project, one of the projects to be implemented in the first Phase, has been taken by Macedonia side. Except the Project, however, there is no information on implementation of their projects.

(FY 2001 Domestic Survey)

Although the local study was started on the Zletovicha Dam Project by JBIC from Apr.2001, it has been suspended after 1 month study due to the local political instability.

(FY 2002 Domestic Survey)

The local study is going on the Zletovicha Dam Project by JBIC.

(FY 2003 Domestic Survey)

20 Nov.2003 L/A about 9,600 mil. yen (The Zletovicha Dam Project)

(FY 2004 Domestic Survey)

Bid for the consultants in Yen Loan project was held (deadline of the proposal, 5th March, 2005)

(FY 2005 Domestic Survey)

Now in implementation phase.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY2007 Domestic Survey)

Suggested project as follows was conducted.

Implemented Project : Development of Geographical Information Database of Macedonia(dispatch experts)

Implementing Period : from January, 2007 to March, 2007

Implementing Body : Department of Location Survey

Contents : reinforcement of GIS/database making capacity

Successful Bidder : PASCO Corporation

(FY 2009 Domestic Survey)

Although we did photo shooting all around the country in the development study, we have covered only 70 percent of the country in the topographic map on a scale of one to 25,000. According to the information after the study, the remaining 30 percent was adjusted by the result of technical transfer and provided equipments. Now, people can buy the printed pictures at a lower price because selling restriction of topographic maps was eased.

(FY2012 Domestic Survey)

1. Implemented Project: Project for Transformation of the Macedonian State Coordination System to the World Geodetic System using Permanent GNSS Stations and Its Application

(Implementing period) August 2009 - March 2010

(Implementing body) State Authority of Geodetic Works (SAGW)

(Contents of the project) Technical transfer to transform the Macedonian State Coordination System to the World Geodetic System

(Successful bidder) An expert was dispatched from Geographic Survey Institute of Japan.

2. Implemented project: Expert for producing smaller scale topographic maps

(Implementing period) June 2011 - March 2012

(Implementing body) State Authority of Geodetic Works (SAGW)

(Contents of the program) Technical transfer and the implementation of OJT Program on the methodologies to produce diagram regulations for the reduced scale change of the digital topographical map and to edit smaller scale topographic maps

(Successful bidder) Kokusai Kogyo Co. Ltd.

(FY2012 Overseas Survey)

1. Development of national base maps in country wide level

(Objective of the project) Production of digital topographic maps in scale of 1:25,000, technical transfer and dissemination of geographical information

(Summary of the project) Within the project 55% of the territory was covered by digital topographic maps in scale 1:25,000. After the completion of the project the remaining territory was covered by AREC using the donated equipment and trained staff

(Period of implementation of the project) 2007-2011

(Organization implementing the project) Agency for Real Estate Cadaster

2. Establishment of permanent GPS stations and transformation of the Macedonian state coordinate system into World Geodetic System

(Objective of the project) Introduction of global European ETRS89 coordinate system as official state coordinate system in the Republic of Macedonia

(Summary of the project) 14 permanent GNSS stations covering entire territory of Macedonia have been established (Macedonian Positioning System . MAKPOS), analytical center in AREC was established and transformation parameters between the old state coordinate system and the new upcoming system ETRS89 have been determined.

(Period of implementation of the project) 2007-

(Organization implementing the project) Agency for Real Estate Cadaster

(Organization supporting implementation of the project) JICA, SIDA, World Bank (loan)

3. Support for establishment of middle/long term plans

(Objective of the project) To develop ARECs capacities for middle an long term planning.

(Summary of the project) Training of the management staff for middle/long term planning.

(Period of implementation of the project) 2007-2012

(Organization implementing the project) Agency for Real Estate Cadaster

(Organization supporting implementation of the project) SIDA

4. Improvement of services for selling topographic maps

(Objective of the project) To improve the accessibility of AREC data sets for the end users and improve the services for selling.

(Summary of the project) Creation of AREC geoportol, through which the customers can view and download ARECs mapping data.

(Period of implementation of the project) 2007-

(Organization implementing the project) Agency for Real Estate Cadaster

(Organization supporting implementation of the project) SIDA, Dutch Cadaster, World Bank (loan)

5. Construction of WebGIS

(Objective of the project) To construct WebGIS through which the users can view AREC data sets

(Summary of the project) Creation of web-based application where AREC data can be easily viewed from the end users and training of AREC staff for maintenance and updating of the contents.

(Period of implementation of the project) 2007-2012

(Organization implementing the project) Agency for Real Estate Cadaster

(Organization supporting implementation of the project) SIDA, World Bank (loan)

6. Production of smaller scale topographic maps

(Objective of the project) Production of topographic maps in scales: 1:50,000, 1:100,000, 1:200,000, 1:500,000, 1:1,000,000.

(Summary of the project) Capacity building of AREC staff for production of smaller scale topographic maps, development of specification for each of the different scales and map production.

(Period of implementation of the project) 2010-

(Organization implementing the project) Agency for Real Estate Cadaster

(Organization supporting implementation of the project) JICA

| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | To conduct technical assistance for capacity development (CD), concerning the legislation, administration system and organizational structure, for soil contamination management related to mining in Macedonia. | | |
| 7. CONSULTANT(S) | Mitsubishi Materials Techno Corporation | | |
| 8. STUDY PERIOD | Dec.2005 | ~ Sep.2008 | 33month(s) |
| 9. SITE OR AREA | The M/P was formulated considering the whole area of Macedonia and the P/P was conducted in the Zletovica Basin in Probstip. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Pilot Project : (1) Risk assessment : a) Exposure Risk of Heavy Metals in Soil Characterised by Land-use. b) Total Exposure Risk of Heavy Metals in Soil and Drinking Groundwater. c) Agricultural Risk Assessment of Crops in the P/P</p> <p>2. Master Plan on the Soil Contamination Management : (1) Institution Level of Capacity Development on Soil Contamination Management : a. Provisional Legal Framework of Soil Contamination Management until Establishment of the Basic Law of Soil Contamination Management. b. Procedure of Main Tasks for Constricting Provisional Institutional Framework of Soil Contamination Management : Task - 1: Definition of Soil Contamination. 2: Applying the P/P Survey Results (Review of the P/P). 3: Finding and Selection of Soil Contamination Sites. 4: Prioritisation of Investigation Sites for Soil Contamination Surveys. 5: Soil Contamination Survey (Guideline of Survey) and Chemical Analysis (Method of the Official Analysis). 6: Reporting of Soil Survey Results. 7: Counter-measures Method of Soil Contamination. 8: Monitoring Method of Soil Contamination. (2) Society Level of Capacity Development on Soil Contamination Management. (3) Organisation Level of Capacity Development on Soil Contamination Management. (4) Technical (Individual) Level of Capacity Development on Soil Contamination Management.</p> <p>3. Working Programme on Survey and Counter-measures of Soil Contamination in Whole Area of Macedonia</p> <p>4. Urgent Counter-measures: (1) Water from most of the wells/springs of villages in the P/P area has high concentrations of arsenic, cobalt, nickel and lead, exceeding the Standard of Drinking Water. It is necessary to conduct chemical analysis of the well/springs water at the accredited laboratory (MoH) to confirm the situation of water quality. If the water is confirmed to be contaminated, the counter-measure should be taken immediately to prevent the local residents to use water for drinking and other sources of water supply must be prepared. For taking actions for this problem, it is necessary, at appropriate time, to disclose the actual situation through a proper way of risk communication to the local residents for sharing information and raising awareness and discussing immediate counter-measures. (2) Finding the scattered distribution of the wheat with high Pb concentration exceeding the standard over the P/P area suggests relatively high agricultural risk and cultivation of wheat must be carefully considered in the P/P area. The yearly variation of heavy metals in wheat found during the P/P suggest that continuous monitoring of wheat with increasing number of samples is necessary to confirm this. After monitoring, proper actions such as changing agricultural product from wheat to something else should be considered. (3) The tailings dams of TD-I and TD-II are classified as Exposure Risk Level 5. Because they are located close to the residential area and the risk to human health is high, an urgent counter-measure for reducing high risk is necessary. As an urgent counter-measure, either removing tailing material or covering the surface of tailings dam and constructing retaining walls on the west side of the tailings dam should be considered immediately.</p> | | |

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2009 Domestic Survey)

Based on the Master Plan, the Action Plan and the Pilot Project have been established and implemented. In response to this, "Anti Pollution Measures", which includes blocking of the contamination source and prevention of the proliferation of contaminated objects, have already been in place. However, the measures do not reach a satisfactory level because of the limitation of the budget.

(FY2013 Domestic Survey)

Consultants of wastewater treatment engineers have participated in "JUBILEE BALKAN MINING CONGRESS" held in Macedonia in September 2013, and made presentations on water treatment technology, however, information on managing soil contamination were not available. They seem no positive reactions for implementing the project.

(FY2013 Overseas Survey)No information to be specifically mentioned.

Description :

Implementation of the project (FY 1993 Overseas Survey)

1.Improvement program of the Transport Administration.

Essential structural change was carried out in MTME. It will continue.

Reorganization MTME

One of the recommendations by the study team was "Reorganization of MTME" which includes an introduction of "model organization system" to the existing "functional organization system"

Polish government has reacted to the recommendations as follows:

1)Establishment of new departments

-Department of Railways

-Department of Civil Aviation

2)Reorganization of the existing departments

-Department of Transport Policy

Reorganization of former Department of Transport systems and Department of International Cooperation

-Department of Motorcar Transport

Former Department of Land Traffic Administration

2.CMK railway line improvement

F/S was requested to JICA

3.Port Cargo Information System & General Cargo Terminal

They were used to draft the Maritime State Policy toward 2000.

4.The training program of PKP Management staff

This is in implementation phase. The firm to conduct training course has been chosen.

5.Restructuring of PKP

1995 "The Study on Restructuring of Polish State Railways in Poland" (JICA)

Utilization of the outputs:

The Government utilized the study results to formulate following two documents.

-Transport Policy and Realization Steps on the way of Transforming

Polish Transport System into adopted one to the market economy and new cooperation conditions in Europe

-Polish Transport System's Integration with EC Transport Systems

Situation:

(FY 1997 Domestic Survey)

Development study on privatization of national railway was carried out by JICA in 1996.

(FY 1997 Overseas Survey)

There are no changes in situation.

(FY 1998 Domestic Survey)

Oct.1996~Jan.1998 JICA M/P "Privatization of Polish State Railway"

| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 1998 Domestic Survey)(FY 2001 Domestic Survey)

Market economy has been promoted in Poland since 1989, and the privatization of the national railways (PKP) in the country has also been examined since 1991 as a part of the promotion of market economy. The government of Poland has positively tackled with the reform of the Poland national railways. It newly established the department of railways in MOTME in 1992, and clarified a direction of the reform by approving transport policies in a Cabinet meeting and making the "New Poland National Railways Law" effective etc. in 1995. The mentioned study is highly evaluated by MOTME and the national railways, etc. As the content of the report is comprehensive and the completion is the same with the time when the privatization of the national railways has been reviewed, the report is distributed to those concerned in the parliament and high-ranking government officials such as a presidential aide, and it has been used widely as a reference for the examination of the privatization of the national railways. The content of the proposal for Poland was enriched because Poland had a great interest in experiences of the privatization of the Japanese National Railways (JNR) and many unique policies in the reform of JNR such as the privatization and division of JNR, deregulation, the treatment of long-term debt, a reduction in surplus workers, the abolition of low-density lines and the establishment of the Settlement Corporation were applicable to the PKP's case, especially in the implementation of the study. Poland requested Japan to dispatch experts on the subjects stated below to raise effectiveness of a report which is the outcome of the study on privatization stated above, and the experts were dispatched by a JICA base.

Technical cooperation:

Dispatch of experts: It is evaluated by Polish side that the appropriate advice by the experts contributes to promote privatization of the Polish national railways when the privatization of PKP is in progress.

1. April 1998 (18 days): "Support for the Reform of Railways (training for staff)" 2 persons (Japan Railway Technical Service)
2. October-November 1998 (21 days): "Support for the Reform of Railways (technical guidance)" (Seminars were held.) 3 persons (2 for Japan Railway Technical Service, 1 for Japan Telecom Co., Ltd.)
3. April 1999- "Support for the Reform of Railways (training for staff)"
4. February 2001- "Support for the Reform of Railways (technical guidance)"

(FY 2001 Domestic Survey)

After the submission of the report in February 1998, the PKP Reform Law was established, PKP became a special corporation, and accounts were separated in passenger, freight and infrastructure sectors in the special corporation, and the 3 sectors are supposed to be divided into the companies in the future. The direction of the privatization of PKP is same with the proposal of the development study, and the result of the study is used as a reference.

On the other hand, in implementing the privatization of railways concretely, Poland requested the government of Japan in April 2000 to conduct a JICA's development study again about adequate methods to privatize passenger and freight companies and the examination of the content of financial restructuring etc. since the development study was useful. However, it has not been conducted yet due to a problem of tax for the JICA's development study in Poland.

(FY 2002 Domestic Survey) (FY 2003 Domestic Survey)

Subsequent study: "Study on the Privatization of the Poland National Railways" (F/S)

Implementing period: March 2003 to March 2004 (Phase I), May 2003 to March 2004 (Phase II)

(FY 2003 Domestic Survey)

Technical cooperation:

Training in Japan: Privatization of Railways-training of Japanese case studies (September-October 2003)

(FY 2003 Overseas Survey)

- 1) September 1999, Revised a national railways program.
- 2) September 2000, Revised a law for privatization.
- 3) Reduced employees to 147,000 people by the end of 2002.
- 4) Stopped the operation of low profitability 3,900km sections by the end of 2002.
- 5) Established a labor preparation fund.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

Description :

(FY 1999 Domestic Survey)

Subsequent to the study, Konin was merged with the neighboring province of Poznan. The recommended industrial and agricultural development projects are being implemented with EU assistance. Privatization is progressing in the province's three basic industries (coal, power, aluminum) and the new entities are making progress in realization of the recommendations of the Study.

(FY 2003 Overseas Survey)

Konin Regional Development Agency provided the following services chiefly to small and medium enterprises for four years from 1999 to 2002.

- 1) Training activities: Training of various fields such as marketing, financing and quality management were provided to 400 small and medium enterprises all over Wielkopolska.
- 2) Advice: Seven bases to support small and medium enterprises were instituted in Wielkopolska, where supporting service was provided to 2,000 companies in a year.
- 3) Information service: Various information on accession to EU was provided. Technical cooperation of Japan:

Technical cooperation of Japan:

(FY 2003 Overseas Survey)

- 1) Dispatch of Experts: FY1998 (2 persons), FY2000(3 persons), FY2002(1 person)
- 2) Acceptance of Technical Training Participants: FY1998, FY1999, FY2000, FY2002 (one person for respective fiscal years)

Description :

(FY 2005 Domestic and Overseas Survey)

Proposals made in the study were adopted in "The restructuring of PKPS.A group and privatization promotion plan towards 2007" prepared by the Polish government, which were reflected to the Polish Railway policy. The study has been considered highly evaluated by Polish side. In addition, 3 experts were dispatched for a follow-up of the study to advise on privatization of national railway.

2004: Polish railway restructuring and privatization plan prepared, taking the result of study in account.

2004/Dec: JICA has dispatched 3 experts to make a comment on the plan

2005/Feb: The plan was approved by a cabinet, which was recognized as a formal government plan

2005: Related legislation are under consideration in national assembly.

(FY 2006 Domestic Study)

Poland, which became a member of EU 2 year ago, adopts proposals in the main study into Polish railway policies and promotes privatization and railway corporate downsizing of PKP.

(FY 2006 Overseas Survey)

On 16 Dec. 2003 which was a period of the report making, the Council of Ministers approved the "program for privatization and reorganization of the PKP group toward 2006". However, as speed of reorganization was too slow, the Council of Ministers approved the "strategy for privatization and reorganization of the PKP SA group" on 22 Feb. 2005.

The government allocated more national budget to support the railway transport which is aiming at its modernization and infrastructure development. The "railway foundation" was established based on the new gazette law chapter 12, article 61 which became effective from 2006. The foundation is a new capital source for railways in the sense of extra budget.

Surplus of PKP SA and Polish Railway Lines (PLK SA) were transferred to regional governments.

Subsequent study: F/S on a privatization plan of the Polish Railway (PKP S.A.)

Implemented period: 14 months from Mar. 2003 to May. 2004

Implementing agency: The Ministry of Transport Railway Department

Objective: Implementation of studies and proposals which can be reflected into Polish railway policies and which can be combined into the "plan for PKP S.A. group reorganization and privatization toward 2007" established by the Polish government

Beneficiaries: PKP S.A.

Funding party: own fund

Technical cooperation: Dispatch of experts (Short-term expert) : 3 experts in Dec. 2004

(FY 2007 Domestic Survey)

Poland seems to continue to adopt the contents proposed in mentioned study into Polish railway policy and encouraging restructuring and privatization of railways.

| 9. SITE OR AREA | Bucharest | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1.Construction of 3 reclamation disposal plants (Balaceanca, Cretuleasca, Glina)</p> <p>2.Installation of water supply (deep well) and pipe for surrounding villages of 3 plants.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Subsequent studies: (FY 1998 Overseas Survey) Sep.1997~March 1998 Redraw of F/S for the development of Glina Landfill US\$ 10,000 (own fund) * Pre F/S for new landfill sites (Giulesti-Sarbi, Vidra) were conducted in July~Sep.1998 with their own fund (US \$10,000 each).</p> <p>Background: (FY 1996 Overseas Survey) May.1996, Municipality of Bucharest submitted to Ministry of Finance to request OECF loan. In Dec.17.1996, the Municipality of Bucharest received the reply from both the Ministry of Finance and the Ministry of Public Works that both Ministries were willing to assist the implementation of this project. The municipality is to submit the detailed documents in order to obtain their final consent as the Government of Romania.</p> <p>(FY 1997 Domestic Survey) The Government of Romania has requested OECF loan to construct a disposal plant. In July of 1997, Romanian president visited Japan and submitted a letter to the Japanese Government to request a loan.</p> <p>(FY 1997 Overseas Survey) The Municipality of Bucharest permits and authorizes only the Glina landfill site, because of the opposition shown by the local councils and others for Balaceanca and Cretuleasca. OECF loan is to be applied for 75% of project cost, and government budget for remained part. It is necessary to conduct F/S in accordance with the Romanian Law. Technical assistance for the implementation of The Sanitation Tax was accomplished by own means.</p> <p>(FY 1998 Domestic Survey) In addition to this proposed project, the government of Rumania has requested OECF loan for the construction of harbor on the coast of the Black Sea and also the highway that leads to the harbor. It seems that higher priority is given to those harbor and highway construction projects.</p> <p>(FY 1999 Domestic Survey) Romanian President submitted a letter to the Japanese Government to request a loan on disposal plant when he visited Japan in 1997. However, this project has not been included in the official request which has been submitted from Rumanian government to Japanese government.</p> <p>(FY 2005 Domestic Survey) Subsequent project: Urban waste reclamation site development Implementation period: 2000 to 2002 Implementing party: Bucharest municipal and private companies Relationship with the study: 1. After the completion of study, although loan request from the Romanian Government to JBIC was anticipated, request have never been submitted. 2. Glina disposal sites have implemented expansion construction with funds from Bucharest municipality. 3. Complete privatisation of logistics system and introduction of the private funds for the disposal system has rapidly progressed. Reclamation sites have followed collection logistics services to be privatised which as a result, all of the collection services and disposal sites except Glina are conducting developments and operations with the private fund.</p> | | |

Description :

(FY 1999 Domestic and Overseas Survey)

No major progress has been made thereafter.

(FY 2001 Domestic Survey)

Unknown.

(FY 2001 Overseas Survey)

The present status of M/P is described as "in progress or in use" rather than "delayed" or "discontinued." The Study was finished in March 1999 and a Proposed List of Recommendations was included in the Final Report in order to improve the Prahova River quality.

Those measures (extension and construction of sewerage networks and treatment plants, replacement of the old oil pipeline in Doftana River area, installation of a new laboratory for river and wastewater monitoring) were targeted in 2015. The only action undertaken is in the direction of conducting the studies and obtaining the necessary permits for some treatment plants in Prahova County. All other efforts to improve the River Water Quality were delayed by the lack of financial resources. That is the reason that the Study is considered as finished with the measures included in the proposed M/P under continuation and achievement.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2008 Domestic Survey)

| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description : (FY 2000 Domestic Survey) Tulcea: Official request letter for implementation of the Project by Japanese Grant aid has been submitted. Galati and Braila: To implement the project by Phare's fund, the financial arrangement is in progress.</p> <p>(FY 2001 Domestic Survey) 1.The request procedure was not made for the grant aid on the sewage disposal plant construction in Tulca due to the change of the mayor at the election in May 2000, though the draft request form has been prepared. 2.It seems that the materializing plan of the sewage disposal plant constructions in Galati and Braila financed by EU do not have any specific progress. 3.Subsequent Studies:Fund of EU</p> <p>Subsequent Study: (FY 2001 Overseas Survey) Implementation period: 2000-2004 (four years) Study type: F/S Financial sources: EBRD (30%) and ISPA (70%) Amount: 173,902,000 US\$ (approved in 2000) Contents: Seven cities located along the Danube River (namely Tulca, Galati, Braila, Calarasi, Giurgiu, Turnu-Magurele and Drobeta-Turnu Severin) were selected as higher priority cities in the nation wide development of wastewater treatment from the view points of the government policies to fulfill the EU Environmental Directives as one of EU applicant countries. While wastewater collection system are considerably developed in the selected cities, none of them have proper treatment facilities. They are discharging wastewater to the Danube River without proper treatment. Objectives: 1) To conduct a basic study on wastewater treatment in the selected seven cities. 2) To conduct a feasibility study for wastewater treatment of the targeted three cities, namely Tuleca, Galati, and Broila among the seelcted seven cities. 3) To carry out technology transfer to the Romanian counterpart personnel in the course of the study.</p> <p>(FY 2002 Overseas Survey) 1) Galati: The international tender for selecting the consulting is scheduled in Jan.2003. 2) Braila: The project has been approved and the consultant has been selected. The consultant will prepare the application for the city collector, in order to obtain the funds under ISPA. The city collector has not been included in the feasibility study for the treatment facility. 3) Tulcea: The application is in the approval process in Brussels. 4) Drobeta Turnu-Severin: The international tender for selecting the consulting is scheduled in Jan.2003.</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Domestic Survey) (FY 2005 Overseas Survey) Galati: A tender for the selection of consultants for management and supervision is under preparation. Tulcea: An application for the Cohesion Fund of the EU is under preparation and is to be completed in 2007. The preparation of the application is financed by ISPA. Braila: Construction has started. Droba Turnu-Severina: A tender for the selection of consultants for technical assistance, management, and supervision has been completed.</p> <p>(FY 2009 Domestic Survey) No information to be specifically mentioned.</p> | | |

| 9. SITE OR AREA | Olt County and Dolj County | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>In this plan, the subject forests of the Plan were classified into the following 2 groups;</p> <p>1) forests of which the damage must be restored(damaged forest)</p> <p>2) forest of which the decline must be avoided(prevention forest)</p> <p>1. The basic principles of damaged restoration measures:</p> <p>1) Establishment of regeneration methods</p> <p>2) Establishment of environmental conservation function of forests</p> <p>3) Promotion of efficient forest restoration</p> <p>2.The basic principles of decline restoration measures:</p> <p>1) prevention of damage by drought and excessively wet conditions</p> <p>2) restoration of forest mantle</p> <p>3. The main planning items of restoration measures:</p> <p>1) cutting of standing trees mainly featuring damaged trees and declined trees</p> <p>2) reforestation</p> <p>3) nursing</p> <p>4) construction of drainage and infiltration</p> <p>5) supplementary planning to prevent damage of forest mantle</p> <p>6) improvement of forest roads</p> <p>7) forestry machinery</p> <p>8) establishment of a general arboretum and forestry work demonstration forests for local development</p> <p>9) technical development to breed highly resistance species</p> <p>4. The main planning items of prevention measures:</p> <p>1) construction of drainage and infiltration works</p> <p>2) supplementary planting to prevent damage of forest mantle</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2000 Domestic Survey) The MWFEF hopes that the Plan will play a pioneering role in the restoration of degraded forest in Romania. While Romania is aiming at joining the EU, many environmental and legal issues must firstly be solved. It is hoped that the implementation of the Plan will contribute to the solving of some such issues. The following necessities have been identified in connection with the implementation of the Plan.</p> <ol style="list-style-type: none"> 1) Necessity of firmly identifying new target forests and preparing environmental standards by the year 2003. 2) Necessity for international aid to enable activities in line with the environmental as well as forestry strategies. 3) Necessity for international aid to enable Romanian to comply with the environmental standards of the EU in 3-4 years time. <p>The prospects for implementation of the Plan are still far from certain as of November 2000. However, recently, some organization of the Netherlands dispatched a party to Romania for the data collection and the negotiations over the conditions of the forest in the placed area.</p> <p>(FY 2001 Overseas Survey) F/S on Forest Restroration in Romania Plain is being planned as follows, Implementation Period: 10 operation years. Financial sources: Not yet identified. Amount: 10,709,386 US\$ Total cost inclusive of indirect cost. Contents: The project covers 115,806 ha forest area located in two countries in the Danube Plain, affected by forest decline and consists in the implementation of the Forest Restoration Plan. The main activities refer to production works, reforestation, drainage and infiltration works, supplementary planting at forest mantles, improvement of forest roads, procurement of machinery and decline prevention measures.</p> <p>(FY 2002 Domestic Survey) Received financial assistance by the World Bank, Forest Policy and Management of the Gov. of Rumania was prepared in 2000. One of its strategic actions was afforestation of denuded agricultural land. World Bank prepared the project information document for 'Romania-Afforestation of Degraded Agricultural Land Project', dated 28th of Oct., 2002, and announced its financial assistance of 3.67 US dollars from the Prototype Carbon Fund. In this project, construction method proposed by the last report of this Development Study, including utilization of machines (plough, disk harrow) and effective drilling auger, was adopted, therefore, it can be assumed that a part of the project was prepared, based on the Study result. The recipient: National Forest Administration (NFA) The implementing agency: NFA Funded by: World Bank, Prototype Carbon Fund. Amount of funds: 10.09 US dollars The site: 7 prefectures in Southwestern and Southeastern region (including Olt Prefecture and Dolj Prefecture in which Development Study was conducted).</p> <p>(FY 2003 Domestic Survey) The project by the World Bank reported in the Domestic Study for 2002 was found to be irrelevant to this project. However, partly because the C/P at the time of the Development Studies had been involved in the preparation of proposal for the World Bank project, it is definite that a part of the proposed project has been incorporated into the World Bank project. The proposed project itself temporarily sought a budget toward the implementation but could not procure a budget and has not been implemented yet.</p> <p>(FY 2004 Domestic Survey) The proposed project has once requested for a budget for its implementation, though it has not been implemented due to the failure of securing the budget.</p> <p>(FY 2005 Domestic Survey) The project have been delayed due to political factors such as decline of priority of development project, organisational change of counterpart, and administrative factor such as imperfect administration of implementing body. Several reorganisations confounded the C/P. In addition, emergence of environment related institutions have let degrade political power of forestry related institutions. Thus, although the project have once requested for a fund, it is considered to be difficult in realising the project.</p> <p>(FY 2005 Overseas Survey) During the last 4years, following measures were taken without additional costs:</p> <ol style="list-style-type: none"> 1. Adoption of technical solutions for forest management plans 2. Reference for specific research in area studies 3. Validation of existing technologies <p>Although having a favourable climate conditions in the past, it is difficult to state that the efforts were made to finance coming 5 to 7 years.</p> | | |

Description :**1. Container Terminal Expansion**

(FY 2005 Domestic Survey) Container terminal construction which is the main proposed facility, has been completed in 2003 with JBIC loan. The container is already exceeding its capacity due to much greater handling cargo volumes than expected (Present estimation from the first half, cargo volume in 2005 is estimated to reach 800 thousands TEU despite the JICA's estimation in a development study was 220 thousands TEU in 2005.) As a prioritized project, it could not estimate this explosive expansion due to the estimation of gradual increase of cargo volumes with gradual economic growth based on past experience. Therefore, the project does not establish a plan of large container terminals compatible with present growth despite the project recommends to expand terminals with approximately 1 million tons handling capacities in adjacent blank area as the second phase terminals.

(FY2006 Domestic and Overseas Survey)

Implemented Project: Second phase development of container terminals

Implementation period: April, 2006 - November, 2007 (Second phase) Implementing agency: Constantza Ports and Harbours Bureau

Objective: The completion of the second phase enables to handle estimated 1 million tons container cargo handling volume in 2006.

Relation to the mentioned study: Despite the project is in progress following the content of the report, the third phase development is necessary in order to handle 2010 estimated 2 million TEU due to much larger demands of container cargo than estimated in the report.

Funding body: Own fund (Dubai port)

Others: The Constantza Ports and Harbours Bureau and the Dubai Port concluded an agreement of land re-lease. The construction will begin in 2008 following detail design in 2007 with EUR 80 million own fund of the Dubai Port.

Progress: (FY 2006 Domestic and Overseas Survey) The Greek enterprise Mochlos SA Grecia accepted an order

(FY2007 Domestic and Overseas Survey)

Implemented project: Phase III container terminal improvement

Implementing period: 2008 - 2021 Implementing body: CSCT, DPW

Funding body: Private funds (FY2007 and FY2008 expense: 72 million EUR)

Purpose: By 2007, it became the biggest container hub port in the Black Sea with a transaction volume of 1.2million TEU. The terminal devised a comprehensive master plan aimed at developing the institution by 2021. Primary costs for the engineering work of the second phase project, such as quay cranes and gantry cranes for the yard, the secondary expenses were incorporated. For the construction, 520m of quay which makes the 1500m in total, and it will make the yard space dealing the transaction volume of 1.7million TEU.

2. Grain terminal construction

(FY2005 Domestic Survey) Handling volume of grains has been fluctuating about 4 million tons in these 3 years which are 4 times larger than 1 mil tons in 2000. Despite there are grain terminals in the north port and a part of PIER 1, most of cargo handlings are inefficient such as that many barge operation are done from depot ships in offing due to deficiency of capacity of terminals. CPPA prioritize the project based on an estimation of future cargo volume growth. EBRD did not approve a loan request together with berg terminal. The tender was malfunction at preparation of implementation process by mobilizing private resources. At the moment of 2005, tender is under an assessment regarding barge terminal constructions.

(FY2006 Domestic and Overseas Survey) There is a plan to change the pier 3 to a container terminal, and build a grain terminal on terminal 1. SILO Trans SRL (Romanian company) has submitted a building certification and from April next year, construction will be started with SILO Trans SRL's own funds.

(FY2007 Domestic Survey) Bidding for the maintenance work is currently in progress. There will be an expansion of 6 new deep berths and the area of 34ha for a special terminal after the completion of the work.

3. Barge terminal improvement

(FY2003 Domestic Survey) EBRD is reviewing the fund (application submitted around April 2003). However, the review of a scope/project expense, reviewing the economic assessment are necessary. The consulting company contracted by EBRD will be implementing CPA including the administrative control structure (Draft report will be completed by March next year). E/S operation is not included in the funding, so, it is necessary for CPA to budget for the consultant employment expense.

(FY2004 Domestic Survey) EBRD loan is used for the construction (20 million EUR), design work will be donated from the Dutch government. Construction will be started in FY2005.

(FY2005 Domestic Survey) Rating the bidding (2005).

(FY2006 Domestic and Overseas Survey)

Implementing project: Berg terminal development

Implementing period: July, 2006 - December, 2007 Implementing body: Constantza Ports and Harbours Bureau

Funding party: Romanian government (20%), EBRD (80%)

Contents: Berg mooring pier: 1200 - 1500m x -7.0m, Berth 99 - 101 pusher/ tug mooring pier, Depth of the sea -5.0m

Progress:

(FY2006 Domestic and Overseas Survey) 95% completed, work is expected to be completed in July, 2007.

(FY2007 Overseas Survey) Rest of the work proposed in the mentioned study will be completed in the Phase 3 of the project. However, funding has not been raised.

4. Harbor road improvement

(FY2002 Overseas Survey) Funding and a part of D/D are requested.

(FY2007 Overseas Survey) F/S of Constantza South Port (Road bridge over access canals in sea canal area, network roads in and out of the port), and improvement of the road bridge over Danube/Black sea canal in Constantza Port are implemented. The project is included in SOP-T(Sectorial Operational Programme for Transport) and solidarity funding and structure funding from Europe were requested.

5. Harbor railway improvement

Implemented project: Harbor railway improvement Implementing body: SC INSTITUTUL DE STUDII SI PROIECTARI CAI FERATE S.A.- BUCURESTI-ISPCF

Funding: Own fund Contents: Railroading construction to the Rail 3, Railroading construction to the Rail 6, Construction of railway connection point between Ferry Boat Station termination X in Constantza South Port and Ajijea South Station.

6. Other

(FY2006 Overseas survey) In May, 2004, Constantza Port development work and commercialization plan were implemented. Cargo volume is analyzed by Jacobs Gibb and implemented study in 1999 and 2002. JICA and Jacobs Gibb analyzed operation volume. Both analysis stated fluctuation of operation volume followed by trade development in a past decade as characteristics. Followed by renewal of operation volume estimation, consultants adopted 2 case scenarios, pessimistic scenario which takes various risks related to economic development estimation in Asia and Europe into account, and basic case scenario which almost follow JICA operation volume estimation. Work is halted for the integration of Iron/steel articles terminals and Timber terminal and road improvement is in progress. Construction of grain terminal is opposed to receive funding from the EU Structural Funds.

Description :

(FY 2000 Domestic Survey)

According to information from the Ministry of Environment, Slovakia, they are preparing to apply ISPA fund of the EU for some projects, and the Final Report of this Study is used for the preparation of the applications.

(FY 2001 Domestic Survey)

- 1.It seems that EU may provide more than 5 million Euro(provably 10 ~ 15 million Euro) to the drainage projects of mid-small sized in Hron River basin.
- 2.The DfID of England assists the establishment of the Clean Hron Association of Mayors.

(FY 2004 Domestic Survey)

No information.

(FY 2005 Domestic Study)

No request has been made for a Japanese assistance since 2003.

| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | <p>To formulate technical guidelines for suitable soil and water management, which is the priority subject of Slovak agriculture for the improvement of agricultural production both quantitatively and qualitatively, and to promote agricultural development in the Zahorska Lowland, which is considered as a priority development area.</p> <p>To carry out technical skill transfer to Slovak counterpart personnel, through on-the-job training, sufficient discussion and communication during the course of the Study.</p> | | |
| 7. CONSULTANT(S) | Pacific Consultants International | | |
| 8. STUDY PERIOD | Jun.2001 | ~ | Mar.2003 21month(s) |
| 9. SITE OR AREA | | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The case study was conducted with the purpose of reinforcing the Guidelines through detailed investigation and examination in a limited area and with the purpose of helping user's understanding by introducing ideal case of using the Guidelines. Two sites, i.e., Site-A, of which area is around 3,000 ha, in the Male Lezare and Velke Lezare villages and Site-B, of which area is around 400 ha, in the Gajary village were selected for the Study. Case Study of 1) Farmland management, 2) irrigation and drainage management and 3) Cultivation and farm management was formulated in the Case Study area.</p> <p>The biggest limitation factor to actually apply the farming technology proposed in the Guideline is improvement of the field irrigation machine parts by farmers in the region where irrigation is recommended. Therefore, the scenario was set by three cases according to the investment level to the field irrigation machine parts such as the reel hoses by the farmer.</p> <p>Scenario A: The irrigation agriculture expands to use all the irrigation systems which can be used to its maximum. Regional agriculture develops by a high profitability by which irrigation is assumed to be a base. In this scenario about 850 ha ca be irrigated. Main target crops when irrigation is used are vegetable, sun flower, and spring barley, if there is a surplus in the irrigation water, wheat, maize and alfalfa can be irrigated.</p> <p>Scenario B: This is set as the middle development level between scenario A and C. In this scenario about 400 ha is irrigated. Irrigation is executed to the vegetable and cash crops.</p> <p>Scenario C: This is set as a level of the existing irrigation machine parts or that which new machine parts is added on to it even if repairs be done if it is necessary. Irrigation is assumed to be limited to crops being irrigated now and the vegetable with the highest profitability, and there not be remarkable increase in an initial investment and the farming cost. About 180ha can be irrigated in this scenario.</p> <p>The following plans were formulated for each scenario.</p> <ol style="list-style-type: none"> 1. Farmland Management: Land Use Plan, Possible Crop Rotation, Soil Conservation, Water Management of Soil, and Soil fertility Management 2. Irrigation and Drainage Management: Irrigation Recovery Plan, Restoration of Irrigation Facilities, Irrigation Plan, Improvement of Field Irrigation, Improvement Plan of Drainage Management 3. Cultivation and Farm Management: Profitable and stable farm management through the combination of cultivation techniques according to the characteristic of farm field | | |

Description :

(FY 2003 Domestic Survey)

After July 1, 2003, "Water Management Enterprise, Branch Office Irrigation and Drainage" which was the counter part organization became an independent business body by administrative reformation.

The final report was distributed to the local government, the farmer, the government, the chamber, and the university, etc. The translation from English to the Slovakian word is now advanced

It is planned to do the agricultural development project in the Zahorska Lowland by the European capital in the cooperation of three countries of Czech Republic, Austria, and Slovakia, and the report will be used at this time.

Description :

(FY 2001 Domestic Survey)

After completion of the M/P, JICA dispatched a short-term expert.

(FY 2001 Overseas Survey)

Final Report was published and distributed to concerned organizations such as local organizations and science organizations.

(FY 2002 Overseas Survey)

Name of proposed project: Lubana Project

Period of Study: 2001-2002

Finance: Denmark (Ministry of Labor), Latvian State Budget

Amount of fund: 58,153 LVL

Contents: Sustainable Eco-tourism in the Lubana Wetland Complex by implementing the 21 concepts and supporting employment initiative.

(FY 2003 Overseas Survey)

-20 persons trained in construction of wooden facilities for eco-tourism purposes

-6 persons trained as nature guides

-2 bird watching towers built in Nagi and Graigalava parishes

-Boardwalk of 850 m built in Teirunnieki dog

- Information materials printed and information signs installed

-experience exchange with Jarva community in Estonia

(FY 2003 Overseas Survey)

In 2003 Lubana wetland complex was proposed to be included in the list of internationally important wetlands under Ramsar convention. Respective amendments to the Law on the Convention on Wetlands of International Importance especially as Waterfowl Habitat (Ramsar, February 2, 1971) were adopted on November 13, 2002. Ministry of Environment of Latvia is preparing the Information Sheet on Ramsar Wetlands to be sent to the Secretariat of the Ramsar Convention.

Name of Project: Management of the Lubana Wetland Complex, Latvia

Financing: EU LIFE Nature program

(FY 2004 Domestic survey)

1. Next step overseas survey

1) Natural wetland's water quality restoration management plan in Lubana Wetland (LWC).

This survey was implemented by the hydrology experts between 2003 December and June 2004. Funded by EU LIFE NATURE Program.

2) Maintenance planning of restoration of morphology, trimming of bush, /lawns on the basis of hydrology in LWC.

This survey was implemented between 2003 December and 2004 June. Implemented by two experts (herborists, ornithologists)

3) Improvement plan for habitat of aquatic birds and snipes.

This survey was implemented between 2003 December and 2004 by the experts (ornithologists).

2. Funding:

1) Receiving funds: Madona province assembly.

2) Financing: EU Life Nature (2003 October 28 treaty concluded)

3. Designing/Construction

1) A total maintenance plan in Lubana wetland in Latvia

- Construction started: 2004 June

- Construction completed 2004 September

- Details: Two nature supervision towers in LWC area

2) A total maintenance plan in Lubana wetland in Latvia

- Reconstruction of Aovoelste water gate (2005)

- Building information center (2005)

- Rebuilding of Kalnagala water gate (2006)

4. Technical cooperation: after 2001, no technical cooperation is received

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | Due to the capacity shortage of the existing sewage treatment plants, receiving water bodies in both Towns have already been polluted heavily. In Birzai Town, lake's water was polluted and it caused groundwater pollution due to the high permeable Karst Topography. While in Skuodas, river receiving the treated sewage is flowing down to the neighboring country, Latvia and it caused bilateral problem. The study was conducted to relieve these circumstances by improving the treatment plants. | | |

Description :

(FY 1999 Domestic Survey)

Both Towns needed the immediate project implementation to cope with the current water pollution. Due to the time constraints needed for various transactions in Japanese Assistance, Lithuanian Government has decided to receive the loan from Nordic Investment Bank (NIB). Reportedly, the transaction with NIB has started right after the completion of this F/S.

1. Birzai Waste Water Treatment Plant

Subsequent Study:

(FY 2001 Overseas Survey)

Implementation Period: 9 Mar. 2001 - 30 Sep. 2002

Study Type: Construction by FIDIC " Design & Build and Turnkey Project "

Difference with JICA's proposal: Maximum capacity reduced from 5,000 m³ /d to reduction in 3,300 m³/d due to reduction in water consumption and limited funds available .

Procurement of funds:

(FY 2001 Overseas Survey)

Source(s): NIB, State Grant

Pledged in: NIB loan / 9 Jun. 2000

State Grant / 20 Mar. 2001

Contents of the project to be funded: Construction works for Waste Water Treatment Plant , including construction supervision .

(FY 2002 Overseas Survey)

26 Sept., 2002 state inspection board signed accomplishment act and the plant was taken over by special purpose joint stock company ' Biruzai vandenys'.

Current capacity of the plant: 2000-2100 m³/day

The influent parameters are BOD₇, 500-800 mgO₂/l is much higher the standard.

2. Skuodas Waste Water Treatment Plant

Subsequent Study:

(FY 2001 Overseas Survey)

Implementation Period: 11 Jun. 2001 - 7 Nov. 2002

Study Type: Construction by FIDIC " Design & Build and Turnkey Project "

Procurement of funds:

(FY 2001 Overseas Survey)

Source(s): NIB, Finland grant , State Grant

Pledged in: NIB loan / 9 Jun. 2000

Finland grant / 10 May 2000

State Grant / 20 Mar. 2001

Contents of the project to be funded: Construction works for Waste Water Treatment Plant , including construction supervision .

Construction:

(FY 2002 Overseas Survey)

Period: Apr. 2001 - Apr.2003

Bidder: Lemminkainen Construction Ltd. (Finish company)

One of the construction, ' Soil and Water' is performed by the local consultants.

(FY 2008 Overseas Survey)

No information to be specifically mentioned.

| <p>Description :</p> <p>(FY 2003 Domestic Survey)</p> <p>The situations of the Government of Moldova(GOM) and the study area consisting of Soroca, Balti, Falesti and Riscani after the Study are described below.</p> <ul style="list-style-type: none"> - Apa-canal Soroca- Balti and electricity supplier of Red Nord of Moldova agreed upon under the assistance of GOM that the payment of previous unpaid electricity bill be suspended and that the repayment period for the present debt be extended. - The World Bank granted the soft loan of 2.5 million US\$ to the Soroca city for the rehabilitation and the expansion of the water supply networks. - The city of Falesti has been rehabilitating the sewerage and the water supply networks based on the JICA study report. - The villages along the Apa-canal Soroca- Balti water supply pipeline is trying to find the fund for the connection to the water supply pipeline. - Though the Balti water works raised the water tariff, improved water tariff collection system increased the collection rate. <p>As mentioned above, these municipalities in the Study area have currently made every effort to supply the quality water to the residents. Besides, GOM has requested GOJ through the Embassy in Ukraine to furnish GOM with grant-in-aid program for the ater supply system for the northern region in the republic of Moldova.</p> <p>(FY 2004 Domestic Survey)</p> <p>No information to be specifically mentioned.</p> <p>(FY 2004 Overseas Survey)</p> <p>Due to unfavourable condition, stable water supply has been disturbed, which daily distressing people in the target region. Sporadic water supply forces people to use water from the well. It has been indicated that water, either from deep well or shallow well, includes fluoride nitric acid, which is harmful to health. The Ministry of Health of Moldova recognises correlation between polluted water and high medical disorder rate. High rate of medical disorder observed in the target region is considered to be caused by drinking water from shallow wells.</p> <p>Japanese government is one of the major donors in assisting in improving social infrastructure in Moldova, which is also stimulating the economy. Japanese government is implementing assistance in various fields through the following project.</p> <ol style="list-style-type: none"> 1) Project for Improvement of Medical Equipment for Mother and Child Republican Hospital 2) Project for Improvement of Maternal and Child Care system in the Secon level hospital 3) KR Project 4) Instalment of sound equipment to Mihai Eminescu 5) Emergency assistance in natural disasters <p>Moldovan government considers Japanese assistance to be understanding and strategic, with contract to be implemented without delays. Thus, Moldovan government is seeking for a Japanese Grant Aid assistance in improving northern water supply system.</p> <p>(FY 2005 Domestic Survey)</p> <p>No information to be specifically mentioned.</p> <p>(FY 2006 Domestic Survey)</p> <ul style="list-style-type: none"> - "Request of Grant Aid for the Water Supply Plan of the Northern Area" was submitted to the Embassy of Japan in Ukraine in Jun. 2005. This is a second request as the request submitted in the following year after the completion of the subject study was not adopted. - In the northern 4 areas of the Republic of Moldova, the surface water which can be a water source is only 2 rivers flowing along the border of the country and only 1 river can be used as a water source in practice. A water supply plan to the area concerned by the improvement in the existing water purification plant and water pipe using the river considered by the study to have high potentialities as a water source is thus strongly requested. | | |

| 3. SECTOR | Social Infrastructure | / Urban Planning & Land Development | 4. TYPE OF STUDY M/P |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Department of Real Estate (DRE) Department of Spatial Planning (DSP) | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | (1) Development of spatial data infrastructure (2) Technology transfer : 1) Making of spatial data infrastructure, 2) GIS Application | | |
| 7. CONSULTANT(S) | KOKUSAI KOGYO CO., LTD. | | |
| 8. STUDY PERIOD | Feb.2007 | ~ Mar.2009 | 25month(s) |
| 9. SITE OR AREA | the entire country | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Development of spatial data infrastructure The aims are to make digital topographic maps on a scale of 1:25,000 for about 70% (approx. 10,000 km²) of the entire country and to develop a GIS database, and also to transfer the technologies for the creation of spatial data infrastructure in the course of the above-mentioned work.</p> <p>2. Output items 1) Aerial photographs : Film negatives (5 rolls), Digital data files of aerial photographs (1 set), Contact prints (1 set), Photographs enlarged by 1.6 times (1 set), Index map of aerial photographs (1 set), 2) Field survey results (1 set), 3) Aerial triangulation results (1 set), 4) Digital map data file (2 sets)</p> <p>3. Conclusions Montenegro is striving to become a tourism-oriented nation, and the nation is making efforts to develop and enhance the infrastructure along its coastlines, and the efforts are picking up speed currently. In order to establish a stable fiscal base, however, it is a prime task for Montenegro to develop its abundant natural environment in the northern mountainous region, where a UNESCO-designated World Natural Heritage site is located, while giving consideration to environmental conservation. In other words, it is important to develop tourism and the social infrastructure indispensable to attract tourists: roads, water and sewerage systems, power supply, and telecommunications. Also, DSP is the organization in charge of formulation of plans in this field in Montenegro. The spatial data infrastructure constructed in this study will play an important role in the planning process to achieve this goal. Color aerial photos covering the nation's entire area were converted into digital data as basic data to support the construction of the spatial data infrastructure, and these aerial photos can be utilized for various purposes. In this study, a digital elevation model (DEM) at intervals of 20m was also developed for the targeted area (70%), enabling DRE to produce orthophoto maps easily. In short, in addition to the digital topographic maps and GIS databases which are the output products of this study, different types of geographic information such as aerial photos and orthophoto maps have become available in Montenegro.</p> <p>These output products of this study developed in a digital format can also be arranged and converted into different forms of geographic information (changing contents and scales) and, in that sense DRE, as the nation's only organization that creates and provides maps, needs to respond appropriately to users who want to find geographic information most suitable to their purposes.</p> | | |

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2009 Domestic Survey)

During the Development Study period, because of the time limit, the activities were focused on the maintenance of the spatial database which was conducted for DRE. On the other hand, the technical transfer of the GIS utilization method for DSP; another Counter Part body which needs the widespread utilization of the spatial database, remained at an introductory level. Therefore, it was impossible to achieve satisfactory level of technical transfer within the Development Study.

In such a context, the request for the dispatch of the short time experts was submitted by the DSP around the same time as the end of the project. As a result, the technology transfer of the GIS will be implemented from the March of 2010 to around September of 2010 (for three months).

(FY2013 Domestic Survey)

Project for Proper Application of Geographic Information System (GIS) for Smooth Implementation of National Physical Plan and Capacity Development of Spatial Planning Technology

Implementing Period:2010/3-2011/3

Implementing Organization:Department of Spatial Planning and Development, Ministry of Economic Development

Cooperating Agency:JICA

Overall Goal: The GIS applied technology is used for the Spatial Planning decision in Montenegro.

Project Purpose:

1. To master of technique of making thematic map
2. To master of analysis for Spatial Planning technique.

Outputs:

1. Make a specification document for GIS data base.
2. Make an operating manual for spatial data conversion.

(FY2013 Overseas Survey)

Coastal Area Management Programme of Montenegro(CAMP)

Implementing Organization:Ministry of Sustainable Development and Tourism (MSDT)

Implementing Period:2012-2014

Project purposes

- i) To develop strategies and procedures for sustainable development in project area
- ii) To identify and apply relevant methodologies and tools
- iii) To contribute to the capacity building at local, national and regional levels
- iv) To secure a wider use of the results achieved in the region

Description :

Construction:

The recommendation of the study was fully adopted and the installation was completed in 1983.

This MST Cable which connects three countries took Japanese submarine cable system and was constructed by Japanese company.

Pechaburi (Thailand)-Songkhla (Thailand)

CS-12M, Japanese method (1,200 lines), 74% buried

Songkhla (Thailand)-Kuantan (Malaysia)-Katon (Singapore)

CS-5M, Japanese method (480 lines), 85% buried

Total cable length: 1,711km

After the implementation:

(FY 1994 Domestic Survey)

The telecommunication system has been operated in a good condition since the completion of it.

(FY 1995 Domestic Survey)

Operated in a good condition continuously.

| | Processing | Discontinued or Cancelled |

Description :

(FY 2003 Domestic Survey)

The proposed project of the study was implemented by grant aid of Japan and was completed in November 2002. A completion ceremony was implemented in December 2002. They plan to conduct a defect test in November 2003 when a year has passed after the completion of the bridge.

The Zimbabwean side newly established border facilities with their own funds, while the Zambian side uses existing facilities.

1. Construction of a Bridge

Funding:

(FY 1999 Domestic Survey)

March 16, 1999 E/N 36 million yen "Chirundu Bridge Construction Plan D/D" (Zambia)

March 24, 1999 E/N 36 million yen "Chirundu Bridge Construction Plan D/D" (Zimbabwe).

May 18, 1999 E/N 1,478 million yen "Chirundu Bridge Construction Plan" (Zambia).

June 11, 1999 E/N 1,478 million yen "Chirundu Bridge Construction Plan" (Zimbabwe)

Construction:

(FY 1999 Domestic Survey) (FY 2001 Domestic Survey)

Period of construction: February 2000-February 2003

Content of construction: Length of a bridge 400m, PH5 PH8 PC box section girder, Length of access roads 540m

Constructor: Kajima Corporation Co., Ltd.

Progress situation: Construction works are in progress as planned.

(FY 2003 Overseas Survey)

Period of construction: February 2000-October 2003 Completion of construction

(FY 2002 Overseas Survey)

Chirundu Bridge: They began to use it.

2. Construction of Border Facilities

(FY 2001 Domestic Survey) Both Zambia and Zimbabwe started construction works respectively. People to live in future border facilities areas started migration in the Zambian side. Also, constructor was determined and land development and road construction are in progress in the Zimbabwean side.

(FY 2007 Domestic Survey) Preparing border facilities of both sides has been delayed due to the shortage of fund. Border facilities are to be respectively constructed by Zambia and Zimbabwe.

1) Cargo terminal

(FY 2003 Overseas Survey by an Office in Zimbabwe)

A fund of Z\$2 billion was provided for the project, and it will be increased further in the future. They need a fund of Z\$54 billion by the completion. They have a policy to complete Phase I by the beginning of next year and start Phase II. The problem is that there is lack of foreign exchange for procuring fuels and import products such as machinery and electronic equipments.

Progress: Building: 80%, Construction works of runways for arrival: 63.5%, Construction works of runways for departure: 51%, Parking lot: 49.41%, Total: 65.89%

2) ZRA administrative division

(FY 2003 Overseas Survey by an Office in Zimbabwe) 85% of the total project was completed. The construction will be completed by the end of February 2004, taking the present progress situation into consideration. Only Z\$36.7 million is appropriated to the project, and there is no money left in the fund. We will make up the fund from housing expenses of Z\$75 million and revised budget of Z\$8 million and allocate them to the project.

3) ZIMRA apartment

(FY 2003 Overseas Survey by an Office in Zimbabwe)

Progress: Building: 100%, Construction of sewage: 100%, Parking lot: Uncompleted

4) Housing facilities for the Zimbabwean police will be constructed after the construction for administrative division.

Others:

(FY 1999 Domestic Survey)(FY 2007 Domestic Survey)

They held a seminar on bridge construction including the Chirundu Bridge Construction Plan in the capital of Zimbabwe, Harare in February 7-February 12, 2000. Bridge engineers in both Zimbabwe and Zambia participated in the seminar.

Background:

(FY 1998 Domestic Survey)(FY 2007 Domestic Survey)

F/S was finished in March 1998, and B/D was finished in September 1998.

We prepare for implementing D/D as of December 1998. E/N is planned to be implemented in the middle of December, and construction works will start in August 1999.

"Study for Proposed New Bridge over the Zambezi River at Chirundu Border Post" (July. 1998 to Nov. 1998)

Funding: Grant Aid cooperation (E/N concluded: 18th of May. 1999) amount: JPY 2,956,000,000

Description :

(FY 1999 Domestic Survey)
 The survey results were used as reference for the establishment of a new navigational route (expansion of the old route) in the Straits of Malacca and Singapore. Information on sunken vessels and shoals verified through the survey will be annotated on the new nautical chart to be produced to ensure safety in navigation. Each nation independently carries out the revision of their respective nautical charts.
 Using the results of this survey, a digital nautical chart will be produced with the joint cooperation of the three coastal nations. Digitizing the nautical chart is, however, expected to undergo some rough patches based on conditions observed at this period. The production of a digital chart requires constant data update. However, Indonesia and Malaysia are not fully equipped with the required technology, as well as the software for data update. The implementation of follow-up surveys was recommended to find ways to counteract this problem.

(FY 1999 Overseas Survey)
 The final updating of the electric navigation charts (ENCs) covering the Straits of Malacca and Singapore is being carried by the three littoral states. The updating will be completed by the end of Jan. 2000. From Feb.2000, the ENCs will be installed on Electronic Chart Display and Information System (ECDIS) for sea trials. Any feedback from the trials will be used to further improve the quality of the ENCs. The ENCs will be commercially released from July 2000 and sold through an agent to be appointed.

(FY 2001 Domestic Survey)
 The result of the Study was referred for the establishment of a new navigational route in the Straits of Malacca and Singapore. Moreover the revision of nautical charts was made nationally and the electric charts were completed and on sale.

(FY 2002 Overseas Survey)
 The Authority needs to research the data which concerns proposed project such as the number of marine accident, traffic volume, dangerous of the area and so forth.

(FY 2008 Domestic Survey)
 No information to be specifically mentioned.

| 10. MAJOR PROPOSED PROJECT(S) | <p>Common programs for Thailand/Lao PDR:</p> <p>1. Business Development Forum (USD 223,000/ year): Establishment of a forum which aims at implementing necessary cooperation and actions for industrial development of target areas with participation of private entrepreneur and government officers of Laos and Thailand. 2. Savannakhet Airport Utilization (USD3.48 million): Opening and sharing the existing Savannakhet Airport to both types of passengers from Laos which depart to Mukdahan, and passenger from Mukdahan. 3. Route 9 Joint Maintenance: The rout 9 in Laos is a part of the east-west cloister which connects Thailand and Laos. The Route 9 Joint Maintenance is an experiment to implement repairing and maintenance of the rout through an international cooperation.</p> <p>Programs for Thailand include:</p> <p>1. Integrated faming in rain-fed areas (USD 4,348 of initial investment): The plan attempts improving and stabilizing incomes of agricultural communities through raising yields by implementation of new farming methods. 2. Local Industry Platform (USD 1.27 million): The project aims to establish new supporting agencies aiming at development of regional indigenous industry.</p> <p>3. Human resource development a) Expansion of Rajamangala Institute, Kalasin (USD1.81 million): Course establishment project for engineer cultivation concentrating on IT. b) Establishment of new Rajabhat Institute, Mudahan (USD19.88 million): Establishing a new university for engineer cultivation in the region. 4. Mukdahan goods distribution and processing center (USD4.54 million): Establishing the Goods Distribution Center which can respond regional demands as well as promotes regional commodity distribution for the east-west cloister development.</p> <p>Programs for Lao PDR include:</p> <p>1. New village initiative (USD5.8 million for 10 years): New type of economic development projects in the area which attempt poverty reduction, regional development and income improvement of local inhabitants centering on development of indigenous industries and agriculture etc. 2. Primary education expansion and improvement program (USD12.8million): Project on new construction and renovation of elementary schools for primary education promotion. In this regard, the project proposes to parallel establishment of small farms with schools so that harvest income from farms enables to cover administrative and maintenance cost of schools. 3. Savannakhet agriculture college program (USD11.4million): The project aims to revive the school of agricultural technologies in Savannakhet in order to cultivate experts of agriculture. 4. Savannakhet technical school renovation program (USD6.9million): The project aims to expand and develop the school of technology in Savannakhet in order to cultivate broad range of industrial engineers. 5. Degraded NBCA Forest areas rehabilitation program: The project aims to conserve and improve forestry which environmentally destruction is ongoing.</p> | | |

Description :

(FY2002 Domestic Survey)

Both governments have admitted the significance of proposed projects; however, there have been some factors, delaying their implementation. On the other hand, the project of East-West Corridor has been promoted by the ADB; the proposed projects, especially formulated for Thai, seem to be simultaneously carried forward. Although Lao government has emphasized the projects, the targeted area has not been given priority. The government prioritizes firstly Venetian, its capital, and secondly the Southern area around Pakuse. Therefore, it requires considerable time to launch the projects.

(FY2003 Domestic Survey)

The progress is as follows.

Common in Thailand and Laos:

1. Businessperson Forum: the project, implemented by utilizing a part of funds provided by the Japanese government for ESCAP, has been made full use for business forum activities in support of ADB/ESCAP.
2. Savannakhet Airport Utilization: approval from the Immigration Bureaus of both nations, which is imperative for implementation of the project, will take long (three to five year period will be required before putting the project into effect).
3. Route 9 Joint Maintenance: it has become one of priority issues in the East-West Corridor Program under the support of ADB

Thailand:

1. Integrated Farming in Rain-fed Area: it became a prioritized program for the Thai government and each project has been implemented by related ministries.
2. Local Industry Platform: it has been used in the contents of small- to medium-sized businesses cluster program (Ministry of Technology) under the support of JICA.
3. Human Resource Development: it is expected to be positioned as an object of a private business under the current policy. However, actual privatization of the project requires further development of the regional economy.
4. Mukdahan Goods Distribution and Processing Center: it is expected to be positioned as an object of a private business under the current policy. However, actual privatization of the project requires further development of the regional economy.

Laos:

1. New Village Initiative: as soon as a donor provides support that can be systematically contributed to the revolving funds.
2. Primary Education Expansion and Improvement Program: it aims for implementation within one to two years as a part of formulation of an educational master plan.
3. Savannakhet Agricultural College Program: three to five year period will be required before put into effect.
4. Savannakhet Technical Rehabilitation School Program: three to five year periods will be required before put into effect.
5. Degraded NBCA Forest Rehabilitation Program: three to five year period will be required before put into effect.

(FY2003 Overseas Survey)

Thailand:

The Thai government incorporated "Mukdahan goods distribution and processing center project" into short-term project that will be implemented under ECS between Cambodia, Laos, Myanmar, and Thailand. IEAT is going to implement feasibility study and D/D in FY 2004.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Domestic Survey)

| 10. MAJOR PROPOSED PROJECT(S) | <p>As the objective of the study stipulates, the purpose of this study was to formulate business plan, therefore neither M/P nor F/S were carried out within the study. The proposed business plan was formulated based on the premise that the project would be lunched as a 3-year pilot project where number of borrower students are limited, and then implemented as a post pilot project expanding the project size in full scale. The outline of the proposed plan is as follows:</p> <p>In order to select responsible and reliable borrower students, screening should be on a recommendation basis by educational institutions. In order to keep lending loss risk low, the loan amount should not exceed repayment capacity of an overseas student which is clarified by the fact-finding survey as well as the project should implement fund collection via automatic debit transfer and livelihood support using consultants which have experience of overseas students supporting project. Development and implementation of information system is necessary for a credit management in order to reduce operative duty of UNU Financial Assistance Programme.</p> | | |

Description :
 (FY 2002 Domestic Survey)
 The form of financial assistance was transformed from originally intended Yen loan into capital injection as a result of the discussion between JBIC and UNU which was conducted during the study. Because of condensed scale of the project in association with the formational change, the contract of the project implementation was changed due to the result of the reconsideration of subjected study and implementation method. After the change of financial assistance formation, the UNU and Japan government deepened their consideration of credit schemes responding to difficulty of ending loss control and repayment capacity limit of self-funded overseas students which was clarified in the study.
 The transformed lending method which goes through universities was determined to be implemented privately as a pilot project as a result of shelved individual lending without a bond which was a condition in the study phase.

(FY 2003 Domestic Survey)
 Implemented project: Privately Financed Foreign Students Supporting Program (pilot programme)
 The consensus document which stipulated that JBIC invest for UNU trust fund established in Mar. 2003 was ratified. The Japanese ministry of Foreign Affair capitalize project operating budget.
 JBIC investment amount: Up to JPY 486 million
 Management and operation: UNU Financial Assistance Program
 Contents: A pilot project started in FY2003 as a loan project executed through a university. In addition to five universities participating in this project at present, more universities are expected to participate in the pilot project in the future.

(FY 2004 Domestic Survey)
 The project for self-funded overseas students was launched as a 3 years pilot project from 2003 followed by the result of the subjected study. On one hand, the project is funded by the JBIC and on the other hand, operation funds are covered by the Ministry of Foreign Affairs. The UNU Financial Assistance Program plays central role for project management and project implementation. The subjected project is implemented based on cooperation with universities. Regarding private universities, several universities already get involved to the pilot project. Currently, discussions with national universities which may cooperate to the subjected project are in progress regarding details.
 Beneficial impact: Beneficial impact is not evaluated because the project is in progress.

(FY2007 Domestic survey)
 The project was started in 2003 as a three-year pilot project as a result of the survey. The project targeted privately-financed overseas students were extended and is currently being implemented.
 Implemented project: Financial Assistance Program for Student from Developing Country (Extended)
 Implementing period: April, 2004 - March, 2008
 Implementing body: United Nations University Student Association
 Description: The loan for the pilot project was agreed through cooperating Universities. Cooperating universities are national or private university or junior college which approves the purpose and idea of Financial Assistance Program for Students from Developing Country, and exchanges contracts to give the loan of funds to a student studying abroad at their own expense. Cooperating universities have responsibility for recruiting and selecting the students for the loan entitlement, receive the repayment of the funding and monitoring. Therefore, for the pilot project, growth of the cooperating university numbers will be the key for success of the project.
 According to the web-site of the United Nations University, 26 Universities and four junior colleges participated in this project as cooperating Universities (15 November, 2007), and since the start of the project in March, 2003, scholarship fund has lent to 592 foreign students. However, direction of the project after ending the pilot project has not been officially given. (http://www.fap.hq.unu.edu/FAPS/u/fund_details.html)

Description :

(FY 2002 Domestic Survey)

1. Aimed at building cross border bridge linking Botswana, Zambia and Zimbabwe, the projects faces difficulty in raising funds from the beginning. More specifically, Zambia belongs to low income country, eligible for receiving grant aid, while Botswana, a middle income country, is not eligible.
2. Even though various alternative proposals were submitted, final decision has not been made, and the project is not to be implemented.
3. On the other hand, the government of Botswana has proposed to implement the project based on their own funds, and has requested Nippon Koei.,Ltd. who conducted F/S study, technical assistance to the project.

(FY 2002 Overseas Survey)

Additional studies including railway components, is stacked. The study will be implemented when Botswana and Zambia solve their boundary problem.

(FY 2003 Overseas Survey)

Botswana:

Although this project was added to the Ninth National Development Project, the Botswanan government is studying a plan to construct the bridge without the railway components because of its doubtful financial feasibility. In June 2003, the Botswanan government requested the Japanese government for financing on the occasion of implementing the auxiliary study on the project including the railway components, but the Japanese government responded that it is not prepared for financing on the study.

At present, the Botswanan government is in the process of determining the revenue resource for implementation of the project out of options including the Domestic Development Fund (DDF).

(FY 2004 Domestic Survey)

1. Funds request: Co finance with Buyers Credits (JBIC), and city bank
2. Request period: Application of an official loan has not been submitted but introducing of the initiatives anytime.
3. Other situations: The second presentation has been done for the both leaders of Zambia, and the Republic of Botswana in February 2004. Also, another presentation is planned in later dates.

(FY 2004 Overseas Survey)

1. Next step survey:

There is less possibility of which the nest step survey would be implemented. The Botswana government has been discussing the construction of a bridge without considering the railways because they had no secure statements that whether the possibilities of financial implementation would increase by the railways.

2. Funds raising, etc.

The Botswanan and the Zambian government management committee held a meeting in Lusaka Zambia in order to discuss about fundraising for the project and cooperation method of both countries in November 30 2004. The management committee arrived at an agreement of their directionality such as following the Public-Private sector Partnership (PPP) approach, detaching persons to potential donors in case PPP approach does not work efficiently. The management committee was agreed to hold a meeting in march 2005 to discuss the result of PPP approach, and its directionality. Currently, seeking for the potential investors for this project.

(FY 2005 Domestic Survey)

The project has a possibility to be implemented with BOT method after absolute resolution of boundary issues between Botswana and Zambia in case of a bridge without railways even though feasibility of the project has been quite small due to financial problem of Botswanan government.

(FY 2006 Domestic Survey)

AfDB determined their funding for the subjected bridge following their F/S implementation. Botswana, Zambia, and Zimbabwe which is rated by JBIC as an inappropriate lending outlet country formed a committee to discuss about the subjected bridge development plan.

(FY 2007 Domestic Survey)

As a F/S of shift from view of placing importance to north-south transportation maintenance in SADAC, to measure of placing importance to east-west corridor, conducted issues as follows. Conduct in objective of enhancement of intraregional transportation system that respond to development of African east- west corridor(Mozambique, Maputo, Beira ~ Namibia) in SACAC.

Implemented study : The SADAC North-South Transport Corridor Improvement Study, Consulting Services for the Proposed Kazungula Bridge Project and Boarder Facilities

Implementing period : from January, 2008 to December, 2008

Implementing body : Southern African Development Community Secretariat

Funding party : unknown

Condition : It is in procedure to select consultants. By the F/S of JICA, construction of the bridge itself is able to be conducted, but due to the restriction that Botswana is loan assistance targeted country and Zambia is grant aid assistance country for Japan, funding method had been a problem. In the conduction of Survey this time, it is expected that concrete funding method in international view would be suggested.

| | Discontinued or Cancelled |

Description :
 (FY 2004 Domestic Survey)
 Follow-up of formulating Water Utilization Program and hydro-meteorological monitoring including stream flow observation is strongly recommended, but it has not been realized yet.

(FY 2006 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Domestic Survey)
 Regarding the Water Utilization Program which was the main point of the study, the program was finished in the committee.

(FY 2008 Domestic Survey)
 Although the Ministry of Water Resources and Meteorology requested for a development study on "strengthening hydro-meteorological monitoring" for FY 2005, it has not yet been materialized. The ministry is still expecting the support from donors in this field. It is highly likely that it will request other donors such as Korea, ADB, and WB to provide assistance, in case Japan does not support it.
