| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2001 Domestic Survey) The request for grant aid has been made to implement the project at the model development site of 2,000ha.</p> <p>(FY 2001 Overseas Survey) A request for Japan's grant aid has been submitted to implement the proposed project. The situation of Dong Thap Muoi Area is still severe due to the yearly flood and inundation in which many residents were killed and lost their assets. Therefore, the government as well as the regional government and the residents strongly expect the realization of the proposed project. The implementation of the project will contribute significantly to improve the lifestyle of the area and to maintain a good relationship between Vietnam and Japan.</p> <p>(FY 2003 Overseas Survey) Request for a grant aid assistance has not been approved yet.</p> <p>(FY 2004 Domestic Survey) Although, a request for the Grant Aid has been submitted, it has not been implemented.</p> <p>(FY 2005 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Overseas Survey) All components of the proposed project were accepted by Vietnamese authorities. However, those projects were not implemented due to lack of financial resources. Vietnamese side has applied for a grant aid to GOJ to implement the proposed project in the F/S from 2001, though the request was not accepted.</p> <p>Subsequent Study (Project)</p> <ol style="list-style-type: none"> 1. Planning embankment system for early flood control 2. Detail planning for flood control in the Plain of Reds 3. Implementation of a permanent waste quality monitoring network in the Dong Thap Muoi area 4. Improving rice quality and marketing capacity <p>The Vietnamese government have conducted projects to realise the proposed projects. These projects are; 1) 60 inhabitants risen-bed area (approximately 100-300 households each) has been built in flood prone area of Coo Long Delta, which was the M/P target area, by the welfare program, 2) 150,000 ha of agricultural area has been transferred to higher benefit model, 3) 240km of provincial roads are upgraded, in which 128km belongs to M/P area (all bridges are temporary), 4) 224km of embankment is upgraded with 66million square metres of land, and 5) On-farm model has been adopted for changing agricultural schemes, such as shrimp with rice and fish with potato.</p> | | |

| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | <p>-To carry out necessary engineering and environmental surveys, to complete a detailed design and to prepare draft tender documents of the Project.</p> <p>- To construct the Red River Bridge (Thanh Tri Bridge) and Southern Section of Ring Road No.3 in Hanoi (approximately 13km).</p> | | |
| 7. CONSULTANT(S) | Pacific Consultants International | | |
| 8. STUDY PERIOD | Apr.1999 ~ Mar.2000 11month(s) ~ | | |
| 9. SITE OR AREA | Southern area of Hanoi City | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The results of the F/S indicate that the Project is technically sound and economically feasible. Taking into account the direct and enormous indirect benefits to regional development other than the quantitative savings in travel costs, the Project should be implemented at the earliest opportunity. Based on the above recommendation of the F/S, the D/D was conducted.</p> <p>This project (approximately 13km) consists of the construction of the Red River Bridge (Thanh Tri Bridge) and Southern Section of Ring Road No.3 in Hanoi which is a toll road.</p> <p>The Project was divided into 4 packages as follows:</p> <p>Package 1: Red River Bridge 3.2km Bridge (6-lanes) Package 2: Gia Lam Section 3.4km Toll Road (4-lane) Package 3: Thanh Tri Section 6.6km Toll Road (4-lanes) Package 4: Infrastructure in Resettlement area 120ha</p> <p>The structure consists of bridges, road structures, and embankments including 5 interchanges.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Background of the Study: (FY 2001 Domestic Survey)</p> <p>According to the request to implement the Project from the Government of Vietnam, JICA has conducted the following studies: - The Study on Traffic System in Northern Area (1994) - The Master Plan of Urban Transport for Hanoi City (1996) - The Feasibility Study on Thanh Tri Bridge and Southern Section of Hanoi Ring Road No.3 in Hanoi (1998) - The Detailed Design of the Red River Bridge (Thanh Tri Bridge) Construction Project (2000). Currently Hanoi City does not have enough capacity to absorb the increasing traffic volume flowing into the city. Also, it is concerned that the industrial areas developing in the suburbs will cause serious traffic congestion in the city in the near future. Therefore, the D/D of the ring road rehabilitation including new bridge construction was implemented in the Study.</p> <p>Finance: (FY 2001 Domestic Survey)</p> <p>While conducting D/D, the implementation plan was coordinated between both the governments of Japan and Vietnam. JBIC gave a pledge on the Japanese ODA loans for the Project. The Loan Agreement for the Project was concluded for a part of the total project cost. ("Red River Bridge Constructuin Project I" 10,000 mil.yen)</p> <p>(FY 2003 Overseas Survey)</p> <p>29. Marth 2000 L/A 10,000 mil.yen "Red River Bridge Constructuin Project I" 29. Marth 2002 L/A 14,863 mil.yen "Red River Bridge Constructuin Project II"</p> <p>Construction: (FY 2001 Domestic Survey)</p> <p>The Consultants were selected for the implementation stage of the Project in Dec. 2000. The review of the D/D and the preparation of Tender Documents were conducted by the Consultants between Jan. and May, 2001. Continuously, the PQ process for package I has been proceeding now. The schedule from now shall enter the Tender Stage after the selection of the applicants in the PQ process. It is forecasted in the current situation that the construction may start from the middle of 2002. (FY 2003 Overseas Survey)</p> <p>Selection of Supervision Consultant: Consulting Services Contract was signed on 26 August 2002 between PMU My Thau and the JV Nippon Koei Co.,Ltd. ChodaiCo.,Ltd. TEDI and TEDIS. Review Detailed Design Work: is now under way. (FY 2003 Domestic Survey)(FY 2003 Overseas Survey)</p> <p>Conditions of construction progress: PK1: November 28, 2002 - 72 months (as of end of September: 11.62%) PK2: October 2003 - 55 months PK3: Not yet started (15 months)</p> <p>(FY 2004 Domestic Survey)</p> <p>No information to be specifically mentioned.</p> <p>(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)</p> <p>Subsequent Study: Red River Bridge (Thanh Tri Bridge) Construction Project</p> <p>Funding: Funding party: Japanese government Yen Loans Loan Agreement (I) No. VN VII-4 dated 29 March 2000, Loan Agreement (II) No. VN LX-5 dated 29 March 2002, Loan Agreement (III) No. VN XI-5 dated 31 March 2004</p> <p>Management/operational body after construction: Vietnam Road Administration (under jurisdiction of the Ministry of Transport)</p> <p>Description: - Thanh Tri Bridge (3km bridge, paving, facilities, shore protection, riverbed protection), - Installed roads (bridge, interchange, risen bed, vulnerability measures, paving, facilities), - Construction of resettlement location PK1: Thanh Tri Bridge PK2: Gia Lam Section PK3: Thanh Tri Section PK3 A: Extension of Phap Van Viaduct PK4: Resettlement Site PK6: Second Phu Dong Bridge</p> <p>Design and construction period: PK1: 2002/Nov/28-2006/Sep/30 PK2: 2005/Mar28-2008/Mar/27 PK3: 2005/Mar/24-2008/Mar/23</p> <p>Progress: PK1: 76.6% PK2: 3.5% PK3: 7.5% PK3A: Designing is in progress PK6: Designing is in progress</p> <p>Contract of the Thanh Tri Bridge (PK1) is till end of November 2006, though it is planning to complete the construction till the end August 2006 according to a request made to shorten construction period.</p> <p>Part of site acquisition for the Thanh Tri Bridge road (PK3) has not been completed, which may affect progress of the PK3. Two additional package has been approved, which are now under D/D (as noted below). Tender is planned around next autumn.</p> <p>Technical Cooperation: Seminars: 1) Seminars on new technology, 2) Monthly technical discussion with local technicians.</p> <p>Others: Subsequent studies: 1) Feasibility Study on PK6, 2) Extension survey on PK3A</p> | | |

| Description : | | |
| <p>(FY 2002 Domestic Survey) Though the government intends to implement some of urban drainage system project with the fund from the World Bank, they are preparing to request the Yen Loan for the rest of the project.</p> <p>(FY 2003 Domestic and Overseas Survey) In June 2003, the Haiphong People's Committee requested MPI for request of yen loan with a long list. Since the Haiphong City Infrastructure Improvement (a part of the city drainage project proposed in this study) is funded by IDA started in August 2003, there is a possibility that the construction of sewage treatment plants is included as the target of JBIC loan.</p> <p>(FY 2004 Domestic Survey) Newly requesting for a Yen loan. Requested date: September, 2004 In October 2004, appraisal study was conducted by JBIC.</p> <p>(FY 2004 Overseas Survey) Implemented project: Drainage and waste disposal project for Haiphong City, Phase I Implementing period: 2004-2010 Maintenance and operational body: Haiphong UREN Co. SAD Co. Objectives: To prepare a comprehensives environmental management plan for efficient and effective management skills. Funding: Funding party: Yen loan L/A concluded 2005/3/31 (No. VNXII-4) Amount: JPY 1,517 million Status: After the completion of JICA study in July 2001, in the end of 2003, and in early 2004, Haiphong City has appointed a consultant to conduct pre-F/S, F/S, EIA, resettlement plan and preparation of documents for JBIC loan procedures, which is planned to be signed in March 2005. City Alliance considered funding USD 250,000 grant for technical assistance in solid waste management and treatment, as well as dispatching an audit team to introduce or promote capacity building of solid waste recovery, management, transport, treatment and landfill operation.</p> <p>(FY 2005 Overseas Survey) Procedures for approval is in progress according to the Vietnamese Law. JBIC has supported and supplied a guidance to Haiphong city to request a grant from the Cities Alliance (C/A), which has submitted a request to C/A, JBIC, and UNEP till 11/2005. As a result, C/A, UNEP, and Haiphong City will procure the amount below: C/A: USD 639,000 UNEP: USD 54,000 Haiphong City: USD 174,000</p> <p>(FY 2006 Domestic and Overseas Survey) Implemented project: "Sanitation Improvement Plan for Haiphong City" Funding: Funding party: Yen loan (L/A: March 31, 2003) Amount: JPY 1,517 million Implementing body: Haiphong Sanitation and Environment Improvement Project Phase I Implementing period: 2009-2013 Objective: Improve living environment in Haiphong City by water quality improvement, flood prevention, and solid waste management. Contents: The project consists of management of sewage water, drainage water, and solid waste. Progress: Sewage water: Bidding documents were approved by JBIC in September 2006. Selecting consultants for detailed design. Drainage water: Bidding documents were approved by JBIC in September 2006. Selecting consultants for detailed design</p> <p>(FY 2007 Domestic Survey) The Haiphong City Council has supported preparation of D/D and tender for the Haiphong Sanitation and Environment Improvement Project (2007.6-2009.2)</p> | | |

| <p>Description :</p> <p>Funding: (FY 2002 Domestic Survey) March 30, 2001, L/A JPY 8.2 billion The Ministry of Construction of Viet Nam conducted the evaluation of the final report submitted by JICA in June 2001 and completed the evaluation in October 2002. Subsequently, PMU started the procedure for obtaining an approval of the detailed design from People's Committee of Ho Chi Minh City. Meanwhile, the Government of Viet Nam and Japan Bank International Cooperation have signed the Loan Agreement (L/A) for the Phase I project on March 30, 2001. PMU and People's Committee of Ho Chi Minh City selected Pacific Consultants International as the consultant for construction supervision service in May 2002.</p> <p>Construction: (FY 2002 Domestic Survey) PCI started a review work of the JICA D/D as the 1st stage of the service in June 2002 and completed the work on October 2002. Procedure for obtaining an approval of bidding documents by JBIC was started and the pre-qualification document for Package E (Wastewater Treatment Plant Construction) was approved by JBIC in November 2002 and was officially announced to the public. - The bid tendering for the construction is scheduled to commence in 2003.</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Domestic Survey)(FY 2005 Overseas Survey)(FY 2006 Domestic Survey) Subsequent study: Ho Chi Minh city water environment improvement project Funding party: Yen Loan (L/A: March 30, 2001, March 31, 2003) Amount: JPY 23,994 million Content: Construction works are divided into 5 packages below: Package A: Tau Hu-Ben Nghe Water Channel Rehabilitation Package B: Water pump drainage improvement Package C: Construction of intercepting sewer and pump station, and procurement of underground water pipe cleaning equipments Package D: Construction of distribution pipeline and improvement of combined pipeline. Package E: Construction of water sewage treatment site. Implementation Body: VIWAE Implementing period: Package A: 2005/Dec Package B: 2005/Dec Package C: 2005/Feb Package D: 2006/Jul Package E: 2004/Nov Tender: Package A: Toa Package B: Toa Package C: Nishimatsu Construction Co., Ebara, Shimizu Construction JV Package D: Toa, Shimizu JV (Shimizu JV has priced the lowest, though exceeding maximum price set by MOC) Package E: Nishimatsu, Ebara, Shimizu JV Progress: (FY 2005 Domestic and Overseas Survey) The result of tender for Package A and B and are in negotiation. Construction planned for Dec 2005. (FY 2006 Domestic Survey) Tender is completed for other packages.</p> <p>(FY 2006 Overseas Survey) (FY 2007 Domestic Survey) Implementing project: Ho Chi Minh city water environment improvement project Phase II Implementing period: June 2009 Funding: Funding party: Yen Loan (L/A: March 29, 2006) Amount: JPY 1,557 million Progress: Under bidding(FY 2006 Overseas Survey)</p> <p>(FY 2007 Domestic Survey) Subsequent study: Ho Chi Minh city water environment improvement project Phase II Tender: Package C: Nishimatsu Construction Co., Ebara, Shimizu Construction JV Package E: Nishimatsu Construction Co., Ebara, Shimizu Construction JV</p> | | |

Description :
(FY 2003 Domestic Survey)
November, 2003 Appraisal Mission by JBIC

(FY 2003 Overseas Survey)
Appraisal Mission of JBIC has working visit to Vietnam in November 2003. After series of discussion, following items is agreed:
(1) It was agreed that total investment cost of Thi Vai Cai Mep International Port Development is about 328.652 million USD. Vietnamese side strongly wishes that Consulting Services Cost of Detailed Design Stage will be granted by JICA and 85% of the total investment cost less Detailed Design Cost (construction cost) will be funded by JBIC Loan. The remaining cost will be financed by the Government.
(2) The implementation is drawn up in two options:
(a) Option 1: JICA will implement the Detailed Design from early 2004 and the Loan Agreement will be concluded in March 2005.
(b) Option 2: JICA will implement the Detailed Design from January 2005 and the Loan Agreement will be concluded in March 2006.
As forecast, the cargo volume throughput in Baria- Vungtau port system (mainly are ports in Thi Vai River) in 2010 includes 1.1 million TEUs for container and 5.96 million tons for general cargoes, respectively. To meet the mentioned demand forecast, simultaneous operation of two container terminals and two general cargo terminals should be started in 2010. Therefore, Vietnamese side strongly proposed that commencement of detail design should be in early 2004 and the conclusion on Loan Agreement should be done in March 2005.

(FY 2004 Domestic Survey)
1. Subsequent studies: from August 2004, "Detailed Design Study of CAI MEP-THI VAI International Terminals" Coordination D/D in progress
2. Funding request:
1) Requested party: JBIC
2) Requested period: 2003
3) Implementation status: L/A concluded in 2005, affectation planned, planned to be constructed from 2007

(FY 2005 Domestic Survey)
Subsequent study: Detailed Design Study of CAI MEP-THI VAI International Terminals (coordinated D/D)
Implementing period: August 2004-January 2006
Implementing body: JICA
Objective: To conduct D/D in coordination with the CAI-MEP-THI VAI port development project planned to be implemented with Yen Loan from JBIC. In addition, to conduct technical transfer on D/D, construction, and management of port facilities to PMU85 and VIINAMARINE, the C/P.
Relation with the study: Based on the result of F/S, Vietnamese government has requested the Japanese government for a loan to develop container berth (2 berths) in Cai Mep and to general cargo berth (2 berth) in Thi Vai together with the request conduct a study requiring high order technical skills and promptness. As a response, JBIC and Vietnam discussed and basically agreed on port maintenance policy mentioned in the Minutes of Discussion in November 2003.
Funding:
Funding party: Yen Loans (L/A concluded on 31 March 2005) 85%, Government of Vietnam 15%
Amount: 36,364 million JPY
Contents:
1)Cai Mep international container terminal
(1) Quays (2 berths, 14m depth, 600m long) and Wharfs
(2) Terminal (Approximately 43ha)
(3) Access road (Including bridges)
2) Thi Vai international terminal
(1) Quays (2 berths, 14m depth, 600m long) and Wharfs
(2) Terminal (Approximately 21ha)
(3) Access road
3) Dredge of passage
(1) Passage of 14m depth (Downstream of Cai Mep container terminal)
(2) Passage of 12m depth (Cai Mep container terminal-Thi Vai container terminal)
4) Construction (Control tower etc.)
5) Loading machinery etc. (Gantry cranes, multi-purpose cranes, Jib cranes, VTS system, and etc .)
Status:
The progress report II of the coordinated D/D was submitted to the Vietnamese side in mid October. Following the result of the report, draft final report is to be submitted in mid December. The final report is to be submitted in January 2006 after a discussion. P/Q, selection of bidders, tender, selection of constructor, and contract is planned in 2006. Construction will commence from 2007.

(FY 2006 Domestic Survey)(FY 2006 Overseas Survey)
Currently preparing for P/Q and etc after submission of the final report.

(FY 2007 Domestic Survey)
After the completion of D/D study by JICA, bidding for both projects (Cai Mep - Thi Vai international terminals development and, Thi Vai international container terminal development) were implemented. Currently, bidding evaluation is carried out by the government and the successful tenderer has not been announced. Japan Port Consultants Co., Ltd. implements the consultation service of Cai Mep Thi Vai Port Development service.

Description :
(FY 2003 Domestic Survey)
No information on concrete actions because the survey was conducted shortly after the study had been completed.

(FY 2003 Domestic Survey)
Based on the Feasibility Study report by JICA, the Feasibility Study on the Red river Waterways Improvement in the Segment through Hanoi following Vietnamese procedures and Environment Impact Assessment as required by JBIC were completed.
Being aware of the importance and urgent ness of this project in terms of waterway transport development and the implementation of this project is a basic conditions for Hanoi city development as this river segment runs thought Hanoi center in near future, PMU-Waterways,thought the Ministry of Transport and the Ministry of Planning and Investment, has also requested JICA for Detailed Design, as an speed up the project to meet the requirement.

(FY 2004 Domestic Survey)
Currently, priorities of the request from Vietnam are placed on road, bridge, railroad, and port projects, thus probability of project implementation is low.

(FY 2004 Overseas Survey)
Based on M/P and F/S report "The Feasibility Study on the Red River Waterway Improvement in Hanoi Area", request from JBIC to Vietnam on the following process were executed. In addition, Environment Impact Assessment (EIA) was conducted. EIA was reviewed and approved by the Ministry of Natural Resources and Environment (MONRE), and has been submitted to JBIC. PMU-water way has prepared examination papers as mentioned in JBIC request.
Funding:
1) 2003: PMU-Waterway has requested JICA for a Grant Aid for D/D through the Ministry of Transport and the Ministry of Planning and Investment (MPI).
2) 2004: Instead of the Vietnam government, MPI has submitted a diplomatic document to Japan requesting for a Grant Aid.
3) Currently, project approval is anticipated to be made by Japanese government through JICA or JBIC in fiscal year 2005. Application for the ODA by the Vietnamese government will continue in the future. Cooperation from JICA is anticipated.

(FY 2005 Domestic Survey)
The project has been short-listed for a Yen Loan in the Ministry of Transport, and is under consideration in JBIC.

(FY 2005 Overseas Survey)
The Ministry of Transport (MOT) had submitted F/S to the government of Vietnam for an approval of the investment. Ministry of Planning and Investment (MPI) had arranged a meeting for project adoption on 11th November, 2005 participated by representatives from Hanoi People Committee and related ministries. The project was strongly supported by Hanoi People Committee, which MPI has proposed to the government for an approval. As a result, MPI on behalf of the Vietnamese government enlisted the project on the short-list and had included the project in a diplomatic letter of 1st August 2005 to the Japanese government (through Japanese Embassy) for preferred credit.

(FY 2006 Domestic Survey)
Even though that the region have enjoyed remarkable economic development, road transportation infrastructure environment has not necessary improved. Demand for inland water transportation is high, which can be considered to have high possibility of implementing subsequent projects.

(FY2007 Domestic Survey)
No information to be specifically mentioned.

(FY2007 Overseas Survey)
Vietnamese consultant updated the outcome of the mentioned study such as the Red River Bridge with the consideration of changing value.
Subsequent study: F/S of Northern Delta Transport Development Project (NDTDP)
Implementing period: July, 2007 - March, 2008
Implementing body: PMU-Waterways
Objective: F/S will be carried out with Vietnamese domestic law and standard to learn whether NDTDP is appropriate to be evaluated from the World Bank. The study is constructed with the analysis of technology, economy, finance, environment and society and preparatory work project of selected implementing project. Terms of reference of detailed design, site managing and other technical cooperation proposed by NDTDP will be prepared.
Contents:
A) Construction on three main channel corridors.
A1) Through Duong River (Quang Ninh-VietTri), A2) Through Ruoc River (Quang Ninh-Nimbi), A3) Through Lach Giang river mouth (Hanoi-sea)
B) Construction of 10 to 15 river ports and a bridge over three main channel corridors.
C) Construction of 15 to 30 small scale ferry pier crossings on the three main channel corridors.
D) Support to the inland waterway divisions and transport departments of 15 states effected by the project.
Relation to the mentioned study: Channel between the Red River and Hanoi proposed in the mentioned study is included in A1 and A2 listed above.
Progress:
(FY2007 Overseas survey) Plan listed below is agreed by the Vietnamese government and the World Bank.
April, 2008: Approval by the Vietnamese government
June, 2008: Credit agreement negotiation (May, 2008), Submission to the World Bank administrative board
June/July, 2008: Sign to the credit agreement

| 8. STUDY PERIOD | Nov.2000 ~ Mar.2002 16month(s) ~ | | |
| 9. SITE OR AREA | M/P: 41 Water Supply Systems in 20 Communes in Kon Tom, Gia Lai and Dac Lac Provinces. F/S: 21 Water Supply Systems in 20 Communes in the same area above. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>M/P: Among 46 Water Supply Systems in 20 communes, 21 systems were selected as priority projects to be implemented in 1st stage considering various aspects such as economy, poverty, and care for ethnic minorities. The proposed Water supply systems consist of; 1) pumping system of ground water, 2) piped-water delivery system, and 3) public water taps. As for the rest of 25 systems, it was decided to be implemented in the Phase 2 project.</p> <p>F/S: Total Estimated Cost 13,717 USD Further prioritization was made for the selected 21 systems in 20 communes. As a result of the F/S, it turned out that all the 21 systems showed negative values in FIRR, and only 10 systems showed positive values in EIRR. However, it was confirmed that 21 systems were feasible as a result of comprehensive evaluation covering facility management, organization management and difficulties in taking environmental efforts. A 4-step-wise implementation was proposed based on the maturity of communes and others.</p> <p>Implementation Period 1) 2002-2004 2) 2004-2006 3) 2006-2008 4) 2008-2010</p> | | |

Description :

1. Water Resources Development and Management Plan for 14 Major River Basins

(FY 2004 Overseas Survey)

The Cua Dat Dam and the Nuoc Trong Dam have been constructed by the Government of Vietnam.

2. Integrated River Basin Management Plan for Huong River Basin

1) Ta Trach Reservoir Project

(FY 2004 Overseas Survey)

The Viet Nam government has decided to conduct a study for Ta Trach multi purpose dam construction which prepared a plan to secure a fund from Japanese ODA in 2007. However, on 26th January, 2005, to prevent flooding of Huong river, residents' committee of Thua Thien Hue region have proposed MARD to procure fund from international organization.

(FY 2005 Domestic Survey)

Vietnamese government requested for a F/S of Ta Trach multi purpose dam construction to Japanese government in 2004, while showing intension to implement the project with JBIC fund in the future.

(FY 2007 Domestic Survey)

Based on the above request, JBIC have conducted the following SAPROF; "Ta Trach Multi Purpose Dam Construction Formation Study Phase 1" (2002) and "Ta Trach Multi Purpose Dam Construction Formation Study Phase 2" (2004). No issue was identified in the Phase 1 study through geological study and needs assessment, which have confirmed that the dam construction was still a convincing option although additional study is required for option assessment. In Phase 2, project will be formulated through considerations for more comprehensive alternative plan by sharing information of environment assessment, case study of dam construction, and water utilisation plan of the project with the residents.

However, the Viet Nam government have changed its policy to implement the project with their funds, thus request for the Japanese F/S has been withdrawn. The Viet Nam government is planning to complete the project in 2011.

Implemented project: Ta Trach reservoir

Implementing body: HECI

Implementing period: 2005 to 2011

Funding:

Funding party: Own fund

Progress:

(FY 2007 Domestic Survey)

- Transfer of residents have completed smoothly with additional fund financed for construction of residences and infrastructure.
- However, some residents have shown dissatisfaction due to difficulty met in proceeding livelihood restoration program
- Progress for access road and construction yard except for the main engineering work are progressing at satisfactory level, which are to be completed in 2008.
- Delays in dam construction is due to time spent in change of design of the dam, increase in project cost, difficulty in procuring construction fund, and etc.
- The main construction will commence in 2008 and is planned to be completed in 2013, although there is a possibility for further delay if fund is not procured.

2) Huu Trach Reservoir Project

(FY 2007 Domestic Survey)

While the hydropower dam will be completed by investment of EVN, the plan is lagged and will be scaled back.

3) Other projects

Construction of the Cobi Dam will be completed by 2011 by EVN investment but the project is still in planning phase.

The project of constructing Taulon dam was completed in May 2007.

(FY 2008 Overseas Survey)

The project is still in the planning phase though the Co Bi Dam construction was intended finish by 2011 with the investment Electricity of Vietnam.

The project for improvement of Nam Huong Tra irrigation system by the Asian Development Bank loan is in the process of bidding.

3. Integrated River Basin Management Plan for Kone River Basin

1) Dinh Binh Multipurpose Reservoir

(FY 2004 Overseas Survey)

Subsequent project: Dinh Binh reservoir

MARD confirmed the technical plan, and part of the construction is conducted by budget of the central government.

(FY 2008 Overseas Survey)

The MARD/Ministry of Agriculture and Rural Development confirmed the technical plan. A part of the construction is conducted by the budget of the central government. The construction works will be completed in Sep.2009.

2) Agricultural Development Plan: (FY 2004 Overseas Survey)

(1) Van Phong Weir

(FY 2004 Overseas Survey)

MARD decided to implement a Feasibility Study.

(FY 2008 Overseas Survey)

The MARD decided to implement a Feasibility Study.

The construction works will be started in Sep. 2009.

(2) Irrigation and Drainage Plan

F/S for construction projects, including Drainage Project for Central Area: ADB4 have completed, and acknowledged by MARD. Each projects are as follows, 1) La Tinh river basin project; 2) Thuan Phong river basin irrigation and drainage system, Thuan Ninh dam, 3) F/S have not been conducted for flood prevention for Kon river basin project basin

| 10. MAJOR PROPOSED PROJECT(S) | <p>For the Phase I of the program, it was proposed to adopt and promote the project consisting of following components.</p> <ul style="list-style-type: none"> - "B. Capacity building for the Department of Education and Training" targeted at the department and its subordinate institutes. - "C. Capacity building for local educational administration" targeted at local educational administration organizations - "D. Trainings (and reeducation) for teachers" for teachers colleges - "E. School-based assistance (modeling scheme of full-time elementary schools)" for elementary schools <p>The draft proposal was revised and examined further on the following points after launching the Phase 2.</p> <ul style="list-style-type: none"> - Examination of the priority of proposed sub-components: The priority of components was re-examined based on a comment that components should be prioritized. As a result, it was agreed that all the components were equally important and therefore it was desirable to implement them at the same time. It was considered that each component was closely linked to one another and thus taking a comprehensive approach could bring about more fruitful benefits while keeping the experimental feature of the project. - Revision of part of the proposed sub-components: The component on supporting the introduction of new curriculum was partly revised. The component on the development of school meal facilities was added. | | |

Description :

(2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

Following are results of the Project:

- Established National Primary Education Development Program (PEDP). The PEDP was used in forming Education for all (EFA) plan and was referred to when forming central level and local level plans. Participatory Approach applied in the project for establishing provincial PEDP is utilized not only in establishing plans but also in teachers training, teaching method, and etc.

- Suggestions: In order to make the Project be sustainable, it necessary to assist provinces which have low capacity or which are newly established in forming their provincial PEDP.

(FY 2005 Domestic Survey)(FY 2007 Domestic Survey)

Implemented project: Strengthening cluster-based teacher training and school management in Vietnam Phase I

Implementing period: sep/2004 - Aug/2007

Implementing body: DOET

Objectives: The project will place 3 training systems as an output: 1) School management skills improvement program for teachers ; 2) School management skills improvement program for head teacher ; 3) Planning and management skills improvement program for regional education official

Funding:

Funding amount: 300 million JPY

Funding party: Grant Aid Cooperation Project (E/N signed: unknown)

Technical cooperation:

Training: 133 rectors and 133 teachers from Bac Giang and 15 officials from DOET and BOET

Dispatch of experts: 1. Team leader, 2. Planning and training, 3. School management/small-scale planning, 5. Monitoring and evaluation

Other cooperation: equipment (textbooks, laboratories, audio and visual), field-work (training, seminars and workshop), internship programs.

Beneficiaries: project site: 3 - 5 provinces in Bac Giang, target: Ministry of Education and Training, Bureau of Education and Training in Bac Giang, Departments of Education and Training in the provinces (apx. 50 personnel), teachers (apx. 4,000), principles and sub-principles in primary schools of the provinces (apx. 600).

Benefits: Experts from JICA has been requested by the director of Bac Giang DOET to expand its cooperation to other areas of Bac Giang province. Corresponding to the request, the project has partially begun implementation in the area. Central Working Group has acknowledged the strong relation between central and regional educational institution, which has given an opportunity to diffuse outcome of the project to institutions in Bac Giang province.

(FY 2008 Overseas Survey)

Utilization of the project result

- 100% of primary schools in Bac Giang province have applied the new teaching method gained from the project.

- The relationship between teachers, pupils, teachers and education managers, and teachers and pupils have gradually improved.

- Schools took the first step to JICA's method of organizing professional teacher's meeting.

- Pupils became more positive and active in studying; learning environment was improved so that pupils (and teachers) became interested in class and settle down to study; therefore, effectiveness of class became considerably high.

- At present, junior high schools and senior high schools in Bac Giang have been requested by DOET to apply the new teaching method that gained from JICA project.

- The most highly appreciated output of the Bac Giang project is the new method of organizing professional teacher's meeting, through which teachers could improve their own profession right at their schools. This kind of activity has been disseminated throughout Bac Giang province and has achieved very good result.

| 8. STUDY PERIOD | Aug.2002 ~ Jun.2004 22month(s) ~ | | |
| 9. SITE OR AREA | 5,076 square km, comprising Ho Chin Ming city and part of surrounding 3 provinces (Dong Nai, Bing Duong, Long An) with 7.5 million populations including 3.53 million urban residents. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>M/P:</p> <p>1. Road projects: 1) primary road (15 packages (38 routes), total 382 km) 2) secondary road (16 packages, total 757 km), 3) urban highway (7 zones, total 46 km), and 4) overpass (58)</p> <p>2. Traffic management system projects: 1) traffic management capacity building (training, traffic control equipment, etc., 2) CBD traffic management traffic lights, parking lots, underground passages, pedestrian roads, etc., and 3) bus corridor management (small-scale improvement, bus facility, etc.)</p> <p>3. Public transportation service: 1) urban transport (5 routes, total 97 km), 2) bus way (3 routes, total 57 km), 3) bus system modernization (compartment, assistance, etc.), 4) public traffic terminal (UMRT, intercity bus terminals, and 5) urban water-borne traffic (terminals, water-buses, etc.)</p> <p>4. Traffic environment projects: 1) district traffic improvement (traffic management, feeder road transport, etc.), 2) green network (roadside trees, open street, pedestrian mall, etc.), 3) air pollution improvement (vehicle inspection, monitoring equipment, etc.), and 4) traffic safety improvement (safety facility improvement, campaigns, etc.)</p> <p>F/S:</p> <p>1. Ring road No.2: To develop Ring road No.2 as a complete road and as well as to establish a core area to induce sound urban development by developing the road together with alongside city areas. To do so, a comprehensive development plan has been proposed, considering the following sub-components; a) construction of eastern section (23.5 km, including Phu My Bridge), b) expansion of south-west section (5.0 km, including Phu Dinh Bridge, c) flyover throughout No.2 (total 11 sites)</p> <p>2. UMRT No.1: To develop efficient public transportation corridors in the highly prioritized east zone of UMRT No.1 and the 28-kilometer urban axis from Binh Tay in the center of Ho Chi Minh City to a satellite city in eastern area, Bien Hoa, by linking them with urban transport and buses which can be rapid and mass transit on demand. a) urban railway (underground, 1.8 km) , b) urban railway (overhead, 7.5 km), c) urban railway (ground, 4.4 km), and d) bus way (14.5 km)</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description : (FY 2005 Domestic Survey) Subsequent study: Ho Ting Minh UMRT No.1 eastern section construction plan Implementing body: Ministry of Economy, Trade, and Industry Objective: Depth analysis by JARTS, based on HOUTRANS F/S report due to alteration made to the design of new bridge construction (Tu Tiem bridge). Estimate of the project cost has increased to 625.9 million USD based on revision of lines, detailed budgeting, and survey on resettlement target occupants. In addition, EIRR and FIRR have been recalculated, which were estimated to be 19.3% and 10.9% respectively. Status: Prospecting to proceed Yen loan procedures based on the study result. Construction Investment Report (CIR) and Construction Investment Plan (CIP) is currently prepared for an approval of the Prime Minister.</p> <p>(FY 2006 Domestic Survey) (FY 2007 Domestic and Overseas Survey) Subsequent study 1: Project Formulation Promotion Study (SAPROF) on Ho Chi Minh City Urban Traffic Improvement Project (East zone of No1 mass rapid transit line) Implementing period: April 2006 - October 2006 Implementing body: Ministry of Transport (MOT) Objective: Contributing to improve urban environment, to develop economies of Ho Chi Minh and other regions with reduced traffic pollution and traffic jams through intending to respond to accretive transit demand by building mass rapid transit system in largest Vietnamese city Ho Chi Minh. The SAPROF present a proposal toward the project implementation following reviews F/S done by the C/P. Contents: 1) Necessity of the project and basic information; 2) Confirmation and review validity of the project scope; 3) Review and confirm the project implementation structure and operation and maintenance structure; 4) Conduct supplementary study and make recommendation on environmental and social consideration. The 85% of total investment amount USD 1,025 including land acquisition cost etc, is proposed as the Yen loan project in SAPROF phase.</p> <p>Subsequent study 2: Project Formulation Promotion Study (SAPROF) on Ho Chi Minh City Urban Traffic Improvement Project: Unity of Development of Surrounding Area Implementing period: March - August 2006 Implementing body: Ho Chi Minh People's Committee Objective: Recommending various issues and plans and cooperating SAPROF in order to support to the Ho Chi Minh People's Committee and the Government of Viet Nam to formulate the development plan of surrounding area. Contents: a) Analyzing the current situation and outlook of the development of surrounding area; b) Reviewing the urban development of surrounding area and land utilization; c) Reviewing the transporting network plan; d) Identifying the strategic projects and activities to realize synergetic effect; e) Performing initial evaluation about the feasibility of the recommended project, f) Reviewing the supporting system for implementing the above-mentioned project.</p> <p>Relation with the procurement: The subsequent projects (1)(2) were selected as prioritized route in whole network of mass transit system which was planned in the study on Ho Chi Minh urban transport plan (HOUTRANS). Followed by that result, the C/P requested financial assistance to Japanese government as a yen loan project. Funding party: Yen Loan (L/A concluded: 30 March 2007), Funding amount: 94 million USD (total 1.9 billion USD) Status: The consultant has been already selected (January, 2008)</p> <p>Subsequent study 3: Ring Road No. 2 Project(ADB-PPTA SAPROF) Implementing period: March 2008 - March 2009 Implementing body: Ho Chi Minh People's Committee Objective: Formulating the road network at the Ho Chi Minh City. In order to prevent inflow traffic between cities, the Ring Road No. 2 has high priority. Since the Second Ring Road had not been completed, it becomes dysfunctional. In order to complete the road, the plan aim to review the implementing plan and the framework of operation and maintenance and traffic management. Contents: 1) F/S of the project; 2) Reviewing introducing the PPP method in order to operation and management cost reduction; 3) Reviewing the comprehensive traffic management system.</p> <p>Others: Among the inner-city flyover expressway network recommended in the Master Plan, connecting road between the city and the airport has been planned to implement as : BOT by the Government of Ho Chi Minh. Among the inter-area expressway network, the local feasibility study access road between western Mekong-Delta and eastern Vung-tau has been implemented.</p> | | |

Description :

(FY 2006 Domestic and Overseas Survey) (FY 2007 Domestic and Overseas Survey)

Implemented project: Caimep - Thi Vai International Port Construction Project

Implementing period: January 2007 - December 2011

Implementing body: Project Management Unit 8

Funding:

Funding party: Yen Loan (L/A concluded 2005/Mar/31)

Amount: 36,364 million JPY

Objective: The purpose of the project is to construct container terminal, general goods terminal and related institutions in order to contribute to the economic development in the potential Southern Economic Development Area.

Package 1: Construction of Port Facilities and Buildings for Cai Mep International Container Terminal

Package 2: Construction of Port Facilities and Buildings for Thi Vai International General Cargo Terminal

Package 3: Navigation Channel Dredging and supply and installation of traffic safety system

Package 4: Equipment Procurement (Container cranes x 4, Multipurpose cranes x 4, RTG x 15)

Progress:

(FY 2006 Domestic and Overseas Survey) Consultant will be selected in the end of 2006 and a tender will be held from next year.

(FY 2007 Domestic and Overseas Survey) In the progress evaluating the tender of P-1 (Cai Mep port engineering work) and P-2(Thi Vai port engineering work).

(FY 2008 Overseas Survey)

Total capacity of the two ports is up to 650,000TEU and to 1.6 million - 2 million tons/year.

The project includes the six packages; one package for consultancy services and the 5 packages for civil construction and equipment. Details are as follows:

-Consultancy services package: Checking detailed design, supporting bidding and monitoring construction.

-Package 1: Cai Mep port construction

-Package 2: Thi Vai port construction

-Package 3: Navigable channel dragging

-Package 4: Provision of equipments for port operation

-Package 5: Construction of the connection road from National Highway No.51 to Cai Mep port. (It is an additional package to handle arising issues during bidding of package 1 and 2. The scope of work of package 5 is extracted from package 1 and 2, and the budget for package 5 is funded by the counterpart budget allocated for this project by Vietnamese government.)

(FY 2008 Overseas Survey)

Two of the staff from the Project Management Unit 85 participated in the training in Japan.

(FY2012 Domestic Survey and Overseas Survey)

No information.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2009 Domestic Survey)

(1) A part of the traffic safety of "The Traffic safety strategy"; which has been at work by Ministry of Transport and scheduled to be completed in 2030, was based on the Master Plan of JICA.

(2) The effort has been made by the department of traffic safety of the ministry of transport in order to implement various policies which were suggested in the master plan. Although the possibility of the dispatch of the experts or the technical cooperation has been asked to the JICA Vietnam Office, the concrete direction of the cooperation has not been shown yet.

(3) Currently, two loan based project of JICA and World Bank have been progressed. Therefore it is a very important period to implement the suggestions of the Master Plan. However inadequate capacity of Traffic Strategy Project Management Unit (TSPMU) caused the lack of communications between the related organizations, so that there is a fear not only for the delay of the project but also for the effects of the project. Some urgent actions have been needed.

(4) Following several suggested programs have been in preparation.

1) The program for safety drive and safety measures for the vehicle: This program includes the licensing system of motor cycle and the reform of the automobile inspection system. Still there are tasks to be solved, such as the problem about another new tax on the nationwide 28 million of the motorcycle users.

2) Promotion program for the enhancement of the emergency medical system: This program aims to improve the emergency medical system at onset of the accident. At present, the level of the emergency medical system of the hospital is not adequate, so that the traffic safety measure has not been implemented. However, the enhancement of the emergency medical system in the hospital and the educational campaign for the First Aid, have been implemented by the support from the JICA, WHO and the other international organizations. In addition, implementation of this program has been scheduled as one of the component of the World Bank project; VRSP (Vietnam Road Traffic Safety Project).

3) Program for the enhancement of the administrative capabilities on the traffic safety: Because of the administrative organization reform and the financial problems, the consensus formation of the superagency has not been build at this moment. In order to promote the integrated traffic safety measures, the enforcement of the National Traffic Safety Committee and the Traffic Safety Committees of all ministries have been conducted. Further reinforcement of these organizations by the projects already underway, has been expected.

Description :

(FY 2009 Domestic Survey)

Implementation Project: Technical Cooperation Project; 'Project on Capacity Development on Artisan Craft Promotion for Socioeconomic Development in Rural Area' is in progress.

Goal of the Project: Creation of products that utilize the strength of the community and will increase the living standards of its residents.

Goal of the Project: Building a model that affects the comprehensive promotion of local industry in the agricultural district through the creation of products that utilize the community's strength and increases the living standards of its residents.

Implementation Agency: Department of Agro-Forestry Products Processing and Salt Industry (DFPPSI), MRD)

Implementation Period: 2008.12-2011.11

Technical Cooperation Project has been requested for the 'Project to Support the Production of Safe Agricultural Products', 'Program to Support the Food Crop Production in Remote Areas' and 'Fostering of Water Supply Set-up Program'.

(FY 2009 Overseas Survey) No information.

(FY2013 Overseas Survey)

1.The Northwest Region Rural Development Projec (Technical cooperation project)

Period of Cooperation : August 1, 2010 . July 31, 2015

Implementing Organization:Dien Bien Provincial People's Committee

Project Purpose:The rural development in the pilot districts is promoted through strengthening the system, as district government being the core thrust force, to improve the production, post harvesting and marketing of market-oriented agricultural products

Outputs:

- 1.The method and approach for cultivation, post harvesting and marketing of agricultural products as paddy, soybean, maize, etc. are improved in the Pilot District
- 2.Water resource distribution and irrigation infrastructure management are improved in the Pilot District
- 3.The capacity of rural development of local government such as provincial, district and commune people s committee and some agencies under those committees as well as mass organizations and agricultural enterprises is improved through strengthening the production, post harvesting and marketing of market-oriented agricultural products

2.Project for Sustainable Forest Management in the Northwest Watershed Area

Period of Cooperation : 15 August 2010 to 14 August 2015

Implementing Organization:Ministry of Agriculture and Rural Development (MARD), Department of Agriculture and Rural Development (DARD) of Dien Bien Province, Dien Bien Provincial People's Committee, etc

Project Purpose:Participatory forest management and livelihood development are promoted (in the project pilot sites) through the implementation of the PRAP.

Outputs:

1. The effectiveness and feasibility of the REDD+ action plans in the additional project pilot sites are verified.
2. Technical and institutional capacities of executing and partner agencies in implementing the PRAP are strengthened.
3. Necessary plans and technical documents are prepared for the implementation of the provincial REDD+ in Dien Bien Province

In addition to that, the following projects were implemented.

1. Forestry Preservation Program in Lai Chau, Lam Dong and Ca Mau provinces.
2. Strengthening the capacities for the field of Management of Vietnam's Crop Production Sector for improving the Productivity and Quality of Crop's Products.

(FY2013 Domestic Survey)No information to be specifically mentioned.

Description :

(FY 2009 Domestic Survey)

The pilot project that was drawn up as part of the capacity development activity has been headed by the Vietnamese NPO, and is currently being carried out with the donation funds of Honda Vietnam.

Related operations that are being carried out are as follows:

Implementation Study: Development study 'Study on Potential Forests and Land related to "Climate Change and Forests" in Vietnam'

Purpose of the Project: To cover a large arena of climate change countermeasures in the field of forestry from the perspective of R-CDM, REDD and other methods that promotes carbon accumulation operation. In addition, accumulate information of potential affects of the project to the land through analyzing the satellite image and creating a map that relates to its distribution, and share the information.

Implementation Period: 2009.9-2011.5

Implementation Agency: Department of Forestry, Ministry of Agriculture and Rural Development

Supporting Agency: JICA

(FY 2009 Overseas Survey) No information.

(FY 2013 Overseas and Domestic Survey) No information.

| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | (1) To formulate a master plan in order to secure sufficient water and to improve sanitary conditions (2) To conduct a feasibility study (3) To promote technical transfer (4) To disseminate knowledge obtained through the study. | | |
| 7. CONSULTANT(S) | Tokyo Engineering Consultants Co., Ltd. OYO International Corporation | | |
| 8. STUDY PERIOD | Apr.2007 ~ Mar.2009 23month(s) ~ | | |
| 9. SITE OR AREA | 24 candidate Communes of four (4) southern coastal province: Province of Phu Yen, Khan Hoa, Ninh Thuan and Binh Thuan. | | |
| 10. MAJOR PROPOSED PROJECT(S) | 1. Proposed Facilities Intake facility, Transmission main, Distribution facility, Water treatment plant 2. Priority Projects (1) Phu yen Province : 8,736,500USD 1) FPS-5: 965,700USD, Implementation Schedule -2011, FIRR -0.1%, 2) FPS-3 : 1,260,700USD, Implementation Schedule -2011, FIRR 1.8% 3) FPG-4 : 4,495,500USD, Implementation Schedule -2013, FIRR-15.0%, 4) FPS-2 : 2,014,600USD, Implementation Schedule -2013, FIRR -8.6% (2) Khan Hoa Province : 3,140,800USD 1) FKS-6 : 1,151,300USD, Implementation Schedule -2012, FIRR-8.7%, 2) FKS-8 : 1,989,500USD, Implementation Schedule -2011, FIRR -15.1% (3) Ninh Thuan Province : 10,734,100USD 1) FNG-10 : 10,734,100USD, Implementation Schedule -2013, FIRR-14.5% (4) Binh Thuan Province : 14,724,700USD 1) FBG-13 : 12,759,800USD, Implementation Schedule -2012, FIRR-18.3%, 2) FBS-11 : 1,964,900USD, Implementation Schedule -2012, FIRR-14.5% Total Project Cost : 37,336,100USD, Implementation Schedule 2009-2014, FIRR : -8.6%, NPV : -33million USD 3. Conclusion In conclusion of the financial and economic analysis in the Study, although financial analysis indicates that the Project would be financially infeasible, O&M costs can be covered by the expecting net income from water charges if initial investment (construction) cost are raised from any fund sources. Moreover, according to the result of socio-economic survey conducted by the Study Team, the ATP in the targeted four Provinces is much higher than the proposed water charges which mainly refer to the WTP. In addition to the financial analysis, economic analysis ascertains that the Project can contribute to the social and economic development for the entire society in the targeted four Provinces, and the significance of the Project can fit to the concept of Basic Human Needs (BHN) and poverty reduction. | | |

| 10. MAJOR PROPOSED PROJECT(S) | | | |
| <p>(1) Proposed Projects:</p> <p>The Project should possess substantial impacts being driven to achieve the vision and goal of WEMP. Thus, its first priority target must be the industrial wastewater especially from severe pollution sources, and the domestic wastewater from dense populated areas. Through detailed analysis related to effectiveness and cost performance by the water quality simulation results, the following 7 Projects are proposed for WEMP in the model area.</p> <ul style="list-style-type: none"> - Project 1: Improvement of Water Quality from the Highest Priority Facilities in the Critical Areas, including those of Decision No. 64 and Circular No. 07, - Project 2: Improvement of Water Quality from Higher Priority Facilities in the Critical Areas, - Project 3: Improvement of Water Quality from other Facilities in the Critical Areas and Facilities Outside of Critical Areas, - Project 4: Pollution Load Reduction by Introducing Total Pollution Load Control in the Model Area, - Project 5: Construction of Small-scale Public Sewerage System in Central Bac Kan Town, - Project 6: Construction of Public Sewerage System in North and Southeast Central Thai Nguyen City, and - Project 7: Construction of Public Sewerage System in Southeast of Thai Nguyen City. <p>(2) Operation Programs:</p> <p>The Operation Program is formulated aiming at effective and efficient implementation of the proposed Projects mentioned above and of the pollution control activities as a whole by focusing on the capacity development of concerned administrative bodies. Therefore, the Operation Program should have closer links with the proposed Projects and the actual pollution control activities taken in the model area. Taking the current administrative enforcement situations into account, the following 9 Operation Programs are proposed for WEMP in the model area.</p> <ul style="list-style-type: none"> - Operation Program 1: Enhancement of Industrial Wastewater Control of the Highest Priority Facilities in the Critical Areas, - Operation Program 2: Enhancement of Industrial Wastewater Control of the Higher Priority Facilities in the Critical Areas, - Operation Program 3: Enhancement of Industrial Wastewater Control of other Facilities in the Critical Areas and Facilities outside of the Critical Areas, - Operation Program 4: Promotion of Total Pollution Load Reduction in the Model Area, - Operation Program 5: Establishment of Pollution Control Management System of Iron and Steel Industry in Thai Nguyen City, - Operation Program 6: Establishment of Environmental Performance Rating System of Iron and Steel Industry in Thai Nguyen City, - Operation Program 7: Enhancement of Environmental Awareness and Public Participation for Conservation of Cau River Basin, - Operation Program 8: Strengthening Monitoring Capability and Laboratory Activity of DONRE, - Operation Program 9: Enhancement of River Basin Approach on Water Environment Management. | | | |

Description :

(FY 2015 Overseas Survey)

Each province along with Cau river basin formulated action plan for environmental protection Based on the results of development study.

Project for Strengthening Capacity of Water Environmental Management in Vietnam

Period: June 2010 to June 2013

Implementing Agency: MONRE

Project Purpose:

Capacity of MONRE and target DONREs regarding water environmental management is strengthened.

National Targeted Program of Pollution Remediation and Environmental Improvement is implemented and the component of waste water treatment in Thai Nguyen Province is included in this project.

| 3. SECTOR | Transportation / Railway | | 4. TYPE OF STUDY Other Studies |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Vietnam Railway Administration (VNRA), Ministry of Transport | |
| | PRESENT COUNTERPART AGENCY | Vietnam Railway Administration (VNRA), Ministry of Transport | |
| 6. OBJECTIVES OF THE STUDY | <p>(1) to prepare the draft of railway technical regulation and urban railway standards for the better railway administration as well as the smooth implementation of urban railway projects in Vietnam.</p> <p>(2) to transfer relevant skills and technologies to Vietnamese counterpart and to support their legalizing process together with valuable recommendations for the enforcement of the regulation.</p> | | |
| 7. CONSULTANT(S) | Japan Railway Technical Service | | |
| 8. STUDY PERIOD | Feb.2008 ~ Apr.2009 14month(s) ~ | | |
| 9. SITE OR AREA | Entire Vietnam (as for urban railway, the targets should be Ho Chi Minh and Hanoi, where the railway plan is in preparation.) | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>(1) Ensuring Safety of Railways by Application of the Technical Regulation It is necessary to establish legal procedures to confirm whether railway facilities and/or rolling stock conform to the technical regulations at construction or remodeling stage. It is also essential for supervisors (administration side) to examine from time to time whether these facilities sufficiently conform to the technical standards or not. In the side of railway operators and/or business entities ("railway operators"), they must determine their own implementation criteria (including train operation rules) to be observed by themselves based on the technical standards. Administration side must supervise the railway operators in accordance with the legal procedures and inspect whether the technical standards are observed by railway operators.</p> <p>(2) Appropriate Review of the Technical Regulation In Vietnam, Article 35 of the Law on Standards and Technical Regulations prescribes that the technical regulations shall be revised at least every five years or when necessary. As the drafted technical regulation for railways this time prescribe not only performance-based requirements but also important numerical values/figures in the supplement provisions, it is necessary to monitor its status regularly and to review and/or revise them quickly when necessary.</p> <p>(3) Flexible Application of the Technical Regulation In Article 138 "Enforcement Provisions" of the draft of the technical regulation prescribes that "In case problems or difficulties arise in applying the provisions/criteria, those who apply them shall report the matter to the leader of railway operators and the Minister of Transport in order to solve those problems or difficulties." It is desirable, therefore, to flexibly apply this prescription with careful examination of safety in order to implement construction and remodeling of railways smoothly as well as in a reasonable manner.</p> <p>(4) Recommendation for Enforcement of the Technical Regulation a. Vietnam is urgently requested to establish methods and procedures to apply the technical regulations appropriately based on the laws and practices in the country, while referring to the precedent cases in other countries such as Japan. b. The organizations to evaluate the conformity with the technical regulations should employ and train a sufficient number of engineers who have necessary knowledge and skills in relevant fields, and establish a system to enable them to work efficiently. c. To ensure the safety of railway transport, the administration side shall establish a security inspection system to regularly confirm that railway operators conform to the technical regulations. d. An appropriate mechanism to grasp and examine the requests from railway operators as well as to review and revise the technical regulation in a timely manner should be established in accordance with the related laws.</p> | | |

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

The important sections of this study were surveyed by JICA and yen loan was concluded.

Subsequent Study:

Jul.1983~Aug.1984 "Railway Electrification Project between Chengchow and Paoki" and the "Double Tracking and Electrification Project between Hengyang and Kwangchow"

(FY 1994 Overseas Survey)

Technical guidance for Chinese Ministry of Railways(Jul. 1979 - Sep. 1981) contributed to the railway modernization in China.

1) Technical guidance to improve transportation capacity by shortening interval between train services is working effectively. The interval was shortened from ten to eight minutes.

2) Technology transfer of alarm systems, train radio communications, or automatic train stop (ATS) for natural disaster contributes to prevent railway accidents.

3) The technical guidance also contributed to the "Railway Electrification Project between Chengchow and Paoki" and the "Double Tracking and Electrification Project between Hengyang and Kwangchow(CHN/S 302/84)" completed after this project.

4) Technology transfer of the Japanese yard-automation method was not effective because of huge China's railway freight compared with Japan's. The north yard in Chengchow was fully automated based upon the Canadian method which had nearly the same size of freight. The method will be gradually spread to other districts.

(FY 1995 Domestic Survey)

Since the Japan National Railway had been divided and privatized, it is impossible to gain the informations concernd (According to JR Eastern Japan Co.).

Description :

Finance:

(FY1991 Overseas Survey)

The study result has incorporated in the provinces 8.5 Plan with planned project budget of 3.47 bil. yuan. In Jan.92, the National Water Supply Dept. decided to provide a financial support to the project. A request has been made to the National Planning Committee for the utilization of foreign fund, and presently in process toward ratification.

(FY1992 Overseas Survey)

The National Planning Committee approved the implementation of the project with budget of 3.45 billion yuan in Oct., 1992. The foreign funds can be utilized to finance the project if the project is implemented after 1995. The Local Water Supply Department plans to send a mission to Japan for the negotiation of Japan's Grant Aid in Feb., 1993.

(FY1995 Domestic Survey)

It is learnt that both countries have agreed to make this Project as one of the 4th yen Credit Project on the annual conference on FY 1994.

(FY 1997 Domestic Survey)

It seems that JICA Follow up study team was dispatched in Oct.1997.

Dec.1996 L/A 3,000 mil.Yen

(Sanjiang Plain Long touqiao Reservoir Construction Project)

Construction:

(FY 1997 Domestic Survey)

Construction has not started yet. The project will be implemented under the direct control of Water Supply Department.

Detail:

(FY1992 Overseas Survey)

The entire plan of Sanko Heigen Development Project was designed between 1974 and 1977. Rehabilitation projects of five rivers at the Sanko Heigen are under way. About a half of the construction work was completed with the financial support of the World Bank and the local funds. The lower parts of the river has been improved.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(1)Hengyang-Guangzhou Subsequent Studies: D/D was conducted by Ministry of Railways according to Japan's F/S. Finance: Oct.1984 L/A 10,192 mil.Yen (Hengyang-Guangzhou Railway Expansion Project) Aug.1985 L/A 26,822 mil.Yen (as above II) Jun.1986 L/A 24,491 mil.Yen (as above III) Jul.1987 L/A 8,789 mil.Yen (as above IV) *Contents Double tracking of Hengyang-Guangzhou road (514km), construction of tunnel, electrification (155km) Construction: This project was completed in 1988 aiming at strengthening the transport capacity. (FY 1994 Domestic Survey) Geological survey centering on geophysical exploration was conducted in the Nan-ling Tunnel between Heng Yang and Guang-Zhou as a joint work by Chinese and Japanese experts. Effect: Annual transportation capacity between Hengyang and Guangzhou was raised from 20 million to 40 million tons by the double tracking and electrification. Train was also due to improvement of gradients and curves. The method of tunnel construction at the time of Dayan Shan Tunnel has been utilized for subway construction as well as automation and reduction of other tunnel constructions.</p> <p>(2)Zhengzhou-Baoji Subsequent Studies: D/D was conducted by Ministry of Railways according to Japan's F/S. Finance: Oct.1984 L/A 7,250 mil.Yen (Zhengzhou-Baoji Railway Expansion Project) Aug.1985 L/A 13,258 mil.Yen (as above II) Jun.1986 L/A 9,482 mil.Yen (as above III) Jul.1987 L/A 31,396 mil.Yen (as above IV) Aug.1988 L/A 7,500 mil.Yen (as above V) *Contents Electrification (684km), construction of yard Construction: Of 684km between Zhengzhou and Baoji, the 269km section between Zhengzhou and San-men-xia was completed in 1986. After the construction of the remaining sections was promoted in accordance with the 7th five-year plan (1986-90), it was completed in 1991. Japan's railway-yard technology is not adequate for China due to the huge railway freight in China. Automation of the north yard at Zhengzhou was done based upon Canadian technology transfer. Effect: After the electrification, annual transportation capacity between Zhengzhou and Baoji was raised from 40 million to 60 million tons (50%) by 80 electric locomotives purchased from Japanese firm. And also, this led to the great increase of the capacity of coal transport from northern Hebei and north of Wei-he to eastern districts.</p> <p>In the execution of this construction, various kinds of technical guidance was conducted by short-term experts dispatched by JICA.</p> | | |

Description :

Subsequent Studies:

Mar.1985 F/S Final report submitted

Mar.1985 Basic planning study completed

Technical Cooperation Project "Sanjiang Plain Agricultural Research Center Project" (1985.9.20~1993.3.19)

After the completion of F/S, research center was established as a technical cooperation project. Technical cooperation for 5 years has been completed and the facility and all equipments were handed over to Chinese side.

The basic study on agriculture in a cold area was started in September 1986 and completed in March 1993.

Dispatch of Experts:

After the completion of basic planning, seven long-term experts and some dozens of short-term experts were dispatched as technical cooperation. Field improvement work, setting up of machineries and equipments were completed.

Description :

Subsequent Studies:

The review of the F/S and the basic designs were undertaken by the Chinese authorities.

Finance:

The total planned budget for the project is 2,543 bil.yuan, of which 1.58 bil.yuan is domestic financing and US\$ 262 mil.is foreign borrowing.

Foreign fund (US\$ 26.2 billion) was mainly financed by Germany. Trains, Telecommunication devices, Station facilities, and electric facilities were also purchased from Germany. Loans from the United States and France were also made. Traffic-signal-control systems, disaster-prevention and waterproof facilities were purchased by US loans, and cutting/sharpening machines were by French loans.

OEFC loan was not requested.

Local fund was previously prepared by Shanghai Public Bureau of Subways. Afterwards a municipal bureau under Shanghai City Office took over the position to procure and repay the fund since September 1994. The municipal bureau is an original organization of Shanghai City to operate and manage funding for the projects under the jurisdiction of the City.

Modified Point:

(FY 1992 Domestic Survey)

The subway plan (Route 1, South-north line) was once proposed 13.5km between Xin Longhua-Shanghai. But it was extended to 15km because one section was added between Xin Longhua and Jin-Jiang Dong Yuan.

Oct.1994 completed

May.1995 used

Utilization of outputs:

As the report of this F/S is studied in detail, some part of it could be utilized for D/D. Moreover, this F/S report was translated into Chinese and used as a textbook for other cities subway projects.

Description :

(FY1996 Overseas Survey)

All the strategies and measures formed in the project have a progress in different scales. Some areas have more work completed, like factories relocation, energy saving, etc.

Finance:

Self-financing of enterprises/Government fund

Construction/Implemented Project:

The engineering for increasing the gasification rate has been implemented in a big scale. Pudong Gas Plant was constructed and put into the operation during the Eight-Five Year Plan.

From 1988, Shanghai Environment Protection Bureau continues the efforts for the work of dust/smoke controlling. Actions were taken for renewing the dust remover, which improved the dust removing efficiency for Shanghai average from 70% to 80%. In another hand, some of the extensive technical upgrade work has been done towards the dust remove facilities for bigger size industrial stoves in the factories of cement plants and steel works. In air quality management, it has been established an operational management standard, which makes the possible to the quantified and scientific management.

Effect:

The concentration of both TSP and SO₂ is reducing down every year.

Situation:

(FY1991 Overseas Survey)

The study results led to the establishment of the Shanghai City Program for the Protection against Air Pollution.

| 10. MAJOR PROPOSED PROJECT(S) | <p>Municipality of Shanghai, PRC, is making great effort to develop the Pudong New Area which expands at east bank of Huangpu River flowing down in the central part of Shanghai urban area. This Pudong New Area is connected only by tunnels and new transportation facilities crossing the River are indispensable element for the development of the Area. The project aims to construct the six lanes traffic corridor between both banks. Total length of the corridor is some 8km. Main bridge is cable stayed bridge having 400m center span length (total bridge length 657m). For project site aguisition compensation for factories, stores, etc 123 thousand m2), construction of new houses (350 thousand m2), and farm land acquisition (133 thousand m2) are planned.</p> | | |

Description :

Subsequent Studies:

Mar.1988 F/S reviewed by the Urban Planning and Design Bureau of the Shanghai Municipal Government

Oct.1989 D/D completed by the Urban Planning and Design Bureau and the Donji University

Finance:

Fixed cost of the project

Total cost 330 million US\$

Local cost 225 million US\$

Finance

Local 225 million US\$

ADB 105 million US\$

Construction:

The construction was completed as the Nanpu Bridge.

Effect:

(FY1994 Domestic Survey)

After the opening of the bridge on Nov.1991, the number of vehicles using the bridge is steadily increasing with the progress of the Pudong Area development. Together with the completion of Yangpu Bridge between Puxi and Pudong Areas, both bridges are being used as the two major traffic corridors between the two areas.

The Pudong Area in Shanghai is developing remarkably in recent years, which means that the completion of the Nanpu Bridge greatly contributes to the improvement of investment circumstance for Pudong Area.

Description :

The project was included in the application list for the Third Yen Loan (1990-1994), but was not approved.

(FY1991 Overseas Survey)

Presently the provincial government is conducting a preliminary design mostly in accordance with the F/S result.

The project is planned to be implemented as soon as the approval of the central government is issued, with budget from the provincial fund and a national subsidy.

(FY1994 Domestic Survey)

No progress in the form of a project.

(FY1995 Domestic Survey)

No additional information.

Description :

Finance:

The Government included the D/D on ground water development in the request for the Third Yen Credit (1990 - 1994), but has been unsuccessful.

Situations:

(FY1991 Overseas Survey)

Due to a city's own project, the problem of water supply in Tianjin for both the civil life and industrial development has basically been solved.

Accordingly there is no planned project based on the study, the studied areas still have a role as potential water resources for future urban and industrial development.

(FY1995 Overseas Survey)

The results of this survey work are not utilized because the water resource is very far from the city and the cost to send the water is quite expensive.

1.Telecommunication Development (total cost 320 million yuan)

Jan.22.1991 L/A 2,663 mil.yen (Communication I)

Oct.4.1991 L/A 4.17 bil.yen (Communication II)

To be completed in Dec.1994.

Detail

Based on this report, following assistance have been offered.

- World Bank (Dam construction, agricultural development, regional development)
- ADB (studies on the energy sector and environmental conservation)
- UNDP (studies on policy about economic structure reforms)

Activities toward the development of infrastructure and resources have been started in two core cities following the proposals of this report.

(1)Development of airport (expecting assistance from England or France)

(2)Establishment of Integrated Agricultural Development Experiment Area (agriculture, fish-farming, agricultural and marine products processing)

(3)Industrial investment projects like exploitation of natural gas, the steel industry, the paper industry, are included in the eighth 5 year plan. To realize these projects, negotiations with foreign companies are being made.

(4)Development of business area and road network based on the M/P of Haikou City

(5)Development of the trade center area of Haikou.

(6)Development of the area used to be Haikou airport.

Description :

Technical Cooperation through Mini-Project Scheme:1990.6.1~1994.5.31
"Swine Cenetis and Breeding"

Background:
(FY 1992 Overseas Survey)
A research cooperation (study on production technology of beef cattle and feed) as a mini-project based on the results of this Development Study is under way. 3 long-term experts and 7 short-term experts have been dispatched. Main items of the study are 1) improvement of beef cattle breed and breeding management and 2) improvement of a grassland.
The following construction works were completed with finance of the local funds: an experiment center with 30 rooms, 2 breeding farms (200sq.m), 6 breeding farms (1,200sq.m), artificial insemination facility (40sq.m), offices and a dinning room (540sq.m).
The Chinese side plans to execute the following projects to widespread the satisfactory results obtained by this study among farm houses.
1) Establishment of a company group with beef cattle production firms, 2) Establishment of Technical Service Center,
3) Construction of basic facilities, 4) Establishment of efficient and scientific beef cattle production system
The Chinese side reduced cost of investment in basic facilities from 68.39 million yuan suggested by the Development Study to 42.05 million yuan. A half of the investment cost (21.025 million yuan) will be requested to the Japan's Grant Aid.

(FY 1997 Domestic Survey)
After the completion of Mini-project type Technical cooperation, Chinese side requested Project type technical cooperation newly.
But the realization of the project seems to be difficult owing to other projects to be financed.

(FY 1995 Overseas Survey)
The peoples' government of Gansu Province much appreciates the results of this survey works of the project, however, is anxious about to find the financial resources. At present, Japanese grant aid has been requested for the project "to recover the balance of ecology and to develop the resources of animal husbandry" and for the mini-project. "Transplantation of the embryonic region of cows."

(FY 1997 Overseas Survey)
The region where mini-project was implemented suffers extreme poverty.
Technical cooperation is necessary continuously because only one fifth of the plan was implemented. So far, technical guidance has good results.
Gansu Province submitted request for grant aid assistance (approx. 500mil.Yen) to the central government in March, 1995.

(FY 1998 Domestic Survey)
There are many projects to be requested for grant aid assistance. Therefore, it seems difficult to realize the proposed project.

Description :

Subsequent Studies:

E/S undertaken by Nippon Koei Co. and Dam Engineering Center

Finance:

About 50% (18,200 million yen) of the total amount of constructing cost is derived from Japanese OECF loan.

(Local Currency:1,124 mil.Yuan)

The Second Yen Loan (1985-1989)

Aug.1988 L/A 2,846 mil.Yen (Dam construction I)

May.1989 L/A 8,936 mil.Yen (Dam construction II)

The Third Yen Loan (1990-1994)

Nov.1990 L/A 6,445 mil.Yen (Dam construction III) for construction, equipment, generators, early flood warning system, etc.

*Components of OECF Loan

1.Main-dam(Gravity concrete type, Height 82m, Length 1,140m, the total amount of water 2,168 million cu.m)

2.Sub-dam

3.Hydro-power plant(3units of 6.5MW each)

4.Electric delevary line(4.5km, 66kv)

5.Flood pre-caution system

Construction:

The Second Yen Loan

Spring.1990 Construction commenced

Dec.1995 Completed

The Third Yen Loan

Spring.1992 Commenced

Dec.1995 Completed

On Sep.28,1994 reservoir impounding was commenced by closing the gate of temporary bypass conduit.

Constrcution Trader:Hazama-Gumi

Effect:

By the end of 1996, total 150mil.kw/h of power was generated and 1.4 billion m3 of water was impounded.

Description :

Subsequent Studies:

1991 After F/S was completed, detailed design was presented by 8 Chinese consultants (Civil Aviation Administration of China and South China Institute of Architectural Design as central members), based upon the F/S.

Finance:

Mar.1991 L/A 6,279 mil.Yen

(Construction Project of Wuhan/Tanhe Civil Airport)

*Contents

- 1.Arrival/Departure Area(Runway 3,000m x 45m, Terminal Apron 8,700m2)
- 2.Terminal Area (Passenger Terminal 25,000m2, Cargo Terminal 3,000m2)
- 3.Airport utility, related facilities, access road, etc.

(FY 1994 Overseas Survey)

Total cost of the construction is 655 million yuan. Funding details are as follows:

| | |
|-----------------------|----------------------------------|
| OECF (the third loan) | 5 billion yen (200 million yuan) |
| Chiness Government | 100 million yuan |
| Wuhan City Office | 90 million yuan |

The rest (265 million yuan) will be financed by Wuhan City Office, with a condition that the development right of South Wuhan Airport will be given to the city authority.

Construction:

Dec.16.1990 ordered to start

The first architecture section of Wuhan City started construction in 1992. One of the most critical difference between the F/S and the detailed design was runway extension from 3,000m to 3,400m. The reason of the change was to cope with arrival/departure of B747-400 (international flight) which was bigger than B747- 200 expected.

Oct.1992 Runway and a part of Terminal Building, completed the end of 1993 Airport facility, completed Fright check, completed

Dec.1994 Access road and employees residential facilities, under construction

Dec.27.1994 The opening ceremony was held and commenced its services as for the new airport.

Description :

This project consists of two parts: (1)technical transfer for water saving irrigation by the project-type technical cooperation (2)introduction of the water management equipment through Japan's Grant Aid Assistance.

(1) Project-type Technical Cooperation

"Irrigation and Drainage Engineering Development and Training Center Project" (Jun.1993~Jun.1998)

- Improvement of water use efficiency, irrigation and drainage technique by introduction of Japanese technique.
- Training of technician.

Jun.1993 Five experts were dispatched and the center started to operate.

Nov.1993~Dec.1994 Model infrastructure improvement project was implemented at model farm. Approx.20ha of farmland was improved and irrigation facility and greenhouse for vegetables were constructed.

(2) Water Management System Pilot Infrastructure Project

Finance:

(FY 1997 Domestic Survey)

33mil.yen JICA

*Contents of Project

Establishment of long-distance observation system and rehabilitation of related facilities.

- Rehabilitation of 5 dispersion gate
- Installment of telemeter (5)
- Observation computer (2)
- etc.

(3) Project Implemented by Chinese Fund

Dec.1991 Repair work of the North Main Canal was completed with the local fund.

1993 The Government of China invested 6.16 million yuan as construction cost to carry out the following projects:

- 1)gate for the main canal (2 places), 2)branch pipeline canal (30km), 3)Reservoir (15 places), 4)Irrigation areas (10,000 mu)

(FY 1998 Domestic Survey)

It seems to be difficult to implement the remaining projects.

(FY2000 Overseas Survey)

Redevelopment of the North Main Canal was completed in 1996.

| 8. STUDY PERIOD | Feb.1989 ~ Jun.1990 16month(s) ~ | | |
| 9. SITE OR AREA | Tianjin City Area: 11,312km Population: 8.15 Million (1986) | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>Construction by Tianjin City of a new passenger railway line of about 50 km between Tianjin and Tanggu --- Major purpose is the development of regions along the route, especially, the improvement of commuter transport in Tianjin and Tanggu, and balanced development of regions along the Hai He River.</p> <p>-Section to be opened at the 1st Stage(end of 1995): between Shuang Lin and He Bey Lue,38.70km,Structures: viaduct 31.50km,embankment:7.20km,No.of stations:9 rolling stock:58 cars(commuter electric railways),maximum operation speed of trains 120km/h</p> <p>-Section to be opened at the 2nd stage(early 2000):between He Bey Lue and Tianjin New Port,10.85km,No. of stations:2,rolling stock:84 cars</p> <p>Operational safety and traffic control systems: cabsignal block system, cab signal system,1st-type electric relay or electronic relay system, automatic train control(ATC) system, centralized train control(CTC) system; Rolling stock base:1)Base facilities: facilities for main part inspection or overhaul, temporary repair, trip inspection, regular inspection(monthly, etc.),car cleaning facilities, storage track, etc.</p> <p>2)Inspection and repair facilities: management office, inspection building, workshop building, wheel grinding shop, maintenance base, other buildings.</p> <p>Electric facilities: power transformation facilities, contact wire facilities, power transmission and distribution wire facilities, signaling facilities planning, telecommunications facilities planning.</p> | | |

| PRESENT STATUS | Completed or In Progress Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
|---|--|--|
| <p>Description :</p> <p>Detail (FY 1991 Domestic Survey) To date neither a detailed study nor official request for financial cooperation has been made.</p> <p>(FY 1994 Domestic Survey) In this project, Solin station is planned to be the starting point, on the precondition that the Tianjin Subway Line No.1 will be extended to Solin. However, the request for financial assistance has not yet been made, because the extension work of the subway is being delayed.</p> <p>(FY 1994 Overseas Survey) Although a loan from Japan was applied to the National Planning Committee after F/S, the loan was not admitted as a national project and Tianjin City is seeking for a funding method. At present, BOT method is discussed. The city asked American investment banks and corporations in Hong Kong, Singapore, Germany, France, Canada, Thailand or Taiwan for finance. These corporations are inspecting profitability of the project. Since the New Seacoast Development Project (10 years) was expanded and this project became more important, Tianjin City Representative Assembly and Planning Committee determined to promote this project. One of the most critical changes from the JICA's F/S is the change of areas for railway construction. Replacing the F/S plan of locating the starting point at the south side of the sea/river, the plan to make Tianjin Station a starting point of the railway and expand the line through Tianjin Airport, development district, bonded warehouse district, and the New Tianjin Harbor is now discussed by the Tianjin City Committee of Arts and Science. Reasons of the changes are as follows: (1)The profitability of the line will be raised by cutting unnecessary railway service(11km between Tianjin Station and the starting point at the south side of the sea/river); (2)Accordinging to changes of the regional development plan, on which this project is based, demand expectation at present has become largely different from the expectation at the time of F/S.</p> <p>(FY 1997 Overseas Survey) In November 1995, JV company of Chinese "Tianjun Economic Technology Development Invt" and Thai "Starwell" was founded. This company will be in charge of constructing the Tianjin rapid railway. As for a schedule at present, F/S will be carried out from 1998 and construction will be started in 2000. Investment amount and consulting company for F/S are not settled yet. The route is not determined due to the extension of the existing subway.</p> <p>(Note) An Australian corporation financed A\$ 100mil, for the subway construction at Tianjin City, as a relating project. The section between Tianjin and the original starting point of railway(11km southeast from Tianjin Station) planned in JICA's F/S will be served by the subway after completion.</p> <p>Situation: (FY 1999 Overseas Survey) The government of Tianjin considers the development of Tianjin and Tanggu new passenger railway line as an important policy, therefore the government is proceeding the project accordinly to Tianjin City Plans. Development of Beijing-Tianjin-Tanggu Highway road was completed and its traffic condition has improved.</p> | | |

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Groundwater Development in Su-Shan Water Source Area

Subsequent study:

(FY 1998 Overseas Survey)

Study has been conducted with their own fund. The original plan to connect to the water supply system in Urumuqi was changed. Water transport pile was shortened.

Finance:

(FY 1998 Domestic Survey) (FY 1998 Overseas Survey)

Starting the project is delayed due to the shortage of funds. The request is to be submitted to the central government. Amount of 8.8 million yuan (60 % from the central government, the remaining 40 % from the local government of Urumuqi City) is demanded.

Construction:

(FY 1998 Overseas Survey)

Water source in Su-Shan has been developed with fund of the area and 2 X 10,000m³/day of water is being provided. Its comprehensive development plan is to be conducted.

Detail:

The local government hopes for the project implementation by the grant aid from the Japanese Government. However, the priority of the project at the national level is reportedly not high enough to be included in the project list for the Japanese grant aid program.

Although the local government is keen to implement the project, no action has been taken because of the budgetary limitations.

(FY1995 Overseas Survey)

At the end of 1994, the local government of Urumuqi City made this project as one of the 10 important projects of the year of 1995, and commenced preparatory works.

Trying to find some finance from abroad and to implement designing works for the development. Future cooperation of JICA is eagerly expected.

(FY 1996 Domestic Survey)

Although some desired to implement the project with a BOT scheme, it has not been realized because no Japanese company showed interests on such investment.

(FY 1996 Overseas Survey)

This project is incorporated into the Urumuqi Nineth-Five Year Development Plan and will be implemented between 1998 and 2000. However, finance has not been secured, yet. The Finnish Government provided US\$ 1.23 mil. loan for the procurement of equipment and the introduction of advanced Technology.

(FY 1997 Domestic Survey)

The proposed project was not implemented in FY 1997 in consequence of other priority project (road project).

Local government of Urumuqi tries to assure finance to implement the project because the lack of water is still serious problem.

(FY 1998 Domestic Survey)

It was expected that the project would be realized with Japanese grant aid assistance. However, since other projects in the central area are given higher priority, the policy was changed to implement the project with their own funds.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Reasons for Delay or Suspension: (FY 1995 Overseas Survey) The works of this project were suspended due to the change of circumstances at the region. (FY1996 Domestic Survey) It is difficult to secure the local fund. (FY 1998 Domestic Survey) The impact of the reclamation project on agricultural land and the harbor has been simulated for several years. During the period of this simulation, economic/social situation of this area has been drastically changed due to the economic growth. Objection has also been made against using the reclaimed land as agricultural land. The project cannot be launched until there will be some consensus that the reclaimed land will be used for agriculture as planned. (FY 1999 Overseas Survey) The autonomous region and coastal cities are anxious about effects of large scale land reclamation such as the erosion toward the bay and harm on the security of Qinzhou Port and Guangxi Zhuang Port as well as the environment quality of the bay. They are planning to conduct an ocean survey and simulation in order to make clear of the effects of land reclamation to decide the policy of the project. Due to the new local regulation of Guangxi autonomous region, the environment protection of the ocean and the management of ocean development has been enforced. Therefore, adjustment of the plan is required as the land reclamation project effects the environment of mangrove trees and moreover its area exceeds the limit of the present law. For these reasons, it is considered difficult to implement the project as it was proposed. China Guangxi Water and Power Department will decide a new embankment construction plan by taking into account the opinions of other relevant organizations. The Department is not much interested in implementing a large scale land reclamation in the area where there are ports and mangrove trees.</p> <p>Detail: The project implementation requires approval from the Provincial Planning Committee. An application was filed in Jan. 1992. The Guangxi Water and Power Department applied to register the project to the National 8th Five Year Plan. At the same time, the environmental studies were being carried out. In consideration of the peculiarities of the project, the cost for the D/D would be requested to the JICA. Local costs for the implementation would be provided by the local funds, and foreign costs by the OECF loan. In June 1992, the sea dike in Baigumei suffered damage from the 4th typhoon. On the other hand, Beibai city, adjoining Baiqumei, which is selected as a special economic development zone, is recognized as an important trading point in the south-western part of China due to its role for national border trade with Vietnam and domestic trade within adjoining provinces. Therefore, the Guangxi Regional Planning Committee emphasizes on the expansion of the Beihai harbor, development of railways and roads, and the construction of a new harbor at the entrance of the Qinzhou bay in the National 8th Five Year Plan. However, the Guangxi Regional Planning Committee also recognized importance of this agricultural development project. The committee will register this project to the National 9th Five Year Plan (1996/2000), once the environmental study is finished.</p> <p>(FY 1997 Domestic Survey) Chinese side expects for D/D but has not requested yet. Yen loan will be requested after completion of D/D.</p> | | |

Description :

Detail:

On July 1991, the Committee organized by "The Association for the Promotion of International Trade, Japan" visited at China, vice-president of Ministry of Posts and Telecommunication of China requested promotion of this project.

Chinese Government has not yet requested the implementation of this project to Japanese Government.

(FY 1992 Overseas Survey)

A request has been made to the Ministry of Foreign Economic Relations and Trade for the utilization of Japanese Grant Aid and presently in progress toward ratification.

(FY 1997 Domestic Survey)

Requests for subsequent study nor financial assistance have not been submitted. It is possible that Chinese side has implemented already.

(FY 1997 Overseas Survey)

In 1992, Trade and Economy Department of Jilin Province submitted a request for Japanese grant aid to the Ministry of Trade and Economy. But Chinese side did not request to Japan concerning that the project was not suited to a grant aid scheme and grant aid assistance should be provided for BHN.

Dehui County is promoting the automation of telephone system with own budget. In response to the central government's notice which encourages the installation of more than 10,000 lines in each county, Dehui County leased a switch unit for 10,000 lines from NEC. Moreover, Dehui County purchased another switch unit for 10,000 lines from JV of NEC and Tensing in 1996. At present, 20,000 lines are in use.

Description :

Finance:

(FY 1998 Domestic Survey)

Request for a grant aid assistance is to be submitted (on and after FY 1999).

(FY 1999 Domestic Survey)

Even though the following request for Japan's grant aid was not accepted, Chang Siang Water Resources Development Authority still has a strong intention to implement the project. Chang Siang Water Resources Development Authority submitted supplementary explanation data in May, 1998 to the Japanese embassy.

*Contents of request:

Submitted Date: Oct.1997

Amount of request: 1,695mil.Yen

Contents of request: Development of flood forecasting and warning system, which is composed of the following 3 sub-systems, in the middle and lower reaches in Chang Siang.

1. Data observation and collection system:

Control center (1), sub-control center (3), repeater station (18), tele-meter station (61)

2. Data processing system:

Computer system with file server (1), work-station (2), display (3), hard disk, printer, and so on.

3. Data transmission system:

Transmission of data and information by multiplex transmission line including facsimile and telephone

*After 7 years from the completion of the Study, China is considering to install VSAT communication line independently, due to the change in communication situation.

Construction:

(FY 1998 Domestic Survey)

2 years.

Detail:

(FY 1996 Domestic Survey)

The provision of Japanese grant aid assistance was suspended due to the nuclear testing conducted by the Chinese Government. Thus, the request for grant aid assistance (requested in 1992 with amount of 1,695mil.Yen) to implement this project was turned down. Although the provision of grant aid assistance was resumed this year, it seems that no request has been submitted for this project.

(FY 1998 Domestic Survey)

Considering the terrible damage by flood occurred in the Yangzhu River Basin, emergency of this project has been enhanced. Although this project plans to use the ground circuit, Chinese government strongly desires to use satellite communication. Therefore, the review study on communication facilities should be conducted for implementing the proposed projects.

| 10. MAJOR PROPOSED PROJECT(S) | <p><Immediate Measures></p> <ul style="list-style-type: none"> - Grouting - Pre-stressing work - Additional drain hole - Rearrangement of dam observation facility - Reservoir capacity survey - water stop measure for upstream surface of dam - Rehabilitation for penstock - Dam crest pavement, rehabilitation for gallery & handrails <p><Long-term measures></p> <ul style="list-style-type: none"> - Spillway expansion - Dam stability measures - Anti-frozen measures of dam | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Detail:</p> <p>-Inquiry for the project from Fengman Power Plant on 16, March 1993 -The detailed cost was sent to Fengman Power Plant on 22, March</p> <p>(FY 1995 Overseas Survey) Both countries' authorities concerned had agreed on the necessity of the immediate measures consisted of 8 items. A grant aid of J.yen 1 billion was requested from China to Japan in Dec.,1994, taking into consideration that the circumstances of Japan despite of the Japanese budget is going to be allocated J.yen 1.86 billion.</p> <p>(FY 1996 Overseas Survey) The Chinese Government has been continuously requesting the Japanese Government for the provision of grant aid assistance.</p> <p>(FY 1997 Overseas Survey) In December 1994, the Ministry of Trade and Economy submitted a request for Japanese grant aid assistance for provision of machinery and materials. But in Japan - China Conference held in 1997, Japanese side gave an opinion that a power generation project might be assisted not by grant aid but by loan. As a result, Chinese side deleted the project from a list of grant aid request. The possibility to request for yen loan seems to be low because National Planning Committee doesn't tend to use loan for rehabilitation of dams.</p> <p>(FY 1998 Domestic Survey) Northeast part of China was damaged by flood in Aug.1998. Therefore, northeast China Electric Power Administration planned to implement the immediate measures by their own fund and inquired a Japanese construction firm, which was involved in the construction of this dam, whether or not they tender a bid. Construction of raising the dam crest, though it was not proposed by JICA, was on-going as of Nov.1997 and Remaining Project : "Jilin Fengman Dam Rehabilitation Project : Long-term measures." Impeding Factors : - Difficulty in funds' procurement. - Spillway expansion requires large-scale reconstruction of dam crest. The prospects for the future are unknown.</p> <p>(FY 2000 Domestic Survey) There is little possibility to obtain Yen loan, therefore it is expected to implement immediate measures by their own fund. It is regarded as the cancelled project.</p> <p>(FY 1999 Overseas Survey) 8 components of Immediate Measures were all implemented. Implemented: Road development at upper embankment, Construction of anchor ground, Rearrangement of dam observation facility Impact: This project contributed the stable power generation and the safety for the dam Implementing: Rehabilitation for penstock, Reservoir capacity survey Impeding Factors: The scale of all the projects is too large. Concerning to the construction of the Additional drain holes, it is necessary to improved the lower river channel to control the floods at the lower reaches of the River. Remainings: Special irrigation project, Additional drain hole, Water stop measure for upstream surface of dam *Above construction works were implemented by funds procured from power plant.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Detail:

(FY 1994 Domestic Survey)
Local Government is making an effort to accomplish the Plan-A proposed by the study team, using national budget.

(FY 1997 Domestic Survey)
No information

(FY 1998 Domestic Survey)
There has been little progress in Plan A (maintenance of present water quality level) and B (improvement up to international level) due to the following reasons.
1) Shortage of fund.
2) Water quality of Poyan Lake has been drastically deteriorated.

(1)Integrated Control Project of "Four Rivers"
(FY 1998 Overseas Survey)
The project including the study is on-going (1996~2000) with the fund of the enterprises, the subsidy from the central government, and loan (300 million yuan in total).
(FY 1999 Overseas Survey)
Controlling the polluted four rivers will contribute to the water improvement of Poyan Lake. Amount of 120 mil. yuan of funds was gathered mostly from enterprises, reflecting the polluter-pay principle, along with the government's subsidy and bank's loan.
Construction: 1997~end of 2000

(2)Aftercare of Water Quality Observation
(FY 1998 Overseas Survey)
System for Poyan Lake
Under implementation with foreign fund (1998~2002).

(FY 2000 Domestic Survey)
No information.

*Related Project:
(FY 1995 Overseas Survey)
In addition to the existing measurements foloowings are planned and will be in the designing stage.
-Bridge construction at the exit of Poyan Lake to Yangtze Kiang,
-Dam construction across the Poyan Lake near to Sun-Men-Siang.
The data concerning the contamination from small-scale factories in the final report seem to be insufficient. It will be necessary to investigate again.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

1. Industry: Baliyu Special Area for Industrial Development became full of factories.

(FY 1997 Overseas Survey)

Construction of industrial estate for small scale enterprises, bonded area development, Baliyu special area for industrial development, institutional building to attract foreign enterprises and establishment of Jiujiang Technical Center are planned.

(FY 1999 Overseas Survey)

Many factories were constructed in Baliyu Special Area which now serves as primitive industrial complex. Main industries are architecture, electronics, machine, spinning, etc.

2. Tourism: In accordance with Lushan Resort Development, cottages are being constructed. Ropeway to the summit was installed.

(FY 1997 Overseas Survey)

Jiujiang-Lushan Convention City project and Lushan Resort Development project are being implemented. Lushan is considered as a base for tourism since it was authorized by UNESCO for "World Cultural Scenary" Cottages are being constructed smoothly.

(FY 1999 Overseas Survey)

Lushan Resort Development is at the stage of progress. Environment such as of roads, water service, and electricity was developed by government's debt financing. Development of another 2 new resort areas along with the development of Jiujiang-Lushan Convention City is coming under further review.

3. Distribution: Central government is preparing to authorize the city as a truck interchange terminal.

(FY 1997 Overseas Survey)

Truck interchange terminal and freight-through transit terminal are being constructed. Moreover, wholesale estate, distribution center are under construction.

(FY 1999 Overseas Survey)

Construction of Truck Interchange Terminal was completed and as an effect continuous goods transport is possible. The terminal also serves as places such as basic ingredients sales centers and agricultural products sales center.

4. Transport

1) Railway

(FY 1996 Overseas Survey)

(1) Jiujiang-Hefei Railway Construction Project: Constructed as a provisional route of the Beijing-Shenzhen line.(1996 Operation commenced)

(2) Jiujiang-Beijing Railway Construction Project: Constructed as a part of the Beijing-Shenzhen line.(Sep.1996 Operation commenced)

*The existing line between Jiujiang and Hefei is not utilized in this project. The new line, Beijing-Shangqiu-Jiujiang, is to be used. The line will be extended to Kowloon, Hongkong.

2) Road

(FY 1996 Overseas Survey)

(1) Jiujiang-Jingdezhen Road Construction Project: It is expected to expand the regional economic zone in the eastern part.

Implementing period:1996~2000 / Finance:Own fund (2,880 mil.Yuan), ADB loan (US\$ 150 mil.)

(FY 1999 Overseas Survey)

Jiujiang-Jingdezhen Highway and bridge will be opened at the end of 2000.

(2)

(3) Chang ku Highway (expanded)

(4) Jiujiang-Yoyang Highway: Wuhan Highway route opened. Drivers can drive this road directly from Jiujiang via Chang Ku Bridge.

(5) Jiujiang City Road

(FY 1997 Overseas Survey) Under construction

3)Port

(FY 1996 Overseas Survey)

(1) Jiujiang-Uhang Highspeed Boat

(FY 1997 Overseas Survey)

(2) Improvement of New Port: Container berth is under construction.

(3) Construction of trunk road at port area: Changjiang road is being constructed as a trunk road.

4) Airport

(FY 1997 Overseas Survey)

(1) Jiujiang Airport: Phase I - completed / Phase II- under implementation (total investment 9.6 mil.yuan)

*Components airport terminal, etc

Out of amount mentioned above, 41.3 mil.yuan has been invested so far.

(FY 1999 Overseas Survey) The construction has completed. The airport has already started its service.

5. Urban Development

1) Third Water Treatment Plant Construction Project

(FY 1996 Overseas Survey)

It is to mitigate the water shortage problem, which will be caused by the population increase and the expansion of commercial activities.

Implementing Period:1988~1998 / Finance:Own fund

2) Sanitation

(FY 1997 Overseas Survey)

Improvement of sanitary facilities and solid waste treatment facilities is on-going.

6. Human Resources Development: Establishment of Jiujiang University is planned to raise entrepreneurs.

Detail:

Counterpart team is following up the study results.

(FY 1995 Domestic Survey)

On 1994, the Overseas Coastal Development Center had investigated the possibility of materialization of the new port development plan with the organized counterparts at the site.

Based on the recommendations in the field of distribution including truck relaying terminal, cooperation between private companies are progressing in connection with the transportation network by trucks settling the basic center of the basin of the Chang Jiang River in Shang-hai.

| <p>Description :</p> <p>Subsequent Studies: (FY 1995 Overseas Survey) F/S and D/D have been conducted for some of those projects such as Pudong International Airport, the 2nd stage construction in Waigaochao District and Pudong Rail Traffic.</p> <p>Construction: (FY 1995 Domestic Survey) The First Stage The land reclamation and the sell-off The Second Stage The Yang-Gao Road that connects the port and each development areas and the Yang-Gao great bridge that connects the port and the old city have been completed the construction works. And in the old city zone, a part of the circulated expressway and the subway have also been completed. The transportation network, which will support the industrial development, are gradually constructed.</p> <p>Effect: (FY 1997 Domestic Survey) - Improvement of efficiency in distribution - Reduction of concentration of population in the city - Reinforcement of international competitive power of Shanghai</p> <p>Detail: Development of Pudong New Economic Zone is now paid remarkable attention as a new industrial base, in accordance with Shanghai's rapid economic growth due especially to increase of foreign direct investment. In reflect this situation, the first phase of the free trade zone has been successfully sold out. This study focuses mainly on the second phase of the free trade zone including recommendations regarding management and organization. Some of the recommendations have already approved and applied. The LRT recommended in the study is forwarded to next step of the study. The consultant selected by international bidding is making a detailed plan.</p> <p>(FY 1995 Domestic Survey) Through the land reclamation and the sell-off of the first stage, now the administration systems of the Free-trade zone had been established nicely with gates and fences. Passengers going in and out are strictly checked at the gates, and the actual operation of the Free-trade zone are carrying on at the full scale. The activities of 2nd stage have been commenced by the other organization, including development company of the Free-trade zone. At present, the land reclamation works are progressing rapidly and the actions to transfer the inhabitants are already commenced. At the areas nearby, it has begun to attract enterprises to the places such as Chang-Shen Gao technical area and Jin Qiao Processing and exportation area. The Yang-Gao Road that connects the port and each development areas and the Yang-Gao great bridge that connects the port and the old city have been completed the construction works. And in the old city zone, a part of the circulated expressway and the subway have also been completed. Thus, the transportation network, which will support the industrial development, are gradually and steadily constructed to improve socio-economic infrastructures to attract foreign investment to the city very actively.</p> <p>(FY 1995 Overseas Survey) The findings of this study have been well utilized in order to formulate the development projects.</p> | | |

| <p>Description :</p> <p>In respect of the Second Irrigation Section, which is the object of F/S on this project, it has been on urgent task to construct pumping station diverged at 48t per second from the Second Shokako which is water resources, main canals, and Water Management Facilities along the pumping station. Under these circumstances, the Ministry of Water Resources in China has requested the grant aid of Japan.(1994,5)</p> <p>(FY 1995 Domestic Survey) The Jilin Provincial Foreign Economic Cooperation Bureau has submitted the official request for the grant aid to the Ministry of Foreign Economic Relations and Trade.</p> <p>(FY 1996 Domestic Survey) No official request has been submitted for the procurement of Japanese grant aid assistance. (Japanese government has freezed financial assistance to China from May.1995 till May.1997)</p> <p>(FY 1997 Domestic Survey) Trough priority is low, this project is considered important among the National Development Plan. Official request will be submitted soon.</p> <p>(FY 1997 Overseas Survey) In 1997, Trade and Economy Section submitted a request to Japanese Government for a grant aid assistance. (1.3bil.Yen) Given the request, JICA office conducted a survey on background of the request in August 1997. Construction is scheduled from May.1998 to Aug.2002.</p> <p>(FY 1998 Domestic Survey) The request for a grant aid assistance was submitted again in Sep.1998.</p> <p>(FY 1999 Domestic Survey)(FY 1999 Overseas Survey) Preliminary survey is to be conducted by JICA within this fiscal year. *Contents: Amount 221,225 yuan(Japan's grant aid: 97,177yuan, local fund:37,680 yuan, Chilin Province government fund: 86,368 yuan) Contract of Japan's grant aid has not been concluded.</p> <p>*Construction Implemented with the Chinese Budget This project is referred to the Eighth Five-Year Plan in Julin Province. Chinese government has been constructing the Chimonto drainage station and the canals along it which are the main drainage facilities in the study area. The drainage station is expected to complete in 1994. With regard to the First and Third Irrigation Sections, Chinese government carried out the construction of tailed canals based on the Five-Year Plan.</p> <p>(FY 1996 Domestic Survey) The Development Projects in Qianguo Area were commenced before the implementation of this Study. The improvement works are still in progress. The construction of the Chimonto drainage station was incorporated into the original project and was not newly proposed in this F/S. In fact, at the time when this F/S was commenced the construction works were about to be completed. The project proposed in this F/S was formulated on the assumption that the facilities which had been constructed or under construction in the original plan could be utilized for the project implementation. In other words, the utilization of the Chimonto drainage station was taken into consideration when the project was formulated. Therefore, the construction of the Chimonto drainage station should be considered a part of the proposed project while it was implemented with the local fund and was commenced before this F/S was started.</p> | | |

Description :

Finance:

Own fund (for a part of project).

In July 1995, the State Planning Committee received the request for the Japanese Government loan.

Construction:

(FY 1997 Domestic Survey)

As new establishment of Tong-Hai drainage pump station and accompanying trunk drainage canal, a part of the drainage plan in rural agricultural area, phase I of this project, is necessary in very urgent. Chinese side has been completed it in December 1995.

Detail:

The necessary measures have been taken to request the Japanese Yen Credit in order to implement the remaining part of project (relocation of aquaculture site).

(FY 1996 Domestic Survey)

This project aims to improve the drainage system with which the traditional agricultural method has been adopted. The increase of high-quality fish produce will enable to finance the O/M cost.

25 Dec.1998 L/A 4,759 mil. Yen (Liuzhou Environmental Improvement Project III)

Contents:Support for construction of gas supply facility and waste disposal plant and environment improvement at plants.

1) Utilization of gas as fuel for civil at town area (the 3rd) (proposed project 1) (to be completed by 2002). 2) Waste disposal plant project (to be completed by 2000). 3) Denitration of NO₂ exhaust gas at fertilizer plant (proposed project 5) completed by 2000). 4) Desulfurization of gas from coke furnace at steelworks (proposed project 8) (to be completed by 1999). 5) Transfer of zinc plant with environmental consideration (proposed project 7) (to be completed by 2003). 6) Desulfurization of smoke gas at thermal power station (proposed project 3) (to be completed by 2003).

Progress Situation & its Effects:

(FY 1999 Overseas Survey)

1) Promotion of utilization of gas as fuel for civil at town area.(Completion scheduled by Dec.2002): On-going. The situation of air pollution will be alleviated. 2) Waste disposal plant project(Completion scheduled by Mar.2001): Under Construction. 600tons of wastes will be disposed per day. By this, the problems of waste disposal and secondary pollution will be solved and as a effect, air & water pollution will be alleviated. 3) Denitration of NO₂ exhaust gas at fertilizer plant(Dec.1999: Test run, Mar.2000: Completion): 816.9tons of NO₂ exhaust gas will be reduced per day. There are remarkable impacts of improvement in Liuzhou's atmosphere. 4) Desulfurization of gas from coke furnace at steelworks(Completion scheduled by Jun.2000): Under construction. 0.178 mil. tons of SO₂ exhaust will be reduced per year. 5) Transfer of zinc plant with environmental consideration(Completion scheduled by May 2003): Designs are now being drawn. With the transfer of the factory which is the source of pollution, remarkable improvements of air & water environments are expected. Effective measures against exhaust air, drainage, and waste problems will also be taken in factory transferred area. The target amount of SO₂ exhaust is 0.128 mi. tons per year. 6) Desulfurization of smoke gas at thermal power station(Completion scheduled by Jun.2003): Desulfurization techniques are now being investigated. SO₂ exhaust of 2 power generators will be reduced from 10,900 mil. tons/year to 3,400 mil. tons/year.

(FY 2000 Domestic Survey)

1) Promotion of utilization of gas as fuel for civil at town area: Situation in progress: 65% 2) Utilization of petroleum for boiler fuel at city center: The conversion from coals to petroleum has been promoted. 3) The thermal power station (20 mil kw, 2 plants): Fund: Yen loan, Under procedure. 4) Improvement of boiler facility: With the conversion of the fuel, the coal boilers in the governmental offices, hospitals, hotels and schools were replaced to the petroleum boilers. 5) Denitration of NO₂ exhaust gas at fertilizer plant: The construction has been completed and conducting the trial operation. 6) There is no progress. 7) Transfer of factories as Zinc Plant to suburbs: F/S: completed, under procedure for D/D. 8) Desulfurization of gas from coke furnace at steelworks: The construction of the desulfurization plant has been completed and will receive inspection within one year.

(FY 2001 Domestic Survey)

Utilization of town gas: Progress situation: 96%. Utilization of petroleum for boiler fuel at city center: All boiler facilities fueled coal will be removed. Each user is to provide the finance and convert into the boiler fueled oil or electricity. Thermal power station (Additional installation of the desulfurizers on the present two power units with a capacity of 200 thousand kw): preparation step of the early part. Denitration of NO₂ exhaust gas at fertilizer plant: All work was completed and all is well after the trial. The average exhaust density is 665.5 mg/m³ and the exhaust quantity is 139 kg/h of NO₂ to make clear the second standard stipulated by the National Comprehensive Emission Standards of Air Pollution Source with the successful social and environmental beneficial effect. Transfer of factories as Zinc plant to suburbs: The D/D was implemented. Desulfurization of gas from coke furnace at steelworks: It was completed in Dec.2000 and the operational situation is well. It was confirmed that the rate of desulfurization was 99.7 %. The proposed project (6) as the Desulfurization of smoke gas at thermal power station Project is delayed. This Project is the most important measure on this Development Study. The reason of the delay is that the central government does not approve the construction of desulfurization facility. Some pressure is needed.

Others:

(FY 1998 Domestic Survey) Standard density of SO₂ was changed from 0.224mg/m³ in 1995 to 0.124mg/m³ in 1997.

Backgrounds:

(FY 1996 Domestic Survey)

It is learnt that the procedures for fund assistance on Pollution Source Control (the 4th Yen Loan) is on progress and also at Liuzhou, following measures are being taken by own fund.

1) Utilization of town gas (the 3rd). 2) Improvement of boiler facility. 3) Desulfurization of smoke gas at thermal power station. 4) Improvement of combustion method. 5) Transfer of zinc plant. 6) Denitration of NO₂ exhaust gas at fertilizer plant. 7) Desulfurization of gas from coke furnace at steelworks. 8) Fuel change of boiler (to petroleum) at city center.

(FY 1996 Overseas Survey)

In order to obtain OECF loan more easily, the number of the projects was reduced. The left projects have been and/or will be on their ways gradually. The air pollution and acid disposition monitoring was planned to be continuously conducted. However, due to the shortage of monitoring device and equipment and of the running cost, it has not been implemented as it was planned.

(FY 1998 Domestic Survey)

Problems in procurement of local fund have delayed the implementation of desulfurization project on smoke gas at thermal power station. The prospect for the transfer of Zinc Plant to suburbs is vague due to the difficulty in local fund's procurement and land acquisition.

(FY2005 Domestic survey)

No information to be specifically mentioned.

| Description : | | |
| <p>(1)Construction of High-speed Track Transportation (phase I) (FY 1996 Overseas Survey) The formulation of High-Speed Track Transportation Project (F/S on South-North Line) provided the counterpart with the useful experience which can be utilized in the modification of the Dalian City Comprehensive Transportation-System Plan and the improvement of the High-Speed Track Transportation Network. However, because of the national macroeconomic policy and the financial constraints, the implementation of this project is postponed and no related D/D has been undertaken. (FY 2000 Domestic Survey) The proposed South-North Line has been partially changed and the Line has been constructed with the West Sea Line. The 2nd stage construction, the Line to the Economic Development Area is under construction. (FY 2001 Overseas Survey) No.1 Construction period: November 1999 - July 2001 Content: Total length: 9km Funding: Cost: 160 million RMB, Funding party: Dalian municipality budget Progress: 9km construction has practically completed and is planned to open for service in 2002.</p> <p>No 3 express way Content: Total length: 49.15km, 14 station Funding: Cost - 3,701 million RMB Progress: Planned to be in service from 2004</p> <p>(2)Traffic Control Project The study proposed improvement on 16 crossings. Nakayama Park crossing and Friendship Park crossing will be improved in 1996 and other proposed crossings will be fixed in sequence. (FY 2000 Domestic Survey) The proposed 16 crossing have been already improved in 2000. (FY 2001 Overseas Survey) Funding party: Dalian municipality budget Period: 1996 - 2000 Content: 1) Construction of traffic network: (1.1) Most of the construction has completed, partially under construction and others are waiting for the completion. (1.2) Construction of 85.6km of highway in 4 central district and along economic development area. (1.3) Networking 138.0km long main highway and 170.1km long sub-highway 2) Traffic management plan: (2.1) Improvements of traffic facilities, (2.2) 5,500traffic sign, (2.3) 200 thousand square meter road mark (2.4) Construction of new roadway according to traffic light and speed, (2.5) Alteration of intersection, (2.6) Alteration for 16 intersections indicated in the study, (2.7) Improvement of roads and one-way roads, (2.8) One-way has increased from 22 before 1996 to 51 (2.9) Adoption of traffic restrictions (14 passport, Restricted access to the city for freights over 5 tons in daytime, Limited access for freights below 5 tons, Peak restrictions, Restricted access to Chungshan road for empty taxis). (2.10) Installment of wide-area traffic control system (Installment of England made SCOOT system, Investments of 4.7 million RMB to improve comprehensive public traffic security management system). (2.11) Improvement of institution (Traffic zone and management: 1998 Established planning division, 2000 Established traffic congestion relief process office, 2002 Established traffic discipline promotion division). (2.12) Promotion of traffic safety education (Primary education, Established elementary traffic police and recognized concurrent work system for traffic police in schools) Benefit: Traffic congestion has reduced and gas emission has decreased.</p> <p>(3). Heishijiao public bus station improvement plan (FY 2001 Overseas Survey) Funding Funding party: Dalian municipality Amount: 3.8 million RMB Period: October 1999 - January 2001 Content: Substituting Heishijiao as a long-distance bus terminal to Lushun via southern districts for banned Tangshan bus stop. 203 buses on 3 lines will be in service transporting 3,000 to 4,000 people a day and 6,000 to 8,000 on active day. Benefit: 1) Comfortableness of waiting has increased and service facilities such as bank, entertainment, and shopping has been added by constructing a waiting lounge. 2) Promoted development for business and culture by centering people's activity. 3) Contributed to travel industry by improving traffic and atmosphere conditions.</p> <p>Context: (FY 1997 Overseas Survey) In regard to a rapid railway, D/D and construction which were to be proceeded by Chinese side, have not been conducted due to the lack of finance. In Dalian City, two other development studies namely Study on Traffic Pollution and Study on Establishment of Environmental Model Area, were undertaken continuously. Dalian City considers that this study and study on Traffic pollution be integrated into Establishment of Environmental Model Area Project. Therefore implementation of this project would be after the completion of development study above mentioned. In case that the city is selected as a model city, Dalian City has an intention to include urban traffic project into the Environmental Model City Project. Application of yen loan will be difficult for a while, as the Department of the States noticed in 1996 that no request for loan in regard to railway construction would be accepted for several years except for request from Beijing, Shanghai and Guangzhou City. (FY 1999 Overseas Survey) Due to the shortage of fund, even the proposed priority plans of this project haven't started yet. However, in order to alleviate the condition of traffic congestion, Xian City has promoted some measures such as road development of port, construction of road(city~northeast route), etc. Improvement of Trolley is now under implementation. Future prospects: Due to organizational issues, Dalian city can not establish unified authority for traffic management. Currently, transit, rural, and port authority, transit management committee, and traffic congestion relief office have gradually started to work on integrated management, which improvement for the unified transit management is anticipated.</p> | | |

Description :

(FY 1998 Domestic Study)

Some of selected projects implemented by domestic fund and World Bank Loan has been implemented.

As for the Japan's grant aid, the following project is requested.

Country: China

Project Name: "Maintenance Project of Li-Jiang River Environmental Management Information System in Guangxi Zhuangzu Zizhiqu"

Facilities which will be maintained as river environment management information system are as follows.

- (1) Observation Facility: Water quality automated observatory / Underground water observatory
- (2) Flood Forecasting and Warning Institution: Hydrology observation telemeter, Rain gauge rader
- (3) Environmental Information Center: Information collection and delivery tele-equipment, Information processing equipment, related Software (including GIS etc.)
- (4) PR Facilities of Environment in Li-Jiang River: Museum of Li-Jiang River ecosystem, Equipments for exhibition, PR car

(FY 2001 Domestic Study)

The above projects were requested officially as the grant aid projects; however they have not been approved since their priority is low for the government and the grant aid project for poverty relief at TIANHU district was selected from the same autonomous region.

1. Flood and Water Resource

(FY 2001 Domestic Study)

Li-Jiang embankment, Flood forecasting and warning system, Gullin City inland water control: Implementing with own fund

Diversion channel scheme for Li-Jiang River and Taohuajiang River, Chuanjiang dam: Still planning

2. Securing of Water Quality

(FY 2001 Domestic Study)

Guilin City sewage: Being implemented with the WB fund

Lingchuan Prefecture sewage: Implemented with own fund

Others: Implemented with own fund and private fund

(FY 2002 Overseas Study)

Cleaning work for the surrounding areas and bank protection work of Lake Guanhu, Shanhu and Yonhu were implemented. Cleaning work was completed in March 2000 and protection work was completed in January 2001.

Shutting out pollution construction of Lake Guanhu was implemented by WB and was already completed.

Shutting out pollution construction of Lake Shanhu was implemented by national bond and was already completed.

The total cost for 3 lakes is RMB 44.36 million, consisted of RMB 37.88 for the government bond and RMB 3.6 million for own fund, and RMB 3 million for the WB loan.

3. Ecosystem and Environment Scenery

(FY 2001 Domestic Study)

Li-Jiang weathershed forest plantation, Cleaning of Lake Shanhu and Yonhu: Implementing with own fund

Others: Unknown

4. Organization and Institution

(FY 2001 Domestic Survey)

River environment management information system: Requested as a grant aid project to the central government.

Others: Unknown

Other information

(FY 2001 Domestic Study)

The Guilin City and Guilin District were merged as a new administrative district in order to integrate the projects on Li-Jiang River. Moreover, the Water Environment Committee was set up for the water environment control of Li-Jiang River and are working on the project along the proposal by this study.

(FY 2001 Overseas Study)

The Guilin and Li-Jiang River environmental project financed by the World Bank is a priori construction project in Guilin City and Jiangxi Province. It consists of seven projects including the establishment of urban wastewater treatment system and merging system, waste management, water supply to Li-Jiang River, erosion protection, environmental improvement of three lakes, improvement of residential estate and establishment of wastewater treatment company, environmental protection, and enforcement of Li-Jiang River catchments water resource administration. Total investment has reached RMB 661.21 million (the World Bank loan is USD 41.504 million).

Implementation status:

Implemented: Construction works of distribution pipes for wastewater drainage in Lake Cui Hu, Construction of a garbage and green landfill in Chenkou City,

Construction works for preserving water and soil in Wulixia

Being implemented: Bank protection works in Li-Jiang River, Construction of a distribution pipe network for wastewater drainage of improvement works in the three lakes, Improvement of residential complexes

Being prepared: Afforestation in both banks of Li-Jiang River, Construction works for preserving water and soil

(FY 2002 Overseas Study)

Contracts were made for 21 projects of the "Integrated Environmental Care Project in Li-Jiang River, Guilin" which Guilin City implements with loan of the World Bank, out of which 14 projects were completed. Construction works of the remaining seven projects have already been started.

Riverbank protection works in Li-Jiang River: Out of 9 projects in which construction has already been started, 4 projects were completed and handed over in August 2001. The remaining 5 projects will be completed and a test drive will start in 2001.

Afforestation and soil preservation works in Li-Jiang River: The assignment of afforestation was achieved. Improvement of residential districts: Start in 2002

Strengthening of an agency: Being prepared

(FY 2003 Overseas Study)

The accumulated amount of direct investment for the constructions mentioned above amounted to RMB 115 million, which accounts for 127% of the total completed contract of RMB 90,220 thousand. The construction with the amount of RMB 76,000 thousand was completed in 2001. Thus, the construction project has been progressing at a fast pace.

(FY 2007 Domestic and Overseas Survey)

No information to be specifically mentioned.

Description :

(FY 1998 Domestic Survey)(FY 1999 Domestic Survey)(FY 2001 Domestic Survey)

Implemented project: Shanghai Pudong International Airport Construction Project Plan (phase I)

Funding:

Funding party: Yen loan (L/A concluded: 12th of Sep. 1997)

Amount: JPY 40 billion

Content of a project: Construction of a runway, facilities in custom terminal building, facilities for oil supply, water supply/drainage, and sewage disposal.

Benefit:

(FY 2001 Domestic Survey)

With the opening of a new airport, an old airport (Hongqiao) was integrated, and a new airport company started management. Thus, they took a policy to shift the organizational system of the old airport to that of the new airport gradually when the new airport opened. And the number of flights which was small before increased gradually, and the new airport functions as an international gateway airport in Shanghai now.

Progress:

(FY 1999 Domestic Survey) Oct of 1999, the construction was completed. 1st of Oct, 1999, the airport was opened.

(FY 2001 Domestic and Overseas Survey)(FY 2002 Overseas Survey)(FY 2003 Overseas Survey)

Implemented project: Shanghai Pudong International Airport Construction Project Plan (phase II)

Funding:

Funding party: Fund of the government, Fund of firms, and Bank loan (They plan 1/3 for each, but they have not procured them completely at the present time.)

Amount: CHY 2 billion

Implemented period: January 2003-End of 2004

Contents: Construction of the 2nd runway and related facilities

Progress:

(FY 2002 Overseas Survey) Preparation for comprehensive regulations and works for the early part of the 2nd construction has been implemented. They decide funding plan in the future.

(FY 2003 Domestic Survey) The National Development and Reform Commission (NDRC) held a pre-examining conference for a F/S report related to the 2nd construction works in Shanghai in the middle of August 2003. They made a plan to complete construction of the 2nd runway and related facilities by the end of June 2004 and start operational tests in 2005. They also have a plan to conduct international competition for design proposals of a terminal building constructed in Phase II from September 2003 and to invite members of a committee for the evaluation from Japan. They plan to manage finances for the implementation of the project in their country.

(FY 2003 Overseas Survey) We proceeded with works such as planning for the whole airport terminal areas and the acceptance of proposals for international bidding of the construction of the airport terminal building. The progress situation is as follows.

1. Construction of related facilities in a flight area: They have started the preparation of works for basic improvement in the 2nd phase construction works in a flight area, and the construction is to start on March 2005.

2. Acceptance of proposals for bidding of an airport terminal area plan and airport terminal building 2nd construction: The terminal building of the airport, which is supposed to be constructed by the 2nd construction, will start working from the end of 2008.

An airport terminal building by a 2nd phase construction plan is supposed to start operation in earnest at the end of FY 2008

3. Other facilities: Considering the flight operation work load, related facilities (such as flight area and freight transport areas) will be additionally constructed. Specific scale will be finally determined after the completion of investigation of whole plan.

Related project:

(FY 2001 Domestic Survey)

August 2001: Approach radar control system was chosen.

October 2001: An exclusive apron and a terminal building for VIP with 320,000m² were completed for an APEC conference. CAT II started operation. A terminal building for CAT II will be completed in 3 years.

Plan in 2003: High speed trains connecting the airport and Shanghai City (total length about 30 km) are under construction

(FY 2007 Domestic and Overseas Survey)

No information to be specifically mentioned.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 1998 Domestic Survey) (FY 1999 Oversea Survey) (FY 2000 Domestic Survey) (FY 2001 Domestic Survey) (FY 2003 Oversea Survey)

Implemented project: Baishi Dam Construction Project in Liaoning Province

Funding:

Funding amount: 8 billion JPY.

Funding party: Yen Loan(December 24, 1996 L/A), Liaoning Province- 565 million CNY, Development Bank- 233 million CNY

Construction:

Embankment (514m), Capacity (16.45 billion m3), Freeing port mouth (W:12m x 11 places), Bottom (W:4m x L:5.5m x 12 places), 3 Power generators

Benefits:

(FY 2001 Domestic Survey)

Agricultural water: annual production of irrigated rice increased to about 120,000 tons at the rice paddy of 18,100 ha

Reed: annual production increase to about 220,000 tons at the field of 16,700ha

Water supply: the amount of newly developed water is 0.26 billion tons annually.

Flood control: the safety degree of flood control was developed from 1/20years to 1/50years of the probability at Jin Xian.

Power generation: the annual electric energy production is 31 million kWh.

Fisheries: Fisheries benefits from the cultivation of freshwater fish at the Baishi reservoir and river crab at the lower basin of Liaoning river.

(FY 2003 Overseas Survey)

Flood prevention years were increased from 20 years to 50 years. Water supply to Fuxin City and Jinzhou City, irrigation and supply of industrial water to urban areas at the downstream of Dalinghe.

The flood prevention criteria intended for 52,693 ha of agricultural land in urban areas and rural areas was increased. The project supplied irrigation water to 13,340 ha of paddy fields and 15,341 ha of reed planted fields, and played a role in supplying irrigation water and industrial water to Panjin and Jinzhou, power generation and fish farming.

Progress:

(FY 1999 Overseas Survey) 95.5% (1,498,500 m3) of the whole construction, concrete filling of 5,950,000, and water-proofing of tents in 24,900m, and installment of gates was completed. Installation of power generators are in progress.

Out of 17,933 residents in the dam area, 7,873 residents of 2,342 households have moved out. Water and electricity is available in some areas. Improvement of broadcasting, communication system, and roads are on-going as a part of resident relocation project. Treatment of extra concrete of dam, installation of 12 freeing ports and switch gear, establishment of electric power plant, relocation of 10,110 remaining residents and its relating projects will be all completed by the end of 2000.

Jun 1996: Commenced

Oct 1997: Dam completed

Sep 25, 1999: Waters was filled in Lower weir

Dec 2000: Completed

(FY 2000 Domestic Survey)

Oct 2000: Ceremony for the completion

Nov 2000: Completion

(FY 2002 Overseas Survey) The environment and socio-economic study is to be implemented between June-December 2003. The study will be financed by the assistance from Japan (equivalent to 13 billion JPY (grant aid JPY 251.85 million and yen loan JPY 13.05 billion)) and own fund (RMB 870 million) In terms of technical assistance, trainings in Japan (10 trainers each year), and dispatching experts (50 persons in total) will be requested. By maintaining facilities, the expiration date for the use of Baishi Dam can be extended to 10 years, which would stimulate local production activities and increase current profit up to 72.715 billion CNY.

(FY 2002 Domestic Survey)

Technical Cooperation:

acceptance of a trainees: 1998-2001 32 persons

(FY 2007 Domestic and Overseas Survey)

No information to be specifically mentioned.

| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | 1) To formulate a M/P to control the water environment of Tai Lake (2,428km ²), targeting the years of 2000, 2010, and 2020; and 2) Technical transfer through the conduct of the Study. | | |
| 7. CONSULTANT(S) | KOKUSAI KOGYO CO., LTD. CTI Engineering Co., Ltd. | | |
| 8. STUDY PERIOD | Jan.1996 | ~ Jun.1998 | 29month(s) |
| 9. SITE OR AREA | Area (21,969km ²) that is a potential source of pollutant load flowing into Tai Lake. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Installation of secondary sewage treatment facility for domestic wastewater treatment.</p> <p>2. Effluent load reduction and installation of highly advanced sewage treatment facility for industrial wastewater treatment.</p> <p>3. Construction of a water environment monitoring and observation facility.</p> <p>During the Study, the economic growth rate in the area was over 15%. Assuming that the pollutant generation load is in proportion to the GDP, the inflow load in the Tai Lake was estimated to have doubled in a five-year period, and quadrupled in a ten-year period. Consequently, maintaining the lake water quality at a certain level required tremendous capital. About twice the normal cost for treatment was required as the measures carried out not only targeted organic load reduction, but also the reduction of properties such as nitrogen and phosphorous that impact eutrophication.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

1. Installation of secondary sewage treatment facility for domestic wastewater treatment.

(FY 2001 Overseas Survey)

Funding: Own find

Construction: Construction of 29 wastewater facilities were partially or completely completed and 25 are on-going. The total capacity will reach 2,794,000 ton/day. Moreover, 81 facilities will be constructed in the period of the tenth five-year plan and the capacity will reach 3,913,000 ton/day.

2. Effluent load reduction and installation of highly advanced sewage treatment facility for industrial wastewater treatment

(FY 2001 Overseas Survey)

Many industrial firms reached the effluent standards. Clean production is promoted through adjustment of industrial structure and the effluent is being minimized. Also, the elimination process manual of phosphorous and nitrogen organic matter was tightly restricted for Tai Lake is polluted by organic matter. Fund for construction was secured from local budget.

3. Construction of a water environment monitoring and observation facility

(FY 2001 Overseas Survey)

The Ministry of Water Resources is responsible for construction and Taihu Basin Management Agency is in charge of the implementation of construction. All data concerning operation after construction will be disclosed to public agencies such as Environmental Protection Bureau to share information and provide better public services.

The project is under preparation and an the request for application of grant aid for the construction of a monitoring and observation facility will be submitted to JICA .

(FY 2003 Domestic Survey)

B/D is being implemented.

(FY 2003 Overseas Survey)

Name of the implemented project: Automatic Monitoring System of Water Quality in the Basin of Lake Taihu

Funding: Currently raised domestically with an eye on procurement from overseas is intended.

Amount: 110 million CNY.

Contents: At the early stage the systems will be constructed at 22 places in major water channels that introduce water from Chang Jiangto Lake Taihu, main water channels flowing into Lake Taihu, and water channels in the region of Lake Taihu and at borders of provinces.

(FY 2004 Overseas Survey)

Subsequent study: Study on the agricultural plane source by Lake Taihu basin and aqueous biology

Implementing period: 2004 - 2006

Subsequent study: Automatic water quality monitoring system

Finding: Own funds, Attempting to receive funding from overseas.

Amount: 110 million CNY

Contents: Installing monitoring system at 22 sites. The sites include major rivers that introduce water from Chang Jiangto Lake Taihu, major rivers flowing into Lake Taihu, and rivers in the region of Lake Taihu and at borders of provinces. Currently the automatic water quality monitoring station is being installed at 貢湖 by Chang Jiangto Lake Taihu.

Subsequent study: Chang Jiangto Lake Taihu water quality testing

Contents: Construction of new water channels planned on the "Study on Eutrophication Control of Tai Lake". Currently F/S is being implemented. On-sitestudy is being implemented on one of the channels.

Beneficiaries: Three states - Chiangu, Zhejiang, Shanghai and the cities within them.

Technical cooperation: Since 2001, TBA has not received technical cooperation from Japan, training or dispatch of experts. No technical cooperation project exists.

Progress: Irrigation and Drainage Department is researching the construction of a drinking water source conservation model site and Lake Taihu water biology restoration site in Lake Taihu basin. Currently a F/S is being implemented.

(2005 Overseas Survey)

Subsequent study: Construction of Chang Jiangto Lake Taihu water quality testing

Status: Based on the survey in 2005, 2 billion cubic metres of water flowed to the Lake Taihu out of 4 billion cubic metres drawn from Chang Jiang. This was contributed to the improvement of the water quality and nearby environment as well as supplying water efficiently to the basin. Area of eutrophication in Lake Taihu declined to 70% from 83% in 2001 and category II - III has increased from 70% to 85%. Water quality of the river and channel network has increased from 20% to 40% (category above III), which increased the load capability of the water resources and environment.

This summer's lower rainfall and high temperature weather led to the decline of the water flowing into Lake Taihu, causing a large blooming of algae. there was an oil pollution accident at Huangpu River in Shanghai. These incidents brought about complete cooperation among water authorities, which has implemented the operation scientifically. As a result, the following benefits were gained, 1) total sequearing safe water to Shanghai, Suzhou, Wuxi, Huzhou, 2) sufficient supply of agricultural water in key areas in Hangzhou, Jiaxing, Huzhou, 3) maximum improvement of water quality, 4) guarantee the safety of water environment, 5) implementing preventative measures for the shortage of water.

(FY 2008 Domestic Survey)

Implemented project: Environmental restoration in Lake Taihu (model project)

Implementing period: 15 May, 2001 - 14 May, 2006

Background: Japan has already gained technical know-how against eutrophication, which include the installation of an advanced sewage treatment tank as a distributed sewage treatment system and the utilization of natural purification process by aquatic plants. In China, however, these methods are not yet established.

For this reason, in 1998, the Government of China requested the Government of Japan to implement technical cooperation in order to develop measures on how to deal with domestic drainage from various and dispersed sources, as Japan possesses advanced technologies in this circle.

Description :

(FY 1999 Domestic Survey)

An official delegation led by Mr. Wang Guo Fa, Vice Governor of Jilin Province, visited Japan for two weeks in June 1998 to hold a series of investment promotion seminars in Tokyo, Niigata, Joetsu, Kanazawa, and Nagoya. Accordingly, progress of the project is expected.

(FY 2001 Overseas Survey)

Jilin Province submitted 30 projects for yen loan including the sectors of industry, water supply, urban wastewater treatment, urban waste management, water and soil conservation, environmental improvement, tourism and education through the State Planning Commission. The result of the application has not been informed yet.

Installation of saving water system at irrigation districts (Automatic water-saving irrigation system)

(FY 2002 Overseas Survey)

Subsequent study: 2001

Funding: 10 million CNY (5 million CNY invested by China, 5 million CNY provincial funding)

Construction: 20 April, 2002 - 15 November, 2002

Benefit: Existing paddy field (2,267ha), newly cultivated paddy field (867ha) and improved irrigated paddy field (1,400 ha) in four sites.

(FY 2003 Domestic Survey)

Local staff (interpreters and experts) who are employed for this project and had work experience at OJT have worked various development projects implemented by JICA. This contributed to the development of human resources.

(FY 2003 Overseas Survey)

Implemented project (in progress)

1) Project for Construction of National Large-size High Quality Products and Food Base (Changchun Area)

2) Beef Cattle Development Project in Changchun

Subsequent project:

1) Changchun and Harbin area economic development study

Implementing period: January, 2004 - June, 2004

Funding: 3 million USD of Grant Aid will be requested

Technical cooperation from Japan:

Acceptance of technical training participants: 5 - 10 trainees. The training in the sustainable development of the regional economy will be implemented in 2004.

Dispatch of experts: 3 - 5 persons. Cooperation for study and planning is desired for a period in 2004.

(FY 2004 Overseas Survey)

1. Subsequent study: Changchun - Jilin economic area development plan will be implemented between 2004 and 2005.

2. Funding: Funding for the Songhua River basin pollution control measures will be from various sources. (e.g. Yen loan, Grant Aid, International funds)

3. Construction and planning

1) Changchun Longjia International Airport: In progress. This will be completed in September 2005.

2) Changchun - Hunchun highway: Changchun - Jian mi and Yanji - Tumen have been completed and used. For the rest of the parts, the work is in progress.

3) Songhua River basin pollution control measures: Construction project is in progress for Songyuan city sewage treatment facility. Construction of the sewage treatment facility in north and west outskirts of Changchun, Jilin city sewage treatment facility have been completed.

4) Lao Long kou dam: Currently being constructed.

4. Technical cooperation: Training plan (30 trainees for pollution control measures for 30 days)

(FY 2008 Domestic Survey)

The proposed comprehensive development plan has been authorized by National Development and Reform Commission (NDRC) and utilized for regional development projects due to the rapid growth of China's economy and finances. The plan was also utilized in the mission to entice private investment from Japan organized by NDRC.

The programs listed below are in progress based on the basic development policy of the department authorized by NDRC.

1. Program for rural economic organization - cooperative association for market economy

2. Integrated program for Beef cattle promotion (summary)

3. Program for improvement of Changchun vegetable wholesale market

4. Program for water resource development

5. Program for beneficiary liability on forestry public function

6. Program for industrial promotion of timber processing

7. Program for promotion of agricultural processing and food industry

8. Program for structure improvement and reinforcement of Automobile (including motorbike) metallic component industry

10. Program for industrial promotion of Yanbian district

11. Program for reconstruction of Decrepit company

12. Program for promotion of Yanbian small thrust development

13. Program for Changbai Shan and Yanji tourism development

14. Program for maintenance of East-west arterial road

15. Program for rural feeder transportation network plan

16. Program for maintenance of commodity distribution terminal

17. Program for review of rural economic development zone

18. Program for redevelopment of decrepit housing area

| | Processing | Discontinued or Cancelled |

Description :
 (FY 1999 Domestic Survey)
 Finance:
 The beneficiaries are able to share in the expenses for operating & managing water supply system, however they have difficulty to share the cost of facilities construction. Therefore, the inhabitants are looking forward to the subsidy from local government but the plan to implement construction is not certain yet.
 The procedures for JICA grant aid has already been completed in Ministry of Water Resources, but its aid has not been procured yet until now.

(FY 1999 Overseas Survey)
 The water supply facility model operated without any problem. Residents desire JICA to formulate a further water supply plan. If the project will be implemented, large social and economic effects are expected. At present, local government is trying to collect funds from various routes in order to implement the proposed project.

(FY 2001 Overseas Survey)
 The project has not been realized yet.

(FY 2003 Overseas Survey)
 In China, with implementation of the "National Drinking Water Scarcity Solution Project" with the objective of solving drinking water scarcity for residents and cattle in water-starved areas, the water supply project was implemented in villages that became objects of the water supply project. In TOKUTO province, the Water Supply Project was incorporated into the provincial Drinking Water Scarcity Solution Plan, and consequently the water supply project was implemented in villages that became objects of the project.

Description :**Status of Application**

Environmental management plan prepared by the study have been applied to various issues in Dalian city, such as; Relocating aged factories from urban area, Expansion of environment monitoring system, Promotion of environmental education.

(FY 2000 Domestic Survey)

Dalian has historically developed as economic and trading center in north east of China and industrialized city. Recently, environmental problem is getting serious in the city due to rapid urbanization. So, the Chinese Government decided four central districts in Dalian City as Environmental Model Zone, and requested to the Japanese Government to conduct a study for formulation of environmental management plan for it. The study was carried out from November 1996 to March 2000 and during the period the study team visited the city seven times for field survey. The study was cooperated with Kitakyushu city, which is a friendship city of Dalian city for long time, and its know-how was efficiently put in the recommendation especially in the field of political management system.

The study covers wide area and details are as follows;

1) Monitoring and analysis of meteorology and air quality, water, deposit and living things in Dalian Bay, and noise at main traffic roads. 2) Sampling and analysis of emission gas and discharged water from plants(point sources of pollution) and sewage water from residential houses(apartment). 3) Measuring and analysis of emission gas from vehicles(non-point source). 4) Identification of present environmental situation, analysis of environmental pollution, and formulation of environmental pollution estimation model(satellite image analysis and simulation model). 5) Identification of presents socio-economic development and study on future industrial framework and energy changeover plan. 6) Assuming of socio-economic development framework and estimation of future environmental condition. 7) Setting of future(at 2010) environmental target figures and identification of the theme to be investigated. 8) Survey on present situation of collection and middle and final treatment of the solid waste from plants, hospitals and residential houses, study on the theme and countermeasures, and making a recommendation for improvement plan. 9) Survey on present situation of organization, institution and environmental education, and making recommendation for the improvement plan. 10) Study on the items to be implemented in a political field and summarize in the modernization plan for environmental management. 11) Formulation of action plan for important project in the items of countermeasures recommended. 12) Pre-Feasibility study and EIA for the priority projects selected from the important projects. 13) Formulation of the environmental basic plan including whole study results. Formulation of "Dalian Basic Plan for Environmental Pollution Protection", which is useful for Dalian Environmental Protection Bureau to prepare the Basic Plan by themselves. It was used in 2nd seminar as a textbook.

(FY 2001 Domestic Survey)

Finance: 28 Mar.2000 L/A 5,315 mil. Yen Dalian Environment Model City Project Part I, 30 Mar.2001 L/A 3,202 mil. Yen Dalian Environment Model City Project Part II

1. Improvement of the plant for which F/S was implemented.**(FY 2001 Overseas Survey)**

1) Dalian Pharmaceutical Plant: Improvement and relocation were completed. Procured 136 million yuen by land transfer and joined the domestic stock market. 2) Dalian Dye Plant: Improvement and relocation were completed. Dalian Chemical Industry Company payed the relocation expense, 180 million yuen in advance. 3) Chunhai Thermolectric Plant: Pollution reduction improvement was completed. Fund was procured by themselves. 4) Dalian Steel Plant: Pollution reduction improvement of electric furnace was completed. Fund was procured by themselves.

2. Urban wastewater treatment**(FY 2001 Overseas Survey)**

1) Construction of MA RAN River wastewater treatment plant was completed. Finance: 330 million yuen (including 83 million yuen loan from World Bank)
2) Construction of CHUN RYU wastewater treatment plant was completed. Finance: 90.66 million yuen (including 34 million yuen loan from World Bank)
3) Construction of HAKKESO wastewater treatment plant was completed. Finance: BOT (procured by themselves)

(FY 2002 Overseas Survey)

Contamination and maintenance of electric furnace of Dalian Steel Cop: reforming old furnace, abating emission of smoke and grime (the period 20th of March-June of 2004, 12 mil dollars). Dust collector in cement factories: in renovating facilities, clean production will be launched, The 1st phase of Environmental Protection Project for Dalian pharmaceutical factories: The factory is moved and transformed to actualize clean production (Financed 6.37 mil. dollars). Establishment of the Model Center (requested): establishing a model center for environmental education which serves as contact between environmental educational enlightenment and clean production in Northern Region.

3. Air pollution reduction

(FY 2001 Overseas Survey) The result of the joint research between China and Japan, the sulfur dioxide inhibition method, was utilized and the SO₂ concentration rate in the air decreased from 60mg/m³ (1997) to 30mg/m³ (present).

4. Provision of equipments

(FY 2001 Overseas Survey) Through the study, the Japanese side provided equipments of approx. 20 million yuan. Among the equipments, five automatic monitoring stations are working properly. Based on the stations, the Environmental Protection Bureau constructed five more new stations with own procured fund. However, some equipments are not exchangeable due to lack of spare parts.

5. Others

(FY 2001 Overseas Survey) Dalian City was highly evaluated in its environmental protection activities and selected as one of the world top 500 cities by the United Nations.

(FY 2004 Overseas Survey)

Chongqing Tianyuan Chemical Industry District Thermal Power Plant Expansion Project (October, 2002 - January 2004)

Reducing discharges of 1,610 ton sulphur dioxides, 5,800 ton fine particles, and 80 ton NO_x annually.

Anti Daiko group made Thermo-electricity Furnace Pollution Project (March 2002 - July 2004)

Introduced a 40 ton AOD furnace, square alloy casting dust-proof system. Dust-proof has accomplished 50mg/square metres. Realised reduction of 1,536 tons of dust per year.

(FY 2005 Overseas Survey)

No information to be specifically mentioned.

| <p>Description : (FY2000 Domestic Survey) There is no information after the completion of the project.</p> <p>1. Organic Chemical Plant in Guizhou (FY 2001 Domestic Survey) Finance: Mar.28,2000 L/A 6.266 Billion Yen 'Guiyang environment Model City Project ' Mar.30,2001 L/A 8.169 Billion Yen 'Guiyang environment Model City Project II'</p> <p>2. Chemical Fertilizer Plant in Guizhou (FY 2001 Domestic Survey) It was not approved as the JBIC Project because the loan scale was small.</p> <p>3. Power Plant in SEITIN (FY 2001 Domestic Survey) It was not approved as the JBIC Project because the loan scale was small.</p> <p>4.Countermeasures Plan for Environment and Water Pollution Maotiao River Basin in Guizhou Province (FY 2002 Overseas Survey) The project was integrated into JBIC's Yen Project from 2002-2004 (around 100 mil.dollars). The work is to be started in 2004, and lasted for 3 years. (FY 2003 Overseas Survey) Next stage study: China desires implementation of the project in 2004 or 2005 with the study expense funded by JICA in addition to its own fund but It has not made the request yet. Details of study: Systemicity and feasibility of the water environment improvement method of the Maotiao River Basin in the Guizhou. Dispatch of experts is desired.</p> <p>5. Other Project (FY 2001 Domestic Survey) Sewage disposal plant and rationalization of factory effluent utilization: implementing by the own cost Ecosystem survey and conservation management planning: unknown Water environment monitoring: implementing by the own cost Organizational enforcement of the environment protection direction: personnel cut by the government was made Enforcement of the Sewage and waste system: not yet implemented</p> <p>Profit effects: (FY 2002 Overseas Survey) Through project implementation, Kweichow province will contribute to regional economic development, social progress including quality control of water resources, as well as improvement in life standards including some sense of security, provided safe drinking water.</p> <p>Situation: (FY 2001 Domestic Survey) The projects are implemented based on this Study. Three Plants are under reexamination from the viewpoints on rationalization and scale expansion except the Organic Chemical Plant among the Plants on F/S. The measure for mercury pollution is made partially by soil covering. The joint experiment for the soil improvement by the low temperature heat treatment are preparing to be requested as the grant aid by JICA.</p> <p>(FY 2001 Overseas Survey) Fund was procured from various sources. High temperature mercury removal method was used for contaminated land, however, it was not successful. Therefore, the low temperature mercury removal method proposed by the study is being examined.</p> <p>(FY 2004 Overseas Survey) Status of the measures taken against 4 major pollutant source related to the plan of immediate measures prepared in this study are as follow:</p> <ol style="list-style-type: none"> 1. Organic Chemical Plant in Guizhou: Measures against mercury pollution are taken by using Yen Loan 2. Chemical Fertiliser Plant in Guizhou: Construction of new chemical fertiliser production system is in progress using a loan from ADB 3. Power Plant in Seiten: Measures against waste water are taken using its own capital. 4. Chemical Fertiliser Plant: Measures against water waste pollution are taken, using Gov. allotment and its own capital. | | |

| Description : | | |
| (FY 2000 Domestic Survey) No information available. | | |
| 1. Farmers participatory projects (FY 2001 Overseas Survey) The following activities are on going. - 4 science and technology model areas are being selected related to mountain district development. - Preparing an application for yen loan. (FY 2002 Overseas Survey) 2 mil. yuan from Ministry of Science and Technology, 3 mil. yuan has been collected so far, combined with 6 mill. yuan of farmers' private funds. | | |
| 2. Public Works | | |
| 1) Dam drinking water project by Japan's aid (FY 2001 Overseas Survey) The Ministry of Foreign Trade and Economic Cooperation has submitted an application to JICA and is waiting for approval. (FY 2002 Overseas Survey) The next phase of Study: in practice Request for Grant Aid, amounting for 5,110 mil. yuan (the cost will be shared evenly) was submitted to the Japanese Govt. (FY 2003 Overseas Survey) As of FY2003, the request for a grant aid has been submitted to JICA through the former Ministry of Foreign Trade (also approved by the present Ministry of Commerce) | | |
| 2) Underground water environmental research (FY 2001 Overseas Survey) The Ministry of Science and Technology applied for a joint research with Japan, however, it has not been approved yet. The Chinese side has already spent two years from 2000 to 2001 for the research project with Japanese experts joined the project. A request for dispatch of Japanese experts was submitted to the ministry in 2002. (FY 2003 Overseas Survey) 2001 - 2003: Dispatch of experts (3 persons including personnel from Chiba University) was realized and annual studies and research activities were conducted in the mountain area of Taihang Shan. | | |
| 3) Farmers market project (FY 2001 Overseas Survey) The application has been submitted to the Ministry of Science and Technology. Japan's aid is expected and approval is awaited. | | |
| 3, Farmers support project (FY 2001 Overseas Survey) The project has not implemented yet. (FY 2003 Overseas Survey) 1) The request for yen loan was continuously made in 2003. 2) Based on the final report of the study, Hebei Mountain Area Economy and Technology Development Office prepared the "Agriculture, Science and Technology Development Plan in Hebei Mountain Area" (2003-2005-2010), which the aforementioned office is expected to implement the plan by bringing concerned experts together from 2004 under the leadership of the Mountain Area Economy and Technology Development Office. The framework is likely to be expanded based on four development zones where the project has been previously implemented into dozen or so plantation areas in Taihang Shan and eight industries in Yanshan. The gross investment amount is 1.91 billion yuans, of which 3 million yuans, expected to be input from the provincial government from 2004, will be used to attract investment from various fields as a lead aiming for joint implementation. | | |
| (FY 2004 Domestic Survey) No information to be specifically mentioned. | | |
| (FY 2004 Overseas Survey) Hebei province has set forth 4 points in improving the living condition of 30 thousand farmers in 18 villages of the target water irrigation area. 1) To implement construction of an asphalt-paved roads to each villages. Construction completed for 12 villages in the end of 2004. 2) To construct water container for household. To prepare for a water shortage in dry seasons by containing rainwater. Presently completed for 70 percent of the household. 3) To implement actions for reforestation of arable land. To improve the ecosystem. 4) To train and assist farmers in popularising "water efficient farming". In addition, to introduce drought resistant species. Other than these, projects such as development of wasteland within project area, damming of rivers, land generation, and dam construction for village and land protections are in progress. The objectives of the above projects are to improve the environment and to overcome poverty of the farmers. | | |

Description :

Situation:

(FY 2000 Domestic Survey)

The proposed projects in this study, namely construction projects of the East-side Road and West-side Road and Rodo- Bridge, were approved in the Counseling Committee Meeting of Changsha City Government.

The Construction Committee of the Changsha City Government has already asked the Japan Bank for International Cooperation (JBIC) to finance the construction projects of River-side Road based on the decision of Counseling Committee Meeting.

Section between Syoko No.3 Bridge and West Lake Road of the East-side Road has been constructed by their own funds.

(FY 2001 Overseas Survey)

The application for yen loan was submitted in the end of 1999, however, it has not been approved yet.

1. East-side section of Riverside Road.

(FY 2001 Overseas Survey)

Finance: Own fund.

Construction : Completed.

2. West-side section of Riverside Road.

(FY 2001 Overseas Survey)

Finance: Own fund.

Construction: Will be completed in Oct. 2002.

3. Roudou Bridge and its approach road.

(FY 2001 Overseas Survey)

Finance: Own fund.

Construction: On-going. The roads were partially completed.

4. River side road

Subsequent studies

2003

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

The project is till 2003 and has already been completed.

| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY2001 Domestic Survey) Based on the results of this study, the government of P.R. China has been trying to coordinate towards the earliest Implementation by loans from Japan Bank for International Cooperation (JBIC), but no progress has been observed as of today.</p> <p>(FY2002 Domestic Survey) Shanxi Province shows a positive attitude toward implementation of the project. The draft of request for grant aid was allegedly submitted to the Central Govt. of China (Agricultural Dept.). The progress/result of discussion within the govt was not fully known. Though perhaps, there would be a high possibility that the project will be carried forward operation, the policy direction of govt. of China remains ambiguous at the moment. Therefore, even if the request is submitted, it is unclear whether its details are compatible with JBIC's aid policies towards the country (focused on environment protection and poverty alleviation).</p> <p>(FY2002 Overseas Survey) It would be essential to dispatch Japanese specialist for 2nd phase of Study. Moreover, the Grand Aid is to be proposed for operational cost. The proposal will be prepared in FY2003, and submitted for FY 2004. The Ministry is examining research plan on agriculture/fishery and environmental protection in the Yellow River coastal area.</p> <p>(FY2003 Domestic Survey) Because realization of financing is likely to be continuously difficult from the progress hitherto, it is considered desirable to revise the requested project as needed and prepare the ground for the project toward systematization by Dispatch of Experts (for a short time of approximately six months) as described in the "Study by Overseas Offices in FY2002".</p> <p>(FY2003 Overseas Survey) 1) Culture ponds of 220 hectares as a standard have been already developed and one breeding place for juvenile fish that makes use of the waste heat of power generation was constructed. 2) Future development of coastal fishery in the Yellow River will chiefly aim at quality enhancement. In terms of construction, for example, existing culture ponds will be modified to raise the level higher than a standard culture pond and develop it into what will serve as a model, and no new construction is expected. 3) The modification of culture ponds need financing from Japan and a grant aid is desired.</p> <p>(FY 2004 Overseas Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Domestic Survey) No information to be specifically mentioned.</p> | | |

| <p>Description :</p> <p>(FY 2002 Domestic Survey) SOA recognizes the low probability that JICA cooperates SOA project again although SOA expects assistance to the next marine survey project driven by SOA. Guangxi and Beihai authorities contacted the study team to seek a possibility of marine survey project in Beihei coast. Their reason to request assistance is that Guangxi dose not have financial source to invest in environment due to its low standard of living although survey and measures are urgent needs in the sea with mangrove and coral reef due to its serious pollution. Participants in the study meeting of "Comprehensive Environmental Plan of Pearl Rive Estuary" showed high interest in activities of environmental conservation in Seto Inland Sea of Japan and the topic of "total amount regulation" introduced by the study team. It is worth considering dispatch of short- or long-term experts who have such organizational and institutional know-how if there is a request because the dispatch would contribute a lot in improving monitoring in Pearl River Estuary. Chinese engineers will be able to make the best use of the technologies transferred in the study because of their high level skills. However, there is a possibility that China requests short-term expert dispatch in the future on treatment of chemical substance such as dioxin and endocrin or on simulation technology in unique sea like Shenzhen which are not serious issues yet in China.</p> <p>(FY 2002 Overseas Survey) After the study, Environment Assessment Center for the State Oceanic Administration has carried out "An Assessment on Environmental Quality in Pearl River Estuary" in 2002. This Study set 44 assessment points. The assessment on water quality, low quality and marine life has started in May, August, and October respectively. The assessment will be continued in 2003.</p> <p>(FY 2004 Domestic Survey) Neither a concrete proposal equivalent to the subsequent study, nor related plans has been prepared. This study is to prepare a monitoring plan to be conducted continuously taking into account the local environment status, which does not include a proposal for subsequent studies including improvement of facilities using a Yen loan. Although system development to utilize monitoring results of the target area was proposed in this study, which requires sufficient amount of fund, this project has completed with a confirmation that the SOA, the counterpart, and other Guangdong province government agencies will collaborate to proceeding the issue. Although use of Yen loan has been considered other than a Chinese budget, China is continuing its own monitoring, which there are no request made for a Yen loan.</p> <p>(FY 2004 Overseas Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2007 Domestic and Overseas Survey) No information to be specifically mentioned.</p> | |

Description :

(FY 2002 Domestic Survey)

Major projects proposed in II can be categorized into three types as follows:

1) 1 to 4: Short-term (urgent) projects:

Concerning the short-term proposals, Ministry of Construction in China announced that the Ministry decided to study the feasibility of system integration and other reforms in June 2002.

2) 5 to 9: Long-term (policy-making) projects

These projects will be considered for implementation once the short-term projects are completed and the new systems are established.

3) 10 and 11: others

A Japanese electronics manufacturer has been conducting a feasibility study on the integrated information system of Housing Provident Fund Management Centers in cooperation with JBIC. Also, a Japanese real estate information provider also has shown strong interests in the housing market information system and will start the study in near future in China.

(FY 2002 Overseas Survey)

A subsequent study, 'Study on Financial System Reform for the Western Development In the People's Republic of China', is one of the major development strategies within the national plan of '10th Five Year Plan (2000-2005)'. In that Survey: 1) Necessary fund, period and characteristics of fund flow for each construction projects of Western Development will be categorized/researched. 2) Related investments will be categorized/researched. 3) Feasible financing route and methodology will be researched following categorization and research of each investment 4) Policy recommendation on establishment of financial routes, financing system, and fiscal/tax revenue system for the Western economic development will be prepared based on the understanding of fiscal transfer systems in Japan and other countries.

Implementing period is scheduled for FY 2003-2004, and the study will be funded by the People's Bank of China.

(FY 2003 Domestic Survey)

JBIC's "housing finance information system improvement project" started in March 2003 as a part of the "main proposed projects" described in the FY2002 Follow-up Studies, built up new systems as well as indicated issues based on understanding of actual operational flow condition of public housing finance system targeting direct ruling city Chongqing, and corresponding methods with those issues. Regarding indications above, a specific estimate of investment scale and evaluation of profitability were implemented. We are expected to accept technical training participants (4 people) are expected to be accepted from Chongqing Municipal People's Government in Japan to provide them with trainings at the Ministry of Land, Infrastructure and Transport and the Government Housing Loan Corporation within this fiscal year. Also, the final report of this study by the study committee was brought into publication in Chinese under responsibility and editing of the CP, The People's Bank of China (with approval of the JICA Peking Office).

(FY 2003 Overseas Survey)

The studies are attracting wide range of attention and highly regarded as useful in the housing loan reform policy of China. Especially, the study outcome in subjected project are supported by the People's Bank of China so much so that the outcomes are likely to be utilized in establishment of a future policy.

Technical cooperation of Japan (Acceptance of Technical Training Participants):

Trainee received: 3

Technical fields: The housing loan system of Japan, etc.

Period: 20 days from March 2002

(FY 2004 Domestic and Overseas Survey)

No information to be specifically mentioned.

(FY 2005 Domestic and Overseas Survey)

No information to be specifically mentioned.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Overseas Survey)

The proposals in the subjected study brought a reform of "Chinese public housing deposit management regulation". Also, the publication of "Chinese housing finance report" brought an impact to the society.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Overseas Survey)

Promoted nation wide housing reserve system reform. The housing mortgage have been improving and supply houses are valued by money.

Description :

(FY2002 Domestic Survey)

The guidelines, recommended in the Study have been shared among other concerned parties in Nanjing, Shanghai and Guangzhou. Additionally, the government has submitted request for preparation of development plan in medium-sized city in the Southern area.

(FY 2002 Overseas Survey)

For the traffic sector, each project based on the plans presented below is in progress in Haichen City.

2001: Constructed western outer circular road: 14.2km, Newchwang - West forth: 10.3km

2002: Chi highway: 14.2km, millennium bridge

2003: Eastern circular road 9.078km, Ijyo line: 25.5km

2004: Suejyo line 20km

2005: Yuhoi line 15km

Funding: Funded from the government and the municipality.

Status of construction: (1)Newchwang - West forth: completed and started being used in 2001. (2)Millenium bridge and Chi highway: Completed in 2002. (3)Eastern circular road: Completion planned in October 2003. (4)Ijyo line: Construction planned. (5)Sueiyo and Yuhoi line will be conducted according to the district road development plan.

(FY 2003 Domestic Survey)

Following the outcome of the project, western administrative personnel training and western national development training (15 trainees) were conducted in March 2003.

In addition, Strategic Study for Development of Medium-Sized Cities in the Western Region has been implemented from May 2004.

(FY2003 Overseas Survey)

1) Agricultural sector: Project for strengthening the marketing for fruits of the mountainous area in the Southeast region: in urban areas of Haichen City, in addition to establishment of a market especially for fruits(wholesale market) , general markets have been established in 64 places. The sale of fruits is intended for domestic markets.

Water saving agriculture project: The water-saving irrigation project for agriculture was implemented from June 1998 and completed in October 2001. The area that realized water saving reached 4800 hectares in three years.

2) Commercial sector: A concentrated industrial development ward is expected to be constructed with an eye on xiangzhen companies scattered over Haichen and companies in urban areas of Haichen City.

3) Haichen River Rehabilitation Project : After commenced on April 1, 2001, the construction has entered the phase where water is dammed in stages. Under the circumstances, one rubber-made dam to dam accumulate surface water, one unit of dam to dam service water and one unit of dam to accumulate the service water have been already completed, which have formed an artificial lake of 660 thousand m² in water area that can accumulate 920 thousand m² of water. The implementation will enable use of surface water of the Haichen River, which will allow solution of the water pollution problem.

4) Traffic sector: (1)Project for strengthening the function of the Haichen City Loop Road West Side Bypass Passage: the total investment amount is 146 million yuans, of which the bank loan is 18 million yuans and the self-financed funds of Haichen City is 48 million yuans. The project was commenced in March 2000 and completed in October 2001, and the roads have been entirely opened. (2)Road Width Expansion Project for Urban Areas and Haichen along Expressway Lines: construction of the Haichen Expressway Line and expansion of road width in urban area of Haichen were determined. The total investment amount is 30 million yuans, of which allowance from the senior-level administration is 12 million yuans and the self-financed funds of Haichen City is 18 million yuans. The project was commenced in May 2000 and completed in May 2001, and the roads have been entirely opened. (3)Central Circular Road Construction Project: the project was implemented with the city government's investment of 20 million CHY and has already completed. (4)Urban Area Central District Redevelopment Project: the project was implemented with the city government's investment of approximately 10 million CHY has already been completed.

5) Improvement of urban areas: (1)Haichen River Park Greening/Riverfronts Improvement Project: the city government will improve the construction of the Haichen River Park by investing 60 million CHY, and will complete it in two construction phases. The first construction phase has been already completed and the second construction phase is expected to be completed in 2003. (2)Low income housing complex function improvement project: the city government will standardize low income housing complexes to standardize the holding area in the new housing based on the area in the existing housing and provide appropriate allowances. The program intends to improve the housing condition of low-income groups.

6) Overall: Project for new construction of fruit processing and production lines: Chinese company constructed a production line of fruit juice by inputting 17 million CHY. This line has enabled production of 8 tons of fruit juice per hour and 10 thousand tons of fruit juice in five months. Although the project is not at the stage of making a formal financing application to main dealing banks or related financial institutions, economic advisors of the government issued an alert relating to the national debt ability. They indicated that the nation does not have enough debt ability to complete the whole project. In the light of this point, increase of domestic production and recovery of economic growth are needed. It is expected that improvement of the condition will lead to enhancement of the debt ability, everything will turn for the better, and overseas loan enough to implement all stages of the project will become obtainable.

At present, efforts have been made to acquire economic grant aid for part of the projects listed in the first phase study. The examples include the afforestation program and the agroforestry system intended for small-scale producers.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

1. Magnesia material processing reestablishment project: Haichen Lien group hi-tech fireproof material project has started in early 2003, which 110 million RMB will be invested. At present, phase 1 construction has completed, part of whom are already starting production.

2. Haichen city ward business model area construction plan: 1) Yamato plaza, building area, 24,000 square meters. 140 million RMB was invested for new construction, which will start from early 2004. Now in progress. 2) Kyorin group. 10 million RMG was invested for a new shopping centre construction. Area, 24,000 square metres. Completion in November, 2004.

3. Development of central Haichen: Construction of Haichen Osteopathy Hospital complex building. 35 million RMB was invested and construction will start in early 2003. Operation from the end of 2004

(FY 2005 Domestic Survey)

The study has formulated urbanization guideline as well as Haichen comprehensive development plan. In the second year, focus was especially on the later plan, which has taken up Jiangsu province as a model to consider provincial urban policy and organization both from small and medium, and large and medium city perspectives. The study has also prepared urbanization strategy for Jiangsu province, which has been reflected to urbanization guideline. In the course of preparing the provincial development plan, Jiangsu city have adopted strategies considered and prepared in the main study.

(FY 2006 Domestic Survey)(FY 2007 Domestic and Overseas Survey)

No information to be specifically mentioned.

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| (FY2002 Overseas Survey) The proposed projects of the Study were integrated into the Urban Transportation Plan in Chengdu. Nothing was determined with regards to fund procurement. | | |
| (FY2002 Domestic Survey) There is no information available on the current situations of this project . | | |
| (FY2003 Overseas Survey) Public roads and private roads or semi-expressway will be opened on the assumption that conditions are prepared for new construction and reconstruction of roads aiming for successive construction of expressway networks. As for funds, government investment and private investment are supposed to be introduced. With acceleration of city construction in Chengdu City, urban area has been gradually expanded, newly constructed housing complexes are gradually increasing and establishment of road network construction is gradually getting improved. As citizens who used to live in the center of the city are gradually relocating to newly constructed housing complexes, civil needs for public transportation system are rapidly increasing. The government is intending to emphasize improvement and investment in public transportation system. Details of traffic-related projects already implemented in China are as follows. 1. Urban transportation project 2. Construction project of nucleus stations for public transportation 3. Roads exclusively for traffic were newly constructed in 36 places. 4. Chengdu City Public Transportation Network Improvement Project 5. Transportation markets were opened to encourage privatization of public transportation. | | |
| (FY 2004 Domestic Survey) Visitor to the site confirmed satisfactory progress. | | |
| (FY 2004 Overseas Survey) Concerned city has still not implemented/conducted prioritised project corresponding to the proposal of this project. However, by only referring to the outcome of this project and corresponding to related development policies of Chinese government and field situation, metropolitan transportation project will be commenced. | | |
| (FY 2005 Overseas Survey) Subsequent Study: Chengdu City Bus Line Density study Implementing body: Chengdu City Government, Chengdu City Planning Bureau, Shouthwest Jiaotong University Objective: Increase rationality and appropriateness of current bus lines, new plans for bus lines Funding: "Chengdu Bus Line Network Plan" project cost Implementing project: 1) New construction of roads in Chengdu city central area 2) New construction of roads in Chengdu city central area 3) Expansion and construction of bus priority lanes 4) Construct 'hub terminal bus station' where environment is already fixed Construction start period: 2002 Status of progress: 60-70% have been completed in central area. Administration body after completion: Chengdu City Transportation Committee (Chengdu City PUBlic Transportation Control Bureau, Chengdu City Public Safety and Transportation Control Bureau) | | |
| Technical Cooperation: Training: Urban Transportation Planning (Trainees: 7 personnel, Implementation period: 2001-2003) | | |
| Others: Coordination and adjustment of bus lines are matters of urgency. As average non-linear coefficient of bus lines in Chengdu city central area is 1.53 and average distance of roads reaches 21 km, structure of network is very irrational, causing troubles for passenger vehicles to pass by and increasing burden on road network. 'Busing' reform of urban passenger transportation has been completed to a certain point, and it is now in its market adjusting phase. Chengdu city has set up "Transportation Committee". It has just established a consolidated administration structure. Development and adjustment of current public transportation system is an urgent matter. There is also a possibility of introducing new type of public transportation measure (e.g. monorails). Development of the city and economy is so rapid that transportation volume study of 2000 can no longer be used. Chengdu city needs to implement a study to find out current situation. | | |
| (FY 2006 Domestic Survey) No information to be specifically mentioned. | | |
| (FY 2007 Domestic Survey) Chengdu City has already enforced most of road maintenance for a own-fund | | |
| (FY 2007 Domestic Survey) No information to be specifically mentioned. | | |

| 10. MAJOR PROPOSED PROJECT(S) | <p>The Anning watershed located in southwestern parts of Sichuan Province is severely devastated and Anning River overflows frequently and it is a violent river carrying a large amount of earth and sand to downstream. Furthermore, there are many naked and eroded hillsides and a large amount of earth and sand is produced from there. A major survey area to be a model for this watershed is to be set and an afforestation plan including small-scale erosion control works for the area is to be formulated.</p> | | | | | | | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2003 Overseas Survey)

The project will be implemented for five years including the first three years for afforestation and low-cost construction for mountain improvement and the remaining two years for concentration on cultivation of infant forests.

Building of forests: First year - 3,800.00ha ; Second year - 5,078.00ha ; Third year - 3,800.00ha

Mountain improvement works: First year - 54.00ha ; Second year - 72.00ha ; Third year - 54.00ha

Breakdown of funds:

1,599,000 CNY purchase of equipment and materials - 3,990,000 CNY study and design - 5,892,000 CNY technical training, study, dissemination and promotion - 2,942,500 CNY emergency fund - 5,892,000 CNY. Total amount of investment for project construction - 294,600,000 CNY (4.464 billion JPY: 100 JPY = 6.6 CNY).

(FY 2004 Domestic Survey)

"Model Afforestation Project in Sichuan" is implemented in Chang Jiang basin, which has relation with the implementation of the project, and thus it is anticipated that further plans be decided upon the completion of the project.

(FY 2004 Overseas Survey)

Adjust, and collate to the forestation plan, reflecting situations of an actual activity of previously conducted projects, such as the natural forest preservation project, "land to a forest" project, forestation in wasteland and mountains.

Period: August 2004 - October 2004

Implemented project: Sichuan Chang Jiang basin forestation and afforestation model project

Funding:

Funding party: Japanese Grant Aid

Funding amount: 2,600 million yen

Content: forestation of 5,000 ha in dried valley of Chang Jiang Basin and dried valley and afforestation model 180 ha

Implementing period:

Construction: 1 July 2006 - 30 June 2010

Technical cooperation:

Training: total 14 persons for afforestation, and 14 persons for basin forestation

Dispatched experts: Dispatching one group each in the year 2006 and 2007: 1 person each for afforestation, basin forestation, chief advisor, and coordinator.

Benefits:

Beneficiaries: Sichuan Province Forestry Bureau, Institute of Sichuan Province Forestry Research and Design, Liangshan Zhou Forestry Bureau, Panzhihua City Forestry Bureau, 5 Prefecture Forestry Bureaus of targeted projects, 5 Prefecture areas of targeted projects (Short-term: 7 millions in Liangshan Zhou Province and Panzhihua City, Mid-term: 86 millions in Sichuan Province, Long-term: 3 millions in the middle-lower sites of Chang Jiang)

Benefits: Ideal, Principles, methods, and process of this project offered a revolutionary innovation and a breakthrough for research and planning of basin forestation in Sichuan Province.

Progress:

(FY 2006 Oversea Study) 85%

(FY 2005 Domestic Study) No information to be specifically mentioned

(FY 2006 Domestic Study) No information to be specifically mentioned

(FY 2007 Domestic Study) No information to be specifically mentioned

(FY 2007 Oversea Study)

Implemented project: Model Afforestation Project in Sichuan (extended)

Implementing body: Sichuan Province Forestry Bureau, Liangshan Zhou Forestry Bureau, JICA

Implementing period: July 2005 - October 2007

Funding:

Funding party: JICA (Technical Cooperation Project, R/D concluded: June 2005)

Funding amount: Japan: 975 million CNY, China: 1450 million CNY (1JPY=0.065CNY)

Objectives: 1) Build model nurseries and establish model reforestation projects in Xichiang-shi, Xide-xian and Zhaojue-xian in the Anning River basin; 2) Train engineers and disseminate technology to the local communities to improve ecological condition in the region.

Benefits:

Beneficiary: Residents in Xichiang-shi, Xide-xian and Zhaojue-xian in the Anning River basin

Benefits: Impacts of the project are as follow: 1) Improved the living environment of people in the Anning River basin through forestation, that is based on the voluntary activities by residents motivated by developmental approach; 2) it developed tray plant technology and compiled the series of documents about forestation, nursery and participatory approach. It formulated the models, which are appropriate for "Land to Forest" and "Natural Forest Preservation" projects, implemented by the Government of China; 3) it increased the farmers' income through the success of cultivating oilseed rape at high-lying area, implementing the model-sight of cultivating forest-grass and building ecology.

Technical Cooperation:

Training course: based on the training programme of China and Japan Forestry and Ecology Training Center (September 2006, July 2007)

Dispatch of Expert

Long-term: Chief advisor, operational coordination, nursery, forestation, training and diffusion (13)

Short-term: Maintaining forestation, forestry, nursery, conservation(29)

Progress:

(FY 2007 Oversea Study) Following programmes were implemented: forestation of the model forest (344 ha); training and diffusion of forestation and nursery technology; simple conservation project.

(FY 2005 Domestic and Overseas Survey)
No information to be specifically mentioned.

(FY 2006 Domestic Survey)
No information to be specifically mentioned.

(FY 2007 Domestic Survey)
No information to be specifically mentioned.

(FY 2007 Overseas Survey)
State Council of the People's Republic of China have set up a goal to construct, well balanced urban city, where environment preservation is regarded. Guiyang Municipality implemented many operations various fields, such as energy saving, reducing industrial drainage, participatory project, preventing pollution, and equipment of environment management system. Proposed contents have been utilized, especially in enterprise environment system, energy saving, participatory projects, and improvement of current management system.

| <p>Description :</p> <p>(FY 2006 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2007 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2008 Domestic Survey) Implemented project: Dam construction and irrigation development. Contents: Construction of dams - Mei yao gou dam, Er tang gou dam and A la gou dam, 2) water-saving irrigation promotion project, 3) irrigation channel improvement project - Er tang channel improvement improvement etc., 4) qanat conservation project (Turfan City), 5) enhancing management structure project. Budget: 180 million USD (100 million USD from the World Bank and 82 million USD from Chinese government) Status: After the review by the State Council, a project appraisal mission from the World Bank implemented the on-site survey. The mission found that the project met the bank's requirements and complied with the bank's system.</p> <p>Implemented project: Afforestation and water conservation project in urban area. Contents: Construction of a main channel (83.2km) for the irrigation Budget: 4 million CNY Implementing period: To be completed by 2008.</p> <p>Implemented project: Construction of water-saving irrigation schemes Budget: 11 million CNY in 2006, 25 million CNY in 2007, 45 million CNY in 2008. Area to be irrigated: 5400ha Establishment of pilot sites: 10 sites (by 2008). Acquired the 5 million CNY for research from the Central Government to establish water-saving technique for grapes. * Target: Area for water-saving irrigation will be around 14.7 thousand ha by 2010.</p> <p>Implemented project: Training for qanat protection Implementing body: State Administration of Cultural Heritage in China and Turfan Local Authority Implementing period: March 2009</p> <p>Implemented project: Qanat rehabilitation project Summary: 60 million CNY was invested by the Central Government of China in 2006. Since 2007, the cost of qanat protection (20 million CNY annually) is included in the budget of the Central Government.</p> <p>Implemented project: Review of water-saving institutions Summary: Subsidies will be provided to farmers who has installed water-saving irrigation (the amount will be between 3000 and 6000 CNY/ha); otherwise the cost of water to be paid by them will be doubled. Implementing period: December 2006</p> <p>No information on "Development of wells in Western basin", "Recharge of surplus water by flood", and "Establishment of the River Basin conference"</p> <p>(FY2012 Domestic Suevey) 1. Implemented project: Established watershed council (groundwater council) (Project objective) Develop a better water resource management system (Project outline) Established 13 agricultural water management councils, and improved agricultural water resource self-management system (Implementing period) From 2006 2. Implemented project: Expand and enforce legal systems (Project objective) Develop a better water resource management system (Project outline) The following 10 regulations were established.</p> | |

Description :

(FY 2006 Overseas Survey)

Proposal of the study has been a cornerstone of the western development related monetary policy.

(FY2007 Domestic and Overseas Survey)

Reformations have proceeded in China after implementing the above mentioned study, such as the study on the promotion method of western region development, promotion of financial system reformation agenda, establishing rural area financial system in conjunction with the model, expansion of public support for compulsory education, have same policy recommendation and the direction in the mentioned study.

The number of financial organizations in western region are increasing and quality of service is also improving. Demand for a large amount of funding is attracting private funding, and as a result, more private funding is also flowing into the western region. The country has augmented the funding to the western region.

(FY 2008 Domestic Survey)

The Chinese government has proceeded in the expansion for correct utilization of agricultural land and reformation of a farmer's collaboration organization as a part of a rural finance reformation to correct regional differences, improving farmer's income and stabilizing farming villages.

Proposed projects "vitalization of regional finance", "diversification of project finance", "risk management and reform of information, knowledge and technology" have been progressed.

(FY2012 Domestic Survey)

1. The study result is published in China as "report on study of financial scheme for development of western China" (page 736), (Research Bureau of the People's Bank of China, Japan International Development Organization, and Koei Research Institute (Japanese firm)), China Citic Press, November 2007) and is used as referential literature for research and policy formulation by the bank and concerned section of the State Council and widely in China.

2. The Government of China formulated 12th five-year plan for the people's economic and social development (2011-2015) and the 12th five-year plan for major development of western region (2011-2015) The policies in both plans are as following and they are mostly in parallel to the course of policy proposals of the study:

1) Prioritize the major development strategy of the western region as comprehensive strategy of regional development, enhance infrastructure construction and ecological environmental protection, and create a new growth pole (Chapter 18).

2) Promote financial structural reform through deepening of reform of financial institutions (development of modern financial corporate system, internal control and risk management, reform of Agricultural Development Bank of China, etc.), acceleration of creation of multilayered financial market system (encouragement of financial innovation, development of securities market, etc.), development of financial coordination mechanism (sound systematic financial risk hedge system, evaluation system, etc.), enhancement of financial supervision (development of financial management system of local government, enhancement of government's risk handling responsibility for local small and medium-sized financial institutions (Chapter 48).

3) Consolidate financial distribution among each governmental levels and enhance financial guarantee of local government for basic public services. Develop a budget management system and improve the soundness of taxation system and local taxation system gradually (Chapter 47).

4) Develop agriculture into an industry and develop a new type of rural collaborative organizations, deepen reform of rural financial institutions, encourage construction of local banks, and develop small financial organizations and micro finance in rural areas (Chapters 6 and 8).

5) Deepen reform of state-run companies through reform monopolized sectors and creation of effective competitive market (Chapter 45).

(FY2012 Overseas Survey) No information to be specifically mentioned.

| <p>Description :</p> <p>(FY 2006 Domestic Survey) The study was originally requested as a Yen Loan project. Due to the Japan's policy to suspend new Yen Loan project in 2008, China is needed to request a Loan by that time. However, it is concerned whether the request will be made in time because there are many other project requests from all over the country, which makes it difficult to gain high priority among them.</p> <p>(FY2007 Domestic survey) Yunnan Province was encouraged to implement the proposed urgent project in the mentioned study with a Yen Loan. However, the province abandoned the financial support and changed the policy to implement the project with their own funds.</p> <p>(FY2007 Overseas survey) Feasibility studies for the urgent project in the mentioned study have been completed. However, a concrete schedule has not been set due to lack of funding caused by the province's poor financial capability. For this reason, advice about the international donor route which can be utilized for implementation of the project is needed.</p> <p>(FY 2008 Domestic and Overseas Survey) No information to be specifically mentioned.</p> | | |

| 9. SITE OR AREA | <p>Development of water privilege system in country-wide scale in China</p> <p>Model area : Taizi river basin(13,883km² in area, 413km in stream length, 8.28million people in population) in Liaoning Province(145,746km² in area, 41.03million people in population)</p> | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>Main suggestions against water privilege system in China : basic framework of water privilege system development</p> <ul style="list-style-type: none"> * Development of water privilege system with consideration of climate, water use, land use, history, and culture of China * Development of water resource management and water privilege system by the appropriate administration of the government would suit well. * It is in stage to develop water privilege system and conduct primary distribution of water privilege. Introducing water privilege system by making use of existing acquisition permission system is most practical. Promote the system development in stages by securing public essence and real right essence of water privilege. * Conduct the existing acquisition permission system firmly as premises for promoting the development of water privilege system. * Strengthen basin water resource management in stages in order to secure water privilege. Ensure consistency of water resource plan and water privilege, and increase the degree of water use safety in area that water resource is deficient, and increase water use elasticity in drought time. * Although it is in stage that is able to conduct water privilege assignment if conditions are developed, it should be conducted carefully by developing relevant institutions. Pay attention to abrupt establishment of free competition market principle. In order to reduce the risk of adverse influence occurrence by transfer and assignment of water privilege to minimum level, transfer and assignment should be started from negotiation transaction in mediation by government and third party agencies, and then shift in stages to quasi market trade by establishing compensation system against adverse influences. * It is possible to increase the amount of usable water resources by improving water quality. Conduct development of integrated organization which conduct comprehensive management of water privilege and water quality effectively. * It is too early to introduce effluent trading system in full scale. Conduct existing sewage drainage density regulation firmly at first. * Introduce disclosure of information and democratic stakeholders participation system, and develop mechanism to prevent conflict by the introduction of water privilege system. * Conduct development of water privilege system in stages about 15years(from 2006 to 2020) by developing conduction and operation structure. <p>Main conclusion and suggestion about priority subjects water resource distribution system : 11terms, water privilege system : 9terms, water market system : 5terms, water pricing system : 11terms, drainage water management system : 11terms, service water measurement system : 6terms, service water transfer system : 15terms</p> | | |

Description :

(FY 2009 Domestic Survey)

The establishment and the reformation of the pension system, including the suggestions in the MP such as, "installation of basic pension", "the clarification of the government's responsibility", and "the actual maintenance and enforcement of the income after retirement for the rural inhabitants", has been progressing.

In terms of "compulsory participation", in the case of China, there is no enforcement by the government. When China aims to achieve nationwide participation, it decided to promote the participation by sweeten the conditions of the enrollment instead of forcing them. As a result, the rate of the enrollment has been increased.

The State Council released the guiding opinion for the Rural Pension Insurance System (It was promulgated in the 1st of September 2009.the foreign announcement was the 4th of September).

1) Purpose: To try to diffuse 10% of the whole prefectures by 2009, and by 2020 to cover all over the country.

2) Insurance cost: Five types such as, a hundred Yuan, two hundreds Yuan, three hundreds Yuan, four hundreds Yuan, and five hundreds Yuan.

3) The Government Assistance: the amount of the government subsidies, from the local government will be more than 30 Yuan per year per person, and the support from the central government will be 55 Yuan per month per person.

4) Enrollment period: From 16 years old to 59 years old. The start of the benefits is 60 years old.

5) The minimum enrollment period: 15 years.

(FY 2009 Overseas Survey) No information.

(FY2013 Domestic Survey)

For the New Rural Resident Social Endowment Insurance System, it has intended that integration with "Urban resident social endowment insurance" for non-employed in city from the areas urbanization advanced. In February of 2014, the State Council promulgated "Opinion concerning the integration of the basic endowment insurance systems for urban resident and rural resident", and announced the integration of the both systems by 2015.

The most recent total enrollment of the Urban and Rural Resident Social Endowment Insurance in the end of 2012 was 483.7 million people, up 151.87 million peoples from the previous year, and number of the recipients was 130.75 million people. The fund income was 182.9 billion yuan, up 64.8% from the previous year, and the premium income was 59.4 billion yuan, up 41% from a year ago. The fund expense was 115 billion yuan, increasing 92.2% compared with the previous year, and the balance of the fund is 230.2 billion yuan. About the introduction situation of the New Rural Society Endowment Insurance only, the pilot introduction has been implemented at 1914 Counties from 27 Provinces and Autonomous regions, and 4 direct-controlled municipalities in whole country as of the end of 2011. The total enrollment of them is 326.43 million people, and 85.25 million people from that have received the insurance.

As of the end of 2012, the New Rural Resident Endowment Insurance System was introduced into 2,856 administrative districts in the County level in the whole country. Agricultural executive office appreciated that they could achieve approximately 3,000 counties in three years, which meant 1,000 administrative districts in the county level per year. It is scheduled to cover rural areas all nationwide by 2020.

(FY2013 Overseas Survey)

Implemented Project:

1) Construction of the management system for information,

2) Human resources development for administrative talents.

3) Introduction and extension of endowment insurance system.

Implementing body: Ministry of Human Resources and Social Security of the People's Republic of China

At present, SMSC is in charge of operation of Line No.1~4.</p> <p>Detail: (FY1991 Overseas Survey) After the completion of the JICA study, the Korean authorities decided to reroute the proposed Subway No.2 in accordance with the urban development plan for Seoul. Specifically, the subway was to be constructed in line with the policy objective of alleviating the population concentration in the Gangpae Area by encouraging the population growth of the Gangnam Area. Accordingly, the subway No.2 was divided into four sections, and the construction was completed in four stages, as shown above. The route proposed by the JICA study was different from the one actually constructed, but coincided over some parts of the Sections 1) and 4) shown above. On these parts, the findings of the JICA study were utilized for detailed designing with some technical modifications.</p> | | |

| 9. SITE OR AREA | | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>(1) Collection and Transportation: <M/P> Three component separation of combustibles, non-combustibles, briquet ash is required for incineration, material recovery and preparing covering material for landfill. Vehicle collection system should be introduced to whole Seoul by 1995 . Transfer stations are recommended for the effective transportation of waste to the disposal site. <F/S> Improved collection and transportation system will be established in whole Gangdong Gu in 1988. Transfer station with its capacity of 1,150 t/d, compactor trucks collect combustible waste and dump trucks collect briquet ash and non combustible waste, container trucks and two tons and four tons of trucks should be introduced.</p> <p>(2) Intermediate Processing: <M/P> Construction of 13 units of incine-ration plants and Material recovery plants are proposed. The amount of incinerated waste would be 2,574 thousand tons in 2005, which is 48% of estimated combustible waste. Daily processing rate will be 300 tons in 2005, which means 99 thousand tons are treated annually by the plants. <F/S>Construction of 600 t/d incineration plant was proposed for Gangdong Gu. The plant is expected to be in operation in Autumn 1988. In 1988, 100 days of operations is planned and 330 days after 1989.</p> <p>(3) Final Disposal: <M/P> Final disposal is proposed as Nanjido mounding for initial stage, Incheon coastal landfilling for advanced stage and use of subsidiary landfills. <F/S> Construction and Operation of new landfill sites in Nanjido, Incheon.</p> | | |

Description :

(FY 1996 Domestic Survey)(FY 1998 Domestic Survey)

The Development Study related to the Agricultural and Animal Husbandry Cooperative Society Systematization Project, proposed by M/P, was undertaken.

*For detail, please refer to "Strengthening of Agricultural Cooperatives (A110/97)".

Veterinary Laboratory Technology Development Project is being implemented as Project-type Technology Cooperation.

Japanese technical cooperation:

(FY 1998 Domestic Survey)

1 July 1997~30 June 2002 Project-type technical cooperation (Technical improvement project of diagnosis skill on infectious disease of livestock).

- Acceptance of 5 trainees annually.
- Dispatch of long-term experts (5 experts) to Agriculture University of Mongolia.
- Provision of materials for examination.

Finance:

(FY 1999 Overseas Survey)

Request for Japan's grant aid was submitted for implementing "Seed Multiplication Project" in July 1999 (amount: US\$8,035,000; components: equipment supply and facilities construction).

Backgrounds:

(FY 1996 Overseas Survey)

On 26th of December, 1996, request for assistance for the proposed project was submitted by Ministry of External Relations.

(FY 1997 Domestic Survey)

As a result of election in July 1996, the political power has changed and administrative reform was carried out drastically.

New counterpart of the project is Ministry of Agriculture and Industry.

Mongolian side desires early implementation of seed multiplication among the proposed projects.

Decline in seed quality is main factor which has caused a reduction of agricultural production.

(FY 1997 Overseas Survey)

The Government of Mongolia was made re-organized by following IMF order. Mongolian side has limited money to develop the projects.

(FY 2001 Domestic Survey)

The priority project proposed in this Study, The Agricultural and Animal Husbandry Information Transmission System Servicing Project, made the start of the implementation of the Basic Design Study on the Information Assistance for Rural Nomads.

(FY 2005 Domestic Survey)

JICA development study, the improvement of rural livestock farming institution against Zodo, has been conducted (February 2003 to February 2006). Maintenance of water facilities (well) in nomadic area, and proper maintenance in nomadic land is conducted.

(FY 2005 Overseas Survey)

Mongolian Ministry of Agriculture requested Japanese Government for a funding on technical cooperation project in improving statistical information network of Agriculture. However, JICA and the Ministry has reached to an agreement to integrate 3 individual projects, namely Strengthening Agricultural cooperatives, Extension service and Agricultural information system. In accordance with the agreed concept, the Ministry of Food and Agriculture requested a technical cooperation project to increase agricultural production through integrated service and cooperative activities, as well as statistical information network in 2004.

Project preparation study is going to be carried out. This study will be followed by project implementation on Intensifies Livestock and Corp farming starting from April 2006. On behalf of the Government of Mongolia, the Ministry of Food and Agriculture has submitted its request to Japanese Government to carry out development study on "Possibility of Growing Wheat under Irrigated condition" for fiscal year of 2006-2007, which has been reviewed by the Japanese side.

Subsequent Project: Milk Production Improvement Project

Beneficiaries: Dairy farmers, milk producers, herders and consumers

Implementing period: June 2004

Funding:

Funding party requirement: Japanese Trust Fund

Amount: 1.9 million USD

Beneficiaries: dairy farmers, milk producers, herders and consumers

Content: The project has been implemented with a technical cooperation from Japan. Trust Fund and the technical support from FAO of the UN since June 2004. The project sites cover Saikhan and Mandal soum of Selenge aimag, Mungun morit soum of Tuv aimag, Darkhan-khuns shareholding company of Darkhan-Uul aimag, Jargalant village, "Suu" and "Mon-Suu" shareholding companies in UB. Project has several components such as supply of dairy equipment, spareparts, establishment National Dairy training center for conducting trainings transferring know-how on up-to-date technology in dairy field. Total funding of the project is 1.9 million USD for 3 years duration.

Subsequent Study: Improvement Plan of Livestock Farming System in Rural Area

Beneficiaries: Rural population and herders

Implementation period:

Phase I March 2003 to June 2003

Phase II: August 2003 to December 2003.

Phase III: in progress

Contents: The third phase or pilot study based on the first two phases outcomes is now being implementing in Dornogobi aimag aimed at mitigation measure of Dzud damage.

| Description : | | |
| <p>(1) Telecommunication facilities development in Ger Area Finance: (FY 1998 Overseas Survey) Since private companies were allowed to participate in the development project of telecommunication facilities in Ger Area, WILL project was started. Mobicom is conducting the project (installation of base station and subscriber stations, connection to PSTN and cellular network) by BOO scheme. (FY 1999 Overseas Survey) The project is not fulfilling of the targets due to limited coverage area of the service, low household income and affordability to the service tariff. (FY 2001 Domestic Survey) Some private company provides the communication services by wireless system (WILL) to the Newly Developed Area include the Ger Area. It would seem that the government gave the license for operation. Service Charge: This service charge is higher than the one of present fixed telephone charge provided by the Mongolian TELECOM, and lower than the one of the cellular phone.</p> <p>(2) Telecommunication equipment improvement at ATC-6 (FY 1998 Overseas Survey) No action has been taken for realizing the project. (FY 1999 Overseas Survey) No action has been taken for realizing the project due to financing problems. (FY 2001 Domestic Survey) Although is had asked the Japanese Government for a loan for two years since the completion of M/P, it has not been accepted. However, it was implemented by the French Grant Aid (200 million FF). (FY 2002 Overseas Survey) Implemented in 1998-1999: Breakdown of funding is French grant aid (25%, 835,000 FF), Mongolian government's investment (50%) and Mongolia Telecom (25%). Limit of switchboards in Ulaanbaatar was expanded to 16,000 lines. Mongolia Telecom is planning to expand the limit of ATC-6 to 3000 lines in 2002.</p> <p>(3) Others (FY 1998 Overseas Survey) Regarding "Project of Conversion to N7 Signal at International Telecommunication Station" and the purchase of the parts, a Japanese grant aid assistance is being requested. (FY 2001 Domestic Survey) Financial Procurement: It was realized from the Japanese Non-Project Grant Aid in JFY 1999 and 2001. Phase 1 : 200 million Yen, Phase 2 : 200 million Yen (Total : 400 million Yen) Supplier : NEC Corporation (FY 2001 Domestic Survey) Construct: Aug.2002 Completed</p> <p>Background: (FY 1997 Domestic Survey)(FY 1999 Overseas Survey) The government of Mongolia submitted a request of yen loan with amount of 5 billion yen and SAPROF in February 1997. OECF dispatched an evaluation mission to the country in Jun.-Jul. 1997, but no pledge was executed at the 6th Mongolia Assistance Group Meeting in October 1997, because the privatization of telecommunications in Mongolia is supposed to be unclear so far.</p> | | |

Description :

(FY 1997 Domestic Survey)

The objective of the Study is to make 1/50,000 aerial photographs and prepare 1/25,000 topographic maps covering an area of approximately 10,800km²/from the Long. 114.00' E to Long. 115.30' E and from the south of Lat. 49.40' N to Lat. 48.40' N in Ulaan-Tsav area in Mongolia. The area is a steppe in the peneplain extending to the north of Choibarsan, the central city in the north-eastern part of Mongolia.

This area is mostly used for grazing . The next predominant usage is mowing place for feed. A few barley field scatters in the flat area. The population of this area is small. Most of the inhabitants are nomadic.

The matters of the Study are as follows.

1. 1/50,000 aerial photography approximately 10,800km²
2. 1/25,000 topographic mappings approximately 10,800km² (128 sheet)

The Study started in February 1993. Through the field operation of setting of aerial signals, aerial photography, ground control point survey, field identification of aerial photographs, field completion and laboratory study of aerial triangulation, stereo plotting, compilation, drafting and printing, it was accomplished in July 1996 after period of four years and five months.

The existence of abundant underground resources in the study area is expected. Their development and utilization will depend on the studies (aerial photographs, topographic maps, etc.) from now on. Utilization of the results of the Study for this purpose is expected.

(FY 1998 Overseas Survey)

The outputs of this study are topographic maps with 1:2,500 scale in East part of Mongolia. Those maps will be used for the "Tumen-gon" and "Tumen-ekh" international project for developing infrastructure.

(FY 2002 Overseas Survey)

1/25,000 map has been well utilized by the Dornod local government for soil quality surveys and analysis.

In addition, GPS was used for the first time during this Study. Actualization of GPS network in Mongolia was assisted.

Description :

(FY 1998 Domestic Survey)(FY 2000 Domestic Survey)(FY 2001 Domestic Survey)
There is a movement toward Grant Aid.

(FY 2002 Overseas Survey)

The Ministry of Food and Agriculture and NAMAC examine the strengthening of agricultural cooperatives and their activities with the support of Japanese technical cooperation. The project includes educating staffs of agricultural cooperatives, exchanging information about marketing of agricultural products, and securing financial resources for businesses of agricultural cooperatives etc. Moreover, the government of Mongolia notified that 2003 is the "Year to Promote Cooperative Activities"

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Overseas Survey)

Implemented project : Support to Structure Combined Management Model of Agriculture and Livestock

Implementing period : from June, 2006 to June, 2009

Objective : The objective is to establish combined management model of agriculture and livestock in field level by producers, by utilizing public agency services such as Ministry of Food and Agriculture and Agriculture and Livestock Diffusion Center.

Implementing body : Ministry of Food and Agriculture, NAMAC establish inside of Ministry of Food and Agriculture by departments that conduct guidance, supporting, and supervise agricultural cooperatives

Contents : strengthen operational capacity of selected management body, increase the income, strengthen operational capacity of agriculture and livestock producer, enable for selected management body to access against agriculture and livestock information and market information, increase the income of cooperative union member, improve the living environment, and affect to agricultural and livestock cooperative in targeted area and sumu around

Funding :

Funding party : the Government of Japan(Grant Aid)

Funding amount : 200million JPY

Benefit :

1) benefit to residents(income increase in the selected management body, agricultural technology transfer, procurement of equipment, and technical training against selected management body)

2) benefit to regions(activation of regional economy, introduce the experience of selected management body to regions)

3) JICA would support structuring combined management model of agriculture and livestock in 24 management body of 8 sumu in Bulgan province, Darhan-Uul province, and Selenge province, through the project.(9 agricultural cooperative of NAMAC out of 24 management body have been participating to the project)

Technical cooperation :

Training program : training in Japan(2), training in Vietnam(1) much technical training at Khukh Khot

Dispatch of experts : 2 personnel(Expert of dairy cattle gave advice about increasing milk yield and feed formulation. Expert of beef cattle gave advice about feeding procedure, breeding management, and selection, of breeding cattle)

| Background: | | |
| (FY 1998 Domestic Study) | | |
| A main line of the Mongolia Railway between Sukhbaatar and ZamynUud is an important means of transportation in Mongolia. In particular, concerning long-distance transportation and international transportation, the railway plays an important role in life as the main artery of physical distribution which has strong relationship with people's lives due to the delay of an improvement in roads. | | |
| In the study, we proposed to the Mongolia Railway about measures for disasters and concrete bridges getting too old in the section of about 450 km between Sukhbaatar and Bayan. | | |
| In the implementation of the project, the Mongolian side expects grant aid from the Japanese side, taking into consideration the nature of the track and the financial problem of the Mongolia Railway. | | |
| (FY 2001 Domestic Study) | | |
| Yen loan has not been decided about the Railway Transportation Improvement Project (StageII). | | |
| (FY2007 Domestic Survey) | | |
| No information to be specifically mentioned. | | |

| <p>Description :</p> <p>(FY2002 Domestic Survey) There is no information available after the completion of the study.</p> <p>(FY2002 Overseas Survey) Altai city requested to implement the projects proposed in this study, but the central government could not cope with the request due to the shortage of budget and manpower. The shortage and low quality of water impedes the development of western Mongolia."Provincial towns basic urban services project" funded by ADB was implemented in 5 western provincial centers from 1998 to 2000; however Altai city was not included in the project area, since the groundwater development study was being implemented in Altai city when the project was started.</p> <p>In recent years, water supply is often cut off in Altai city because of the old water supply facilities. It also causes the immigration from Altai city to the other districts since local people believe that the low water quality is the cause of high morbidity rate (the study team showed that the levels of most of the chemicals included in water of Altai were within the normal ranges of Mongolian standard (except for Magnesium)). Mongolian government has requested for the grant aid assistance to implement the significant projects proposed in the study.</p> <p>(FY 2003 Overseas Survey) Target of Request for Fund: Yen loan, Grant Aid -Time of request: 2000-2002 -Condition of request realization: Not responded</p> <p>Mongolian government installed water conveyance pipes (200mm x 1.6km x 2) (total amount 100 tugrik) with its own fund from FY2003 budget. In addition, the government is expected to implement the following programs among the recommendations in the study, by using the budget for FY2004.</p> <ul style="list-style-type: none"> -Installation of Mongol-made water purifier -Installation of chlorination equipment -Repair work of chlorination equipment -Installation of Russia-made pumps and repair of boreholes -Installation of a water pipe (2 km) <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2008 Domestic Survey) No information to be specifically mentioned.</p> | | |

Description :

(FY 2000 Domestic Survey)
Mongolian economy has been stagnated since its economic transition. Mongolia has suffered from the sharp cut of economic aid from the former Soviet Union as well as the loss of markets in the Soviet block. It, however, has not been able to develop new markets and needed foreign currency for sustainable development. In this sense, tourism is an industry with great potentialities. After the study, National Tourism Center (later Tourism Board; TB) was established as planned and the proposal of JBIC tourism project was submitted to the Japanese Embassy in Ulaanbaatar as the fourth prioritized project.

(FY 2001 Domestic Survey)
The government of Mongolia submitted the request again as the second priority project to the government of Japan in Aug.2001. Moreover, the interpreter who was employed by the Study team was appointed to the Deputy Director of the Tourism Board and has been promoting the suggestion by the Study vigorously.

(FY 2002 Overseas Survey)
The Tourism Law of Mongolia was enacted in May, 2000 and was then amended in November, 2000. The law outlines definition for tourism, responsibilities and obligations of the state, tourism organizations and the classifications and grading of tour guides and hotels. In connection with this law, several regulations were adopted as follows;
- State Monitoring Regulation for Tourism
- Regulation of Classification and Grading of Tour Guides
- Regulation of Classification and Grading of Hotels and Tourist Camps
- Temporary Regulation of Classification of Tour Operators
"The hotel standard" and "The tourist ger camp standard" were adopted in 2000 and improved in 2002. In 2001, 116 hotels in Ulaanbaatar and 108 tourist ger camps were star-rated.
The Government of Mongolia has proclaimed 2003 as the " Visit Mongolia Year", and for the purpose, set up a National Committee responsible for organizing arrangements for this event. In Ulaanbaatar , the design drawing draft of "Mongolian Culture Park" and "Tourist Street" completed and locations are determined. The overseas tourism representative offices in Tokyo and Seoul were opened in 2002.
"Development of tourism human resource" (US\$ 6.662 million) and "Development of tourism infrastructure" (US\$ 18 million) projects are on the list of proposed projects to Japanese Government for 2002-2003 that was approved by Mongolian Government.

(FY 2003 Domestic Survey)
Although a request for yen loan has been submitted every year from the department in charge to the contact person for foreign aid of the Mongolian government, the request has not yet reached a formal request because the priority within the government is not high enough to be adopted.

(FY 2003 Overseas Survey)
1. The government made the following efforts in order to put into practice the tourism development program (master plan).
1) Tourism was positioned as an especially high importance in the economic sector, a series of policies intended for promotion of tourism and enforcement of the Tourist Law were incorporated into the government activity plan (2000-2004) and the Socioeconomic Development Basic Guideline.
2) The Mongol Tourist Bureau (MTB), which is the implementation agency of the government, was established in January 1999 under the name of "National Tourist Center (NTC) and was reorganized into MTB on September 9, 2000. MTB will take charge of enforcement of policies and promotion of tourism promotion.
3) The Mongol Tourist Law was established on May 5, 2000 and revised on November 30, 2001. This law defines tourism and specifies liabilities and obligations of the government and organizations involved in tourism, organizational structures of administrative organs , rights, responsibilities, classifications and grades in association with tour guides, operators, hotels and supervisory authorities over the tourist industry, placement (planning) of infrastructure, penalties against infringements of the law. In association with this law, regulations were established including the following.
-National regulation on supervision of the tourist industry
-Regulation on classification and gradation of tour guides
-Regulation on classification and gradation of hotels and tourist camps
-Regulation on classification of tour operators (provisiona
2. DThe Mongolian government declared 2003 as the "Mongol Tourism Year" and established a national committee to generalize the event held in commemoration of the year.
3. First draft design drawings of the Mongolian Culture Park and the Tourist Street in Ulan Bator were completed with the construction sites determined.
4. Standards for hotels and tourist camps were adopted in 2000 and were revised in 2002. In 2001, 116 hotels and 108 camps were rated.
5. Training courses for tour guide, first aid, traveling "tracelessly", etc. were planned under the cooperation of aid agencies for the purpose of diversification and quality improvement of products and services for the tourist industry, execution of employee training, assessment of companies and enhancement of competitiveness.
6. The Mongolian Airline will operate regular flights (26 planes) (international flights, destinations: Moscow, Peking, Berlin, Frankfurt, Alma-Ata, Irkutsk, Hohhot, Seoul, Tokyo and Singapore)
7. In September 2002, Investment Forum 2002 was held in Ulan Bator.
8. Overseas offices of the Tourist Bureau were established in Tokyo and Seoul in 2002.
9. At the 9th Conference of Donor Countries, the Mongolian government was recommended from donors and international organizations to implement the 22.2 million dollars' worth of tourist education enhancement project under the aid from Japan, yen loan for FY2003 and FY2004.
In addition, the "Human Resources Development Project for Tourist Industry (6.662 million US dollars' worth)" and "Kharkhorin Region Tourist Development Project (35 million US dollars' worth)" were added to the application project list to the Japanese government as well.

(FY 2004 Domestic Survey)
Lack of coordination within the Gov. led the proposal to be partially proposed as a JBIC item, though it was not selected.

(FY 2005 Domestic Survey)(FY 2005 Overseas Survey)
Funding requests has been made after year 2000, though the projects not been implemented. C/P is considering to continue requesting for a financial assistance and to examine other funding sources at the same time..
Financial request is to be continued and another way of funding is to be considered.

Description :

(FY2001 Domestic Survey)

In the course of the study including discussions about the master plan as well as technical transfer, MPC has already taken the initiative in improving reliability of services and expanding demands for postal services. MPC officers, many managers and employees joined technical transfer seminars run by the JICA Study Team, and understood the detailed contents of the master plan. MPC, then, has already started implementing the master plan in many levels of organizations. Mr. Hideki Bando, the head of the advisory committee, attended the above-mentioned seminars and key meetings with counterpart agencies in Mongolia, and actively provided useful know-how from experiences in Japan's postal services. The Study Team was informed that MPC had been sharing and utilizing some documents and presentation materials distributed in the seminars. MPC always have those materials ready in the post offices so that service people can actually use them.

It was confirmed that MPC would be starting various improvement initiatives for mainly short term while ensuring all necessary supports from the government of Mongolia, and future requests to Japan will be made through official routes. This will be also applicable to such cases as applications for trainees to or receiving experts from Japan.

The Study Team has finalized and submitted the final report to JICA under the supervision of JICA, and finished the entire mission as originally planned.

(FY2002 Overseas Survey)

The field survey was carried out in Mongolia from April to September 2000, with cooperation by counterparts such as MPC and MOI in Mongolia. The Study team examined the postal service business (including the postal service system, transportation network, market, needs for new services and management and finances).

After the study MPC was provided about 12 vehicles 2000, 2001 and 2002.

(FY 2004 Domestic Survey)

No information to be specifically mentioned

(FY 2005 Domestic Survey)

No Information to be specified.

(FY2005 Overseas Survey)

Progress of the proposed project are as follows:

- Program for improvement in collection, delivery, and sorting work: investment has not yet been made.
- Program for investment in improvement of postal delivery: Annually replacing 10 to 15 vehicles.
- Program for investment in management support system: Planned to implement in 2005, though delays due to lack of financial resources.
- Program for training:
 - Budget for MRC staff education:
 - 2001-3.9971 mil
 - 2002- 9.418 mil
 - 2003- 17.9635 mil
 - 2004-13.5885 mil
- Program for investment in mail handling facilities: No progress
- Program for investment in vehicles for Pigeon Mail services: No progress

| | Processing | Discontinued or Cancelled |
| Description : | | |
| (FY 2003 Domestic Survey) | | |
| The Third Party Information System is being used by the inspectors and has realized real results in tax collection. The information to be incorporated is planned to be expanded from customs and inspection information to include real estate related information and bank transactions. | | |
| Further, with respect to the review of taxation staff education, based on the results of the study it is being implemented within the development study as the Mongolian National Taxation Education System Preparation Study. | | |
| (FY 2004 Domestic Survey) | | |
| 1. Subsequent studies: "Study for the Establishment of a Tax Education System" | | |
| 1) Content of the study: textbook development for the Mongolian tax authority officials, cultivation of trainer, and follow-up of existing tax collection project | | |
| 2) Study period: November 2003 - July 2005 | | |
| 2. Technical cooperation | | |
| 1) Acceptance of trainee: 2 personnel, revenue official training system, licensed tax accountant system, from November 28, 2004 to December 3, 2004 | | |
| 2) Dispatch of experts: 11 personnel from November 2003 | | |
| 3. Request for subsequent studies: taxation education system (project-type technical cooperation) | | |
| 1) Content of the study: revenue officials education system establishment, improvement of tax collection system | | |
| 2) Possibility of implementation: Considered in JICA and Ministries. | | |
| (FY 2005 Overseas Survey) | | |
| Subsequent study: Mongolia economic transition / development study | | |
| Implementing period: November 2002 - March 2003 | | |
| Implementing body: General Department of National Taxation of Mongolia | | |
| Progress : 100% | | |
| Implemented project: Third party information system | | |
| Implementing period: November 2002 - March 2003 | | |
| Implementing body: General Department of National Taxation (GDNT) of Mongolia | | |
| Objectives: To develop tax payment information management system to increase payment rate by conducting inspection and revenue management through utilization of information. | | |
| Funding: | | |
| Requested party: Yen Grant Aid | | |
| Requested date: November 2002 | | |
| Technical cooperation: | | |
| Training: Training on Trainers for GDNT to conduct training service 10 personnel 3 to 4 weeks | | |
| Dispatch of experts: Practical and concrete technical cooperation for tax management system 7 personnel from December, 2001 to February, 2003 | | |
| Status: | | |
| From Volume 1 Main Report, project has been conducted based on the plan. Revision of NTA training system has been conducted. Project will focus on GDNT human capacity development and support for tax management system in Mongolia as well as tax education system. | | |
| (FY 2006 Domestic Survey) | | |
| Technical cooperation: | | |
| Training: Special Training, 8 personnel, 9/Mar/2006 - 24/Mar/2006 | | |
| Dispatch of experts: Short-term experts: 6 personnel, from January, 2006 : taxation education progress management, improvement of taxation administration, and service improvement | | |
| (FY 2007 Domestic Survey)(FY 2007 Overseas Survey) | | |
| Reinforcement project of taxation administration has been conducted from January, 2006, has been improving the Third Party Information System, and has been formulating the VAT invoice process as a system. | | |
| Implemented project : Reinforcement Project of Taxation Administration in Mongolia | | |
| Implementing period : from early August, 2005 to late July, 2008 | | |
| Implementing body : General Department of National Taxation (GDNT) of Mongolia | | |
| Objective : conduction of short-term action plan of education against tax administration staff, revision of curriculum, development of education tools, improvement of tax administration service, introduction of tax accountant certification system | | |
| Fund procurement : the Government of Japan(technical support project) | | |

| Description : | | |
| (FY 2003 Domestic Survey) | | |
| (1) The Final Reports of M/P and F/S were submitted by the Consultant to JICA headquarter in February 2003. | | |
| (2) The Final Reports were forwarded to the related organizations of Mongolian Government in March, 2003. | | |
| (3) After the implementing bodies (Mongolian Ministry of Infrastructure (MOI) and Post and Telecommunication Authority (PTA)) reviewed the contents, final reports were submitted to the cabinet office to gain approval. | | |
| (4) In August, 2003, the final report was approved by the Mongolian Cabinet Office and then submitted to the parliament for the final approval. | | |
| (5) In September, 2003, rehabilitation of rural telecommunication system master plan had final approval as a national project by parliament. | | |
| (6) In October 2003, the request for Grant Aid for "Rehabilitation of rural telecommunications system in Khangai and Central regions of Mongolia" was submitted to Japanese Government. The project includes the rehabilitation plan for 22 sites in three Mongolian states (Uvurhangay, Selenge and Darhanuul). | | |
| (FY 2004 Domestic Survey) | | |
| 1. Grant aid projects: Rehabilitation of Rural Telecommunications System in Khangai and Central Regions of Mongolia | | |
| 1) March 2003: Submitted for a project to be implemented in fiscal year 2004. | | |
| 2) October 2004: Reapplied for a project to be implemented in fiscal year 2005 with a new format. | | |
| 3) Realization status: For the project requested to be implemented in fiscal year 2004, reconsideration was given by the Mongolian government after June 2004, corresponding to the notification given by overseas agencies of the Ministry of Foreign Affairs (Japanese Embassy and JICA). As a result, request reflecting indicated issues were prepared and has been submitted on 25th October 2004. | | |
| 2. Other progress: | | |
| In Mongolia, organizational reform was conducted for MOI and PTA, which were the government agencies for telecommunications and information technology, in September 2004 and Mongolia Information and Telecommunication Technology Department directly under the President. It is considered that project actualization will be commenced by the new agency. | | |
| (FY 2005 Domestic Survey) | | |
| August 2005: Plan was resubmitted as an FY2006 implementing project. | | |
| (FY 2006 Domestic Survey) | | |
| Considering the progress of privatization of telecommunication service provider of Mongolia, the development of local communication network by Mongolia on their own efforts, and the change of applicable communication technology after the master plan survey, the review of master plan is needed and it is unlikely to be implemented as planned. | | |
| (FY2007 Domestic survey) | | |
| No application was submitted from the Mongolian government in FY2006. | | |
| After five years survey of the master plan, there is an improvement in the condition of the communication in Mongolia such as establishing optical fiber cable in a part of the project coverage area with the support of other countries. In addition, with the development of communications technology, the old digital multiplex transmission method, which was recommended in the master plan, is now becoming obsolete and IP packet transmission is becoming the mainstream. Therefore, implementing the project on the basis of the master plan as it exists is unlikely, and a fundamental review is necessary. | | |
| As a part of Ministry of Internal Affairs and Communications Asia broadband plan, the pilot experiment used long-distance wireless LAN with IP packet transmission using Japanese technology was implemented in FY2005 and FY2006 in Mongolia, value of the diffusion of ICT and Internet use is recognized. | | |
| Therefor, including a long-distance wireless LAN as a technical element is preferable if a rural communications network development master plan continues to be reviewed in future. | | |
| (FY2007 Overseas Survey) | | |
| Due to progress and the high-rate of development, progress in the ICT sector and economic growth, the effect of the project which will be carried out based on the master plan is unconvincing. A review of the master plan considered with the current state of the ICT market and economic demand will be necessary. | | |

| <p>Description : (FY 2003 Overseas Survey) The application for Japan grant aid for construction of bridges and box culverts along Eastern Arterial Road between Baganuur and Undurkhaan has been submitted to the Government of Japan in Dec. 2001. Then, the application for Japan Grant aid for construction of roads and facilities along Eastern Arterial Road between Baganuur and Kherlen river East and Murun river West and the application for Japan Grant aid for procurement of equipment/ maintenance center on Eastern Arterial Road have been submitted to the Government of Japan in Apr. 2002.</p> <p>(FY 2004 Domestic Survey) Grant Aid funded B/D in progress.</p> <p>(FY 2005 Domestic Survey)(FY 2005 Overseas Survey) Subsequent study: B/D on Eastern Arterial Road Construction and Equipment procurement Implementing period: June 2004-March 2005 (9 months) Implementing body: JICA Objective: To conduct basic design and estimate project cost of Section II and Section IV among all six sections of the Eastern arterial road. Relation with the report: To realize issues decided in the F/S and to prepare a framework of Grant Aid in B/D Funding: Funding party: Own funding and Yen Grant Aid (E/N concluded June 27, 2005) Amount: Own fund: 1,227 million JPY, Yen Grant Aid: (Total) 544 million JPY (As of 1/2 period, undecided for 2/2 period) Equipment procurement: 501 million JPY Services : 43 million JPY Content: 1/2 period: Plant-related equipment procurement and 5.2 km road construction 2/2 period: Other equipment procurement and approximately 55 km road construction Progress: After the F/S, the B/D of the project to construct Eastern arterial road and improvement of equipment has been carried out by the consultant. March 2005: Final report of the B/D has been submitted. October 2005: Tender evaluation on contractor and equipment supply has completed. 1/2 period: Contract concluded for equipment supply. Undecided for construction. Other sections is under development with own funding.</p> <p>(FY 2006 Domestic Survey)(FY 2007 Domestic Survey) Next phase project: Project for Construction of the Eastern Arterial Road and Improvement of the Related Equipment in Mongolia Implementing period: From July 2007 to March 2010 (3 years and 9 months) Implementing body: Ministry of Road, Transport and Tourism of Mongolia Goal/Objective: Detailed design and construction of Section II and Section VI among the whole 6 sections (from Section I to VI) of the Eastern Arterial Road. Relation to the subject procurement: After formulating the outlines of Grant Aid concerning items decided by the F/S in the basic design, detailed design and construction are to be conducted. Funding: Requested time: Year 2002 Financing source: Yen grant E/N agreement date: Jun 27, 2005 544 million yen (1/2 Phase single fiscal year), May 30, 2006 2.4 billion yen (2/2 Phase government bonds) Contents: 1/2 Phase: detailed design, procurement of plant equipment and road construction 5.2 km 2/2 Phase: procurement of other equipment and road construction approximately 55 km Operation and management body after the completion of construction Section II : Tuv AZZAN Road Operation and Maintenance Cooperation under direct control of Ministry of Road, Transport and Tourism of Mongolia Section VI : Harugui Road Operation and Maintenance Cooperation under direct control of Ministry of Road, Transport and Tourism of Mongolia Progress: (FY 2006 Domestic Survey) 1/2 Phase: completed 2/2 Phase: in progress Sections other than the Section II and VI among the subject of F/S have been implemented or in progress by own funds of counterpart country. (FY 2007 Domestic Survey) 2/2 Phase(from July, 2007) : 32.3% completed. This project is a combined term of civil engineering and equipment. The progress of construction only mention about civil engineering. Equipment term has been 100% completed. Remaining section among 250km of F/S has been all completed by the own funding of Mongolia. By the completion of this construction, the target of F/S would be accomplished.</p> <p>Technical cooperation: Training program : 2personnel, from February 5, 2006 to February 25, 2006, about operation and maintenance of roads and operation and maintenance of equipment</p> <p>(FY 2007 Overseas Survey) No information to be specially mentioned.</p> | | |

Description :

(FY 2006 Domestic Survey)

Although this study is considered to be highly prioritized, it appears that the Mongolian government is examining how to deal with an issue where the initial request for Yen Grant is not ensured. It seems that the most appropriate response to this study which includes lots of soft components is to implement skill profession. This, however, conflicts with the budget issue. It would be important to have international institutions involve in the project and to respond it systematically if the small scaled projects taken place in this study were to be implemented widely. It is also possible for NGO to lead the project. It enables local administrations to improve their ability.

(FY 2008 Domestic Survey)

No information to be specifically mentioned.

Description :

(FY 2006 Domestic and Overseas Survey)

No information to be specifically mentioned.

(FY 2007 Domestic Survey)

Implemented project : Reinforcement Project of Tax Administration in Mongolia

Implementing period : from early August, 2005 to late July, 2008

Implementing body : General Department of National Taxation (GDNT), JICA

Objective : conduction of short-term action plan of education against tax administration staff, revision of curriculum, development of education tools, improvement of tax administration service, introduction of tax accountant certification system

Funding : the government of Japan(technical support project)

Technical cooperation :

Training program : country-by-country special training at FY 2004 January to February by 10 persons about staff training system, country-by-country special training at FY 2005 January to February by 10 persons about service against tax payer

Dispatch of experts : 7 personnel from January, 2006

Beneficiaries : staffs of Mongolian Taxation Authority, and all citizens

Benefit : Almost all(90% over) staffs of General Department of National Taxation(about 1,000 persons) had the chance of training. The tax revenue of 2007 year was more than 170 billion yen and became budget surplus.

Utilization of suggested project : Checking manual and case manual had been made up, but the full utilization is from next year.

OBJECTIVES OF THE STUDY | 1) Establish Master Plan of waste management in Ulaanbaatar city targeted to complete in 2020, and conduct feasibility survey about prior project made up in the M/P. 2) Support capacity development of private, organization, system/society level concerning to waste management in Ulaanbaatar city. | | |
| 7. CONSULTANT(S) | KOKUSAI KOGYO CO., LTD. | | |
| 8. STUDY PERIOD | Dec.2004 ~ Mar.2007 27month(s) ~ | | |
| 9. SITE OR AREA | 7 district of Ulaanbaatar city(Sukhbaatar District, Chingeltei District, Bayanzurkh District, Songinokhairkhan District, Bayangol District, Khan-Uul District, and Nalaikh District) total 3,944km ² , total population 866,591(AD2005) | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>M/P :</p> <p>The basic target of Master Plan is to "establish waste management system in Ulaanbaatar city that would match to environment conservation until targeted year of 2020". Specifically, promote 3Rs(Reduce, Reuse, and Recycle), and 1) restrain outbreak of waste as thoroughly as possible by promoting outbreak restrain in houses and offices which is the source of the outbreaks 2) reuse and recycle the broken-out waste 3) wastes that broken-out after restraining and reuse/recycle should be collected appropriately and should be disposed appropriately to restrain from making negative impact to the environment 4) establish these waste management structure by dividing the responsibility of government, private company, and resident in fair and clear rules. The specific numerical targets are as follows.</p> <p>1) waste collecting rate in ratio of population : AD2006(apartment area : 100%, yurt area : 42%), AD2010(apartment area : 100%, yurt area : 100%), AD2015(apartment area : 100%, yurt area : 100%), AD2020(apartment area : 100%, yurt area : 100%) 2) ratio of self disposal and inappropriate disposal against amount of outbreak : AD2006(winter : 54.2% summer : 20.2%), AD2010(winter : 1.2% summer : 2.6%), AD2015(winter : 1.0% summer : 1.9%), AD2020(winter : 0.7% summer : 1.2%) 3) separated collection in apartment area : AD2006(ratio of separated collection : 0%, population of separated collection : 0persons), AD2010(ratio of separated collection : 15%, population of separated collection : 83,587persons), AD2015(ratio of separated collection : 40%, population of separated collection : 289,809persons), AD2020(ratio of separated collection : 70%, population of separated collection : 634,432persons) 4) ratio of separated collection against amount of outbreak : AD2006(winter : 0% summer 0%), AD2010(winter : 4.9% summer 8.5%), AD2015(winter : 17.7% summer 25.4%), AD2020(winter : 40.4% summer 48.9%) 5) ratio of intermediate disposal against amount of outbreak : AD2006(winter : 0% summer 0%), AD2010(winter : 2.2% summer 3.6%), AD2015(winter : 8.0% summer 11.1%), AD2020(winter : 18.5% summer 21.8%) 6) ratio of recycle against amount of outbreak : AD2006(winter : 3.0% summer : 6.6%), AD2010(winter : 4.8(1.0)% summer : 8.4(1.7)%), AD2015(winter : 9.3(3.8)% summer : 13.6(5.3)%), AD2020(winter : 16.9(8.9)% summer : 20.5(10.5)% 7) method of final disposal : AD2006(Narangiin Enger disposal site : Open Dumping, three other disposal site : Open Dumping), AD2010,2015,2020(Narangiin Enger disposal site : Sanitary Landfill Level4, three other disposal site : Sanitary landfill level2)</p> <p>F/S :</p> <p>1) improvement of collecting system(improvement in efficiency of collecting in apartment area, provision of collecting service to all residents in the city, introduction of separated collection in apartment area, and construction and operation of central maintenance workshop), 2) development of Narangiin Enger city-waste disposal site(construction of sanitary landfill disposal site and conduction of sanitary landfill disposal), 3) development of Narangiin Enger recycle estate(construction and operation of sorting facility, construction and operation of RDF producing factory, and development of factory construction site for private recycle vendors and enticement of company)</p> <p>Suggestions :</p> <p>1) diffusion of the improvement achievement in Ulaanbaatar city to main cities in Mongolia, 2) strengthen the coordination between Ministry of Environment and Ulaanbaatar city, 3) conduction of technical support project to solve the problems that comes up against Ulaanbaatar city and Mongolia</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| (FY2007 Domestic and Overseas Survey) | | |
| Financial assistance procurement has been done and has been conducted in about the suggested project as follows. | | |
| Implemented Project : Improvement Plan of Waste Management in Ulaanbaatar city(grant) | | |
| Implementing Period : from August, 2006 to May, 2007 | | |
| Implementing Body : Ulaanbaatar city, JICA | | |
| Objective : support against waste administration in Ulaanbaatar city | | |
| Contents : construction of new disposal site, procurement of waste collecting vehicle | | |
| Progress : | | |
| (FY2007 Domestic Survey) | | |
| B/D has been already conducted | | |
| Fund Procurement : grant assistance : E/N concluding day June 26, 2007 Procurement Amount : 1 billion and 14 million Japanese yen | | |
| The construction work would be started from March, 2008. | | |
| (FY 2009 Domestic Survey) | | |
| 1. In grant aid, "The Study on Improvement of Solid Waste Management Plan for Ulaanbaatar Municipality in Mongolia," projects below were implemented. | | |
| 1) Improvement of Waste Collecting System | | |
| (Objective)Improvement of waste collection efficiency in apartment area and providing the waste collection service to all the citizens | | |
| (Overview)Obtaining 30 compactors and 113 dump trucks, and building the central maintenance workshop | | |
| 2) Development of municipal waste disposal plant | | |
| (Objective)Minimizing the negative effect of municipal wastes collected in the city of Ulaanbaatar to surrounding environment and discarding in a landfill in a sanitary manner. | | |
| (Overview)Building a sanitary landfill | | |
| 2. Technical Cooperation Project "Enhancing Solid Waste Management Plan for Ulaanbaatar Municipality in Mongolia" | | |
| (Project Objective)Enhancing the waste management capability of Ulaanbaatar municipality by human recourse development | | |
| (Cooperation Period)2009.10-2012.10 | | |
| 3. Development of Recycle Complex | | |
| It is expected to be implemented with assistance of KOICA. | | |
| It is scheduled that Record of Discussion will be concluded between KOICA and Ulaanbaatar municipality in April, 2010 and that grant assistance of USD 3.5 million will be implemented for 20 months. | | |
| (FY2012 Domestic Survey) | | |
| Ulaanbaatar also implemented the following projects with its own fund: | | |
| 1. Proper closure of former treatment facility associated with construction of new treatment facility | | |
| 2. Additional procurement of garbage trucks: 100 dump trucks and 13 compactor trucks | | |
| 3. Pavement work of access road to treatment facility constructed with Japanese government aid | | |
| 4. Establishment of waste fund system for having cross subsidy of collected fees work | | |
| 5. Major enhancement of operation structure of treatment facility | | |
| 6. Securing budget from municipal general budget for sanitary landfills at treatment facility | | |
| 7. Establishment of EPWMD, a new organization to promote waste management plan and policy, within the city government office | | |
| 8. Revision of collection and treatment fees | | |
| 9. Change of collection fee payment method to garbage collector based on the truck scale records at treatment facility | | |
| 10. Collection of garbage fees together with electric power charges in yurt areas | | |

Description :

Construction:

(FY 1993 Domestic Survey)

As of March 1982, the construction of the auditorium was completed and educational programmes have been produced there.

Background:

Basic design survey to list up broadcasting equipment was carried out from 24 Mar. 1977 till 13 Apr. 1977. After that, this study was conducted.

Description :
Project area-45,000ha
(1) Demonstration Unit (1,300ha)
Subsequent Studies: Jul.1981 B/D
Finance: Oct.20.1981 E/N 840 mil.Yen (Project for the Improvement of the N-N Irrigation Facilities)
Contents: Construction of the demonstration facility with irrigation function and flood protection function in Narshinghi.
Construction: 1981~Mar.1984 implemented (Consultant/Chuo Kaihatsu Co.)

(2) Block A-1 (3,000ha)
Implementation cost is 11,390.22 Taka (including F.E.8,201.78 Taka)
Subsequent Studies:
Feb.12.1989 E/N 76 mil.Yen (Project for the Construction of the N-N Irrigation Facilities D/D)
Jan.11.1988 E/N 105 mil.Yen (Project for the Rehabilitation of N-N Irrigation Facilities D/D)
Finance:
*Sep.7.1988 E/N 536 mil.Yen (Project for the Rehabilitation of the N/N Irrigation Facilities)
Contents: Construction of the irrigation facility in Narshinghi.
*Aug.24.1989 E/N 570 mil.Yen (Project for the Construction of the N-N Irrigation Facilities)
Contents: Construction of the ring dike (18km) at N-N irrigation area, irrigation of farmland (2,230ha), construction of bank.
*Jun.6.1990 E/N 1,796 mil.Yen (Project for the Construction of the N-N Irrigation Facilities)
Contents: Construction of the irrigation facility in Narshinghi.
*Aug.29.1991 E/N 977 mil.Yen (Project for the Construction of the N-N Irrigation Facilities)
Contents: Construction of the irrigation facility in Narshinghi.
Construction: Sep.1990~Mar.1993 implemented (Consultant/Japan Engineering
Consultants: Co.,Ltd, Contractor/Shimizu Kensetsu)

Management/Administration:
Project management is being carried out by 14 machinery technicians, 9 civil engineers and 8 reserve staff under the responsibility of BWDB. Administration at pump site and operation diary are comparatively in good condition. Water management at pump side is rigid and some farmers complain. Due to the financial shortage, the number of staff is not enough and procurement of materials and parts tends to delay. Establishment of a farmers' organization and charge for water are being considered but are not achieved yet.

Effect:
(FY 1993 Overseas Survey)
Communication of Project area is much developed, and the peoples in the locality is now cultivating three crops in a year. Although before the Project implementation, only one crop was cultivated in a year. The technology transfer is appreciated as it is very useful and appropriate.
(FY 1996 Domestic Survey)
Agricultural production has increased drastically owing to introduction of high yield variety and rise of planted rate (130%~230%). Also farm production has diversified. For example planting of cash crops to sell at Dhaka has increased, big consumption area. Stabilization of public welfare by flood protection. Revitalization of social and economic activities by utilizing bank road. Increase of fish-raising industry by utilizing Borrow Pit and new excavation.

(3) Remaining Works (Block A-2, A-3 and B)
Subsequent Studies:
(FY 1997 Domestic Survey) Sep.~Dec.1995 SAPROF (OECF)
Difference with JICA's proposal: The project includes improvement of irrigation / drainage facility in Block A-2. Bank will be constructed in outer spaces including Block A-2.A-3, Area B, because to construct a bank along with D-N road would be difficult.
Complementary Study was conducted by OECF contacting with local consultant after SAPROF had been finished. Some measures for social aspects were proposed.

Jul.1997 L/A 339mil.yen (N-N Drainage, Irrigation Project E/S)
Contents of project: EIA, additional design survey, D/D on bank and irrigation / drainage facilities, establishment of supporting programs for land acquisition, training, participatory development, agricultural management, and so on.

Construction:
(FY 1998 Domestic Survey) Not yet started.

Operation & Management:
(FY 1998 Domestic Survey) BWDB will be in charge of O&M.

Dispatch of Expert:
(FY 1998 Domestic Survey) Dispatch of JICA experts and JOCV for guiding agricultural and water management after the project completion is proposed.

| 9. SITE OR AREA | Road between Dhaka and Chittagon | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The Meghna River (about 830m wide) and the Meghna-Gumti River (about 1,360m wide) cross the Dhaka-Chittagong Highway about 25km and 40km east of Dhaka, respectively, where the Roads and Highways Department(RHD) provides mechanised ferry services. As the waiting time of vehicles for the ferries has increased, RHD has expanded the ferry arrangements to accommodate the increased traffic demand. However the necessity of ferry improvements will arise with the continuously increasing traffic. It is urgent to construct two bridges across these rivers which will complete the 380km long Aricha-Dhaka-Chittagong Highway, and the Dhaka-Chittagong Highway will be connected with the land transportation. The bridges are Meghna Bridge 930m, Meghna Gumti Bridge 1,480m respectively.</p> | | |

Description :

Reasons of Stoppage:

Due to damages of cyclone and financial problem.

Detail:

(FY1991 Overseas Survey)

From July through September 1987, Bangladesh was hit by a flood, the severest one in 40 years. As a result, railway routes were disrupted in many places and cut at more than 300 sections. Although efforts were made for the restoration, damages were caused again in 1991 by a cyclone. Under such circumstances, this project is now in suspension.

No aid is given to this sector by the World Bank and the other donor agencies, because this sector holds problems in management.

(FY1993 Overseas Survey)

Suspended/Discontinued due to the changes of development policy in terms of the priority and the problems of financing.

Description :

The Aftercare Study of this study was conducted in 1989 based on the record maximum floods of 1988 floods (70 year frequency).
(FY1991 Overseas Survey)

The study on the nationwide flood policy was conducted by the international organizations and each donors. The east part of Dhaka City was assigned to ADB, and the western part was assigned to Japan.

(1)West Side (FAP8B)
Rehabilitation of dike, improvement of drainage channel and construction of pumping station.

Subsequent Studies:
Mar.1990 E/N 66 mil.Yen
(Water Drainage System Improvement Project in Dhaka City)
Mar.-Jun.1990 D/D

Finance:
Sep.1990 E/N 626 mil.Yen (Water Drainage System Improvement Project in Dhaka City)
Aug.1991 E/N 1,158 mil.Yen (Water Drainage System Improvement Project in Dhaka City)
May.1992 E/N 397 mil.Yen (Water Drainage System Improvement Project in Dhaka City)

Construction:
Construction trader: Obayashi construction
Mar.1991~Mar.1993 Completed

Situation:
(FY1995 Overseas Survey)
This project was taken over by the DWASA, which carried out an updating study of this project.

(2)East Side (FAP8A)
Subsequent Studies:
May.1992 F/S completed (ADB)

Finance:
ADB loan 915 mil.US\$

Construction:
1996~1997 (schedule)

Description :

Finance:

1990 The Government of Bangladesh requested for OECF loan to implement the irrigation over 9,000ha, but the OECF survey mission concluded that the project was premature for financing.

Detail:

(FY 1991 Overseas Survey)

The economic viability of large-scale pump irrigation schemes are increasingly considered doubtful vis-a-vis the country's vulnerability to frequent floods these years. Other agricultural projects under implementation elsewhere are encountering the difficulty of purchasing land for irrigation development. The Government of Bangladesh thus withdrew the OECF application for the proposed project.

(FY 1995 Overseas Survey)

This project is planned based on the river water of Ganges as the water resource. However, after expiry of the memorandum of understanding with India in 1988, it became hard to get enough amount of water. At present, the negotiation with India is carrying out to this water supplement issue.

The drainage systems are being investigated under FAP (Flood Action Plan) and recommended to implement as for a medium-term project.

(FY 1996 Overseas Survey)

The Government of Bangladesh is not in a position to implement the project with her own resources. OECF loan is requested for the project implementation.

Implementation of the project will be assigned to BWDB.

Recovery of the project may be possible by imposing water tax to the beneficiaries.

(FY 1997 Overseas Survey)

The project was included in the Three Year Rolling Programme (1996-98) and also in ADP (1997-98).

Recently signed Ganges Water Treaty, has a provision for 35,000 cubic of water flow which is favorable to this project.

Financial problem is delaying implementation.

Description :

Subsequent Study:

1991.1.7~2.28 B/D

Finance:

Dec.11.1991 E/N 723 mil.Yen(Model Rural Development Project-Phase 1/3)

Aug.16.1992 E/N 849 mil.Yen(Model Rural Development Project-Phase 2/3)

Jul.11.1993 E/N 895 mil.Yen(Model Rural Development Project-Phase 3/3)

Contents:

Elaboration of plan for rural infrastructure service and strengthening of rural organization at Homna and Daud Kandi.

Construction:

Phase I Dec.1991~Mar.1995 Completed

(Consulting firm:Taiyo Consultants Co.,Ltd./

Construction Trader: Nishimatsu Construction)

The construction work includes two Training Centers, two Workshops and two Godowns.

Mini Project-type Technical Corporation

Jan.6.1992~Jan.5.1996 Rural Development project

This technical cooperation was implemented by JOCV and Japanese irrigation experts. With their assistance, the facilities constructed under this cooperation have been in operation.

Effect:

(FY 1995 Overseas Survey)

RBDB and TCCA (Thana Central Cooperative Association) conduct training courses of agricultural production and upgrading life for people in the villages. JOCV volunteers are involved in these training. The project was very effective specially in improving the living standard of rural inhabitants. About 70% of them are benefited.

(FY 1996 Domestic Survey)

The improvement of industrial facilities in rural area has provided approximately 80,000 people with the opportunity for long-term employment.

(FY 1996 Overseas Survey)

The construction of workshops and godowns has resulted in the increase of agricultural production and the ensuring of fare prices through adequate marketing facilities.

| PRESENT STATUS | Completed or In Progress Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
|--|--|--|
| <p>Description :</p> <p>Reasons for Delay or Suspension: (FY1993 Overseas Survey) According to the feasibility study of JICA, Taka 28 crore is required to implement the Project. The main factor which delayed the implementation of the Project is the financial problems. The project may be implemented only when the fund becomes available from Governmental grant assistance from Japan or any other donor country.</p> <p>(FY1996 Overseas Survey) For the future grant aid project, it is required to reconsider over the F/S.</p> <p>(FY 1997 Domestic Survey) F/S review is not carried out yet, preparation of request for grant aid neither.</p> <p>(FY 1997 Overseas Survey) Negotiations were carried out with foreign companies such as Jurong Shipyard of Singapore, Komatsu Japan for joint venture but finally not succeeded. GOB is still looking for joint venture collaboration with some Japanese companies. To implement other recommendations, Chittagong Dry Dock needs technical assistance.</p> <p>(FY 1998 Domestic Survey) Although grant aid assistance can be thought as the only way to realize the project, request for grant aid has so far not been prepared.</p> <p>(FY 1999 Overseas Survey) The project is not cancelled at all. No progress could be made yet due to the lack of fund of the Bangladesh Government as well as the absence of any collaborating partner from overseas. However, negotiations are being carried out from time to time with foreign companies/agencies which indicate some interest in the project. During the recent days, BSEC (Bangladesh Steel & Engineering Corporation) considers that from the business point of view a second Dry Dock will be more beneficial than a Slipway. To justify this new idea and also to reconsider the viability of the entire project after the lapse of a long period of ten years, a further study to review the original F/S has become necessary. As a result, this issue will be taken up for discussion in the Board Meeting of March 2000 with the aim of requesting JICA through Bangladesh Government for a review study of the project.</p> | | |

Description :**Finance:**

During the annual meeting of 1992, The government of Bangladesh requested an OECF loan. Although OECF sent a preliminary mission in Jun.1992, it decided to turn down the request because the electricity supply plan to the main pumping station had not been confirmed.

Financial cooperation is being requested to the Government of Japan.

Detail:

Further study and reconsideration are needed to adjust to the standard flood control policy of Bangladesh.

(FY 1993 Overseas Survey)

After completion of additional survey and detailed design studies, the preparation to secure finance will be started.

To involve more number of local consultants and personnels of the Government of Bangladesh to the Project activities will be requested to JICA.

(FY 1994 Domestic Survey)

Although further study is needed to modify the project, it is suspended due to the lack of fund.

(FY 1995 Overseas Survey)

As the result of the fact-finding survey done by OECF in 1990, it was found that there was no idea to supply electric power for the pump stations. Therefore, the implementation of this project had been once suspended.

However, since this project covers the area used to suffer the flood disasters every year, the construction of the drainage facilities, 22km of embankment and about 3km of power distribution line to the pump stations are planned and promoting with a high priority.

(FY 1996 Domestic Survey)

Due to financial constraints, no progress has been made to revise the electric supply plan, which the OECF preliminary study team found unsatisfactory. Therefore, no action has been taken for the implementation of the proposed project.

(FY 1996 Overseas Survey)

The electricity plan is completed.

(FY 1997 Domestic Survey)

It is possible that request for grant aid will be submitted after FY 1999.

(FY 1997 Overseas Survey)

The project is getting delayed due to the lack of interested donor to support the project financially.

IDB has given indication that it may consider to send an appraisal mission which is not yet confirmed.

(FY 1998 Domestic Survey)

Higher priority is put on the development project of infrastructure in the capital area which was damaged by flood this year. Therefore, lower priority is put on this project in Kurigram located in the periphery.

(FY 1999 Overseas Survey)

The project is delayed due to the lack of fund. ERD (Economic Relations Division, Ministry of Finance) is being requested every year to look for a donor, but it seems that the priority is not very high yet. However, Bangladesh Government allocated Tk.10.15mil. for the project out of their very limited FY1999-2000 budget and some work is already in progress.

| <p>Description :</p> <p>Subsequent Studies: Sep.1993 L/A 179 mil.Yen (Development Project of Dhaka Port E/S) Oct.1994~Jun.1996 Implemented Consulting Firm / PCI Content/ F/S review, Field investigation, D/D, Cost estimate, Preparation of tender document and Technology transfer.</p> <p>Difference with JICA Proposal/ JICA proposed two separate places for container terminal & general cargo jetty but proposal has been made for side by side at one place for same. JICA proposed straddle carrier but consultant designed RTG cranes.</p> <p>Finance: (FY 1997 Overseas Survey) GOB already applied for OECF loan that amount of Taka 526.7mil. (FY 1999 Overseas Survey) The application for ODA loan was not materialized finally. Some steps were initiated to go ahead with the project by self-finance of the Bangladesh Government, but this was not also materialized due to fund constraint. About two years ago, the Ministry of Shipping, without consulting the other relevant ministries/agencies, succeeded to sign a contract with an American company to implement the project on BOO basis. However, this contract could not be implemented yet due to strong opposition from the Labor Union of BIWTA and other inter-agency problems on the Bangladesh side. There is a possibility that during the forthcoming visit of President Clinton to Bangladesh in the last week of March, the existing contract might be amended to suitable terms and conditions for both the parties. However, the insiders of BIWTA still feel that it will be better to try for the JBIC loan again to safeguard the interest of Bangladesh.</p> <p>Detail: Planning Commission of GOB instructed BIWTA to prepare a project paper for the combination of Cargo Handling Facilities and Container Terminal Projects in Apr. 1991. The Feasibility Study was approved officially by GOB in Sept. 1991. The request for Yen Loan of FY1992 has been submitted by GOB at the end of Oct. 1991. As of Mar.1994 The Government of Bangladesh has decided to implement the Development Project of Dhaka Port, combining this project and the Development project of Dhaka and Narayanganj Port.</p> <p>(FY 1993 Overseas Survey) This Project is treated as the same Project namingly "Development project of Dhaka and Narayanganj Ports" (M/P, F/S project completed in FY 1987) by the Government of Bangladesh.</p> <p>(FY 1997 Overseas Survey) GOB acquired 36.3 hectares land for the project.</p> | | |

Description :

Finance:

(FY 1995 Overseas Survey)

The Government of Bangladesh has requested grant aid to the Government of Japan. The project design was reviewed to meet the proper scale of the Japanese grant aid.

(FY 1997 Domestic Survey)

The projects are included in the long list of request for FY 1996 grant aid assistance.

(FY 1999 Overseas Survey)

BRDB's application for Japan's grant aid could not climb up yet in the ERD's priority list, therefore, no result has come through. However, it seems that some positive actions are now being taken by the LGEB side toward the implementation of a portion of the project.

Detail:

Considering the situation of Stage I, which was implemented with the Japanese grant aid assistance, and the effect of Mini-Project Technical Cooperation, the implementation of Stage II will be decided.

(FY 1997 Overseas Survey)

GOB sent a request to Japanese Embassy in May.1997, to support the basic design mission. A proposal was sent scaled down.

(FY 1998 Domestic Survey)

The situation has not changed.

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Subsequent Studies(Situation of request): (FY 2000 Domestic Survey) In relation to the Dhaka Eastern Bypass Project, the Dhaka Central Eastern Component was requested. However, no progress can be observed due to the unsuccessful negotiation about the demarcation of the project between the World Bank and the Japan side.</p> <p>Finance: (FY 1994 Domestic Survey) Donor meeting is planned to be held at Dhaka city on Dec.1994. On this meeting policy of each donor country or international organization will be discussed. (FY 1995 Domestic Survey) Planned Donor meeting on Dec. 1994 had been cancelled. However, it will be held on around Sep. 1995 in Dhaka. (FY 1996 Domestic Survey) In 1994 FPCO (Flood Plan Coordination Organization) compiled the report for the implementation of respective FAP and distributed it to donors. Although a donor meeting was held in 1995, no concrete action has been taken for the project implementation. (FY 1999 Overseas Survey) The project is again included in the Priority List of FY1999-2000 having the following components: a)Dhaka East Northern Compartment (3,000ha, Tk.4,645mil.); b)Dhaka East Central Compartment (3,000ha, Tk.4,074mil.); c)Dhaka East Southern Compartment (2,000ha, Tk.4,074mil.). Bangladesh Government is now looking for donors for this project. In the ADP for FY1999-2000, Bangladesh Government allocated Tk.300mil.for this project, but no work has started yet.</p> <p>Detail: (FY 1993 Overseas Survey) No commitment from Donors for conducting the detail design and implementation has yet been received. Eastern part of the Greater Dhaka Flood Protection Project (FAP-8A) is under preparation by Bangladesh Water Development Board (BWDB).</p> <p>(FY 1995 Overseas Survey) It may take some time to decide priority among six(6) blocks of the project, because the construction cost will be as large as \$74M. There is another alternative to consider the east embankment as a part of the N-S Trans Bangladesh Trunk Highway (Chittagon - Dhaka - N.W.) which passes the Jamna Bridge which is under construction.</p> <p>(FY 1996 Domestic Survey) ADB implemented F/S on the western region of Dakka, following M/P. Later, as a part of measures for flood mitigation and for environment protection, ADB has undertaken the rehabilitation of drainage canals, the rehabilitation of the bank and the embankment.</p> <p>(FY 1996 Overseas Survey) Ministry of Water Resources had been requested to arrange fund through ERD for the implementation of the sub-projects namely Greater Dhaka East, Narayangonj DND & Narayangonj West. No commitment from Donors for conducting detailed design & implementation has yet been received. PCP for FAP-8A has been prepared by BWDB and is in the process of approval.</p> <p>(FY 1997 Overseas Survey) BWDB prepared a PCP scaled down to Taka 2,300million and sent to MOWR. It is included in the priority list for donor support.</p> | | |

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| <p>This Study (FAP2) was undertaken as one of 26 Flood Action Projects (FAP). FAP2 targeted the area surrounding by the River of Pramaputra and the border with India. This Study was undertaken by the study team participated by the Japanese and the British experts. Respective FAP study was commenced around the same time with the fund provided by various donors. However, because the completion dates of respective study were varied, no integral plan to cover a whole FAP has been made, yet.</p> | | |
| <p>FAP-2 (FY 1994 Domestic Survey) ADB seems to have been interested of the "Gaibandha Improvement Project" which is a priority project of FAP-2.</p> | | |
| <p>(FY 1995 Domestic Survey) EPCO considers "Gaihandha Improvement Project" as a high priority project. However, it seems to take considerable time before its implementation since no step has been taken to coordinate respective FAP.</p> | | |
| <p>(FY 1998 Domestic Survey) Implementation Plan for the projects proposed by this study and prioritized in FAP has not yet been formulated.</p> | | |
| <p>(FY 1999 Overseas Survey) The project is included in the Priority List of Bangladesh Government for FY 1999-2000 and is waiting for donors.</p> | | |
| <p>Environment Impact on the Surrounding Area: (FY 1995 Overseas Survey) ADB has just approved a technical assistance amounting to more than B1 million for assessing economic, social and environmental impact to the N-W region by the construction of the Jamna Bridge in December, 1995.</p> | | |
| <p>Problems to be solved: (FY 1995 Overseas Survey) Relative feasibility and priorities of the project will be affected by the reevaluation of the project from the viewpoint of poverty, environment and people's participation.</p> | | |
| <p>Situation: (FY 1996 Overseas Survey) Final recommendations of FAP studies have been given in the report on Bangladesh Water and Flood Management Strategy, Sept.1995 approved by the GOB.</p> | | |
| <p>(FY 1997 Overseas Survey) The project is delayed due to lack of financial support.</p> | | |
| <p>Related Projects: (1)FAP-1 (FY 1996 Domestic Survey) Construction: Being implemented by IBRD.</p> | | |
| <p>(2)FAP-13 (FY 1993 Overseas Survey)</p> | | |
| <p>Subsequent Studies: Oct.1993~Dec.1996 Phase II Study</p> | | |
| <p>Finance: Both Japan and U.K. show their interests to finance FAP-13.</p> | | |

| | Processing | Discontinued or Cancelled |

Description :

Finance:

(FY 1995 Overseas Survey)

The grant aid for this project has already been requested.

(FY 1996 Overseas Survey)

OECE is requested for financing.

(FY 1997 Domestic Survey)

The project is included in the long list of request for FY 1996 grant aid assistance.

(FY 1999 Overseas Survey)

The project is delayed due to the lack of fund. It seems that it is very difficult for ERD to get a donor for this project. However, Bangladesh Government allocated Tk.28.5mil. for the project out of their very limited FY1999-2000 budget and some work is already in progress.

Detail:

Government of Bangladesh will implement the plan depending on the Flood Action Plan conducted by World Bank and other organizations.

(FY 1993 Overseas Survey)

Hoping to involve more local consultants and the staff of the government of recipient country.

(FY 1995 Overseas Survey)

GOB plans to implement the embankment by themselves. This project has been given high priority as it covers the area where floods occur frequently every year. It is planned to construct the drainage facilities and extend the embankment for flood protection.

(FY 1997 Overseas Survey)

This project is given priority by the GOB and has been included in the Annual Development Plan. The implementation of the project needs donors' financial support for which GOB is waiting.

BWDB completed some protection works and embankment.

(FY 1998 Domestic Survey)

This project is excluded from the projects that will be provided loan, due to the deteriorating financial situation of Bangladesh government.

Description :

Utilization of Outputs:

(FY 1996 Overseas Survey)

Outputs are supplied in different development authorities such as Chittagong Port Authority, SPARRSO, Water Development Board, etc. SOB is preparing for topographic maps.

(FY 1997 Domestic Survey)

Outputs of datum lines are being utilized for measurement and regional development plan.

Necessity to Update Outputs:

(FY 1997 Domestic Survey)

There is no necessity to update outputs at present. Datum lines were rearranged in the area covering 70% of whole country. It is necessary to establish nationwide datum line system by rearranging remaining 30%.

Related Project:

(FY 1997 Overseas Survey)

SOB is now implementing a 3 year project (1996-99) on topographic mapping and procurement of equipment with the assistance from the Government of France. (Taka 160mil.)

Detail:

(FY 1997 Domestic Survey)

Assistance on construction of new datum lines, provision of machinery and dispatch of expert was requested to JICA's study team in October 1997. Official request will be submitted in the near future.

(FY 1997 Overseas Survey)

Survey of Bangladesh received 10 JICA experts in 1996 and 97 to modernize the organization. A Project Performa has been prepared to establish a cartographic center. The organization is planning to complete remaining 30% of land area through own personnel trained under the project.

(FY 1998 Domestic Survey)

There is no information.

(FY 1999 Overseas Survey)

1.Survey of the remaining 30% land area: The measuring equipment needed for this purpose have already been obtained through JICA (28 Dec.1998 E/N 341mil.yen).

Government of Bangladesh has already allocated a nominal fund of Tk.12 lakh for the work. Therefore, the work will start this year with a plan to complete within the next two years. A short-term JICA expert is expected to arrive soon to help in the necessary preparations for the work. JICA is further requested to provide at least two geodesy experts to guide in the actual work during the Dec.2000 ~ Jan.2001.

2.Cartography equipment: The cartography equipment provided by JICA are already in operation, but having some small problems in operating the printing press. JICA will accept three trainees at the grassroot level to eliminate the problems.

3.Digitization of maps: The French Government's assistance during the last two years for digitization of maps will expire at the end of June.2000. By this time, only 17 maps out of 267 in total have been digitized and as many as 250 maps are left behind. In order to complete the work, a grant aid of US\$3mil and the services of 3 experts for at least 3 years will be necessary.

Description :

(FY 1999 Domestic Survey)
As regards the conclusion of the feasibility study, it is considered that the provision of JBIC loan is not appropriate in light of budget scale and the aid policy of Japanese government. On the other hand, an urgent project proposed in the feasibility study has been adopted for the grant aid assistance at the bilateral annual consultation meeting between Bangladesh and Japan. The Bangladesh government waits for an immediate implementation of the grant aid cooperation.

(FY 1999 Overseas Survey)
WASA has already requested the Ministry of Local Government and Rural Development (LGRD) to take up the matter with ERD (Economic Relations Division, Ministry of Finance) for finding out a donor as soon as possible. WASA has also requested the Ministry of LGRD to acquire land for the project. Meanwhile, WASA is eagerly waiting for fund (about Tk.1,000mil.) from JICA to implement the urgent project proposed in the study. WASA is also requesting the Japan's grant aid for procurement of the sewer cleaning equipment which will cost more than Tk.500mil.

(FY 2000 Domestic Survey)
Subsequent Study: October - November 2000 B/D "Development of Sewerage System in North Dhaka".

(FY 2000 Overseas Survey)
The application forms for Japan's grant aid for "Development of Sewerage System in North Dhaka" and "Procurement of the sewer cleaning equipment in South Dhaka" had been submitted. In order to cope with these requests, JICA implemented a preliminary survey for the grant application in May, 2000 and a basic design study (phase I) from October to November, 2000. As the result of these studies, it was found that the improvement of sewage system in Central/South Dhaka required immediate actions. At present, JICA is confirming with the Bangladesh government regarding the contents of the requests. Taking into account reactions by Bangladesh government, JICA will examine the feasibility of projects.

(FY 2001 Overseas Survey)
As a result of the discussion between JICA and ERD, the government of Bangladesh decided to make a new application for Japan's grant aid concerning "Development of Sewage System in Dhaka," including components to care broken parts in power supply for sewer culverts. The application form has been submitted to Japanese Embassy in Bangladesh and project concept paper (PCP) was approved by ECNEC (Executive Committee of the National Economic Council) on June 19, 2001 (Requested amount: 3,378 million yen).

(FY 2003 Overseas Survey)
An agreement memorandum was made between the Chinese government and the Bangladeshi government on November 1, 2002 on the construction of a sewage treatment plant and the improvement of related sewerage on the eastern side of Northern Dhaka; however, concrete movement has not been seen yet.

(FY 2008 Domestic Survey)
Following the recommendation made in the Feasibility Study, the basic design study for 1) the rehabilitation of the existing main sewer culvert from the norther part of Dhaka to the Pagla sewage plant and 2) the maintenance of the sewer culvert cleaning equipment in the southern part of Dhaka had been launched. During the study, however, policy environment has changed. At present, therefore, the study has been abandoned.

Description :

(FY 2001 Overseas Survey)

1. After receiving JICA's final report, CWASA submitted PCP (project concept paper) to the government of Bangladesh and is awaiting approval.
2. A request for Japan's grant aid to implement the proposed project has been submitted to the government of Japan.
3. JBIC's Sector Strategic Mission visited CWASA from May 21 to 22, 2001 and discussed fund procurement for the project implementation.
4. CWASA is making efforts to collect delinquent charge from users.
5. Two tasks were organized to crackdown illegal connections, defective meters and bills.
6. Various efforts are made for management and financial improvement.

(FY 2005 Domestic Survey) (FY 2005 Overseas Survey)

Subsequent Study: Extension of Mohara Water Treatment Plant in the People's Republic of Bangladesh

Relation with the study: A project which is based on F/S survey reports

Implementing Period: 2005

Implementing body: Chittagong Water Supply and Sewerage Authority (CWASA)

Funding:

Funding party: Own finance

Amount: No details known (approximately 35 million USD)

Objective: To extend Mohara Water Treatment Plant, according to the proposal made in the study, to secure 90,000 square meters drinking water per day to solve water shortage and to supply safe drinking water to Chittagong city and its surroundings.

Status: Implementation with own fund were decided, since request for the Grant Aid made to the Japanese government in 2001 was not accepted.

September 2005 - Tender

October 2005 - Tender evaluation in progress

| 10. MAJOR PROPOSED PROJECT(S) | F/S: Based on the results of the study, four priority projects and a regional rural water works plan were proposed. 1) Rural Water Supply for Keshabpur by Groundwater from Deep Aquifers: Provision of safe drinking water for 61 mouzas (population of 8,400) in urgent areas in Keshabpur by developing groundwater from deep aquifers. 2) Improvement and Expansion of Urban Water Supply Facilities in 3 Pourashavas: Provision of arsenic-free water through improvement and expansion of urban water supply facilities for Chuadanga, Jhenaidah, and Moheshpur 3) Provision of Arsenic Free Water to Socially Vulnerable Sectors by Rainwater Harvesting and Solar Distillation System 4) Establishment of Thana Arsenic Mitigation Promotion Center 5) Regional Rural Water Works Plan: Distribution of arsenic safe drinking water to rural areas through pipes, where deep aquifers are not suitable for development, where deep aquifers are not suitable for development through a pipeline. Project Cost: Foreign Cost 1)624 million BDT, 2)388 million BDT, 3)358 million BDT, 4)208 million BDT | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| (FY 2003 Domestic Survey) The supplementary survey on deep groundwater use in the Keshabpur area, conducted as a pilot project, revealed that deep ground water not contaminated with arsenic is continually produced. However, regarding the arsenic contamination mechanism, a single source cannot be determined and the fact that the contamination will spread by groundwater flow cannot be denied. It is characterized by constantly changing contamination conditions. Therefore, the use of deep groundwater cannot be considered an absolute measure and the provision of a safe water supply investigated through the development study under the grant aid program has not been achieved. Although the use of deep ground water is thought to be a major alternative plan based on the present situation of groundwater use, it is just one scheme. | | |
| (FY 2003 Overseas Survey) The Department of Public Health Engineering approved implementation of sewerage development and the water supply improvement project in Keshobpur Thana County, Jessore Province, which is a priority project in the projects proposed in these studies. This project will introduce 30 manual pumps and 3 electric pumps to construct supply water systems in 16 places of Keshobpur Thana County. | | |
| (FY 2004 Domestic Survey) Subsequent studies: Rehabilitation of the laboratory is in progress. Implementing period: February - August 2004 Submission of final report: July 2005 Funding party: Grant Aid (waiting for an approval) Other progress: B/D on "Strengthening Water Examination System in Bangladesh" conducted in 2004. | | |
| (FY 2005 Domestic Survey) Subsequent study: Laboratory improvement Implementing period: February - August 2004 Submission of final report: July 2005 Funding party: Yen Grant Aid (Currently waiting for an approval) Other progress: B/D for water quality examination system strengthening plan was conducted. | | |
| (FY 2005 Overseas Survey) Department of Public Health Engineering (DPHE) has submitted a proposal on waste water development and water supply project implementation for Keshobpur Thana district in Jessore prefecture. The project has not been implemented though DPHE is expecting for an immediate realisation. Subsequent study: Database improvement for deep ground water development Implementing period: 6 months Implementing body: Department of Public Health Engineering Relation with the project: To identify potential and vulnerability of deep groundwater to arsenics. Funding: Funding party: DFID and JICA Amount: 3,105 million BDT Content: software development Objective: 1) To manage data and develop map of aquifer throughout Bangladesh to identify vulnerability and potential 2) to recognise the actions and data gaps based on the aquifer map 3) to prepare an output to utilise in comprehensive aquifer survey. | | |
| (FY 2006 Domestic and Overseas Survey) No information to be specifically mentioned. | | |
| (FY 2007 Domestic Survey) Preliminary survey of the technical cooperation project was implemented. | | |
| Implementing project: Project for strengthening the capacity for water quality analysis and monitoring system (Dispatch of short-term experts) Implementing period: November, 2007 - February, 2008 Implementing body: Department of Public Health Engineering (DPHE), JICA Objectives: 1) Establishing water quality analysis and monitoring system, and 2) Introduction of quality assurance/quality control and formulation of training plan. | | |

Description :

(FY 2003 Domestic Survey)

LGED set up Project Implementation Unit (PIU) which was recommended during the Study on March, 2003. And 50m of mound protection works and two numbers of hand tubewell were constructed as an examination at Gurai union in Haor Area with an amount of 1.9 million JPY which raised from fund of Japanese expert assisted by JICA Bangladesh office. As for second stage, LGED is now preparing to start training on vocational skill education (September, 2003).

(FY 2003 Overseas Survey)

These studies proposed implementation of two pilot projects in two villages - Char Area and Haor Area. A project will be formulated with the whole area as a target based on the analysis of the result obtained from implementation of these pilot projects.

Some of the projects have been completed in the aforementioned areas under the financing of JICA, Bangladesh government and interested parties. Another project is expected to be completed in Char Area in near future.

LGED submitted a request for a grant aid to the Japanese government in July 2002 in order to pursue all the projects in the aforementioned two areas (210,000 USD, 117.75 BDT).

Assistance from Japan (Grant Aid) is indispensable to complete the model project.

(FY 2004 Domestic Survey)

1. The LGED requested the grant aid with following components to the Government of Japan

1) Char area (budget: 1,010 million JPY): Homestead raising of flood shelter; Homestead raising of evacuation route; Rehabilitation and improvement farm road connecting villages; Public market establishment

2) Haor area (budget 1,210 million JPY): Construction of encroachment protection wall in residential area; Early flood prevention banks for harvest seasons; Construction of underwater farm road connecting villages; Construction of post-harvest facilities (paddy rice drier); Low lift pump (LLP) procurement; Rehabilitation of farm roads in villages; Establishment of public market

2. Other funding request

By using the debt relief, in addition to the above Grant Aid project, request for soft components using a counter-fund was made (August 2004).

1) Vocational education program, 2) Literacy and sanitation education to the illiterate, 3) Microcredit, 4) Free offer of medicine.

3. Other progress

LGED has, based on the D/S output, established PMO within LGED and has established Project Implementation Unit (PIU) in Grai village in Kishoreganj district, Hanor area. With the help of a NGO, developing an understanding for community share, although small, construction of encroachment protection wall and vocational training program was implemented with a participation of the community. In addition, construction is experimentally conducted in Algar char gram in Faibandha district, Char area. (May 2004) LGED has developed its confidence on the outcome of developing community consent, which intends to continue other project proposed for the model project and commence construction of flood-adoptive structure building, and are willing to implement in other areas by combining soft components.

(FY 2005 Domestic and Overseas Survey)

Two model projects were prepared in the Master Plan. The progress of the pilot project implemented by LEAD financed by JICA and the Bangladesh government is as follows;

Implementing period: January 2003-30 June 2006

Implementing body: LGED

Progress: 85%

1)Char region (Algar char gram):

(1)School road (total length 445m) construction: 2004/Jul completed

(2)Preparation of grass planted school ground: 2005/Apr completed

(3)Rehabilitation of school road: 2005/Jun completed

(4)Ditch along school road (total length 548m): 30%

(5)Ditch along school road (total length 979m): 30%

2)Haor region (Grai village)

(1)Purbabara breakwater (total length 38.42m): June 2003 completed

(2)Construction of deep well with hand pump (7): June 2003 completed

(3)Implementation of vocational training program (25 residents from low-income households): completed

(4)Microcredit (24 residents from low-income households, 500BD each): in progress

After receiving the grant aid request, JICA has sent a study team to Bangladesh from 25 August 2005 to 23 September 2005 to conduct research on necessity, validity and promptness. The Minutes of Discussion was signed between JICA and ERD, which JICA confirmed for a grant aid to construct erosion protection walls in Haor excluding Char from the target area. JICA has not yet given a final decision on the amount of grant aid to the Char-Haor project, which LGED will prepare Development Project Plan to submit the Bangladesh government in order to secure matching fund after decided.

(FY 2006 Domestic and Overseas Survey)(FY 2007 Domestic Survey)

Subsequent project: Project for improving living standard of vulnerable people of the Haor areas in the People's Republic of Bangladesh

Implementing period:

Preliminary study: August 2006 - September 2006

B/D: Feb/2007 - June 2007

Construction: September 2007 - March 2009 (planned)

Implementing institution: LGED, JICA

Objective: Constructing embankment for preventing wave encroachment of residential areas (model sites) in each of four districts in Haor area; Technical transfer to LGED for constructing and maintaining embankment. As a overall objective, LGED is expected to maintain effective embankment other than the model site in Haor area.

Progress:

(FY 2006 Domestic and Overseas Survey) In the process of analyzing the basic design study. Since JICA's constructing cost is higher than other donors', JICA has been considering proceeding the project.

(FY 2007 Domestic Survey) The implementation was shelved on the ground that the constructing cost by the Grant Aid had been estimated higher than other donors, and the project would not be the model project.

| 10. MAJOR PROPOSED PROJECT(S) | <p>Parallel use of local government system and manual observation telemeter:</p> <p>1.Meteorological and hydrological measurement system: 1) Building telemeter observatories (23); 2)Choosing tipping bucket method for rain gauges, and water level sensing pole and ultrasonic sensors for water level gauge</p> <p>2. Data transmission system: Employing VHF and HF communication for telemeter communication system.</p> <p>3.Analysis system: 1)Implementing hydrological and hydraulic calculation (super model) for focusing on Dhaka, by using MIKE 11; 2)Introducing a local flood analysis model at five of each local government office; 3) Using a hydrological and telemeter data for super model; 4) Updating flood information by a regional model using super model as the time of sectional flood forecasting using telemeter data; 5)directly transmitting telemeter measurement area to flash flood occurring areas</p> <p>4.Forecasting and warning system:1)Reflecting forecasting and warning issues to the Comprehensive Disaster Management Program (CDMP); 2)Suggesting people in charge of flash flood occurring areas providing actual water level and actual rainfall data gathered by special methods; 3)Meeting various needs towards local residents about flood forecasting and warning system; 4) Meeting various needs towards river structures during flood forecasting and warning</p> <p>5.Evacuating system :1)Dividing responsibility the project relating to evacuation system for between local government and Bangladesh Water Development Board (BWDB) ; 2)Considering various issues relating to evacuation of local residents; 3) Meeting various needs towards river structures during flood forecasting and warning</p> <p>Conclusion, Recommendation</p> <p>1. Improving annual operation and maintenance activities for implementing alarm control and operation and maintenance.</p> <p>2. 1)Securing sufficient budget for operation and maintenance; 2) Constructing organization framework for the system management; 3)Establishing water law or river law and improving river ledger and river structure ledger for maintenance rivers</p> <p>3. Implementing the project promptly</p> <p>4. 1)Implementing pilot projects; 2)Choosing Sylhet for the target of the first pilot project; 3)Introducing local government system;4)Introducing maintenance system and nation-wide flood warning system to to Sylhet as the first pilot project</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2004 Overseas Surveys) In order to implement the proposed project "The Pilot Project for Improvement of Flood Forecasting and Warning Services", the formal request for Japanese Grant Aid has been sent to the Embassy of Japan in Bangladesh, through the Ministry of Water Resources (MoWR) and ERD aiming to implement from May 2005.</p> <p>(FY 2005 Domestic Survey) Request for a pilot project on flood forecasting and warning service improvement has not been selected, which existing atmospheric radar system facilities improvement has been selected. The pilot project has been requested again in July 2005, which is currently under discussion in MOFA (as of 4th November, 2005).</p> <p>(FY 2005 Overseas Survey) Final discussion has been held with ERD for the implementation in September, 2005. MOWR and ERD is continuously working to promote implementation.</p> <p>(FY 2006 Domestic Survey) Planning project finding of Infrastructure Development Institute-Japan for evaluating feasibility for improving flood forecasting and warning system.</p> <p>(FY 2006 Overseas Survey) No information to be specifically mentioned.</p> <p>(FY 2007 Domestic Survey) Promotion of the project is continued by the Infrastructure Development Institute-Japan. There is an unconfirmed report that formal request have been made to implant "The Pilot Project for Flood Forecasting and Warning service" conducted by the Infrastructure Development Institute-Japan.</p> <p>Subsequent Study: The Study of Flood Forecasting System, Bangladesh Implementing Body: Nippon Koei Co., Ltd. Implementing Period: October, 2006 - March, 2007 Objectives: Recently, rainfall data all over the world is available using satellite remote sensing data. Satellite Observation Rainfall Data (available online) is created through data obtained by tropical rainfall measuring mission (TRMM), military satellite observation data of the US and data obtained by Visible and Infrared Scanner (VIRS) of geostationary satellite. The rainfall data is widely available as the data covering all basin of international river in Bangladesh, which is updated every three hours. The project for improving existing flood forecasting and warning system recommended in the mentioned development study aims to mitigate the flood damage by improving the accuracy of flood forecasting and warning information by following methods: automating observation and gathering moisture and meteorological information by utilizing telemeter and meteorological Doppler data; expanding the lead time of flood forecasting and warning information by used of Satellite Observation Rainfall Data.</p> <p>Content: The following contents have been formulated as basic principles of the improvement project:</p> <ol style="list-style-type: none"> 1) Improving and enhancing a flood forecasting and warning system targeting monsoon flood which is expected to be highly effective. 2) Introducing an upgrading plan of the local management system (development study results) in phases with the view to promote local disaster-prevention activity and river management, as a second step. 3) Utilizing Integrated Flood Analysis System (IFAS) promoted by The International Centre for Water Hazard and Risk Management (ICHARM), and introducing a inflow forecasting system from India or other countries in order to extend flood forecast lead-time. 4) Effectively utilise the Flood Forecasting and Warning Centre(FFWC) by expanding the system. 5) Prioritizing establishment of operational system of "Flood Forecasting and Warning system + IFAS" under centralised management of FFWC. 6) Reconsidering the scale and capability of the telemeter system and related functions recommended in the development study, based on the importance of maintenance and management of flood forecasting and warning system. 7) Considering operational structure of comprehensive observation data such as meteorological Doppler data, and telemeter data. <p>The followings were recommended as the improvement of the existing flood forecasting and warning system under the FFWC.</p> <ol style="list-style-type: none"> a) Formulating the system collecting satellite observation rainfall data automatically. b) Formulating the runoff model from implementing runoff analysis for conversing runoff from satellite observation rainfall data. c) Formulating the information processing system relating to flood forecasting and warning information incorporating the b) model d) Formulating the actual flood forecasting and warning information by inputting the satellite observation rainfall data collected through the a) system to the c) system <p>(FY 2008 Domestic Survey) The application form for Grant Aid was submitted by Bangladeshi government; however it was not adopted due to the following reasons: * A higher priority is given to another project (a radar maintenance project); and * It is necessary to carefully examine the government's operation and maintenance system about which Japan is concerned.</p> | | |

|----------------|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :
(FY 2005 Domestic Survey)
The project has been given the priority in Bangladesh. Subsequently, JICA's coordinated detailed design (D/D) is prospected to be implemented, though some financial problems has existed due to the huge cost of implementing of the D/D.
The ADB is also in the process of appointing a consultant as technical assistant (TA) focusing on the feasibility of Public Private Partnership (PPP).

(FY 2005 Overseas Survey)
Request has been made for Padma multipurpose bridge construction to the Asian Development Bank (ADB), the World Bank, and the Government of Bangladesh. The request for yen loans has been made to the Government of Japan in May 2005. Within all cost, 880.92 million USD has been requested to the Government of Japan and 474.00 million USD were requested to the Government of Bangladesh.
Construction is planned to commence on October 2008, after procurement of fund and preparation. Duration of the construction is planned for 54 months.

(FY 2006 Domestic Survey)
- Funding request of 25 million USD has been made to the ADB for the D/D on Padma bridge construction project.
- Revision of the F/S study has completed in November, 2006.
- Implementation of the D/D by the ADB is meant to start in October, 2007.

(FY 2007 Domestic and Overseas Study)
The Department of Environment of Bangladesh (DOE) has given the clearance to implement the project. In addition "Construction of the Padma Multipurpose Bridge Project" was approved on 20 August, 2007 by the Executive Committee of National Economic Council (ECNEC), the highest approving authority. Furthermore, in order to prevent illegal construction in the project site, "Special Land Acquisition Ordinance for the Padma Multipurpose Bridge Project" has been formed and circulated through the Bangladesh Gazette on 7 July, 2007. Land acquisitions are implemented under the concerned Deputy Commissioners with the assistance of Executive Agency Bangladesh Bridge Authority (BBA, formerly Jamuna Multipurpose Bridge Authority, JMBA).
TA loan agreement for D/D has been signed on 12 December, 2007. 5 consulting, which submitted EoI have been short-listed. ToR/RFP with comments from BBA have been sent to the ADB to incorporate in the final RFP. Selection of consultants will be finalized before May, 2008.

Subsequent Study: Preparation of the Land Acquisition Plan (LAP), the Resettlement Action Plan (RAP) and the Environment Management Plan (EMP) of Padma Bridge at Mawa-Janjira corridor
Implementing Period: December 2005 - May 2006
Implementing Body: Bangladesh Bridge Authority (BBA), Bangladesh Consultant Ltd
Objective: To review environment protection measures, resettlement framework and land acquisition, and carrying out the study to prepare LAP, RAP and EMP referring the mentioned F/S. Land will be acquired for each LAP, the affected people living in the area will be resettled according to the RAP, and the environment mitigation measures will be taken according to the EMP. Financial security will also be considered.
Content: Measures from the view of land acquisition, resettlement of residents and environmental and social standpoints.

(FY 2009 Domestic Survey)
In order to implement 'The Construction of Multipurpose Padma Bridge Project', yen credit, ADB, WB, and a funding request has been made to the Islam Development Bank. In addition, the following study, 'The Construction of Multipurpose Padma Bridge Project Minute Plan' is in progress. The details are as follows:
1. The prospect study was conducted by DB for JICAF/S, and currently D/D is being carried out by a consultant agency from New Zealand with the funding of DB.
2. Review the minute plan while in progress and inspect the necessity, validity and the urgency of this project. In addition, through this process, the validity of this operation will be inspected on the basis of a total unifying viewpoint which includes the most updated economical and financial information.

(FY 2009 Overseas Survey) No information.

Description :

(FY 2005 Domestic Survey)

The Japanese government has supported the Survey of Bangladesh (SOB) in the national standard point network maintenance plan, procurement of printing equipment, and Dhaka metropolitan geographical information development plan.

With the output of the above activities and self effort, the SOB has completed the maintenance of GPS network and first level standard point network throughout Bangladesh, which are preconditions to renew time varying aged (approximately 50 to 70 years ago) 1:50,000 scale map. In addition, request has been made to the Bangladesh government in utilizing matching fund for Yen Grant Aid to prepare 1:50,000 scale maps of Dhaka and the surrounding areas, planned by introducing digital mapping techniques.

(FY 2005 Overseas Survey)

No information to be specifically mentioned.

(FY2006 Domestic and Overseas Survey)(FY2007 Domestic and Overseas Survey)

Mapping information collected by the mentioned development survey attracted various organizations interest highly. Four-sets of soft copy and 2,316-sets of hard copy of digital data have been distributed to the users. RAJUK used the mapping data as basic information of for the preparation of Greater Dhaka master plan.

Implemented project: Improvement of Digital Mapping System of Survey of Bangladesh

Implementing: period: July, 2007 to July, 2013

Implementing body: Survey of Bangladesh (SOB)

Funding:

Funding body: Japanese Debt Relief Grant Aid (DRGA) Counterpart Fund (Japanese government approval date: 21 July, 2006, Bangladesh government approval date: August, 2007)

Amount: 1207.68 million BGT (1 JPY = 0.68 BGT)

Target:

- 1) Create 1/5,000 geographic map of five major cities of Bangladesh (Chittagong, Khulna, Sylhet, Rajshahi, Barisal) with digital mapping system.
- 2) Create 1/25,000 geographic map of whole Bangladesh with digital mapping system.
- 3) Improvement of geographic map creation ability of SOB.
- 4) Consultation work of mid and long-term project plan of SOB.
- 5) Installation of needed materials and equipment.

Progress: (FY2007 Domestic Survey) Japanese government are considering dispatching experts for short-term to support this project.

Implemented project: Reinforcement of digital mapping system project

Implementing body: Geographical Survey Institute in Ministry of Land, Infrastructure, Transport and Tourism

Long-term dispatching expert: One expert, August, 2005 - August, 2006

The following surveys are suggested in the document, No. P-2052/11-G DRGA, dated on 17 July, 2007, which was submitted to JICA from the Bangladesh government:

- 1) Geographic survey of electromagnetic and gravity needed for the creation of declination magnetism chart and gravitational correction, 2) Preparation of concept paper for establishing National Spatial Data Infrastructure (NSDI).

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY2006 Domestic Survey) (FY2007 Domestic and Overseas Survey)

Implemented project: Improvement and expansion project of Matuail landfill site.

Implementing body: Dhaka city

Implementing period: July, 2005 - July, 2007

Funding:

Funding body: Dhaka city (Utilisation of the debt cancellation fund)

Amount: 790 million JPY (1 JPY=0.57 BDT), (237,500 USD for consultation fee, 6,684,000 USD for construction fee)

Management body after completion: Dhaka city

Relation with the study: Improvement of the existing method of waste disposal to a hygienic landfill system is the most prioritized project in proposed projects.

Objectives: Improvement and expansion of existing Matuail landfill (open dumping method) to hygienic landfill system.

Content:

Improvement of Matuail final disposal site: Soil cover work, rainwater drainage system work, leachate collection system work, management facility work, gas-vent line system work, road work, street lamp work.

Expansion of Matuail disposal site: Dam work, leachate collection system work, leachate reservoir work, leachate treatment system work, road work, street lamp work.

Progress:

(FY2006 Domestic Survey) Half of the construction has been done although it appears that its process has been delayed as compared to the construction manual. BUET has implemented environmental impact analysis and detail design in order to improve the Matuail final disposal site and its construction has been in process. Currently, BUET is implementing construction supervision.

(FY2007 Domestic and Overseas Survey)

85% of construction is completed. Operation have started from 3 October, 2007. Construction schedule was extended from July 2007 to June 2008, due to funding issues.

Condition of the disposal site have improved dramatically. Installed trucks is expected to be utilized in improving efficiency of solid waste collection and transportation.

Transformation to landfill system was completed. Future issues are to conduct efficient management and operation.

Technical cooperation:

Dispatch of expert: Technical cooperation for improvement of construction of the disposal site and cover soil work were conducted by four experts for a short period.

Other:

Dispatch of JOCV: Environmental education: 2 personnels, From July 2006 to July 2008: To improve awareness of waste management by implementing environmental education program at school.

JICA TCP: TCP is expected to be launched in 2007.

(FY2006 Overseas Survey)

Request for funding (9.3 million JPY) for Aminbazar disposal plant improvement has been made to own government.

(FY2007 Domestic and Overseas Survey)

Implemented project: Strengthen waste management ability project in Dhaka

Implementing period: February 2007 - March 2011

Implementing body: Dhaka city, JICA

Funding:

Funding body: Own fund, JICA (Technical cooperation project)

Objectives: Improving waste management system project in Dhaka city

Outcome:

- 1) Conduct appropriate coordination between operational management of the project and the stakeholders involved.
- 2) Encouragement of community-based waste management program.
- 3) Improving ability of waste collection and transportation.
- 4) Efficient operation and maintenance of the final disposal site.
- 5) Improving accounting system for waste management.

Relation with the mentioned study: 4 proposed prioritized programs in the mentioned study are the main component of the technical cooperation project.

Technical cooperation:

Training: Training on community-based waste management (Japan), On-site training (Third country)

Progress:

(FY2007 Overseas Survey)

1) Operation management: Collection and transportation system are improving at the pilot waste management area.

2) Encouragement of community-based waste management program: Education on environment is continuing. Dhaka city earmarked 500 million BDT for the purpose of community-based waste management and improving awareness of the people.

3) Improving ability of waste collection and transportation: NGO and other organizations are working in the management area or at a local level, for the first stage of the collection improvement. There are 10 sites to be exploited for the secondary collection system improvement, where procurement of two sites have already being completed and procurement of two sites are in progress.

4) Efficient operation and maintenance of the landfill: Independent management area will be designated in Aminbazar landfill.

5) Improving accounting system for waste management: Good progress has been made on collection of financial data for waste management and overall improvement of finance affairs.

(FY 2008 Domestic Survey)

No information to be specifically mentioned.

(FY2012 Domestic Survey)

1. Implemented project: JOCV dispatch

(Objective) When dispatches first started, environmental education programs run at schools in Dhaka helped to raise awareness of waste management. In addition to environmental education programs, the Ward Based Approach is also currently increasing in number.

| <p>Description :</p> <p>(FY2006 Domestic Survey) Asian Development Bank (ADB) is committed to phase 3 after completing phase 2 SSWRDSP-2 for small scale water supply development. This was carried out in 61 provinces excluding Chittagon highland, where there is a poor public safety, during implementation period between 2002 and 2009.</p> <p>After completing the survey of the master plan in March 2006, SAPROF is being implemented by JBIC with the cooperation of SSWRDSP of ADB. Now, the proposed project in the aforementioned research, FY2007 yen loan project, is expected to be implemented. The target area is not only within the Mymensingh district, but widened to Sylhet and Faridpur.</p> <p>(FY2006 Overseas Survey) After implementing SAPROF, a small scale water supply development was created to make a contribution for the efficient usage of water resource for agriculture and fisheries by providing a small scale water supply management plant in the north of Bangladesh. This project is implemented by LGED and O&M under the supervision of WMCA and LGED. JIBIC was requested to raise a fund for the project for small scale water supply development in Mymensingh, Sylhet and Faridpur.</p> <p>(FY2007 Domestic Survey)(FY2012 Overseas Survey) Implementing project: Small scale water supply development project (Implementing body)Bangladesh Local Government Engineering Development (LGED) (Funding) Funding body: Yen Loan (L/A concluded 11 December, 2007)(E/N conclusion 31 January 2008 - 31 January 2016) Amount: 5.313million JPY (Objective) Water resource management is an urgent task for a country, which is frequently damaged by floods. The purpose of the project is to reduce poverty by improving efficiency of agriculture and fisheries, and increase production by improving infrastructure such as sewage, reservoir, and irrigation in north east and central area of Bangladesh. Relation with the mentioned study: In M/P, only Mymensingh was the only target area. However, Sylhet and Faridpur were included in the target area of the project when SAPROF was implemented. (Situation) (FY2008 Domestic Survey)No information to be specifically mentioned. (FY2012 Overseas Survey) Construction of infrastructure to improve water management with establishment of Water Management Cooperative Association for O&M of the infrastructure. The on-going project area covers Greater Mymensingh, Sylhet and Faridpur District.</p> | | |

Description :

(FY1994 Domestic Survey)

The Bhutan government puts high priority on the implementation of another project and has not made any official request to finance this project.

(FY1995 Overseas Survey)

There is no possibility to implement this project because of the change of development policy and the convert of the donating country.

(FY 1997 Domestic Survey)

Request for a grant aid assistance has been submitted to Japanese Government in 1997.

(FY 1998 Domestic Survey)

It seems difficult that this project will be provided a grant aid assistance since higher priority is put on other projects.

Description :

(FY 1997 Domestic Survey)

Village Water Supply and Irrigation Water Resources Exploitation Project will be materialized by government's own fund and not by Japanese aid because of the contents and scale.

Wanduephodrang Water Supply Project will be requested as Grant Aid Project. However, coordination among the related ministries is necessary because there is another project that needs larger amount of grant aid.

(FY 1997 Overseas Survey)

No action has been taken to materialize the project after the completion of the study, because project scale is not appropriate and the irrigation project is less feasible. The quantity of ground water available is not suitable for an irrigation project.

Moreover Domestic water supply is under the purview of another ministry.

(FY 1998 Domestic Survey)

Irrigation water resources development project and village water supply project have not been implemented since the government budget was not allocated for those projects. The request for a grant aid assistance regarding Wangdu Phodrang City water supply project has not been submitted since there was a large-scale grant aid assistance project (road, power generation, etc.).

(FY2005 Domestic survey) (FY2005 Overseas Survey)

There are difficulties considering an implementation of the project, due to political issues such as lowered priority within the development plan.

In addition, according to the FS conducted, ground water for the irrigation has been revealed to be insufficient, which is only enough for a local use. Therefore, implementation of the project is difficult.

The result of the study has been reported to the Ministry of Health, which controls drinking water in rural areas.

Description :

Finance:

(FY 2001 Domestic Survey)

On 8 May, 2001, E/N for 171.3 million JPY, "Project for Reconstruction of Bridges"

* Contents of the Project: Reconstruction of five decrepitude bridges which are impeditive on the major roads.

Construction:

(FY 2003 Domestic Survey)

8 October, 2001 - 15 October, 2003

Benefits:

(FY 2001 Domestic Survey)

By reconstructing five decrepit bridges, living conditions are improved: they include improvement of public transport and postal services, safe and assured access to the public facilities (especially schools and medical institution), which will benefit 100 thousand local citizens and eventually affect the economic and social development of Bhutan.

Process:

(FY 1999 Domestic Survey)

It will be requested as a Grant Aid project.

(FY 2004 Overseas Survey)

1. Project for Reconstruction of Bridges (phase 2)

Wakeytar Bridge (on National Route No.5) and Sunkosh Bridge between Tsirang and Dagana, Wangduephodrang, Tsirang, Sarpang and Dagana Dzongkhag could enjoy direct benefits from the reconstruction of the bridges.

Reconstruction of Tangmachu Bridge bring positive benefits to Mongar and Lhuntse Dzongkhag and indirectly to the nation as a whole.

Department of Roads was in M₀C, but now under MoWHS.

(FY 2008 Domestic Survey)

"Project for Reconstruction of Bridges (five bridges)", "Project for Reconstruction of Bridges Phase 2 (three bridges)" and "Project for Reconstruction of Bridges Phase 3 (six bridges)" were implemented in accordance with their urgency and priority.

Description :

(FY 2003 Domestic Survey)

Implemented project: Koma Bridge Construction Plan

Funding amount: 9.5 million JPY

Funding party: JICA (Japan's Grant Assistance for Grassroots Project, G/C concluded: 28 February, 2003)

Content: Construction of a bridge for motorless vehicles

Implemented project: Gortrang Bridge Construction Plan

Funding amount: 9.98 million JPY

Funding party: JICA (Japan's Grant Assistance for Grassroots Project, G/C concluded: 28 February, 2003)

Content: Construction of a bridge for motorless vehicles

The Subsequent Study: The Preliminary Study for the Technical Capacity Development Project for Sustainable Agriculture

Implementing body: JICA (Japan's Grant Assistance for Grassroots Project, G/C concluded: 28 February, 2003)

Implementing period: February 2003 - March 2002

Content: Construction of a bridge for motorless vehicles

Objective: Reviewing appropriate support and scale of the project aiming to improve technical skill of Renewable Natural Resource Research Center-East (RNRRC-east), and enhancing research and diffusing system

(FY 2005 Domestic Survey) (FY 2006 Domestic Survey) (FY 2007 Domestic Survey)

Implemented project: the Project for Improvement of Machinery and Equipment for Construction of Rural Agricultural Road

Funding amount: 521 million JPY

Funding party: JICA (Grant Aid: E/N concluded 15 February 15, 2005)

Content: Procuring equipment for road constructions in six eastern prefectures (bulldozers, oil pressure shovels, wheel loaders etc.)

Status:

(FY 2006 Domestic Survey) Training planned to be conducted in FY 2006.

(FY 2007 Overseas Survey) Country focused training course "Maintenance Construction equipment": Trainees (2), Period (16 November, 2006 - 15 January, 2007)

(FY 2005 Overseas Survey)

District Rural Access Master Plan (DRAP) study was conducted by Stichting Nederlandse Vrijwilligers (SNV) and Second Eastern Zone Agriculture Programme (SEZAP) from FY 2004 in order to identify measures for accessing, rank villages in terms of access, and screen and rank the proposals. However, it is estimated to be difficult to implement the project due to lack of irrigation water.

(FY 2006 Overseas Survey) (FY 2007 Overseas Survey)

Implemented project: Agricultural production technology development and diffusion support plan in 2 East provinces.

Target area: Lhuntse and Mongar Disitric

Implementing body: JICA Renewable Natural Resource Research Center-East (RNRRC-east),

Implementing period: June 2004 - June 2009

Funding party: JICA (technical cooperation project, E/N concluded: 14 June, 2006)

Objectives:

1. Developing appropriate options of agricultural technology aiming diffusion 2. Enhancing diffusion system for better technology at two provinces 3. Through coordination with farming households, implementing pilot activities relating to research and test and diffusion. Improving technological capacity of farming households in four model districts.

Technical cooperation:

Dispatch of experts:

long-term experts: 3 personnel (chief advisor, garden crop technology, rice cropping technology, coordination/diffusion),

short-term experts: approximately 3/year

Training:

Training in Japan: 39 (fruit cultivation and pruning tree technology, tree management technology, harvesting management and shipping technology, diffusion system, PCM, agricultural skill practice, etc.)

Training in each country: 2 (construction equipment maintenance)

Benefits:

Beneficiary: Roads for Power Tiller Track (PTT): Phosorong, Pongchela, Bargongpa, Songthurpa, Jamcholing, Barpang, Yagang, Pirmani, Traling, Redaza and Wangling (approximately 125)

Benefit: Five metric of fresh vegetables are monthly sold at local markets generating income.

Status: Road for PTTs have been constructed in areas mentioned below

1. Kadam-Phosorong: length 5.0km, beneficiaries 65 hhs

2. Pirmanl-Jamcholing: length 3.7km beneficiaries 60 hhs

(FY 2007 Domestic Survey)

Technical cooperation:

Training: Construction equipment maintenance (Country focused training course : 2 personnel, 29 November 2006 - 15 January 2007)

(FY 2007 Overseas Survey)

The following farm roads and power tiller roads construction have been proposed to be conducted through JICA support, other than the project mentioned above Research and Extension Support Project in Lhuntse and Mongar:

Farm roads: 1) Tinkarbi - Silambi, 2) Tsamang - Banjar-Ganglapong, 3) Drametse - Ballam

PTT: 1) Palangphu - Tormashong, 2) Gangola - Chali, 3) Sherzong - Khabra, 4) Tormzhong - Chubar,

Others: 1) Tingkarbi ? Tsenzabi, 2) Zandari - Taumbar, 3) Jabgang - Muhung

Description :

(1) Convention line improvement

The study recommended that the conventional line improvement should be carried out including the section between Kampur and Calcutta.

Subsequent Study:

Based on the recommendations, the Ministry of Railway requested a JICA feasibility study on the improvement around the New Delhi Station* ("Development Plan for the New Delhi Station," completed in 1990). The Indian Railway Board is studying the improvement of Kampur - Calcutta Section, utilizing the method employed by this study.

*Refer to "Development Plan for the New Delhi Railway Station (1989)"

Finance:

Own fund (Ministry of railway)

Construction:

(FY 1994 Overseas Survey)

Improvement of the whole section is being implemented. Since preparation of electric locomotives and arrangement of tracks or singals are almost completed with few exceptions, the new railway service will be started in June 1995. The frequency of service is scheduled as once a day in the beginning.

(2) High-speed railway construction

(FY 1994 Overseas Survey)

Plan will be necessary for the Indian Ministry of Transportation in the future, it is not planned at present.

Description :

Reasons for Stoppage:

(FY 1994 Overseas Survey)

L/A of OECF loan* was concluded in March 1990, but abrogated in June 1994. The reason was that, though consulting concerning detailed design (JARTS), proposals of the Ministry of Railways and negotiation for contracts started in October 1990, no conclusion was made even spending a long time. It have been difficult for the ministry to make a conclusion because they had been seeking for possibility to privatize train production and railway management, keeping accordance with the Indian Government's grand policy of privatization since 1991.

(FY 1994 Domestic Survey)

The Ministry of Finance of Indian Government has sent official letter to New Delhi office of OECF on Aug. 1994 saying that the loan amount for the project has remained unutilized because of non-conclusion of consultancy agreement between the Indian project executing agency and the Japanese consulting firm for various reasons. Indian Government, therefore, decided to terminate the loan agreement, and asked for the agreement of OECF for the termination.

Following the above request, OECF HDQ is taking contact with concerned Ministries of Japanese Government to terminate the loan.

| | Partially Completed | | |
| | Implementing | | Discontinued or Cancelled |
| | Processing | | |
| Description : | | | |
| (1)Calcutta Port | | | |
| Subsequent Studies: | | | |
| D/D undertaken | Modernization of KPD water gate | Apr.~Aug.1991 | |
| | Replacement of Tug Cuameli | Apr.~Jun.1990 | |
| F/S undertaken | Development of 4 lane bridge | Feb.1990~Aug.1991 | |
| | Channel navigation / VTMS project | Jan.1990~Aug.1991 | |
| | Replacement of Floating Crane | Feb.1990~Agu.1991 | |
| Finance: | | | |
| Almost all the fund was domestically financed (by governmental budget, internal reserve, or loans). Foreign fund, that was allocated to the container park at Calcutta, was financed by the ADB loan. | | | |
| Construction: | | | |
| Modernization of KPD water gate | Nov.1991~1993 | scheduled | |
| Replacement of Tug Cuameli | Sep.1990~Jan.1992 | scheduled | |
| Replacement of mobile crane | Jul.1990~1992 | scheduled | |
| Port road, Improvement of port facilities, Loading/discharging machines, Replacement of port service vessels have been partly completed. Container cargo operation is controlled by computers. | | | |
| *Projects completed (FY 1996 Overseas Survey) | | | |
| VTMS, Replacement of railway track and associated, Rehabilitation of yard space(Phase II), Modernization of container freight station, Replacement of pilot vessel, Replace of survey vessel, Replacement of viaduct bridge, Refurbishment of roads. | | | |
| *Projects in progress | | | |
| Replacement of bascule bridge | | | |
| *Projects deferred (FY 1996 Overseas Survey) | | | |
| Replacement of swing bridge, Replacement of C.V.Atlas, Augmentation of equipment / maintenance system | | | |
| (2)Haldia Port | | | |
| Subsequent Studies: | | | |
| Techno-Economic FS by RITES for rail facilities upto 2005 | | | |
| Study by GSI for construction of off-shore facilities at Digha High / Saugor Island.(own fund) | | | |
| Finance: | | | |
| Almost all the fund was domestically financed (by governmental budget, internal reserve, or loans) | | | |
| Construction: | | | |
| (FY 1991 Overseas Survey) | | | |
| Replacement of Dredger | Mar.1990~Aug.1991 | | |
| Procurement of Grab Dredger | Mar.1990~Aug.1991 | | |
| Due to the decrease of the cargo destined for former USSR countries, and the little need to invest in the new port (Haldia) by port users, implementation of the project is not expected a this moment. | | | |
| (FY 1996 Overseas Survey) | | | |
| *Projects completed | | | |
| Replacement of Tug Kunti, Procurement of high-powered locomotive in replacement, Construction of roads inside and outside Docks, Construction of Quarter, Augmentation of railway and yard facilities, Construction of 3rd oil jetty, Night vavigation, Procurement of bull dozers. | | | |
| *Projects in progress | | | |
| Infrastructure improvement and rehabilitation work, Replacement of Tug, Development of Dock Basin, Construction of Barge Terminal, Replacement of stacker-cum-reclaimer, Procurement of Grab Dredger, Reconstruction of Tippler, Construction of ship loaders, Improvement of signaling and telecommunication system. | | | |
| *Projects deferred | | | |
| Replacement of dredger Churni, Augumentation of existing container handling facilities/Terminal, Extension of second arm of Dock and development of additional berth, Development of Quay face before berth no.3, Development of shore facilities at Saugor Island/Digha High. | | | |
| Situation: | | | |
| (FY 1996 Overseas Survey) | | | |
| JICA F/S re-categorized the improvement of pilot systems into short-term action items (previously long-term objectives). It is for the purpose of cost reduction and improving CPT's financial status by raising working ratio of pilots and maintaining working circumstances. | | | |
| Effect according to implementation of the project is satisfactory.Assessment of effects is now being undertaken. | | | |
| (FY 1997 Overseas Survey) | | | |
| F/S on shore based station for Pilotage was conducted from Sep.1997 to Jan.1998. Proposals of this study have been modified according to the changing needs. | | | |

Description :

Detail:

(FY 1994 Domestic Survey)

To implement the Project, the request from the government of Uttar Pradesh State, where the project will be implemented, to the Central Government must be required in the first place. Up to date, the State government has taken no action. The government of India requires a large proportion of grant aid in the financial assistance. She considers that unit cost per ha is rather high for extension of the proposed development concept to surrounding areas.

(FY 1996 Domestic Survey)

The state government has not approved the implementation of the project.

(FY 1997 Overseas Survey)

There is no perspective for realization of the proposed project.

(FY 1998 Domestic Survey)

State government has not submitted the request for fund. There is little possibility to submit the request in the near future.

Description :

(FY 1998 Domestic Survey)

In India, Jawaharlal Nehru Port (JNP), which was newly established at the location of the other side of Mumbai Harbor, started its operation in 1989. JNP is a port which specialized in handling transport of containers and bulk cargos. Mumbai Port (MBP), which shares the hinterland of containers with JNP, has stopped its extensive development for more than 10 years. However, about 10 years have passed, and JNP has increased the amount of containers handled, and has developed steadily.

In India, the amount of cargos transported on the sea is expected to increase rapidly in the future due to the population of a little over 900 million. The rate of containers is still not high enough, and it is expected that the amount of containers will increase synergistically in the future.

Thus, a new container terminal construction project was proposed and F/S was conducted at MBP since the present MBP can not smoothly handle the amount of containers which should be handled in the both ports in the future, given the future development plan of JNP.

It seemed that the Indian side, including the Ministry of Surface Transport (MOST) and Mumbai Port Trust (MBPT), expected to receive yen loan for the project. But, since India conducted nuclear tests twice in May 1998, it became difficult to think for a while that there will be a progress in the project.

(FY 1999 Overseas Study)

Consultants are under bidding for the study. Also, a proposal to increase the depth of the main channels is under examination.

(FY 2003 Overseas Study)

2 container berths (3 container berths in the future) are constructed and a container terminal is developed by BOT. Bidders are invited by January 15, 2004 in addition to 5 candidate firms for selection.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

| <p>Description : (FY 1998 Domestic Study) 1. The government of India proposed as an OECF project for FY 1997/1998, and the OECF Fact Finding mission was dispatched to Tamil Nadu in December 1997. 2. The project was postponed to fiscal years after the next fiscal year by the governmental mission of March 1998.</p> <p>(FY 1999 Domestic Study) (FY 1999 Overseas Study) There is no concrete movement for the implementation of this fiscal year.</p> <p>(FY 2001 Domestic Study) The project was postponed to years after the next fiscal year by the governmental mission for yen loan of March 1993. Since India conducted an underground nuclear test in May 1993, Japan has taken measures to stop new yen loan as well as demanding India to stop nuclear tests and the development of nuclear weapons promptly and to join NPT and CTBT early. We can expect progress in the future because the measures were lifted recently.</p> <p>(FY 2007 Domestic Study) Implementation Project: Tamil Nadu Irrigated Agriculture Modernization and Water-bodies Restoration and Management Project Implementation Term: From Dec. 2006 Study of Environmental Influence: Terminated in Mar. 2007 Financing Settlement: Jan. 2007 Procurement Plan: Dec. 2007 Funding: Funding by: World Bank, The government funds Funding Amount: USD 566 million Implementing Body: MDPU/Water Resources Organization Objective: To improve productivity in irrigation-based agriculture by selecting basins of the higher priority and keeping continuance of water sources control system. The following matters are required. 1) To plan modernization of the irrigation system by keeping surface water as well as 64 reservoirs in the selected basin(Cost of Project: USD 282.8 million) 2) To plan intensive and diverse agriculture(Cost of Project: USD 166.2 million) 3) To establish irrigation-based agriculture system(Cost of Project: USD 52.7 million) 4) To plan improvement of water management(Cost of Project: USD 5.9 million) 5) To manage and coordinate the whole project(Cost of Project: USD 8.3 million)</p> <p>Relation with the heading Study: It was an important item to improve (modernize) reservoirs in F/S of the heading Study, however, it was decided to improve agricultural productivity as arranging the System Tank (Connected Reservoirs) , etc. in each basin. Tamil Nadu Government decided to implement the Reservoirs Improvement Project from their general point of view through the consultation with the World Bank.</p> | | |

Description :

(FY 1999 Domestic Survey)

Ministry of Surface Transport is planning to implement the project under BOT scheme. However, no progress has been made. Due to the Indonesia's nuclear bomb tests, Japan's financial assistance toward Bareilly Bypass and Gwalior Bypass was frozen at the termination phase of this Study. Therefore, implementation under BOT scheme was recommended as a conclusion.

(FY 2001 Domestic Survey)

The enforcement body in the case of the materialization of the proposed projects is NHAI (National Highway Authority of India). Although NHAI appealed to the government to carry out all the bypasses of the proposed projects by Grant Aid of Japan after this Study, but the government did not correspond at all. There is no project which was materialized until Nov. 2001 substantially, although NHAI has been preparing the bypass construction to be carried out by BOT or BOOT method.

Although national highway maintenance is already performed by the BOT method and it is thought in India that the government side subject of the enforcement by the BOT method is NHAI, there are some from which MoST becomes an enforcement body, and there seems to fight for the leadership by NHAI and MoST about the enforcement. It is judged that the project does not progress due to various factors, such as discord with MoST, lack of capability of the NHAI itself, and immaturity of the financial market in India.

(FY 2003 Domestic Survey)

Personnel who know the details of this study have decreased as a result of retirement and transfer in the New Delhi Ministry of Surface Transport, which is the organization in charge of this study. On the other hand, JBIC is not positive in adoption of road construction/ improvement projects requested by India. Because India is so keen on introduction of the ITS technology with the objective of improving the traffic condition that a significant review is required even in the case where introduction of ITS facilities is incorporated into the contents of project in order to implement the studies in future.

| <p>Description :</p> <p>(FY 2000 Domestic Survey) No progress has been seen because request can not be submitted owing to sanctions posed over atomic bomb experiment.</p> <p>(FY 2001 Domestic Survey) Although maintenance of the road, targeted in the project, was decided to be implemented using the BOT scheme, there is no progress where none of private entity has responded to the term.</p> <p>(FY 2003 Overseas Survey) As for activities toward implementation of the project, a coordination committee was established with the objective of implementing EPE under the Indian Government and the Minister of Urban Development, and is reviewing progress at a regularly held meeting. In addition, a working group was established under the National Capital Region Planning Board (NCRPB). The project is under preparation for implementation. Of the proposed expressways, the project for the expressway between KUNNDORI and KAJIABIRD will be implemented in conjunction with the project for the expressway between FARIDABIRD and NOIDARKAJABIRD for the purpose of improvement of the "Eastern Peripheral Expressway"(EPE). The National Capital Region Planning Board (NCRPB) has adopted financial planning models prepared by two consultants - SBI Caps and IFCI - as final selections out of the 11 consultants it commissioned for consultation. Those plans propose implementation of projects under the SPV method. The project can enter the implementation phase as soon as approvals are obtained from organizations concerned.</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Domestic Survey) This project is part of the toll road highway network plan. Initially, BOT scheme using a private sector fund was considered for realisation, although this has not been implemented. Positive action from central and local authority in adopting PPP scheme, especially government initiatives in finance and risk sharing, was not made.</p> <p>(FY 2009 Overseas Survey) Instead of Kundli-Ghaziabad Expressway (41km), entire Eastern peripheral Expressway(134km) is under implementation.</p> <p>(FY 2009 Domestic Survey) No information.</p> | | |

Description :

(FY2002 Domestic Survey)

There is no information available on the current situations of this project.

(FY2003 Domestic Survey)

Project delayed due to change in structure of the organization in charge or similar cause.

Feasibility of the prospects: the project aims at carried forward operation within 3-5years.

(FY 2004 Overseas Survey)

A major reason of the delay is due to replacement made in Madyha Pradesh of DHFW, the major counterpart. Following the completion of M/P, JICA term had conducted a presentation of the detail and held a meeting with senior officers of Madyha Pradesh government in January 2003. In this meeting, Madha Pradesh government has submitted a request to dispatch 2 JICA experts and to improve maternity healthcare facilities in Damoh and Tikamgarh, among the target area of the study, and had agreed for a technical cooperation.

Formal request for the dispatch of a JICA expert and the facility is applied to Indian government on 21st October 2003. The second form for a dispatch of JICA expert was submitted on 8th March 2004. All of these documents have been received by JICA and at present, the project is to commence from 2005.

(FY 2005 Domestic Survey)

Description :

(FY 2003 Domestic Survey)

Quick Reconstruction Support project was implemented through this study.

It was confirmed that the request made by the Government of Gujarat had been conveyed to the Government of India, however, the Embassy of Japan has not been informed of the request.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

Status of the proposed project:

1. Primary education facilities: No funds from JICA, which was offered from DPEP

2. Rural sanitation medical facilities:

* Bjuj mental care rehabilitation centre: With a funding cooperation from the EC, establishment of the centre was approved with 9.6 million INR. Blind People's Association is the implementation body. Paraplegia hospital, ahmedabad is striving for the same goal. EC has approved 33.2 million INR for paraplegia hospital improvement. Investment in equipment has almost completed. Pension system for a rehabilitation of paraplegia patient is conducted by Gularat government.

* Expansion of Anjar CHC: staff accommodation with the capacity of 25 persons is included in a new construction conducted in Phase 1 of the Grant Aid from EC.

* Bjuj medical equipment supply centre: district level logistics management plan is conducted in the Sector Investment Program of EC funding cooperation. National level research has been completed, which the plan includes securing supply in national and regional level. Preparation for the design of the building is now in progress by technical experts.

* Primary health centre in 6 district of Bhuj: project has been handed over to Indian Red Cross. All of the reconstruction for health facilities has been completed and been transferred.

* Allopathic dispensary which 5 staff accommodation and 3 sub-centre are built in parallel:project has been handed over to Indian Red Cross. All of the reconstruction for health facilities has been completed and been transferred.

3. Technical education:

* Institute of Seismology Bhuj: established by funding (300 million INR) from the World Bank. The Institute has been conceptualised by a cooperation from the Columbian University and is in progress to secure architect. Construction will be started in June 2005, planned with 12 months of project period. If JICA is to seek funding, it will reduce loan from the World Bank to a certain point.

* Engineering College at Bhuj: Currently constructed with a funding assistance from the World Bank (300 million INR). Construction has started in November 2004, planned with 14 months of project period.

4. Training for long-term disaster measures participation capability improvement of the community in collaboration with GSDMA

Capacity building of the community for long-term disaster measures is an indefinite program. GSDMA is prepared to accept any funding assistance from JICA.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Domestic Survey)

By ascertaining from the satellite image, accommodation for class 4 staffs has been constructed, which is included as "3)Regional Health Facility, 4)Expansion of Anjar CHC".

| <p>Description : (FY 2007 Domestic Study) Implemented Project: Goa Water Supply and Sewerage Project Implementing Body: JBIC Funding: Funding by: Yen Loan(E/N Date of Conclusion: Sep. 14, 2007) Funding Amount: JPY 22,806 million Objective: In this Project, it is expected that the effect is spreading to other states by carrying out the 24-hour Water Supply prior to other states. To fulfill this purpose, aiming to improve the management of the responsible agency, various matters are required to be implemented: such as Leakage Reduction by setting a team for leakage, Improvement of Water Supply Volume Management System to grasp and control Water Pressure and Volume in each area, etc. Especially about measures for leakage, the progressive Japanese knowledge of Water Supply and Sewerage Management is to be shared with the related agencies in India, as using a scheme of dispatching specialists by JICA. In addition, other activities are also required: such as Improvement of Periodical Users Feedback System, Improvement of Service by Public Works Department and Education for residents about saving water and sewerage connection to each house in cooperation with their local NGOs. Loan Funds is appropriated to Construction of Water Supply and Sewerage, Procurement of Machinery and Materials, Consulting Service, etc.</p> <p>(FY 2009 Overseas Survey) (FY 2009 Domestic Survey) 'GOA Water Supply and Sewerage Project' is currently underway and is expected to complete by the year 2014. Moreover, an expert of 'Non Revenue Water Reduction' has been dispatched.</p> | | |

| <p>Description : (FY 2008 Domestic Survey) Subsequent study: Dedicated freight corridor trunk route project (western corridor) Contents: To develop/improve rail line infrastructures in terms of civil engineering, rail track, railway vehicle, and systems in the Phase-1 route (Rewari-Vadodara 920km) of the dedicated freight corridor project (western corridor) Condition: Government of Japan expressed its intention to provide economic cooperation for western corridor development to the government of India just prior to the completion of the development study. E/S for yen loan was pledged in 2008. Currently, the SAPROF study is being implemented.</p> <p>Subsequent study: Dedicated freight corridor trunk route project (eastern corridor) Contents: To develop/improve rail line infrastructures in terms of civil engineering, rail track, railway vehicle, and systems in the trunk route between Dadri and Sonnagar (880km) targeted by the dedicated freight corridor project (eastern corridor); and to introduce the methodology for transportation system method which uses Single Stack Container (SSC) train in electrical system. Condition: Eastern corridor development is financed with the government own fund and the funds of international agencies such as World Bank and Asian Development Bank.</p> <p>Subsequent study: Proof examination for running stability of dedicated freight corridor transportation (technical cooperation project) Cooperation period: February, 2008 - February, 2009 Cooperation body: Objective: In November 2007, at the meeting of ministers in charge of economy, it was approved to construct trunk freight corridors; however there was no conclusive discussion on the method of rail traction for the western corridor.</p> <p>(FY2012 Domestic Survey) Implemented project: Dedicated Freight Corridor Project (Western Corridor) *Engineering service for the phase 1 section (Rewari-Vadodara) (2.6 billion JPY) was extended in October 2009 and the phase 1 of the main aid for civil engineering work and vehicle procurement for Phase 1 section was extended in March 2010 (90.3 billion JPY). *Yen-loan agreement was concluded for 1,616 million JPY for project design review and engineering service for tender preparation for the construction of phase 2 section (Dadri-Rewari and Vadodara-Mumbai (total of 552km)) in July 2010. Subsequent Study : Feasibility study (FS) for quasi-high-speed railway development project in India (Project contents) FS for improving the speed of local passenger trains to 160km to 200km per hour between Delhi and Mumbai by moving freight trains from the exiting line to new freight line after the completion of the arterial freight railway line project (Implementing body) Ministry of Economy, Trade and Industry (Implementing period) 2012-13 (Counterpart) Ministry of Railways</p> <p>(FY2012 Overseas Survey) Implemented project: Dedicated Freight Corridor Project (Eastern Corridor) (Project contents) between Sonnagar - Mughal Sarai - Kanpur - Khurja - Dadri and Khurja - Kalanaur - Dhandari Kalan APL-1: Khurja-Kanpur double line section (343 km) APL 2: Kanpur - Mughal Sarai double line section (390 km) APL 3: Ludhiana . Khurja single line (397 km) (Implementing body) the World Bank. The financing & implementation is planned to be made in three stages below through the Adaptable Program Loan and utilizing the International Bank for Reconstruction and Development (IBRD) source. (Total cost)4,111 US\$m. The APL-1 has been taken up as Phase 1 of the Eastern Corridor and Loan Agreement for APL-1 amounting to USD 975 million was signed in October 2011. The tendering/ procurement process for selection of Contractors is currently in progress. (Implementing period) The implementation is planned over June 2011 - June 2017.</p> | | |

Description :

(FY 2009 Domestic Survey) (FY 2009 Overseas Survey)

The following ODA requests have been made to Japan:

1. Yen credit 'State of Himachale buradishu, Crop Diversification Project' (2008.8)

Summary: Applicable to 5 prefectures out of 12 prefectures: (1) Maintenance of small scale irrigation facilities (2) Maintenance of farm roads (3) Enforcement of the structure of the project (4) Strengthening the training of dissemination personnel and of dissemination activities (5) Marketing support (6) Consulting service

Period (Scheduled): 2011-2018

*SAOROF has been implemented.

2. Technical Cooperation Project, 'Capacity Development of Agricultural Dissemination Personnel, Transfer of Agricultural Skills due to the Installation of Model Crop Field' (2008.8)

(FY2013 Overseas Survey)

Implemented project : Himachal Pradesh Crop Diversification Promotion Project (Japanese YEN Loan)

Loan Agreement: February 17, 2011

Schedule : February 2011-March 2018 (86 months)

Estimated Project Cost (Loan Amount): 6,035 million yen (ODA Loan Amount: 5,001 million yen)

Borrower: The President of India

Project Objective(s):

The objective of the project is to promote sustainable crop diversification in Himachal Pradesh by development and rehabilitation of minor irrigation facilities and access farm roads, as well as by improvement of extension services including promotion of vegetable cultivation, thereby contributing to improvement of livelihood of farmers in Himachal Pradesh

Project Site/Target Area:

Of the twelve districts in the State of HP, the target of the project is the selected five districts that are considered to have high potential for crop diversification in light of the conditions of climate, topography and farming systems

Project Component(s)

1) Infrastructure development (construction of irrigation facilities: approximately 210 locations, irrigation area: approximately 3,700ha, improvement of access farm roads: approximately 100km in total)

2) Support for farmers (promotion of vegetable cultivation, improvement of post-harvesting technology, strengthening of the organization of farmers group, etc.)

3) Institutional Development (strengthening of the functions of the Department of Agriculture, strengthening of the services for promotion of agriculture, baseline survey and impact assessment)

4) Consulting services

Implemented project : Technical Cooperation Project for Crop Diversification in Himachal Pradesh

Date of R/D signed : Oct.01, 2010

Term of Cooperation : 2011/01 ~ 2016/0

Counterpart (C/P): Department of Agriculture, The Government of Himachal Pradesh

Project purpose : The promotion mechanism for crop diversification is established in DOA Himachal Pradesh

Outputs :

(1) DOA's capacity to plan and implement crop diversification is strengthened.

(2) Training system to promote crop diversification is developed.

(3) Core extension officers for crop diversification are trained.

(4) Crop diversification model is developed and practiced in the Pilot areas.

(FY2013 Domestic Survey) No information.

| Description : | | |
| Because Male' is the capital of Maldives and bears 25% of the total population, the coastal protection project in Male is given high priority. | | |
| (1) West Coast | | |
| Subsequent Studies: | | |
| The Government of Republic of Maldives has requested in February 1993 for the construction of seawalls along the West Coast of Male Island where the utmost urgency of the construction was indicated in the development study. The Government of Japan decided to carry out a basic design study in connection with the coastal disaster prevention plan for the Island of Male', and JICA dispatched a basic design study team between August and September, 1993 to investigate the necessity of the plan. After that the construction procedure and roughly cost estimation were carried out. | | |
| Feb.1994 E/N 32 mil.Yen (Project for the Seawall Construction in Male Island (D/D)) | | |
| Finance: | | |
| Jul.1994 E/N 856 mil.Yen (Project for the Seawall Construction in Male Island 1/2) | | |
| Jul.1994 E/N 480 mil.Yen (Project for the Seawall Construction in Male Island 2/2) (provision of grant aid / FY 1995) | | |
| Content:87mil.Yen (for Supervision by the consultants firm) | | |
| 1,249mil.Yen (for Construction) | | |
| Construction: | | |
| Construction Trader:Taisei Construction | | |
| Nov.1994~Mar.1996 Completed (FY 1998 Overseas Survey) | | |
| (2) East Coast | | |
| Subsequent Studies: | | |
| The Government of Republic of Maldives had requested the implementation for the East Coast, which was given 2nd priority, to the Government of Japan on Aug.1994. The Government of Japan accepted the request and planned to dispatch the basic design study team to the site on Aug.1995 in order to discuss with the Maldives authority concerns and to investigate the circumstances by topographic survey and so on. | | |
| Jan.1996 E/N 30 mil.Yen (Project for the Seawall Construction in Male Island (II)(D/D)) | | |
| Finance: | | |
| 2 Jun.1996 E/N 1,148 mil.Yen | | |
| (Project for the Seawall Construction in Male Island (II)) | | |
| Construction: | | |
| Construction Trader:Taisei Construction(17 Oct.1996~15 Mar.1998) | | |
| Operation and management: | | |
| (FY 1998 Domestic Survey) Facilities are well managed and maintained. Sand is supplied for the artificial beach and the surrounding area is also well maintained. | | |
| Effects: | | |
| (FY 1998 Domestic Survey) Since the damage by high tide has been alleviated and sand erosion from the reclaimed area has been protected, there have been positive effects on protection of human life and social improvement. Improvement of the view of the artificial beach has increased the number of tourists. | | |
| (3) South Coast | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2000 Domestic Survey) Minister of Construction and Public Works and steering committee expressed their request of early implementation of priority projects. However, the project hasn't yet come to the implementation.</p> <p>(FY 2004 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2004 Overseas Survey) No progress was seen due to unavailability in acquiring guidelines and lack of related regulations. Financial difficulty can be the greatest obstacle. Possibility of the implementation is totally dependent on the Gov. or the national interest. Therefore, there is a possibility if the situation turns around in this mean. However, due to apparent impossibility factors for implementation and other impediment factors, request for the funding has not been submitted.</p> <p>(FY 2005 Domestic Survey) A reef with final disposal has been utilised as an industrial site after reclamation. In addition, industrial sites are constantly being created by reclaiming the site with high quality soil in other areas. Sites has been utilised as gas tank, cement silo, block factory, shipyard, repairing factory, and warehouse, which has become a unique industrial complex in Maldives. Although, JICA study has proposed for adequate expansion (construction) plan, C/P is propelling their original plans, which prioritise utilisation of the reclamation sites. Although, initially the project was planned as a Yen Grant project, it has not been realised due to policy changes. However, final disposal sites has been utilised without any coast protection facilities, which risks of tidal waves to spread the wastes exists. Therefore, immediate measures are required. As a result of the above mentioned reasons, realisation of waste disposal facility with Yen Grant Aid is considered to be difficult. However, there needs to improve fragile coast to protect disposal sites from tidal waves. This is eligible for a Grant Aid and a request has been submitted from the C/P.</p> | | |

Description :
 (FY 2008 Domestic Survey)
 Implemented project: Support for Tsunami Recovery in Maldives (Non-project grant aid assistance)
 Amount: Approximately USD 16 mills
 Contents: Projects that have been proposed in the study (including D/D, cost-estimates, and preparation of tender documents) such as "Reconstruction of Power Distribution System," "Rehabilitation of Causeway," "Redevelopment of Administrative Facilities," and "Improvement of Sewerage System."

Implemented project: Maldives Tsunami Reconstruction Project (Yen loan)
 Amount: JPY 273.3 bills
 E/N concluded: August 2006
 Contents: The project is aimed at reconstructing various small-scale infrastructures (such as harbor and sewerages) that have been damaged by Sumatra Earthquake occurring in December 2004, thereby restoring the efficient system for material/service distribution and the stable system for sewerage service. It is thus expected to contribute to the improvement of victims' livelihoods and economic recovery of Maldives (the activities include "the construction of island harbor facilities and shore-protection facilities", which have been proposed in the study).

Description :

The reasons for realizing the project are as follows:

- large impacts
- high priority

Subsequent Studies:

Jun.1984 E/N (Rural Telecommunication Network Improvement (D/D), 154 mil.Yen)
Mar.1985 D/D undertaken

Finance:

May 1986 E/N 1,226 mil.Yen (Rural Telecommunication Network Improvement I 1/3)
Oct.1986 E/N 2,245 mil.Yen (Rural Telecommunication Network Improvement I 2/3)
Sep.1987 E/N 905 mil.Yen (Rural Telecommunication Network Improvement I 3/3)
Aug.1991 E/N 904 mil.Yen (Expansion of the Rural Telecommunication Network II)
Jul.1992 E/N 781 mil.Yen (Expansion of the Rural Telecommunication Network III)
Jun.1996 E/N 1,864 mil.Yen (Expansion of the Rural Telecommunication Network IV)

Upon the completion of the construction financed by grant aid assistance planned to be signed in Jun. 1996, all of the proposed projects will be completed, except for that of 2 areas. (FY 1997 Domestic Survey)

Construction:

(FY 1997 Domestic Survey) (FY 1998 Domestic Survey) (FY 1999 Domestic Survey)
Phase IV Feb.1997~March.1999 (completed).
Contractor / Phase IV Kanematsu, Nippon Musen

Operation and Management:

NTC is in charge of O&M. Materials and facilities provided by a grant aid assistance are well maintained and smoothly operated.

Impacts:

(FY 1997 Domestic Survey)

In Phase I-III, 42 public phones were installed and service is being provided to resident and public organizations.

Perspective for Remaining Projects:

(FY 1998 Domestic Survey)

Regarding the "expansion of rural telecommunication" including the remaining two sites, a grant aid assistance will be requested in 1999.

*Related Project

Presently, the World Bank finances the project to equip all VDCs with Multi-Access Radio System, taking into account the progress of this proposed project. The completion of this World Bank financed project is expected to increase the number of subscribers which NTC can accommodate.

| 9. SITE OR AREA | 42,000 sq.km in eastern Nepal | | |
| 10. MAJOR PROPOSED PROJECT(S) | | | |
| <p>1) Arun III Hydropower Development Project This project (240 MW) is projected the most economically feasible in all 53 hydropower sites (total of 11,000MW) located within the Kosi river system. Under the project as set out in the master plan study, catchment area is 32,332 km², maximum discharge is 156 m³/s, total head is 194m, facility output is 240 MW, and annual generated energy is 1,965 GWh. Subsequent to this master plan study, the project was the subject of a JICA funded feasibility study, and detailed design (402 MW output) has been completed by a German and Japanese consortium. Development of half the foregoing capacity is in progress with funding by the World Bank.</p> <p>2) Sun Kosi Diversion Project This is a multipurpose development project comprising diversion of 72 m³/s of discharge from the Kosi river by 16 km long tunnel to the Terai plain for irrigation, as well as hydropower generation utilizing the head available along the diversion route. This diverted discharge will enable perennial irrigation of farm land in the broad Terai plain (175,000ha), anticipated to raise farm productivity from the current 350,000 tons/year to 100,000 tons/year. Power would be generated utilizing head along the induction canal from the Sum Kosi (61,000kW) as well as at Kamla dam (32,000kW).</p> | | | |

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

1) The Arun III hydropower project is the most economically viable project among projects surveyed in Nepal; 2) Implementation of Arun III will promote the development of other hydropower projects; and 3) Sun Kosi Diversion Project is important partly for its impact on food production and partly for environmental conservation in the Himalayas.

(FY 1998 Overseas Survey)

Funds have been procured for the project implementation since higher priority has been given to the energy development and private sector has participated in constructing the facilities.

1. Arun III Hydropower Development Project

Subsequent Studies:

F/S undertaken by JICA (EPDC, CKC)

Oct. 1988~Apr. 1991 D/D undertaken jointly by West Germany (Lahmeyer /Energy Engineering) and Japan (EPDC /CKC)

Finance:

The Government of Nepal has requested external funding from ADB, Germany (KfW) and Japan (OEFC).

Jan. 1995 WB gave up the project because of the environmental problems.

(FY 1997 Domestic Survey)

No progress.

(FY 1995 Overseas Survey)

WB has been requested to resume the implementation of the project.

Construction:

1992 to be commenced (Although F/S planned 402 MW, the project is to be divided into 2 stages of 201 MW). 2001 to be implemented.

2. Sun Kosi Diversion Project

(FY 1997 Domestic Survey)

The Nepalese Government has repeatedly requested a JICA F/S on the Sun Kosi Diversion Project, which is the most promising project among the Kosi River M/P and its economic impact is high but has been unsuccessful, partly because the expected cost of construction could be as large as US\$500 million.

(FY 1997 Overseas Survey)

F/S has not been realized yet but the M/P has been widely used for related works.

3. Bhote Kosi Hydropower Project

(FY 1994 Domestic Survey)

NEA is going to implement a plan for Bhote Kosi Project as one of the best sites for hydropower development among many sites studied under the Basic Study.

(FY 1995 Overseas Survey)

The MOU has been signed with a private company to implement the Bhote Kosi Hydropower project.

(FY 1997 Domestic Survey)

Under construction by BOT scheme.

4. Khimtikhola Hydropower Project (60 MW)

Finance:

Cooperative Finance of ADB and IFC (Appr. US\$200 mil.)

Construction:

1995 Commenced (State Craft (Norway))

| | Processing | Discontinued or Cancelled |
| Description : | | |
| Finance and Construction | | |
| Sep.-Oct.1990 | Installation of transmission stations in Ilam, Nepalganji, Palpa, etc .with the total cost of 1.40 million NER. Nepalese Government budgeted. | |
| Nov.1993-Jan.1994 | Installation of Namji, Sarangkot, Pokhara, Juleshor and Daunne transmission stations and transposer stations. French Government provided grant aid assistance of the total cost of 14 million FF. | |
| Detail: | | |
| The Government of Nepal (GON) requested a Japanese grant aid, but it was notified by the Japanese Government that the project would not be funded immediately. The GON requested a grant aid to France, which subsequently agreed to undertake an F/S on TV broadcasting network. The GON is expecting a Japanese aid on studio equipment. | | |
| (FY 1996 Overseas Survey) | | |
| In Jul. 1994, the Japanese Government was requested for grant aid assistance to implement the TV Studio Improvement Project. | | |
| (FY 1997 Domestic Survey) | | |
| Nepal side is preparing for requesting a grant aid assistance. | | |
| (FY 1997 Overseas Survey) | | |
| Request for a grant aid assistance has not been approved yet. | | |
| (FY 1998 Overseas Survey) | | |
| Nepal National Broadcasts has been utilized the results of this M/P when they have developed their TV network in nationwide. Relay stations proposed by this study are no longer necessary since the technical conditions have been changed. | | |

Description :

Subsequent Studies:

Sep. 1992 A Japanese mission was dispatched for Sindhuli Road Aftercare Study. M/M was signed to review F/S for the reduction of construction.

Jan. 1993 "Sindhuli Road Aftercare Study" by JICA was started. In

June 1993, the draft final report will be submitted. The objective of the study is to examine the alternative plan including a single track plan to reduce the cost.

Finance:

Aug.16 1995 E/N 75mil. Yen (Sindhuli Road (D/D))

Detail:

The Government of Nepal assigns top priority to this project among various trunk road projects, and is requesting Japanese grant aid. The new government considers the improvement of road and drink water facility to be important development areas for the moment.

(FY1994 Domestic Survey)

Although the torrential rain attacked Nepal in Jul.1993 just after the Aftercare Survey, the rain did not make heavy damage on the road of this Project which was surveyed by the Dept. of Road in Jan.1994. The Basic Design Study for Section I was conducted in Aug.1994. The Draft Final Report was submitted to HMG in Oct.1994.

*Refer to "Aftercare Study for Sindhuli Road Construction Project (1993)" about details thereafter.

MAJOR PROPOSED PROJECT(S) | <p>The master plan was formulated for 15 years from 1990 to 2005, and 33 projects of central government level and 137 projects of local government level were included in the plan. The proposed high priority development projects are as follows:</p> <p>Irrigation rehabilitation project : Rajikdwa:2,400 ha</p> <p>Rural road rehabilitation project : Tansen to Tangas:75 km East-west highway to Sandikharka:69 km</p> <p>Rural water supply : Banganga and Gajeda:for 11,900 population Material supply program: for two districts of hill area</p> <p>Agriculture production promotion :</p> <p style="padding-left: 20px;">Improvement of agri.:3-district extension services offices</p> <p style="padding-left: 20px;">Ilaka service centre:22 Ilakas</p> <p style="padding-left: 20px;">Veterinary service centre:1-Regional centre 3-District centre 27-Ilaka centre</p> <p>Improvement of plan implementation :</p> <p style="padding-left: 20px;">Institutional improvement: Central and caacity district government</p> <p style="padding-left: 20px;">Capacity improvement of staff:3-district,villages</p> <p style="padding-left: 20px;">Improvement of budgetary: System in situation of local government central</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

This project is regarded to help the promotion of the Development Policy of the Nepalese government.

Subsequent Studies:

Jun.1992~Sep.1993 F/S undertaken by JICA
(Rajikduwa Irrigation Project)

Jan.1994 Rajikduwa Irrigation Planning Works have been completed by the submission of the draft final report regarding to the basic design.

Finance:

(FY 1999 Overseas Survey)

1.Gulmi-Arghakhanchi Rural Development Project(GARDP)

It is under progress by EU fund.

*Contents: Agriculture, Rural infrastructure-road, Community buildings, Drinking water, etc.

2.Rural Water Supply and Sanitation Program

It is under progress by FINNIDA fund.

*Site area: All 6 districts of Lumbini Zone.

Detail:

(FY 1991 Overseas Survey)

The Government of Nepal plans to incorporate the proposal of the present study into the forthcoming the 8th five-year plan, and hopes for a small team of JICA experts who will advise on the annual planning of the proposals.

(FY 1997 Overseas Survey)

EC is assisting MLD in implementing one IRD project in Gulmi and Argakhanchi districts. Therefore, JICA proposed projects have not been implemented yet.

(FY 1998 Overseas Survey)

The rural development policy proposed by this study is being utilized in the on going Ninth National Development Plan (1998-2003).

Since cost of the investment by the beneficiary farmers has been increased due to the guideline of the Nepal Irrigation Sector Project (NISP) by World Bank, the implementation of subsequent studies expect few have been postponed.

*Related Project

The World Bank has provided the Irrigation Line of Credit (ILC) for three development districts in the western part of region. 20 mil. NRs. has been already disbursed to Kapirubus district, which has been promoting the irrigation project with it.

(FY 2000 Domestic Survey)

No information.

Description :

(1) Kathmandu International Airport Development Project
Subsequent Studies:
Jun.1993-Jul.1994 "Tribhuvan International Airport Modernization Plan in Nepal"(M/P+F/S)
Jan.1994 E/N 106 mil.Yen (Project for Modernization of Tribhuvan International Airport in Kathmandu (D/D))

Finance:
Jul.1994 E/N (Modernization of Tribhuvan International Airport in Kathmandu)
Total 3,453 mil.Yen, Items, for FY 1994 876 mil.Yen, for FY 1995 2,371 mil.Yen, for FY 1996 206 mil.Yen
(FY1994 Domestic Survey)

Construction:
(FY1995 Overseas Survey)
The project has been implemented as "Kathmandu International Airport Modernization Plan in Nepal"

*Refer to "Kathmandu Airport Improvement Project Study (1994)".

Situation:
(FY 1996 Domestic Survey)
No request has been made to finance the proposed projects (2) and (3). This is mainly because of the financial difficulty of the Government.

(FY 1996 Overseas Survey)
ADB has provided the loan for the construction of airports in Pokhara, Lukla and Jomson. However, as to the Simikot airport, no concrete plan has been made for the project implementation.

(FY 1997 Overseas Survey)
DCA has been doing some improvement work at Simikot Airport with its own resources. So far DCA has not requested assistance from Japan but DCA is looking forward such cooperation from the Government of Japan.

(FY 1999 Overseas Survey)
Simikot: completed.
Pokhara: completed.
Kukla: to be completed by Jun. 2001.
Jomson: to be completed by Jun. 2001.

Description :

(1)Mahankal Chaur Plan and Bansbari Plan

Subsequent Studies:

Feb.- Mar.1991 B/D (Kathmandu Water Supply Plan)

Consultant/ Japan Engineering Consultants Co., Ltd.

Finance

Jul.1992 E/N 2,086 mil. Yen

(Kathmandu Water Supply Facilities Improvement Plan - 1/2)

Jun.1993 E/N 1,286 mil. Yen

(Kathmandu Water Supply Facilities Improvement Plan - 2/2)

These are for the installation of two filtration plants to improve water supply system in kathmandu.

Construction:

(FY 1995 Domestic Survey)

Phase I - completed

Phase II - completed in Feb. 1995

Effects:

(FY 1995 Domestic Survey)

To begin the utilization of the water filtration plant constructed by phase 1 and 2, it becomes possible to supply enough water for the demands until 1995. At the same time, the quality of water becomes safe and sanitary, since enough amount of chlorite is found at the hydrants in downtown.

Problems:

(FY 1995 Domestic Survey)

The deep wells as for the water resources for the plant during the dry season (especially Feb. to May) are planned to be repaired by the World Bank, however, the repairment works are much delayed.

(2)Balaju/Sundarijal

(FY1996 Overseas Survey)

The rehabilitation work is in progress with the IBRD loan. The provided loans are US\$24 mil. and US\$27,000 respectively.

(3)Lambagar

(FY1996 Overseas Survey)

The priority has been lowered because the river, from which water will be taken, was polluted.

(FY 1998 Overseas Survey)

The priority has been lowered since the reviver, the water source, has been polluted.

(4)Shaibhu/Manohara/Balkhu:

(FY 1996 Overseas Survey)

Grant aid assistance has been requested.

(FY 1997 Overseas Survey)

Request for these projects has been forwarded for FY 1998 to Government of Japan for consideration.

(FY 1998 Overseas Survey)

The project is delayed since it is not included in the World Bank projects.

(5)Kodkhu, Roshi and Melanchi

(FY1993 Overseas Survey)

Above three projects have been proposed to JICA.

(FY1995 Overseas Survey)

The government of Nepal expects the Kodku and Melamchi Projects to be included in the next phases.

(FY1996 Overseas Survey)

As to the Melamchi River Project, local consultants completed B/D with UNDP fund. The total project costs for the improvement of a water intake tunnel, water treatment plants and water supply network and the implementation of hydraulic power project are estimated at US\$138 mil.

Kodkhu Project has been delayed due to the land acquisition problem caused by the rise of land price in Kathmandu.

Description :

Bheri-Babai Hydroelectric Project

Subsequent Studies:

(FY 1998 Domestic Survey)

March 1998 ~ Aug. 2000 JICA F/S study on "Bheri-Babai hydroelectric power development".

Cost: approx. 300 million yen

Difference from JICA proposal: Tunnel route was moved to the upper stream.

(FY 1999 Overseas Survey)

Phase 2 of F/S is undergoing.

Finance:

(FY 1999 Overseas Survey)

Jul.9.1999 A request was submitted to Japanese government.

*Amount: 170 mil.US\$

Detail

(FY 1995 Domestic Survey)

After the stoppage of Arum III project, this project becomes hopeful one to be developed next to the Gandaki-A project.

(FY 1997 Domestic Survey)

The problems of this project are as follows.

1. Coordination with India is necessary, because the lower Bheri runs through India.
2. Construction of facilities including a power plant needs to be cautious, because a drainage mouth is in a national park.

(FY 1998 Overseas Survey)

Higher priority has been given to the supply of electricity to the west part of the country that is under-developed. This has promoted the implementation of the proposed projects.

Related Project

Mahakali II Irrigation Project by World Bank (FY 1996 Overseas Survey)

The construction is in progress with ADB loan and is expected to complete next year.

Description :

Detail

The Nepali government intends to implement the Immediate Program by applying the Japanese grant aid Program and in fact the Government of Nepal has already submitted the application to the Government of Japan.

(FY 1995 Overseas Survey)

Hydro-meteorological stations established under the study program are now in operation and undertake data collection. However, hydrological stations strengthening program, which is expected to be supported by JICA, has not been materialized yet.

(FY 1996 Overseas Survey)

The Government of Nepal requested for the Japanese grant aid assistance twice. But they have not been accepted. Because of the budget constraint of the Department of Hydrology and Meteorology and the negation of the Japanese Government to provide grant aid assistance, the Facility Improvement Project has not been materialized.

(FY 1997 Domestic Survey)

The Government of Nepal is requesting a grant aid assistance but the request is not approved yet, maybe due to the low priority of the project.

(FY 1998 Overseas Survey)

The facilities have been developed under the model project. Two observation stations, which were constructed in this study, are still being utilized.

(FY 1999 Overseas Survey)

Due to the changes that have taken place 7 years after the completion of the development study, Department of Hydrology and Meteorology is taking into consideration of reviewing and updating this project by Japanese experts.

Description :

Subsequent Studies:

End of Mar.-May 1993 Basic design study team was dispatched.

(FY 1995 Domestic Survey)

End of Oct.1994 An additional survey team was dispatched for three weeks.

Jan.1995 The works have been completed by the submission of the draft final report.

Detail:

The project was short-listed at the time of Annual Meeting held in May, 1993.

(FY 1995 Overseas Survey)

Although the Government of Nepal had requested the Government of Japan for financing the implementation of this project, the Japanese government expressed her inability to finance to project in September, 1995 through the Embassy of Japan. This was because, first, the project expense would be considerably high while the number of beneficiaries would be small and, second highest priority was given to another project. However, the population growth has outweighed the growth of agricultural production. Therefore, the Nepales Government has given high priority for development activities that can increase agricultural production.

(FY 1997 Overseas Survey)

Because the cost to be involved was found to be very expensive, the project has not been taken for implementation.

No initiative has been taken to procure the fund.

(FY 1998 Domestic Survey)

There is little possibility to implement the project.

(FY 1998 Overseas Survey)

It aims to enhance the share of the investment by the beneficiaries to the irrigation facilities in the Nepal Irrigation Sector Project (NISP) by World Bank that was started in 1996.

However, although the irrigation project proposed by this F/S was included in the Eighth National Development Plan (1992 - 1997), it is not mentioned in the on-going Ninth National Development Plan (1998 - 2003). The priority of the project has been lowered.

(FY 1999 Overseas Survey)

This project has been suspended.

(FY 2000 Domestic Survey)

There has been no progress after D/D Study because of the high cost.

Description :

Detail

Printed topographic maps are used for the promotion of various government policies and utilized to establish rural development plans by public organizations in 5 districts of Lumbini zone.

(FY 1996 Overseas Survey)

The Government of Nepal has been drawing up topographic maps for other 13 zones with the financial and technical assistance of FINNIDA. It will be completed by the end of 2001. As a result, the topographic maps for all 14 zones, including Lumbini where maps were prepared with the Japanese assistance, are to be completed.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Subsequent Studies:

(FY 1994 Domestic Survey)

This survey work has been conducted for formulation of a Master Plan. Intensive and close investigations have been made in the particularly selected county of Jhapa. This survey work was almost same as the Feasibility Study. The survey works targeting 30 units of this county will be implemented in advance to provide a sample case to the further project implementation. It will be better to conduct the Feasibility Study on Mahothari and Banke counties based on the results of this survey work in future.

Finance:

(FY 1997 Domestic Survey)

The Government of Nepal requested the Japanese grant aid including necessary equipment or materials to promote the project in September 1997.

(FY 1999 Overseas Survey)

1.Jhapa Groundwater Irrigation Project

Aug.1997 Japan's grant aid(10.8 mil.US\$) was pledged.

*Contents: Deep tubewell irrigation system development for 4,500 ha.

(FY 2000 Domestic Survey)

The not deep wells have been developed by their own fund by slow degrees. It is expected to conduct the grant aid project that has been already pledged on 1997.

Detail:

(FY 1995 Overseas Survey)

The study findings are used to establish several other irrigation development schemes in Jhapa district.

(FY 1996 Overseas Survey)

In 1995 the cabinet made a decision that the irrigation in Terai Plain would be promoted by means of shallow wells, not deep wells proposed in this Study. The project realization has been waited. However, it should be necessary to dig deep wells at the place where shallow wells are not of use for the irrigation.

(FY 1998 Overseas Survey)

Since the policy of the Agricultural Prospective Plan (APP) has given higher priority to utilizing the groundwater rather than the surface water as the water source for the agricultural use, higher priority has been given to this project.

| 9. SITE OR AREA | 3 provinces in Kathmandu Valley (Kathmandu, Bhaktapur, Lalitpur) | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>This project aims at improvement/rehabilitation of existing irrigation facilities (irrigation area approx. 9,000ha) under the governmental irrigation scheme at Kathmandu Basin which is food supply base to the Metropolitan area. And also aims at establishment of farmer participating agriculture, placing the maintenance under the control of farmers. For the method, 13 of irrigation priority schemes as follows were selected from existing schemes and phased transfer of schemes to farmers after the rehabilitation is expected. Facility projects for targeted irrigation schemes are as follows.</p> <p>1)Water intake facility: Among 18 facilities in 13 schemes, 13 facilities need to be renewed and 4 facilities including slight one, need to be repaired.</p> <p>2)Water Canal: Out of trunk line (61km), existing stone-piled lining (32km) and soil water canal (29km) will be improved to be concrete lining, branch canal (28km) and 3rd canal will be constructed.</p> <p>3)Structural facilities of canal: Structural facility for tertiary level including water control gate and water division.</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |
| Description : | | |
| <p>Finance: (FY 1998 Overseas Survey) Most of the thirty proposed rehabilitation schemes will be implemented as a part of the Second Irrigation Sector Program (SISP) which are implemented in 1996 - 2002 with financial support of Asian Development Bank.</p> | | |
| <p>Progress Situation: (FY 1998 Overseas Survey) Out of the thirty schemes, Kothku, and Tika Bhairav-I schemes have been completed, Bashan, Dahkhsinkali, Mahadev Khola, and Katunje schemes have been partially completed, and Indrayani, Bishwambhara, and Kutudhal schemes are under implementation. (FY 1999 Overseas Survey) The remaining schemes are under progress.</p> | | |
| <p>1. Shali Nadi Irrigation Project A detail survey is intended. *Contents: Irrigation for 150ha of Shankhu Bajrajogini VDC, Suntol VDC, Pukulachhi VDC, and Lapse Phedi VDC.</p> | | |
| <p>2. Bosan Irrigation Project The project is under survey for implementation under SISP. *Contents: Irrigation for 30ha of Kirtipur Municipality and Machchhe VDC.</p> | | |
| <p>3. Lubhu Raj Kulo An approval was submitted after completing all the necessary procedures. *Contents: Irrigation for 150ha of Lubhu VDC.</p> | | |
| <p>4. Tika Bhairav II An approval was submitted after completing all the necessary procedures. *Contents: Irrigation for 200ha of Lalitpur district.</p> | | |
| <p>5. Bidol Irrigation Project The project is under consideration for a survey. *Contents: Irrigation for 50ha of Bhaktapur District.</p> | | |
| <p>(FY 2000 Domestic Survey) Because of the high cost, there is no action to obtain finance for the remaining schemes.</p> | | |
| <p>Reasons for Delay: (FY 1998 Overseas Survey) SISP guideline adopts the policy that the beneficiaries should bear more costs for the irrigation facilities when they are invested. In addition, the policy that the farmers' irrigation group should operate and manage the irrigation facilities is promoted. As a result, the project will be implemented if there is the request from farmers' irrigation group. Therefore, since there has not been any request from the group, some proposed projects have not been implemented.</p> | | |
| <p>Detail: (FY 1995 Domestic Survey) preparing for request on the assumption of Grant Aid.</p> | | |
| <p>(FY 1996 Overseas Survey) The early implementation of this proposed project is considered difficult because the review study points out (1) the rise of land price and (2) the higher priority is given to drinking water than irrigation water as the use of water resource.</p> | | |
| <p>(FY 1997 Overseas Survey) From the point of view of the importance of urban land in Kathmandu and the face value of the land vs cost involved in the implementation of the irrigation schemes, no effort to execute these schemes have been taken.</p> | | |
| <p>(FY 1998 Domestic Survey) The reason why there has been any progress in implementing this project is that the higher priority is given to drinking water than irrigation water as the use of groundwater.</p> | | |

| Description : | | |
| <p>(1)Emergency Project Improvement of radar, etc. Subsequenet Studies: Jan.1994 E/N 106mil.Yen (project for Modernization of Tribhuvan International Airport in Kathmandu (D/D)) Finance: Jul.1994 E/N 876 mil.Yen (Project for Modernization of Tribhuvan International Airport in Kathmandu 1/3) 1995 E/N 2,371 mil.Yen (Project for MODrnization of Tribhuvan International Airport in Kathmandu 2/3) 1996 E/N 206 mil.Yen (Project for Modernization of Tribhuvan International Airport in Kathmandu 3/3) Construction: May 1995 Commenced (FY 1995 Overseas Survey) Aug.1997 Completed (FY 1997 Domestic Survey) Operation & Maintenance: (FY 1997 Domestic Survey) After the completion of construction, training for control officers is on-going. After the training, control work utilizing the radar will be started.</p> <p>Situation: For the implementation of the project, 2 Japanese long-term experts have been dispatched, and the staff's training have also been commenced in Japan. (FY 1996 Domestic Survey) The request has been made to implement the remaining project (construction of a training center, etc.) of the emergency project. (FY 1997 Domestic Survey) Grant aid assistance is requested for remaining projects. (FY 1998 Domestic Survey) Installation of SSR on the summit and development of the training center will be implemented with a grant aid assistance if airport radar which was installed in the emergency project phase I is surely used. However, the trouble of other materials gives damages to the new radar. Therefore, JICA is planning to implement the improvement project on those materials before the implementation of the phase II. Study is to be conducted in Feb. ~ Aug. 1999, then phase II is to be implemented. (FY 1999 Domestic Survey) Nippon Koei Co. conducted a study before implementing phase II.</p> <p>(2)Improvement of Ground Facilities Finance: ADB (Tribhuvan International Airport Improvement Project) Project Content: Improvement of runway and parking lot, expansion of apron and improvement of terminal Construction: Sep.1997 started (FY 1996 Domestic Survey) ADB has been implemented the improvement project since 1990. (FY 1997 Domestic Survey) After the completion of expansion work of apron, international terminal is being expanded.</p> <p>Differences from JICA's proposal: (FY 1998 Domestic Survey) The plan formulated by this study requires the move of the military facilities, and gives burden to the government of Nepal, in terms of land acquisition and finance.</p> <p>Japanese technical cooperation: (FY 1998 Domestic Survey) Acceptance of trainees: 42 trainees in total (radar control technique, and radar equipment maintenance). 6 experts (radar control technique, and radar equipment maintenance) in total were dispatched to Department of Civil Aviation, Nepal.</p> <p>Situation: (FY 1996 Domestic Survey) The procedure to establish a public corporation to operate the airport instead of the Department of Civil Aviation is in progress. (FY 1996 Overseas Survey) This M/P has been reviewed and modified with the ADB's Technical Assistance. The modernization plan will be implemented based on this modified M/P.</p> | | |

Description :

(1) Community Disaster Prevention(Phedigaon, Namtar, Chisapani)

(FY 1998 Domestic Survey)

A JICA expert (rural development, two years) has been dispatched since July 1998. PEU (Community Disaster Prevention) was established in the DOSC and the advice is being given by an expert in order to implement the promotion and monitoring of the community disaster prevention project.

1. Basic Sabo Project

(FY 1997 Domestic Survey)

The DOSC (Department of Soil Conservation) would like to request the grant aid to Japan for the implementation.

(FY 1998 Domestic Survey)(FY 1999 Overseas Survey)

Although the request for a grant aid assistance was submitted, it has not been approved.

2. Participatory Disaster Prevention Projects

i) Phedigaon

(FY 1997 Domestic Survey)

DPTC(Disaster Prevention Technical Center) is requesting the budget to Japan as the Pilot Project.

ii)Chisapani

(FY 1998 Domestic Survey)

Nepal Red Cross has implemented the project as a social welfare support project of Japanese government for three years from March 1998.

3. Community Development Projects

i) Wireless Telephone ar Namtar

(FY 1997 Domestic Survey)

Village committee is requesting to Napalese government for the implementation.

ii)Eri-culture Project at Namtar

(FY 1997 Domestic Survey)

Japanese businessmen group (people concerned with study team members) is trying to establish a private company to develop eri-silk industry at Namtar.

(FY 1999 Domestic Survey)

The project seemed to be implemented by local private company, however there is no precise information.

iii)Water supply at Chisapani

(FY 1997 Domestic Survey)

Grass roots grant of Japan is expected.

(FY 2005 Domestic Survey)

There is no pregress on the Japanese side.

"Nippon NGO Network for Nepal(NNNN)" is interested in participating in agricultural related projects as community development.

(2) IDPP for Kulekhani Reservoir

(FY 1997 Domestic Survey)

NEA(Nepal Electricity Authority) is going to carry out the detailed study for implementation. They are expecting to utilize the remaining loan for Kulekhani Disaster Prevention Project II financed by OECF, if the results of the derailed study is good.

(FY2001 Domestic Survey)

It has been decided to implement the ongoing Kulekhani Disaster Prevention Project II by utilizing the remaining loan financed by OECF.

(FY 2002 Domestic Survey)

Construction: Feb. 2002 Completed.

NEA will be in charge of the management and operation after completion.

Description :

(FY 1998 Domestic Survey)

The study is used for the "Community Development and Forest/Watershed Conservation Project (CDFWCP) in Nepal" (JICA technical cooperation project) and "Greenery Promotion Cooperation Project (GPCP)" (JOCV).

(FY 2000 Domestic Survey)

The study is useful to solve problems between residents and projects (include GPCP) in an on-site level through the use of a map for a watershed management plan and watershed management profile.

(FY2007 Overseas & Domestic Survey)

No information to be specifically mentioned.

Description :

Funding:

(FY 1998 Domestic Survey)

It has not been confirmed yet (October 1998), but it seems that the proposed project is included in a list of requests for grant aid of the government of Nepal as a grant aid project in FY 1999.

(FY 1999 Domestic Survey)

DOI requests for grant aid to Foreign Investment Promotion Division every year (amount of money requested: US\$12,375,000).

It is a precondition to supply Nepal Electricity Authority (NEA) with dredges in the implementation of the project.

(FY 1999 Overseas Survey)

July 8, 1998 They requested for grant aid.

*Content of a Project: Improvement in irrigation (750 ha)

(FY 2001 Domestic Survey)

The priority of the project proposed by the study is high, and they request for grant aid to supply dredges and implement irrigation plans.

(FY 2002 Domestic Survey)

The project is not in a list of requests for grant aid for FY 2002.

(FY 2003 Domestic and Overseas Survey)

While an implementing institution hopes that the project is implemented by grant aid, the project is removed from a list of requests of the embassy of Nepal. However, this project is placed as a semi top priority.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Overseas Survey)

To the implementation of the proposed project, Department of Irrigation (DOI), Ministry of Agriculture submitted the request for grant aid cooperation (Sep.2007).

Amount: US\$ 11,049,186 (according to F/S) US\$6,653,432 (based on revised range of business)

In 15th of Oct. 2007, Japanese Embassy and DOI visited the site together.

STUDY SUMMARY SHEET

| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | Department of Irrigation, Ministry of Water Resources | |
| | PRESENT COUNTERPART AGENCY | Department of Water Induced Disaster Prevention (DWID) | |
| 6. OBJECTIVES OF THE STUDY | 1) To formulate a Master Plan for flood mitigation for eight rivers in the Terai Plain 2) To conduct a Feasibility Study for the priority projects identified in the Master Plan 3) To carry out the technology transfer to the counterpart personnel of HMG/N in the course of the Study | | |
| 7. CONSULTANT(S) | NIKKEN Consultants, Inc. Nippon Koei Co., Ltd. | | |
| 8. STUDY PERIOD | Nov.1997 ~ Jun.1999 19month(s) ~ | | |
| 9. SITE OR AREA | M/P: Basins of the 8 rivers that flow through the Terai plain(Ratuwa, Lohandra, Lakhandei, Narayani, West Rapti, Babai and Khutiya Rivers) F/S: The Lakhandei and Babai River basins | | |
| 10. MAJOR PROPOSED PROJECT(S) | M/P: 1) Watershed Management Component For the conservation of watershed, construction of erosion control facilities, encouragement of afforestation and land use regulation are recommended as primary measures. In order to mobilize local communities and related organizations, publicity activities are also essential to materialize the measures. 2) River Control Component As a datum line for river course stabilization, river boundary line (RBL) should be first designated and authorized for the flood mitigation activities. The river control component includes bioengineering measures such as forest and grass belts as dike works and preventive bank protection by vegetation in addition to the conventional river control measures. 3) Community Development Component This component consists of three sets of activities, i.e., community mobilization to build up organizational bases for implementation of the Plan, Local coping measures to enable the communities to live with flooding, and community-based sustainable flood mitigation measures to motivate the local people to maintain and sustain the flood control structures. F/S: 1) Watershed Management Component Gully erosion control and hill-side works, River-side eroision control by consolidation of riverbed, protection of riverbank from scoring, and planting permanent crops along the riverbanks, Afforestation and land use regulations 2) River Control Component Forest and grass belts, spurs(groins), revetments, ring dikes, dike roads, and closing dikes 3) Community Development Component Community Mobilization, local coping strategy, multi-purpose facility | | |

| 9. SITE OR AREA | Area between Kathmandu and Naubise (located about 20 km west of Kathmandu) | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>To construct a new alternate road between Kathmandu and Naubise, where existing Tribhuvan Highway is the sole trunk-road linking Kathmandu with other areas in Nepal. The existing Tribhuvan road in this section has extremely steep terrain and poor geology, therefore a remarkable numbers of traffic interruption have been taken place. The Project Road will be constructed aiming to provide reliable and comfortable land transport in this section, which has the most important role in national security and economical points of view.</p> <p>1. Construction of New 2-lane Alternate Road: Total Length 21.4km. 2. Construction of 2-lane Highway Tunnel: Total Length 705m (included in the above). 3. Other proposed issues</p> <ul style="list-style-type: none"> - F/S on the solar and wind power generation for operation of the highway tunnel. - Construction of track terminal in the vicinity of Kathmandu Outer Ring Road. | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Situation (FY 2001 Domestic Survey) Department of Road (DOR) submitted EIA report to MOPE (Ministry of Population and Environment) on May 2001 for approval. After public notice of the EIA for 30 days, an evaluation committee was held and returned its comments on the EIA to DOR, DOR prepared answers against the comments and submitted them to MOPE. Currently final approval for the EIA is expected to be issued soon. Regarding financial source for the Project, DOR prepared a Implementation Program (I/P) for application of JBIC loan and request a JBIC loan application for the Project through MPPW (Ministry of Physical Planning and Works). There is an argument on the expected financial source for the Project, e.g. Loan or Grant, in the Nepal government and further discussion on this matter is still in process in the Government.</p> <p>(FY 2002 Domestic Survey) The government was examining on whether the funds will be raised on loan aid or grant aid (JICA's D/D). Later on the consensus has allegedly reached that they would submit official request for loan aid.</p> <p>(FY 2003 Domestic Survey) It is apparent that a request was made to JBIC. Request amount: Over 10 billion JPY Details: Construction of alternative road between Kathmandu and Naubise with the objective of improving the access from Mid-Western Tarai and India to Kathmandu. Possibility of adoption: the adoption is considered to be difficult because the project is not within the scope of project scale assumed by JBIC.</p> <p>(FY 2004 Domestic Survey) There are no activity to progress this project due to high priority placed on arterial road construction project between Kathmandu and Tarai.</p> <p>(FY 2004 Overseas Survey) The government is planning to adopt BOT for the construction.</p> <p>(FY2005 Domestic Survey) Rehabilitation of Mugling to Narayangat section, extending from Prithibi road which Kathmandu and Naubise by-pass road was planned, has become a priority after been destroyed by a disaster in 2004. Concerns towards by-pass road construction between Kathmandu and Naubise are low in comparison, which realisation is less likely to be made unless rehabilitation of the section is underway.</p> <p>(FY 2005 Overseas Survey) Funding is yet to be made. The Government is still planning to adopt BOT for the construction, which has issued a public notice for national, international, private, and public investors on 4th March, 2004.</p> | | |

Description :

(FY2002 Domestic Survey)

There is no information available on the current situations of this project.

(FY2003 Domestic Survey)

Difficulties in funding.

Period of 3-5 years is required to be realized.

(FY 2004 Overseas Survey)

1) Farmers, plantation owner groups, agricultural union, consumers, wholesale group, and retail groups are strongly requesting Nepalese government to establish a new wholesale market. This action is based on the request for a funding made to Japan by HNG/N for an establishment of a new market in the Kathmendu basin. HMG/N is aiming for an implementation of the proposed project within 1 or 2 years. Other project will be implemented, when enough funds have been secured.

2) The Honorable Minister for Agriculture and Cooperative will construct the basis in the project area by February 2005. Basement construction of the road at the entrance point and land generation will soon be commenced. Therefore HMG/N is enthusiastic in market development, which aims to develop the proposed market as an Export Promotion Centre. This is due to the demands from India, Bangladesh, and Arab for horticultural products. However, rating, packaging, and transportation system has not been developed yet. Improvements of above issues are also anticipated in the proposed project.

3) Secretariat level meetings had made action plan and defined the responsibility for clearance of land area and preliminary construction for market area in this fiscal year.

4) Effort from this Directorate (ABPMDD) has been continuing for the land acquisition, site plan, initial construction and enumerating interested traders along the help of stakeholder, such as Kalimati wholesale market, concerned administration, and ministries.

(FY 2005 Domestic Survey)

Grant aid was requested, though was not selected.

(FY 2005 Overseas Survey)

1) Foundation stone has been laid in the proposed Manohara (Thimi) whole sale market site.

2) Action Plan and responsibility has been clearly defined for clearance of land.

3) Efforts has been continuing for land acquisition, site plan, initial construction, and enumerating interested traders.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Overseas Survey)

Implementing project "the construction of wholesale market, construction of the basic roads of the entrance"

Funding: Amount: RS 40,500,000

Constructing period: July.2005 to June. 2006

Progress:

Drawing design plan, construction of wholesale market, calculating the cost for the basic roads construction in the entrance, and prepare for tender documents are completed. The construction has not been started yet at present, because problems were found in cultivation construction.

Description :

(FY2002 Domestic Survey)

There is no information available on the current situation of the project.

(FY2003 Overseas Survey)

Various projects are implemented aiming at enhancement of civil consciousness especially against earthquake disasters using such means as media and seminars under the initiatives of the Ministry of Home Affairs of Nepal. The main cause for the stagnation of the project progress is shortage of funds and resources.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2004 Overseas Survey)

Project can not been implemented due to a complexity of the situation. Priorities of the agencies are placed on security related issues.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

Implementation of the project has not progressed due to the difficulties in funding. Although the future implementation of the project is still under consideration, 3 to 5 years may need for a progress.

(FY 2006 Domestic Survey)

No information is mentioned specifically.

(FY 2007 Domestic Survey)

The assassination of King Nepal was happened just before the completion of the study and peace and order got worsen afterwards. Therefore the Ministry of Home Affairs seemed to decide to regard the stabilization of order as the first prior issue.

As proposed in the study of this project, "protection against disaster" was treated as independent paragraph in national development plan of Nepal and strengthening information management system of protection against disaster is mentioned as prior project of disaster measures. Considering above, though it seems that the construction of inclusive database will progress, it needs 3 to 5 years to be materialized since the stabilization of order is the most prior issue.

(FY 2007 Overseas Survey)

While there is funding problem for implementation, the activities are in progress. Several developments were found in formulation of policies such as evaluation on earthquake risk, disaster measure plan and beforehand prepare in area level, and improvement of on-the-spot measure in emergency, and etc. Furthermore, each municipality is actively attempting to the campaign for improvement in consciousness toward reducing damages by earthquakes. For instance, Lalitpur District operates towards the formulation of construction standards with support of JICA senior volunteer.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2003 Domestic Survey) The government of Nepal submitted a request letter for Japan's grant aid to realize the proposed projects in this Study in September 2003.</p> <p>(FY 2004 Domestic Survey) In Nepal, irrigation project over 2,000 ha of land requires EIA clearance. The department of irrigation is in the process of acquiring EIA during 2003-4. It is intending to request the Grant Aid to Japan with the grant of EIA clearance.</p> <p>(FY 2004 Overseas Survey) Request has been made for a funding assistance to implement the project. Project is prospecting to be implemented with the funding assistance from donor countries. Government is intending to fund the project, if funding assistance from donor countries are to be delayed.</p> <p>(FY 2005 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2005 Overseas Survey) D/D is required before implementing the project. The Nepalese government has made a request to the Japanese government for a Grant Aid of 1,412,812,000 NPR.</p> <p>(FY 2006 Domestic Survey) Possibility of implementation of the subsequent project requires EIA clearance. If both EIA clearance and funding are available, there is a high probability of the implementation. However, regarding the possibility of progress towards realisation, although it has been noted in FY 2005 Overseas Survey that the Nepalian government has made 1.4 billion NPR request for Yen grant, it is considered that the request has not been formally being made. In addition, although EIA clearance requires complicated procedures, none of the procedures has been made due to transfer of staff in charge, which can be considered that the realisation of the project is difficult for the time being.</p> <p>(FY 2007 Domestic Survey) The proposed project is the construction of Head Works in Sunsari River. It requires EIA clearance because its irrigation area is more than 800ha. Feasibility can be found if EIA clearance is done. There is little collision between Maoist and government side in Terai district, where includes beneficial area of Sunsari River Irrigation Project. The collision is becoming to be occurred in plain of Terai, compared to the past when most of collision was occurred in mountainous region. Therefore Nepalese C/P is also waiting for the improvement of peace and order condition of the designated area. There is a possibility of moving toward grant aid cooperation with the improvement of peace and order. (informed by C/P in Nov.2007)</p> <p>(FY 2007 Overseas Survey) The request letter for financial cooperation was submitted to the Japanese government (July.2007). Requested amount: USD 22,249,000 On 10th of Aug. 2007, the Japanese Embassy visited DOI and had a conference on the range of the project.</p> | | |

Description :

(FY 2008 Domestic Survey)

Request for B/S of the development of long-term final disposal site (Grant Aid) for "Development of final disposal site" made in summer of 2007 is now under discussion.

(FY 2008 Overseas Survey)

Capacity development of local government personnel and stakeholders, and preparation of strategic action plan for each local government are now in progress. SWMRM have prepared a proposal for capacity development of personnel in 58 local governments in Nepal and has submitted to the Ministry of Local Government. This study was requested to the Japanese government as a Technical Cooperation Project. Lalitpur municipal office and KOICA has agreed to conduct feasibility study of RDF plan development in Lalitpur District

(FY2012 Domestic Survey)

Subsequent Study: Information Collection/Follow-up Survey for the Solid Waste Management in Kathmandu Valley

(Objective) Current conditions and issues of the solid waste management in Kathmandu Valley after the Development Study are to be confirmed, and basic information will be collected as a reference for considering the direction of JICA assistance in the coming period.

(Implementing period) February - March 2012

As for the construction of a long-term sanitary land fill, a request for the grant aid cooperation was submitted in 2005. However, this request was not approved eventually, since the due procedures for Environmental Impact Assessment (EIA) were not completed. The procedures for EIA were taken completely, but there seem an expectation for the grant aid cooperation from the Japanese Government and political turmoils, impeding a realization of ensuring the self fund in the country.

(FY2012 Overseas Survey)

Based on the suggestions from the Development Study, the following measures were taken.

- Formulation of New Solid Waste Management Act 2011: This clarifies the differentiation between Solid Waste Management Resource Mobilization Center (SWMRMC) and local government organizations.

- Formulation of Solid Waste Management Act 2011: This clarifies the changes in legal statuses and coverage areas.

- Development of Sisdol Short-term Land Fill (LF): Development of Sisdol Land Fill Valley II and Handover Valley II and rehabilitation/maintenance of closed Sisdol site were completed.

- A closure plan of Bagmati River Disposal Site has been under the operation.

As for the Action Plans on solid wastes in Kathmandu City, Lalitpur City, Madhyapur Thimi City, Kirtipur City and Bhaktapur City, the following various projects and measures have been conducted.

A. Improving the collection and transportation of wastes: The establishment of efficient solid waste transportation system through setting up junction points and direct transportation, the promotion of sorted collection of wastes through mobilizing municipalities, and the promotion of waste collection by the private sector

B. Promoting the reduction of wastes: The promotion of composting/recycling of wastes among households and communities, the development of waste processing facility (WPF), the improvement and expansion of existing composting facilities including junction points, and the promotion of plastic recycling

C. The improvement of final treatment sites: The closure of unused disposal sites

D. The promotion of citizen participation and behavioral modification communication: The establishment of nature clubs, the mobilization of resident volunteers, the implementation of educational programs to raise national awareness on solid waste management

E. Strengthening administrative capacity of solid waste management: The development of medical waste management system, the introduction of monitoring and evaluation system, etc.

| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | 1) To formulate basic strategy on disaster risk management considering result of risk assessment for N-M Highway 2) To formulate structural measures for Ruwa River/Marsyangdi hydro Power Plant | | |
| 7. CONSULTANT(S) | Nippon Koei Co., Ltd. | | |
| 8. STUDY PERIOD | Jul.2007 ~ Feb.2009 19month(s) ~ | | |
| 9. SITE OR AREA | The Study area is located in the southern-central of Nepal. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1-1. Basic Strategy on N-M Highway</p> <p>Basic strategy I: Additional Structural Measures : Among the selected 12 sites, three which is supposed to be measured by DWIDP or through this pilot project and one more site which can be excluded since deposits in the sabo dam is removed. An additional site in Ruwa Khola is however considered. Hence, total cost of preventive structural countermeasure in the nine sites is 204 mil. Rs. Cost : 222.07million Rs. Construction Schedule 2009-2011.</p> <p>Basic strategy II: Regular Maintenance and Quick Response : Cost :25,205,067Rs. Cost and Benefit : Maintenance B/C5.2, Emergency Works B/C134</p> <p>Basic Strategy III: Maintenance of Sabo Facilities : Major Maintenance Works of Sabo Dams : 1) Removal of deposits (cost is 1.0 mil Rs/year (280 Rs/ m3)), 2) Repair of damaged sabo facilities</p> <p>Basic Strategy IV: Road Early Information System : Cost 2,986,230Rs. Benefit 10,555,026Rs/year.</p> <p>Basic Strategy V: Disaster Mitigation Activities in Communities (Kabilash Village) : Outline of Disaster Mitigation Activities in Kabilash Village : 1) Hazard mapping, 2) Disaster education, 3) Early Warning/ Evacuation System, 4) Simple structural measures, 5) Forestation planning and countermeasure planning. Cost : 852,460Rs. schedule 2008-2028. Benefit : 70,700 Rs/year</p> <p>1-2. Evaluation for Basic Strategy</p> <p>A benefit cost ratio (BCR) of 2.0 is determined for the additional structural measures for the eight sites. A BCR of 1.3 is calculated concerning the deposit removal for the prioritized six crossing streams. After structural measures to the eight sites and six crossing streams deposit removal are completed, no other sites will be subjected to main high risks with ALp of over 1 million Rs/year. Road regular maintenance, quick response (reopening) for road closure disaster, and road early information system are efficient methods in reducing the remaining risks.</p> <p>2. Countermeasures for protecting the power plant have been planned as below.</p> <p>a) Removal of soils in the sabo dams; 8,500 m3</p> <p>b) Concrete walls to protect the power plant; right bank: 207 m, left bank: 57 m, total: 267 m</p> <p>Construction cost is 18.4 million Rs and the BCR is 2.0.</p> | | |

Description :

Subsequent Studies and Others:

- 1973-1975 M/P for Muhammad-Bin-Quasim Port
 1975 D/D for the construction of a berth with the capacity of 25,000-75,000t
 1976 Undertaking of this Study
 1976-1980 D/D by consultants of Japan, France, Canada and U.K.
 (Financed by Holland, Canada, Japan, W.Germany, Italy, Bulgaria and GOP)

Finance:

GOP and loans/grants from foreign countries.

Construction:

- 1974 - Undertaken by France, Belgium, Holland and GOP (The project scale was modified.)
 Jun.1995 Scheduled to be completed (Construction cost: Rs. 4,700 mil. (include Foreign Currency Rs. 1,913 mil.))

Detail:

(FY 1993 Overseas Survey)

This JICA study has resulted in the improvement of the second port of Pakistan, Port Muhammad Bin Quasim.

(FY 1994 Overseas Survey)

1977-79 : A French consultant company won the international bid which was conducted upon the completion of "D/D of Terminals for Iron Ores and Coal" by JICA. The company revised JICA's design and presented a new detailed design. Total construction cost of Rs.220 mil. was financed by France.

1979-83 : A Dutch consultant company got an order after the completion of D/D of "Implementation of Dredging and Navigation-support Facilities" by JICA. The project was conducted from 1978 through 1983. Total construction cost of Rs.397.06mil.(foreign fund of it was Rs.320.44mil.)was financed by the ADB.

Due to the construction delay for lacking enough domestic finance and inflation, the total cost at the time of completion came up to more than a double of original estimation (from Rs. 2,097 mil. to Rs.4,700 mil.). Constructions financed by foreign funds are completed, but the delay of constructions to be financed by domestic funds is at a critical situation and governmental support is needed.

Nov.1987 Loan from the Belgian Government BEC 485.89 mil.

Jul.1988 Buyers Credit from Consortium Bank 841.77 mil. (A Belgian consulting firm won the international bid).

Main works were implemented with the investment costs of Rs.1,542.2 mil. including Rs.799.2 mil.of foreign currency.

(Ancillary Work)

Pakistani Government Rs.81.5 mil.

(Total Investment Cost)

Approximately Rs.1,624mil. (the Pakistani government: Rs.975 mil, the Loan from the Belgian government: Rs.221 mil., the Belgian Bank Group Loan: Rs.428 mil.).

Construction:

Oct.1988-Oct.1992 Main works were Implemented

Contractor: Besix

Nov.1993 Ancillary works were started (the construction of a service center building, a clinic, refrigeration facilities, etc.are now progressing)

Jun.1995 Ancillary works were completed.

Details:

Upon the completion of the construction of the port facilities, the trial operation started partially on December 1992. The collection of port-usage charges also started.

(FY 1993 Overseas Survey)

This JICA study was highly appreciated and was well-utilized in the implementation of the project.

(FY 1994 Overseas Survey)

Because the port has not been officially admitted yet, the port management and its operation have been handled by the persons in charge of this project.

(FY 1997 Overseas Survey)

The maintenance dredging of channel and basin of Gwadur Fish Harbor cum Mini Port was done in 1996.

Fund has not been procured yet for remaining components.

| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(1) Container Terminal 1.Basic Infrastructure of Qasim Port Finance: ADB Loan Construction: 1986 The 1st stage completed.</p> <p>2.Karachi Port and Qasim Port Finance: Investment from the private sector expected (Rs.160 mil.). Construction: June 1994 - June 1996 Scheduled to be implemented. Although the construction is likely to be undertaken by an Australian private firm, a civil lawsuit concerning the firm's bidding have been under deliberation in the Supreme Court (in the high court the case was decided for the Australian firm). The location of some of the container terminals was changed from the west shore, which was proposed by this Study, to the south part of the port since the private sector hoped to slash the investment cost. No modification concerning the size of the port was made.</p> <p>(2)Inland Container Freight Station : ICFS Subsequent Studies: Dec.1994 The Pakistan Railways presented a conceptual design to build ICFS in which the change of the construction site was proposed (Sheikhupura at the northwestern district was selected for the construction site instead of Kahna Kacha at the south of Lahore). Finance: The government is now under consideration to accept the investment from the private sector.</p> <p>Detail: (FY 1994 Overseas Survey) Since the completion of this Study, the counterpart has been reluctant to promote the construction of both Ports, Karach and Qasim. While 12 years have been passed since then, no progress has been made. The possibility to review this M/P was discussed. However, no action has been taken. The government decided to reorient its policy and to promote the privatization. At present, the government is willing to construct the container terminal with the investment by the private sector. A private firm is now examining a plan, which proposes to alter the existing two berths to the container terminal.</p> <p>(FY 1997 Overseas Survey) J.V. of APL (USA) and ICT (Philippines) is implementing the project for setting up of a container terminal at Berth No.22~24 (Jan.1997 ~ Sep.1998). Project for Berth No.6~9 is under process.</p> | | |

| 9. SITE OR AREA | Entire country | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The study covered 1) roads and road transportation, 2) railways, 3) ports, 4) shipping, 5) aviation and airports, and 6) other transportation modes. Major proposals are as follows:</p> <ul style="list-style-type: none"> - Improvement of database on transport and traffic. - Improvement and expansion of MTRC. - Comprehensive study on inland water ways. - Introduction of containerization and related adjustments of transport modes. | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

The master plan was incorporated into the transport sector of the 6th Five-Year Development Plan (1983-88). Feasibility studies were undertaken on major airports (Karachi, Lahore and Islamabad).

(FY 1993 Overseas Survey)

- 1) Motor way project is denied according to the results of this survey.
- 2) Indus highway has been constructed by OECF loan.
- 3) Geometric Design has been utilized in North-West province.
- 4) In order to determine the method of traffic forecast, NTRC and NHA have discussed which is better, AASHTO or JICA criteria.

(FY 1994 Overseas Survey)

Comprehensive recommendations based upon data (e.g., traffic volume, etc.) analysis were presented, and the M/P contributed a lot to determination of basic transportation policies.

(FY 1994, FY 1995, FY 1997 Domestic Survey)

No additional information.

Description :

(1) Construction of the Locomotive Factory

Subsequent Studies:

1985 D/D completed

Finance :

Feb.1984 L/A 9,760 mil. Yen

*Components: Construction of locomotive factory/ the provision of parts of locomotives, which are planned to be constructed in the first operating year of the factory/ etc.

Construction:

May 1985 Contract concerning the consulting service signed.

1989 Evaluation of tender completed.

Feb.1990 Construction started.

Feb.1991 Installation of machinery started.

Dec.1993 Construction completed.

(2) Locomotive Rehabilitation Project

Finance:

Aug.1993 L/A 6,011 mil.Yen (Locomotives Rehabilitation Project)

*Components: Rehabilitation of 54 locomotives/ the provision of training for the staff of National Railway company

Mar.1996 L/A 6,774 mil.Yen (Locomotives Rehabilitation Project II)

*Components: Rehabilitation of remained 48 locomotives.

(3) Manufacturing of Locomotives

Finance:

Aug.1994 L/A 6,067 mil.Yen (Diesel Electric Locomotives Production Project)

*Components

Manufacturing of 18 diesel locomotives

Mar.1996 L/A 8,578 mil.Yen (Diesel Electric Locomotives Production Project II)

*Components: Provision of 30 locomotives (10 locomotives to import and 20 locomotives to manufacture at the factory constructed with OECF loan).

Detail:

(FY 1993 Overseas Survey)

The procurement of 38 diesel locomotives (30 finished and 8 knocked-down) was completed with nine-billion-yen OECF loan signed in December 1980.

(FY 1994 Overseas Survey)

After the construction of the factory was completed, in August 1994, five diesel locomotives are planned to be manufactured with materials procured with the OECF loan signed in February, 1984. In addition, materials used for the manufacturing of 18 diesel locomotives will be procured with the OECF loan signed in August 1994. With the procured materials, eight of locomotives will be manufactured in the second operating year and ten will be in the third operating year.

According to the investment plan of the railway sector integrated in the Eighth Five-Year Plan (1993/94 - 1997/98), additional 53 locomotives will be procured and 101 will be rehabilitated, for which Rs.16,400 mil. will be allocated.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Subsequent Studies:

Mar.1990 - Feb.1991 D/D

Finance:

Mar.1989 L/A 12,518 mil. Yen

*Components

Construction of (1) water conveyance facility (2) water filtration plant (3) pumps and electric equipment and (4) reservoir, which will be utilized to supply water from Khanpur to the urban areas.

The domestic fund (Rs.1,871 mil.) is provided by the Pakistani government and the Punjab state government.

Construction:

Feb.1995 started (scheduled to be completed by Jul.1998)

Consulting Firm/Nippon Jogesuido Sekkei,Parsons Engineering Science Inc(USA), local

Contractor/Taisei Corp,local

(FY 1997 Overseas Survey)

All components except transmission pipeline to Islamabad & Service Reservoir Islamabad and Housing Colony completed to the extend of 50 to 80 %.

Detail:

(FY 1992 Overseas Survey)

Although the OECF loan is made available already, the source of domestic fund has not been confirmed. Although at present the national government is examining the possible provision of the fund, the commencement of the project requires the fund from the Punjab state government as well.

(FY 1993 Overseas Survey)

As the provision of fund by the national government and the state government has been confirmed, the construction will be completed by 1995 or 1996. It is said that not only OECF but also the Bank of Tokyo has provided the fund for this project.

(FY 1997 Domestic Survey)

Construction has been suspended because the land for treatment plant is not acquired yet and procurement of fund by Punjab state has some problems.

Rental operation of rubber-roll husker to the collaborating rice mills.</p> <p>3. Production of edible oil from rice bran through processing facility and relevant technology from which highly sophisticated use of the rice bran is much improved. In addition, the facility can be used for other local oil seeds and will increase efficiency of oil extraction then ultimately will save oil importation and foreign currency be involved.</p> <p>4. Establishment of facilities for improving and developing postharvest technology in order to meet the farmers' request as well as requirement, necessary test and adjustment shall be made for the relevant postharvest machinery. At the same time necessary training for the handling and operation of the said machinery for the farmers is also implemented for the reasonable use of the by-products of the agricultural produce concerned together with the required implementation of the facility and machinery to go with.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(1)Project 1 has been carried out by the private entrepreneurs.

(2)Project 2 has been carried out by the manufacturers of the agricultural machinery. This results in the timely harvest and the loss is decreased.

(3)The implementation of Project 3 has been considered by the Ministry of Food and Agriculture as a part of the Edible Oil Production Plan included in the Eighth Five-Year Plan.

(4)Establishment of facilities for improving and developing postharvest technology (Project 4)

Finance:

Dec.1991 Grant Aid requested-Not accepted

Request for the Cooperation:

1992 Project-type technical cooperation for mechanization of rice cropping and improvement of post-harvest technology requested.

Dec.1992 Dispatch of short-term experts in the field of agricultural machinery and post-harvest technology requested.

Detail:

(FY 1995 Overseas Survey)

The project "the research and introduction of Modern Rice Transplanting and Harvesting Technologies" is being implemented for a period of three years (1993/94 -1995/96) with own fund of the Pakistani government. For the implementation of the Pre and Post Harvest Rice Research and Development, the request has been made to the Japanese government for funding.

(FY 1996 Domestic Survey)

The project of edible oil and the construction of training facilities thereof have been in halt due to the following reasons:1)The oil extracted from rice bran is not competitive as much as ordinary edible oil, and 2)The present organization among private entrepreneurs doesn't function well for the collection of rice bran.

Description :

(1)Khanpur Dam

*Please refer to "Conduction of Water From Khanpur to Islamabad/Rawalpindi(1984)."

(2)Simly Dam (Phase III)

Finance:

Mar.1989 L/A 5,750 mil. Yen for the construction of the third pipe and the extension of the water filtration plant in order to supply 76,000 tons of additional water to Islamabad from the Simly dam.

Construction:

(FY 1998 Domestic Survey)

1991~Aug.1997

Contractor / Taisei Corp.

Detail:

(FY 1991 Overseas Survey)

Rs 35.37 mil. was allocated for the implementation of F/S for the Cherah dam, but it has been suspended until the Khanpur Irrigation Project is completed. Although the budget allocation of Rs.12.87 mil. was approved in Aug.1989 to undertake the study on the groundwater resources and the request was made for the JICA assistance, the request was turned down by JICA which claimed that similar F/S had been undertaken before.

(FY 1997 Overseas Survey)

The proposed projects have been incorporated into 8th 5-year Plan (1991~1995).

| | Discontinued or Cancelled |

Description :

This M/P was utilized in the transportation/traffic sector of the seventh five-year project (FY1988/89-1992/93) conducted by the Pakistani government. The proposed projects have been implemented as follows:

(1) Indus Highway

The linear-shape adjustment and the pavement renovation of the existing 1200km-long Indus Highway, which runs from the north to the south through the west side of the Indus River basin and leads from Peshawar (near to Islamabad) to Kotri (near to Karachi), and the construction of a new 240km-long highway, which is directly connected to Karachi.

This highway construction plan is, according to the priority based upon pavement status and traffic volume at each region, divided into three phases (Phase I, II and III).

Subsequent Studies:

F/S, D/D undertaken

Consultant / local

The implementing agency/ Planning Commission

Financed by OECF (70%) and GOP (30%)

Finance:

Mar. 1989 L/A (Phase I, foreign currency 8.5bill. yen, domestic currency 3.64bill. yen)

Jan. 1991 & Aug. 1993 L/A (Phase II, foreign currency 45.8bill.yen, domestic currency 8.08bill. yen)

OECF financed 80% of the total construction cost. OECF loan for Phase III will be decided with the progress result of I and II.

Construction:

(FY 1996 Domestic Survey)

Phase I Completed

Phase II Scheduled was completed around Dec. 1997

Phase III Undecided.

(2) Additional carriageway project (N-5: Karachi-Lahore-Islamabad)

(FY 1994 Overseas Survey)

Sections between i) Nowshera and Cablet, ii) Rawalpindi and Kharian will be expanded to 4-lane width. Finance for this project is negotiated with the World Bank.

(3) Construction of the Great Bridge between Sukkar and Rohri**Finance:**

A loan from ADB was admitted in 1994.

(4) Creation of road traffic database

To reinforce the National transport Research Center, the creation of traffic database is under consideration. (FY1994 Overseas Survey)

(5) Comprehensive Study on Transportation System in Lahore.

Oct. 1991 M/P completed by JICA

Detail:

(FY1993 Domestic Survey)

The 7th plan period was over mid-1993. The comparison between the initial plan and results will be done in the national transport plan study of 1994.

(FY1994 Domestic Survey)

The National Transport Plan (the 8th 5-year plan) has been undertaken by JICA since Jan. 1994 lasting in Mar. 1995.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons For Delay and Suspension:

(FY 1992 Overseas Survey)(FY 1993 Overseas Survey)(FY 1995 Domestic Survey)

As the result of social and economic changes such as a population increase and urbanization in the Metropolitan Islamabad area, the opening of nearby road that led to a decrease and higher prices of agricultural land, etc., the Government puts higher priority on the water supply for the metropolitan area where the rapid increase in population has been observed.

Background:

After the completion of F/S study, the Government of Pakistan has decided to suspend the project, because the beneficiary area of the project engulfs part of city districts (which is called park areas by the Government of Pakistan).

Sanyu Consultants Inc. was requested by the Government of Pakistan to make a conception paper for the project in order to coordinate among the concerned authorities, and it was submitted in Feb., 1990 to the Government of Pakistan.

(FY 1991 Overseas Survey)

Rs.1,359 mil. is desired to be funded by OECF.

(FY 1997 Overseas Survey)

Review of F/S including other components as water supply, waste water treatment and sanitation, and grant aid assistance are expected but not requested yet.

(FY 1998 Overseas Survey)

The P&D Division views that cost of development per ha is very high and project might not be feasible in respect of irrigation. The concept clearance committee has therefore decided that the project may be reviewed for provision of drinking water in lieu of irrigation.

Description :

(1)Phase I / First Two Years

(Islamabad ETV Center, 15 Broadcasting Stations, TVRO and 2 Earth Stations)

Subsequent Studies:

The B/D report was drawn up during this F/S.

Finance:

Dec.10.1989 E/N 1,634 mil.Yen

(Project for the Establishment of the Educational TV channel)

27 Jun.1990 E/N 1,783 mil.Yen (Project for the Establishment of the Second TV channel for Education)

Construction:

Mar.1991 the first year project completed

Nov.1992 the second year project completed.

The opening ceremony was held at the presence of the President of Pakistan.Since then, it has been broadcasting seven hours a day at regular time.

Contractor / Sumitomo Corp

(2)Phase II / Last Three Years

Subsequent Studies:

Jun.1994~Dec.1994 B/D

Jul.1995 D/D has been conducted for eleven rebroadcasting stations

Finance:

Feb.1995 E/N 333 mil.Yen for 4 rebroadcasting stations.

(Project for Expansion of the Educational TV Channel)

May 1995 E/N 214 mil.Yen for 11 rebroadcasting stations. (Project for Expansion of the Educational TV Channel-National Loan Phase-1/2)

1996 E/N 578 mil.Yen (Project for Expansion of Educational TV Channel-National Loan Phase-2/2)

Construction:

(FY 1997 Domestic Survey, Overseas Survey)

Feb.1995~Apr.1998

As of February 1998, TV center, 27 ETV.RBSs, 2 Earth Stations have been completed. 3 ETV.RBSs are under construction.

Contractor / Sumitomo Corp

(FY 1999 Overseas Survey)

Construction was completed in 1998. TV centers are in operation since Mar. 1999.

(3)Phase III

(FY 1999 Overseas Survey)

Construction will be implemented after Japan's grant aid is ensured.

*Contents: 2 TV Centers at Karachi and Lahore, 13 Nos. ETV rebroadcast stations

Management & Operation:

(FY 1996 Domestic Survey)

The Islamabad ETV Center and 15 broadcasting stations, constructed for the first two years, have been run without any problem. The 4 broadcasting stations constructed in Phase 1 of the Last Three Years Project have been also managed smoothly.

Effect:

(FY 1993 Overseas Survey)

This project has been contributing to the improvement of the literacy rate and been highly effective in the fields of health, family planning and microindustry.

(FY 1999 Overseas Survey)

ETV rebroadcast station network has extended the TV coverage population of the country to approx. 75%. The coverage number will enhance to approx. 98% when the development of Phase III completes.

Others:

(FY 1997 Overseas Survey)

The PC-I Form of ETV project Phase III has already been submitted to Ministry of Information and Media Development.

| PRESENT STATUS | Completed or In Progress Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
|---|--|--|
| <p>Description : *Mol Dam Subsequent Studies: Aug.1993 L/A 206 mil.Yen. (E/S for Water Resource Development Project in Malis Basin) for the review of the existing plan concerning the dam and the reservoir, its D/D and its tender preparation. Jan.1994~Mar.1995 D/D implemented</p> <p>Difference from JICA Proposal: The boring revealed the weak nature of the soil at the dam site. The additional foundation work was implemented to enhance the stability of the construction site.</p> <p>Finance: (FY 1996 Domestic Survey) The State Government of Sindh plans to implement the project with an OECF loan. The necessary procedure to approve the project implementation has been in process in the Government of Sindh. Thus, the L/A signing is likely to be in 1997. The amount is to be 4,500 mil.Yen and the project contents will be the construction of Mol Dam, of a pilot demonstration farm and of roads to cross the river. (FY 1998 Domestic Survey) The Pakistan government is preparing to submit the request for OECF loan after the cancellation of economic sanctions imposed on Pakistan. Amount (planned): approx. 5 billion yen Contents (planned): Mol dam, a pilot demonstration farm, and the road crossing the river, etc.</p> <p>Construction: (FY 1996 Domestic Survey) The Pakistani Government expects the construction to be commenced from Oct.1995. The construction work is planned to be undertaken for four years, including the preparation for tender. After the signing of L/A, a construction trader will be determined through tender.</p> <p>Situation: (FY 1996 Domestic Survey) A pilot demonstration farm is to be constructed at the site of the present extension farm run by the Government. This extension farm mainly aims at the experiment on varieties of agricultural products. But it has not been in active operation. D/D on a pilot demonstration farm has been completed as a part of an OECF-financed project. Although the procedure to approve the project implementation in the Provincial Government has been delayed due to the low economical efficiency of the Project, the Government desires the early implementation of a pilot farm project to disseminate the agricultural method which requires less water. (FY 1997 Domestic Survey) It is unknown if a request for OECF loan has been submitted. (FY 1998 Domestic Survey) Reasons of not realizing the project: - There is an opinion in the state government of Sindh that EIRR should be enhanced. - Economic sanctions were imposed on Pakistan due to the test of nuclear bombs.</p> | | |

| Description : | | |
| (1)Mithawan Hill Torrent Area (Pilot Project Area) | | |
| Subsequent Studies: | | |
| Aug.1993~Jan.1994 B/D (B/D-39mil.Yen, Phase 1-60mil.Yen, Phase 2-42.8mil.Yen) | | |
| Finance: | | |
| Apr.1994 E/N 487mil.Yen (Project for Water shed Management and Irrigation Development in Mithawan) | | |
| Jul.1994 E/N 456mil.Yen (Project for Water shed Management and Irrigation Development in Mithawan) | | |
| Construction: | | |
| Contractor / Taisei Kensetsu Co.,Ltd. | | |
| Phase 1 May.1994~Mar.1995 completed | | |
| Contents of Works:sand pocket, basin conservation, road rehabilitation | | |
| Phase 2 Nov.1994~Mar.1996 completed | | |
| Contents of works:construction of flood dispersion facility, basin conservation facility. | | |
| Operation & Maintenance: | | |
| (FY 1997 Domestic Survey) | | |
| Constructed structures at Mithawan are being utilized effectively, maintained by local residents. Nursery farm exceeded the capacity of demand for young tree owing to growing consciousness for river conservation. At present a variety of trees are planted for feeding, lumber and firewood. Residents desire for small-scale dam which is impossible for them to construct by, themselves due to financial and technical problem. | | |
| Effect: | | |
| (FY 1997 Domestic Survey) | | |
| Chotinara Flood dispersion facility has contributed to enlarge Irrigation area drastically. River basin conservation project has demonstrating effect for residents and social effect for surrounding areas. | | |
| (2) Mithawan/ Bhattiwala Dispersion Structure | | |
| (FY 1998 Domestic Survey) | | |
| Subsequent study: | | |
| Oct. 1995 ~ June 1997 B/D | | |
| *results/ provision of a grant aid assistance is not appropriate considering the scale and form of the dispersion proposed by Pakistan side. | | |
| 13 ~ 29 Oct. 1997 B/D | | |
| *results/ it is proposed to provide machines and materials necessary for the construction of the facilities which control water in Mithawan Alluvial Fan. | | |
| Finance: | | |
| 4 May 1998 E/N 455 million yen | | |
| Japanese technical cooperation: | | |
| 4 March ~ 29 April 1998 Acceptance of a trainee (erosion control technique). | | |
| (3)Vidor Hill Torrent Area | | |
| (FY 1996 Domestic Survey) | | |
| The implementation of project in this area has been scheduled to be after the completion of Mithawan project. But the state government of Punjab requested to World Bank to carry out the project. | | |
| Subsequent Studies: | | |
| Review Study and D/D (ADB) conducted | | |
| Finance: | | |
| World Bank approx. 1,200 mil.yen | | |
| *Contents of loan | | |
| Construction of two dispersion structures, additional works and others. (rehabilitation of road, dam, construction of bank) | | |
| Construction: | | |
| Aug.~Dec.1996 | | |
| Contractor / Local contractor | | |
| Progress: | | |
| Dispersion structure No.1 was completed but other works had been cancelled because of the difficulty to finish within the loan period. | | |
| Background: | | |
| (FY 1997 Domestic Survey) | | |
| In the beginning, local people were not willing to cooperate but through activities of FAO, explaining the impact which can be obtained from the Project, residents became to participate actively in designing and construction works. | | |
| (4) D.G. Khan Area | | |
| (FY 1998 Domestic Survey) | | |
| No actions have been taken. | | |

Description :

(FY1995 Overseas Survey)

The study results have been circulated to all concerned agencies that would use it for their specific development.

(FY 1996 Domestic Survey)

The JICA mission was dispatched to conduct the Study on the modernization of Karachi Port. However, due to the disturbed peace and order both in Pakistan as a whole and in Karachi, no progress has been made.

(FY 1997 Overseas Survey)

Projects recommended by NTP and included in the 8th Five Year Plan are as listed below.

(1)Road

Double-tracked of N-5.

Improvement of Indus Highway.

Completion of Islamabad - Lahore Motorway.

Highway Safety Programme etc.

(2)Railways

Doubling of tracks.

Electrification of track.

Revamping of signalling and repair of bridges. Rolling stock and modernization of management information system.

(3)Ports & Shipping

improvement of Karachi & Port Qasim.

Development of other various ports.

Institutional improvement etc.

(4)Airport

Improvement of major airports.

Presently 8th Five Year Plan (1993~98) is being reviewed and 9th Five Year Plan (1998~2003) is being formulated by Planning Commission in consultation with all the concerned Ministries and executing agencies / departments.

(FY 1999 Domestic Survey)

The study results were utilized in the 9th Five Year Plan(1998-2003).

Description :

(FY 1996 Domestic Survey)

The establishment of "Chashma Right Bank Development Corporation" has no advance, even though it is recommended as a preparatory stage to implementation. Therefore, implementation will delay even if the request for finance was submitted. The corporation is expected to be implementing and managing organization and it is indispensable to improve an actual complicated organization system which is impediment factor to promote the project. OECF gives a careful consideration to the matter because of high cost. Follow-up study will be undertaken to approve the project.

(FY 1997 Domestic Survey)

The local government of NWF province considers that this project should be implemented after the completion of Gravity Irrigation Development Project in the adjacent plain area financed by ADB.

The slow progress of the above project has caused the delay of realization of this project.

At present, stage I and II of ADB project have completed and Stage III (7 years for implementation) has started in 1994.

(FY 1998 Domestic Survey)(FY 1998 Overseas Survey)

The government of NWF province regards the project financed by ADB loan as the development project phase I and the project proposed by this study as the development project phase II, respectively. The proposed project is to be implemented after the completion of the phase I (right bank irrigation channel project). Since the major component of the proposed project is the large-scale pump, it is necessary to improve the deteriorating electric power supply. The provincial government is required to have further initiative to ensure the fund for this large-scale project.

(FY 1999 Overseas Survey)

The proposed project has been delayed because of the lack of fund for D/D.

| <p>Description :</p> <p>(FY 1998 Domestic Survey) A former member of the study team, Mr. A. R. Mahsud (Nippon Giken Co., Ltd.) now promotes as a loan project at the local site.</p> <p>(FY 2000 Overseas Survey) Funds have not been procured, but the priority of the study project is high for the local government of Panjab Province.</p> <p>(FY 2002 Domestic Survey) The project will be implemented as a loan project because it is not put on a list for grant aid projects. But, the prospect for the restart of the loan project is not certain for the time being.</p> <p>(FY 2003 Domestic Survey) There is a possibility to request for yen loan again if it is resumed after 2004.</p> <p>(FY 2007 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2007 Overseas Survey) The outcome of the study recommends to establish farmers organization, to implement indicated canal lining plan, and to participate to the canal management operation thereafter. However, Irrigation and Power Department of Punjab Province does not have legal framework for establishing farmers organization which is along the objective. Also, although Yen loan had been requested, it has not been realised due to the freeze of Yen loan. Furthermore, government of Punjab Province is willing to implement pilot project by grant aid cooperation than to implement the project as a loan project.</p> <p>10 years has been passed from the completion of investigation by JICA. During this period, Irrigation and Power Department of Punjab Province implemented a lot of canal lining project under the provincial year development plan. Furthermore, the fund for irrigation canal (for branches) lining project in Punjab Province was funded by National Drainage Plan and Federal Government. In addition, while this project is based on JICA report, it is necessary to revision and improvement, considering current strategy and policy framework.</p> | | |

| <p>Description :</p> <p>Funding: (FY 1998 Domestic Survey) In Group 1, Nippon Giken Inc. ma(FY 2007 Domestic and Overseas Survey) Some recommended projects have been completed under the federally funded groundwater recharge project, and other dam constructing projects have been in progress. After 2005, the new development study has been going to be implemented as results of various discussion and supplementary study. However the commencing period is currently unclear due to worsening security situations.de a request as a grant aid project and submitted it to Balochistan State. Balochistan State submitted a request to the federal government,and the government examines the request.</p> <p>(FY 1999 Overseas Survey) A request for grant aid was submitted to the embassy of Japan in April 6, 1998. The amount of money requested is 806.602 million PKR for the cost of constructing five recharge dams, Machinery and facilities</p> <p>(FY 2001 Domestic Survey) Groundwater recharge dams have been constructed in 34 places since 1999. Among the proposed projects of the plan, Dara in Group I and Ghutal Shela in Group II have already been completed. Also, they planned in 28 places in FY 2001/2002, out of which they already secured budget in 11 places. There is no progress in the future prospect of other unimplemented priority projects because of the aid suspension in the past 3 years and the present situation in Afghanistan. Also, it is difficult for a while in the future.</p> <p>(FY 2002 Domestic Survey) The request of 1.6 million JPY for constructing five recharge dams, machinery and facilities was sent in 2002.</p> <p>(FY 2003 Domestic Survey) A preliminary study on grant aid (Preliminary Study on Balochistan State Flood Outflow Development Plan) is conducted from September 2003 to December 2003. They examine whether a basic design (B/D) survey should be conducted in the future.</p> <p>(FY 2007 Domestic Survey) Implementation of "Balochistan State Water use Efficiency Improvement Project" have been decide after various discussion and supplementary study by JICA since 2005(JICA notification: 18 July 2007). However after the Expressions of Interest was invited, the implementation has been halted since security situation has been worsened. resume of the project is currently undecided.</p> <p>(FY 2007 Overseas Survey) Implemented project: Provincial PSDP 2005-2006 and 2006-2007, Federally Funded Ground-Water Recharge Project and Quetta Water Supply Environment Improvement Project Implementing period: 1998-2008 Implementing body: Ministry of Water and Power, Irrigation and Power Department Status: The Khad Kocha II dam and the Dara dam have completed in 2005-2006, construction of the Brewery dam and the Wali Dai dam are in progress under the federally funded Groundwater Recharge Project. Construction of the Jagda Ghutai Shela dam has been implemented under the provincial PSDP, and rehabilitation of Murghi Kotal dam have been carried out during 2006-2007 under the governor's special fund. Construction of the Margi dam have been proposed under the federally funded Quetta Water Supply and Environment Improvement Project. The Samaki dam has been constructed and the Sanzali dam is under construction as one of the sub-project of the Ground Water Recharge Project funded by PSDP. Funding party: Own fund (500 million PKR)</p> <p>Construction: Period: 1997 (design), 1998-2007 (construction) Progress: 70% (Irrigation and Power Department), basic design carried out by departmental staff though local contractors.</p> | | |

| 7. CONSULTANT(S) | Nippon Giken Inc. | | |
| 8. STUDY PERIOD | Aug.1997 ~ Sep.1998 13month(s) ~ | | |
| 9. SITE OR AREA | The study covers the Taunsa barrage and related facilities which are located in the southwest post of the Punjab province, 900km upstream from the mouth of the Indus. | | |
| 10. MAJOR PROPOSED PROJECT(S) | 1)Rehabilitation of Barrage and Hydraulic Structure: Rehabilitation work should be taken-up as earlier as possible. Rehabilitation scale and method must be selected in a manner to meet with availability and capacity of implementation organization. All undersluice gate will be newly replaced with one leaf gate. Weir gate will be repaired continuously using present gate leaf. All gates except canal regulator gates will be electrified in gate operation. Hydraulic Structure shall be repaired in its damaged portion. 2) Rehabilitation of canal bed excavation and repairing canal escapes. 3) Equipment procurement, O & M and monitoring equipment. | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|---|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 1999 Domestic Survey) The Project has not been progressed due to freezing of development assistance caused by nuclear test and coup in the country.</p> <p>(FY 2001 Domestic Survey) The proposed Projects on this Plan do not have any progress because of the aid-suspension during last three years and the present situation in Afghanistan. The huge flood at D.G.Khan area destroyed the tail distribution outlets of the main canal in D.G.Khan canal. Therefore, it is impossible to irrigate to the area of about 200 thousand ha.</p> <p>(FY 2002 Domestic Survey) Due to the fact that Japan's ODA was discontinued to impose sanctions against development of atomic weapons in Pakistan, the project was not carried forward operation. This time the Govt. of Japan decided to launch grant aid of 300 million dollars to Pakistan, and this project was listed as a prospective project of FY2003. The Govt. of Pakistan has already approved PC-I, and submitted a request to the Govt. of Japan.</p> <p>(FY 2003 Domestic Survey) The preliminary study in relation to a grant aid (Preliminary Study for Taunsa Barrage Partial Repair Project) was implemented from August 2003 to October 2003. The chances are high that the basic design (B/D) will be implemented in the first half of 2003.</p> <p>(FY 2008 Domestic Survey) Implemented project: Project for the Rehabilitation of Gates of Taunsa Barrage (Grant aid assistance) Project Cost Estimation: 5,469 million yen (188 million yen from Pakistani side and 5,281 million yen from Japanese side) Implementing body: Irrigation and Power Department, Government of Punjab Contents: Following are major facilities and equipment to be served at the Taunsa Barrage with this grant aid assistance: -Exchange of the 7 sand drain gates on the left bank; -Rehabilitation of 22 gates for the spillway gates; -Exchange of 29 gates with switch gears; -Electrification of 29 gates with switch gears; -Repair of the upper-deck; -Supply of 5 bulkhead gates for provisional closing; -Constructions of river bank protection for shipping and storing the bulkhead gates; and -Supply of the equipment for the repair, maintenance and management of the gates (A 50t crane, 2 tugboats and 3 boats). Construction period: About 50 months estimated, including the detailed design period *Some parts of this projects are implemented with the grant aid provided by Japan and others are conducted with the loan from the World Bank.</p> | | |

Description :

(FY 2004 Domestic Survey)

The study is to formulate a master plan (M/P) for comprehensive flood countermeasures. The Pakistan government has requested Japanese Grant Aid for the Maintenance of flood forecast and alarm system and the construction of a community pond suggested by the M/P. Also F/S on the construction of draub has been requested by the Pakistan government. Currently, the basic design study for the maintenance of the flood forecast and alarm system has been implemented under the grant aid.

(FY 2005 Domestic and Overseas Survey)

Subsequent study: Basic Design Study on the Urgent Pproject for Lai Nullah Flood Forecasting and Warning System in the Islamic Republic of Pakistan

Implementing period: August 2004-March 2005 (7.5 months)

Implementing body: JICA

Objectives: The upper goal of the project is to mitigate flood disaster, particularly to reduce the number of casualties in the capital city. Specifically, the project aims to promptly evacuate the residents to secure locations. To achieve the above objectives, the study aims to procure and install equipment as well as constructing necessary facilities.

Implemented project: Lai Nullah Flood Forecasting and Warning System Project

Implementing body: JICA, Federal Food Commission

Implementing period:

Design: August 2004 to December 2004 (4 months) B/D

Construction: August 2005 to March 2007 (19 months) D/D, S/V

Funding:

Funding party: Yen Grant Aid, E/N concluded on 10 August 2005, own fund

Amount: Yen Grant Aid: 661 million JPY, Own fund: 23 million PKR

Progress:

(FY 2005 Survey)

1. Consultancy Contract has been signed between CTI Engineering International Co. Ltd., Japan and FFC, which has been verified by the Japanese government.
2. Contract for the procurement of equipment has been signed and is waiting for an approval from the Japanese government.
3. Arrangements for establishing PMU are in progress.
4. In this fiscal year (2005/Jul-2006/Jul), 115 million PKR (Yen Grant: 100 million PKR, Own fund: 15 million PKR) was allocated for the project.
5. PMD is making necessary arrangements for the Frequency Allocation through PTA.
6. Necessary arrangements for A/P are in progress.

(FY 2006 Domestic Survey)

B/D and D/D was completed and now has been constructed.

(FY 2007 Domestic Survey)

Progress status of the construction: 100%

(FY 2006 Domestic Survey)

Flood way proposed as a structural measures against flood damage mitigation is now preparing to conduct F/S by local consultant with local government budget (advertisement for consultant has been published in the newspaper in June this year).

(FY 2007 Domestic and Overseas Survey)

Lai Nullah high way and drainage canal project has been implemented by Rawalpindi Development Authority (RDA) since Lai Nullah drainage canal project has been proposed as the main structure long-term measure in the study.

Technical cooperation:

Training program: 2 people 1st of Oct.2005 to 30th. Training on Flood Forecasting and Warning System and water prevention activities.

Dispatch of experts: Project for strengthening Lai Nullah River Flood Risk Management: The objectives of this project is to establish system that enables residents in case of flood in Lai Nullah River basin. This objective will be achieved by utilisation of Flood Forecasting and Warning System, which was provided by grant aid cooperation, improvement of capability of transmitting adequate warning, improvement of capability of promoting escape by making and utilization of hazard map, and improvement of flood risk management capability of related organizations by revising flood measure plans, which was formulated by Rawalpindi District. Planned period for implementation: Dec. 2007 to Nov. 2009. Number of dispatched experts: 6

(FY 2008 Domestic Survey)

Implemented project: Project for strengthening Lai Nullah River Flood Risk Management (Technical Cooperation Project)

Counterpart: Federal Flood Commission, Pakistan Meteorological Department, Municipal government of Rawalpindi

Implemented period: from 1st of December, 2007 to 1st of November, 2009.

Objectives: To establish system that enables residents to evacuate from flood in the target area.

Background: Since there are still some issues such as improvement of accuracy of flood prediction by utilizing observation data accumulated by the flood forecast and alarm system and settlement of the plan for promoting evacuation after the issue of the alert, the Pakistan government requested a technical cooperation project to the Japanese government in 2006 in order to make it use for reduction of flood damage.

Enough progress are not seen for "Repair of Lai Nullah River Channel, Construction of Drainage Canal, Construction of reservoir storage", "Improvement of River Environment", and "preparation of law and system".

| 10. MAJOR PROPOSED PROJECT(S) | <p>The Survey was conducted by building cooperative relations with persons involved in Pakistan and taking council with them many times. It was conducted in steps of analysis of present state, designing to improve healthcare information system, executing operation test, evaluating operation test, and establishing NAP concerning improvement of healthcare information system of Pakistan.</p> <p>Healthcare information system is absolutely imperative for improvement of management in data-utilized healthcare service. From this view, this Survey established national action plan to cope with the needs of information in healthcare management which enable the healthcare information system evolve and improve continuously.</p> <p>Furthermore, the Survey established the model of District Health Information System(DHIS) which match to the decentralization policy of Pakistan. The model was established by introduction of "Prism Framework" as the conceptualistic framework to develop routine information system of Pakistan, and by analyzing the present state of Healthcare Management Information System(HMIS) existing in Pakistan. In the DHIS model, in order to improve the quality of information which contribute to the healthcare management of the district, and to promote continuous use of information, new guidelines, report form, manual, and software by open-source were created.</p> <p>In addition, this Survey was carried out to improve in governance of healthcare system through the healthcare information system, not just only to establish the healthcare information system.</p> | | |

Description :

(FY2007 Overseas Survey)

The Healthcare Department made request through the Economy Agency for support of JICA to good many activity in part of national development plan in next accounting year.

(FY2007 Domestic Survey)

Implemented project: plan to diffuse DHIS(District Health Information System)

Implementing period: from July, 2007 to June, 2010

Implementing body: Quetta and Punjab state government in Pakistan

Funding party: Own funds of the recipient country

Objective: The objective is to establish and diffuse DHIS throughout Pakistan through the Survey, which is developed for provision of information that is necessary to improve the performance of district healthcare system which befit the policy of decentralization.

Progress: PC-I(Planning Commission Form Number I), which is the plan to conduct the project in Government of Pakistan, was approved by Quetta and Punjab state. The training to diffuse DHIS has started in 20 states.

(FY2012 Overseas Survey)

Implemented project: The District Health Information System Project for Evidence-Based Decision Making and Management

(Cooperation period) July 15, 2009 - July 4, 2012

(Counterpart (C/P)) National Health Information Resource Center, Ministry of Health

(Project goal) Routine operation and budget planning are practiced in an evidence-based manner, through newly introduced DHIS (District Health Information System), at the selected districts in Pakistan.

(Outputs) 1. Scale-up Strategy for the DHIS is formulated and approved at the Joint Coordinating Committee. 2. MoH/NHIRC staff is adequately trained on the DHIS operation. 3. The DHIS data are collected in a complete, precise and timely manner from formal first/second health facilities to DHOs (District Health Organizations). 4. The DHIS data are entered into the DHIS software, processed and analyzed at DHOs and further aggregated and analyzed at PHDs and MoH/NHIRC. 5. By using the results of analysis of the DHIS data, the items for resource reallocation and budgeting are identified respectively at DHOs and PHDs. 6. Efforts to promote the DHIS are adequately coordinated among the stakeholders such as organizations relating to MoH and other donor organizations.

Description :

Review Study:

Another JICA study (M/P+F/S) was conducted in two phases during 1988 - 1989 to review this feasibility study. The new study proposed the construction of dams, irrigation development (62,000ha) and a hydropower plant (25MW) in the 1st phase and proposed 3-stage development plan for the NCRB area in the 2nd phase.

The Sri Lankan Government is now considering the construction of Karuganga Dam proposed by the new study. As a result, the proposals of this F/S were greatly changed. (FY1992 Overseas Survey)

Description :

This study results are effectively utilized. The details should be referred to "Development Projects of the Port of Colombo (M/P+F/S)".

(FY 1995 Domestic Survey, Overseas Survey)

No additional information.

(FY 1997 Overseas Survey)

Most of the F/S projects are effectively utilized and the balance few (extension of South West Break -waters removal of south end of NW Breakwaters) to be taken up after further studies.

Description :

This Project has been carried out with the OECF loan (10,650 mil.Yen), IDA (US\$ 9,000), the Japanese grant aid and the Japanese technical cooperation.

(1) Development of Mahaweli Area

Subsequent Studies:

Finance:

Oct.1981 L/A 7,700 mil.Yen (Development of Mahaweli Area)

May.1988 L/A 2,950 mil.Yen (Development of Mahaweli Area II)

For the construction of the irrigation facilities as a part of development Project of Mahaweli in order to irrigate 24,100ha and subsequently to promote the settlement of 24,100 households in the irrigated area. With the OECF loan, IDA fund and Kuwait fund, the construction of canals, the procurement of the materials and the agricultural training to the farmers are to be implemented.

Construction:

At the end of 1992 Main and branch canals completed

1993 Tertiary irrigation and drainage canals and rural roads scheduled to be completed

(2) Construction of Pilot Farm

Subsequent Studies:

Jul.-Aug.1982 B/D

Finance:

Dec.1982 Grant Aid E/N 996 mil.Yen

Construction:

Apr.1983~Mar.1984 Completed

(3) Technical Cooperation

Feb.1985~Jan.1990 Experiments and demonstration on the pilot farm

Dec.1990~Nov.1992 Follow-up technical cooperation (an expert in upland farming)

Nov.1992~Oct.1994 After-care technical cooperation (experts in agricultural machinery and dry-field farming)

The government of Sri Lanka expects the continued technical assistance from JICA to disseminate the farming technique and the knowledge for maintenance and management of the facilities.

Situation:

(FY 1997 Overseas Survey)

Two major activities of the pilot farm are seed production and rice processing. The expected objectives were not realized due to inefficiency of local management staff.

Description :

(1) Expansion of Colombo Airport (I)

Subsequent Studies:

F/S Colombo Airport Development Study Project (Consulting firm: Netherlands Airport Consultants BV (NACO))

Finance:

Apr.1983 L/A 10,200 mil.Yen for the renovation of the passenger buildings/ EXIM Loan for the construction of the runway/
UK ODA for Nav aids/ France ODA for other facilities

Construction:

Jan.30.1989 Completed

Maintenance & Operation:

Due to the frequent occurrence of terrorism, the number of passengers had been less than expected initially. However, because the order, which had prohibited ordinary passengers and vehicles to enter freely the Airport premises, was lifted in August 1995 and the Government launched the tourism promotion policy, the number of passengers has been increasing. Thus the revenue has been increasing as well.

Operation and Maintenance is carried out by Airport & Aviation Services (SL) LTD. The capacity of the airport is expected to be adequate upto 2000.

(2) Expansion of Colombo Airport (II)

(FY 1998 Domestic Survey)

Subsequent studies:

1997 F/S was conducted by own fund.

1998 SAPROF by OECF.

Finance:

Aug. 1999 L/A of yen loan (scheduled).

Planned amount of loan: 10 billion yen

Contents:

Improvement of passenger building, expansion of cargo terminal building, improvement / paving of runways, etc.

Construction: N/A

Backgrounds:

The survey conducted by the Japan Airport Consultants, Inc. in May, 1995 confirmed the following:

*Improvement Plan (II) (expected cost - nine billion Yen)

1. Construction of two two-story piers
2. Construction of seven boarding bridges for both sides of each pier
3. Construction of an additional apron beside each pier

After this plan meets the approval of the cabinet, the international tender will be called for a consulting firm to formulate F/S report for the Expansion of Colombo Airport (II) . However, because the Cabinet has been occupied with the recurrent racial dispute, it is likely to take time before the plan is materialized.

(FY 1997 Domestic Survey)

Counterpart is Airports and Aviation Services Ltd, (AASL) at present. The stock of this private company is hold by government.

Description :

High priority; This project is considered top priority by the Government of Sri Lanka.

The greater Colombo area is the center of political and economic activities in the country, and the outdated and insufficient telecommunications system had become a major bottleneck to be overcome by the early 1980s.

(1) Telecommunications Network Improvement Project in Greater Colombo

Finance:

May.1985 L/A 10,359 mil.Yen for (1) the construction of the junction network connecting 24 stations in Greater Colombo (installation of 109.1km-long junction cable, establishment of 781 new PCM system and installation of 230km-long duct) and (2) the construction of the subscriber network connecting seven stations (installation of 147km-long primary cable, 950km-long secondary cable and 490km-long duct).

Construction:

Jan.1988~Mar.1991 Completed

(2) Telecommunications Network Improvement Project in Greater Colombo

(II)

Subsequent Studies:

Jun.1993 D/D Commenced

Finance:

Mar.1991 L/A 10,968 mil.Yen for (1) the construction of the subscriber network, which was not implemented in the Phase I and (2) the improvement of the equipment.

Construction:

Nov.1991 The contract with the consulting firm signed

Jul.1993~Jul.1996 Completed

Maintenance & Operation:

The maintenance section of Sri Lanka TELECOM is in charge of M&O.

Effect:

The improved subscriber network enhances the reliability of telecommunication services. As a result, the number of subscribers has increased, which results in the increase of the revenue of Sri Lanka TELECOM. Also, the project contributes to the development of economy.

*This study will not be followed up from FY 1997. (the proposed projects have been completed)

Description :

(1) Telecommunication Network Improvement Project in Greater Colombo
(II)

Finance:

Mar.1991 L/A 10,968 mil.Yen

Subsequent Studies:

May.1991 (OECE)

Construction:

Jul.1993~Jul.1996 Completed

After completed, Japanese Construction Company supports Sri Lanka TELECOM for the management and operation.

Refer to "Telecommunications Network Improvement Project in Greater Colombo (1993)".

(2) 100% Digitalization of Junction Networks

Finance:

ADB Loan

Construction:

(FY 1996 Overseas Survey)

Nov.1993~Dec.1996 Completed (Marubeni)

(3) SLTD Organization Improvement Project

Finance:

The World Bank Loan (FY 1993/1994)

Construction:

(FY 1996 Overseas Survey)

Sep.1992~Aug.1994 Completed (Sofrecom, France)

(4) Subscriber's Line Expansion Project

Finance:

Aug.1993 10,112mil.yen (Regional Telecommunications Development Project)

*Contents of the project

Renovation and construction of inner and outer facilities as switching machine, subscribers' cables, etc. in Kandy, Matale, Nawalapitiya, Aatton, Kalutara, Panadura.

Construction:

Dec.1997 Deadline for a tender

Detail:

(FY 1995 Domestic Survey)

Because of the recent political and economical changes, both M/P and F/S have been reviewed since March 1995.

(FY 1997 Overseas Survey)

Financial assistances for project implementation were obtained from OECE, World Bank, ADB and Finland.

The suggestions of the JICA study are being implemented under different projects.

Underground cable systems is an effective mechanism.

| Description : | | |
| <p>(1)Minipe-Nagadeepa Irrigation Rehabilitation Project Subsequent Studies: May.1990~Dec.1991 E/S Finance: Jul.15.1988 L/A 1,850 mil.Yen for the renovation of the main canals and roads (73.3km), the renovation of the branch canals and roads (90km) and the renovation of the tertiary road. Construction: (FY 1998 Domestic Survey) Sep.1991~March 1998 Management & Operation: (FY 1997 & 1998 Domestic Survey) Department of irrigation is in charge of operation of main and branch canals and farmers organizations are in charge of small canal under the supervision of Irrigation Management Division. Effect: (FY 1997 Domestic Survey) Residents were hired for construction. By the income from the work, the life of residents has been improved.</p> <p>(2)Minipe-Nagadeepa Rural Development Project Subsequent Studies: Apr.~May.1989 B/D Finance: Apr.17.1989 E/N 449 mil.Yen Jun.22.1989 E/N 709 mil.Yen for the improvement of rural road and the digging of wells. Construction: 1989 started Mar.1991 Completed (Konoike-Gumi) Operation & Maintenance: (FY 1997 Domestic Survey) Residents are in charge of administration of wells under the supervision of provincial assembly, and Divisional Engineer's Office is in charge of road maintenance. But maintenance cost shortage has caused superannuating. Approximately 40 wells out of 181 wells and some part of road need repairs. Effect: (FY 1997 Domestic Survey) Clean water is available now and the time spent by women for carrying water has been reduced drastically. Rehabilitation of road contributes to revitalization of the area.</p> <p>(3)Construction of Mahaweli Road Bridge Reinforcement of transportation of agricultural product, improvement of distribution network, rural life bases and rural transportation system in Minipe area, the left side of Mahaweli river. Subsequent Studies: Jan.1994 E/N 76 mil.Yen (Project for Construction of the Mahaweri Road Bridge (D/D)) Apr.~Jun.1995 D/D Finance: May.1995 E/N 236 mil.Yen (Project for Construction of the Mahaweri Road Bridge) Construction: Jan.1996~July 1998 (Kajima Corporation) Technical Assistance from Japan: (FY 1998 Domestic Survey) Acceptance of trainees Sep.1996~2 months 1 person (Bridge construction) Sep.1997~2 months 1 person (Bridge construction) Sep.1998~2 months 1 person (Bridge construction) Operation & Management: (FY 1998 Domestic Survey) Department of irrigation is in charge. However, its responsibility is planning to be transferred to Ministry of Road Development.</p> <p>Others: (FY 1997 Overseas Survey) The project has mainly focused on improving irrigation infrastructures in Minipe and Nagadeepa. In addition well, roads and bridge were constructed. Under community development and local capacity building, the government line agencies were provided with variety of supplies including building, vehicles. The projects led to increase the cropping intensity. In addition, cropping pattern has changed.</p> | | |

| | Discontinued or Cancelled |

Description :

In 1987, the Government of Sri Lanka selected the Model Project for Improvement of Agricultural Production, which is one of the priority projects proposed by M/P, as the first priority project to be implemented.

(1) Model Project for Improvement of Agricultural Production

Subsequent Studies:

Jan.9~Feb.20.1989 B/D

Finance:

Jun.22.1989 E/N 996 mil.Yen (Phase I)

Jun.29.1990 E/N 1,075 mil.Yen (Phase II)

Construction:

Feb. 8.1991 Phase I Completed

Oct.17.1991 Phase II Completed

Effect:

increase of paddy yield by 70% annually.

(2) Development of Social Infrastructure

The Construction of 16 Bridges and the Donation of Materials.

Subsequent Studies:

Jul.27~Aug.30.1993 B/D

Finance:

Apr. 5.1994 E/N 1,195 mil.Yen

(Integrated Rural Development Project for Gampaha District (Phase I))

Sep.12.1994 E/N 531 mil.Yen

(Integrated Rural Development Project for Gampaha District (Phase II))

Construction:

Construction Trader: Hazama-Gumi

Aug.9.1994~Feb.20.1995 Phase I

Jan.31.1995~Nov.29.1995 Phase II

(3) Project-Type Technical Cooperation

Upon the request for the project-type technical cooperation, the Japanese government dispatched the preliminary study mission in March 1993. The project-type technical cooperation has been conducted since 1994.

Detail:

(FY 1995 Domestic Survey)

In August 1995, the Sri Lankan Office submitted a request for the review survey of the 1987 M/P to the Japanese Embassy.

| Construction of Jetty | 200m | | | | | | | | | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Subsequent Studies:

Oct.23~Nov.12.1990 B/D

Jan.17~Jan.31.1991 B/D

Jan.23. 1992 E/N 28 mil.Yen (Rehabilitation of Kirinda Harbour D/D)

*Socio-economic survey and of the fishery survey and the formulation of the renovation plan.

Components of Renovation Plan:

Phase I- Extension of the main breakwater by 60m and construction of the 80m-long sub-breakwater

Phase II- Extension of the main breakwater by 120m and construction of the 120m-long jetty and the 140m-long sub-breakwater

phase III- Extension of the main breakwater by 20m, rehabilitation of the main breakwater (120m) and construction of 90m-long sub-breakwater

Finance:

May.28.1992 E/N 737 mil yen (Rehabilitation of Kirinda Harbour-1/3)

May.31.1993 E/N 1,209 mil yen (Rehabilitation of Kirinda Harbour-2/3)

May.16.1994 E/N 212 mil yen (Rehabilitation of Kirinda Harbour-3/3)

Feb.1.1999 E/N 5 mil yen

Construction:

Phase I- Oct.1992~Mar.1993

Phase II- Jun.1993~Mar.1994

Phase III- Jun.1994~Mar.1995

Contractor:Goyo Construction Co.

After Completion of Construction:

The dispatch of short-term experts on the maintenance of cold storage and on the coastal survey works, which was planned to be started in Nov.1995, has been suspended due to the worsening public peace and order. (FY 1995 Domestic Survey)

Maintenance and Operation:

(FY 1996 Domestic Survey)

The Kirinda Port has been well maintained by the Ceylon Fishery Harbours Corporation. Since the Port resumed its operation, the Corporation has been monitoring the Port and in May 1996 the first dredging was undertaken. The dredged earth was approximately 5,000cu.m., which was less than the figure estimated in B/D, 10,000cu.m. Therefore, it can be concluded the renovation work was successful.

Effect:

(FY 1996 Domestic Survey)

The fish catch is reported to be 1,500t annually, which well exceeds 800t estimated in B/D. It results in the income increase among fishermen.

Detail:

(FY 1994 Domestic Survey)

The implementation and management work conducted by the consulting firm was completed on October 12, 1994.

(FY 1996 Overseas Survey)

The request has been submitted for the extension of quay wall and the installation of machinery and tools for workshop.

Package 1 Joint Facilities Kalu ganga dam NCP canal New Irrigation Area 23,900 ha Cashew Farm 10,000 ha Rehabilitation 25,500 ha Package 2 Joint Facilities NCP canal Minipe LB canal New Irrigation Area 26,600 ha Rehabilitation 38,600 ha Package 3 Joint Facilities NCP canal Minneriya Pump Station New Irrigation Area 27,000 ha Cashew Farm 10,000 ha <F/S>Agricultural Development (62,000ha) in the Amban Ganga basin and hydro-power generation (25MW) by constructing the Moragahakanda dam with a height of 72m. Principal feature of irrigation and drainage system is as follows: - Rehabilitation of irrigation canal 60km - New Construction of irrigation canal 120km - New construction of O/M roads 150km - Downstream land development 13,900ha - Drainage canal 90km</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| <p>Subsequent Studies: (FY 1998 Domestic Survey) Type of study: Review F/S Cost: 63 million Rp. Period: Jan.-Dec. 1999 Consultants: Nippon Koei, Co., Ltd. A.GIBB (U.K.)</p> <p>Finance: (FY 1998 Domestic Survey) It seems that the request for OECF loan will be submitted after the review of F/S.</p> <p>Detail: 1. Priority decreased: New government in 1989 placed Janasabia-Plan as significant task in policy. The content of plan: To give Rp 2,200 per month to poverty. 2. Since 1989 structural adjustment proposed by World Bank and IMF has been implemented.</p> <p>(FY 1994 Domestic Survey) The Mahaweli Development Board undertook the survey for the Kalu Ganga Dam Construction Project in this project area from 1992 to 1993 and examined its result with this proposed project. What was proposed to the cabinet, which was convened on July 6, 1994, was to undertake the construction of both dams simultaneously in order to avoid the operational losses which were likely to take place in case each dam was constructed separately. However, considering the availability of investment fund and their priority, the construction of the Moragahakanda dam is planned to come before the construction of the Kalu Ganga dam.</p> <p>(FY 1995 Overseas Survey) The construction of the Moragahakanda dam is under examination as the first stage to realize this project.</p> <p>(FY 1996 Overseas Survey) In Jun.1996 the Re-Appraisal Study was implemented and the Government of Sri Lanka is now seeking the assistance to carry out F/S based on the Re-Appraisal Report. The construction of the Moragahakanda dam is planned to be implemented based on this F/S and funds has been sought. This project requires the maximum of 2,000 families to leave their lands. Therefore, the Government is seeking for funds to provide them with irrigation facilities and public infrastructure in new lands. The proposed project has been modified and it is decided to implement only the dam construction and civil works necessary for the resettlement.</p> <p>(FY 1997 Overseas Survey) New large-scale irrigation development projects are put lower priority by Sri Lankan government because of their low profitability. There is less possibility to implement this project at present.</p> <p>(FY 1998 Domestic Survey) It seems that the request for OECF loan for constructing Moragahakanda Dam will be submitted after the review of F/S.</p> <p>(FY 1999 Domestic Survey) A request for Japan's ODA Loan hasn't been submitted. A review on F/S is under preparation by Kuwait fund.</p> | | |

Description :

After the completion of this study, which was to formulate the emergency plan for the construction of 350m-long breakwater, the Sri Lankan government was seeking the possibility to implement the project with the assistance of the Japanese government.

It is said that the construction of the breakwater will urge foreign shipping companies to open up their business at the Port of Galle.

(FY 1992 Overseas Survey)

The Sri Lankan government is examining the possibility to implement the project with the BOT scheme and will appoint an implementing company on June 30. At the same time, it is under consideration to apply for an OECF loan.

(FY 1995 Domestic Survey)

An implementing company has not been appointed, yet. However, the Government has been seeking the way to realize this project. For example, it calls to foreign companies to propose a new development project of the Port of Galle.

(FY 1997 Overseas Survey)

The importance of the Galle Port has been reconfirmed in the study of Integrated Development Plan in the Southern Area conducted in 1996. The project will be possibly implemented if fund as financial assistance is secured. Sri Lankan government was planning to apply the BOT scheme but the plan is being suspended. The government plans to review the scale of the project.

(FY 1997 Overseas Survey-Counterpart)

The new offers for the development of Galle Port on BOT basis were called for by the Ministry of Plan Implementation and have been evaluated. Finally, Mott Mac.Donald/China Construction (UK-China consortium) was selected for the development of the outer harbor and LOI was issued in May 1996. The consortium was required to submit a F/S covering financial, technical and environmental aspect of the project. The JICA design was updated. In January 1998, Govt decided to cancel the LOI because of their inability to show the financial aspects to go ahead with the project.

Fresh tenders will be called very soon.

(FY 1999 Overseas Survey)

The project is difficult to implement with BOT scheme. The government of Sri Lanka made a request for Japanese ODA loan in Aug. 1999.

Description :

Finance:

(FY 1997 Overseas Survey)

Government budget

1994: 40 mil.Rp, 1995: 55 mil.Rp, 1996: 40 mil.Rp, 1997: 40 mil.Rp, 1998: 45 mil.Rp, 1999: 63 mil.Rp

Project components such as agricultural roads, rural electricity, minor irrigation facilities, drinking water facilities, social amenities were implemented.

<Request for Financial Assistance>

A part of the proposed project for District-I is in process in order to be implemented as a grant aid project.

(FY 1995 Overseas Survey)

The main report has been distributed among the relevant Ministries, Department and Institutions. Data and statistics have been used and an action has been taken to implement a proposed project. A request for grant aid has been submitted to the Japanese government.

(FY 1996 Domestic Survey)(FY 1997 Domestic Survey)

The request for grant aid assistance has been submitted to the Japanese Government.

(FY 1997 Overseas Survey)

Annual mission, which visited Sri Lanka in January, recommended to implement projects utilizing the counter value of KR2. Sri Lankan government has requested grant aid assistance for bridge construction in 1998. The project priority is in rural road.

(FY 1998 Domestic Survey)

It seems that the government will not request a grant aid assistance. They are examining other source of fund for the bridge construction.

(FY 1999 Overseas Survey)

JICA's grant aid: 407.9 mil. Rs.

Government budget: 20.1 mil. Rs.

*Contents: Rural roads, Weekly market centers, Community centers, Libraries, Agricultural training centers

(FY 2000 Domestic Survey)

No information.

| 3. SECTOR | Transportation | / Road | 4. TYPE OF STUDY M/P |
| 5. | COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | |
| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | To formulate a M/P on bridge development at nationwide with the target year of 2010 and to make a guideline on maintenance/repair of the bridges. | | |
| 7. CONSULTANT(S) | Japan Bridge and Structure Instituted, Inc. | | |
| 8. STUDY PERIOD | Mar.1995 | ~ Aug.1996 | 17month(s) |
| 9. SITE OR AREA | Whole Sri Lanka except the north and east area | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>There are about 4,430 bridges on national trunk roads. Among them, 206 bridges were judged to need urgent rehabilitation and tabulated in the list by RDA. Considering the conditions of all bridges in Sri Lanka, 100 bridges were selected.</p> <p>The 100 bridges which need to be rehabilitated were divided into 3 groups based on the priority of rehabilitation which was determined considering function of roads, traffic volume and damage degree of the bridges. The Project Implementation Program was prepared in accordance with the priority.</p> <p>The study results were extended to 4,430 bridges, and it was assumed that 253 nos. of bridges need rehabilitation. Rehabilitation Plan for the 253 bridges were prepared.</p> | | |

Description :

1. Reconstruction Project of Five Bridges

Subsequent Study:

(FY 1998 Domestic Survey) March 1998 Study on B/D

Finance:

(FY 1998 Domestic Survey)

27 Aug. 1998 E/N 468mil.yen (Reconstruction Project of Five Bridges)

*Contents of the project: Reconstruction of Bridge No.31, 32, and 38.

(FY 1999 Domestic Survey)

27 May 1999 E/N 878mil.yen (Reconstruction Project of Five Bridges)

Construction:

(FY 1998 Domestic Survey)

announcement of P/O: 17 Nov.1998 ; an explanatory meeting for bid (scheduled): 8 Dec. 1998 ; bid (scheduled): 8 Jan. 1999 ; Commenced: 31 Mar.1999 ;

Completion(scheduled): 31 Mar.2000

| | Location | Route | River | | |
|------------------|------------------------|--|------------|-----|----------------|
| Bridge No.31 | South-Galle | Elpitiya-Opatha-Avittawa Road(Modaela) | Galwake | 14m | RC Box Culvert |
| Bridge No.32 | North West-Puttalalm | Bolawatta-Dankotuwa Road | Oya | 14m | PC |
| Bridge No.38 | Sabaragamuwa/Ratnapura | Gilimale-Malwala-Carney Road | Eluwamulla | 25m | PC |
| Nartupana Bridge | | Horana-Anguruwatota-Aluthgama Road | | | |
| Kospalana Bridge | | Moratuwa-Piliyandala Road | | | |

(FY 1999 Overseas Survey) Progress situation: The construction of Bridge No.31, No.32, and No.38 has completed to 78%. The construction of other bridges will start soon.

(FY 1999 Domestic Survey) Bridge No.31, No.32, and No.38 were reconstructed.

Operation & Management:

(FY 1998 Domestic Survey) RDA (Road Development Authority) will be in charge of operation & management after the completion.

(FY 2001 Overseas Survey) As these bridges are located on National Highways maintained by RDA, normal maintenance work of these bridges are also carried out by RDA. There is no considerable maintenance requirement at present as they are new.

Effect:

(FY 1998 Domestic Survey) It is expected that reconstruction of bridges will vitalize economic activities such as agriculture, commerce, industry, etc., improve traffic, improve access to public facilities such as schools, hospitals, administrative offices, etc., promote exchange activities with other local communities.

2. Rehabilitation Project of Small/medium-sized Bridges

(FY 1998 Domestic Survey)

Rehabilitation Project of Small/medium-sized Bridges (Phase II, tentative name).

The remaining two bridges are planned to be rehabilitated by a grant aid assistance.

(FY 2000 Domestic Survey)

Subsequent Study: Study on B/D Rehabilitation Project of Small/medium-sized Bridges (Phase II, tentative name). (Oct. 2000)

3. Reconstruction of Gampola and Muwagama Bridge

Subsequent Study:

(FY 2001 Overseas Survey) Feb. 23, 2001 D/D 41 million yen "Reconstruction of Gampola and Muwagama Bridge (D/D)"

Fund Procurement:

(FY 2001 Domestic Survey) Jun. 15, 2001 E/N 1497 million yen (2001-430 mil. yen, 2002-765 mil. yen, 2003-302 mil. yen) "Reconstruction of Gampola and Muwagama Bridge (D/D)"

Construction Progress:

(FY 2001 Overseas Survey) Oct. 10, 2001 Construction was started.

4. Progress situation of the proposed project

(FY 2001 Overseas Survey) 30 bridges are remaining out of 100 bridges studied for the rehabilitation/reconstruction. Design work of some of these bridges have been completed.

Background:

(FY 1997 Domestic Survey) The Government of Sri Lanka requested Japan's Grant Aid for reconstruction of 13 bridges among 35 bridges which were classified under The Group one, Top Priority to be rehabilitated in the Master Plan Study on Bridge Development, in November, 1996.

In June, 1997, The Government of Sri Lanka again requested Japan's Grant Aid for reconstruction of 3 bridges which especially need urgent rehabilitation.

JICA will dispatch a preliminary study team to Sri Lanka from 12th November, 1997 (3 weeks).

Description :
(M/P)
Finance:
(FY 1998 Domestic Survey)
M/P proposed projects are under implementation with OECF loan, French Protocol, Suppliers' Credit, their own funds.
18 Aug. 1997 L/A 3,114 million yen (Transmission and Substation Development Project (I))
*Project components: 1) Rehabilitation of the Kolonnawa Substation which provides approx. 60% of the City of Colombo's power supply, and 2) Upgrading of the 132 kV transmission line to 220kV in Western Province (South) to meet demand in that area.
(FY 1999 Domestic Survey)
28 Sep. 1998 L/A 4,030 million yen (Transmission and Substation Development Project (II))
*Project componets: 1)Construction of Ratnapura 132/33kV Grid Substation; 2)Construction of Athurugiriya 132/33kV Grid Substation; 3)Reconducting of Kelanitissa-Kolonnawa 132kV transmission line; 4)Expansion of Thulhiriya Grid Substation; 5)Installation of additional equipment at Chilaw Grid Substation; 6)Installation of static capacitors at Kelanitissa and Pannipitiya Grid Substations.
(F/S)
1. Telecommunication Network Expansion Project in Colombo Metro Area
(FY 1998 Domestic Survey) (FY 1998 Overseas Survey)
Finance:
18 Aug. 1997 L/A 10,023 million yen (Telecommunication Network Expansion Project in Colombo Metro Area I)
28 Sep.1998 L/A 13,369 million yen (Telecommunication Network Expansion Project in Colombo Metro Area II)
Project Components: This project aims to respond to the demand for telephone services by installing new switching systems in the Colombo Metro Area.
Phase II includes part of the scope excluded by F/S.
Construction:
(FY 1998 Domestic Survey) (FY 1998 Overseas Survey)
Period: Phase I March 1999~Aug.2000 / Phase II Aug.1999~Jan.2001
Progress situation: Phase I Bid was made in July 1998. Now is preparing for contract. / Phase II Preparing for bid.
(FY 2002 Overseas Survey) Construction of Phase I: 99 % completed (Planned completion: Mar. 2003 as of Jan. 2003)
Benefitful Impacts: (FY 2001 Domestic Survey)The total increase of the telephone lines of 130 thousands are expected because of the additional lines by the project of 110 thousands and transfer of lines of 20 thousands.
2. Construction of Central Ring Optical Fiber Transmission Network
(FY 1998 Domestic Survey) (FY 1998 Overseas Survey)
Finance: It is under implementation as an additional scope of "The Regional Telecommunication Development Project (12 Aug. 1993 L/A 10,112 mil. yen)". Period of L/A was extended three more years.
Construction:
(FY 2001 Domestic Survey) Period: Phase I from Sep.1998 to May 2000, Completed, Phase II from Mar.2000 to Oct.2001, Completed
Profit effects:
(FY 2001 Domestic Survey)The demand on telephone was satisfied by means that the additional installation of the transmission lines connecting between central and western principal cities with the telephone exchange.
3. Construction of New ISC, TSC
(FY 1998 Domestic Survey) (FY 1998 Overseas Survey)
SLTL has conducted a study and partially changed the contents of the F/S proposed project (Deleting the Earth station ISC: 2,600 circuits --> 4,200 circuits, TSC: 21,000 circuits --> 10,000 circuits).
The project is being implemented with Suppliers' Credit or their own funds.
(FY 2001 Domestic Survey) The construction was completed in Dec.1999. International telephone exchange 2,000 lines, Out-of-Town telephone exchange 10,000 lines, Capacity of exchange (10,000/20,000 lines)
Profit effects:
(FY 2001 Domestic Survey) The increasing Out-of-Town and International telecommunication became possible to be exchanged smoothly because of the Telecommunication Network Expansion Project in Colombo Metro Area, the Telecommunication Network Expansion Project in Rural Cities and other projects.
Privatization of government institute:
(FY 1998 Domestic Survey) Sri Lanka Telecom (SLT) was privatized to Sri Lanka Telecom Limited (SLTL) in Aug. 1997.
Situation after privatization: The number of subscribers has increased from 20,000 to 40,000 for a year after the privatization. It is planned to shorten the period of construction of the projects which are under implementation or planning. Medium or small-scale projects are being implemented with ODA or Suppliers' Credit. NTT is participating in management and project construction by dispatching several experts to SLTL.
Background:
(FY 1997 Domestic Survey)
Conditions during Study Period: The implementation of the 5-Year telecommunications development plan to be completed by the end of 1994 was delayed due to budgetary constraints. To cope with this, the completion target was extended up to the end of 1997.
To speed up the development, private telecommunications investor participation was planned.
Present Conditions:
Based on the private participation policy, Sri Lanka Telecom (SLT) was changed to Sri Lanka Telecom Limited (SLTL) with corporatization recently. At the same time, NTT Japan became a partner of SLTL. SLTL is at present preparing a new corporate plan to enhance services in accordance with JICA Master Plan. OECF fund and other finance sources will implement several projects proposed by JICA Team as urgent projects.
(FY 2001 Domestic Survey) 1) All investments other than ODA were suspended in OCT.1999 because the SLT project investing cost in 2000 has been substantially suppressed as a result of the telephone demand survey in 1999 and many declination of the new lines construction of the year. Furthermore, the Telecommunication Network Expansion Project in Colombo Metro Area II was also suspended because of the demand decreasing in Colombo central area. 2) The SLT gave up the additional telephone installation in the underpopulated area because the frequency allocation, which has been made application to the government in 1997, was not approved. 3) The SLT are facing the management problem because of the income reduction of 2 billion Rupee for the international telecommunications as a result of that the new other entries to the business. 4) The income of telephone charge is decreasing because the mobile phone subscribers are increasing as a result of that the mobile phone firm came into the business under the government policy.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|---|
| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| Description : | | |
| <p>(FY 1997 Domestic Survey) The study team for the development of the new port of Colombo submitted the final report in September 1996. In accordance with the proposal of the report, the Government of Sri Lanka made an official request for a yen loan for 1997, however, the Government of Japan suspended judgement due to the fact that the development of QEQ on a BOT basis was not concluded and the redevelopment plan of QEQ was not finalized.</p> | | |
| <p>(FY 1999 Overseas Survey) F/S will be undertaken for South port under ADB. The TOR for F/S has been prepared in consultation with World Bank and JBIC. F/S is scheduled from March 2000-January 2001.</p> | | |
| <p>(FY 2001 Overseas Survey) F/S has been completed by ADB and final report is awaited. ADB has approved US\$ 10 million Technical Assistance Loan for Colombo Port Efficiency and Expansion Project. Invitation for Expression of Interest for Consultancy services is in progress and closing date for submission of documents is Dec. 12, 2001.</p> | | |
| <p>(FY 2001 Domestic Survey) This Study was requested by SLPA (Sri Lanka Port Authority) based on the viewpoint on the middle and long term development plan to study the possible developable space from whole port areas preliminary and comprehensively. As a result, it was suggested the development of the southern port and the new port at north of present port as a practical plan, and that it was the most effective and economical to develop the southern port as a short term plan. On the other hand, the management of the QEQ (Queen Elizabeth Quay) was entrusted to the private firm (SAGT: South Asia Gateways Terminals, the firm invested by R&O) and the expansion works was started in order to operate QEQ as the container terminal in earnest. This fact has not been assumed at the time of the Study and the role of the present QEQ became different from the suggestion of the Study. SAGT which has acquired a right of QEQ required the scale expansion of the southern port and was pressed to review the feasibility of the southern port development which became an important factor to develop QEQ area. As a result, the ADB Study as "F/S Study on the Southern Port of the Port of Colombo (Nov.2000)" based on the suggestions by this Study was implemented. As there is a difference between the suggestions by both Studies on the development scale, shape and etc., SLPA takes time to reach the decision as an implementing agency.</p> | | |
| <p>Future perspective: (FY 2001 Domestic Survey) Although it does not have any relation to this Study, the development project of North Pier of the Port of Colombo as "The Port of Colombo Urgent Improvement Project" has been proceeding by JBIC loan based on the Development Study of "Development of the Port of Colombo" implemented in 1989.</p> | | |
| <p>(FY 2002 Overseas Survey) 1) Project director has been appointed to carry out the Project 2) Regarding selection of Consultant for Colombo Port Efficiency and Expansion Project, bids were evaluated and sent for ADB's concurrence. 3) Selection of Panel of Experts is in progress.</p> | | |
| <p>Related projects: (FY 2001 Domestic Survey) Although not directly related, following the results of 1989 development study "Port Colombo Development Plan", "Port Colombo emergency rehabilitation project", development plan of Port Colombo's north Pier, is in progress using JBIC loan.</p> | | |

Description :
Subsequent study:
(FY 1998 Overseas Survey)
Internal revision (Own Fund)
*Difference from JICA's proposal: reduction of the project budget to Rs. 1,191.3 million, reduction of equipment by 50%.

Finance:
(FY 1998 Overseas Survey)
9 Feb. 1999 L/A 3.7 million Kuwait Dinar (Kuwait Fund)
*Contents: Rehabilitation of irrigation system, institutional development, engineering services, training in Liyangastota, Muruthawela, and Badagiriya irrigation scheme.

Construction:
(FY 1998 Overseas Survey)(FY 1999 Overseas Survey)
1999 - 2004.
(FY 2001 Overseas Survey)
Progress Situation: The progress up to the end of Oct. 2001, is about 17% of the total work.
Perspective for remaining work: The remaining work will be completed on schedule.

(FY 2002 Overseas Survey)
The target date of completion of the project is end 2004. However, as the initial stage of the project registered slow progress, the project is expected to be completed in 2006.

Total cost incurred during the period of operation of the project;

| | CF (Rs.M.) | RFA (Rs.M.) |
|------|------------|-----------------------------|
| 1999 | 0.8 | -- |
| 2000 | 12.26 | 36.50 |
| 2001 | 30.84 | 77.74 |
| 2002 | 26.15 | 37.69 (as of the Oct. 2002) |

Background:
(FY 1997 Domestic Survey)
Sri Lanka Government (Department of Irrigation) has been preparing for implementation of the project by World Bank loan and OECF loan, but it is not realized yet.

According to the document (Revised Cost Estimate, April 1997) of Department of Irrigation achieved (informally), construction costs for 3 projects are being reviewed. Department of Irrigation has told JICA study team of intention to request Yen Grant assistance for 1 project and OECF loan for other 2 projects (Informal meeting on 1996/May).

This project was not in the agenda during 1997 informal meeting with the Government of Sri Lanka, it is necessary to advise the country's related organization on the procedures regard to carry out the business.

Greater Kandy Water Supply Project : About 5 billion 151 million yen. *Contents of the Financed Projects: Water intake facilities, water purification facilities, chlorination facilities for distribution reservoir, water supply facilities, water distributing installations, machine parts procurement for operation and maintenance, and consulting services. (FY 2004 Overseas Survey) Design: May 2001 - completion in Jun. 2002 Construction: Dec. 2003 - Aug. 2006 Management section: NWS&DB/National Water Supply & Drainage Board, Kandy Municipal Council Tender etc. : The construction is commissioned to M/s Taisei/Hitachi consortium (the contract was concluded on 9 Dec. 2003) Consulting service is commissioned to Nippon Jogesuido Sekkei Co., Ltd. The overall progress of the project is 33% (As of Oct. 2004). Technical transfer etc. : Acceptance of two trainees, and dispatch of experts (for the designing period). (FY 2008 Domestic Survey) The first stage of the construction was completed, and the second stage is being prepared with the balance of the yen loan.</p> <p>2. Kandy Sewerage Project (FY 2000 Overseas Survey) Application has made for JBIC funding. (FY 2001 Overseas Survey) Requested amount: 2,386 million yen Contents: Sewage pump house (Capacity: 8,500m3/day), Sewer pipeline approx. 22km, 2 Sewage pump houses. (FY 2004 Overseas Survey) The JBIC Fact Finding Mission visited the site in Apr. 2004. The SARPROF/Special Assistance for Project Formation mission is waiting for the completion of EIA/Environmental Impact Assessment in the specific region where the sewerage plant is located. Management section: Candy city council (FY 2008 Domestic Survey) No information to be specifically mentioned.</p> <p>3. Nuwara Eliya Water Supply Project (FY 2000 Overseas Survey) Implementation is funded by JICA under Grant Aid Assistance. (FY 2001 Overseas Survey) Fund Procurement: To be implemented by Japan's Grant Aid. (481 million yen) Contents: 7 Wells (Intake capacity: 6,000m3/day), Chlorination facilities, Transmission pipeline approx. 8km, 5 Transmission pump houses, 5 Distribution reservoirs, Distribution pipeline approx. 9km. (Stage I, II included.) (FY 2002 Domestic Survey)(FY 2002 Overseas Survey) 28 Nov. 2001 E/N 481 mil.Yen (The Project for Improvement of Nuwara Eliya Water Supply 1/2) 3 Jul. 2002 E/N 555 mil.Yen (The Project for Improvement of Nuwara Eliya Water Supply2/2) Bidder: Taisei Corp. Date and period of the planned start of construction: Jun.2002 (10 months), Oct.2002 (12 months) (FY 2004 Overseas Survey) Design: from May, 2001 to Jun. 2002 Construction: Stage 1: from 1 Jan. 2002 to 15 Mar. 2003 Stage 2: from 24 Jul. 2002 to 31 Mar.2003 Management section: Nuwara Eliya Council Technical transfer etc.: Regular monitoring by an engineer from NSDB/National Science Development Board, an assistant engineer from Nuwara Eliya Council, a JICA expert and an inspector. (FY 2008 Domestic Survey) Completed on schedule.</p> <p>4. Nuwara Eliya Sewerage Project (FY 1999 Domestic Survey)(FY 1999 Overseas Survey) Together with above water supply project, applied for Japanese Grant Aid in the year 2000. (FY 2000 Overseas Survey) Application has made for JICA Grant Aid Assistance. (FY 2001 Overseas Survey) Request for JICA's Grant Aid has been submitted. Contents: Sewage treatment plant (Capacity: 1,400m3/day), Sewer pipeline approx.14km, 2 Sewer pump houses. (FY 2004 Overseas Survey) The Grant Aid was requested to JICA through the ERD/Economic Relations Division in Aug. 2002. Management section: Nuwara Eliya Council Other progress: The investigation for the upper and lower water service project is in progress in the southern part of Candy city. The fund is to be supported by the Danish government (DANIDA/ Danish International Development Assistance). (FY 2008 Domestic Survey) No information to be specifically mentioned.</p> | | |

Description :
(FY 2000 Domestic Survey)
As the result of the Feasibility Study, the Sri Lanka Government has the strong intention to embody the materialization of the project. Therefore, the Sri Lanka government submitted the request letter for JICA BD/DD study in August 2000, and has a plan to implement the project soon.
For the construction, the Sri Lanka government will request for the Japan's ODA loan.

Subsequent Study:
(FY 2001 Domestic Survey)
21 Jun.2000~ 29 Mar. 2002 Detailed Design Study on the Outer Circular Highway to City of Colombo in the Democratic Socialist Republic of Sri Lanka.

(FY 2002 Domestic Survey)
JICA's D/D for the roads between Wattala and Aottawa (28km) was launched on Sep, 2001, but residents' opposition group hindered its progress. The Govt. is carrying out campaign for generating understanding on projects among local people. Moreover, the Govt. made a public announcement on the area as commercial land, instead of enforcing coercive legal methods. The Govt. shows desire to launch the project through Yen Loan after D/D.

(FY 2003 Domestic Survey)(FY 2003 Overseas Survey)
The consultant contract was concluded between JICA and consultants (Oriental Consultants, Pacific Consultants International) on study of detailed design (D/D) on June 21, 2001 and put into effect, but it was suspended on January 30, 2002 because relocation of residents was not facilitated on the side of Sri Lanka. The Road Development Authority, which is the Implementation Agency of the government of the party nation, has made explanation to the local residents at site and efforts to obtain agreement from them since the suspension at the end of January 2002. In addition, the government of the party nation has been performing a survey at its cost. As of November 2003, RDA is requesting JICA to resume a part of study of the Southern section of 12km with less problematic impacts on opposing local residents, out of the total study target length of 28 km.
Although it has not reached concretization, the Japanese government is expected to provide a yen loan in response to the request of the party nation government.

(FY 2004 Domestic Survey)
As for the Phase 2 of the D/D of Outer Circular Highway to the City of Colombo, D/D of Southern 12km section and B/D of Northern 26km section is in progress during June 2004 - May 2005. This aims to conduct detail design of the southern section, which is already surveyed by counterpart Gov., and to prepare documents to progress explanation to Northern section residents, provide technical assistance, and to clarify conditions of basic designs with the preparation of an order documents.
There is a possibility of D/D implementation for Northern section if it is possible to conduct survey by gaining agreement from the residents.

(FY 2005 Domestic Survey)
Subsequent study: Detailed Design Study on the Outer Circular Highway to City of Colombo
Implementing period: June 2001-March 2002, May 2004-July 2005
Implementing body: JICA
Objective: To conduct B/D and D/D study on the Outer Circular Highway to City of Colombo, and to transfer output to a planned Yen Loan project.
Relationship with the report: B/D and D/D was conducted as subsequent study, based upon the selected route in the F/S in the report.
Status: Requesting for Yen Loan as of 2005. Subsequent study initially aimed to conduct D/D on the whole section of the planned project sites (29km). However, opposition campaign by a residential group have let the project to suspend. Only D/D of Southern 12km section was completed after resumption. However, the Northern 16km section is unable to resume the study due to residential campaigns. Although result of the study shows feasibility for the southern section alone, realisation of the project is considered to be difficult without northern section to be feasible.
F/S study is being conducted for a possibility of road reallocation for unsolved sections by University of Moratuwa. Future progress is uncertain, where activities by the Sri Lankan government, such as consultation services to residents, have been discontinued due to implementation of the above mentioned study.

(FY 2009 Domestic Survey)
Implementation Study: The Study on Urban Transport Development of the Colombo Metropolitan Region (Phase II)
Summary: The construction of a section of the expressway to connect the southern highway and the central national highway located in the suburb of Colombo. (STEP applicable project)
Funding Source: Yen credit 57.18 billion yen
E/N Exchange: 2008.6.24

Next Phase of Study: GREATER COLOMBO URBAN TRANSPORT DEVELOPMENT PROJECT: OUTER CIRCULAR HIGHWAY TO THE CITY OF COLOMBO (OCH)
Purpose of the Project: To reduce traffic congestion near the city of Colombo and to build an outer circular expressway to foster development within the range of grand Colombo.
Summary: Construction of the Colombo-Katunayaka Expressway which will connect Colombo and the airport, and the construction of a 29 km highway (tentatively 4 lanes) in Kottawa which will connect with the southern expressway (STDP) that stretches from Colombo. The southern section (Kottawa-Kaduwela) is currently under construction, and the continuing northern section (Kuduwela-Kadawatha) is under tender assessment. Requesting detailed design and construction funds (yen credit) from our country (2005) for the remaining two northern sections. Kottawa-Kaduwela have been tendered in April 2009, and Kaduwela-Kadawatha, in March of 2010.
Study Type: D/D
Period: 2008.3 - 2013.6
Implementation Agency: Road Development Authority, Ministry of Highways
Supporting Agency: JICA

(FY 2009 Overseas Survey)
The Study on Greater Colombo Urban Transport Maintenance consists of the following stages:
Stage 1- Kottawa (southern expressway starting point) to Kaduwela 11km (currently under construction)
Stage 2- Kaduwela to Kadawatha 8.9km (construction expected to begin)
Stage 3- Kadawatha to Kerawalapitiya 9.2km (base construction completed)

| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>(FY 2001 Domestic Survey) Requested detail design of the project under JICA scheme in the year 2001 but not accepted. Requests detail design of the project again in the year 2002.</p> <p>(FY 2001 Overseas Survey) JICA study was completed and prepared report was dated Oct. 2000. The Government of Indonesia has given 2nd priority for Galle Project in their list in requesting funds 34th Yen Loan Package. At the stage, Sri Lanka Port Authority was given the deadline to complete the EIA report and obtain environmental clearance by Dec. 2000. However, environmental clearance was received in Feb. 2001, and therefore JBIC did not undertake project appraisal. Thereafter, no further progress.</p> <p>(FY 2002 Overseas Survey) JBIC fact finding mission visited Port Galle and conducted meetings with relevant officials in Colombo and Galle in Nov. 2000. In mid of year 2002, another JBIC mission visited Colombo and Galle. EIA clearance was granted and subsequent meetings were held to make awareness of the project to public. In addition to public, presentation was done to Parliamentarians in Galle District and Galle District Development Council at Galle.</p> <p>(FY 2003 Overseas Survey) Emphasizing the importance of the project in all forums including the one held in Tokyo in June 2003, the Sri Lanka Ports Authority is making every possible effort to obtain the STEP loan.</p> <p>(FY 2004 Domestic Survey) Finance: 1) Request to: planned for Yen Loan 2) Requested date: July, 2004 Discussion held with JBIC Fact Finding Mission and Sri Lankan Port Authority about this project 3) Status: April, 2005 JBIC Appraisal Mission planned for dispatch</p> <p>(FY 2004 Overseas Survey) 1. Subsequent Studies: 1) Environmental Impact Assessment (EIA) has completed. Department of Coast Conservation has approved the implementation of the project with conditions. 2) Port sector M/P preparation to identify the priority of Sri Lankan port development project was conducted on February, 2004, with the funding from ADB. The objective is to examine the effect of project implementation to the coral reefs inhabiting in the Port of Galle. This report was approved by the Cabinet of Ministers. 3) Review of carriage estimation of the Port of Galle has completed in accordance with the development program proposed in port sector M/P (July, 2004). 4) Numerical modelling study, taking into account the balance of hovering and concentration of the Port (July, 2004). This will be an extremely useful reference for JBIC to give decision of the loan. 2. Funding Request: 1) Requested Party: JBIC loan based on Special Terms for Economic Partnership (STEP) loan scheme. 2) Requested Period: November, 2002 - May 2004 JBIC will dispatch Appraisal Mission in December, 2004 to settle YEN loan contract. 3. Other Progress: The Cabinet Appointed Tender Board and the Technical Evaluation Committee has been appointed by the Ministry of Finance to commence procurement activities for the selection of consultants. The Sri Lanka Port Authority has requested JBIC for a list of consultants, whom are capable of conducting detailed design of the project within STEP scheme.</p> <p>(FY 2005 Domestic Survey) Subsequent Study: Commissioned Study on Development of Port of Galle Implementing period: September 8th 2005 - November 30th 2005 Implementing body: JBIC Objective: 5 years have passed since the completion of the study. During the period, several issues relating to cost increase (approximately 10,000 million JPY) has occurred, such as price hike of steel materials, attention to Tsunami prevention measures, increase in number of remuneration to fishing industry, and extended construction period. The study is to revise project proposed in the mentioned study taking into account the necessity to reduce the amount of Yen loan and to curtail project expenses. Phase I: Construction of breakwater, construction of a quay, purchasing of packing equipment. Phase II: Construction of additional quay. Funding: Requested party: Yen loan. Coordination between JBIC and the Sri Lankan government aiming to conclude in FY 2005. Possibility of realisation: Loan contract to be made during 2005 for phase I.</p> | | |

Description :

(FY 2003 Overseas Survey)

Under the mentioned study, 661 deep tube wells have been proposed to be introduced in order to meet the total water demand of 154,166m³/day.

(FY 2004 Domestic Survey)

Although Water Resource Board of the Ministry of Irrigation, the C/P, requested Grant Aid to Japan Embassy to implement the proposed project in mentioned study by Japanese grant aid cooperation, as a project in fiscal year 2003, it had not been adopted.

(FY 2004 Overseas Survey)

The proposal of the proposed project in mentioned study was submitted to the Department of External Resources on 16th October 2003, reply had not been made.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2007 Domestic and Overseas Survey)

No information to be specifically mentioned.

Description :

1)Sewerage (Phase I)

(FY 2003 Domestic Survey) JBIC expects to conduct the SAPROF for Phase I project of sewerage system.

(FY 2004 Overseas Survey) For the sewerage (phase-In), selection of the consultant has been completed in September 2004 for JBIC to conduct F/S, due to difficulties faced in acquiring an agreement of the local community in planned sewerage treatment site, as of December, it has not been commenced yet.

(FY 2005 Domestic Survey) Due to difficulty of acquiring an agreement from the local community in planned site, recommencement of the project has not been planned.

2)Water Supply (Phase I)

(FY 2003 Domestic Survey)

Implemented Project: Kandy Water Supply Project

Implementing period:

Stage 1: Jan. 2002 to Jan. 2007

Stage 2: Mar. 2007 to Aug.2012

Implementing body: National Water Supply and Drainage Board (NWSDB)

Funding:

Funding Party:

Stage 1 : Self fund, Yen loan (L/A concluded: 18th Jan. 2001), 5,151mil. JPY

Stage 2 : Self fund, Yen loan (L/A concluded: 28th Mar.2007)

Content:

Amount of water supply: 115,500m3/day Sewage works: 36,670m3/day Aqueduct: 1.6km Service reservoir: Kahalla (600m3),Kahawatta (600m3), Kurugoda(600m3), and Asgiriya(4100m3) Water pipe: 28km Water pipe(conduit): 15km

Tender: Implemented in Nov.2003. Consultant contract: M/s Nippon Jogesuido Sekkei Co., Ltd. Constructor contract: M/s Taisei Corporation, Hitachi Plant and Engineering & Construction Co., Ltd.

Conditions:

(FY 2003 Domestic Survey) The tender was already done as the object of special Yen loan by JBIC. Negotiating to reduce the work scope due to excess of a bidding price.

(FY 2003 Overseas Survey) Requested additional investment to JBIC. The curtailed project range is Stage 1, deleted project range is Stage 2.

(FY 2004 Domestic Survey) Contracted with curtailing the range of construction of service reservoir, water pipe, conduit and water quality analysis instruments.

(FY 2006 Domestic Survey) Progress: 98%. Construction for site maintenance was implemented in Oct.2006.

(FY 2007 Overseas Survey) Supplying water was started in Jan.2007. The term of a guarantee for cracking ended in Jan.2008.

Description :

(FY 2004 Domestic Survey)

Requested project-type technical cooperation.

(FY 2006 Domestic Survey)

Conducting preliminary survey for technical cooperation project.

(FY 2007 Domestic and Overseas Survey)

Implemented Project: Capability of National Solid Waste Management Support Center improvement project

Implementing Organization: National Solid Waste Management Support Center (NSWMS), JICA

Implemented Period: 15th Mar.2007 to 14th Mar. 2011

Funding:

Funding Party: Own fund, JICA (Technical Cooperation Project)

Relation to mentioned study: Counterpart government requested government of Japan to implement the project.

Objective: In order to make local government capable of implementing solid waste management following National Waste Management Strategy, NSWMS is to acquire the capacity to support solid waste management movement of local government through cooperation with related communities (such as government offices concerned and local assembly)

Contents: 1) strengthening of organizational management capacity of NSWMS 2)NSWMS acquires capacity to encourage local government to make solid waste management action plan 3)NSWMS acquires capacity to encourage local government to implement solid waste management action plan.

Technical Cooperation:

Dispatch of Experts : Long-term experts (5 people)

(FY 2008 Domestic and Overseas Survey)

No information to be specifically mentioned.

Description :

(FY 2004 Overseas Survey)

The status of the HMP is unfortunately officially not yet finalized due to the internal conflict between the MoH and the government medical officials union called GMOA as of today. However, the work of Japanese consultants was officially recognized as completed at November, 2003 by the MoH officials. The finalization of the HMP has been progressing and could end in a month time, however, due to other political issue between the MoH and the GMOA, the finalization of MPH also suspended in the last several weeks. This is very unfortunate situation for the MPH, however there is no other way to overcome the issue than just for two party to solve other issue first. At the end of master plan project, the MoH had requested to continue the support of the implementation of the HMP. Answering the request of the MoH, the Japanese government has decided to implement other Study under the scheme of Development Study and has already sent a SW team in September this year to decide the scope to the Study, the Study (HMP phase 2) is expected to start early 2005 for 2 years period.

Though the finalization of HMP is still taking place, the implementation of the HMP has been supported by several development partners. The World Bank has decided to give a support in a grant from in amount of US\$ 60 million from June 2004 as a five year project to implement the HMP planned projects. JBIC has also started budget support loan called SIRUP 2 in the health sector in the amount of US\$ 50 million for the next 5 years. JICA has been giving a technical support to these on-going donor funded projects to a successful implementation and the efforts are highly recognized and appreciated by the development partners and the MoH.

(FY 2005 Domestic Survey)(FY 2007 Overseas Survey)

Actions has been taken to gain political approval from the MoH for the M/P prepared has continued even after the regime change in April 2005, which is prospected to be approved as a white paper in 2005.

Subsequent study: Sri Lanka Health System Management Development Plan

Implementing period: November, 2005 - September 2007

Implementing body: MoH, JICA

Funding:

Funding Party : JICA(Development Survey)

Objective: 1) To promote the implementation of Master Plan proposed in Phase I (Study on Medical Health System Improvement Plan) and to develop management skills of the MoH. 2) To propose action plans and implement the plan in the following 3 fields;

Field I: To expand 5S-TQM movement and to improve hospital management.

Field II: To reconsider information system by clarifying cost structure of health service and to propose action plans for rational and efficient hospital management.

Field III: To propose national risk action plan regarding NCD prevention, social marketing activity strategy, and operation plan for NCD prevention at local level, in coordination with the World Bank.

Technical cooperation: (Dispatch of experts) To promote the implementation of Master Plan proposed in Phase I (Study on Medical Health System Improvement Plan) and to support toward the conduction of projects in coordination with the World Bank

Period: From early 2004

Implemented project: Sri Lanka Health Sector Development Project (SLHDP)

Funding:

Funding party : the World Bank

Amount: 6 million USD (2004-5 years)

Contents: Implementation of 8 components, including local medical system development, budget system improvement, and medical information system, based on the Master Plan proposed in the Study on Medical Health System Improvement Plan. Cooperative implementation with Japanese government is agreed, especially in improving the quality of hospital service and NCD (Non-Contagious Disease) components.

Implemented project: Small Scale Infrastructure Rehabilitation and Upgrading Project (SIRUP) Phase II

Funding:

Funding party : JBIC(Yen Loan, L/A concluded : December 7, 2004)

Amount: 11,776 million JPY

Contents: 1) Education: rehabilitation of school buildings/maintenances conducted by Ministry of Education, Ministry of Technology/Vocational Training, State Governments, 2) Health: Rehabilitation of medical facilities that was going to be implemented by the State, procurement of machineries, 3) Rural development: Maintenance of supply chain distribution facilities etc., to increase rural residents' income

(FY 2007 Domestic Survey)

The necessity of the countermeasure against NCD implemented in one field of the subsequent survey, "Sri Lanka Health System Management Development Plan(Development Survey Phase)" was recognized through this Survey and Development Survey Phase . Therefore, technical support project called as "Program of Health Promotion in Community and Improvement of Preventive Medical Care" was planned to be conducted, and now preliminary survey has been conducted.

The objective is to support the conduction of Action Plan established in the Development Survey, to support in expanding to other region, and to support in system and politic measure field.

(FY 2008 Domestic and Overseas Survey)

Implemented project: Program of Health Promotion in Community and Improvement of Preventive Medical Care

Aid agency: JICA

Counterpart: MoH

Implementing period: May, 2008 - March, 2013

Objective: Effective and efficient implementation strategies targeting lifestyle diseases and cardiovascular disease caused by lifestyle will be formulated on a social medicine basis.

Input from Japan: Experts from six different fields (general overview, lifestyle diseases measures, clinical epidemiology, health promotion, medical information system management, cost analysis), implementing health checks, provision of equipment (diacrisis equipment, computers, health education equipment, vehicles etc), training and workshops.

* The master plan created in the development study was officially approved as the Health Master Plan 2007 - 2016 in the Ministry of Health in Sri Lanka, in February 2007.

Sri Lanka "Master Plan Study for Strengthening Health System" and "The Study for Evidence-based Management for the Health System"

:Through an individual expert dispatch program "Healthcare Civil Services" (Mr. Kanamori, an expert) (from March 1, 2008 to March 31, 2010), JICA pushes ahead with implementation of the healthcare master plan and also makes efforts to improve the monitoring programs.

:As for improving hospital operations through 5S-TQM, JICA intends to diffuse and further advance improvement in hospital operations through the technical cooperation project "Enhancement of Total Quality Management in Hospitals through the 5S-TQM Approach," which is scheduled to start in October 2009.

Description :

(FY 2007 Domestic and Overseas Survey)

Implemented Project: School management improvement project

Implemented Period: Oct.2005 to Dec.2008

Implementing Body: Ministry of Education (MOE), Japan International Cooperation Agency (JICA)

Relation to mentioned study: Sri Lanka requested Japan to provide technical aid referring to the proposal in mentioned study. As a result , Technical Cooperation Project was adopted and has been implemented.

Funding:

Funding Party: Own fund, JICA (Technical Cooperation Project, R/D Signature Date: 12th Aug. 2005)

Objective: To system to establish of sustainable implement school management improvement in 5 target areas; Jaffna, Trincomalee, Kurunegala,Badarawela, and Wellawaya.

Contents: 1) implementation of educational improvement in activity Zonal Education Office 2) implementation of educational improvement activity at the school supported by of ZEO, 3) implementation of science and mathematics educational improvement activity in schools.

Benefit:

Beneficiaries: Regional education office, Zonal Education Office, 150 primary schools and junior high schools.

Technical Cooperation:

Dispatch of Experts: 4 Long-tem experts

Training:10 trainees in Japan

Progress:

(FY 2007 Domestic Survey) 50 schools for 1st batch and 100 schools for 2nd-batch (150 schools in sum) were planned, however the number of schools selected are 130 as of 31th of Jan. 2008 due to security reasons.

(FY 2008 Domestic and Overseas Survey) The project hascompleted in December, 2008. After the completion of the project, budget has been distributed from the provincial government to the schools targeted in the project to conduct improvement activities. In addition, technical cooperation has been conducted by the local consultant for project activity, which is currently carrying out nation wide promotion. Furthermore, primary school teacher and science and mathematics teacher is currently dispatched to the target area of the project, which are planned to be dispatched contiuously.

(FY 2008 Domestic Survey) School infrastructure and equipment improvement, proposed in the above mentioned development study, has been partially implemented through Yen Loan's "Small-scale Infrastructure Rehabilitation and Upgrading Project".

Description :

(FY2007 Domestic and Overseas Survey)

Implemented project: plan to develop comprehensive management ability of irrigated agriculture in arid area

Implementing period: from June, 2007 to May, 2011

Implementing body: Department of Irrigation and Water Management, JICA

Funding:

Funding party: Own fund, JICA(Technical Cooperation Project)

Objective: The object of this project is to establish comprehensive training system, which is for improving ability of government agent and farmer organization, in order to raise agriculture productivity.

Contents: establish system to develop ability of government agency and farmer organization in four fields(1. operation and management of farmer organization 2. management of irrigation facilities and water 3. agricultural production 4. distribution and processing), and develop ability of other government agency through the training by counterpart

Technical Cooperation:

Dispatch of experts : two long term-experts, two short-term experts

Training : training in Japan

Others : equipments were provided(three vehicles and training materials)

(FY 2009 Domestic Survey) No information to be specifically mentioned.

(FY 2009 Overseas Survey) No information to be specifically mentioned.

| 10. MAJOR PROPOSED PROJECT(S) | <p>Priorities :</p> <p>1. Improvement of politic adjustment ability : 1) Inst-1 institution of Political Cooperation of Urban Transportation(PCUT) centered on Executive Office of the President 2. Improvement of system and organization : 1) Bus-1 provide route commission system and conduct pilot project 2) Bus-3 improve ability of route planning by National Transport Commission(NTC) 3) Bus-4 improve ability of project operating by Sri Lanka Transportation Board(SLTB) 4) Bus-5 improve ability of route planning by The Western Province Road Passengers Transport Authority(WPRPTA) 5) Rail-3 improve ability of project operating by Sri Lanka Railway(SLR) 6) 3W-1 conducting consulting service about innovating regulation of cyclo and improve ability of operating it, by The Western Province Road Passengers Transport Authority(WPRPTA) 3. Enhancement of cooperation between different transportation modes : 1)Bus-2 promote connection and cooperation between different transportation modes, and develop the time table 2) Bus-8 establish bus stops in the main line 3) Road-49 establish connecting facilities (suburb) 4) Road-50 establish connecting facilities (inner city) 4. Improvement of service level : 1) Rail-1 rehabilitation of railway track(Coastal, Main, KV, and Puttlam Lines) 2) Rail-2 rehabilitation of railway communication and signal system(Coastal, Main, KV, and Puttlam Lines) 3) BRT-1 improvement of Bus Rapid Transit(BRT) 5. Improvement of central highway and flyover : 1) Road-1 improvement of Outer Circular Highway(OCH) 2) Road-6 improvement of Baseline Road(Phase refinement of Baseline Road in addition) 3) Road-7 improvement of Marine Drive Extension(including interchange) 4) Road-15 improvement of Colombo-Horana Road(including Kohuwala Flyover) 5) Road-16 improvement of Kirulapone-Kottawa Road (A4 Road) 6) Road-17 improvement of Kandy Road(Phase including 1 flyover and 1 interchange) 7) Road-18 improvement of Kandy Road .Phase 8) Road-43 convert Road-43 Rajagiriya Intersection to interchange 9) Road-54 Capacity building of RDA - improvement in ability of land acquisition and transfer 6. Correspondence to increased demand of transportation : 1) Road-14 expansion of B152/B425 2) Road-20 improvement of Rajagiriya-Ratmalana Road 3) Road-21 improvement of Road from Pannipitiya to Battaramulla 4) Road-WP2 widening of ittakotte-Thalawathugoda-Hokandara-Kokadawila zone 5) Road-WP4 widening of Pannipitiya-Moralatiya-Tumbowila zone 7. Improvement in ability of management and maintenance : 1) Road-48 improvement in ability of stormwater management and improvement in ability of road management and maintenance 2) Road-55 improvement in design basis of road and improvement in adjustment of management and maintenance 8. Improvement of ATC/transportation control : 1) TM-1 refinement of the shape of intersection 2)TM-2 establishment of wide-area transportation control system in city 3) TM-17 enhance ability of intersection control and designing 4)TM-6 improvement of central highway 5) TM-17 enhance ability of intersection control and designing 9. Improvement of school transportation : 1) TM-11 expansion of staggered work-hours program 2) PT-1 improvement of school transportation 3) TM-19 improvement in ability of intersection control by Capacity Building of Traffic Police 10. Improvement of traffic safety and vehicle checkup : 1) TM-13 education of road users 2) TM-14 develop traffic safety statistics and strengthen the countermeasures of traffic accident 3) TM-19 improvement in ability of intersection control by Capacity Building of Traffic Police 4) Env-1 cross-sectional improvement in ability of vehicle checkup</p> | | |

Description :

(FY2007 Domestic Survey)

The establishment of PCUT, which was suggested by the Survey to adjust urban transportation planners(government agencies) and to promote the project, was approved by the Diet at July, 2007. RDA is asking for yen loan to introduce flyover and ATC.

MOT is also asking for yen loan to develop bus project. The suggestion of this Survey was referred in the comparative investigation of urban transportation plan in five-country-five-city of Regional Technical Assistance(RETA), by ADB(Asian Development Bank).

(FY2007 Overseas Survey)

The Supreme Court appointed to build committee concerning sustainable planning of urban transportation in Colombo city. The committee is organized by all stake holders involved in urban transportation. Until PCUT will be perfectly operated, the committee would be operated provisionally as PCUT.

The strategic action plan of urban transportation in Colombo area was formulated by the committee. The Survey was referred for the formulation of the action plan.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

(FY 2009 Overseas Survey)

A request has been made to External Recourses Department through ministry of Highways for development assistance for the design of area traffic control system as proposed by the study. However the request has not gone to JICA through ERD. This is very important project to reduce the traffic congestion taking place. One road improvement project identified by the study in in implementation at present with local fund.

(FY2012 Overseas Survey)

1. Implemented project: Greater Colombo Urban Transport Development Project Phase II

(Date of L/A signing) 2011/03/22

(Approved amount) 31.688 billion yen

(Project objective) The Project aims to contribute to promoting logistics and commodity distribution in Sri Lanka, through mitigating the traffic congestion in the Greater Colombo and improving the connection between rural areas, by constructing the highway connecting the main national roads and the southern highway in the suburb of Colombo City.

(Names of project site/target area) Colombo District and Gampaha District

(Project summary)1) Construction of Colombo Outer Circular Highway (4-lane limited highway) and an interchange 2) Installation of the toll device 3) Consulting service (i) changes of the facility design of highway road/structure design for the toll collection, (ii) construction management)

(Total project cost) 51.431 billion yen (including Yen Loan component 37.406 billion yen. The Yen Loan component of this time: 31.688 billion yen)

(Project implementation schedule)November 2008 ~ March 2016 (89 months in total as planned)

(Implementing body) Ministry of Ports and Highways, Road Development Authority

2. Implemented Project: Development of Kirulapone-Kottawa Road (A4 Road)

(Project objective) Establishing an important access route to Southern Highway

(Project summary) The construction to expand the road to 4 lanes in the section from Kirulapone to Southern Highway, and the construction to expand the road to a normal 2-lane road in the section from Southern Highway to Godagama

(Implementing body) Road Development Authority

(Supporting Body) Asia Development Bank (ADB)

(Implementing period) 2013 ~2015

3. Implemented project: Development of Colombo - Horana Road

(Project objective) Establishing an important access route to Southern Highway

(Project summary) The construction to expand the road to a 4-lane road in the section of 15 km from Pamankada Bridge to Kahathuduwa, and the construction to expand the road to a normal 2-lane road in the section of 12.6 km from Kahathuduwa to Horana.

(Implementing body) Road Development Authority

(Supporting body) Asia Development Bank

(Implementing period) 2013-2015

4. Implemented project: Development of Marine Drive Extension

(Project objective) The extension construction of Marine Drive covering 2 km to the north and 1.75 km to the south could ensure an alternative road alongside the seacoast line and mitigate the traffic congestion of Galle Road. In addition, the construction of a high level road to Dehiwala is to improve the access from Galle Road to Marine Road.

(Project summary) -Extension of Marine Drive to north and south, -Extension of around 2 km section in the north from Bambalapitiya to Kollupitiya, -Extension of around 1.75 km section in the south from Ramakrishna Road to Dehiwala, -Construction of a flyover (high level road) leading to Dehiwala on Galle Road

(Implementing body) Road Development Authority

(Implementing period) 2009-2012

5. Implemented project: Development of Kandy Road

(Project objective) A flyover is to be constructed to Kelaniya Rail Crossing on Kandy Road, for the purpose of eliminating the source of serious traffic congestion on Kandy Road and mitigating the traffic congestion problems.

(Project summary) The construction of a flyover to Kelaniya Rail Crossing on Kandy Road

(Implementing body) Road Development Authority

(Supporting body) Mabey Bridge Ltd. (British)

6. Implemented project: Development of Kandy Road (Phase II)

(Project objective) The mitigation of traffic congestion of the main roads in Sri Lanka through the expansion of the traffic volume

(Project summary) The Project intends to extend the road to a 4-lane road in the section of the total length of 4.78 km from Kadawatha to Imbulgoda on Kandy Road (A001).

(Implementing body) Road Development Authority

(Supporting body) China Development Bank (CDB)

7. Implemented project: Extension of B152/B425 Eppamulla-Pamunugama Road

(Project objective) The traffic congestion is expected to be mitigated by alternative roads for A3 through the improvement of the access as a result of the construction to extend the road in the section of 5.2 km on B152 to a normal 2-lane road and and the extension of B425 and Eppamulla-Pamunugama Road to a 2-lane road.

| Description : | | |
| <p>(FY2007 Domestic and Overseas Survey) Implemented Project : Recovery, Rehabilitation and Development Project for Tsunami Affected Roads on the East Coast in the Democratic Socialist Republic of Sri Lanka Implementing Period : from August, 2005 to June, 2007 Implementing Body : Ministry of Highways and Road Development, Road Development Authority(RDA), JICS Funding : 841million Japanese yen Fund Party : Government of Japan{free financial aid in non-project, E/N conclusion day: January 17, 2005(Plan to Recover the Economical Infrastructure in Eastern Provinces)} Amount : Objective : Recovery and Rehabilitation of 4 Causeways that sustained damage from Tsunami caused at December, 2004. The 4 Causeways are in eastern area of Sri Lanka, which are Komari, Periya Kallar, Koddaia Kallar along National Route 4 and Panichankeni along National Route 15. Progress : (FY2007 Domestic and Overseas Survey) Recovery of Panichankeni Causeway has been canceled due to public security problem, and 3 Causeways are to be recovered. The bid was made at July 8, 2005 and Hazama Corporation won the bid. The recovery and rehabilitation of the 3 Causeways is completed.</p> <p>(FY 2009 Domestic Survey) (FY 2009 Overseas Survey) Recovery, Rehabilitation and Development Project for Tsunami Affected Trunk Roads on the East Coast. General Condition: Of the 4 Causeways, restoration of highway 15, Panichchankeni has been cancelled due to public disorder. For that reason, only 3 causeways have been restored that were completed in June of 2007.</p> <p>Pro-Poor Eastern Infrastructure Development Project Purpose of the Project: Development and maintenance of road infrastructure; highway 4 and 15, of Sri Lanka's Eastern region that were affected by the December, 2004 Tsunami. Summary: 1) Road maintenance and improvement: Expansion of road width and asphalt paving. Highway A004, Akkaraipattu - Batticaloa 64km Highway A105, Batticaloa - Tirikandiadimadu 36km 2) Construction of a new Kallady bridge This railway bridge was constructed 100 years ago. A two-lane highway bridge will be constructed (approximately 290km in length) next to the railway bridge which is currently being used as a one-lane highway bridge. Implementation Period: 2007.12- 2010.6 Funding Source: Yen credit (2006.3)</p> <p>Eastern Province 5 Bridge Reconstruction Project in Sri Lanka (Project Formulation) Purpose of the Project: Foster the economical development of the eastern and southwestern regions by restoring the main highways; 5 and 15 of the eastern states that are falling behind on reconstruction work in comparison to the southwestern states. Summary: The scale of 5 bridges that are to be constructed are as follows: Bridge No.1 L=26m (diameter between the 2: 13mx2), W=10.4m, roadway: 3.7mx2 lanes, sidewalk: 1.5mx2(Both sides) Bridge No.2 L=85m (diameter between the 5: 17mx5), W=10.4m, roadway: 3.7mx2 lanes, sidewalk: 1.5mx2 (both sides) + a box culvert, L=7.0m, W=10.4m (roadway: 3.7mx2 lanes, sidewalk: 1.5mx2(both sides) Bridge No.3 L=16m(diameter of 1), W=10.4m, roadway: 3.7mx2 lanes, sidewalk: 1.5mx2(both sides) Bridge No.4 L=36m (Diameter between the 2: 18mx2), W=10.4m, roadway: 3.7mx2 lanes, Sidewalk: 1.5mx2(both sides) Bridge No.5 L=133m(Diameter between the 7: 19mx7), W=10.4m, roadway: 3.7mx2 lanes, sidewalk: 1.5mx2(both side) + a causeway (on the left bank 82m, on the right bank 85m) Implementation Period: 2010. 1 - 2010. 8 Funding Source: Grant aid</p> <p>(FY 2009 Overseas Survey) No information to be specifically mentioned.</p> <p>(FY2012 Domestic Survey) Implemented project: The Project for Reconstruction of 5 Bridges in Eastern Province (Date of signature: Agreement of the implementation) November 11, 2010 (Cooperation period) November 25, 2010 ~ August 31, 2012 (Project objective)The Project intends to contribute to the dividends of peace to be given to people affected by conflicts, through the improvement of the access to the eastern province by reconstructing small-mid scale bridges over the national road No.5 connecting the central province and the eastern province as well as Panichankeni Causeway and its bridge over the national road No.15 within the eastern province. (Names of project sites/target areas)(i) 4 small-mid scale bridges over the national road No.5 connecting the central province and the eastern province (ii) Panichankeni Causeway and its bridge over the national road No.15 within the eastern province (Project summary) 1) Contents of civil engineering construction and procured equipment, etc (i) Reconstruction of the bridge (240/4KMP) over the national road No.5 (the length of 26 meters) (ii) Reconstruction of the bridge (241/2, 241/3,241/4KMP) over the national road No. 5 (the length of 85 meters, in addition to one site of 7-meter box culvert) (iii) Reconstruction of the bridge (247/2KMP) over the national road No.5 (the length of 16 meters) (iv) Reconstruction of the bridge (283/7KMP) over the national road No.5 (the length of 36 meters) (v) Reconstruction of the bridge (59/1KMP) over the national road No.15 (the length of 133 meters, Causeway Left Bank 82 meters Right Bank 85 meters) 2) Consulting service: detailed design, assistance to bidding procedures (Total project cost/approximate cooperation budget) Total project cost 1.427 billion yen (approximate cooperation amount of Japanese side: 1.217 billion yen, Sri Lankan side 210 million yen) (Project implementation schedule) February 2010 ~ March 2013 (planned) (37 months in total, including detailed design and tender period) (Implementing body) Road Development Authority (RDA)</p> | | |

Description :

(FY 2008 Domestic and Overseas Survey)

Hospital business improvement: Organizational Development for the Quality Management Program.

- 1) 5S-TQM activity introduced during development study has been continued in the target hospital, which is contributing in improving the service level of the hospitals.
- 2) Activities are continuously monitored by the JICA expert dispatched to the Ministry of Healthcare and Nutrition.

Hospital financial management improvement: Strengthening the Health Financing System of the North Western Province through Cost Accounting

1) Activity is continuously monitored by JICA Sri Lanka office and an expert dispatched by JICA. In addition, a computer was installed to the target hospitals for cost accounting in FY 2008.

- 2) Concerned parties are in consideration to introduce cost accounting.

NCD prevention and control: Promoting Healthy Lifestyle in Kurunegala District, NCD Surveillance and Prevention in Polonnaruwa District

1) A Technical Cooperation Project, integrating two projects proposed in the study, has been planned and is now implemented with a project duration of 5 years.

Implemented project: Project on Health Promotion and Prevention and Preventive Care Measures of Chronic NCDs

Implementing period: May/1/2008 . March/31/2013

Project Site: Colombo, Kurunegala district, Polonnaruwa district, Ragama, Gampaha district

Implementing party: Ministry of Healthcare and Nutrition

Supporting Agency: JICA

Objectives: To prepare a effective and efficient strategic plan for chronic NCDs and its outcome Cardiovascular Disease based on sociomedical point of view.

Background: JICA has prepared a Master Plan, which provides policy and strategy for health sector reform by conducting the "Master Plan Study for Strengthening Health System in the Democratic Socialist Republic of Sri Lanka (Phase I development study)" from 2002 to 2003. In the plan, change of disease structure and necessity for strengthening measures for NCDs in the future were pointed out. Subsequently, according to the proposal of the master plan, JICA has implemented "The Development Study on Evidence-Based Management for the Health System in Sri Lanka" from October 2005 to September 2007 for the fields which requires a more concrete proposals. During the study, output of the mentioned master plan has been adopted as, "Healthcare Master Plan 2007-2016", a formal 10 years master plan of the Ministry of Healthcare and Nutrition, which is expected to be implemented. Under the circumstances, the Sri Lanka government has acknowledged NCD measures as a prioritized issue within the healthcare sector, and has requested implementation of the Technical Cooperation Project for NCDs, especially for life-style related diseases.

Improving Trauma Care in Sri Lanka

- 1) Continuing the pilot activity started during the above mentioned development study, with an support from NGO.

Sri Lanka "Master Plan Study for Strengthening Health System" and "The Study for Evidence-based Management for the Health System"

:Through an individual expert dispatch program "Healthcare Civil Services" (Mr. Kanamori, an expert) (from March 1, 2008 to March 31, 2010), JICA pushes ahead with implementation of the healthcare master plan and also makes efforts to improve the monitoring programs.

:As for improving hospital operations through 5S-TQM, JICA intends to diffuse and further advance improvement in hospital operations through the technical cooperation project "Enhancement of Total Quality Management in Hospitals through the 5S-TQM Approach," which is scheduled to start in October 2009.

(FY2012 Domestic Survey and Overseas Survey)

Description :

(FY 2009 Domestic Survey) (FY 2009 Overseas Survey)

1. Preparatory Study for Flood Risk Management and Climate Change Adaptation in South Western Sri Lanka

(Overview)Feasibility Study on a priority project proposed by the development study

(Implementing Period)2010.1-2011.8

(Implementing Agency)Department of Disaster Prevention and Mitigation, Disaster Preparedness Center and Ministry of Irrigation and Water Management, Department of Irrigation

(Cooperating Agency)JICA

(Current Situation)in operation

2. Technical Cooperation Project "The Disaster Management Capacity Enhancement Project Adaptable to Climate Change"

(Objective)Capacity building of disaster-related organizations(project objective:to establish a disaster prevention model for the disaster-prevention activities and evacuation of the pilot area s residents based on disaster monitoring and forecasting activities)

(Challenges of Project)

1) To strengthen the Leadership and coordination capacity of Disaster management Centre (DMC)

2) To enhance the monitoring capacity of Department of Meteorology (DoM)

3) To enhance the analysis and monitoring capacity of National Building Research organization (NBRO)

4) To regularly transfer the disaster management information

5) To improve the management capacities of districts, divisions and communities

(Implementing Period)2010.2-2013.1

(Implementing Agency)Department of Disaster Prevention and Mitigation, Disaster Preparedness Center and Ministry of Irrigation and Water Management, Department of Irrigation

(Cooperating Agency)JICA

(Current Situation)in operation

(FY2013 Domestic Survey)

On the flood Prevention Project of the objective livers, the government expected to construct dam more than to build some banks that the project had proposed in a development study. So it had turned out not to relate to the yen loan project, which means the government did not intention to borrow money, the Preparatory Study was discontinued.

(FY2013 Overseas Survey)

Proposed improvements have been discussed with the River Basin Forums established in Rathnapura and Kalutara and the members of kalutara River base forum did not agree with the construction of flood bunds along the river to contain flood water within the river banks. Ministry of Irrigation and the Department of Irrigation has proposed to construct holding reservoir in the upper catchment of Kalani river at Malawala and transfer flood water to adjoining Walawe River basin, which serves farmers in Hambantota district as measure to mitigate drought frequently occur in Hambantota area.

Training material developed to enhance the capacity of communities in hazard prone areas is useful to undertake awareness programme at village level. DMC reprinted these flip chats and had issued a copy to each district.

Description :

(FY 2009 Domestic Survey)

In regards to the materialization of 'Project' which was proposed at the MP, National Water Commission is under the assumption that the project will be funded with Japanese loans. They are to begin the loan procedure on the basis of the final report. There is no Japanese embassy in Armenia, hence Japan's loan operation which is under the jurisdiction of the Russian embassy, is currently taking place equally in three Kaukasos nations (Armenia, Azerbaijan and Georgia). As a result, lending to Armenia will be affected by the loan records of the other two nations.

(Since this will be the first time that the National Water Commission will be receiving a loan from Japan, through the development studies, IP (plan) has been created and knowledge transfer has been performed.)

(FY2013 Domestic Survey)No information to be specifically mentioned.

(FY2013 Overseas Survey)

Starting from January, 2014, the State Committee of Water Economy of Armenia and the Consortium of CES Consulting Engineers Salzgiteer GmbH (Germany) and Jrtuk LLC (Armenia) signed a consulting contract on Improving and Developing Water Supply and Sanitation Systems in Rural Communities (about 560 villages in Armenia). The results of JICA's study will be used during the study

Description :**Situation**

(FY 2001 Domestic Survey)

It is said that Ministry of Environment was established recently and the SCE played an important role for it. However, it is not definite how the BCE will be involved. It is said that the discussion is being held whether the request letter for Japan's Grant Aid should be submitted from the BCE (C/P of study team) or from Ministry of Environment. Since their movement is complicated politically in the government of Azerbaijan, it seems to be difficult to forecast the result of discussion in the government.

(FY 2001 Overseas Survey)

BCE's function and structure for environmental/natural resource conservation have been changed since the establishment of Ministry of Environment and Natural Resources. The name of BCE has been changed to Absheron-Baku Regional Ecology and Natural Resources Department and its function has become limited to environmental conservation and audit. Concerning the proposed project, Ministry of Environment and Natural Resources has submitted a request for Japan's grant aid in order to purchase technological equipment and machinery for expansion of natural environment conservation organizations in Azerbaijan.

(FY 2002 Overseas Survey)

1) Institutional Capacity Building for the BCE

TACIS provided 131,083 Euro for laboratory equipment project.

The proposal of the project sent for consideration to Japan for Grant 4.3 mil yen.

2) Development of Environmental Data Management (Priority project)

An Archive Fund has been established in the Ministry of Ecology and Natural Resources. The Ministry finances the Fund by its own resources (3,894,000mil US\$, O&M 164,000US\$).

3) Development of Environmental Monitoring System

National Monitoring Service has been established in the Ministry of Ecology and Natural Resources by their own means.

4) Development of Nature Conservation System

Ministry of Ecology and Natural Resources manages the System by their own means.

5) Development of Illegal Dump Control System

Ministry of Ecology and Natural Resources manages System by their own means.

6) Development of Supervision and Support System for M/P Formulation of Municipal of Solid Waste Management and Waste Recycling.

The Municipal of Solid Waste Management and Waste Recycling has been established in the Ministry of Ecology and Natural Resources.

Description :
(FY2002 Domestic Survey)
There is no information available on the current situations of this project.

(FY 2002 Overseas Survey)
It seems difficult to realize the proposed projects due to the hard financial economic situation without the financial sources of international finance organization. Present time, the activities of acquisition of large buses are conducted for long-term credit conditions. Baku City has got different offers from about 30 urban bus producers. The Executive Power of Baku City negotiates with the Baku Branch of the Mitsubishi Corporation in order to improve the condition of the city streets. Japanese Grant is expected for the realization of these activities. Transport Department has also raised the question before the Executive Power of Baku city about the Grant for acquisition of large buses.

(FY 2003 Domestic Survey)
Concerns arise for the difficulty in management and operation of the bus due to a tight financial condition. Economic recovery is anticipated.

(FY2007 Domestic Survey)
Projects and research for realisation of the projects proposed in the mentioned study have not been implemented and there have been no specific activities for implementation. There is a possibility to implement the proposed projects in the mentioned study if Azerbaijan's economic recovery progresses by oil development, causing considerable rise in motor traffic demand and a significant city traffic problem occurs. In addition, financial support will be required from the government, where healthy financial status of the city council would be a necessary requirement.

Description :

(FY 2008 Domestic Survey)

Service of Geodesy and Cartography (SGC), a counterpart organization in the Ministry of Environment Protection and Natural Resources, currently supervises the map and geographic(al) information. However, SGC has no experience of creating 1:10,000 topographic maps although the technical transfer of 1:50,000 topographic maps was conducted by the Study Team during the development study.

For this reason, SGC asked cooperation on the preparation and submission of a request for technical cooperation of Japan,

The Ministry of Finance, which is a contact point of foreign assistance, has submitted the official request to the Japanese Embassy in Georgia.

The main points of this request are; reconstruction of the national territory ravaged by disputes between Russia, recovery and maintenance of living conditions, national land redevelopment to promote upgrading industrial and economical infrastructure which have been forced into suspension, maintenance of geographic information needed to support the reconstruction plan.

(FY2012 Domestic Survey and Overseas Survey)

No information.

Description :

(FY 1995 Overseas Survey)

After reconstruction of the present banking systems, the project will be implemented in 1997.

(FY 1997 Overseas Survey)

A part of the proposed projects has been realized. Remaining projects are to be realized gradually.

Outputs of the study have been utilized for elaboration of a plan for establishment of Real Time Gross Settlement System.

Subsequent Study:

(FY 1997 Overseas Survey)

Jun.1994~Sep.1994 Review study (fund from World Bank)

A part of JICA's recommendations was re-studied in detail.

Description :

Finance:

The Government is said to be preparing for a proposal for Japanese grant aid on the renewal of old facilities to produce TV programs which is given the top priority among various projects proposed by this survey work.

(FY 1998 Overseas Survey)

Request for a grant aid assistance was submitted to Japanese government for the renewal of the facilities/equipment for producing the programs. There is no financial source in the Kyrgyz Republic for implementing this project.

Situation:

(FY 1995 Overseas Survey)

Based on the study results, SNBC has started its daily morning programs package and has been working on improving the quality of its programs. It has been requested to hold several seminars for improving broadcasting services to the Japanese Government.

(FY 1996 Domestic Survey)

B/D will be implemented for the provision of studio equipment, which is considered the most urgent. The Japanese grant aid assistance is likely to be provided after the completion of B/D.

Description :

(FY 2007 Overseas Survey)

Concerning "Improvement of Cholpon-Ata sewage disposal", which was proposed in the mentioned study, Preliminary Study was implemented from July to Aug.2005 in order to implement Grant Aid Cooperation.

(FY 2007 Domestic Survey)

Implemented Project: Community Activation Project in Issyk-Kul State

Implementing period:

Preliminary Study: Feb.2006 to Mar.2006

Project:Nov.2006 to Oct.2010

Implementing body: Issyk-Kul Oblast State Administration, Ministry of Economy and Finance

Funding:

Funding party: JICA (Technical Cooperation Project, R/D concluded: Aug 2006)

Objective: Objective of the project is to establish a system to conduct self-reliant and sustainable community empowerment activity through implementation of pilot project (One Village One Product Movement), concerning community activation. The principal aim of the project is to transfer techniques to Kyrgyz Counterpart in order to conduct community empowerment activities.

Benefit:

Beneficiary: About 12,000 people (in 8 villages, 1500 people in each village)

Relation to the mentioned study: The project was designed based on the project proposed in the mentioned study.

(FY 2008 Domestic Survey)

Implemented project: Support of Participatory Management of Forest Resources in the Kyrgyz Republic (JICA Technical Cooperation Project)

Implementing period: January 19, 2009 - January 18, 2014

Implementing body: State Agency for Environment Protection and Forestry

Project site: Chui province, Issyk-Kul province

Objective: Reforestation and forest management/maintenance are undertaken with the participation of local residents in pilot site and the methodologies developed through the implementation of the pilot projects are disseminated to other areas.

Background: There has been a challenge for the government to implement policies for reforestation and conservation effectively. So far, the government could manage it with cooperation from foreign aid agencies; there is no successful case, in which the government conduct reforestation and conservation activities by itself. Against this backdrop, it is of critical importance to tackle issues with the understandings and actions not only of the government but also of the local residents.

Implemented project: Expansion of Tamchi Issyk Kul International airport

Construction of expansion of Tamchi Issyk Kul international airport in Tamchi was undertaken with the capital of Russia and the airport has been operated since 2008.

Rehabilitation of Cholpon-Ata sewage treatment plant: This project receives the highest priority and urgency for implementation, as it deals with the conservation of water quality of Lake Issyk Kul, which is the greatest tourism resource of Kyrgyzstan. The government of Kyrgyzstan substantially recognize this importance and thus has made the request to Japan for cooperation. Against the request of Kyrgyzstan government, JICA is planning to provide grant aid assistance.

(FY2012 Domestic Survey)

Implemented project: Community Empowerment Project through Small Business Promotion by One Village One Product(OVOP) Approach in Issyk-Kul region

(Implementing period) December 15, 2011 - December 15, 2014

(Project objectives) To construct a small business promotion model based on OVOP approach in Issyk-Kul region

| <p>Description :</p> <p>(FY 2007 Domestic Survey) The leader of the investigation team took over the management of marketing NPO which was conducted as pilot project of the Survey.</p> <p>(FY 2007 Overseas Survey) Ministry of Agriculture, Water, and Processing requested for technical support to equipment procurement in order to expand the scale of operation about "Bio-lab", which is producing chemical fertilizer.</p> <p>(FY2012 Overseas Survey) Implementing project: Establishment of Marketing Services Center in Tyup district (Objective) To demonstrate local farmers how to search and find new markets. Develop own trade activity. To improve farmer's knowledge and experience to promote their products. (Project outline) Finding and organizing the marketing of agricultural products is identified as priority in all agricultural development strategies. In this sense extension of marketing services becomes important and priority. The products are healthy since no fertilizers and chemicals are used in agricultural production in the country. Therefore, it facilitates transition to organic agriculture. The development of organic development is also included in agricultural development policy documents and has great potential benefits. Agricultural development strategy of the Kyrgyz Republic was approved by the Board of the Ministry of Agriculture and Melioration of the Kyrgyz Republic in December 2012. (Implementation body) Center of Marketing Services Mr. Higashi (Situation) The project has made proposals to improve product quality and sales, establish a national brand for agricultural products of the Kyrgyz Republic. Currently, donors are being sought to continue projects on animal identification. This is a long-term theme. World Bank completed the project "Improvement of marketing", implemented in 2006-2012. The project activities and search for new donors will be continued. This is a long-term theme.</p> <p>Implementing project: Experimental sheep fattening in Min-Bulak Ayil Okmotu, Naryn District of Naryn Province (Objective) Development of Livestock (Implementation body) Association of Sheep Farmers (Situation) The project made recommendations to conduct animal identification, livestock health improvement, to define the rights and obligations of pasture users, cattle farmers, suppliers and sellers of livestock and meat.</p> <p>Implementing project: Demonstration farms for cotton production in Mady village, Kara-Suu of Osh Province (Situation) Successful implementation requires large funding and longer time. There is need for beneficial credits for the long term repayment period. Support in selling products is required with profitable prices.</p> | |

| <p>Description :</p> <p>Finance: (FY 2002 Domestic Survey) Project name:Almaty Solid Waste Management Rehabilitation Project Finance: E B R D Fund procurement situation: to be implemented within the approved budget. Amount: 27.8million EUR Date of pledge or approval: Dec.2002 (FY 2003 Domestic Survey) Details of the financed project: rehabilitation of the garbage disposal service, establishment of garbage disposal system and finance, improvement of garbage collection equipment, improvement of relay stations and equipment, improvement of final disposal sites.</p> <p>(FY 2000 Domestic Survey) 1) Application for Japanese grant aid for urgent improvement project was submitted to Japanese Embassy in 1999. 2) EBRD (European Bank for Reconstruction and Development) is discussing financing for part of priority projects(Urgent improvement project and second priority project) in 2000. 3) Almaty City has established the Waste Authority in Jan. 2000 to improve solid waste management.</p> <p>(FY 2001 Domestic Survey) Almaty City has established the Waste Authority in early 2000 based on the result of the Study. However, the remaining projects were not materialized as the grant aid due to the low priority in the central government. After that, Almaty City had been discussing with the European Bank for Reconstruction and Development (EBRD), has signed on the Loan Agreement amounted US\$ 22 million on this project and commenced the procedure for bidding. However, the Loan Agreement has not been issued yet because the central government had not approved this project as an investment project. Almaty has been trying to negotiate with the central government to settle it, therefore, the newly procurement like garbage carts and others has not been made. Meanwhile, the present management system was improved because the Waste Authority was operated by the self-finances like a collected charge. The relationship between Almaty City and the central government (especially the Ministry of Treasury or the Ministry of Planning and Development) seems to be instable because its priority was low among the grant aid project at the central government and the approval as an investment project by the central government was delayed and etc..</p> <p>(FY 2004 Overseas Survey) Due to an amendment made to the regulation (2001), which prohibited local authority to acquire a loan from foreign countries, project has not been completed.</p> <p>(FY 2005 Overseas Survey) Project has already being implemented with a fund from EBRD.</p> <p>(FY 2009 Domestic Survey) Construction of a new landfill for domestic waste on the territory of Ili district of the Almaty region (objective) Prevention of environment pollution, new job formation (the summary of the project) The landfill is supposed for stocking of pressed solid domestic waste, which allow increasing the load of waste on the unit area of the construction, ensuring efficient usage of land resources. After exploitation the landfill will be closed, its surface will be reclaimed for further usage of the area. The whole process of stocking, covering and pressing of solid domestic waste is automated. The landfill accepts SDW from the residential structures, municipal buildings and enterprises. Description :

(FY 2000 Domestic Survey)

The agency on Land Resources Management of the Republic of Kazakhstan has already distributed CD-ROMs, which store Geographic Information as the final results of this study, to international organizations in Kazakhstan such as the institute of Space research of RK, Kazgiprovodkhoz, and the International Fund for Saving the Aral Sea. The final results have been used in higher steps in national/regional planning as source for analysis and basic data in those organizations.

(FY 2001 Domestic Survey)

The final results of the study is utilized for the Kzylorda Oblast inventory work in the Kazakhstan Forest Authority that is affiliated with the Committee of Forestry, Fishery and Hunting. Also, the Agency on Land Resources Management has a plan to utilize the results as basic spatial data for developing environmental database such as water quality database.

(FY 2002 Domestic Survey)

The output of the study has been used by Oil and Gas Authority as a basis material in the summary research of hte route in the pre-F/S of the study on oil and gas transportation facility management in Kzylorda Oblast and Kazakhstan.

(FY 2003 Domestic Survey)

From April 2003, Kaz Geo Cosmos, a private entity, has began to sell remote sensing data manipulation, new geographical map development, and update service for existing geographical maps. The entity has adapted geographical map development methods transfered by JiCA, which were then transfered domestically by the country.

(FY 2004 Domestic Survey)

The output of the study has been used as a dataset in various GIS software within maintenance/management system of oil and gas transportation facilities of Oil and Gas Authority in Kzylorda Oblast and South Kazakhstan Oblast.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2009 Domestic Survey) No information.

(FY 2009 Overseas Survey)

Since the cartographic data was developed in 2000, it does not correspond to the present-day state of the region and has no widespread application.

Description :
(FY 2002 Overseas Survey)
It is necessary to promote the proposed projects in compliance with the legislation.

(FY 2002 Domestic Survey)
Subsequent Study:
D/D: The Detailed Design Study of the Water Supply and Sewerage System for Astana City in the Republic of Kazakhstan
Study period: Mar. 2003 -
Consultant: NJS (Nippon Jogesuido Sekkei. Co., Ltd.)

(FY 2003 Overseas Survey)
Procurement of Financing: There is no decision yet.

(F Y 2004 Domestic Survey)
Follow-up study was conducted by JICA in FY 2002 ("The Study on the Master Plan for the Development of the City of Astana"). This study was conducted with the objective to determine detailed condition of the plan for major sections, which will be the centre of the city.

(F Y 2004 Overseas Survey)
At present, study has not been conducted by Japanese groups, therefore foreign fund is not needed. Master plan for the Astana city is in the process for implementation.

(FY 2005 Domestic Survey)
No information to be specifically mentioned.

(FY 2006 Domestic Survey)
The survey for the following stages has not been conducted. Kazakhstan estimated the future increase in the population of the country and the master plan for the future is likely to be reviewed. Waterworks and sewage system project has been under operation based on the master plan through the JBIC loan.

(FY2007 Domestic Survey)
No information to be specifically mentioned.

Description :

(FY 2009 Domestic Survey) No information to be specifically mentioned.

(FY 2009 Overseas Survey)

1. Improvement of the road Beineu - Opornyj

Reconstruction of the road sector Beineu-Opornyj of 122,6 km long was made from the republican budget and the loan of the European Bank for Reconstruction and Development. As a result the road of the 3rd category with a load of 13 tons per axle tree of a vehicle was put into operation in July 2008.

2. Modernization of the road Aktau-Beineu and improvement of the road Aktau-Shetpe (sectors of the highway Atyrau-Aktau)

The highways Aktau-Beineu and Aktau-Shetpe are sections of the road of republican status the Atyrau-Beineu. The road has strategic status for the region as it provides access through Atyrau to Russia and Europe. Improving the communications quality of the road Atyrau-Aktau is a factor of the regional economy development, primarily the industrial sector, use of its transit capacity.

The cost of reconstruction of the road Aktau-Beineu of 470 km long is 66 billion tenge (450 thousand U.S. dollars). In 2010 at the beginning of work 500 million tenge (3,4 thousand U.S. dollars) was allocated from the republican budget. These funds are being used for reconstruction of the section "Beyneu-Manasha" of the road Beineu-Aktau of 40 km long and correction of design and estimate documentation of the sector "Manasha-Aktau (430 km). The principal amount for reconstruction of the remaining 430 km will be mobilized in the form of ADB loan.

3. The new railway Zhanaozen - the state border with Turkmenistan

In 2008-2009 1.2 billion tenge was allocated for development of design and estimation documentation (8.1 million USD). 29 billion tenge (196 million US dollars) was allocated from the republican budget for 2010 for completion of the design and estimation documentation and beginning of construction. The construction will continue in 2011. Completion of construction is scheduled for December 2011. Currently the work is in progress on dumping roadbed, laying of railway tracks.

4. Promotion of the seaport Kuryk

The port Kuryk will comprise the entire necessary infrastructure: a powerful oil terminal, a base of support offshore oil operations, shipbuilding and repair yards, liquefied natural gas terminal and other facilities. The total expected investment - 8,95 billion tenge (1324.7 million U.S. dollars).

Among 11 social and infrastructural development projects of the workers' settlement Kuryk implementation of 9 projects is completed, the remaining two will be completed this year. In 2010 the workers' settlement will be completely ready for the construction of coastal infrastructure facilities.

5. Modernization of the International Airport of Aktau City

The project of the Aktau City International Airport modernization is being implemented in the framework of public-private partnership (concession) in order to put the Aktau City Airport in compliance with the international standards, to increase passenger and cargo traffic flow by air transport through the region's territory. The concession agreement with the Turkish company LLP "ATM Grup Uluslararası Havalimani Yapım Yatırım ve İşletme Ltd.Sti." is concluded. Construction of the passenger terminal of the Aktau City International Airport was finished. Official opening of the passenger terminal was held in September 2009. Currently the airstrip is being renovated.

6. Promotion of the Free Economic Area "Seaport Aktau"

Nowadays in the FEA "Seaport Aktau" 3 projects are implemented, 7 high-tech export-oriented projects are being implemented, 2 more project are prepared for realization. In 2009 at the expense of the republican budget construction of the necessary engineering (water, gas, electricity) and transport infrastructure (roads) was started on the territory of FEA "Seaport Aktau". In 2010 1,700 million tenge (11,5 million U.S. dollars) was allocated from the republican budget for continuation of works.

7. Promotion of the new city of Aktau

In the course of official and working visits of the President of Kazakhstan Mr. Nazarbayev N.A. to the United Arab Emirates in 2009, agreements were reached on the practical implementation of urban projects. In 2009, the Memorandum on mutual cooperation between the Mangistau Regional Governor's Office and the JSC "Real Estate Fund "Samruk-Kazyna" was signed regarding beginning of construction of the first district in the framework of the project. The 1st stage of construction was determined - six four-story buildings in district 33 of Aktau. A land area of 43.26 hectares was allotted. The competition for development of design and estimate documentation on the project "Development Plan of district 33 in Aktau" was declared.

8. Development of the international recreation zone Kenderly

In February 2010 the Regional Governor's Office and the International Sustainable Development Company (SWDC) signed the "Agreement on joint operation for building up the tourist complex and the recreation zone "Kenderly", funding of the project started.

Nowadays geotechnical surveys of the resort's "Kenderly" territory were completed, including all life lines and the international airport. The feasibility study for construction of external engineering infrastructure was developed. For these purposes 61 million KZT was allocated from the local budget.

By the decision of the regional maslikhat (Executive Committee) dated 30 March 2010 the Action Plan is approved for building of the recreation zone "Kenderly" for 2010-2013. In April and July 2010 the delegation of investors visited the region. Investors confirmed participation and the beginning of construction of the recreation zone in 2010.

9. Establishment of the Caspiy State University of technology and engineering

In 2008 the Aktau State University named after Yessenov was transformed into the Caspian State University of Technologies and Engineering named after Yessenov. In 2009 the construction of the main academic building of the Caspian State University of Technologies and Engineering named after Yessenov was fulfilled out of the Republican budget. In 2010 the construction of student dormitories was started.

The agreement with the Institute of organization and industrial automation of Magdeburg (Germany) was reached on international cooperation and establishment of university-based "Center for the Engineering of Central Asia".

(FY 2013 Overseas and Domestic Survey) No information.

| <p>Description : (FY 2008 Domestic and Overseas Survey) Disaster prevention activities in Tajikistan has been administered by the REACT, which UNDP has taken the lead to establish the organization coordinating with International organization, NGO, and government agencies, and the Emergency Commission as a secretariat. This organization has been working on active operations as a coordinating agency for establishing disaster prevention systems, and disaster relief activities. Hereon forth, REACT will lead disaster prevention activities, especially focusing on disaster preparation and rescue operation. Therefore, Japanese assistance related to disaster prevention should be discussed under REACT scheme or by coordinating with other country, international organization, and NGOs.</p> <p>Implemented project: Khatlon Province Flood Risk Management Project of Tajikistan Implementing body: ADB implementing period: 2008 Funding: Funding party: ADB Amount: 22 million USD Relation to the development study: The project took over the priority project "Urgent Dike Restoration Works in Hamadoni District" and "disaster prevention capacity enhancement plan" proposed in the development study. Objective: To mitigate flood risk in Kulob, Vose, Farkhor, and Hamadoni districts. Contents: 1) Dike construction as a structural measure, 2) preparation for flood, forecast and warning, and disaster prevention management capacity development as a non-structural measure.</p> <p>Implemented project: Participatory flood management project Implementing body: ADB Implementing period: 2009 Fund: Funding party: ADB Amount: 3 million USD Relation to the development study: The project took over the priority project "Urgent Dike Restoration Works in Hamadoni District" proposed in the development study. Objective: To contribute in poverty alleviation through natural disaster mitigation including flood in Farkhor, Hamadoni, Vose, Panji, and Shuro-obod districts. Contents: Targeting 130 villages in 5 districts of Khatlon province. To establish a system to prepare a flood preparation plan participated by villagers, NGO, and concerned parties, and to have approved by CES through inspection of the proposal.</p> | | |

Description :

(FY 2015 Overseas Survey)

Grant Aid of the Project for Rehabilitation of Drinking Water Supply Systems in Pyanji District, Khatlon Region (D/D) is under implementation.

Period: January 2014 to July 2015

Implementing Organization: Housing Service Enterprise

The Improvement of Water Supply in South West of Tajikistan

Project Overview: 1) Rehabilitate water supply system and where applicable, allow selected wastewater improvements, 2) improve both billing and collection, and 3)

Improve financial and operational management in Rumi district

Period: 2013 to 2015 (F/S was implemented in 2012)

Implementing Organization: Housing Service Enterprise

Funding Agency: European Bank for Reconstruction and Development

Project Cost: 12 million USD (loan from EBRD: 5 million USD, and Grant from EU IFCA: 7 million USD)

In Vakhsh, the rehabilitation of distribution pipelines are carried out by government budget (from 2010 to 2020).

Description :

Finance:
(FY 1998 Domestic Survey)
Ministry of Public Works is implementing the construction works of the Kaparas water intake facility (new construction), an aqueduct (new construction), water treatment plants (expansion) of Tuyamuyun-Nukus and Urgench.
This project requires a large amount of funds. However, since IMF pointed out the problem of double exchange rate, new financial assistance from aid agencies are now suspended.

(FY 1999 Overseas Survey)
The Ministry of Communal Services of Uzbekistan has accomplished the construction works in the region of Aral sea to develop the water supply pipeline network.
1. Water pipe from Tuyamuyun to Urgench: to supply water to households and industrial consumers of Khorezm region, total cost 144,544,000sums, length 377.6km, capacity 577,000m³/day, construction of water purifying facilities, filter station, a reservoir of clean water and a pump station.
2. Water pipe from Tuyamuyun to Nukus: total cost 215,532,000sums, length 380km, capacity 340,000m³/day
3. Construction of pumping station on the Kaparas reservoir: total cost 11,233,000sums, capacity 690m³/day

(FY 2002 Overseas Survey)
The above mentioned construction has been accomplished.
3. Construction of pumping station on the Kaparas reservoir: For the period 1999, 795,000 sums of budget (at the level of prices of 1991) was utilized.

Background:
(FY 1997 Domestic Survey)

a) Results of Water Quality Analysis
According to own analysis, evaporated residue, total hardness values are exceed the standard.

b) Kaparas Intake Pumping Station (water source relocation)
To utilize the clean water from Kaparas Reservoir, the facilities are under construction. However the progress of the construction is not so high due to the budgetary difficulties. Currently, the water source is the canal diverted from the Amdariya river.

c) Tuyamuyun-Nukus and Tuyamuyun-Urgench Water Supply System
The same reason as Kaparas Intake Pumping Station, the construction progress is slow. Especially, the transmission pipe to Muynak, where the water quality is expected to be the worst in the system, have not be installed.

d) Water Supply System I Khorezm Province and Republic of Karakal Pakistan
Water Treatment Plant is too old for work. There is not enough stock of spare parts and the chemicals such as coagulants on disinfectant due to financial difficulties, therefore, operation and maintenance is insufficient. JFW ratio is high and water meters are seldom installed.

e) Water Usage
The area belong to semi-arid and ground water is saline, therefore, the purified water seem to be used for livestock on gardening purpose.

f) Technology Level
Technology level is relatively high due to the transfer from the former Soviet Union.

g) Organization and Institution matters
There still exist organization or institution under the structure of the former Soviet Union. Organization, Institution, Laws, which are suitable for market economy, are not developed fully.

h) Management / Financial Affairs
The effect of the former Soviet Union planned economy still remains. Water tariff is under low price policy and UFW ratio is high, therefore, income is insufficient for the organization. The financial situation is tend to be deficit, which causes insufficient operation & maintenance and delay of planned construction schedule.

| PRESENT STATUS | Completed or In Progress | Promoting |
|--|--|--|
| | Completed Partially Completed Implementing Processing | Promoting Delayed or Suspended Discontinued or Cancelled |
| <p>Description :</p> <p>Subsequent Study: (FY 1999 Overseas Survey) Aug. 1999 F/S review (UTJ fund of UZS 3,000,000) Financial and technical analysis, The purchase of 4 trains was considered.</p> <p>(FY 1998 Domestic Survey) Uzbekistan Railways (UTJ) is regarded as a main means of transportation in the country, because it is the railways in an inland country as well as other central Asian countries. However, UTJ has no specialized repair plant which can overhaul electric locomotives and trains in Uzbekistan at present. Uzbekistan has depended on other countries such as Ukraine to repair electric locomotives and trains.. However, there are problems such as the lack of foreign currency and schedule. In order to cope with an increase in repair works caused by an increase in electric locomotives and trains owned due to an increase in transportation and the extension of routes electrified etc. which can happen in the future, repair plants for them are necessary. In this study, based on the above mentioned background, a JICA study team proposed to construct a repair plant for electric locomotives and trains which can cope with an increase in repair for them in the future (2010)..</p> <p>(FY 2001 Domestic Survey) Although the construction of a repair plant for electric locomotives and trains is requested as a yen loan project, it has not been approved since IMF has a negative opinion about the currency policy of the country.</p> <p>(FY 2002 Domestic Survey) Though the priority of the project is very high in Uzbekistan, there is no progress in the procurement of funds. The country has a policy to request financial assistance once a year (1 project), and the electric sector was a target in 2002. In the railway sector, this project comes as the second while the construction project of the new railway line from Uzbekistan to Afghanistan ranks first. But, according to the presidential decree No. 285 on August 8, 2002 "Measure on future cooperation with Japan" this project is to be launched in FY 2006.</p> <p>Related project: (FY 2001 Domestic Survey) The Tashkent Train Repair Plant Construction Project (including the procurement of 25 trains) was implemented with yen loan (Project for Strengthening the Capacity to Transport Passengers for Trains) from Apr. 1998 to Aug. 2001.</p> <p>(FY 2002 Overseas Survey) The State Railroad Company of Uzbekistan examines revising the result of F/S reviewed because it has finished the Train Plant Construction Project and a repair project for electric locomotives is implemented in a part of the plant..</p> <p>(FY 2003 Domestic and Overseas Survey) Although the priority of this project is very high in Uzbekistan, the request for funds has not been approved. Uzbekistan has a policy to request for funds once (1 project) a year, and in the past 3 years the target was the educational sector in 2000 and the electric sector in 2001 and 2002. The top priority in the railway sector is the construction of railway from Uzbekistan to Afghanistan, and this project (Electric Locomotive Repair Plant Construction Plan) ranks second.</p> <p>(FY 2007 Domestic Survey) There is no possibility for progressing the project.</p> <p>(FY 2007 Overseas Survey) The grant aid has been requested for implementing following projects proposed in the mentioned study. Subsequent study: The Detailed Design Study for Development of the Repair Base for Rolling-stock and Industrial Engineering of Car-building in Uzbekistan Funding body (request): Yen Loan (6528 million JPY), Own fund (17,096,100 USD) In the feasibility study, cost was estimated to be 71,496,100 USD. Of them 56,346,100 USD are in foreign currency, and 15,150,000 USD (equivalent) or 19.695 billion UZS . costs are in national currency, UZS. 76.1%, or 54,400,000 USD of all costs are planned to be covered by JBIC loan. 23.9%, or 17,096,100 USD (equivalent) of the costs are planned to be covered by own fund. Possibility of implementing the activity: Considering for reconstructing Foundry-Mechanical Plant according to Project with import substitution production support with 750 new freight wagons, as well as expansion of overhauling capacity of the railcars (mineral carriages, cement wagons, containers and etc.) from 350 units up to 1300 unit per year. Project realization allows make up a deficiency in freight rolling stock of Uzbekistan Temir Yullari taking into account the depreciation and forecasted growth of freight transportation in the coming years, as well as creation of additional job places.</p> | | |

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 1999 Domestic Survey)(FY 1999 Overseas Survey)

1) The Government of Uzbekistan requested to the Japanese Government to finance for the development project of New Tashkent Airport in 1998. However, the Japanese side gave no positive reply.

2) The Government of Uzbekistan has given priority to the New Tashkent Airport Development in order to encourage reform to market-oriented economy and national economic and social development.

3) National Air Company "Uzbekistan Havo Yullari" (NAC) has conducted the further detailed feasibility study from April 1999, and intends to request financial assistance for the New Tashkent Airport Development to the Japanese Government next year.

4) At present, three local airports (Samarkand, Bukhara, Urgench) modernization projects is ongoing under the Japanese Yen Credit. Subsequently, NAC intends to implement the modernization project of Nukus Airport, which was selected as high priority airport in JIAC Master Plan Study with appropriate soft loan.

(FY 2001 Domestic Survey)(FY 2002 Domestic Survey)

Although the Yen loan was requested regarding the New Tashkent Airport Development in FY 1999, it is not requested again from that time. The Yen loan is not requested regarding the Nukus Airport Modernization. The other priority projects proposed on this Development Study do not have any progress to realize them. The present Tashkent Airport development works (Passenger Terminal, Taxiway, Apron for domestic lines) have been implementing although they had not proposed by the Study.

(FY 2002 Overseas Survey)

Uzbekistan Airways received joint loan of EBRD and German bank KfW in the amount of 48 million US\$ for reconstruction of international terminal of Tashkent airport, namely modernization of ATC, taxi track and pyrone.

1) First stage: Upgrading of international terminal

2) Second stage: Modernization of cargo terminal

KfW bank contracted one German consulting/ engineering company to prepare F/S of Tashkent airport Cargo terminal.

Preparation of the above-mentioned F/S was started in April 2002. It was scheduled to accomplish it by the end of 2002, however it is still under preparation.

(FY 2003 Overseas Survey)

From 2002 to 2003, a feasibility study was implemented in relation to the improvement of the airport and the Tashkent Airport Cargo Terminal in Nukus City and Termez City.

From 2002 to 2003, improvement of the Nukus Airport Passenger Terminal was implemented on the private fund of "Uzbekistan Airways", with subsidization by the government of Karakalpk Republic.

"Uzbekistan Airways" and the airport cargo terminal will be improved under the financing of the KfW Bank of Germany.

The budget planning for the airport improvement project by Nukus City and Termez City is supposed to be determined within FY2004 and implemented in 2005 - 2006.

(FY 2008 Overseas Survey)

The International flights increased from 370 in 1996 to 460 in 2002. The number of the international tourists increased from 30,000 in 1996 to more than 150,000 in 2003, however there is no data available on exact number of increase of the tourists using the concerned three airports. The modernized three airports were put on the list of the international airport of the ICAO/International Civil Aviation Organization, and began to accept the international flights.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2000 Domestic Survey)

The Tashkent Vodokanal has changed the water policy effective as of February, 2000 as follows;

Tashkent Vodokanal is to employ the revised tariff table effective in March 2000 and will uniformly charge 6.75 sum/m³ to the users. With this policy, the proposed solutions regarding the method of collecting installation costs are included. Also, Vodokanal examines the possibility of setting up a Department of Publicity and having employees wear uniforms. The data in our main report is referred to in their future investment plan on facility and equipment.

(FY 2001 Domestic Survey)

Having regard to the result of M/P, the proposal on the installation cost collection system of meters was accepted for the revised tariff table adopted in the Tashkent Vodokanal. Although the Uzbekistan side had fixed idea to set up the tariff, the survey team showed various options and proposed the most reasonable method. This enabled to implement the technical transfer on how to set up the tariff for the continuous discussion, not as a transient matter.

Furthermore, regarding the facility, the study team analyzed the cause of problem on the necessary renewal and improvement of facility for the future from the different point of view with the Uzbekistan side, and proposed the point of the optimum improvement. As a result, the Uzbekistan side agreed this improvement plan and adjusted the future measures to be taken.

As a result above all, the long and short term policy on the future water project management and tariff control were made clear.

(FY 2002 Overseas Survey)

A partial re-organization of sales department of Vodokanal has been implemented.

Japanese Technical Cooperation :

(FY 2001 Domestic Survey)

Although it was planned from Oct.2001, it is postponed because of the terrorist acts in the USA.

(FY 2002 Domestic Survey)

Dispatch of the Short-term Expert of experts : Feb.~ Mar. 2001, Acceptance of trainees: two trainees ,Apr.~Mar.2002

Benefit effects:

(FY 2003 Overseas Survey)

1)The potable water tariff revision issue was solved. 2)Adoption of nonmetal piping in water plumbing was significantly increased. 3)Use of Japan-made valves for detection of leakage parts extremely eased repair works of damaged piping, and the expense required for the works was reduced.

Situation to implement the Project:

It would seem that the other aid agency or international organization commenced to realize the project based on the result of this Development Study.

(FY 2002 Oversea Survey)

Vodokanal had contacts with EBRD and ADB. They were interested in the situation with urban water supply.

(FY 2003 Domestic Survey)(FY 2003 Oversea Survey)

Of the proposed details, revision of tariff and improvement points in the method for bearing installation cost of water meters have been already put into action and improvement of management has been encouraged. On the other hand, as for facilities, a loan from EBRD (European Bank for Reconstruction and Development) for urgent rehabilitation of facilities amounting to 13.5 million dollars is has been applied for.

(FY 2004 Domestic Survey)

Based on the result of this study, subsequent F/S is in progress as a next step for priority projects within the master plan prepared with the focus to improve the management of water service entity and to maintain water supply facilities (JICA Development Studies: in progress from July, 2003).

Project Name: JICA project "The Study on Water Supply System Improvement in Tashkent, Republic of Uzbekistan", (1) Funding Party: JICA, (2) Amount: FY 2003: 1 million YEN. Under contract negotiation for FY 2004, (3) Content: Development Study, (4) Japanese Technical Corporation: Accepting trainee from several countries, such as Uzbekistan and Kazakhstan, (5) Benefit: Because the project is in progress, benefits have not been evaluated.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

Subsequent Studies "Tashkent Water Supply Service Facilities Improvement Project"

On April, 2004, Khokimiyat in Tashkent and EBRD concluded a contract of this project. Implementation period is scheduled from 2004 to 2007, which EBRD will allot a budget for equipment purchase, replacement of low market rate pumps in three water supply facilities, and construction of new pump-facilities and water supply management facilities. The project will implement design and reconstruction of the sluice facilities, which will establish a new pumps and water pipes at 3-d above water level.

Funding party: 10 million USD

Implementing body: SUVSOZ

Technical Corporation

Training: 4 experts from SUVSOZ has taken part in JICA hosted training courses from 2001 to date.

Dispatch of Experts: Study conducted on pricing mechanism by a JICA consultant in SUVSOZ from December 2001 - March 2002

Other Technical Corporation: (1) In 2002, JICA Uzbekistan Office alienated 4 computers (Pentium 3) to SUVSOZ, which is not used in other department of the Trust. (2) In November, 2004, JICA study team has purchased 2 ultrasonic flow metre, "Vzlyot", to measure the consumption volume of SUVSOZ pipelines.

Benefits: (1) Proposed improvements in management system and tariffs, which JICA consultant had prepared, are referred in the essential activities of SUVSOZ.

Adjustment of drinking water, which was lowered to net cost, has made a settlement of internal public subsidy. (2) Non-metal pipes, especially polyethylene pipes, are widely used. (3) Gradually introducing uniforms for the Trust staffs, uniforms with a Trust's logo are introduced for emergency service and sewage staffs. (4)

Reorganisation of "Water Sale" department was partly conducted establishing department for each district for marketing, which water charges are collected by locals taking an opportunity and saving of water is recommended through media. (5) Positively introducing local water management equipment to allowing self-report. (6) Using

Japanese equipment to check water leakage, which accomplished sharp decline in manpower and costs for damaged water-pipe eradication. (7) Ultrasonic flow meter

made possible to analyse amount of water supply and amount of water utilisation facility.

Description :

(FY 2004 Overseas Survey)

Ministry of Health send second application for conducting study at the regional level, the purpose of study is to create the comprehensive regional model of improving health services at district and regional level including all priority directions proposed at M/P. There is expectation that study will be conducted in Navoi region of Uzbekistan. Navoi has many problems at district and regional level in terms of structure and efficiency of health care services. The region has already received some Grant aid equipment in the past, there is a hope that a new study will help to consolidate structures and services for building a new model of regional health care, which is also provide better quality services.

(FY 2005 Domestic Survey)(FY 2006 Domestic Survey)(FY 2007 Domestic and Overseas Survey)

Subsequent study: Navoi medical service improvement plan (Development study)

Implementing period: February 2007- March 2008

Implementing body: JICA

Objectives: To investigate the status-quo of medical facilities from the 1st level to the 3rd level, to collect and analyze data of hospital management, and to clarify the role/function of the 3rd medical services based on its geographical characteristics with large-scale soil and the disease structure in planning medical services focusing on the purpose of 3rd medical services. In addition, the most adequate plan will be selected to prepare a detailed plan. In addition, the objectives include the technical transfer to the counterpart in the process of the study. The plan of restructuring is made on the assumption of ten years from 2008 to 2017.

Situation:

S/W was signed on July 2005. Study is in preparation. The Government of Uzbekistan has undertaken health care reform since 1990s. Public announcement has been made by JICA in October 2006 and is planned to implement local survey from January 2007. Executive Order No.3923 indicating the main policy of the execution and the further reform of the National Health Service Plan, was promulgated on 27 Sep. 2007. The Executive Order evaluated the following: result of the current National Health Service Plan, disease prevention, and a further improvement of the medical service supply at state and a county level.

Improvement program for health care services system of Navoi oblast proposes series of activities to meet the changing demands of health issues. It includes six components as following:

1. Disease prevention
2. Diagnosis and treatment for non-contaminated diseases
3. Medical facility
4. Medical equipment
5. Sanitary condition of health facilities
6. Efficiency of Drug supply

"Component 3" proposed have been realized as establishment of Oblast general medical center and Oblast diagnostic center.

(FY 2008 Overseas Survey)

The results of the study were used in preparation of the national policy in health care sector reforming process. All orders of the Ministry of Health of Uzbekistan have been using materials received during conducted survey inside of study project. All the material of the master plan was used for orders of the regions and to preparation of the health management reform by Uzbekistan Department of Health.

Description :

(FY 2008 Domestic and Overseas Survey)

1. Development of Integrated Practical Medical Care Manual for Non-communicable Diseases

After few months after the implementation of the development study, a Technical Cooperation Project (doctors' training at hospitals in Japan - revision of the manuals for individual conditions - implementation of seminar programme lasting two to three years on site) was requested to support elaborating a practical medical manual, improving medical care systems and setting up in-service training courses for doctors. Request is under review in JICA.

The idea of Integrated Practical Medical Care is supported by MoH, Health Care Services in Navoi and the doctors in the Navoi region so that the Integrated Practical Medical Care for non-communicable diseases is expected to be applied in the Navoi region.

2. Improvement and enhancing medical care facilities (Setting up regional medical care and diagnostic center)

The construction budget had been reviewed by the counterpart government by the time the development study was implemented. The Government of Uzbekistan is expecting to receive funding from several donors for the medical equipment. The Government of Japan has not yet received the request.

3. Maintenance of medical equipment - the maintenance of basic medical equipment at the regional central hospital

The regional government of Navoi will procure the medical equipment with small-scale funding including the grass-rootsgrant aid scheme from Japan.

(FY2012 Domestic Survey and Overseas Survey)

Description :

(FY 2001 Domestic Survey)

The water supply sector, as well as other sector of public infrastructure, have various problems. To overcome these problems and to structure sustainable water supply system, recommendation suggested such as follows: 1) Establishment of organization; water supply in district towns are to be operated by government. Because of difficult to operate small water supply systems in other local communities, it was confirmed that they would be entrusted to the self-help endeavor of the concerned residents. 2) Development of human resources; all engineers and officers who were at the management of former supply authority have left. It is required to train staff for the administrative and engineering posts. 3) Development of Laws, regulations and standards; it is required to develop laws and regulations that define the under supply services during the transition to establishment of the East Timorese National Government. 4) Financial Planning; it is necessary to make the water supply service be operated without depending the government's subsidy. It is therefor, proposed initiate the tariff collection in the early stage. 5) Sustainable Water Supply Facilities; water distribution control system must be adapted into the rehabilitation plan in terms of sound management of water supply services.

Finance:

(FY 2002 Domestic Survey) UNOPS

Construction:

(FY 2002 Domestic Survey) Dili 2001-2003, 3 cities (Liquica, Manatuto, Los Palos) 2002-2003

(FY 2003 Overseas Survey) Construction progress: water supply system for Dili - completed in July 2003, water supply system for three local cities - completed in November 2002, water supply system and drainage networks in Dili - scheduled to be completed in March 2004

Technical cooperation of Japan: Acceptance of Technical Training Participants

(FY 2003 Domestic Survey) May 2004 One person (technical field: leakage prevention)

Future perspective:

(FY 2002 Domestic Survey) Grant Aid will be offered to local 5 cities.

(FY 2003 Overseas Survey) As for the Project for the Improvement Water Supply in DILI and Rural Districts, the B/D is supposed to be completed in March 2003 to July 2003 and the E/N is supposed to be signed in the next fiscal year.

(FY 2003 Domestic Survey) Five local cities Grant aids are supposed to be provided Grant aids are expected to be requested for the following two projects of water distribution pipes improvement

- 1) Water supply facilities improvement projects in Same City and Ainaro City: Request period: FY2006, Amount: 1,107 million yen
- 2) Water supply facilities improvement projects in Ermera City and Maubisse City: Requested period: FY2008, Amount: 859 million yen

(FY 2004 Domestic Survey)

1 Water supply system and drainage networks in Dili

1) Design: Started in September 2004. Completed in December 2004. Tender in January 2005, 2) Construction: Planned to start in February 2005. Planned to be completed in December 2006, 3) Management/Operational body after completion of design/construction: Water and Sanitation Services (WSS)

2 Subsequent Studies

"Water Supply System Improvement Plan in 2 Cities: Same and Ainaro", planned to be conducted in FY 2005

(FY 2004 Overseas Survey)

1 The Project for the Improvement of Water Supply in Dili and Rural Districts

1) Target site: 5 districts/cities, 2) Progress: Design has completed in August, 2003

2 The Project for the Improvement of Water Supply in Dili

1) Funding Request: Grant Aid, E/N approved on 17th May, 2004, 2) Contents: 3 water treatment facilities, including restoration works for an aqueduct, carriage pipe, and distribution pipe, 3) Construction start date: March, 2005 (completion in December 2006)

(FY 2005 Overseas Survey)

Subsequent study: The study on urgent improvement of water supply system in East Timor

Implementation period: February 2000 - August 2000

Implementation body: JICA

Objectives:

- To plan and implement urgent projects
- To contribute to UNTAET's infrastructure rehabilitation programs

Technical cooperation:

Dispatch of experts:

Adviser for the Directorate of Water and Sanitation Service (September 2004 - September 2005)

Training program:

Operation and Maintenance of Urban Water Supply Systems: (May 19 - August 10, 2003)

Non-profitable waste management: (13 October - December 08, 2003)

Seminar on comprehensive solid waste management: (11 May - 17 July, 2004)

Operation and management of urban water supply systems (31 May - 08 August, 2004)

Engineering of solid waste: (08 June - 28 August, 2004)

Seminar on comprehensive solid waste management: (17 May - 9 Jul, 2005)

Description :

(FY 2001 Domestic Survey)

The usable topographic maps for Dili City in East Timor had basically been only the 1:25,000 scale topographic maps that were made up by BAKOSURTANAL, Indonesia in 1990's (two types of aerial photos taken in the 1980's and the 1990's). In addition, other topographic maps of larger scale had also been partly available, but those maps had been expanded and compiled from the 1:25,000 scale topographic maps.

Therefore, the accuracy of these topographic maps was the same as that of the 1:25,000 scale maps, and the information contained in those maps was that obtained in the middle of the 1980's and early in the 1990's. The topographic maps available for the Dili City and its environs have already been inadequate at present because of large changes in the land use and road conditions.

One of the important objectives for creation of the 1:2,000 scale topographic maps and GIS data in this Study was that those maps should be prepared as soon as possible for use as basic materials to promote the reconstruction of urban facilities in Dili City which is about start and to solve the problems that the Dili City, the largest city in East Timor has.

However, the existing materials necessary for creation of digital topographic maps, especially GIS data had mostly been lost since the dispute in September 1999 and usable existing materials were not available. Thus, the Study Team had to collect various types of information necessary for creation of digital topographic maps and GIS data through field verification.

As Described above, there were many difficulties in this Study for creation of digital topographic maps and GIS data in terms of the required time and its contents compared with the works for other ordinary areas. It is also anticipated that those topographic maps and GIS data will readily be subject to secular changes as the reconstruction of Dili City is making progress.

However, it was expected that the created digital topographic maps and GIS data would be effectively used as the basic materials for the reconstruction of the urban facilities and solution of various problems in Dili City and its environs.

(FY 2003 Overseas Survey)

The geographic information provided in February 2003 had been taken over from UNTAET to the Ministry of Agriculture (Cadastre). However, the provided geographic information had not been used in the Ministry of Agriculture at all due to shortage of manpower and lack of ability. With transfer of the geographic information from the Ministry of Agriculture to the Ministry of Land and Property accompanying the ministry reform enforced in August, the geographic information came to be utilized by staff in the Ministry of Land and Property effectively for various purposes at present including compilation of database of land registration information.

(FY 2003 Domestic Survey)

We have been receiving inquiries since the completion of the study from various quarters such as the United States, NGOs and Japan Self-Defense Forces on how to obtain the topographical map, which is a deliverable of this study. The fact proved that the map has been effectively utilized.

(FY 2004 Overseas Survey)

No information to be specifically mentioned.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Overseas Survey)

Technical Cooperation:

Training: Planning and management of national mapping and surveying, October 2005 to July 2006 1 personnel.

Description :

(FY 2004 Domestic Survey)

The development plan prepared in the study has been utilized as a basement data for the National Development Plan, prepared at the time of the independence in May 2003. In Timor-Leste, almost all of government publication and statistics data have been scattered. Thus the development plan, a comprehensive report in agriculture, forestry, and fishery prepared in this study, has been utilized not only by government authorities but by related donors and NGOs as well.

Along with the study, Lacro irrigation area has completed its repair works in December 2003, which all of 660 ha area has been irrigated in rainy season. The pilot project has completed its mission along with the study. Irrigation association established by the study team has continued to lend cultivation equipment and loan for a rent.

(FY 2004 Overseas Survey)

Based on the study, sustainable development of agricultural production, poverty reduction, community development, environment, agriculture, and capacity building have been considered to be a priority issue. The Ministry of Agriculture, Fishery, and Forestry and JICA East Timor office are considering to jointly implementing 2 of the project from the above priorities.

1. Agriculture Rice Promotion Project in Manatuto: The objective of the project is to improve the productivity to ease irrigation fee. This project is planned to be conducted for 3 years with a participation from the community.

2. Community-Based Watershed Management Project: The objective of the project is to develop a new community based approach using traditional local management and operational methods.

(FY 2005 Overseas Survey) (FY 2007 Domestic Survey)

Implementing period: 2005/Jun - 2008/Jun

Objective: To increase rice productivity in target area.

Funding:

Funding party: Yen Loan E/N concluded 2005/Jun

Benefit:

Beneficiary: Rice farmers and water users in the Manatuto District

Benefit:

- 1) Income increase
- 2) Adoption of rice production and O/M irrigation scheme in other areas of Timor-Leste.
- 3) Improvement in rice productivity by efficient operation of the Lacló irrigation plan.
- 4) Lacló irrigation plan has been operated by WUA.

Progress: In progress (FY 2007 Domestic Survey)

(FY 2006 Overseas Study)

Technical cooperation:

Trainings (5-10 personnel/year, April 2005 - April 2006):

- Course on agricultural statistics for senior personnel in charge of statistics
- Forest and watershed environment and technologies of land and water quality conservation
- Local development for small-scale farmers through the Agricultural Cooperatives Law
- Personnel on the counterpart side involved in the irrigation and water discharge
- Third country training program (TCTP)

Dispatch of specialists: Dispatching senior policy advisors and irrigation WUA advisors to the Ministry of Agriculture, Forestry and Fisheries (5 personnel for 1-2 years).

Others: Manatuto Irrigation and Rice Cultivation Project (IRCP)

Others: Projects on going are as follows.

Projects related to agricultural production (promotion of rice cultivation).

Beneficiary: Rice producers and residents in the community in Manatuto Prefecture

Beneficial effects:

- Farmers benefited from the maintenance and improvement of irrigation facilities and cultivation technology: 420 people
- Targeted farm areas of the Lacló irrigation plan: 650ha
- Improvement of knowledge on rice cultivation and an increase in the production
- Income generation by an increase in the production and the quality improvement of rice cultivation in the community

(FY 2008 Domestic Survey)

Grant Aid.

-Name of study: The Project for Rehabilitation and Improvement of Maliana Irrigation System.

-Contents: Grant the fund for the Irrigation and Water Management Division of the Ministry of Agriculture of the Democratic Republic of Timor-Leste to conduct the followings restorations and improvements for the irrigation channel in Mariana Irrigation District in order to improve the farm production in the Bobonaro District, Mariana region;

(a)Improvement construction of water intake gate facilities from Bulobo River which is the source of water,

(b)Repair of the main canal in irrigation channel (1.5 kilometers in total),

(c)Repair and installation of the secondary canal in irrigation channel (4.46 kilometers and 4.73 kilometers in total, respectively),

(d)Construction of administration buildings for sluice,

and so on.

-Exchange of Notes: Aug. 2007.

-Amount of the Grant: 737 million yen (maximum)

-Counterpart: Irrigation and Water Management Division of MAFF/Ministry of Agriculture, Forestry and Fisheries

(FY 2008 Overseas Survey)

-The planning and designs on irrigation development and water resource, and two studies and mapping are in preparation

-Protection, River Normalization and Land Consolidation, WUA/Water Users Associations are in preparation.

Description :

(FY 2015 Overseas and Domestic Surveys)

Project for Community-based Sustainable Natural Resource Management

Period: From December 2010 to October 2015

Implementing Organization: National Directorate of Forestry, Ministry of Agriculture and Fishery

Project Purpose: An operational mechanism of CR-NRM at suco level is developed.

The following components proposed in the development study were incorporated in this project:

- Land Use Planning Program
- Reforestation/Forest Management Program
- Farm and Livestock Management Program
- Agroforestry Management Program
- Community Development/Livelihood Development Program
- Capacity Development Program

Description :
 (FY 2004 Survey)
 State of implementation of the project is unknown, though recommendations are being considered.

(FY 2005 Domestic Survey)
 No information to be specifically mentioned.

(FY 2006 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Overseas Survey)
 Implemented project: Urgent water supply project in Kabul city
 Implementing body: Afghanistan transitional government
 Funding:
 Funding body: Grant Aid (E/N concluded on 26 July 2002)
 Amount: 289 million JPY
 Content: 24 free water wagons

Implemented project: Re-construction of public transport
 Implementing body: Afghanistan transitional government
 Funding:
 Funding body: Grant Aid (E/N concluded on 25 February 2003)
 Amount: 2.23 billion JPY
 Content: 1) Supplying 94 coaches and 17 minibuses for Kabul city public transport together with maintenance equipment and 2) Supplying 4 coaches to Kabul International Airport together with spare parts and maintenance equipment.
 Other: This project attracted other donors' interest and funds. Indian government granted 400 coaches and 200 minibuses in FY 2004 and FY 2007, which sums up to 17.3 million USD. In addition, Pakistan government granted 100 trucks in FY 2004 and 100 coaches in FY 2005.

(FY 2008 Domestic Survey)
 No information to be specifically mentioned.

Description :
(FY 2005 Domestic Survey)
No information mentioned specifically

(FY 2006 Domestic Survey)
No information mentioned specifically

(FY 2007 Domestic Survey)
Preformulated short term rehabilitation project were supported not only by JICA but also shared by government related ministries and agencies and by other donors, such as the UN agency. These prioritized projects are supported by substantial number of donors including JICA. However, direct and indirect effects of and relations between implemented projects and rehabilitation projects which were prepared in the mentioned study are not evident. Below are listed examples of support from Japan which are thought to be related.

1. Education
1) School construction plan (Grant Aid): proposed project; Restoration, construction and rehabilitation of elementary and secondary schools.
2) Strengthening Teacher Education Program (JICA Technical Cooperation Project): proposed project; Supporting teacher training.
3) Support for Expansion and Improvement of Literacy Education in Afghanistan (JICA TCP): Basic education and training to preschool children, youth and other certain groups.

2. Health care
1) Tuberculosis control project (JICA TCP): proposed project; Reconstruct National Tuberculosis Laboratory, establish the information database system for National Tuberculosis Program
2) Strengthening Special Education in Afghanistan (JICA TCP): proposed project; Reconstruct National Tuberculosis Laboratory, establish the information database system for National Tuberculosis Program
3) Reproductive Health Project (JICA TCP): proposed project; Improvement for reproductive health

Lists stated below are details of the above project, which are closely related.

Implemented project: Tuberculosis control project
Target: To deliver high quality tuberculosis treatment throughout the country through DOTS
Implementing body: Ministry of Public Health, JICA TCP
Implementing period: September 2004- September 2007
Target Area: Entire country of Afghanistan
Major activities: 1) Enhance NTP (National Tuberculosis Program), 2) Disseminate DOTS within model area, 3) Establish a study on high quality sputum smear microscopy throughout the country.

Relation with the mentioned study: Technical cooperation project using buildings and equipment which were improved and upgraded in "Urgent Rehabilitation Support Program" (Tuberculosis center refurbishment). Emergency restoration was made in accord with the details of Technical Transfer of the concerned Technical Cooperation Project.

(FY 2007 Oversea Survey)
No information to be specifically mentioned.

Description :

(FY 2005 Domestic Survey) (FY2007 Domestic and Overseas Survey)
 The mentioned urgent rehabilitation study, which were proposed while the urgent development studies were undertaken, was supported not only by JICA but also shared by government related ministries/agencies, and other donors such as the UN. These prioritized projects are supported by substantial number of donors including JICA. However, direct and indirect effects of and relations between implemented projects and rehabilitation projects which were prepared in the mentioned study are not evident. Below are listed examples of support from Japan which are thought to be related.

1. Education
 - 1) School construction project (Grant Aid): Proposed project; Construction of schools to where there are shortage of local schools in Kandahar city and province
 - 2) Literacy rate improvement project (JICA TCP): Proposed project; Education to youth and adults.
2. Healthcare
 - 1) Education of midwives in Kandahar project (JICA on-site order): Proposed project; Strengthen local primary healthcare.
3. Woman
 - 1) Support women's financial empowerment project (JICA TCP): Proposed project; Develop capacity and activity of Kandahar women's bureau
4. Reintegration of ex-combatants: Proposed project; Comprehensive integration project for ex-combatants in Kandahar province

Lists stated below are details of the above project, which are closely related.

Implemented project: Reintegration project; Community development supporting project
 Implemented body: Ministry of Rural Development and Rehabilitation, JICA (PROTECO)
 Implemented period: June, 2004 - June, 2009
 Funding:
 Funding body: JICA, PROTECO (E/N concluded 12 June 2004)
 Target area: Dand district in Kandahar province
 Target: Developing capacity of people who work for community development projects
 Activity: Main activities are as follows. 1) Training in community development center (ICD) 2) Implementation of community development project in rural areas (10 Villages) 3) Implementation of rural skills stimulation project
 Input: Japan) Dispatch of experts, Salary of local staffs, office management fee, local training fee, community development project fee, rural skills stimulation project fee
 Technical cooperation: Training in Japan; Promotion of sustainable community development in cooperation with the citizens, Training in third country, Inspection in domestic company
 Progress:
 (FY 2007 Domestic Survey) Community development project has been completed in 9 villages and preparation is in progress in 1 village.

Implemented project: School construction project (first phase)
 Funding:
 Funding body: Grant Aid (E/N concluded 7 July 2004)
 Amount: 677 million JPY
 Target Area: Kabul city, Kabul province, Parwan province, Kandahar city
 Content: Construction of 32 schools (376 class rooms, 67 management rooms), including construction of wells and facilities, and procure school furniture (for 2 schools in Kabul city, 5 schools in Kabul province, and 4 schools in Kandahar city).

Implemented project: School construction project (second phase)
 Funding:
 Funding body: Grant Aid (E/N concluded 6 July 2005)
 Amount: 1.022 billion JPY
 Target area: Kabul city, Kabul province, Parwan province, Kandahar city
 Content: Construction of 32 schools (376 class rooms, 67 management rooms), including construction of wells and facilities, and procure school furniture (for 3 schools in Kabul city, 6 schools in Kabul province, and 9 schools in Parwan province).

Description :
 (FY 2005 Domestic Survey)
 Japanese government received grant aid request for restoration project of Kandahar Talnak main watercourse.
 Subsequent project: Reconstruction project for central agricultural experimental station. (Technical Cooperation Project)
 Implementing body: JICA
 Implementing period: 2005/Aug
 Relation with the subjected study: The mentioned study concurrently conducted rehabilitation of Kokaran farm. This project utilise the restored facilities.

(FY 2006 Domestic Survey)
 Entry to Kandahar has been prohibited for Japanese due to deterioration of public security. Thus, there has been no progress for the project in spite of the fact that a request for grant aid for the Turnak main watercourse rehabilitation project was approved.

(FY 2007 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Overseas Survey)
 Projects proposed in the mentioned study and are not yet implemented, will contribute to the improvement of local living standards, if implemented.
 Training of personnel have not yet been realised, even though several requests have been made from the Agriculture Service Department since the restoration of Kokaran laboratory. In addition, none of the personnel understands how to operate the transferred equipment, since none of the personnel received training for the operation.

(FY 2009 Domestic Survey) No information to be specifically mentioned.

No information to be specifically mentioned.

(FY 2007 Oversea Survey)
Implemented project: Project for restoration work of Mazari Sharif City road
Implementing body: Ministry of Urban Development and Housing, JICA (Grant Aid)
Implementing period: November, 2005 - March, 2007
Funding:
Funding body: Grant Aid (E/N concluded on 28 November, 2005)
Amount: 1.2 billion JPY
Content: Rehabilitate 10.7km of the existing roads in Mazari Sharif city in order to revitalise economic activities and attract tourists.

(FY 2008 Domestic Survey)
No information to be specifically mentioned.

(FY2012 Domestic Survey)
No information to be specifically mentioned.

(FY2012 Overseas Survey)
1) Rehabilitation of Existing Schools in Mazar-e-Sharif
*Reconstruction of 7 schools in Mazar-e-Sherif
(Japanese corporation involved) Corporation name: Kitano Construction Corp. Description: Contractor
2) Construction of New Primary Schools for Underserved Areas in Mazar-e-Sharif
*A number of governmental relief organizations, international organizations and non-governmental organizations have constructed thousands of schools in Balkh Province and across the whole of Afghanistan.
3) Facility Improvement for the Faculty of Education in Balkh University
*Under the operation (2005-)
*(Supporting body) UNICEF, GIZ, Swedish Committee for Afghanistan
4) Introduction of In-Service Teacher Training and School-based Teacher Training in Mazar-e-Sharif
The following Technical Cooperation Projects were implemented.
*Strengthening Teacher Training Project (STEP) (2005-07)
*Strengthening of Teacher Education on Special Education(2008-10)
*Project on Strengthening of Teacher Education Program Phase 2 (STEP 2)(2007-10)
*EProject for Strengthening of Teacher Education on Special Needs Education Phase2 (STESE2)(2013-15)
5) Improvement of School Management in Mazar-e-Sharif
*People in Need, supported by JICA, has implemented model projects in 7 schools.
6) School-based Education Quality Improvement with Community Involvement and usage of Multi-purpose Room
*EPeople in Need, supported by JICA, has implemented model projects in 7 schools.
7) Improvement of Information Management Capacity of Balkh PED
*This has been implemented since 2006 by the assistance of UNICEF and GIZ.
8) Capacity Building of Balkh PED for Establishing School Maintenance System
*This has been implemented through Information Systems Technical Cooperation Projects, etc.

Description :
 The following projects were implemented or being implemented.

Feasibility Study on Urgent Water Resources Development and Supply for Kabul Metropolitan Area (F/S)
 October 2010 to September 2012

Project on Promotion of Kabul Metropolitan Area Development (technical cooperation project)
 from May 2010 to May 2015

The Project for Improvement of Water Supply Facilities in Dehsabz South Area, Kabul Province (Grant Aid)
 Total cost 2563 million yen
 from April 2013 to January 2015 (total 22 months)
 Target: Water Supply: 5,000 m³/day in 2018 from nothing in 2012
 Population served: 42,000 persons in 2018 from nothing in 2012
 Water Supply hours: (hours/day): 24 in 2018 from zero in 2012.

(FY 2015 Overseas Study)
 In regard with economic plan, a subsequent study was implemented as below.
 1, Economic Strategy for Development of Kabul New City, 2, Feasibility study of Barikab Agricultural Economic zone, 3Preparation of Structure Plan for Barikab Agricultural Economic Zone, 4 Preparation of Development Plan for Industrial Parks, 5EIA of Barikab Agricultural Economic Zone, 6EIA of Industrial Parks.

In regard with land use, a subsequent study was implemented as below.
 Preparation of Structure Plan for Phase 1 of Kabul New City 2, Preparation of Structure Plan for Phase 2 of Kabul New City, Preparation of Development Plan for Phase 1 of KNC, Land Preparation Plan for Phase 1, Urban Development Guidelines for PDA in reference to KNC, Preparation of Greenery Master Plan for KNC, Parceling of Phase 1 area, Preparation of Business Plan for Phase 1 of KNC, preparation of adapted land adjustment method for development of parcels, preparation of contract documents for phase 1 parcels,

In regard with infrastructure development plan, a subsequent study was implemented as below.
 1. Feasibility Study of urgent water resources for KNC, Underground water resources study for KNC, Outline Design of water supply for Phase 1, Detail design of water supply for parcel 1 (PDA), 2, Outline Design of Primary and Secondary Roads of Phase 1, Detail Design of Primary and Secondary Roads of Parcel 1 (PDA), Conceptual Design of Sewerage System of KNC, Outline Design of Sewerage System for Phase 1, 3, Outline Design of Power Supply for Phase 1, 4 Conceptual Plan of Solid Waste management system for phase 1.

The Project for Improvement of East-West Arterial Road and Community Road in Northern Area of Kabul (Grant Aid)
 -Implementing period: March 2012 to September 2012

| | Processing | Discontinued or Cancelled |

Description :

Background:

Dec.14~Dec.22.1977
 The 1st preliminary study
 Study on fishery resources and request.

May.10~Jul.6.1978
 The 2nd preliminary study
 Study on technical cooperation and the site for aquaculture.

Feb.~May.1979
 The 3rd preliminary study
 Biological marine study, study on fish for aquaculture and detailed design for experiment center.

Feb.22~Mar.10.1980
 The 4th preliminary study
 Study on site for a center, budget allocation, living environments of experts, problems.

Construction:
 May.1984 Mariculture Center constructed

Situation:
 The Center has been functioning well in mariculture-related research, training and extension, attracting many visitors from neighboring countries.
 The research program at the Center has been diverse, covering from mariculture to R & D on sea food processing. The reports of the findings have been widely exchanged with similar institutions in other countries like Japan and Malaysia. The species hatched at the aquarium of the Center have been sent to aquariums in other countries. The administration has a plan to diversify the functions of the Center, including the establishment of an extension facility in Abu Dhabi.

Of the Subsequent Studies
D/D completed (Al Bassierah Dam Project (1981)) Refer to "Al Bassierah Dam Project (1981)" for detail.

Detail
(FY 1991 Overseas Survey)
Although D/D was conducted as "Al Bassierah Dam Project", the Iran-Iraq War and the drop of oil prices were adversely affected the implementation of the project and the project was temporarily suspended. In 1989 the Japanese government was requested to assist the resumption of the project. In 1990 the UEA government planned to allocate the own budget in order to implement the project. The consulting firm, which conducted D/D, was requested to update the study which was implemented about ten years ago.

| | Processing | Discontinued or Cancelled |

Description :

1. After the completion of this D/D, the Government of UAE decided to implement the project by international tender and asked JICA for additional cooperation on the guidance and evaluation of the tender and award procedures, which was duly approved and executed. After the completion of D/D, the project was suspended due to financial difficulty.

2. UAE sounded in 1989 the intent of the Japanese Government, desiring to revive the project, but received a negative response.

(FY 1991 Overseas Survey)

In 1990, the UAE government began to resume the dam project with federal budgets. Because the JICA study was undertaken ten years ago, UAE water resource engineers consider it necessary to restudy the groundwater conditions in the proposed site and to update the detailed design. The company which was successful in the tender has inquired the UAE government whether the construction can be done in accordance with the original JICA detailed design, and requested the engineering services from Japan.

(FY 1995 Domestic Survey)

No additional information.

(FY 1997 Domestic Survey)(FY 1998 Domestic Survey)

Implementation of project has delayed because of financial constraint of the government.

* Refer to "Wadi al Bassierah Basin Water Resources Development Project (ARE/S 301/81, JICA F/S)" for detail.

Description :

(FY 1997 Domestic Survey)
 As UAE is presently out of the list of aid recipient countries for DAC, the Japanese Government has no intention to implement this project.

(FY 2002 Domestic Survey)
 The policy of this M/P is 'effective use of existing natural water resources', and the Study proposed the effective use of natural water resources (e.g. cultivating equipment for ground water and saving water irrigation system) However, after completion of the Study in 1996, UAE shifted its policy of water supply to mass desalination of seawater, and the M/P decreased its priority in effective use of natural water. Moreover, the proposed project, 'establishment of observation network' is delayed due to the alteration of the division in charge of human resource management within the dept. Also, after the Study, UAE was eliminated from the DAC aid recipient countries, it cannot be anticipated to receive Japan's ODA. Ministry of Agriculture and Fishery, the implementing agency, has limited budget allocation, it will require time to raise funds for groundwater recharge facilities. The groundwater recharge dams project was proposed, based on the Development Study in 1980, spent 15 years until the commencement of the operation. Considering these, it will need more than 5 years to launch this project.

(FY 2002 Overseas Survey)
 The reason for the delayed situation: difficulties in procuring finance.
 Future prospect: more than 5 years required to implement the projects
 Although the number of farms using modern irrigation systems and greenhouses increased, but may be not applied in all farms of studied area during the required period of project implementation which is 9 years since 1996 till 2004.
 Situation after the study:
 1) Legalization, maximum total depth for drilling water wells in the project area and adjacent wadies limited to 500 feet.
 2) Studies completed recently proposed more new locations for recharge facilities as small dams, trenches and ponds in the project area and adjacent wadies.
 3) Local government is planning to use sewage treated water for irrigation within the study area.

Description :
 Based on the results on this study shown in the Final Report handed over to Algeria side in March 1993, the government of Algeria is preparing to ask Yen loan to the government of Japan.
 On the other hand, the government of Japan sent a fact-finding mission to Algeria, in September, 1993. Taking account of missions report, for the moment, the government of Japan is looking round the situation of Algeria, especially in security matters, before entering the procedure of the finance.

Description :
(FY 2007 Domestic Survey)
Ministries in charge of preparing earthquake disaster prevention plan are divided into several ministries according to their operations: the Ministry of Internal Affairs for urgent measures; the Ministry of Environment for general prevention measures; the Ministry of Housing and Urban Affairs for earthquake damage estimation and quakeproof plan. The Ministry of Housing and Urban Affairs (responsible for microzoning and quakeproof plan) had been selected as the counterpart for implementing the mentioned study. However, the ministry opposed strongly against the involvement of the Ministry of Internal Affairs and Ministry of Environment in formulating the disaster prevention plan and the urgent measurement plan. The Ministry of Housing and Urban Affairs also opposed against formulation of the M/P for quake proof plan, thus training in Japan was not realized.

(FY2012 Domestic Survey and Overseas Survey)

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :
 The reasons for realizing the project are as follows:
 1)Contribution to the alleviation of water shortage caused by population increase and urbanization
 2) High Priority
 3) The General Organization is the most powerful and active governmental agency in Cairo City.

Subsequent Studies:
 Dec.1979 D/D completed

Finance:
 Jun.1976 L/A 5,820 mil.Yen
 (Water Supply Improvement project in Great Cairo (I))
 *Components of project
 (1)laying of pipelines for tap water (23km) and raw water (17km)
 (2)construction of one pumping station (90,000m3/day) and three water distribution ponds (10,000m3 and two 12,000m3)
 Dec.1978 L/A 3,375 mil.Yen
 (Water Supply Improvement Project in Great Cairo (II))
 *Components of project
 laying of pipelines for raw water (Heliopolis-Nase City) and for tap water (at the central Cairo and the eastern Cairo) and
 cleaning of the existing pipelines
 (FY 1998 Domestic Survey)
 This project includes Helwan water conveyance facilities (row water pipeline).

Constrution:
 Aug.1984 Completed

*Pumping facilities, Heliopolis water conveyance facilities and Nasr City water conveyance facilities have been already completed.

(FY 1998 Domestic Survey)
 Helwan water conveyance facilities have been also completed.

Related Projects:
 (FY 1994 Overseas Survey)
 Taking into the consideration the situation change taken place after the completion of the construction, "East Bank Water Supply Master Plan" was formulated in 1990 with the USAID fund, which targets the year of 2010. Among the proposed projects, the improvement of the Assyria Water Purification Plant has been implemented with the assistance of the JICA grant aid.

(FY 1995 Domestic Survey)
 The executing agency plans to undertake the facility expansion project after the Assyria Water Purification plant is renovated in December, 1997. Also, it considers to conduct a revisional study of M/P.

(FY 1997 Domestic Survey)
 The government of Egypt expects for grant aid assistance for expansion work of Assyria Water purification Plant.

Major projects are as follows:</p> <ol style="list-style-type: none"> 1) Establishment of an agricultural experiment station (selection of suitable crops, development of appropriate farming systems, improvement of irrigation management and disease and pest control); 2) Establishment of a Fishery Management Center (Resource surveys, experimental aquaculture, resource management); 3) Rural Development; 4) Expansion and improvement of West Harbor of High Dam; and 5) Road development around the High Dam Lake Area. | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Utilization of Outputs:

The study result was translated into Arabic. Also, it was incorporated into the regional development section of the National Development Plan and has been utilized as a guideline for the development of Southern Aswan region. Although as for the proposals made in M/P, no F/S was conducted, various proposed projects have been implemented.

(FY 1997 Overseas Survey)

The results of this study has been utilized for elaboration of "High Dam Lake Area Integrated Development Plan (1997~2017)".

(1)Agriculture

(FY 1991 Overseas Survey)

Agricultural Experiment Station: Constructed with the local fund.

Foreshore Agricultural Project covering 11,000 fedden: Being implemented with the financial assistance of WFP.

(FY 1994 Overseas Survey)

Agricultural Development Research Center: Constructed with the local fund. Research has been conducted for the settlement of small farmers. JICA has been requested for the technical cooperation and the provision of equipment.

(2)Fisheries

Fishery management Center:

Finance:

Jun.8.1980 E/N 500mil.yen

Implementation:

Dec.1980~Dec.1981

*Contents of works

Research Administration building, laboratories, experimentation ponds and instruments

Consulting company / Azusa Sekkei

Contractor / Kitano Construction Corp.

(FY 1993 Overseas Survey)

The technology transferred in the process of this study is proved to be very useful in order to set up the system for the fishery resource development in High Dam Lake. However, the period was too short. In order to realize the project, they plan to collect the basic data concerning fish farming and environment matters as well as to examine the fishery promotional measures such as the structure of fishing industry, the regulation and the transportation system.

(FY 1994 Overseas Survey)

The Fishery Management Center has well managed the projects concerning the storage, ports and fish farming. The grant for three ice-making machines related to the fishing industry has been requested to the Japanese government.

(FY 1997 Overseas Survey)

D/D on management of the center, fishery resources management and aquaculture was conducted by JICA and High Dam Lake Area Development Authority from Dec.1990 till Dec.1993.

The Japanese evaluation team organized by JICA was dispatched to Fishery Management Center in Jan.1996 in order to conduct and overall review and evaluation of the project with the Egyptian evaluation team of Fishery Management Center (FMC). The Japanese evaluation team observed that the project was successfully carried out according to the work plan. However, three items remain as outstanding targets of work:

- Establishment of lake fisheries planning to cope with the change of fishery productivity which is effected by eutrophication and fluctuation of water level of the lake.
- Estimation of effects of fish fry release and promotion of aquaculture at suitable locations.
- Extension of study results to the fishermen.

(3)Improvement Road

Construction of Aswan-Ab Simbel, Kalabasha-Gurf Husein and Aswan-El Araki:Completed with a local fund (FY 1991 Overseas Survey)

(4)Others

Abu Simbel Port and Ice Plant: Constructed with a local fund. About 100 companies are working on the quarry development around the lake.

Detail

(FY 1994 Overseas Survey)

The state government is responsible for the implementation of many of the proposed projects. Some of them have been successively implemented in regions such as Aswan, Abu Simbel, etc.

| | | |
|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Reasons of Suspension:
 The Egyptian Railways is convinced that electrification should be implemented. However, the project is suspended owing to huge amount of initial cost and the insufficiency of electricity, Electrification between Cairo-Alexandria would not be realized for ten years from now on. It would take longer time for electrification of other lines.
 (FY 1991/94 Overseas Survey)

Improvement Works/Alternative Project:
 Some improvement works on signals, tracks, etc., based on this project were implemented with the financial cooperation of both France and West Germany. An alternative project of introducing turbo train units between Cairo and Alexandria has been implemented since 1983 by French finance.

Description :

Reasons of Stoppage:
 (FY1994 Overseas Survey)
 Since 1980, the number of passing vessels through the Suez Canal has decreased due to depression of the marine transportation business. Hence, the Second Stage Project targeting the passing capability for the vessel of 250 thousand DWT should have been postponed.
 Considering proceeding construction of gas pipelines which substitute marine transportation, it should be admitted that the project has become less profitable.
 Container transporters would be prospective clients for the canal after development. However, the project should be reconciled from the viewpoint based upon various possibilities of change.

(FY1998 Overseas Survey)
 There seems to be possibility of realizing the proposed projects through the new Study "The Effective Management System fo the Suez Canal" of which TOR and required applications already submitted to the Ministry of International Cooperation.

Situation before Stoppage:
 Contrary to the double tracking of the canal proposed by the study, SCA decided to carry out the widening and deepening of the present canal.
 NEDECO implemented the F/S on this proposal.

Description :
 (FY 1994 Overseas Survey)
 The Economic Research Unit, the counterpart agency of this study, has been active in the implementation of the projects, based on the study reports.
 (1) Research on the Optimum Toll Calculation System
 (2) Participation in all F/S conducted by SCA
 (3) Research on the safe passage, etc.

Also, a JICA expert was dispatched to assist these activities. It expresses the desire for the technical cooperation on the Optimum Toll Calculation System.

Subsequent Study:
 Aug.1983~Aug.1985 F/S for Safety Improvement of the Suez Canal

Description :

Subsequent Studies:
 1984 D/D (Italian company)

The implementation was done by international tender in which Japanese companies also participated. The successful bidder was an Italian company.

Finance:
 Italy (US\$1,815,522: 80% government and 20% suppliers' credit) and local fund(2,112,620 E.pounds).

The project finance was as follows.
 Italy US\$ 18 million
 Local fund 2 million E.pounds

Construction:
 1985 completed

Related Project:
 (FY 1994 Overseas Survey)
 A new relevant project, information networking of El Faiyum - El Minya - Asyut - Qena - Luxor - Aswan, D/D is in progress by local finance. ATT is the Turn Key Contractor of the project. Completion of the network is scheduled in 1995.

Description :

Reasons of Stoppage:
 The new policy which was adopted after the completion of the Study was not compatible with its proposals. Part of the reason was that the cost estimate of the Project was considered disproportionately higher than the prevailing standards in Egypt.
 Long time has passed since the completion of the Study and what was proposed in the report is not viable any more.
 (FY1991 Overseas Survey)

Description :

(1) North Hussina Valley Area
 (FY 1991 Overseas Survey)
 The project area was reduced to 20,000 feddan.
 Subsequent Studies:
 D/D (GARPAD)
 Finance:
 Own fund (Total project cost: 153.03 mil.E.P. including 123.03 mil.E.P. of local currency)
 Construction:
 1987-92 Implemented

*During the period for the Five-Year Plan from 1992 to 1997, approximately 10,000 feddan will be added.

(2) Port Said Area
 (FY 1991 Overseas Survey)
 The project area will cover 36,000 feddan.

Detail:
 This project was planned to be implemented under the Social and Economic Development Five-Year Plan (1982/83-1986/87). However, the implementation was postponed due to the financial constraints caused by the drop of oil prices.

(FY 1994 Overseas Survey)
 Land consolidation and the construction of drainage facilities and irrigation facilities have been steadily in progress. The construction of a siphon, which is to take water from the Jerusalem canal, is scheduled to be completed in June 1995 after which the settlement will start. At present, the number of those who desire to settle in this area exceeds its capacity.
 The development of a part of area, covering 2,000 feddan has been delayed due to the excavation of historic sites, etc.
 The dispatch of experts in land consolidation or the project-type technical cooperation is desired to promote the project implementation more efficiently and more vigorously.

Description :

The proposed project has been integrated into the Second Five-Year Development Plan (1987-92).

Subsequent Studies:
1987-88 D/D (GARPAD)

Finance:
1986 Financed by the National Investment Bank and the Ministry of Finance(Foreign Currency:15mil.E.P. Local Currency:72.2 mil.E.P)

Construction:
Jul.1987 Commenced
Jun.1986 Completed
Most of the infrastructural facilities have been constructed.
Approximately 10,000 feddan of land was consolidated and planting was started in a part of that area. Fish farms were constructed, which utilize drainage.

Detail:
(FY 1994 Overseas Survey)
Land consolidation and house and public facilities construction have been steadily in progress. The number of those who desire to settle in this area exceeds its capacity. The facilities to drain to the Lake Manzara was constructed and salt leaching is being currently implemented. The Egyptian government desires JICA either to undertake the project-type technical cooperation or to dispatch experts (agronomist, plantation instructor, farm manager, self-management farm consultant, etc.).
The construction of a farm products processing plat (a milk processing plat, etc.) will be commenced after settlers move in the area.

Description :

(FY 1991 Overseas Survey)
 This project was not integrated into the Second Five-Year Development Plan (1987-1992), which resulted in the project delay. However, it is integrated into the Third Five-Year Development Plan and is considered one of high priority projects in Fayoum.

(FY 1994 Domestic Survey)
 In June 1994, the Pats Drain Project, which will be the main water resource of this project, was completed.

Subsequent Studies:
 In 1993, the request for D/D was submitted to GARPAD.

Finance:
 The negotiation with National Investment Bank has been conducted to secure the finance for this project.

(FY 1995 Domestic Survey)
 The Project has been Partially implemented with own fund.

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

The project was integrated into the Fifth Five-Year Plan. Although the preparation to apply for an OECF loan was made, it was discontinued.

Finance:
Own fund
Total project Cost: 25,388 mil.E.P.
(Local Currency-17,650 mil.E.P.and Foreign Currency-8,737.38mil.E.P.)

The executing agencies: the Sinai Development Authority and Ministry of Development, New Communities, Housing and Public Utilities

Construction

1.Sewers
The diameter was changed to 200- 1,200mm. 126km out of 132km were completed.

2.Force Main
The diameter was changed to 900mm.The construction (11km) was finished.

3.Pumping Stations
13 out of 19 stations with the capacity of 0.05-5.88m³/sec. have been completed up to 70%.The construction of the remaining six stations has not been commenced due to the difficulty in the land acquisition.

4.Treatment Plant (20,000m³/day)
Phase I commenced in 1992 and 40% of the construction was finished.
Phase II has not been commenced.

5.Pilot Firm (2,000 feddan)
D/D was implemented from 1987-1990 by NOPWASD. The construction has not been commenced. This is due to the poor soil condition. The construction will be financed by National Investment Bank.(107 mil.E.P.) Scheduled to be completed in December 1995.

(FY 1997 Domestic Survey)
Construction of remaining parts is not started.

Description :

*The construction of two plants was commenced in 1992 with own fund and is scheduled to be completed in 1995.

Subsequent Studies:
 1990-1991 D/D implemented by NOPWASD
 Faqus 50,000m3/day at the first stage
 Kafr Saqr 50,000m3/day at the first stage
 Expansion of the capacity of Zagazig Water Treatment Plant from 200 l/sec. to 600 l/sec.
 Expansion of the capacity of El Abbasha Water Treatment Plant from 650 l/sec. to 1,050 l/sec.

Finance:
 NOPWASD fund

Construction:
 (FY 1994 Overseas Survey)
 The construction of Zagazig WTP, Faqus WTP and Kafr Saqr was commenced. However, because the total amount which NOPWASD can be invested has not been finalized, the date of the completion is unknown.

(FY 1995 Domestic Survey)
 The improvement of water supply facilities (ground water) was undertaken in some cities of this region.

(FY 1997 Domestic Survey)
 No additional information.

(FY 1998 Domestic Survey)
 The down-sized project is under implementation in accordance with the available budget.

Description :

(1)Navigation Aid Facilities
(FY 1994 Overseas Survey)
A lighthouse equipped with navigation-supporting systems (hectometer 80) was completed. Powerful rescue boats(2 traction boats) were built.

(2)Vessel Traffic Management Systems
(FY 1996 Overseas Survey)
Finance:
Own fund (Suez Canal Authority)(34,280,940 Krona)
Construction:
Feb.1, 1994 - Apr.2, 1996
Effect:
Enhance safety of transit

(3)Ship Handling Simulator
(FY 1996 Overseas Survey)
Finance:
Own fund (Suez Canal Authority)(1,378,000USD)
Construction:
1995-1996
Effect:
Enhance safety of transit.

(4)Canal Traffic Communication System
(FY 1998 Overseas Survey)
A new canal communication systems (trunking system) was established and establishment of GMDSS systems for the tugboats and in the marine communication center has started.

(5)Emergency Information Network
(FY 1998 Overseas Survey)
It was decided to establish the emergency information network.

Situation:
(FY1991 Overseas Survey)
Project equipment was procured from Denmark, Sweden, U.K. and U.S.A. from 1985.
(FY1996 Overseas Survey)
Suez Canal Authority is continuously devoting its effort to improve the safety of transit in Suez Canal. The improvement of the Marine Communication Center, the upgrading of the navigation system and the vessel traffic management system and the introduction of the ship handing simulator have been implemented.

Finance:

Jan.1991 E/N 979 mil.Yen

Rehabilitation and Development of Ataquia Fishing Port (I)

Sep.1991 E/N 898 mil.Yen

Rehabilitation and Development of Ataquia Fishing Port (II)

Total Project Expense: 1,877 mil.yen and 11 mil. E.P.

Construction:

1991-1993 Implemented and completed

(2)Other Projects

Subsequent Studies:

Mar.1992- Sep.1993

Refer to D/D of "Development Plan of Suez Canal Area Study (1993)"

*The land acquisition problem caused the change of the project sites for the Adabiya Free Zone and Adaquia Industrial Estate.

Adabiya Port Loop Road 1989-1994 31 mil.E.P.

Industrial Estate and Free Zone June.1994-June.1995 100 mil.E.P.

Water Treatment Plant (Phase I) 1994-1996 65 mil.US\$

These projects are either implemented or scheduled to be implemented.

(FY 1993 Overseas Survey)

Detail:

(FY 1993 Overseas Survey)

The Ministry of Marine Transport of the Egyptian Government has been implementing the Expansion Plan of Adabiya Port.

The Ministry of Development of the Egyptian Government have had a private consulting firm prepare for the implementation of Tourism Development Plan in the western part of Suez Canal area. Furthermore, the construction of Loop Road connecting Cairo and Adabiya is ordered to a local contractor and will be implemented with the local fund.

(FY 1994 Overseas Survey)

Upon the completion of this study, CDO was established to supervise the Northern Suez Gulf Investment Project and has been in charge of the implementation of any related project to this study.

(1)Set No.1

Studio Complex (Phase 1 and others)

(FY 1997 Overseas Survey)

The new T.V. center is privatized.

Subsequent Study:

Review of the studios complex scale and composition.

Consulting Company / The Fourth Consortium (U.K.)

Finance:

Private Fund EP 650mil.

Construction:

Jan.1998~Jan.2001

*Contents

Improving the economic viability of the studios complex by increasing Phase 1's studios to 14 in number instead of 6.

Convert the two 900 studios assembly halls to 4 studio (350m2) and convert 4 rehearsal rooms to 4 studios (285m2). All new studios have their associated technical and stars rooms.

(2)Set No.2

(FY 1997 Overseas Survey)

Subsequent Study:

Review and D/D of the service and shooting areas composition.

Consultant / ERTU, Arab Contractor

Finance / ERTU's own fund

Finance:

Government budget(ERTU) approx. EE 13mil.

Construction:

Jun.1997~May.1998

*Contents

Converting some existing structures to studios and associated facilities.

7 studios in the shooting open area and service complex.

3 studios have been completed by the end of 1997.

Detail:

(FY 1991 Overseas Survey)

The land has been acquired and the construction of in-site infrastructure is in progress with local fund (fences, internal road, waterpipe network, electricity supply, etc.)

This implementation is undertaken referring to the concept plan proposed by this F/S.

(FY 1996 Domestic Survey)

Scheduled to be implemented from Oct.1996 for Five years.

Construction Trader:Consortium of U.K. Trafarga and SONY U.K.

Description :

(1) During the implementation of JICA study "Development Plan of Suez Area (1983-86)", the renovation of the port in front of the Adabiya area was in progress and the general cargo wharf of Berth No.7 was scheduled to be completed by 1986/1987.

However, the schedule was subsequently changed, which was approved by High Technical Council of MOMT, and the project was integrated into the current Five-Year Development Plan. The construction was partially commenced.

(2) The fishery port plan in the Ataquia area has been implemented with the Japanese grant aid.

Jan.21.1991 E/N 979 mil.Yen

(Rehabilitation and Development of Ataquia Fishing Port I)

Sep.26.1991 E/N 898 mil.Yen

(Rehabilitation and Development of Ataquia Fishing Port II)

(3) During the period of March 1992 to September 1993 D/D for the Development Plan of Suez Area (except for the Ataquia Port) was implemented with the Japanese grant aid.

*Refer to "Development Plan of Suez Canal Area 1986".

*The date of S/W is for "Development Plan of Suez Canal Area".

Description :
 Situation of utilization:
 (FY 1997 Domestic Survey)
 The study report and data are utilized as the lecture materials in Cairo University, etc.
 (FY 1998 Domestic Survey)
 In Oct. 1998, the seminar on the urban transportation pollution was held jointly by Cairo University, Ministry of Transportation, and Environmental Agency with the support of Ministry of Transportation, Japan, and with utilizing the data of this study on urban transportation.

(1)Construction of Expressway No.2 and No.3
 Pre-F/S was completed. JICA was requested to implement F/S at the end of December, 1992.
 (FY 1998 Domestic Survey)
 Construction has not been started.

(2)Construction of Ring Road
 Finance:
 Own fund
 Construction:
 55km of northern part of Ring Road has been completed (FY 1994 Overseas Survey). The improvement of parking lot has been partially implemented. The implementation of Long-Term Traffic Regulation Plan was just commenced (FY 1993 Overseas Survey).
 (FY 1997 Domestic Survey)
 Construction was completed.

(3)Widening and Construction of Kamel Sidky Street
 The construction has not been commenced (FY 1997 Domestic Survey).
 (FY 1997 Domestic Survey)
 Construction is not started yet.

(4)Improvement of Heliopolis Metro (Ramses-Nozha)
 In September 1994 the Egyptian Government allocated 38 mil. E.P. to procure the motors for 400 streetcars running in Heliopolis Metro.
 (FY1996 Domestic Survey)
 The Heliopolis Metro Corporation has been merged into the Cairo Transportation Corporation.
 (FY 1998 Domestic Survey)
 Construction has not been started.

Detail
 In 1990 USAID sent an appraisal mission. Tender documents for the Nile bridge of the Southern Ring Road are being prepared with USAID loan.
 The dispatch of a JICA expert to CTA was requested.
 DRTPC has been conducting the study concerning the subway fare system, utilizing the demand projection of the traffic network formulated in this M/P.
 (FY 1993 Overseas Survey)
 Approximately 20% of the projects proposed by this M/P has been implemented.
 The request was made to the Japanese government for the promotion of the scholarship program, in which the latest technical know-how can be acquired, in addition to the economic assistance program.

Perspective:
 (FY 1997 Domestic Survey)
 Implementation of remaining projects would be difficult unless department in charge is established.

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(1)Construction of Siphon under Suez Canal

Subsequent Studies:

Aug.15.1991~Nov.10.1993 D/D undertaken by British consultant financed by Kuwait Fund

Finance:

121 mil. E.P. from Kuwait Fund and 67 mil. E.P. from the National Investment Bank (Total 188 mil.E.P.).

(Contractors:JV of CMC of Italy and BESIX of Belgium).

Construction:

The capacity of Siphon is 160m/3sec. covering 400,000 feddan.

Jan.1994 Commenced

(FY 1997 Domestic Survey)

Oct.1996 penetrated, under construction of lining and entrance.

(FY 1999 Overseas Survey)

Feb.22.1999 Completed

Maintenance & Operation:

After the completion of the construction, the North Sinai Development Organization will be in charge of the management for the infrastructure. For the on-farm level, big investors will be responsible for own area while a water users association will manage the area allocated to small holders.

(2)Land Reclamation

In the area of 265,000 feddan, the construction of the irrigation and drainage facilities and related facilities have been in progress. The request for F/S for Phase II, covering 135,000 feddan, was made to JICA. JICA conducted F/S.

Subsequent Study:

Jan.1996~Jan.1997 JICA Development Study (F/S) "North Sinai Integrated Rural Development Project".

Finance:

Kuwait fund.

Technical Cooperation:

Feb.1997 Request for D/D on pumping station and aqueduct was submitted.

(3)Village Plan

Finance:

(FY 1996 Overseas Survey)(FY 1999 Overseas Survey)

The National Investment Bank will be responsible for the financing of the village infrastructure.

*Contents: Construction of administrative buildings and small holders' houses for village 1,2,3,4,7 in Tina plain zone.

Construction:

(FY 1999 Overseas Survey)

Village 4 and 7 are under implementation.

(4)Agro-Processing

Finance:

(FY 1996 Overseas Survey)

There are approaches presently with the Social Funds for the financing of agro-processing for smallholders.

(FY 1999 Overseas Survey)

It will be financed by National Investment Bank

Perspective for remaining works:

Water conduction including land reclamation (area 5, 135,000 feddan JICA F/S conducted) will be started at all trunk canals in 2001. Financial resources are Kuwait and Saudi fund.

Others:

(FY 1998 Overseas Survey)

Present counterpart agencies are Sinai Development Authority, Ministry of Development; Ministry of Public Works and Water Resources; Irrigation Dept., Ministry of Agriculture.

Description :

(1) Lahoun Regulator (one of five barrages and regulators to be required), Giza Intake and Hassan Wasef Intake (FY 1994 Overseas Survey)
 Subsequent Studies:
 Jan.1995 Grant Aid E/N 9.4 mil.Yen (Project for the Improvement of Delivery Water System on Bahr Yusef Canal)
 1995 D/D
 Finance:
 16 May 1995 E/N 963mil.yen (Project for the Improvement of Delivery Water System on Bahar Yusef Canal Phase-1/2)
 16 May 1995 E/N (provided in FY 1996) 1,424 mil.Yen (Project for the Improvement of Delivery Water System on Bahar Yusef Canal Phase-2/2)
 Construction:
 (FY 1997 Domestic Survey)
 Lhoun Regulator:Sep.29.1995~Mar.15.1997
 Construction Trader: Dainippon Doboku Co., etc.
 (FY 1998 Domestic Survey)
 Completed.

Operation and management:
 (FY 1998 Domestic Survey)
 Beni Suef Office of Irrigation Department is in charge of operation and management. Eight staff are assigned to Lahorn regulator management office.

Effect:
 (FY 1998 Domestic Survey)
 It has become easier to operate the gate and water distribution in the benefited area has been improved. The quality of water has also been improved due to decrease of dump garbage.

(2) Mazora Barrage
 Subsequent studies:
 (FY 1998 Domestic Survey)(FY 1998 Overseas Survey)
 March ~ Aug. 1998 B/D (JICA)
 (FY 1999 Domestic Survey)
 D/D by Japan's grant aid (7 Jan. 1999 E/N 87mil.yen).

Finance:
 (FY 1999 Domestic Survey)(FY 1999 Overseas Survey)
 Request for Japan's grant aid was submitted (amount: 2,200mil.yen, project components: Mazora regulator, bridge, revetment, control tower, approach road, etc.).

(3) Sakoula and Mansyattoereguhab Barrages
 (FY 1998 Domestic Survey)
 Request for a grant aid assistance has been submitted.
 (FY 1999 Domestic Survey)
 It has not been approved.

(4) Rehabilitation of the Bahryusef Canal
 (FY 1994 Overseas Survey)
 Local finance and the American financial assistance are desired.
 (FY 1997 Domestic Survey)
 Financial assistance (grant or loan) from Japan is expected.
 (FY 1998 Domestic Survey)(FY 1999 Domestic Survey)
 Regarding the Harica sub-channel pilot farm project, the request for a grant aid assistance has been submitted. It is desired to establish the total irrigation system including other sub-channels with Japanese technical cooperation and OECF loan.

(5) Technical Assistance from Japan:
 (FY 1998 Domestic Survey)(FY 1998 Overseas Survey)
 Dec. 1995 (10 days) Acceptance of a trainee (technical training).
 3-16 Nov. 1997 Acceptance of three trainees (irrigation facilities planning, design and control).
 June 1996 ~ June 1999 Dispatch of experts (irrigation water distribution plan, irrigation technology) to Irrigation Improvement Sector, Irrigation Department, Ministry of Public Works and Water Resources.

(6) Others
 The technical transfer concerning the irrigation technology is desired through either the establishment of a training center or the dispatch of experts. (FY 1997 Domestic Survey)

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(1)Deep Wells
 The North Sinai State Government has been constructing deep wells, based on the study result.

Construction:
 (FY 1994 Overseas Survey)
 <Phase I>
 36 wells were selected and 24 of them were constructed by the Egyptian companies (Sina and Regwa).
 <Phase II>
 A tender for 16 wells will be called for this year.

(FY 1997 Overseas Survey)
 Well drilling and construction of water supply pipe line and tanks are underway (period/ 5 years).

(2)"South Sinai Groundwater Resources" (Mar.1996~Oct.1998)
 This Study was implemented in the North Sinai. Upon the request to undertake the Basic Study targeting the South Sinai, the "South Sinai Groundwater Resources" was decided to be implemented. It aims to formulate a hydrogeological map of the South Sinai and to update the data of the North Sinai.

Situation:
 The hydrogeological map produced in this study has been utilized in the formulation of the development plans for this area.
 In order to promote the agriculture development along the coastal area of the North Sinai, the construction of canals to convey water from the Nile has been in progress. It is feared that the completion of this construction may trigger the mass migration of the nomads in this area. To mitigate the impact of such migration, the authority is planning to undertake the well-digging project on a large scale, referring to the hydrogeological map formulated in this Study.

(FY 1997 Overseas Survey)
 The results of the study have been utilized for executing related water projects.

Description :

(FY 1997 Overseas Survey)
 The results of the study have been utilized to elaborate 5 year successive plan (1994~).
 The proposed master plans are thoroughly used together with the detailed roadway and bridges inventory computer programs and the O/D movement matrices for passengers and freight by Road & Bridge Authority and Transport Planning Authority.
 Land Development Aimed Project, Maintenance Level of Service Project and Nile Bridge Project have being implemented since 1994 with Government budget (approx. EP 610mil.).
 Consulting Company / Road & Bridge Authority, local consultants

The implementation of two routes proposed in the study as higher level of service projects is not scheduled at the time being. Plans are intended now to implement 4 major roads by BOT systems in the desert land reclamation areas.
 Local governments will implement bus and taxi terminal improvement projects in the future.
 Truck terminals proposed in the study, are considered in the freight transport improvement plans on the National level.
 Egypt National Railways and the Roads & Bridges Authority take railway-crossing improvements into consideration.

(1)Expressways (Cairo-Alexandria and Cairo-Damietta)
 (FY 1994 Overseas Survey)
 The request for F/S is now in preparation to submit to JICA.

Finance:
 (FY 1997 Domestic Survey)
 Service level maintenance projects are being implemented by own fund at each site.

(FY 1999 Overseas Survey)
 1.Cairo-Alexandria development
 BOT scheme
 *Difference with JICA project: Length 180km
 2.Cairo-Damietta development
 Government Fund 1,626mil.L.E.

Construction:
 (FY 1999 Overseas Survey)
 1.Cairo-Alexandria development
 2001~ (construction period: 10years)
 2.Cairo-Damietta development
 2007-2012

(2)Railway
 It is planned to formulate M/P based on database produced in this M/P.
 (FY 1997 Domestic Survey)
 In December 1994, M/P on the rationalization of the National Railways of Egypt was conducted as a part of M/P on the national transport system.
 Data base established by this study was utilized to implement "Egypt National Railways (EGY/S 114/96)"

Detail:
 (FY 1994 Overseas Survey)
 It is expected that the demand for the construction of the expressway (Cairo-Ismailya-El Arish) will increase as the importance of Sinai Peninsula grows. The preliminary survey mission will visit Egypt from late January to early February of 1995 in order to formulate M/P on behalf of the National Railways of Egypt, targeting the year of 2010.

(3)Others
 The Road Network Registration System, which was produced in the process of this M/P, has been under revision.
 (FY 1997 Domestic Survey)
 Related Study:
 JICA D/D "Construction of the Suez Canal Bridge (EGY/S 404/96)"
 JICA F/S "Crossing Structure (Bridge) over the Suez Canal at Ismailia Zone (EGY/S 310/96)"

Impeding factors regarding the remaining projects:
 (FY 1998 Domestic Survey)
 Investment and assistance are mainly given to the bridge construction over Suez.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :
 (FY 1994 Domestic Survey) The project is to be divided into 11 packages of civil engineering work and 3 packages of mechanical work. The project is expected to be complete within seven years.
 (FY 1997 Overseas Survey) Government budget and private fund are financial sources. (Contractors are local.)

1. Projects Implemented by the Sinai Development Corporation (CDO) with its Budget
 Construction:
 (FY 1994 Overseas Survey)
 Completed : Improvement of Ataquia-Sea-Front Line, El Shatt Ferry, El Khore Bridge, Reclamation of El Khore and Suez Cornice
 Implementing: 1) Link road connecting Suez-Cairo express way (90% completed) 2) A fisherman service area at the Ataquia Port (80% completed) 3) Fence installation at the free zone (6% completed)
 Under Bidding: Construction of infrastructural facilities in the industrial estate and free zone (water treatment facilities, drainage, green belt, electricity, telephone lines, maintenance buildings, roads, etc.)
 (FY 1999 Overseas Survey) All projects which were implementing had completed.

2. Ataquia Industrial Estates and Ataquia Free Zone
 (FY 1995 Domestic Survey) The construction of road, water supply network and power service network and the installation of fence for the Free Trade Zone are planned to be implemented.
 Finance: the Egyptian government (98 mil.E.P.)
 (FY 1997 Overseas Survey) EP.10mil. has been allocated in 5 year plan (1997~2002) for road expansion.
 Construction:
 (FY 1997 Domestic Survey) Free Processing Zone and Industrial Zone are to be completed by March 1998. Free Processing Zone will be transferred to Free Zone Authority in June 1998. The existing railway will be utilized to transport raw materials to a steel company, which is to be constructed.
 (FY 1997 Overseas Survey) 1) Infrastructure network for the free zone and Industrial Zone will be completed by June 1998. 2) The expansion area of the Industrial Estate Zone and part of the housing area have been added to the Industrial Estate Zone and 70% of all the resulted area has been allocated to investors. 3) The Ministry of Electricity constructed the electricity transformer stations.
 (FY 1999 Overseas Survey)
 98% has completed. The development of Free Processing Zone, Industrial Zone and Free zone will complete by Jun. 2000. 85% of Industrial Estate Zone were allocated to the investors.
 (FY 2000 Domestic Survey)
 Construction: completed
 1) 90% of Industrial Estate Zone has been allocated to the investors. 2) The allocation of the Free Processing Zone for the Investment Agency of the Ministry of Economy is under arrangement. 3) The New Industrial Estate (78km²) in Ein Sohknah that is located to the 40km south of Ataquia was also delivered allocated to the investors.

3. Water Treatment Facility
 Finance:
 (FY 1997 Domestic Survey)(FY 1999 Overseas Survey)
 Implementation of the project in 5-year-plan (1997~2002) was decided.
 Cost: 90mil.E.P.
 Contents: 3000m³/day, pump station, water tank, intake facility
 Contractor/ Arab Contracting Company
 Construction:
 (FY 1999 Overseas Survey) 90% has completed. A study is now undergoing to consider whether a new water purification construction is applicable or reinforcement of existing facilities are appropriate.
 Future construction plan:
 (FY 2000 Domestic Survey) 1) Construction of the new purification plant with the capacity of 100,000 m³/day is planned on the fringe of the Suez Water Supply Canal and the intake of the plant by their own fund(1.8 mil Egypt Pound) 2) The improvement construction for 200,000m³/per day increase is planned by BOT.

4. Waste Water treatment Plant
 (FY 1997 Domestic Survey)(FY 1999 Overseas Survey)
 Implementation of the project in 5-year-plan (1997~2002) was decided.
 Cost: 86.5mil.E.P.
 Contents: Urgent project will be implemented for 4 months to develop capacity of 3000m³/day facility. Capacity of 52000m³/day facility will be constructed in 24 months.
 Contractor/ Arab Contracting Company
 Construction:
 (FY 1999 Overseas Survey) It will start at the beginning of 2000.
 (FY 2000 Domestic Survey)
 Jun. 1999- : The construction is expected to complete within 2 years.
 Situation in progress: the temporary plant with the capacity of 3,000 m³/day has already been completed and under trial operation.

5. New Ataquia Port
 (FY 1997 Domestic Survey) Development by U.S. company with BOT scheme is proposed.
 (FY 1997 Overseas Survey) EP.20mil. has been allocated in 5 year plan (1997~2002) for the Ataquia Fishing Port.
 (FY 1999 Overseas Survey) Development under BOT scheme was cancelled. Enlarging and modifying Adabiubia Port is under processing.
 (FY 2000 Domestic Survey) 1) Development of the new Ataquia Port was cancelled. 2) The Adabiubia Port was restrictively completed to modify.

Situation:
 (FY 1995 Domestic Survey) The Government has already proclaimed the ordinance concerning the establishment of the Ataquia Free trade Zone.

* Refer to "Development Plan of Suez Canal Area (EGY/S 203B/86)", "Development Plan of Suez Canal Area (Follow-up) (EGY/S 601/88)" for detail.

Description :

(FY 1997 Domestic Survey)

One of the most important items which should be implemented immediately is to improve data collection and information system, including analysis of this data for improvement of ENR.

This is the main subject to be followed up after the Master Plan Study for Egyptian National Railways, and in this connection "Study on Modernization of Information System for ENR" is now under negotiation between the two countries on its conduct.

(FY 2000 Overseas Survey)

Following measures have been taken in order to improve management.

Passenger Business: Train service based on market research, Introduction of ticket reservation system

Freight Business: Private sector participation into operation and maintenance

Facilities: Construction of commercial center, Installation of telecom network

Financial Sector: Cost control by restructuring, Increase of passenger revenue by appropriate tariffs, Private sector participation in O/M sectors.

(FY 2002 Domestic Survey)

Technical cooperation:

Dispatch of expert:

Long term expert: Management of Railroad, Maintenance and Administration, Safety Management (1 personnel each)

Period: Jan.2002-Feb.2002

Description :
(FY 1997 Domestic Survey)
Upon receipt of the draft final report, North Sinai Development Organization, the counterpart organization, made an official request to the Government of Japan in February, 1997 for conducting detail design regarding No.7 pumping station and conveyance facilities composed of 23.7 km concrete lining canal, 7.8 km box culvert canal, and 12.6 km steel pipeline. This request is given top priority among those requested from the Government of Egypt to the Government of Japan. The Government of Egypt is now waiting for the technical cooperation regarding the detail design.
Besides the request, preceding parts of the El Salam canal has been under implementation with financial assistance from Kuwait and Saudi Arabia. The construction is approaching the end of Bir EL Abd Zone which borders on the area undertaken in this Feasibility Study. Therefore, Egyptian government urgently needs the technical cooperation in order to proceed the construction covering the area undertaken during this Study.

(FY 1998 Overseas Survey)
Kuwait funds, Saudi funds, and funds from Egyptian Investment Bank are to be provided for North Sinai Development Project.

(FY 2001 Overseas Survey)
The President announced the transfer of the North Sinai Development Organization to its stock holders within one or two years. Minister of Water Resource and Irrigation explained the new organization as a company serves for investors/farmers and controls distribution of irrigation water, maintenance systems, agriculture, introduction of marketing, and technical consulting. The Ministry will continuously possess the ownership of natinal irrigation/drainage facilities including the project pump stations even after the transfer. The new company will manage and maintain the faciities by collecting necessary expense from the users.

(FY 2001 Domestic Survey)
Subsequent study: North Sinai Integrated Rural Development Project (Phase III)(Detailed Design Study) in the Arab Republic of Egypt (refer, EGY/A 401/00)
Implementing period: 1998/Aug - 2000/Oct
Implementing body: JICA

Subsequent project: Water conveyance canals in El ser and El Kwwareer area.
Finance: Kuwait fund
Fund procurement situation: to be implemented within the approved budget.
Amount: 315 million Egypt Pounds
Date of pledge or approval: No information available
Contents: Purchase of equipments for the seventh pump staton and water conveyance pipelines. (Application for JBIC loan is being considered because of lack of internal money.)

other constructions:
1) Water Conveyance Canal
Preiod: 3 years
Contents: 1, Culvert. 2, Open Channel
Situation of progress: Tender Documents have been prepared.
2) No.7 Pumping Station
Period: 3 years
Contents: Pumping Station and Pipelines
Situation of Progress: Tender documents have been prepared.
3) Land Reclamation and Irrigation/Drainage Systems
Period: 5 years.
Contents: Main irrigation and drainage branches and pumping stations if required.
4) On-farm Irrigation and Drainage Facilities
Period: 3 years.
Contents: On-farm system.
5) Agricultural Development Supporting Survices
Period: 1 year
Contents: Supporting Services (responsible for land leveling/ advice for land reclamation and cropping patterns/ seeds and fertilizer/ loans)
6) Settlement and Social Infrastructure, Housing, Water & Electric Supply, etc.
Period: During the contact of irrigation and drainage systems.

Description :

1. Japanese Grant Aid Portion
 This study is derived from "Crossing Structure (Bridge) over the Suez Canal at Ismailia Zone" (EGY/S 301/96)
 Finance: 1997/Aug/25 E/N concluded, 9,779 million JPY
 Content: Construction of the Suez Canal Bridge
 Construction Period: 1998/April 1998 - 2001/April
 Contractors: KAJIMA, Consortium of NKK/ Nippon Steel Corporation
 Progress:
 (FY 1998 Domestic Survey)
 Preparation works was completed.
 (FY 2000 Domestic Survey)
 Completion planned in fall 2001.

2. West Portion
 Finance: Own fund, etc.
 Contractor: General Nile Company for Roads & Bridges(GNCRB)
 Contents: Construction of 31 spans of 4 lane approach pre-stressed concrete bridges(1,171m), Construction of access road(1,884m)
 Progress:
 (FY 1998 Domestic Survey)
 Footing is being constructed smoothly. Regarding the construction of pier and abutment, 36.3% had been completed by the end of Oct. 1998.
 (FY 1999 Overseas Survey)
 71.8% of the construction has completed.

3. East Portion
 (FY 1998 Domestic Survey)
 This study is derived from "Crossing Structure (Bridge) over the Suez Canal at Ismailia Zone" (EGY/S 301/96)
 Finance: Own fund, etc.
 Contractor: The Arab Contractors(AC)
 Contents: Construction of 27 spans of 4 lane approach pre-stressed concrete bridges(1,080m), Construction of access road(3,015m)
 Progress:
 (FY 1998 Domestic Survey)
 Pile driving was started. Concrete experimental mixing was completed. Footing was started. 7.8% of the preparation works have been completed by the end of Oct. 1998.
 (FY 1999 Overseas Survey)
 65.5% of the construction has completed.

| Description : | | |
| (FY2000 Domestic Survey) There is no information after this project. | | |
| (FY 2001 Domestic Survey) The Alexandria Port Authority who is the responsible body is taking action for requesting the Yen loan in the government of Egypt. But it cannot reach to the official request due to the difficulty of administrative procedure and approval in the government. The structural reform on each fields is under implementation. The infrastructure building by BOT system is also mapped out a course from 1996. The deregulation policy in the field of port management is also in effect, e.g., the permission not only for the national but also the private firms to participate in from 1998. The first example in the port sector is the conclusion of BOT project contract with the consortium of Netherlands and Egypt for the project on the container yard construction at East Portside Port in Aug.1995. As above, the reason of delay to materialize the project is the port management project procedure is under such a transition period in addition to the financial problem. | | |
| (FY 2003 Overseas Survey) 1) A pier exclusively for oil and fats products for export was constructed in EL-Dekniela by BOT 2) The construction project of Pier No. 85 in the grain terminal was completed by its own funds. 3) Open bids are invited for construction of piers. 4) Construction of coal terminal, berth, and multi-purpose terminal of Alexandria Port has not been implemented with no prospects for funds. The government desires to obtain cooperation from Japan. | | |
| (FY 2004 Domestic Survey) Funding requests: 1) Requested Party: the World Bank 2) Requested Period: Around May 2004 3) Status of actualisation: In regard to a loan (100 million USD) made to multi-purpose terminal construction in Alexandria Port, proposed in JICA study, the World Bank mission was dispatched and are holding talks with the Alexandria Port Authority. Loan requests and subsequent status are unknown. | | |
| (FY 2004 Overseas Survey) 1. Loan Requests Although requests of loans to other donors (the World Bank and EU) for the major project proposed in the study were made due to its stupendous capital requirement, replies have not been given. 2. Status of the proposed project Almost all of the projects are in progress 1) Removal of warehouses near Pier14, 15, 16 and in third zone (26, 27, and 46), which is blocking distribution channel of materials. 2) Construction of major roads. 3) Construction of the gate. 4) Introduction of management system and electric management network. 5) Preservation of ocean environment and reducing contaminative materials. | | |
| (FY 2005 Domestic Survey) Regard a multi-purpose terminal construction in Alexandria Port proposed in JICA study, the World Bank mission was dispatched around May 2004 and held discussions with the Alexandria Port Authority. | | |
| Subsequent study: Master Plan Study on Marine Transportation Services Implementing period: S/W concluded in July 2001 Implementing body: JICA Details: A study on transport service system between the Alexandria Port and the Cairo metropolitan area, which utilises the Nile river, was conducted. | | |
| (FY 2009 Domestic Survey) Some of the projects proposed by the study were implemented, but the plan of building a multipurpose terminal has not been implemented. Facility improvement by Build-Operate-Transfer (BOT) is predominant at ports in Egypt and there is a tendency that improvement of container terminal is promoted to be targets of investment by foreign terminal operators. Therefore, government funds are likely to be allocated to related infrastructure maintenance of the container terminal and not diverted to such multipurpose terminal and cargo berth. | | |

| <p>Description :</p> <p>Subsequent project: Water Management Improvement Project in Nile delta (Project Type Technical Cooperation) Implementation period: Mar. 1, 2000 ~ Feb. 28, 2005 Implementing body: Royal Irrigation Department, Ministry of Agriculture and Cooperatives Relationship with the study: Pilot project proposed in the study has been implemented. Content/progress: (FY 2001 Overseas Survey) - Formulate the current condition of irrigation, water management system by farmers at Bahr El Nour pilot area. - Pre-organize the water user's association and workshop at the site. - Study of women's living condition concerning farmer's activities. - Research of on-farm annual plan for the crops as well as small scaled irrigation system. Situation: (FY 2003 Domestic Survey) Needs of the project will become clear, which depend on the progress of project-typed technical cooperation. (FY 2004 Domestic Survey) Two years extension is planned for the Project-Type Technical Corporation, which was till FY 2004. It is assumed that pipeline meska conducted as Project-Type Technical Corporation will be diffused to cover whole Nile delta on account of the result of this extension. (FY 2005 Domestic Survey) The report proposes rehabilitation of two parts of the dam and pump space, and development of the pilot project to the central delta area in addition to this pilot project. A proposal for further development needs to be submitted for these projects to be implemented after this subsequent project. Therefore, implementation of additional projects depends upon success or failure of the pilot project (Technical assistance project). (FY 2005 Overseas Survey) Request for the Grant Aid has been submitted to the Japanese Government to improve Rahbin regulator and Absham lock. The Rahbin regulator is in control of the water on the main canal feeding the WMIP project area. (FY 2009 Domestic Survey) Technical Cooperation Project "Improvement of Irrigation Water Management and Environmental Conservation in the North-East Region of the Central Nile Delta (Phase 2)" (Objective) This project aims to establish water irrigation association at terminal irrigation canals, to improve irrigation efficiency by upgrading the facilities, and to meet the demand for limited water supply in Egypt. (Project Overview) Establishment of water irrigation association and renovation of terminal irrigation canal (Implementing Agency) Central Administration for Irrigation Advisory Services (Time Period/Duration) 2008-2012</p> <p>Progress has not been made in areas below; 1) Renovation project of Rahabin floodgate 2) Renovation of river pumped storage</p> | | |

Description :
 (FY 2001 Domestic Survey)
 No request is issued for any priority project.

(FY 2004 Domestic Survey)
 No information to be specifically mentioned

(FY 2004 Overseas Survey)
 Fund for the project proposed in this study can not be secured at the moment.
 According to the priorities of public investment of the tourism sector, the implementation of the project will be commenced after the major national project, which results in delay.
 Therefore, funding source of the project is limited. Implementation of the project with Japanese Grant Aid is required. However, request has not been submitted.

(FY 2005 Domestic Survey)
 No information to be specified.

(FY 2005 Overseas Survey)
 According to the development achieved in the tourism sector, related institutions are considering to adopt concept of integral tourism development proposed in the study. However, update of the study is required. In addition, projects proposed in the study have lowered its priority due to financial constraints.
 The Egyptian government is considering to request JICA for an update of the study, and to promote realisation of the project through the Ministry of Foreign Affairs.

Description :
 (FY 2001 Overseas Survey)
 The tender documents have been prepared. While the issuing the relevant adjudication for conveyance system (including P.S. 7) and El ser and El Kwwareer area is up to the decision of the supreme Ministeral Committee.

(FY 2001 Domestic Survey)
 Egyptian Government has continuously made efforts to arrange budget for the project implementation since the detailed design documents were received from the Government of Japan. However, no action has been taken to implement the water conveyance project in El ser and El Kwwareer area. According to the original plan, The package of No.7 pumping station and water conveyance pipelines is to be funded by the Kuwait fund, and the other 3 packages are to be finded by internal budget. However, the government is considering to procure the additional foreign fund, i.e., JBIC loan, due to shortage of local budget for project implementation.

(FY 2004 Domestic Survey)
 Water conveyance pipelines and a development of the settlement has been progressively conducted, securing its fund from the national budget, the Kuwait fund, Arab fund, and investments from Arab investors. However, No. 7 pumping station, conducted with the heading of this project, has been delayed due to lack of funds.

(FY 2005 Domestic Survey)
 No information to be specifically mentioned.

| 10. MAJOR PROPOSED PROJECT(S) | | | |
| <p>1. Forecast of Suez transit: The operational forecast model that can be easily operated by personal computer has been installed.</p> <p>2. Management and operation policy: Basic policy on management and operation was proposed.</p> <p>3. Toll structure and rates: Toll rates should be based on a standard saved distance. In addition to this point, it is recommended to introduce a fixed rebate rate system regarding saved distance by main O-D pairs. Another major modification involves revising the toll structure for Container Ships to be able to reflect the earning capacity of the ship. Currently applied weather deck surcharge based on the number of tiers on deck should be revised once the EDI system is introduced. Currency unit to which the toll is to be pegged is also evaluated from various viewpoints.</p> <p>4. Marketing system: Marketing management system is proposed for each of the sub-systems.</p> <p>5. Improving management and operation: The improvement of management and operation in the fields of Canal transit service, business diversification, financial management and the modification of some parts in the rules of navigation are proposed.</p> <p>6. Project evaluation: Re-evaluation of the projects including Deversoir By-pass Extension Plan is conducted based on the newly forecast data on transits.</p> | | | |

Description :
(FY 2002 Domestic Survey)
Suez Canal Authority revises the toll structure and rates every year. In the course of revising, the Authority is considered to use the forecast model and to study the timing for introducing and application methods of various propositions of the Study.

(FY 2004 Domestic Survey)
As of 2004, there are no activities for toll structure and tariff revision. In addition, execution of the Deversoir By-pass Extension Plan is from 2010, but there is no detail information.

(FY 2005 Domestic Survey)
Soft components proposed in the study have been applied to several measures. For an example, result of the study has been applied to Suez Canal toll structure revision.

(FY 2005 Overseas Survey)
There is a possibility to carry out a study for long-term forecasting of WSB trade and Suez Canal toll's structure. To realize the project, cooperation from JICA is necessary.

(FY 2006 Domestic Survey)
After the study (conducted in August 2001), the number of passage ships and the weight amount decreased in 2003. It is increasing again after 2003, and toll fee (container ships) will be reexamined.

(FY 2007 Domestic Survey)
No information to be specially mentioned.

Description :
 (FY 2003 Domestic Survey)
 Request for grant aid for Japanese Government for Alexandria-Cairo Waterway Improvement Project by dredging & installation of Navigation aids.

(FY 2003 Overseas Survey)
 All of the projects proposed in the study were incorporated into "Five Year Plan for Development of Inland Waterway"

(FY 2004 Domestic Survey)
 No information to be specifically mentioned.

(FY 2005 Domestic Survey)
 Preparatory study is being conducted with a plan to conduct Nobarria canal improvement project (Grant Aid).

(FY 2006 Domestic Survey)
 No information to be specifically mentioned.

(FY 2006 Overseas Survey)
 Implemented Project: 1) Alex Maritime Lock, 2) Nobarria Maritime Lock, 4) Bolin Canal
 Funding:
 Funding Party: Kuwait Arab Bank (loan)
 Implementing Period: 2004 - 2005
 Objective: 1) Expansion of lock gate to 116m, 2) Efficient and secure transportation of barge through lock gate passage time reduction, 3) Securing of transportation method to industrial complex.
 Progress:
 (FY2006 Overseas survey) FS for 3 components have been completed. Tender have completed and are at contract negotiation.

(FY 2007 Domestic survey)
 No progress has been made on the proposed project in the mentioned study. However, the result of the mentioned study has been taken over for the research of "East Mediterranean Sea land and sea consecutive freight distribution system study" conducted by JBIC in 2007. To be specific, JBIC's research includes inland traffic, promoting modal shift from truck to rail to transportation on inland waterways, constructing incoming train lines for industrial estates, freight railway corridor (links the inland industrial estates to the harbor), and constructing a river port.

| | Processing | Discontinued or Cancelled |

Description :
(FY 2004 Survey)
Since the study was completed only a short while ago, it is not clear if the government has implemented concrete actions, though the reaction to recommendation seems to be consider.

(FY 2005 Domestic Survey)
Subsequent study: Overseas Basic Study on Establishment of Transportation Agency in Great Cairo (Organization/System)
Implementing period: Early March, 2004 - end of November, 2004
Implementing body: JICA, Great Cairo Transportation Planning Higher Committee, National Transportation Research Institute
Objective: Population of Egypt is concentrated in Cairo and the delta area, which is establishing a new city around the desert within 50 km from Cairo due to over population. The population of Great Cairo including Cairo and these satellite cities is about 14 million and expected to reach 22 million in 2022.
However, only two subway lines for north-bound and south-bound exists in Cairo, and national railways hardly provide city transportation services. Means of transportation are provided by cars in the city, though public bus services are not functioning with congestion created by vans and taxis. In addition, the only highway is also in congestion all day long.
Under these circumstances, the Egyptian government established Higher Committee for Greater Cairo Transport Planning and requested for the Japanese government to plan city transportation in order to establish city transportation facilities, including railroads, organization, and systems. In response to this, the Japanese government conducted a person trip survey as a response, which proposed a master plan on city transportation targeting year 2022. In addition, the Japanese government conducted a feasibility study on the prioritized projects (East-West transportation, Heliopolis public transportation, No. 4 subway corridor transportation management plan, and the improvement of organization of bus public corporation).
In order to smoothly facilitate these plans, however, coordination of planning, implementation, approval, and management is necessary, which covers many ministries, autonomies, and public corporations, is necessary. In addition, strengthening of supervision is required in order to secure new financial source and prevent deterioration of services. The Egyptian government is preparing a government ordinance to establish Transportation Agency as the central organization, which coordinates these various functions. The main role of the organization is to propose most adequate transportation plan based on estimated future transportation demand, financial procurement, management, allocation, and supervision of city transportation services. In addition, it will also consider amendments of the existing laws. Of special note among these is the development of mass transportation services and city expressways, significantly running short in Cairo. With large scale of investment required, a well-planned arrangement is expected for the institution, and the newly-established transportation Agency has particularly large expectations for its first role.
With the context above, this study aims to conduct basic preparation to understand legal imperatives and the role of the existing organizations in Egypt, and utilize the results of traffic studies to traffic planning preparation.

Subsequent study: Study on management cost planning for Cairo city toll motorway project
Implementing period: Early April, 2005 - end of April, 2006
Implementing body: JICA
Objective: To conduct elaboration of institutions concerning the charge of expressways and of financial plan taking into consideration the introduction of private funds in the future. The population of Great Cairo was about 14 million in 2002 but expected to reach 22 million in 2022. It is expected that traffic problems resulting from traffic congestion will become more serious without drastic measures for the future, though it is serious even now.
JICA implemented Cairo Regional Area Transportation Study (Phase I, hereinafter CREATS) in 2000, and formulated M/P in 2002. The main strategy of the M/P is to conduct comprehensive improvement of city transportation, not a partial improvement. The M/P set the most appropriate scenario about the traffic system for future traffic demand increase. In that, construction of highway network (total length of about 78km) in addition to maintaining public transport and existent trunk roads was proved to be most efficient in maintaining the current trip speed. CREATS estimates that trip speed will be 18.0km/h by combining motorway, while trip speed with the current trunk roads will slow down from 19.0km/h to 11.6km/h.
On the other hand, financing to implement constructions of road based on the M/P is difficult, which requires two folds of current budget relying on taxes. Thus, toll road is proposed as one of the measures to secure the financial source and simple analysis of institutions was conducted. However, the introduction of private funds also needs to be considered in order to further develop the construction plan, and the selection of appropriate PPP schemes and the problems concerning the existing BOT plan need to be examined. In particular, an elaborate financial plan including risk analysis is necessary for attracting private investment, however, this is what the existing BOT plan lacks. Therefore, planning needs to be made in order to prepare the optimal institutions for the entry of private sectors.

(FY2007 Domestic survey)
Pre-feasibility study investigation for the toll motorway priority maintenance section in Cairo, Egypt was implemented, and a feasibility study will be implemented.

(FY 2008 Domestic Survey)
Subsequent study: F/S on priority maintenance section of the Cairo city toll motorway project (development study)
Implementing period: 12 August, 2007 - 11 August, 2008
Target:
1) Set the priority maintenance section of the motorway and implement a technical and financial F/S including an alternative proposal.
2) Setting up MEA organization and formulate a project execution plan.
3) Implement capacity building to MEA preparation room through implementing the study.
Background:
To promote the highway maintenance utilizing the PPP by the year 2022 which was set in the M/P of "Operation funding plan of Cairo Inter-urban Toll Highway Construction Plan (PPP study)", the following points were proposed; 1) implementing a F/S for the extension of the No.1 and No.2 Highway (E1-2, E2-2) and No.3 (E-3) and promote the construction at once with high concessive fund, 2) strengthen the structure and ability of the detailed structure related to the PPP and charging for the highway. After receiving the result of the study, the Egyptian side has started the preparation of an Inter-urban Highway Construction Plan, and established the preparation room for setting up the MEA proposed in the PPP study.
In addition, Egyptian side has requested the implementation of a F/S due to lack of experience in the construction of the highway in an urban area and PPP, toll road system.
This study was implemented with the cooperation of implementing PPP and F/S for the priority section of the highway proposed in the PPP study.

| | Discontinued or Cancelled |

Description :
(FY 2007 Domestic Survey)
Prospective :
2007 - 2008 : F/S on high priority expressway sections, establish a secretariat for MEA in MOT, Environment Impact Assessment
2008 - 2009(plan): Establish MEA, approved by MoT, MoP, MoF, consultation with approval in the parliament, Prime Minister issues MEA decree and the amendment
2009 - 2010(plan): Loan assistance procedure, F/S on next routes
2010 - 2012(plan): Construction on high priority expressway sections
2013(plan) : In service

Subsequent Study: Feasibility Study on The High Priority Toll Expressways
Implementing period: August 2007 - July 2008
Implementing body: General Authority for Roads, Bridges, and Land Transport, Ministry of Transport, JICA
Objectives: 1) F/S on E1, E2, E3, 2) Support establishment of MEA, transfer technology, 3) Formulating strategic plans for introducing PPP
Relationship to the mentioned study: The alternative plans including road line shape and construction are necessary according to the latest situations. Due to the fact that the target include contents which were not targeted in the PPP study or changed after implementing the study, comprehensive reviews considering road construction planning, technical and financial feasibility and ecologically conscious are needed. Relating the PPP, the issue of charging the high priority express ways and establishing and operating the MEA will be corresponded collaterally the above-mentioned technical issues, since the roads the Cairo Metropolitan Area are under several authorities. It is also important to provide recommendations corresponding to the latest situations of the Cairo Metropolitan Area, based on the experiences and technologies of toll expressways in Japan.

| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Western Corridor Development Plan</p> <p>The areas along the development corridor for the public transport system need to be relatively densely inhabited, so as to generate sufficient traffic demand for public transport. However, at present, the urban development along the proposed new transport corridor has a rather low density. Over time, these urban centers and the surrounding localities will become medium to high density urban areas. Ideally, the urban centers will be best interlinked by public transport systems and connected to the surrounding localities by feeder transport.</p> <p>The future growth pattern along the proposed Western Development Corridor is envisaged as depicted in the Figure 1.6. The NUCs and the main agglomeration will be interlinked by three corridors, consisting of two point-to-point corridors and one continuous urban/transport corridor. On-going and planned development projects will create new urban centers in the areas between NUCs and the main agglomeration. Those urban development projects will be sufficient for providing housing units required for the future demand. After 2027, the northern and southern areas of the study area will remain as desert lands.</p> <p>2. 6th of October Railway</p> <p>1) 1st Phase : El Malek El Saleh ~ Al Wahat Road 15.2km, Target Year 2017, Construction Cost 1,278.5 million USD, Construction Schedule 2008-2016</p> <p>2) 2nd Phase : Al Wahat Road ~ Bank Street 25.3km, Target Year 2022, Construction Cost 822.3 million USD, Construction Schedule 2013-2021</p> <p>3. Exclusive Busway on 26th of July Road</p> <p>3) The proposed exclusive busway service connects 6th of October NUC to the Metro Line 2 through 26th of July Road.</p> <p>Construction costs : LE1,654.13 million, Construction Schedule 2009-2011</p> <p>4. Description :

Technical Cooperation:
 The Iranian government requested the Japanese Government for the technical cooperation for the establishment of the Development Center, in which the training would be provided for the people, who would undertake the proposed projects.

Oct.1988 The Ministry of Foreign Affairs dispatched a mission for technical cooperation. The implementation of the project-type technical cooperation for the establishment of the Cener was agreed.

Apr.1990~Mar.1996 (including one-year follow-up Period)
 The project-type technical cooperation "Caspian Sea Coastal Area Agricultural Development Project" was implemented over six years.

(FY 1998 Domestic Survey)
 Project type-cooperation for "CPIC Training Center". The establishment of the training center in CAPIC for the purpose of nurturing the experts and the technicians of agricultural, and development, mechanization of paddy cultivation, and post-harvest treatment is planned. Government of Iran desires dispatch of experts and provision of materials and they are negotiation for the implementation has been exchanged.

Effect:
 (FY 1996 Overseas Survey)
 Upon the implementation of technical cooperation, land consolidation and mechanized rice cultivation will be extended throughout the country. Consequently, increase of rice production and introduction of secondary cropping are expected, and increase of farmers income and improvement of their living standard will be attained. Also, the establishment of the center aims to supply sufficient number and qualified engineers and key farmers and the Iranian Government has scheduled to strengthen the function of the center.

Subsequent Studies:
 (FY 1998 Domestic Survey)
 Nov. 1990 ~ July 1993 "Irrigation and Drainage Development Project in Haraz River Basin".
 Please refer to IRN/A 301/93 for detail.

D/D is to be conducted with their own fund within the Third Five-year Plan (2000~2004).

Description :

Subsequent Study:

(FY 1998 Domestic Survey)

D/D is to be conducted with their own fund within the Third Five-year Plan (2000-2004).

(FY 2000 Overseas Survey)

D/D and implementation project named "Haraz River exective project" has been implemented since 2000 to 2004.

"Haraz River exective project" covers 3,000 ha.

Finance:

(FY 1996 Overseas Survey)

A loan from OECF, Islamic Development Bank or the World Bank is desired.

(FY 1998 Domestic Survey)

Relations with U.S. have improved, and loan for this project is expected.

(FY 2000 Overseas Survey)

"Haraz River exective project" is funded by government and farmers. 30% of fund comes from government and 70 % from farmers throughout long-term loan system. The amount of fund would be decidedon the base of topo & cadasteral maps of D/D.

Detail:

The project-type technical cooperation (CAPICS) Mar.1996 finished.

(FY 1996 Overseas Survey)

The study results are considered very useful. To realize them, the financial resources need to be secured and the project staff need to be trained. This project has been given high priority under the Second Five-Year Plan.

* This F/S is derived from "Caspian Sea Caspian Area Agricultural Development Project (M/P, IRN/A 101/86)".

(FY 2000 Overseas Survey)

D/D and implementation project named "Haraz River exective project" has been implemented since 2000 to 2004.

"Haraz River exective project" will

Description :

Sep.18.1996--Oct.10 JICA 2 short-term experts scheduled to be dispatched (port preservation and set up of fare).

(1)Anzali Port

(FY 1996 Overseas Survey)

-Reinforcement of the western and eastern breakwaters (Completed)

-Development of five new jetties (Partially Completed)

-Constructing a new extension which is perpendicular to the existing eastern breakwater in the channel, about 150m in length (90% completed)

-Jetty No.4 elevated to the height of 1.40 meters (completed)

(FY 1997 Overseas Survey)

Extension of jetties.

(FY 2000 Overseas Survey)

The elevation of old quays is under implementation.

Fund for Construction of New Eastern Breakwater was procured by PSO revenue.

(FY 2001 Domestic Survey)

The extension of breakwater and rehabilitation of berth were completed.

(2)Imam Khomeini Port

(FY 1996 Overseas Survey)

-60 meter extension to the existing silo jetty is completed.

-Transfer of iron powder jetty to a new place on the southwest (after the silo jetty) (partially completed)

(FY 2000 Overseas Survey)

Extension of container quays is considered by PSO and would be implemented by PSO revenue.

The development of 4 general cargo quays is completed.

(FY 2001 Domestic Survey)

- The quay was extended from 5,602 m of 29 berths in 1993 to 7,300 m of 37 berths in 2000.

- 8 berths for general cargo and container were expanded.

Situation:

(FY 1997 Overseas Survey)

The forecasts and related statistics of M/P need to be updated and F/S needs to be reviewed.

(FY 2000 Overseas Survey)

30% of proposed projects in Iman Khomeini port and 80% of projects in Anzali port have been realized. The reason for unaccomplishment of the rest is misforecast of demand in the study.

(FY 2001 Domestic Survey)

The one of the reasons of partial delay for materializing the project seems to be the slump of cargo handling at port due to the critical economic situation because of the minus growth caused by the sudden drop of the oil price in 1989 and by the agricultural depression under a drought even the oil price was high in 1999.

The new 5 year plan (from Mar.2000 to Mar.2005) is targeting the liberalization such as a economic structural reform, privatization of principal firms, reduction of subsidy etc. Moreover, it is the policy for the Port of Khomeini which is the principal port in the Persian Gulf to reinforce the function as the entrance port of the rising central Asian countries.

(FY 2005 Domestic Survey)

Local government is continuing the rehabilitations of both ports with its own funds in a difficult financial situation, where Yen loan have not been made since the hydro power plant project in year 2000.

Existing plan needs to be revised since 10 years have passed since its planning and preparation.

Description :
 (FY 1998 Domestic survey)
 The 2nd division of basic study, JICA, conducted a study on project formation for preventing air pollution in the Greater Teheran Area in December 1998.

(FY 2000 Overseas survey)
 The "Integrated Plan for Reducing Teheran Transport Exhaust" is implemented with government fund. The implementation period is from 2000 to 2009, and it is a project with the total of USD 1,961 million plus IRR 1,387.5 billion.
 Study in the next stage:

(FY 2002 Domestic and Overseas survey) (FY 2007 Overseas survey)
 Subsequent study: Study on Strengthening and Improving Air Pollution Management in the Greater Teheran Area
 Implementing body: Ministry of Environment Teheran Office, JICA
 Implementing period: September, 2002 - February, 2005
 Funding:
 Funding party: JICA (Development study, 12 March, 2002 R/D concluded)
 Objectives: Air pollution of Greater Teheran will be reduced and living environment will be improved.
 Technical cooperation:
 Training: Air pollution modeling, effluent gas density regulation, anti-air pollution measures, anti-acid rain measures
 Benefits: Level of carbon monoxide (CO) in Teheran city (780ksqm) to below 9ppm in 8 hour average, sulfur dioxide density (SO2) to below 140ppb in 24 hours average, nitrogen dioxide density (NO2) to below 8.00ppb in one hour average, PM10 (particulate substance with less than 10 μ m diameter) density to 150 μ g/m3 in 24 hour average.

(FY 2003 Domestic survey)
 IBRD will conduct a study on the extension of a monitoring plan and a monitoring station proposed in this study (Islamic Republic of Iran Environmental Management Support Project) in 4 cities (Teheran, Isfahan, Kosyatto, and Marakku) for 5 years from August 2003.
 1 trainee was accepted in FY2003.

(FY 2003 Overseas survey)
 They established 6 automobile inspection centers with the capacity of 26 lines for vehicles and 10 lines for motorcycles. An increase in fine was approved to strengthen automobile inspection system in December 6, 2003.

(FY 2007 Domestic and Overseas survey)
 No information to be specifically mentioned.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
(FY 2001 Domestic Survey)
As a result of the JICA study, Tehran Municipality representatives are aware of the importance of disaster management, and they decided to grapple with seismic disaster prevention and mitigation master plan in Greater Tehran Area. However, in the present condition of Iran, there is no sufficient technology, human resources and budget to prepare such an important plan, therefore, they officially requested continuous support from the Government of Japan. On the other hand, from the experience of the project, JICA has officially announced to the Tehran Municipality to strengthen the structure of the organization in order to increase the implementation ability. By accepting this request, Tehran Municipality is being reorganized now.

(FY 2001 Overseas Survey)
The second project which can be considered as continuation of the first one is also admitted by JICA and is expected to start in April 2002.

(FY 2002 Overseas Survey)
Subsequent Study: Comprehensive Master Plan on Urban Seismic Disaster in Greater Teheran Area
Implementing body: JICA, Tehran municipality
Implementation period: from 2002
Funding: 2,633.480 thousand USD
Objective: With the result of the study, micro-zoning, it aims to formulate a master plan to reduce damage by a systematic approach, such as normal condition, immediate aftermath of earthquakes, and reconstruction period, and to formulate action plans for priority issues.

(FY 2003 Overseas Survey)
Subsequent Study: The Comprehensive Master Plan Study on Urban Seismic Disaster
Implementation period: 2002/Sep-2004/Jul (23 months)
Funding: World Bank Loan, 200 million USD
Content: Renovation of old fabric zones in Teheran
Progress:
(FY 2005 Overseas Survey) Under survey. Some of old fabric zones in Teheran are planned to be renovated by the loan.

(FY 2004 Domestic Study)
No information to be specifically mentioned.

(FY 2005 Domestic Survey)
The study has been approved as an official disaster prevention plan in Tehran by the Iranian government. Thus, proposed issues are considered to be implemented in the future. Currently, 3 requests for a technical cooperation has been submitted, which plans for emergency measurement within 72 hours has been selected.

(FY 2005 Overseas Survey)
Tehran Seismic Micro zoning Study had a great impact to perception of the people regarding an earthquake. The study has founded a basis for the people to be alerted to seismic disasters and vulnerability of different districts in the Greater Tehran Area. As a result, Tehran Municipality has made efforts to reduce vulnerability of the most vulnerable districts. Establishment of the Tehran Disaster Mitigation and Management Centre (TDMMC) and Districts Disaster Management Headquarters are one of the outcomes of Tehran micro zoning projects. In addition, the project created an incentive to managers and officials in different organisations to produce relevant data/maps to be implemented in the future studies.
However, despite all the benefits achieved, programming skills to integrate individual data and project output to manipulate results are lacking.

Description :
 Tehran Water Diversion Project:
 (FY 2002 Overseas Survey) (FY 2002 Domestic Survey)
 Ministry of Energy, Tehran Regional Water Board, the government. of Iran, has decided to implement the project. Currently, F/S has been implemented, financed by Yen loan, whose funding party is JETRO, to Jan. 2003. JETRO is conducting F/S for constructing project of tunnel and water supply facility.
 (FY 2003 Domestic Survey)
 To restructure the water works and the 6th water purification plant in Tehran City, JICA implemented prior study of "Master Plan Study on Redesign of Water Distribution Network in Tehran Municipality" in Sep. 2003.
 (FY 2003 Overseas Survey)
 The Yen loan request was submitted to the Iranian government at the end of Mar. 2003.
 Teheran Tunnel: USD 133,687,000
 Reconstruction of the Teheran 6th filtration plant: USD 53,264,000
 (FY 2005 Domestic Survey)(FY 2005 Overseas Survey)
 Waiting for a reply from the Japanese government.
 (FY 2006 Overseas Survey)
 Implemented project: Diverting Tunnel Construction
 Funding party: Chinese government
 Implemented period: July 2004-2011
 Managing and operating body after the completion of the construction: Teheran Regional Water Company
 Progress:
 Design
 (FY 2006 Overseas Survey) 50% completed (First phase was done)
 Construction:
 (FY 2006 Overseas Survey) 15% completed

Almout Water Diversion Project:
 (FY 2002 Overseas Survey)
 The Ministry of Energy submitted the request for the project. (has not been arrived at the embassy as of Dec. 2002)

Taleghan Dam Construction Project.
 Implemented project: Taleghan Dam Construction Project
 Managing and Operating body after the completion of the construction: Tehran Regional Water Company
 Implemented period: 2001 to 2007
 Funding: Chinese companies
 Progress:
 Construction:
 (FY 2006 Overseas Survey) 98% completed
 Other Component:
 (FY 2006 Overseas Survey) 83% completed

(FY 2006 Overseas Survey)
 The following studies were conducted.
 1) Qazvin industrial water master plan
 2) Initial Nohob Dam survey of Hableh Rud River in Qazvin
 3) Khar Rood Dam survey of Khar Rood River in Qazvin
 4) Initial Barajin dam survey of Barajin River in Oazvin
 5) Oazvin irrigation/drainage system survey (downstream of Nohob River)

Others:
 (FY 2006 Overseas Survey)
 Technical Cooperation:
 Training: Integrated water resource management, 2 persons, 1 month (Nov. 8, 2005-Dec. 11, 2005)

(FY 2007 Overseas Survey)
 The minutes of meeting was exchanged between Iran and Japan, regarding the implementation of the participatory water management system in Golestan province

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2003 Domestic Survey)

The Study Team recommends implementing a pilot project, namely the orchard terrace project for soil erosion protection at Vastegan, Chahar Mahal & Bakhtiari Province, in prior to implementing the other projects interventions proposed in the M/P. The project can be initiated in a small scale (15ha) with rather small amount of budget, and farmers can get direct profit through their ownership of orchard terrace. Vastegan area is selected because of its accessibility, and is located in about 80 km south of the province capital Sharekord It can be approached from Sharekord within one hour drive.

Iranian counterparts, representatives of Ministry of Jihad Agriculture, expressed its hope for the Japanese assistance of the next stage at the Meeting for draft final report, held on January 30, 2002 in Tehran. Japanese side recommended that the new request for the assistance to start the next stage should be submitted to the Embassy of Japan in Iran.

(FY 2003 Overseas Survey)

1) In order to move on to next stage of Karoon watershed management, we requested Japanese Embassy and JICA two pilot projects which has been selected from five master plan areas, as a sample of integrated activities in watershed to control all parameters which affect the natural resources, but we have not received response yet.

2) Referring the Master Plan, Watershed Management Deputy invested 3,445 million Rials to construct some structures and series of activities to control erosion and preserve the nature against negative factors. In this regard "Vastegan" and "Bazoft (especially in Tabarak area)" selected and following activities has been done.

1. Feasibility study and design study (4,500 ha): 2003-2004, WMD provincial department
2. Design study for flood spreading and river treatment (100ha): 2003-2004, WMD provincial department
3. Gabion and masonry works (16,350m³)
4. Seed Sowing (250ha)
5. Tree planting (154ha)

6. River treatment work (Bank protection)(22,000m³)

7. Flood prevention works(Earth dam etc.)(52,000m³)

8. Maintenance of existing check dams(1,310m³)

9. Completion of meteorological and hydrological station (3 stations):

Beneficiaries - 5,000 residents in targeted sites in Vastegan and Tabarak

Effect: To predict characteristics of floods more accurately by collecting meteorological and hydrological data

3) In addition, there are two problems about this project.

One hydrological measuring station in Esfahan Province dose not work, because of bad location. There is mistake for selecting the place which we install measuring station.

Another problem is in data collection system. The JICA team provided one laptop computer which is installed Japanese OS and Japanese application software for collecting data from data logger in each measuring station. But combination between data logger and the computer is very bad and dose not work well.

(FY 2004 Domestic Survey)

No information to be specifically mentioned.

(FY 2005 Domestic and Overseas Survey)

No information to be specifically mentioned.

(FY 2006 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Overseas Survey)

Subsequent Study: Study for Basin Management in the Pilot Area

Implemented period: 2001-2003

Implementing body: Regional Basis Management Office

Funding: Own fund

Objectives: Basin management, land erosion control, drain water control, flood control

Benefits:

Beneficiaries: Residents of basin or lowland area

Technical cooperation:

Training: 14 personnel, 44 days

Others: Workshop and seminars for Government officials and residents

Progress:

(FY 2006 Overseas Survey) 70% completed for the study area selected

(FY 2007 Domestic and Overseas Survey)

No information to be specifically mentioned.

Description :

(FY 2003 Domestic Survey)
 It is now under preparation a project related to the water resources development in the Gorgan basin. There is also an environment conservation project under realization, by the same JICA, in the neighboring Mazandaran province, where the Lamsar treat was established. So, the Iranian government has given great importance to the region since 3 projects (including the present one) has being planned and executed within only 2 or 3 years.
 The climatological and hydrological data has being measured for many years in Iran. For example , the Caspian Sea water level variation has being measured for many centuries. So, the climate and hydrological equipment installed by the project will be very helpful. It will contribute, with the results of the present study, for the water management of the Gorgan basin to mitigate the water availability problem in the region.
 The present study was realized with the participation of the counterpart, and the inhabitants' voice was heard through a socio-economical survey. So, the projects and ideas included in the results of the survey can be base for the future plans of the government.

(FY 2003 Overseas Survey)
 The government of I.R.IRAN has policy to strengthen NGO, such as farmer's organizations. And the Ministry of Jihad-e-Agriculture tried to strengthen concerned farmer's activities. As result of that many Rural Productive Cooperation (hereinafter RPC) was established. RPC has roles to make connections between government and farmers. For example to get some subsidy from the government (loan, fertilizer, chemicals, etc.) And base on an agreement between Ministry of Energy and Ministry of Jihad-e-Agriculture, RPC must establish Water User's Association (hereinafter WUA). This function of RPC is not so common. And, participatory development is not so common method in I.R.IRAN.
 In the meantime, task allocation of water management is not clear in Iranian system. Main facilities are responsible for the Ministry of Energy and inside irrigation schemes are for the Ministry of Jihad-e-Agriculture It means each WUA has a duty O/M their irrigation facilities. But, the task, duty, rights are not clear in detail infield level.
 According to these situations, Agricultural organization of Golestan Province made some requests to Government of Japan to support RPC &WUA to strengthen (or introduce) participatory development. And during the activities by participatory development Provincial Government wants to try suggested programs in the development study. Requested supports are project type cooperation, short term experts and leader farmers training in Japan (to change their way of thinking).

(FY 2004 Domestic Survey)
 No information to be specifically mentioned.

(FY 2005 Overseas Survey)
 Iranian government made a request for project type cooperation. Golestain prefecture has conducted several preparation activities for the requested project.
 - Preparation for proposed model farming system. Farmer's association made discussions inside and decided model farm area inside the area.
 - Preparation for water management. Golestan prefecture constructed canal, irrigation facilities to prepare for water management cooperation.
 The study team and C/P institutions has conducted discussion with the Ministry of Energy, Agriculture, and WUA on Gharasu basin agricultural development project, which have included the Ministries role in the study. Agricultural organisation in Kermanshah province has considered several project to implement the project based on the study, though there is no experience in Iran for soil improvement. Thus, the Kermanshah province have requested the Japanese government for a short-term expert on the assistance for soil improvement for stock breeding.

(FY 2006 Domestic Survey)
 No information to be specifically mentioned.

(FY 2006 Overseas Survey)
 Pavant ROC has implemented main waterway, banking, and second irrigation/waterway construction
 Technical Cooperation
 Training: Training in Japanese farm household
 Dispatch of experts: Request for short-term expert

(FY 2007 Domestic and Overseas survey)
 Feasibility study of the Golestain state community participation agriculture development promotion project is being proceeded after the decision of technical cooperation project by JICA. For the realization of the proposal in the mentioned study, funding cooperation was requested.
 In addition, the progress rate of the projects carried out by the Iranian government is 95%. 1) Laying irrigation canal, 2) Laying the second canal, 3) Farmland maintenance, 4) Construction of the second reservoir, 5) Construction of the office.

| | Completed Partially Completed Implementing Processing | Delayed or Suspended Discontinued or Cancelled |
| <p>Description : (FY 2004 Survey) Since the study was completed only short while ago, it is not clear if the government has implemented a project, though the reaction to recommendation seems to be consider.</p> <p>(FY 2005 Domestic Survey) During the study, although preparation of the document has been made for a request of expert, request has not yet been submitted. The project competes with the similar requested assistance, "Gorgan Plain Irrigation Drainage and Agriculture Development Plan", where coordination is been made for short-term experts from JICA within the Ministry of Agriculture.</p> <p>(FY 2006 Domestic Survey) No information to be specifically mentioned.</p> <p>(FY 2006 Overseas Survey) While the water and land management was completed as scheduled, grain production and horticulture management are still behind. Other activities undertaken are as follows; 1. Organic agriculture: 1) grain production (corn, chick pea and vegetable), 2) horticulture 2. Securing compost site of animals/nemertean and grains from household 3. Organic breeding 4. Animal handling agriculture (especially cattle) 5. Machinery to provide animal fertilizer 6. Greenhouse cultivation (training and structure) 7. Process to use animal urine for agricultural purpose 8. Promotion of water saving</p> <p>(FY 2007 Domestic survey) Activity for the realization of the proposal of the mentioned study is not implemented.</p> <p>(FY 2007 Overseas survey) A request for the implementation of sustainable agriculture using mixed production techniques with farmer participation was performed for JICA by the Iranian Ministry of Agriculture. In Ministry of Agriculture local office (Kermanshah state), following support is thought to be needed. 1) Technical transfer by dispatching the experts, 2) training of Iranian experts in Japan or other countries.</p> <p>(FY 2008 Domestic Survey) Implemented projects: Project for infrastructure development and water management improvement in Lanbasaar irrigated area Content: Based on the direction of President Rafsanjani then, there has been the policy of developing/consolidating farm lands not only in the target area but also in the whole country. Especially, farm land development/consolidation in northern part of Guilan and Mazandaran Provinces are remarkable. There is no information for Kermanshah Province.</p> <p>As for "Integrated agriculture development project", the Iranian side has set up JICA Development Study Follow-up Promotion Office, and is providing low interest loans for introduction of livestock for small scale farmers etc. Dispatch of expert for agricultural support of ecological integrated crop-livestock farming had been requested to the Japanese government and had already been adopted. Project for participatory integrated agriculture in Kermanshah Province (technical cooperation project) is requested.</p> <p>No information is available on the following proposed projects. -Karab Kiranbaar dam irrigation project -Sanjabi Plains drainage improvement project -Farmer capacity development through the establishment of cooperatives -Project for strengthening agricultural extension system</p> | | |

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
(FY 2005 Domestic Survey)
The mentioned plan has been adopted as an official disaster prevention plan in Tehran city. In addition, community disaster prevention activities are continuously conducted by own funds after the completion of the mentioned study in Tehran.
Furthermore, preparation of plans for urgent measures within 72 hours has been selected as a new project by the Ministry of Foreign Affairs.

(FY 2006 Domestic Survey)
No information to be specifically mentioned

(FY 2006 Overseas Survey)
The study including the periphery of Teheran was approved by the congress. The plan already shows successful results in Teheran.

(FY2007 Domestic survey)
Implemented project: Teheran City neighborhood citizens volunteer project
Implementing period: November, 2006 - 2007
Implementing body: Swiss Agency for Development and Cooperation (SDC), TDMMO
Objective: 1) Reducing casualties and damage from disasters, 2) Improving disaster prevention awareness of citizens, 3) Promoting disaster prevention activity to the community, 4) Improving awareness of disaster prevention, emergency response, improve search and rescue ability, 5) Establish partnership and build cooperation with government and citizens, 6) Build local organizations, the organization of the state, the network of international organizations.
Relation with the mentioned study: Constituted based on the mentioned study (Corresponded to disaster prevention organization promotion project in the model community).

Subsequent study: Emergency Response Plan and Capacity for the first 72 hours after an Earthquake
Implementing period: July, 2007 - March, 2010
Implementing body: TDMMC, JICA
Funding:
Funding body: JICA (Technical Cooperation project)
Objective: Project plan for Emergency Response Plan for the first 72 hours after an Earthquake in Teheran was revised and the priority of project will be improved.
Benefits: Improvement of emergency response plan, Developing fast response damage and assessment system, Constructing a community based emergency response plan
Relation with the mentioned study: Constituted based on the mentioned study.

Description :
 (FY 2005 Domestic Survey)
 Implemented project: Continuation of the pilot project (Strengthening of EC secretariat, inventory management for solid and fluid source, and preparation of the Environment white paper
 Implementing body: Department of Environment, Teheran office
 Relation with the mentioned study: To continue the pilot project.
 Status:
 (FY 2005 Domestic Survey) In progress

(FY 2006 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Domestic survey)
 Increasing the amount of information of immobile/ transferral air pollution source, and strengthening the management information system (MIS) are proceeding by DOE, from August, 2004 to August, 2006. These project were based on the proposal in the mentioned study.

(FY 2009 Domestic Survey)
 1. We have seen progress in degree of air pollution by conducting an alternative vehicle program (providing subsidies to dispose of old-model cars and to purchase new models) which was triggered by this development study.
 2. Most parts of the proposals for reform in organizational structure have not been implemented while replacement of ministries, secretaries, and deputy secretaries has occurred.

Description :
(FY 2005 Domestic Survey)
No information to be specifically mentioned.

(FY 2006 Domestic Survey)(FY 2007 Domestic and Overseas survey)
Implemented project: Anzali wetland environment management project
Implementation period: November, 2007 to October, 2009
Implementing bodies: JICA, Department of the Environment
Funding:
Funding party: JICA (Technical cooperation project, R/D concluded 10 February, 2007), Own funding
Objectives: Technical cooperation project aiming at establishing a detailed framework of zoning and a mechanism for the wetland which require technical assistance in the main items of the subjected study.
Benefit:
Beneficiaries: Fishermen, Hunters, Inhabitants in Anzali wetland, and Anzali wetland.
Benefits: A few thousands fishermen and hunters, 100,000 birds in Anzali wetland and 193ksqm of Anzali wetland. Environmental purification and health promotion by wetland biogeocenosis will be maintained, managing the ecology of the Anzali wetland. Moreover, an indirect effect for the inhabitants (including the next generation) around the wetland is expected.
Technical cooperation:
Training:
Training country-by-country: "Wetland control methods in Japan", "Ministry's cross-sectional environment administrative operation" (Dispatching 3 - 4 people, Spring and winter of 2008)
Dispatch of experts: 5. (35.6MM, Chief adviser/organization and system maintenance, wetland management and monitoring, zoning, environmental education, eco-tourism)
Progress:
(FY 2007 Domestic survey) The President was replaced, and, most of the members of the high-level posts for the CP organization were replaced. The new President is active in a development project and shows approval for the highway construction passing the Anzali wetland which the Ministry of Road Traffic is promoting. The environment of the wetland is expected to deteriorate remarkably if highway construction is proceeded.
(FY 2007 Overseas survey) For maintaining the Anzali wetland, increasing locals and students awareness of the wetland is essential. One of the achievements is preventing the construction of the Anzali belt line.

(FY 2006 Overseas Survey)
Subsequent study: Survey for water dosage fluctuation impact
Implementating period: 2 years
Design: 24 months from Mar. 2006 to Mar. 2008
Implementing body: Caspian sea environment program
Objective: Socio-economic impact of water dosage fluctuation, were evaluated
Benefits:
Beneficiaries: Approximately 150 thousands Inhabitants in the wetland regions
Benefits: The project was implemented in 20 thousands hectare of Anzali wetland including regional governments of Anzali and Someesara.
Technical cooperation:
Training: The project is operated in cooperation with Caspian sea environment program. (10 persons/ 2 years)
Progress: 25%

Implemented project: Watershed management in Masuleh basin
Implementing period: 2003 - 2004
Implementing body: Regional watershed management office
Benefits:
Benefits: Local inhabitants, inhabitants in Anzali wetland and its surrounding area.
Technical cooperation
Training: 10 persons; 14 Oct. 2004 - 14 Nov. 2004, 27 Mar. 2004 - 27 May. 2004; watershed eco-system management
Others: Seminars, Newsletters, Educational workshop including letters for local habitants and Iranian experts.

Other
1. Plantation and sapling for 300 hectare of Masuleh basin as watershed management.
2. Sewage treatment system is still in operation.

Description :
(FY2007 Domestic survey)
Detachment of the experts was requested from the Iranian side but seems to have been implemented after the mentioned study.

(FY2007 Overseas survey)
Proposals in the mentioned study were utilized and the following activities have proceeded.

- 1) Evaluation of quality and vulnerability of the water system: Completed drawing the entire water system and structural modelling of quantitative analysis, analysis of strong motion, review of velocity response spectrum
- 2) Research on main water line from No.6 Water Treatment Plant to 1180 west reservoir via distributing reservoir located in block 21 and 22: Optimization of the water pipe (progress rate: 60%).
- 3) Western Teheran distribution line: Water distribution to No.51/16 distributing reservoir, replacement of the water source for emergencies (bidding in progress).
- 4) Western Teheran 1180 distribution reservoir construction: Response plan for the increase of the water demand, replacement of water sources in an emergency (progress rate: 80%).
- 5) Installing automatic cut-off valve to distributing reservoir outlet: System installation to prevent the danger of flooding caused by leakage of drinking water and breakage of the distributing reservoir outlet. (bidding)
- 6) Northern Teheran distributing pipe survey: Gravity water supply and replacement of water source in the emergency to No.72/38/24 distributing reservoir. (bidding preparation completed)
- 7) Southern Teheran distributing pipe survey: Power supply in Southern Teheran water source and replacement of water source in the emergency. (progress rate: 80%)
- 8) Surveying Southern Teheran decrepit water supply network and Northern Teheran water supply network: Management of water pressure to the distributing pipe, replacement of water source in the emergency. (progress rate: 80%)
- 9) Water conveyance survey from Kan water purification plant to No.15 distribution reservoir via No.13 distribution reservoir, improvement to distribution reservoir intake (progress rate: 30%)
- 10) Water conveyance from No.59 distribution reservoir to No.37 distribution reservoir, improvement to the intakes of No. 37/57/58 distribution reservoir.
- 11) Water conveyance from No.6 distribution reservoir to No.59 distribution reservoir, improvement to the intakes of No. 56/59 distribution reservoir: replacement of water source in the emergency. (progress rate: 50%)
- 12) Raw water transmission survey from Ghoochak tunnel to No. 3/4 water treatment plant: replacement of No.3/4 distribution reservoir in the emergency.
- 13) Distributing pipe survey from No.5 water treatment plant to No.43/46/48/49 distribution reservoir, and No.3/4 water treatment plant: (progress rate: 80%)

(FY 2009 Domestic Survey) No information to be specifically mentioned.
(FY 2009 Overseas Survey) No information.

(FY2012 Domestic Survey)
No information to be specifically mentioned.

(FY2012 Overseas Survey)
Implementing project: Project of "Water Supply in Disasters and Emergencies"
(Project outline) In 2007 and following JICA's studies, Water and Wastewater Organization of Tehran procured and installed the mentioned equipment. At the first stage, this organization conducted identifying and prioritizing the reservoir tanks in Tehran and feasibility study of possibility of installment of the equipment on output pipelines. After completion of the mentioned stage, The organization underwent the procedure of purchasing the valves with sensitivity to earthquakes and at the final stage installed them.
(Implementation body) Water and Wastewater Organization of Tehran
(Benefits) People of Tehran: 12,223,598, Area: 686.3 km?, Having a safe reservoir of drinkable water in case of an disaster
Subsequent study: Study on "Retrofitting the Water Facilities in Tehran"
(Objective) Moving toward the overall goal of making Tehran's water facilities resistant to earthquakes.
(Implementation body) LAAR Consultant Engineering Co., PARS AB TADBIR Company, DEJHAN TARH Company (Geotechnical Consultant Company), ZAMIN KAVAN Company (Geotechnical Consultant Company)
(Situation) In progress

Description :

Subsequent Studies:
1979~1981 (Jordan Govt 56,296 JD, Japanese Govt 2,380,000 JD)

Finance:
Jun.20.1977 L/A 7.5 bil.Yen (Wadi Arab Dam Irrigation Project)
*Components of the Project
Construction of Rockfill dam and sprinkler system
(loan for equipment for civil engineering, construction, CS)

Construction:
1981~1987 Construction(Jordan Govt 1 mil JD,Japanese Govt 7 mil JD)
1986 Started to operate (officially completed in 1987)

The water volume of 20mcm is stored in the dam which has total capacity of 21.1mcm. The height of the dam was changed from 65.5m to 82.5m, because the capacity of impoundment was increased. Water delivery structure is the same as the initial plan, but additional one is pumping station at King Abdular canal, which has four electric turbines consuming 750kw/h each and has the pumping power of 400l/sec, delivery height of 120m from the canal to the reservoir. Necessary expense is mainly running cost to operate the pump. The irrigation area is 10, 200ha. The efficiency of the hydro-pressure network is 85% or more.

Modified Point of JICA F/S:
-Digging wells in the upstream of the dam to supply water to Ilbit city,
-Cancellation of Arwada Dam construction proposed in the upstream of Yarumuka river along the international boundary between Jordan and Syria.
-Execution to deliver water from the King Abdular canal to Amman.

Description :

(1) Irbid Industrial Estate
 Subsequent Studies:
 Because it took six years to conclude L/A, this M/P has been partially modified.
 The initial project site (Approximately 26.6ha, Northeastern Irbid) was changed to another area (42.6ha with the newly developed 40-50ha) due to the increase of the land price in the original site.
 Finance:
 1989 A loan from Saudi Arabia
 Construction:
 (FY 1994 Overseas Survey)
 Completed

Detail:
 (FY 1993 Overseas Survey)
 The proposed projects was integrated into M/P of Irbid Municipality.
 (FY 1994 Overseas Survey)
 As of January 1994, the Industrial Estate was fully occupied and the contract has been concluded for 60% of new development area.
 (FY 1996 Overseas Survey)
 40ha of land has been purchased by Industrial Estate Corporation as an expansion for Irbid Industrial Estate. JIEC is seeking finance for developing the already purchased 40ha.

(2) Irbid Ring Road
 (FY 1994 Overseas Survey)
 Partially completed.
 (FY 1997 Domestic Survey)
 Almost completed.

(3) Tourism Development
 (FY 1997 Domestic Survey)
 Jerash Ruin is under rehabilitation continuously and attractions for tourist are developed.
 Saradin Castle in 'Ajlun was rehabilitated for tourism also and events contribute to vary tourism resources.

(4) Others
 "Ring Roads Construction Project in Irbid City (1982)" and "F/S on Irbid Industrial Estate Project" were conducted by JICA.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Finance:

Local budget of Irbid city (covering 48% of total project budget, 14.6 mil. JD).
 In 1994 the Irbid city allocated 200,000 JD to the project.

Construction:

1986 Commenced
 15.1km has been completed (FY 1994 Overseas Survey).

Detail:

(FY 1991 Overseas Survey)

Parts of the project were implemented while other parts were suspended due to the land acquisition problem. Although Priority of this project is not ranked high, the project is integrated into the National Plan. There is a possibility that the project may be resumed.

(FY 1994 Overseas Survey)

Although the Jordanian Government was willing to promote the project as proposed in M/P, the difficulty to procure fund, the occurrence of the Gulf War, the inflow of refugees, the devaluation of JD, the soaring of land price, etc. caused the project to be delayed. However, because the decentralization of the administrative power has been promoted, the remaining project may be implemented.

(FY 1997 Overseas Survey)

Construction of remained parts has been discontinued since 1986 due to the lack of funds.
 Review study to up-date (specially in costing) is to be carried out to meet recent economic damages.

(FY 1998 Overseas Survey)

The implementation of the project has been delayed because of the Gulf war and its flow of refugees, depreciation of currency, economic fatigue etc. However, the area of Irbid City is continuing to grow and needs toward constructing ring road is increasing.
 The initial construction plan of the entire length had been enlarged from 24km to 32km.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(1) Rain-fed Intensive Agriculture Project
 (FY 1998 Overseas Survey)
 Finance:
 Grant aid by Spanish Government 750,000JD
 The government is receiving a loan of 1,300,000\$ from IFAD for agricultural resource management project.
 Construction:
 On-going

(2) Multi-purpose Pilot Project of Hot Springs
 The total development cost is estimated six mil.DJ.
 (FY 1997 Overseas Survey)
 F/S under implementation (2 years)
 Implementing Organization / MOP, Taliela Government
 Consulting company / Subeh Consultant Co.
 Cost / 50,000JD (own fund)
 (FY 1998 Overseas Survey)
 This project was implemented with their own fund.

(3) Karak Urban Development
 No change is observed in the Karak Urban Development Plan.
 USAID promised to construct a museum and a guest house at a castle. Private investors have been developing the most part of the old city.
 (FY 1998 Domestic Survey)
 No progress.
 (FY 1998 Overseas Survey)
 The land was gained for the construction of handcraft center in 1998. No further progress has been made.

(4) Muta-Mazar Urban Development
 JICA has been conducting F/S on the Muta Industrial Estate Development Project. The Urban Development Department of the Ministry of Urban and Local Environment formulated the New Land Use Plan for the lake district (Summary of JICA F/S).
 (FY 1997 Domestic Survey)
 Target area was changed to be whole southern region.
 (FY 1998 Domestic Survey)
 Although the project has been reviewed, there has not been any progress.
 (FY 1998 Overseas Survey)
 The project fell into abeyance. Similar development project has started in Lajoon city.

(5) Green Badia Project
 U.K. has been revising this project into "Badia Development Project". However, the fund has not been secured.
 (FY 1998 Overseas Survey)
 Only the dissemination of water supply and electricity project has been implemented.

(6) Tourism Development of Dana Valley
 The proposed project has been largely changed. The project has been implemented with the emphasis on the environmental education, the sustainable development and the support for the agricultural method practiced by the indigenous peoples. The project was financed by the World Bank and implemented by the Global Environmental Facility. There is no plan for the construction of Resort Hotel.
 (FY 1998 Overseas Survey)
 This project was implemented with their own fund

Others:
 Sep.1989-Aug.1990 "Agricultural Development for Karak-Tafilal Development Region (1990)" was conducted.
 (FY 1993 Overseas Survey)
 A part of the study results have been utilized in the formulation of the Land Use Program.
 (FY 1995 Domestic Survey)
 The Southern Region Development Study including the Muta Industrial Estate Development Plan has been implemented since September 1995.

Description :
 Eleven projects were proposed in the basic study as follows.

(1)Sultani-Siwaga pipeline project
 Construction:1990 completed (operating fully (100%))
 Water supply to southern part of Anman with volume of 15.9MCM per annum. There are twelve wells at siwaga stagnant water layer.
 (FY 1996 Overseas Survey) This project was not implemented due to lack of water resources to convey water from Sultani to Siwaga.

(2)Rumeil-Madaba pipeline project
 Situation:1992 started to operate (operating 80%)
 Water supply to southern part of Anman with volume of 7MCM per annum (12MCM per annum is possible).
 (FY 1996 Overseas Survey) This project has not been implemented, since there is no enough water resources to be transferred from Rumeil to Madaba.

(3)Wala dam project
 Second priority project for the area.
 Subsequent Study:D/D (EC loan)
 *JICA study was changed due to the reasons as follows.
 The reservoir site proposed by JICA narrows stagnant water layer, because its location is over stagnant water layer. Howard Hamfree Consultants (U.K.) is examining the plan to construct a dam at small sites of upper-stream. These sites enable the direct recharge even located over stagnant water layer. The cost is estimated 23 million JD.
 Finance:
 (FY 1996 Overseas Survey) Request for finance of the project was submitted to Arab Fund for Social and Economic Development. No action has been taken since then.
 (FY 1997 Overseas Survey)
 113mil.USS Arab fund
 *Contents: Wala Dam, Tanur Dam, the conveyor, Irrigation Network

(4)Quatrana dam project
 (FY 1996 Overseas Survey) This project has not been implemented.

(5)Sultani dam project
 The capacity of the dam is only 1.1MCM. Accumulated soil of the dam was removed several times since 1992. The dam site is at lower stream of big Phosphoric Mine and exhausted slag level is high and water quality is low. The dam keeps water for 3 or 4 months per year.
 (FY 1996 Overseas Survey) No action has been taken since 1992.

(6)Siwaga dam project
 Subsequent Study:1992 F/S (CIDA loan)
 Consultant:Hydrosalt Company (Canada)
 Finance:Own fund
 Construction:1992~1993 Completed (by armed forces)
 Situation:The capacity is 2.5MCM. This dam is Rockfill dam and there are concrete canals in both sides. Analysis in 1993 showed the improvement in water quality of stagnant water layer.

(7)Hamam irrigation project: The dam is not yet implemented.

(8)Quatrana irrigation project
 This facility remains as experiment farm constructed in early 1970 by Ministry of Natural Resources. Beduin of the area cultivate the land 1ha each. Feed grains and some commercial vegetables are grown at farm. Ministry of Agriculture still gives slight support for farm.

(9)Nukheila dam project
 Water usage of the dam was stopped 18MCM out of 19MCM (total capacity), because of the promotion of bigger site development at the cross point of Kings Highway and Waji-Mujib lower-stream. This site has capacity of 25MCM and 8MCM out of total will be used for urban water supply. JICA initial survey estimated 7MCM at the same site. D/D was financed by EC loan and the cost was 1.6 million JD. A series of tests were implemented by Howard Homfree Consultants and the geological problem at alluvium of southern river was discovered. Therefore the construction cost of this site is estimated to be considerable high (63 million JD) because of the technical problem.
 Consequently, the initial site, Nukheila, as proposed by JICA becomes desirable. Nukheila dam will be designed for the purpose of water supply to oil shale processing plant and the volume of 22MCM will be required, in case the oil shale exploitation plan becomes feasible. Lajun Plant plans to utilize 17MCM of storaged water and 5MCM of ground water.
 (FY 1996 Overseas Survey)
 Request for finance of the project was submitted to Arab Fund for Social and Economic Development. No action has been taken since then.

(10)Khagra dam project
 Subsequent Study:1990 F/S (CIDA loan)
 Situation:While drill test was being conducted close to the JICA site, Ministry of Natural Resources stopped the development, because of high possibility of contamination by drainage from upper-stream, Lajun oil shale area. Oil shale exploitation has been stopped due to the financial problem. CIDA loan was transferred to Jordana dam at Jafr basin.

(11)Green belt
 It is not implemented yet because of financial shortage.

Situation:
 (FY 1997 Overseas Survey) Except for Wala Dam Plan, no progress or new construction have been accomplished due to either lack of funds or water resources.
 (FY 1998 Overseas Survey)
 The main reasons that enabled the project were; 1)Effort for raising foreign fund aid and domestic fund was made; and 2)High potentiality of water resources development.

Description :

(1)Ground Water RechargeDams (6 potential sites)

1-1.Jardaneh dam
 Subsequent Study:D/D (loan from CIDA)
 Consultant:Hydrosult (Canada)
 Situation: This study was conducted because the Jardaneh area had been selected for alternative plan, since 2 detailed designs among 3 plans at Mujib Basin had been suspended due to ecological and financial problem. The study of Hydrosalt was re-conducted by local consultant.
 Restudy:1992~1993 Review of D/D (Own fund)
 Finance:Own fund
 Construction:1996~1997 Being implemented
 (Construction Trader:Al-Zeer)

(FY 1997 Overseas Survey)
 1997/98 Completed

Main reasons that enabled the construction of dam:
 (FY 1998 Overseas Survey)

- 1) the importance of new water resources development had been recognized with the decline of the competence of existing well
- 2) The increase of irrigation demand and livestock water demand
- 3) Government fund had been raised

1-2.Abusafat dam
 The short-time-study had implemented by Hydrosalt, however, this site was not put in the list for detailed survey by dam bureau.

(2)Potential wellfields of South Hasa & East Ma'an

2-1.Hasa
 Construction:
 (FY 1999 Overseas Survey)
 7 new wells were drilled in south west Hasa for Tafila drinking supply in 1995.

2-2.East Ma'an
 (FY 1991 Overseas Survey)
 12 productive wells were drilled for the phosphate Co. in the east of Ma'an according to the study recommendation.

Utilization of the results:
 The National Water Master Plan was updated with EC assistance during 1991-1992.

Background:
 Although Water Resources Development has been put high priority by related persons, some problems occurred in Jafr Basin like deep well digging, comparatively low productivity, changeable water quality and recharge.
 (FY 1997 Overseas Survey)
 Except for Jardaneh Dam, no progress or new construction have been accomplished due to either lack of funds or water resources.
 (FY 1999 Overseas Survey)
 Due to the new drilling activities in the said area, it is suggested that the potential recharge dam sites should be revised and modified according to the new situation.

(3)Other situation
 Jordan Phosphoric Company is digging 10 wells for production purpose and one for observation purpose at Shidiya. These wells have 21.9MCM/year of potential productivity. D/D was conducted by Howard Hambfree. Groundwater recharge dam will be necessary when the wells start to work.
 Out of 5 test wells, 3 wells were digged by JICA and are being monitored every month by Hydrological Section of Jordan Water Dept.
 (FY 1999 Overseas Survey)
 Some of the above monitoring wells were destroyed by unknowns, and this needs fund for rehabilitation.

Project related:
 The basic study has not yet been linked with any development project of this area. This is mainly because loan had not been received to construct deep aquifer and concrete dams (FY 1994 Overseas Survey). But related projects as follows are under implementation.

| 9. SITE OR AREA | Karak-Tafila Development Region | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The project area is one of the least developed areas in Jordan with no other industries than agriculture and government services industries. The area is under arid conditions with an annual average rainfall of about 200 mm. The rainfall has been very variable and unreliable causing frequent droughts to the agriculture. The present project is to develop and apply traditional rainwater utilization methods in large scale to agriculture to get stable crop production in three areas(Dhiban, Abyad ant Tafila).</p> <p>Main project components:</p> <p>1.Crop production scheme by water harvesting measures, checking dam and winter irrigation.</p> <p>Fodder shrub production scheme.</p> <ul style="list-style-type: none"> - Water harvesting 8,510ha - Winter irrigation 33.9ha - Check Dam 93ha - Rainfed Wheat 270ha <p>2.Fodder shrub production scheme 4,480ha</p> | | |

| PRESENT STATUS | Completed or In Progress | Promoting |
|----------------|--------------------------|---------------------------|
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :
 IFAD Financed Project:
 (FY 1997 Overseas Survey)(FY 1998 Overseas Survey)
 Project contains soil and water conservation, agricultural development, institutional reinforcement, WID and project management.

Finance:
 Local 3,903,104 JD (Government budget)
 Foreign 8,761,877 JD (IFAD)

*Contents
 Civil work, establishment and rehabilitation of tree plantations, equipment and materials, training, water conservation, operating cost.

Implementation Period:
 1996-2002
 The priority is high in the National Development Plan, but they have technical and financial difficulties.

Background:
 (FY 1994 Overseas Survey)
 MOP considers the IRR of this project low. Thus, priority of this project is ranked low, compared with the tourism development whose IRR is expected high. However, in order to create employment and subsequently increase the income in rural area, it is an urgent need to adopt the rain-fed agriculture scheme. The fund must be secured for the project implementation.

(FY 1996 Overseas Survey)
 Finance is requested for the project implementation. Although this F/S estimated 385,200JD for the project cost, we believe this amount is unrealistic due to the fact the cost of 1.0ha of range development is at least 200JD.

Related Projects:
 The Ministry of Agriculture, the Ministry of Public Works and Housing and the Water Resources Agency have been implementing the development projects along Sarka River with the German loan. The pilot project covers 140ha of Waji-Karak in the northern part of Karak. The implemented projects are as follows:
 *Construction of gabion in the Waji area
 *Forestation to stabilize the bank and to prevent the further soil erosion
 *Installation of small scale ponds to prevent the further soil erosion and to increase the agricultural productivity
 *Renovation and construction of irrigation canals and construction of rural road
 More than 2km-long gabion has been constructed and the installation of the new irrigation system was commenced. The Ministry of Agriculture believes that this pilot project will show the effectiveness of Karak project.

*Refer to "Integrated Regional Development Master Plan for the Karak-Tafila Development Region (1987)".

Prospects for the remaining projects:
 (FY 1998 Overseas Survey)
 The priority of the development policy has been changed, with giving higher priority to horticulture and conservation of the natural resources. Lack of financial sources has delayed some projects. Although the local government has acquired loan for some projects, those projects have not been implemented due to the land problem.
 (FY 2000 Overseas Survey)
 Fodder shrub production scheme is not being implemented.

| 9. SITE OR AREA | Jordan Valley | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>The construction of desalination treatment plant (5 million m³/year) and the construction of trunk line to send water at Kafraïn area, southern part of Jordan Valley.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 Subsequent studies:
 (FY 2000 Domestic Survey)
 In case of supplying water to Amman metropolitan area, the problem is to elevate and supply water from the bottom of Jordan Valley. USAID has commenced the feasibility study for the construction of the trunk lines and the condition for the desalination has been prepared gradually.
 (FY 2001 Domestic Survey)
 Other than at the target area by the Study, a Study on the blackish water development has been proceeding at the Dead Sea coastal area and measures for the proposed area by the Study have become a long-term plan, because the water there had a lower salinity than that at the proposed area and had a better quality for the desalination. Meanwhile, the proposed water supply system facility was adopted.
 Implementation Period: May 2000 to Aug.2001
 Type of Study: F/S
 Implementing Agency: USAID
 Difference from the proposal by JICA: The desalination process is done with the blackish water from the Dead Sea coastal area mixed with newly developed surface water.
 * The USAID will provide the grant aid after the Study.

Finance:
 (FY 1999 Overseas Survey)
 1999 A request for a Japan's grant aid was submitted.
 Amount of request: 7,000 mil. yen
 *Contents: Construction of desalination plant(30mil. m3/year)
 Construction of trunk line between desalination plant and national park pump station, to supply water for Greater Amman Area.

Background:
 (FY 1996 Domestic Survey)
 Jordan side submitted the request for Grant Aid after the completion of the Development Study, the request has not been accepted as there was competition with another project on river allocation.
 (FY 1996 Overseas Survey)
 The Minister of Water and Irrigation notified the Ministry of Planning on Oct.9.1995 that the ground water desalination project has now fourth priority in the Japanese aid programs.
 (FY 1997 Domestic Survey)
 This project is listed to request grant aid assistance.
 (FY 1997 Overseas Survey)
 The outputs of the study have been utilized for elaboration of water strategy and the Capital Investment Program (1997~2011), and for re-assessment of the Demand-Supply Table.
 (FY 1998 Domestic Survey)
 It was planned to be implemented with Japan's grant aid assistance. However, it has become possible to conduct water from Israel due to the peace agreement of Israel and Jordan. Therefore, this project is given lower priority by Jordan government and has not been implemented.
 (FY 1998 Overseas Survey)
 This survey was practically used in water resources development project and capital investment project in Jordan (1997-2011). It is also utilized in evaluating water demand.
 (FY 1999 Overseas Survey)
 Due to the scarcity of water available in Jordan, the proposed project is considered as first priority project in the coming five years Emergency Plan.
 (FY 2001 Domestic Survey)
 The nationwide survey on the water resource management in Jordan has been proceeding and the proposed project was scheduled as the mid-long term plan among the survey.
 (FY 2005 Domestic Survey)
 Although the construction of the desalination treatment plant proposed in the study has been planned to conduct B/D with the Yen Grant Aid in the past, implementation has continuous been delayed. On the other hand, consideration to implement the project with the US aid has not been implemented which was planned within the Ministry of Irrigation.
 Desalination is the last water resource available in Jordan as revealed in the master plan. Therefore, realisation of the project would occur in the near future considering water demands in Amman.
 (FY 2005 Overseas Survey)
 Subsequent Study: Abu Zeighan" Deir Alla (Abu-Ezzeighan) desalination plan
 Implementation period: 3 years from 2002
 Implementing party: Ministry of Irrigation
 Objectives: To supply 1,500 to 2,500 cubic metres per hour.
 Funding: Own funding: 5.11 million JOD
 Details: 1) Freshwater processing facilities - 3.2 million 2) Water conveyance pipes - 1.08 million, 3) Water supply point - 0.23 million, 4) Well - 0.60 mil
 Progress: 100% (operated since 2004)
 Benefits:
 Beneficiaries: Greater Amman city
 Benefits: 10 % of water was supplied to the Amman city.
 Others:
 Although USAID has initiated Zara Ma' water supply project in the southern part of JICA project area, the project aims to supply water to Greater Amman. Meeting local demand is requisite for JICA project. However, both USAID and JICA has not yet satisfied the objective. In addition, utilisation of water supply pipe for environmental protection as an additional proposal made in the study has not been included in Abu-Ezzeihan project.

Description :

(FY 1996 Domestic Survey)

6 proposed projects of Jordan Tourism Study are being promoted in order to be accepted as set-plan of tourism item. Set implementation is proposed to display mutual effect considering the oil resources in Jordan, avoiding to implement each small-scale project. At present, follow-up study is being carried out to link as OECF loan project.

(FY 1996 Domestic Survey)

Subsequent Study:

(FY 1996 Overseas Survey)

Upon the request of the Government of Jordan, the Japanese government decided to dispatch an OECF SAPROF team in Jan.1997.

(FY 1997 Domestic Survey)

It is possible that OECF appraisal mission will be dispatched around January to March, 1998. (for sector loan of approx. 10 bil.yen)

(FY 1997 Overseas Survey)

SAPROF was carried out in Jan.-Mar.1997. The implementation of the project is scheduled in the middle of 1998~2003.

(FY 1998 Domestic Survey)(FY 1999 Overseas Survey)

JICA is conducting D/D on the proposed project "National Museum" in collaboration with OECF (Apr.1999 - Mar.2000). Then, the proposed projects will be started around 2000 by Japan's ODA Loan.

Finance:

(FY 1999 Overseas Survey)(FY 1999 Domestic Survey)

2 Dec.1999 L/A 7,199mil.yen

*Contents: 1) Amman Downtown Tourism Zone: National Museum at Ras Al-Ain, Renovating Raghadan Bus Terminal, Developing tourism street(King Talal St.), Developing trails between Roman Theatre, 2) Tourism Development of Karak Downtown and adjacent areas, and Karak citadel, 3) Tourism Development of Salt Downtown and adjacent areas, and Salt citadel, 4) Construction of Dead Sea PKWY to link Dead Sea Coast(Suweimeh-Zara) and Maadaba-Maain road, 5) Construction of Dead Sea Panoramic Complex

Construction:

(FY 2001 Overseas Survey)

1) Amman Downtown Tourism Zone.

Period: 18 months.

Contents: (1) Tourist Street for King Talal St., and Visitor Center. (2) Lookouts (Central Lookout, Al-Hojhinis, and Citadel Lookouts) . 3. Stairways.

Situation of progress: (1) Contractor mobilized in Oct. 2001. Survey work is in progress. (2) Construction of Visitors Center starts in Dec. 2001. (3) Construction of first segment of King Talal St. starts in Dec. 2001.

Perspective for remaining works: (1) Tourist St. work will be carried out in segments in coordination with traffic police/employer. (2) All works will be carried out according to work programe.

2) Tourism Development of Karak Downtown and Adjacent Areas and Karak Citadel.

Period: 16 months.

Contents: (1) Castle Museum/pathways. (2) King Hussein (Tourist St.) (3) Visitors Center/Busways (4) Observation Points (2 locations: Upper/Lower).

Situation of progress: (1) Contractor mobilized in Oct. 2001. Survey work is in progress. (2) Construction of Visitors Center starts in Dec. 2001. (3) Construction of Tourist St. starts in Nov. 2001.

Perspective for remaining works: (1) Tourist works will be carried out in segments in coordination with traffic police/employer. (2) All works will be carried out according to work programe.

3) Tourism Development of Salt Downtown and Adjacent Areas and Salt Citadel

Period: 18 months.

Contents: (1) Abu Jaber Building (2) Four Lookouts / Four public areas. (3) Trails for Tourist.

Situation of progress: (1) Awaiting Salt municipality's response to documents/drawings. (2) Expropriation of Abu Jaber Building has not been completed yet. (3) Expropriation of land for Lookouts has not been completed yet.

4) Dead Sea PKWY to link Dead Sea Coast and Maadaba-Maain road

Period: 24 months.

Contents: Road/Bridges.

Situation of progress: Awaiting JBIC's concurrence for pre-qualification to proceed.

5) Dead Sea Panoramic Complex

Period: 18 months.

Contents: Building works for Museum, Restaurant, Conference Hall, and Lookouts.

Situation of progress: Awaiting MPWH to send letters to invited tenderers to purchase documents.

6) Ragadan Amman Bus Terminal

Period: 24months.

Contents: Building, Landscaping, Dikes, and Bridges.

Situation of progress: Waiting for JBIC's approval for Pre-appraisal document.

7) National Museum:

Period: 24 months

Situation of progress: The projects cannot progress unless the government completes the operation and management system of the road for the National Museum.

(FY 2005 Domestic Survey)(FY 2005 Overseas Survey)

1) Amman Downtown Tourism Zone: component which has not been completed is now in article placement phase and is planned to be completed in December, 2005. 2)

Karak Tourism Development: Completed in 2004-03 3) Salt tourism development 2004-06 2006-06 (67%) 4) Dead Sea-Madaba Parkway (Excursion Route Servicing)

2003-03 2005-11 (progress: 98) 5) Dead Sea Observation Platform Complex: Completed 2004-04 7) National Museum: 2005-02-15 2007-02 (progress: 20%)

Description :
 (FY 1997 and 1998 Domestic Survey)(FY 1998 Overseas Survey)
 Financial state of the WAJ is constantly in deficit, which rely external funds for project implementation.
 The government of Jordan is suspending a grant-aid request once considered because the higher priority project, namely Zai expansion project being considered as a grant-aid project. This Zai Project will be completed by November 2001.

(FY 1999 Domestic Survey)
 A JICA expert for leakage detection was dispatched to WAJ in April 1999.

(FY 1999 Overseas Survey)
 Request for Japan's grant aid (2,500 million JPY) was submitted in September 1999.

(FY 2001 Overseas Survey)
 The amount of Yen Grant requested is 2,300 million JPY.

(FY 2001 Domestic Survey)
 2001/Nov-2002/Mar B/D(JICA)

(FY 2002 Overseas Survey)
 12 Sep.2002 E/N 968 mil.yen (Project for Improvement of the EaterSupply System to Zarqa District 1/2)

(FY 2002 Domestic Survey)
 Construction period: 2003/Mar-2004/Mar

Description :

Subsequent project: Tourism sector development project

Funding:

Funding party: Yen Loan (E/N concluded: 1999/Dec/2)

Amount: 7,199 million JPY

Content:

The project consists of 6 sub-projects.

1. Dead Sea Parkway Development (2003/Mar - 2005/Mar) 2. Historic Old Salt Development (2004/Feb - 2005/Oct) 3. National Museum construction (2004/Feb - 2006/Mar) 4. Amman Downtown Tourism Zone Development (2001/Nov - 2004/Mar) 4.1. Raghandan Bus Terminal development (2003/Aug - 2005/Aug) 5. Dead Sea Panoramic Complex construction (2004/Mar) 6. Karak Tourism Development (2001/Nov - 2004/Feb)

Benefit:

Tourism development is regarded as one of the most important political tasks for the Jordan government because the tourism infrastructure development will contribute to the country's economic stability.

Situation

(FY 2001 Overseas Survey)

2000/May/25: The government of Jordan put the agreement into force, which decided to implement the project.

2001/Jan/28: Pacific Consultant International (PCI) has been employed by the Ministry of Public Works and Housing as a Project Management Consultant (PMC).

2001/Mar: PCI opened their office in Amman and commenced consulting services.

Weekly meetings have been arranged every Saturday morning for PMU, MPWH, GAM and PMC to confirm the progress of the Project and to discuss issues to be solved.

PMC have been reviewing and revising the draft tender documents prepared by the JICA Study Team in coordination with the Implementing Agencies to proceed tendering process.

(FY 2001 Overseas Survey)

Preparation for an executive training project in four main projects (Site management, museum management, environmental conservation, and promotion) is in progress.

(FY 2003 Domestic Survey)

As a commissioned JBIC study, short-term experts for museums were dispatched progressing discussions on museum management organisation and on exhibition concept. Counterpart government has requested technical transfer to JICA for future independence of financing and technology.

(FY 2005 Domestic/Overseas Survey)

Seminars on the project design, and display concepts were held before the Board of Trustees of the national museum and Queen Rania and Princes Sumaya, which have asked for additional inputs to future BOT. Selection of a director of the museum is required.

Progress:

1. Dead Sea Parkway Development

(FY 2001 Overseas Survey) Preparing for tender.

(FY 2003 Domestic Survey) 15.17 %

(FY 2004 Overseas Survey) 72.35 %

(FY 2005 Domestic Survey) 97.04 %

2. Historic Old Salt Development

(FY 2001 Overseas Survey) Preparing for tender.

(FY 2003 Domestic Survey) 4.25 %

(FY 2004 Overseas Survey) 8.04 %

(FY 2005 Domestic Survey) 62.80 %

3. National Museum construction

(FY 2001 Overseas Survey) Preparing for tender

(FY 2005 Domestic Survey) 16.65 %

4. Amman Downtown Tourism Zone Development

(FY 2001 Overseas Survey) mid 2001/Nov Construction started.

(FY 2003 Domestic Survey) 63.39 %

(FY 2004 Overseas Survey) 63.39 %

(FY 2005 Domestic Survey) 95.87 %

4.1. Raghandan Bus Terminal development

(FY 2001 Overseas Survey) Preparing for tender.

(FY 2004 Overseas Survey) 50.28 %

(FY 2005 Domestic Survey) 81.83 %

5. Dead Sea Panoramic Complex construction

(FY 2001 Overseas Survey) Preparing for tender

(FY 2003 Domestic Survey) 67.50 %

(FY 2004 Overseas Survey) 100 % completed

6. Karak Tourism Development

(FY 2001 Overseas Survey) mid 2001/Nov Construction started

(FY 2003 Domestic Survey) 93.06 %

(FY 2004 Overseas Survey) 100 % completed

Technical Cooperation:

Training: JICA Study on Museums seminars - the end January 2005 - the beginning March

Dispatch of experts:

Local based activities in Museums, total of 3 long term-experts were dispatched in August 2005. 2 short-term experts were dispatched twice in October 2005 and December 2005. The short term experts guided about the documentation of collections and educational activities.

| 7. CONSULTANT(S) | PADECO Co., Ltd. | | |
| 8. STUDY PERIOD | Apr.2002 ~ Jul.2003 | 15month(s) | |
| 9. SITE OR AREA | Direct beneficiaries (as a counterpart): material development section in the government, well-experienced teachers. Indirect beneficiaries: teachers and students in each school, specialists in each local educational committee, staff members in the Ministry of Education | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>To develop digital learning materials and to utilize information technology (IT) for education, a great deal of cost and work force are necessary. For effectively using limited resources, it is needed to plan and implement appropriate short- and long-term programs, as well as to invest in the most effective and efficient sector. Furthermore, it takes a long period of time to develop digital learning materials, which also requires continuous improvement and maintenance after development. Therefore, it is necessary to consider measures to improve conventional classes at school as well and to include following elements into the development planning premised on that;</p> <ul style="list-style-type: none"> - students use digital learning materials at computer classes - a few computers are used in each class - teachers use printed learning materials for the computer classes <p>To promote the project, it is necessary to formulate a short-term plan for one or two fiscal year(s), similar to the one conducted during the study, under a long-term master plan for the period of 3-5 years. Such plan needs to be concrete and feasible, consisting of training for teachers, development of learning materials, conducting pilot projects, evaluation, and others.</p> | | |

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
(FY 2004 Domestic Survey)
No information to be specifically mentioned.

(FY 2005 Overseas Survey)
The Ministry of Education has conducted a survey on effectiveness of digital education material to students results and attitudes, and effect to efficiency of teaching methods.

(FY 2006 Domestic Survey)(FY 2007 Domestic Survey)
Implemented project: Project for strengthening the function of a leaning center for science education utilizing ICT
Implemented period: Mar. 2006 to Mar. 2008
Implementing body: Learning Resource Center (LRC) and its national center, QRC (Queen Ranina Center) under the Ministry of Education
Funding:
Funding party: JICA (technical cooperation project, R/D concluded: 9th of Dec, 2005)
Objective: It is aimed QRC and pilot LRC to function as a teachers training center which can conduct secondary science education (7th to 9th grade) utilizing ICT.
Others: This development study can be positioned as a pilot project to utilize ICT in education originally planned by the Ministry of Education of Jordan. The own plan was then prepared by the Ministry of Education based on the results of this study and has been implemented as the central activity of educational reform. Its outlines are: 1) the total of 600 million yen funds is to be raised from each donor on the basis of ICT utilization effectiveness demonstrated by the study results and digital teaching materials corresponding to all grades and curriculum of science, mathematics, English, Arabian, moral education and management are to be developed; 2) Following the method and framework of the study results, a system in which the Ministry of Education handles design/quality control and private business manages actual production is adopted. Also, a new section is to be established in the Ministry of Education composed mainly by the counterpart at the time of study and it is to implement this project.
Relation to mentioned study: Transferring digital education material development technique to Jordan was completed and a lot of digital education materials were developed by Jordan. The implemented project is to transfer techniques on the utilization in schools.

Technical cooperation:
Training in Japan: 2 personnels in FY 2007, 4 personnels in FY 2008
Benefits:
Beneficiaries: science teachers of Ministry of Education and students
Progress:
(FY 2006 Domestic Survey) Teaching materials have been almost developed and tested at about 100 schools, and a plan to promote them nationwide has been presently formulated in the Ministry of Education concerning their use.

(FY 2006 Overseas Survey)
Technical cooperation
Training:
5 trainees, from April 2002 to July 2003, 1) development of digital teaching materials for high school physics, 2) story board training and electronic design
2 trainees, 4 week training in Japan from the Ministry of Education in March 2004
Dispatch of experts: 4 experts, experience exchange with Jordan side on design management and implementation of teaching materials development

(FY 2007 Domestic Survey)
No information to be specifically mentioned.

(FY 2008 Domestic Survey)
No information to be specifically mentioned.

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

(FY 2002 Domestic Survey)

CDR tells us that Lebanon Government is interested in Underpass and Transport Management in Central Tripoli projects. Formal request has not been submitted. JBIC loan seems to be appreciated in this regard especially for the underpass project.

(FY 2002 Overseas Survey)

To implement the proposed projects under the Study, funding is necessary. Especially for large-scaled project, financial aid from overseas would be necessary. CDR has requested JICA to assist in the detailed engineering feasibility of the tunnel project by means of a technical assistance and is waiting for response from JICA.

(FY 2003 Domestic Survey)

The activities for materialisation has not been started.

(FY 2003 Overseas Survey)

CDR has requested JICA to assist in detailed engineering design for the Tripoli West Ring Road by means of technical assistance. Also, in 2003, CDR has requested EIB for funding of the construction of the TWRR.

(FY 2004 Domestic Survey)

No plans for implementation of the proposed project.

According to the mayor of Tripoli (current advisor for the Prime Minister), it is hoped that TWRR and Tripoli City Underpass (the proposed project) can be funded by the Japanese loans.

(FY 2004 Overseas Survey)

1. Funding:

1) D/D for the Tripoli Boulevard under-pass: Funding has still not been secured for the study and the project.

2) TWRR: EIB is planned to assist EUR 2.5 million.

3) Western Tripoli Pan Arab Highway: ISDB is to assist the funding.

2. Other Progress:

Tripoli city has started a street toll parking, using parking meters.

(FY 2005 Domestic Survey)

No information to be specifically mentioned.

(FY 2006 Domestic Survey)

Due to the international issue (conflict with Israel), there is no future prospect in the project and no contact with the Syrian government.

(FY 2007 Domestic Survey)

Due to political causes such as civil war and political change, project is not progressed. It seems difficult to materialise the project.

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(FY 2004 Domestic and Overseas Survey)
 When the submission of IT/R, it was discontinued. Proposal from Lebanon side is "the model is based on inappropriate data, enough identification is not done. Therefore, result is inappropriate, they are not accepted" For the Lebanon side, they were afraid the current inappropriate figures to be publicized (been reported). Lebanon's forthcoming responses are considered to be two points below.

1) Changing S/W contents, study group would spend a few years to maintenance and measure under water, identifying it based on this data, after making sure of the result is trustable, drawing up a master plan.

2) Changing the contents of S/W, this study only to make database and model, when the data is maintained in the following project (maintenance of hydrological measurement line), then this plan would be taken over.

Above requires a wide range of changes, it is not considered to be the issue to be handled by the study group. However, according to the Japan ambassador to Lebanon, if Lebanon side and study group would be both consented, it would be the expedient to collect along the previously described line 2. In other word, the current situation has been changed when S/W has been taking place, this study has reached its most of first targets, change S/W along this line, it was agreed although study group had no rights, this study would conclude.

Later on, while the study group responses to the comments to IT/R, amend where its applicable, endeavor to collect necessary documents for phase 2 work. However, Lebanon side's intention was not a simple technical part, but they were not eager to accept the analysis which was based on contained un-trustable yet inadequate data, either these data not to be reported, it was not certainly a technical problems, it was to do with their sensitivity regarding the water problem, was rather based on political judgment, therefore, this problem would no be the case to be solved with further technical discussion. Accordingly, there were no response for the requested documents, it was considered that it was impossible to continue further and unnecessary, after the discussion with the embassy, it was assumed that the study to be discontinued.

Finally, Japanese side agreed that

- 1) Discontinuing the study in the middle stage,
- 2) As a result of the study, quantity of water resource, study result of possible quantity of water resource development, deleting discussed water resource management strategy and scenario,
- 3) GIS database, DBM model as a system, SSM model as a system would be included in the report,
- 4) It was agreed as: the study result was closed for the public, only one original report was submitted to the Lebanon side, importance of continuous developing human resources in the water management fields, seminars within Lebanon, and Japan, supporting, studying, implementation, management of moisture, measurement of water network - all Lebanon side's demands to be reported to the head quarter.

However, Japanese side has been claiming that the reason for the Lebanon side did not accept IT/R contents was not inadequacy of data, but according to the Lebanon side's internal circumstances, and also the reason for report to be not open to the public - were all not only acknowledged by the Lebanon government, but also the internal circumstances within Lebanon.

Description :

Finance:
 (FY 1993 Overseas Survey)
 The Government is in negotiation with the financial institutes for the project implementation.

Detail:
 Some claim that if the territory, where the Melilla Airport is located, were returned by Spain to Morocco, no new airport would be needed.

(FY 1991 Overseas Survey)
 This project is still integrated into the National Development Plan. The Government is willing to implement it at any time when the political and the economical conditions are stabilized.

(FY 1993 Overseas Survey)
 The land acquisition has been in progress. If higher priority is given to the project, it is likely to be implemented.

(FY 1996 Domestic Survey)
 There is a perspective that this project may be commenced once the projects on the Airports of Agadir and Casablanca are finished. However, no step has been taken for the project implementation, so far.

(FY 1998 Domestic Survey)
 There has not been any request from Government of Morocco.

(FY 1998 Overseas Survey)
 The proposed project was incorporated twice in the national development plan after the survey. The development of Nador Province is seriously considered still, but the priority of constructing airport is becoming lower.

Description :

Subsequent Studies:
 Apr.-May.1987 B/D
 Consulting Firm / Nippon Giken, Inc.

Finance:
 Oct.1987 Grant Aid E/N 677 mil.Yen

Construction and the Donation of Machinery:
 1988~1989 Seven pumping stations were constructed. The boring have been conducted at other six places. The donated equipment are utilized for boring in another region.
 (FY 1998 Overseas Survey)
 1993~1998 The boring has been conducted at 36 places.

Effects:
 13,000 residents in Oujda have been benefited.
 The Moroccan government digged up 55 wells with the provided machinery. As a result, 30,000 people have now an access to clean potable water.

Detail:
 (FY 1993 Domestic Survey)
 Boring operation has been suspended since June 1993 because the equipment granted by the Japanese government has been out of order. The request for the additional assistance was made to procure parts for repair.

(FY 1997 Domestic Survey)
 No additional information on remaining project. Ministry of Public Works is digging wells with own fund, based on this F/S and B/D conducted with Japanese assistance.

(FY 1998 Overseas Survey)
 The local residents will bear the management and its expense of the source of the water supply under the support of state government, but its implementation is in difficulty as most of the residents live a nomadic life.

| 7. CONSULTANT(S) | Japan Railway Technical Service Tonichi Engineering Consultants, Inc. Yachiyo Engineering Co., Ltd. | | |
| 8. STUDY PERIOD | Oct.1985 | ~ | Jul.1987 21month(s) |
| 9. SITE OR AREA | Casablanca | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>This project aims to alleviate traffic congestion in Casablanca and promote urban development of the city in future. A F/S was then conducted on a plan of constructing an urban high-speed railway that uses viaduct structure for its major portions. In the study, passenger transport demand (target year, 2005) was estimated for the railway between the city center and Sidi Moumne, taking into consideration the actual situation of transport and the Master Plan on urban development. Alternative plans were drawn up in terms of transport systems, type of construction(underground semi-underground, ground level, elevated railway), and routes. In view of the local situation and based on the results of the demand forecast, approximate costs of construction for the alternatives were estimated, and these alternatives were compared from technical and economic standpoints, resulting in the selection of optimum transport systems and routes.</p> <p>New railway construction(Double track) 15.2km Track and structures: underground section 7.0km, ground level section 2.2km, elevated section 6.0km, Stations: 17 stations(including station plazas and connection facilities), Electric facilities: substations contact wires, power distribution, signalling, and telecommunications facilities,etc. Rolling stock and rolling stock workshop: 64 electric railcars, building of rolling stock bases, and mechanical facilities.</p> | | |

| | | |
|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

After completion of the F/S, the project was suspended and its future prospects are not clear. According to recent information, the government of Morocco seems to have a strong desire to implement this project with the financial cooperation of both Japan and France.

The mass railway transit proposed by the study was included in the master plan of urban transport in Casablanca. Before the implementation of this project, the government gives first priority to the increase of the bus fleet and the second priority to the improvement of the existing railway. The new MRT will be implemented after these priorities are completed.

The Government of Morocco is considering a F/S on the improvement of the existing conventional railway in Casablanca (2nd priority).

Additional information is unavailable. (as of Mar.1993)

(FY 1992 Overseas Survey)

Waiting for the answer.

(FY 1993 Overseas Survey)

Compared the time when this F/S was carried out, the situation of Casablanca was greatly changed. So a total study on the transportation sector should be done and a French consultant will be appointed.

So this feasibility study done by JICA should be renewed on the basis of it.

Totally saying, difficulties on financial resources must be settled.

(FY 1994 Domestic Survey)(FY 1995 Domestic Survey)

No additional information.

(FY 1998 Overseas Survey)

The proposed plan is included in the urban development project of Casablanca and will be implemented in the future. However, comprehensive survey on the transportation fields needs to be done according to the dramatic change of Casablanca city.

|-----------------------|--------------------------|---------------------------|
| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :
 (FY 1998 Overseas Survey)
 Three dam sites are assigned as high priority due to poor water conservation capacity of the area. These dam projects are expected to meet the water demand. The project, therefore, is highly recognized in the development plan of water resources.

(1)Timkit (medium size)
 Subsequent Studies:
 (FY 1996 Overseas Survey)
 D/D has been implemented with own fund (970,000DH)
 Consulting firm/Counseil Ingenierie et Developpment
 Finance:
 (FY 1997 Overseas Survey)
 FY 1998/1999 budget 156 mil DH
 Construction:
 (FY 1997 Overseas Survey)
 Jul.1998~Jun.2000 implemented

(2)Oukhit (small size)
 (FY 1996 Overseas Survey)
 Subsequent Studies:
 Jul.1992 D/D completed (Own fund 89,000DH)
 Consulting firm/ Hydro-Technica Maroc
 Difference with JICA Proposal:
 The material to cover the upperstream of the dam is changed from stone to earth.

(3)Oulhou (small size)
 (FY 1996 Overseas Survey)
 Subsequent Studies:
 Jan.1994 D/D completed (Own fund 143,000DH)
 Consulting firm/Hydro-Technica Maroc
 Difference with JICA Proposal:
 The material to cover the upperstream of the dam is changed from stone to earth.

(4)Related project
 Study on Tadighoust dam (medium size) is being carried out with the government fund.

Situation:
 (FY 1993 Overseas Survey)
 The JICA follow-up study on three dams have been conducted. The project implementation depends on the availability of fund.
 (FY 1997 Overseas Survey)
 Procurement of funds for construciton of Oulhou dam and Oukhit dam is needed.

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

In Oct. 1991, DCFTT held a JICA-sponsored seminar on the national base maps prepared by the present study. DCFTT sells the maps to be used for regional development planning.

(FY1991 Overseas Survey)

DCFTT considers that the maps prepared by the present study constitute basic and indispensable assets for planning any type of physical development efforts in the country.

(FY1993 Overseas Survey)

The government of Morocco intends to use a scale map of 1/25,000 as a new standard instead of the existing one the scale of 1/50,000.

Now maps of Tanjier, and Mekne's are in process of drawing.

Utilization of Products:

1) Based on the products of the Study, ACFCC

1. produced a new map in the scale of 1/25,000 of Northern part of Doccara.

2. made a collection on the map in the scale of 1/50,000 produced by IGN.

2) The produced maps have been on high demand among various research institutes and ministries. In particular, they played an important role in various projects initiated by the Agriculture Development Agency.

3) The produced map has been utilized as the reference in implementing the OECF-financed project, Doccara Irrigation Project.

Condition of production maintenance:

The produced maps have been well maintained.

Proposals for Further Study:

The current situation of ACFCC in 1995 -

1. Need to update the maps in the scale of 1/50,000 and 1/10,000.

2. Need to produce a map in the scale of 1/25,000 of areas where the concentration of the population and the rapid population growth are observed (especially Metropolitan areas).

3. Need to produce digital data with GIS which can be offered to users.

Considering these factors, ACFCC has been examining the project to improve the existing maps. JICA is required to strengthen the capability of ACFCC and to implement a new technical cooperation project.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

(1) Small-Scale Dam Project in Taounate

Subsequent Studies:

Nov.1994~Mar.1995 B/D on the project implementation and the provision of equipment and materials (66mil.Yen)

Mar.1995 Final report scheduled to be submitted

Finance:

Sep.1995 E/N 466mil.Yen

(Ouergha River Basin Agricultural Development Project-Phase 1/2)

*Components of project

D/D of Gharbia (44mil.Yen) procurement of bulldozer, motor grader, wheel roller, back hoe, vibration roller, dump truck (412mil.Yen).

Jun.1996 E/N 715mil.Yen

(Ouergha River Basin Agricultural Development Project-Phase 2/2)

*Components of project

D/D and preparation of tender documents (76mil.Yen)

Construction of dam, alternative road, irrigation canal facility, water supply facility (639mil.Yen) and technical transfer on execution of works.

Provision of Equipment:

Sep.1995~Dec.1996 Completed (Mitsubishi Shoji Co., Ltd.)

Construction:

(FY 1997 Overseas Survey)

Nov.1996~Feb.1998 Completed (Hazama Gumi Co., Ltd.)

Maintenance & Operation:

Phase I: Generale de l'Hydraulique has been managing equipment with which small and medium size dams along Ouergha river basin were constructed.

Phase II: The water users association has been managing equipment with which the Gharbia dam is operated and managed and the related facilities are maintained.

(FY 1997 Overseas Survey)

The machineries provided in Phase I are being used for construction of Bouhouda Medium-scale dam in Taounate.

Effect:

The agriculture infrastructure was improved. As a result, the self-sufficiency of cereals have been achieved and even unexpected drought can be overcome. The living standard of farmers has been improved.

(2) Other Small-Scale Dams

(FY 1997 Overseas Survey)

2-1. Taounate: 1992~1997 Studies were undertaken

Sites: Douar El Hajra, Merj Douar, Mechkour, K.El Assassa, Bousfoul, Gaadiine, O.Merzaine, Addad, Daroua

Consulting Firm: SCET-MAROC

2-2. Chefchaouen: 1992~1997 Studies were undertaken

Sites: Mokrissate, Douaher, EL.Koucha, Sidi Abdessalam, Tiliouine

Consulting Firm: EQUITER

2-3 Taza: 1992 Study was undertaken

Site: Amlilis / Consulting Firm: H.M

(3) Medium-Scale Dam

(FY 1997 Overseas Survey)

No.1 Tizimellal: D/D undertaken. No.2 Zrizer: Constructed with government budget. No.11 Ain Abdoun: D/D being implemented. No.12 Sahela: Constructed with government budget. No.14 Tazarane: D/D undertaken.

Out of 6 sites selected for Pre-F/S, project has been implemented only at Rharbia. The situation of other sites are as follows.

1) Zrizer: Constructed. 2) Mokhfi: Not realized yet. 3) Sidi Abdessalam: Study undertaken. 4) Tder Hammad: Study not undertaken due to land acquisition problem.

Koudiat Chaib 3 DGH is not in charge of the study of lakes anymore.

Others:

The construction of Sidi Abdeslam dam, a part of the project proposed by this Study, was not implemented with the grant aid assistance mentioned above. However, the Government of Morocco desires to construct it with the Japanese assistance.

(FY 1997 Overseas Survey)

The government can allocate no more than 50 mil.DH annually. There is no sufficient budget to implement projects at all sites.

(FY 1998 Domestic Survey)

It is planning to request for dispatch of experts for the purpose of operating/managing the irrigation facilities of Sidi Abdessalem (P-T-22) small-scale dam.

(FY 1998 Overseas Survey)

The proposed M/P is still utilized as a basic material in developing Ouergha area.

Description :
 (FY 1998 Domestic Survey)(FY 2001 Overseas Survey)
 The government of Morocco officially requested for JICA grant aid about construction of disposal site suggested in the Survey, at January, 1997, but it has not been approved.(Contents : detail designing, construction of landfill disposal site, supply equipment, and technical transfer against the counterpart)
 The Ministry of Environment distributed the guideline to all the municipality.

(FY 2007 Domestic Survey)
 Implemented project : Establishment of Law for Solid Waste Management(No. 28-00)
 Implementing period : from 1997 to 2006
 Implementing body : The Ministry of Environment, Ministry of Interior
 Funding :
 Funding party : German Technology Development Public Corporation(GTZ)
 Funding amount :
 Objective : 1) prevention countermeasure of toxic substance from waste, production reduction of hazardous waste, etc.
 Relationship with the Survey : This law was established in base of the guideline made in the Survey.

Subsequent study : Establishment Plan of National Centre for the Elimination of Special Wastes(CNEDS)
 Implementing body : The Ministry of Environment
 Implementing period : from 2000
 Funding :
 Funding party : German Technology Development Public Corporation(GTZ)
 Objective : 1) promote environmental management of special wastes, collect detailed supplementary information about amount and property of special wastes, etc.
 Relationship with the Survey : Plan was made based on the data collected in the Survey.

Subsequent study : Guideline of Household Waste
 Implementing body : The Ministry of Environment, commune
 Implementing period : 2002
 Funding :
 Funding party : German Technology Development Public Corporation(GTZ)
 Objective : Finalize technical system of countermeasure against pollution caused by wastes from vacant ground and other.
 Relationship with the Survey : It was established in base of the guideline made in the Survey.

Description :

(FY 2002 Domestic Survey)
 At the beginning, though D/D was planned for 4 prioritised project with collaboration with JICA, D/D has not been started due to objections made by JBIC. The objection lies on uncertainty of Moroccan governments policy towards the issue of the transfer of residents.

(FY 2003 Domestic Survey)
 It seems that there is a misunderstanding on the part of JBIC in the annual consultation between JBIC and Morocco in terms of the issue of residents relocation. JBIC seems to be wishing to avoid the loan assistance on the dam construction project if possible under the current climate.
 At present, JICA's development studies on rehabilitation of Khettara (a traditional underground channel) constructed at the TODORA river are in progress(FY 2002 -2004). A part of this basin (approximately 50%) is the service area of the Timkit Dam, one of priority projects in the studies, and in the water resources development of this region, the rehabilitation of Khettara becomes effective only after a new water resource is developed by construction of the Timkit Dam.

(FY 2004 Domestic Survey)
 No information to be specifically mentioned.

(FY 2004 Overseas Survey)
 Presently, construction of 4 dams are difficult with the budget of Morocco government, where there are no progress in any concrete measures. In addition, it has not even been listed in the long-list of the Yen loan.

(FY 2005 Domestic Survey)(FY 2006 Domestic Survey)(FY 2007 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Overseas Survey)
 Implemented project : Construction of Ain Kwachiya Dam
 Implementing body : Ministry of Water and Environment
 Implementing period : June, 2006
 Objective : flood countermeasure in center area of Side Yahia, and conduction of irrigation in downstream site
 Benefit :
 Beneficiaries : Tamara-Skhira province
 Progress :
 (FY 2007 Overseas Survey) Construction started from June, 2006. 50% of the construction has been completed.

Implemented project : Construction of Taskourt Dam
 Implementing body : Ministry of Water and Environment
 Implementing period : June, 2007
 Objective : conduction of irrigation in downstream site, supply water to neighboring regions
 Funding :
 Funding party : Saudi Development Fund, Organization of the Petroleum Exporting Countries(OPEC)
 Contents : construction of access roads, conduction of civil engineering work of dam, conduction of dam construction and electromechanical construction
 Benefit : irrigation of 5,000ha in area, water supply amount : 24million m3/year, population : 35,000persons
 Progress :
 (FY 2007 Overseas Survey) at the time of June, 2007 : access road : 100% completed, dam construction : 20% completed

Implemented project : Construction of Timkit Dam
 Implementing body : Ministry of Water and Environment
 Implementing period : August, 2008
 Funding :
 Funding party : own fund
 Objective : resupply water to Timjdad, irrigation of downstream site land of dam, supply drinking water to neighboring regions, conservation of Timjdad palm tree park
 Benefit : population : 19,689persons, water supply amount to area around Iffegh and Tinjdad : 9million m3, covering area : 2,000ha

Description :

(FY 2004 Domestic and Overseas Survey)

Morocco side requests Japan side for fund to undertake master plan. Japan side has decided to dispatch experts to support the use of the systems installed by the pilot project. Three experts has already sent 2004/6-8.

The treaty relates to use and maintenance management of warning system, among Al Haouz prefecture, facility branch in Al Haouz prefecture, and ABHT was signed. In the same treaty, setting up of application and following up committee is regulated, and are expected to follow up implementation of master plan.

Construction of two measurement stations; Ait Bouzguia, Ouaguejdit in the targeting development study area of Issyl river area by ABHT own budget in 2004, and beginning to set up rain gauge, water level indicator to each stations.

Technical Support :

Three short -term experts (warning system, tele meter, sand prevention technology) has already sent by JICA for following up the pilot projects and guiding of sand prevention technology.

(FY 2005 Domestic Survey)(FY 2006 Domestic Survey)(FY 2007 Domestic Survey)

Implemented project: Issyl River Basin Flood Forecast System

Implementing period: from 2004 to 2007

Implementing body: Tensift basin corporation

Funding:

Funding party: Own fund

Objective: By own funding, constructed tele-meter rain observing station and tele-meter rain/water level observing station within 3 years, at Issyl river basin, where is one field of the Master Plan suggested in the Development Survey.

Relationship with the Survey : This project is part of the Master Plan suggested in the Development Survey. The conduction of the Master Plan is intended to conduct by own fund in long term inch by inch(establish one observing station a year, for example).

Condition :

(FY 2006 Domestic Survey) Water/rain gauge establishment has been successfully bidden by SOHME.

(FY 2007 Domestic Survey) Master Plan besides of project in Issyl river basin, is requested against Japan in grant aid.

(FY 2007 Overseas Survey) Have been developing Issyl wadi water storage pond which break through two part of the flood-forecast system(SPAC).

(FY 2006 Domestic Survey)(FY 2007 Domestic Survey)

Flood and torrential rainfall occurred in scale of 6 to 7 years of river flow rate in Urika Valley at August 29, 2006, and caused two deaths and disasters.

(FY 2007 Domestic and Overseas Survey)

Rehabilitation project of Issyl river(zone in Marrakech city) has been conducted by the government of Marrakech province.

Tensift basin corporation(ABHT) has been intending to conduct the Master Plan besides Issyl river basin by Japanese grant assistance. Therefore, conducted review of the Master Plan through the dispatch of short-term experts, looking toward the grant aid assistance project.

Technical support :

Dispatched of experts : short-term experts dispatched for Flood Countermeasure Project in Atlas Region(2 persons, from June, 2007 to July, 2007)

(FY 2008 Domestic Survey)

No information to be specifically mentioned.

(FY 2008 Overseas Survey)

- The installation of SPAC (flood forecast and warning system) is continued for Issyl river by ABHT (the Tensift Water Basin Authority).

Description :
 (FY 2006 Domestic Survey)(FY 2007 Domestic Survey)
 Implemented project : Morocco: Basic Education Reform Support Program (PARSEM)
 Implementing body : Ministry of National Education, World Bank
 Implementing period : February, 2005
 Funding :
 Funding party : own fund and World Bank
 Funding amount : 150.55million USD (Morocco : 70.55million USD, World Bank : 80million USD)
 Objective: Promote restructure of basic education system in order to improve the school attendance rate of 6 to 14 years old children and to improve the quality of education.
 Relationship with the Survey : This project include the suggested contents of the Survey. When the termination of the Survey, the government of Morocco requested to the government of Japan(JICA) for conduction of Phase 2. Though it was not approved because there are no budget allocation about new development survey against Morocco at the year requested.

(FY 2008 Domestic Survey)
 No information to be specifically mentioned.

(FY 2008 Overseas Survey)
 There has been the strategic policy of continuing the ministerial urgent program, which aims at appropriate utilization of human resources; intensification of their forte area of activities; and improvement of management for decentralization of the education system. With this policy, the ministry held various campaigns for sensitization, resource mobilization and public communication to obtain support and cooperation from development partners through participatory approach. Below are some of projects which have been formulated for the same/similar purpose, including those near to completion and those for which willingness for cooperation has been expressed recently.

- "Youth for youth": Cooperation with UNFPA (United Nations Population Fund).
- "Ideal education and social psychology ability": Cooperation with UNICEF (United Nations Children's Fund)
- "Appropriateness program": Cooperation with USAID
- "PARSEM/Basic Education Reform Support Program": Cooperation with the World Bank.
- "Non-formal education support": Cooperation with UNESCO
- Final evaluation of MEDA II program
- The prior declaration for the implementation of MEDA III

| | Discontinued or Cancelled |

Description :

(FY 2006 Domestic Survey)
 ORMVA/TF is implementing a project on improvement of farmers' income by its own fund as an Action Plan. Also, water-saving irrigation system (Drip irrigation) is planned in an agricultural land with size of 5-20 hectares. Furthermore, while rehabilitation project of Hettara and Yen Loan project on water-saving irrigation are in process between JBIC and Ministry of Agriculture, no specific request has been made.

(FY 2007 Domestic Survey)
 In July 2005 (when the mentioned study completed), application for project Technical Cooperation Project of water saving irrigation portion was submitted to JICA office in Morocco. Restoration of Khettara, which was included in the project plan, is being implemented for 3 years by Grass-root Grant Aid Project.
 In addition, components of Khettara restoration and etc (proposed in the mentioned study) are being considered to implemented by Yen loan (Name of Item: Khettara irrigation maintenance plan)
 Furthermore, similar item has been implemented in northern designated area with Financial Cooperation by IFAD (Name of Item: Rural Development Project in the Mountain Zones of Errachidia Province). According to the implementation method of water saving irrigation (drip irrigation), pilot project of 3ha drip irrigation is being implemented with Grant Aid Program of IFAD.

(FY 2007 Overseas Survey)
 Implemented Project: Khettara Restoration Plan
 Implementing Period: Dec.2005 to second half of the FY2007
 Implementing Body: Regional Authority for Agricultural Development in Tafilalet(ORMVA)
 Objective: 1) Improve efficiency of Khettara by constructing aqueduct(horizontal shaft), 2) Improve of amount of water supply by extending construction of branch drain, 3) Install water saving irrigation system per lot and improve irrigation efficiency, 4) Produce agricultural products with high market value and to improve agricultural skills.
 Related to mentioned study: Through the implementation of verification study within the framework of the mentioned study, number of Khettara that are working or requiring urgent intervention became clear. Though there is a limit of budget, the proposed plans are referred during the implementation.

(FY 2008 Domestic Survey)
 No information to be specifically mentioned.

(FY 2008 Overseas Survey)
 ORMVA TF (Regional Authority for Agricultural Development in Tafilalet) has been engaging in rehabilitation based on the following regular programs or cooperation/coordination.
 - Regular secretariat program (financing khattara (traditional irrigation facilities) at 5 sites per year on average)
 - INDH("National Human Development Initiative") program
 - The triangular program among ORMVA TF, Embassy of Japan and Khattara Association (khattara at 2-5 sites per year)
 The request has been submitted for the application of loan to the basic plan as part of JBIC khattara rehabilitation project.

(FY2012 Domestic Survey and Overseas Survey)
 No information.

| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | 1)To develop an integrated water resources management strategy, formulate the master plan for the integrated groundwater resources management, and formulate the action plan for effective use and conservation of the groundwater resources in the Haouz Plain. 2)To lay the foundation for improving capability of ABHT for administrative management, and promoting sharing of understandings on the problems concerning water resources and water use. 3)To improve skills and technologies of counterpart personnel mainly in the monitoring and analyzing groundwater, by the technical transfer. | | |
| 7. CONSULTANT(S) | Pacific Consultants International | | |
| 8. STUDY PERIOD | Aug.2006 ~ Mar.2007 | 7month(s) | |
| | Apr.2007 ~ Mar.2008 | 11month(s) | |
| 9. SITE OR AREA | The Study Area covers the Haouz Plain located in the most upper basin of the Tensift River with an area of about 6,000 km ² where about 1.61 million people are living. | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1) Action Plan for Groundwater Management - a) Actions for Artificial Groundwater Recharge Project : a. Artificial Recharge Project in R Dat river, b. Preparation of implementation Plan, b) Actions for Hydrological Observation Network Reinforcement Project : a. Installation of observation facilities in the sub-basins of Imintanout River and Lahr River, c) Actions for Program for Groundwater Facility Registration Management : a. Execution of application, permission & registration for construction & rehabilitation of wells, b. Inventory & preparation of database of registered and unregistered wells, c. Monitoring of utilization status of wells, d. Inventory & preparation of database of groundwater intake facilities other than wells, d) Actions for Program for Scientific Estimation of Available Groundwater : a. Accumulation of data for Scientific Estimation of Available Groundwater, b. Staff Reinforcement and Capacity Building for Groundwater Analysis, c. Performing Scientific Groundwater Analysis, e) Actions for Program for Water Quality Monitoring : a. Review and Set Up of Water Quality Monitoring Sites, b. Preparation of Improvement Plan of Water Quality Monitoring, c. Implementation of Water Quality Test based on the Present System, d. Implementation of Water Quality Test based on New System, f) Actions for Program for Water Resources Management Capacity Development of ABHT : a. Capitalization and diffusion of the information on the water resources, b. Reinforcement of the consultation and the cooperation with the concerned stakeholders on the water resources management, c. Rationalization of the authorization procedure of the DPH, d. Reinforcement of the monitoring and the evaluation of the water resources, e. Reinforcement of the water quality control</p> <p>2) Action Plan for Reclaimed Water Supply - a) Actions for Reclaimed Water Supply Project : a. Installation of Water Treatment Plant (Phase 1)</p> <p>3) Action Plan for Water Efficient Agriculture - a) Actions for Program for Drip Irrigation Introduction and Dissemination : a. Defining Priority Area for and Introduction Plan for Drip Irrigation, b. Defining Priority Area for and Introduction Plan for Drip Irrigation, c. Subsidies for Installing Drip Irrigation, d. Supports for Procedures of Subsidy and Establishment of Consultation Desk, e. Extension and Guidance of Water Saving Irrigation, b) Actions for Program for Accumulation and Distribution of Technical Information for Water Saving Farming and Irrigation : a. Development of the techniques of the water saving irrigation and accumulation of the technical information, b. Development of the techniques of the water saving farming and selection of crop/variety, c. Extension and enlightening of water saving farming and irrigation, c) Actions for Program for Seguia and Water Management Improvement : a. Survey for the clarification of the groundwater recharge function of seguias, b. Strengthening of Activities of WUAs for Operation and Maintenance of Seguias, c. Establishment of Monitoring System for Water Use in Seguias System by WUAs, d) Actions for Activation and Capacity Development of Water Users Association : a. Trainings to the executive committee members of the AUEA for the reinforcement of organizational and financial management capacities, b. Relationship reinforcement with the ORMVAH and the DPAs</p> | | |

|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY 2008 Domestic Survey)
 As for the project on artificial recharge of ground water, the request for JICA Technical Cooperation Project is under preparation. The project for reproducing ground water will be implemented with the government own budget.

(FY 2008 Overseas Survey)
 Implemented project: Establishment of model over the influence of artificial raising of Haouz underground water through Iminzat river
 Objective: To measure the efficiency of artificial raising which makes the best uses of a shoal and riverbed; to clarify the management process of the system concerned; and to disseminate this system for other rivers in Haouz plains.
 Outline: 1) Survey and coordination concerning artificial raising in Iminzat river and the establishment of influence model; and 2) Measurement of pressure characteristic in unsaturated zone and clarification of parameters regarding infiltration at Iminzat river

(FY2012 Domestic Survey)
 Implemented project: Sewerage System Development Project
 Its implementation has been prepared with the counterpart government's own budget.
 Although a request of the Technical Cooperation Project for "Artificial Recharge for Groundwater" was submitted in the period from 2008 to 2009, it was obviously not approved by JICA Headquarters for the reason that there is no effect by artificial recharge for groundwater.
 GTZ (current GIZ) has already implemented a technical cooperation project with Tenshift Hydraulic Basin Agency, a counterpart organization of the Development Study. In addition, JICA has conducted a Technical Cooperation Project for flood countermeasure for Atlas Area in Tenshift Basin, which was followed by a grant aid for the Project for Flood Forecasting and Warning System in High Atlas Area. These are the factors behind a lower priority put for the project proposed by the Development Study.

(FY2012 Overseas Survey)
 Implemented project: Sewerage system reuse project in Marrakech
 (Outline) 1. Sewerage disposal, 2. Sewerage for irrigation
 (Fund) Own countries' fund
 (Implemented body) RADEEMA
 (Situation) Sewerage plant is operating. Irrigation water is supplied, and used for irrigation for 7 golf links. Another Sewerage plant is now under construction.

| | Processing | Discontinued or Cancelled |

Description :

(1) Development of Water Resources
 Subsequent Studies:
 Jan.1985~Jun.1986 D/D (JICA) "Wadi Jizzi Agricultural Development Project (OMN/A 401/86)"

Finance:
 Own fund (The Third Five-Year Plan (1986-1990)) (2.7 mil.OR).

Construction:
 The construction of the dam was commenced in March 1988 and completed in August, 1989. Since then, it has been effective in flood control.

(FY 1991 Overseas Survey)
 Upon the request of the Government of Oman, D/D, which focused on the dam construction, was conducted. Initially, it was agreed that D/D would be financed by the Japanese ODA and the construction would be conducted with a loan from the Export and Import Bank of Japan. However, the Iran-Iraq war caused the project delay and a loan from the Export and Import bank of Japan was canceled.
 This project was integrated into the Third Five-Year Plan (1986-1990) as one of high priority projects and the project was resumed as the improvement of the economic condition.

(2) Agricultural Development Plan through Water Resources Development
 (Land Reclamation, Construction of Modern Farm and Training of Farmers, ect.)
 The constant observation of groundwater needs to be conducted for the long-term period and it is currently implemented. In case it is confirmed that the water supply satisfies the future demand, D/D will be commenced.

(FY 1995 Overseas Survey)
 After the construction of the dam, available water is insufficient to irrigate new farm area. Thus, the Agricultural Development Project and the Farm Management Program have not been implemented.

| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

Background:
 Requires some time to collect basic data on Oman's side.
 At Batinah Coast Area, underground water is converted to salty water and the human life and various industries including agriculture face on very critical situations.

Detail:
 (FY 1991 Overseas Survey)
 Experts from JICA continued the observation of the project. At present this project is placed under the purview of the Ministry of Water Resources. No problem has been observed from this transfer. Ministry of Agriculture and Fisheries remains in charge of the dam. The dam is under construction.
 The facilities and observation equipment are still in good condition, and utilized effectively. At present, 42 dams are planned to be constructed. Among them, 20 dams are scheduled to be constructed during the 4th Five-Year Plan of Oman.

(FY 1994 Domestic Survey)(FY 1995 Domestic Survey)
 No additional information.

(FY 1995 Overseas Survey)
 The data provided by the observation network has been fully utilized and published as hydrologic or hydrometeorologic data reports. In this study area three dams have been constructed and one is planned to be constructed.

(FY 1997 Domestic Survey)
 There is no JICA expert since 1997, but facility installed during the study period and machinery are being utilized effectively. Based on the data collected by observation system, water resources development is on going. 4 under ground water dams were constructed in the study area.
 Moreover, establishment of permission system for well construction and rationalization of water utilization are being promoted.

(FY 1997 Overseas Survey)
 At present a metering survey for water rationalization on the saline flow processes in Wadi Ahin are in progress.
 the data provided by the project has been published in a report and the Ministry of Water Resources is the main organization utilizing these outputs.

| PRESENT STATUS | Completed or In Progress | Promoting |
| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :

Finance:

It was agreed that the construction would be financed by loan of the Export Import Bank of Japan. However, the loan fell through because of the Iran-Iraq War, and the project implementation was put off.

Construction:

The construction of the dam was completed by a British engineering firm

Aug.1989 completed

Contractor Executor: Mott McDonald International Ltd.

Construction: J&P (Muscat)

Effect:

The dam operated effectively against more than 10 floods after the completion. Ground water is in good condition also. The project has contributed considerably.

(FY 1996 Overseas Survey)

An irrigation project which covers 20 householdes and area of 100 ha cultivating fruits and vegetables is being prepared in Sohar. EIRR 11.7 which was set at the beginning of the project, progresses favorably. Cooperation in groudwater survey and water quality survey will be recommendable.

*Refer to "Wadi Jizzi Agricultural Development Project (OMN/A 301/82, JICA F/S)" for detail.

Phase 1 - Establishment of pilot farm; experimentation at pilot farm and collection data.</p> <p>2. Phase 2 - Development of up to 500ha area based on the result of Phase 1.</p> <p>3. Phase 3 - Further development based on the result of Phase 2.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 The project was integrated into the Agriculture Development Plan.

Jan.1992 JICA submitted the final report on Phase I of F/S.

Phase II (JICA Development Study 1991~1997)
 Jan.1992 Geological survey for Agriculture Development Project in the Nejd Region (II) commenced.
 (Scheduled to be completed in 1995) This survey aims at D/D on a pilot farm (a final report is in preparation).
 Continued observation of underground water (two observation wells will be constructed by Jan.1992);
 Monitoring of agricultural production; and Formulation of guidelines for the next agricultural development plan.
 Feb.1993~Dec.1994 Pilot farm completed with own fund (2.1 mil.OR)

*Changes from the JICA Study (FY 1995 Overseas Survey)
 -Construction of a laboratory, Storages and veterinary clinic.
 -Costruction of irrigation system for trees.

Apr.1995 The suspended Phase II study was resumed.
 This study is to monitor the agricultural production and to formulate the agriculture development program for the second phase development plan in this area.

(FY 1996 Domestic Survey)
 Apr.1997 Phase II Study scheduled to be completed.

Maintenance & Operation:
 (FY 1996 Domestic Survey)(FY 1999 Overseas Survey)
 The Pilot farm was renamed to the Nejd Agriculture Experiment Station and has been well operated.
 (FY 1997 Domestic Survey)
 A long-term expert was dispatched in Dec.1993 and continues the guidance.

Effect:
 (FY 1996 Domestic Survey)
 The obtained data concerning groundwater level, soil fertility and crop yields is to be utilized in the formulation of the next Development Plan.
 (FY 1997 Domestic Survey)
 After the opening of the Pilot farm, the number of birds has been increased. Interest in the activity of the farm is growing among farmers and officers of other agricultural centers.

Situation:
 (FY 1996 Overseas Survey)
 The increase of intake water risks the sustainability of the development in large-scale. Study to take measures against intake water management and recuperation of water level is indispensable.
 MAF which has effects on transforming desert area into farmland, has been highly estimated. Development of 500 ha of pilot farm, scheduled in phase II, has been delayed. Assistances as follows will be encouraged at the present pilot farm.
 1.Dispatch of expert in areas of water resources and farming.
 2.Dispatch of expert specialised in legislation of hydro-agriculture management.
 3.Dispatch of JOCV in area of agricultural machinery manipulation.

(FY 1997 Domestic Survey)
 There is no plan for Phase III. Oman side desires more experts for the farm and technical cooperation in other related areas.

Reclamation for container terminal is included.</p> <p>2.Short-term Development Plan of the new port in northern Oman (Sohar) up to the year 2000 is proposed to handle increasing cargo after 1995.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :

1. Port of Qaboos

(FY 1997 Overseas Survey)

Subsequent Study: 1990~1991 F/S (Expansion Plan) ; 1990~1991 D/D

Consulting Firm / Indian Consultancy Eng. (Oman)

Study Cost / approx. 10mil. US\$ (R.O. 3mil.) ; Government budget

Finance: 1990 Government budget R.O.25mil.

Components: Almost as the same as JICA's proposal. Number of Container Crane is increased, two to three.

Construction: 1991 Commenced ; Oct.1994 Dredging was completed ; Jun.1996 Completed

Contractor: M/S. WIMPEY ALASI, ANAR ASSRIA ; Hani-Archirodon (Greece/Gulf countries JV)

M&O: The Government has a policy to privatize M&O of the port.

(FY 1997 Overseas Survey)

1) The port faced the serious loss of its container traffic due to the way out of main shipping line to the UAE port since 1994. 2) To improve this situation, short term JICA Expert services were requested and a total of three man-months (twice, total three staff) input was made in 1995 and 1996. 3) The port's financial situation has been improved and it recorded a small amount of net surplus in 1996, though the container handling capacity of the port is yet heavily under utilized. 4) Construction of two new berths, cold storage, three more gantry cranes is plan for the future.

The government made up a policy of privatization of port development. In October of 1996, an English consultant Travers Morgan Ltd. made a successful bid for the revise of new port development. Now an investigation is on going.

2. Expansion of Port of Sohar

(FY 1997 Overseas Survey)

Proposed new port project did not take up until 1995 due to the fact that the anticipated industrial development (natural gas based development) the necessary trigger of this project had been delayed. The project has been incorporated into the 5th Economic Development Plan (1996~2000) and put into implementation.

(FY 1999 Overseas Survey)

The Government of Oman is currently implementing a long-term economic development plan "The Vision for Oman's Economy: Oman 2020", which puts priority on reducing economic dependence on oil, and instead diversifying its domestic industries. The Government is especially emphasizing the development of industries that utilize domestically produced natural gas. The construction of a port in the Sohar area will assist Oman in promoting the economic development plan.

Subsequent Study:

(FY 1997 Overseas Survey)

1996 M/P assessment:

Consulting firm / J.V. of ACER (U.K.) and Travers Morgan (Oman)

A new M/P and with its phase one development plan has been approved by the Ministerial Meeting I Jun.1997.

Dec.1997 Detailed Site Investigation to start

Feb.1998 D/D, preparation for tender to start

Consulting Firm / Travers Morgan, other consultants are not decided yet

Study Cost / R.O. 1mil.

Difference with JICA's Proposal: Proposed site has been shifted.

Finance:

(FY 1997 Overseas Survey)

Request for a loan with amount of R.O. 85mil. has been submitted to EXIM Bank of Japan.

(FY 1999 Overseas Survey)

10 Mar. 1999 L/A Export-Import Bank of Japan US\$250mil.

Contents: Civil works (dredging, land reclamation, construction of berths, breakwater, buildings and access roads), Procurement of equipment, Engineering services.

The completion of the project is expected in Apr. 2002.

3. Japanese Technical Cooperation

(FY 1999 Overseas Survey) Dispatch of two long-term JICA experts (1997 -2000).

Detail

(FY 1991 Overseas Survey)

The Port Development for Northern Oman formulated based on this Study report was integrated into the Fourth Five-Year Plan under the project title of Port Development Strategy in Northern Oman.

(FY 1996 Overseas Survey)

About transfer of technology, training of cargo management and OJT are necessary continuously.

Description :

Utilization of the Study:

(FY 1991 Overseas Survey)

The alternative judged as optimal in the JICA study was adopted

by the Government of Oman as the basic agricultural plan. Based on the hydrological findings, the location of dams is slightly changed, but most of the proposals of the study were adopted.

Subsequent Study

May.1995~May.1997 "Agricultural Development Project in Najd Area (Phase II)"

*For detail, please refer to OMN/A 112/97.

Situation:

(FY 1995 Overseas Survey)

The technical reports and financial reports concerning the project were produced and the meetings have been held regularly to promote the project implementation.

(FY 1996 Overseas Survey)

It became impossible to implement all proposed project because only half of expected budget is allocated for agriculture sector in the 4th 5-year plan. There is slight possibility of starting immediately this project. Ministry of Water Resources is in charge of dam and irrigation, in place of Ministry of Agriculture and Fisheries.

(FY 1999 Overseas Survey)

Main building named agricultural development center is for supporting agriculture and animal husbandry and giving subsidy to farmers and animal breeders.

Description :

(1) Construction of roundabout, etc.

Subsequent Studies:

Dec.1995~Mar.1997 "Road Development Project (D/D)" (JICA)

*The construction of the roundabout was commenced, however, the implementation of other projects depends on the allocation of budget in the Fifth Five-Year Development plan (1996~2000).

(FY 1997 Overseas Survey)

Because of financial problem and construction limit, realization of project is at low stage. Department of Traffic has requested assessment of two-level crossing and sidewalk and study to realize the project for JICA.

(2) Renovation of bridges, etc.

Subsequent study:

(FY 1998 Domestic Survey)

Dec. 1995 ~ March 1997 D/D

Construction:

(FY 1998 Domestic Survey)(FY 2000 Domestic Survey)

They are conducting and will conduct the rehabilitation works for the bridge by own fund.

Background:

(FY 1995 Domestic Survey)

In 1996, the consultants appointed by the Ministry of Communications will implement D/D. Allocation of 3.5 mil. RO has been proposed in the Fifth Five-Year Development Plan (1996~2000).

Detail:

In July 1995, after the completion of F/S, JICA dispatched a survey mission to conclude S/W for the implementation of D/D. The renovation of bridges in an urgent need has been conducted with the government fund. Therefore, no foreign assistance on this matter will be expected.

(FY 1996 Overseas Survey)

The progress has not been made because of financial problem.

Description :

(FY 1997 Domestic Survey)

The budget for the construction was not allocated in the Fifth-Five year plan (1996~2000).

However, the special budget allocation is going to be prepared because of the high priority of the project in the Sultanate of Oman.

(1) Construction of roundabout, etc.

Subsequent Studies:

Dec.1995~Mar.1997 "Road Development Project (D/D)" (JICA)

*The construction of the roundabout was commenced, however, the implementation of other projects depends on the allocation of budget in the Fifth Five-Year Development plan (1996~2000).

(FY 1997 Overseas Survey)

Because of financial problem and construction limit, realization of project is at low stage. Department of Traffic has requested assessment of two-level crossing and sidewalk and study to realize the project for JICA.

(FY 2001 Overseas Survey)

No funds available in the current Five-Year Plan (2001-2005). All the 8 fly-over over the roundabouts need to be funded.

(2) Renovation of bridges, etc.

Subsequent study:

(FY 1998 Domestic Survey)

Dec. 1995 ~ March 1997 D/D

(FY 2000 Domestic Survey)(FY 2001 Domestic Survey)

No information.

(FY 2001 Overseas Survey)

No funds available in the current Five-Year Plan (2001-2005).

One pedestrian under-pass at Al Bidaya has already been constructed, however the constructions of 11 pedestrian under-passes need to be funded.

*Refer to "Road Development Project in the Sultanate of Oman (OMN/S 301/94, JICA F/S)" for detail.

(FY 2002 Overseas Survey)

One additional pedestrian underpass near Shinas has been constructed, and another one is under construction.

The study for the rehabilitation of bridges is currently in progress which includes 5 bridges out of the 9 bridges studied by JICA

Description :

(FY 1998 Domestic Study)

1. During the study in Phase I (Sept. 1987 to Sept. 1989), the government of Oman issued new regulation, and the Ministry of Water Resources handles all the water resource management assessment now.
2. Due to the new regulation, groundwater monitoring was handed over to the Ministry of Water Resources to let it examine groundwater resource condition, its potential, and optimal amount of water developed in the study area.
3. The proposed development plan was accepted by the Ministry of Agriculture and Fisheries (MAF); however, further development will be implemented after the result of a review by the Ministry of Water Resources (MWR).
4. MAF made a pilot farm which was a requirement for implementing this study. To finish the study, the government of Japan dispatched JICA experts from 1996 to 1999, based on a request of the government of Oman, to transfer technique on cultivation research and cultivation technology.

(FY 2001 Domestic Study)

1. The pilot farm is not operated because of slump in oil prices.
 2. Equipments which enable to analyze soil, water, foods were provided and general analysis can be conducted. Moreover, equipments for meteorological observation were also installed.
- Effect of the dispatch of experts: Three experts have been dispatched to the counterparts who had guided the management of the Nejd pilot farm from Mar. 1996 to Nov. 2000 to transfer technique on cultivation, analysis, and soil survey.
3. The exchange of research with other research institutes has been done well. Based on the national policy, the Nejd pilot farm maps out a course on investigation and research under the supervision of the central station, the RUMEISU agricultural experiment station. Moreover, the station has been improving as a base of citrus fruits production in Oman.

(FY 2002 Overseas Study)

After this study, proposed projects have not been implemented at NARS (Najd Agricultural Research Station) because of the absence of researchers and experts. NARS concentrates on monitoring and keeps the current condition. At the site, the following different activities are achieved by their own fund.

1. Fruits field: Thousands of lime seedling production distributed in the witches-broom disease infected area
2. Field crop: Rhodes grass cultivation for hay production sold to livestock keepers
3. Vegetable field: Experimental growing and evaluation of three different onions to find out which one suits most in Nejd.
4. Soil and water: Analysis of water, soil, and plants at the laboratory by Omani staff trained by JICA experts
5. Meteorological station: NARS staff prepares a monthly report at the station established by JICA in 1998.
6. Field study: Field survey achieved by NARS at the beginning of 2002 in order to use it as a background for future planning
7. Other activities: Since 2000, two nurseries were constructed at NARS.

(FY 2003 Overseas Study)

1. Field crops:

At the Nejd Agricultural Research Station, observation plots for growing several cereal crops and forage legumes were established. It was evident from observation record that Cola trees and maize grew well. Barely and sugar canes are still under investigation.

Experiment was conducted at the beginning of 2003 to evaluate 3 types of Alfa alfa (*Medicago sativa*): South Africa, Albatna, and Dakhliya. In general, after one year of the experiment, the result showed that the yield of the first type varied significantly compared to the other two local varieties.

Mechanized hay production in irrigated grass (*Chloris Gayana*) has increased significantly in recent years. In 2002, the area for irrigated Rhodes grass fodder in NARS was 14.5 hectares. In this year, the area increased by 8.5 ha for Rhodes grass. This resulted in an increase in cultivated area of 23 ha. Hay production was 14,800 bales and 12-16 kg at the end of November 2003.

2. Fruit tree:

A part of the witches-broom control project conducted at NARS now merges into a new project entitled the "Oman Citrus Certificate Program".

3. Soil and Water:

A soil and water laboratory is the only laboratory completed with all the instruments and equipments necessary for research. Therefore, this laboratory has been used to make different analysis of water and soil, even plants. Omani staffs trained by JICA experts conduct most analysis required.

The program of water quality survey in Nejd area continued, and selection of 6 boreholes; 3 of them at depth of 200-300 m and the other 3 with depth of 20-50 m was made in 2003, to monitor change in water quality in Nejd area.

4. Meteorological station:

The station was established by JICA in July 1998 and NARS staffs trained by JICA prepare monthly reports.

Description :
(FY 2002 Domestic Survey)
There is no information available on this project.

(FY 2002 Overseas Survey)
The port management (Salalah Port Services Company) has used the study to determine the port's immediate development programme. Request for fund procurement or request of subsequent studies for Salalah Port has not been made yet. However, the Ministry of Transport and Communications has requested JICA for approval of a study to develop a National Port Development Policy.

(FY 2003 Overseas Survey)
The tenders for consultancy services for the extension of the breakwater and construction of two container berths with associated works have been received on the 17 November 2003. Immediately after the designs/ tendering of the works is completed within 280 days after award of consultancy works, the construction for the extension of the breakwater and the container berth will be taken up.

(FY 2004 Domestic Survey)
1. Subsequent Study: "Study on Oman National Port Development Strategy"
1) Contents: Preparation of a master plan for national port development strategy targeting fiscal year 2025 and preparation of a guideline for 7th 5 year plan.
2) Study Period/terms:
8th December - 26th December 2003 (1st P/S)
1st February - 14th April 2004 (2nd P/S)
June, 2004 - May, 2005 (Main Study)

2. Finance:
1) Funding party: Own funding 73 %, private funding 27 %
2) Amount: 74 million OR (approximately 2,200 million YEN)
3) Content: Container quay 700m (-18m), depth extension (-18.5m), breakwater extension 2,400m, gantry crane, and etc

3. Design/construction: Salalah No. 5/6 Container Terminal Berth Extension Plan
1) Construction start date: early 2005
2) Completion: planned in 2007
3) Content: Container quay 700m (-18m), depth extension (-18.5m), breakwater extension 2,400m, gantry crane, and etc

4. Technical Cooperation
1) Acceptance of Trainee
1 personnel for JICA Port Engineering Course June-August, 2004
1 personnel for JICA Counterpart Training November 2004

(FY2005 Domestic Survey)
18 metre deep container berth may be equipped with a private fund (concession scheme).

Description :
 (FY 2005 Domestic Survey)
 Request for a technical project has been submitted by the Omani government in establishing Qurm Environmental Information Centre (QEIC). JICA has dispatched a preparatory mission to hold a discussion for realisation, which subsequently has dispatched a R/D mission in June 2005.

(FY 2006 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Domestic Survey)
 The opening of technical cooperation became pending because of the delay of construction of Qurm Environmental Information Centre, which was precondition for the technical cooperation project. Furthermore, construction land was heavily damaged by the cyclone in 2007. The technical cooperation project has been stopped as of Jan. 2008.

(FY 2009 Domestic Survey)
 Construction of the Mangrove Information Center was supposed to be completed by the government of Oman. However, due to the flood in the planned construction site, it was destroyed with the remained mangrove forests.

| | PRESENT COUNTERPART AGENCY | | |
| 6. OBJECTIVES OF THE STUDY | 1) To formulate long-term port development strategies in Oman with 2025 as a target year. (1) Long-term strategy on port facilities development, (2) Long-term strategy on the administration, management and operation of port. 2) To formulate the 7th 5-year plan (from 2006 to 2010) port sector guidelines. 3) To attempt technology transfer to the counterpart through the implementation of the study. | | |
| 7. CONSULTANT(S) | | | |
| 8. STUDY PERIOD | Jun.2004 | ~ Jun.2005 | 12month(s) |
| 9. SITE OR AREA | | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p>1. Proposed project budget M/P total: Government: 380 million, Private: 226 million, Total 606 million Unit: Rial (maintenance costs are not included)</p> <p>2. Proposed project budget Priority projects total: Government 227.62 million, Private: 66.58 million, Total 294.2 million Unit: Rial</p> <p>1. Master plan formulation: 1) Problems of existing port: (1) Lack of future perspective concerning the assignment of role/function among ports, (2) Absence of efficient system concerning port management/operation. 2) Goal: (1) Formulation of long-term port development strategies in Oman with 2025 as a target year (long-term strategy on port facilities development, long-term strategy on the administration, management and operation of port), (2) Formulation of the 7th 5-year plan (from 2006 to 2010) port sector guidelines 3) Basic policy for port sector development: (Policy) (1) Port development which contributes to the promotion of industry sector other than petroleum and to the vitalization of private sector initiative (strengthening of collaboration with other sectoral development plan, invitation of industry, promotion of trade), (2) Improvement in business environment by speeding up various procedures, (3) Improvement in port cargo handling capacity (reform of port management and improvement in loading efficiency by the capacity building of port workers), (4) Promotion of private sector participation in the port sector (Infrastructure/Facilities) (a) Secureness of port handling volume based on a long-term demand forecasting (2025 as a target year), (b) Port development which contributes to the alleviation of regional disparities, (c) Role assignment of port functions, (d) Port development which is in harmony with ongoing urbanization 4) Long-term development plan for port facilities: A long-term development plan was formulated based on the above basic policy. Targeted ports and major features are as follows. (1) Qaboos Port: breakwater, construction of container wharf, expansion of container yard, (2) Salalah Port: cruise terminal, pier for petroleum, development of bulk terminal, construction of container wharf with the total length of 1,750m, (3) Sohar Port: depth 16m, bulk wharf, construction of container wharf, (4) Duqm Port: invitation of petroleum refinery and oil terminal station, port development in line with the ongoing dry dock plan, (5) Shinas Port: extension of breakwater, small-scale wharf development</p> <p>2. Priority project: The phased development plan of the above M/P was prepared and projects which need to be developed by priority in the 7th 5-year development plan targeting mainly the first phase were selected. Selected ports and results are as follows.: 1) Qaboos Port: breakwater, container yard area expansion (24ha): (Problem) The container yard is insufficient and a large vessel cannot enter into the port due to shallow depth. (Solution) Stone and reclamation materials for breakwater construction are to be secured by cutting through the mountain in the back and to level the cut area and to utilize there for in demand container yard were proposed. 2) Salalah Port: container wharf, bulk wharf, cruise wharf, pier for petroleum 1 unit: (Problem) Although FTZ development is in progress, the handling capacity for customary cargo such as cement to support the development is lacking. (Solution) To construct a bulk/passenger terminal by developing reclamation using dredged soil was proposed. 3) Sohar Port: container wharf, bulk wharf: (Problem) Although most of materials/products are transported as a container cargo with the full operation industrial area, there is no wharf for container. (Solution) The construction of container terminal and bulk terminal were proposed in order to make highly efficient loading possible. 4) Duqm Port: breakwater, public wharf, dry dock for 5,000DWT class: (Problem) As there is no port facilities in the area (Wusta Region), the transportation cost is relatively high and the regional development is lagging behind. (Solution) To try to reduce transportation cost and to create employment opportunities by developing port facilities and dry dock were proposed.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
 (FY 2006 Domestic Survey)
 No information to be specifically mentioned.

(FY 2007 Domestic Survey)
 The subsequent project on Duqm project is in progress, out of ports chosen as prior projects in mentioned study.
 Implemented project: Constructing ports projects in the Sultanate of Oman
 Objective: The objective of this project is to construct the port facilities which has restoration equipment (dry dock) such as LNG ship and tanker. Port facilities with dry dock is impeded by the increase of restoration demand of LNG ships and etc in the middle east area including Oman. We can support the efficient plying of ships and reducing cost for maintenance of Japanese shipping agents by dissolving these bottlenecks mentioned above. Adding to the construction of dry dock, which was planned by Oman from first, the construction of industrial complex, centering future oil/gas industries advocated in mentioned proposed project, is regarded as important infrastructure and is also placed as a prior project in national development plan.
 Funding: Yen loan: (L/A concluded: 22nd Sep. 2007) USD 660mil (JPY 31.4bil) The cooperated funding with JBIC and 7 private financial organizations. JBIC guarantees the funding part of private financial organization.
 Beneficiaries: 17000 residents of Wusta region (employment), companies which are going to locate in Duqm.
 Benefits: Considering the total economic investment effect, we analyzed financial income and expenditure for each public and private implementing body, and confirmed its feasibility. EIRR (Economic Internal Rate of Return) is 10%, FIRR (Financial Internal Rate of Return) of government is 5%. We setting the standard FIRR of private operator(15%) and verified. As a result of that, it is concluded that implementation of the project is possible with continuous governmental aid since economic impact is large while there are some financial difficulty. EIRR: 11% for Duqm Port, FIRR: Duqm Port public: 2.5%, private: 20%

(FY2012 Domestic Survey and Overseas Survey)

| 10. MAJOR PROPOSED PROJECT(S) | <p>Proposed project budget: 571,428 to 701,298 (thousand USD)</p> <p>1. National road network plan - The primary national road network was planned according to the following principles in order to build a highly functional and reliable national road network. First, the "East-West Corridor" composed of 2 routes which are both the alternative route of each is to be built in the both south and north side of Al Hajar mountains in the North. Also, the inland route and the coastal route are to be developed and to be made them the alternative route of each as the "South-North Corridor" connecting the Central and the South with more developed northern region of the country. Furthermore, international roads to neighboring countries are also incorporated. - The secondary national road was planned to complement the function of the primary national road and to connect the primary national road with existing and future major social and economic development base at the same time. - In "Plan of Operation", the project was put into the 5 frames of five-year project from FY 2006 to FY 2030. Furthermore, candidate projects are also proposed which should be implemented in case budget obtained spare or in 2030 afterwards.</p> <p>2. Pre-feasibility study We chose 4 projects which fill the various requirements from projects included in the 7th 5-year plan, and implemented pre-feasibility study. Also, we chose the projects which are important and have characteristic problems and implemented pre-feasibility study focusing on each problem. The objects of pre-feasibility study are following: 1) Projects included in the 7th 5-year plan (1) Hamra-Rustaq road (extension: 29km), (2) Madha-Dafta road (extension: 15km), (3) Al Hij-Flim road (extension: 19km), (4) Mahlah-Ismaiayah road (extension: 45km) 2) Projects included in the 8th 5-year plan: (1) Hasik-Shuwaymiyah road (extension: 80km, theme: environment), (2) Batinah Highway (extension: 270km, theme: Wadi Flood), (3) New Batinah Ex'way (extension: 246km, theme: toll road project)</p> | | | | | | | | |

Description :

(FY 1998 Domestic Survey)

There is no sewage facility in Khan Yunis City, Gaza Strip yet. Residents use dug tanks for sewage facilities, take sludge out of them regularly, and dump it near residential areas without treatment. Thus, the environment deteriorates so badly, and the demand for its improvement is strong.

Also, rainwater tends to stay because of geographical features, and there are damages every year in spite of the fact that it is dry. Thus, a sewage plan was made for the target area of 4,458 ha for the year 2015 in the study. The target area of the sewage plan became 3,632 ha. Also, the rainwater drainage plan targeted at the center of the city of 423 ha. The sewage of 54,000 m3 will be treated per day and about 480 thousand people will benefit (2015) when the project is finished.

The implementation of the phase 1 (1998-2002) is planned in F/S, and it is estimated that the sewage of 16,100 m3 is treated per day and the population of about 160 thousand benefit in the planned area of 874 ha (2015)

1. Khan Yunis Area Sanitation Improvement Plan

Funding:

(FY 1999 Domestic Survey) March 25, 1999, E/N JPY 283 million, "Khan Yunis Area Sewage Improvement Plan"

*Collection and transport of sewage and procurement of machinery and materials for treating and transporting dry sludge

Benefited:

(FY 2001 Domestic Survey) Provided machinery and materials carry human waste and sludge in dug toilets, which contributes to sanitary improvements in Khan Yunis area.

2. Study on the Khan Yunis City Sewage Improvement Plan

Subsequent study:

(FY 1999 Domestic and Overseas Survey)

1999 - 2000, B/D (JICA)

*Target areas were cut down, and rainwater drainage facilities are not included.

Funding(request):

(FY 2001 Domestic Survey)

Funding party: JICA grant aid, Amount of money financed: JPY 4 billion

Progress: The danger level became level 4 in the project site planned and on-site works became impossible due to the conflict between Israel and Palestine which started in October 2000. The works stopped at the time when D/D was finished by an instruction of JICA.

(FY 2007 Overseas survey)

Implemented project: Pump Station 3 Pressure Tubes Project (Phase 1) (February, 2003 - August, 2003)

Implementing body in Counterpart Country: Khan Yunis City

Contents: Improvement of Khan Yunis City sewage system and implementing the project planned by Japanese development study. Due to the limited funding, the project was divided into two phases.

Funding party: Private fund of aid-recipient country, Norwegian government, Dutch government, Funding amount: 66,400USD

Progress: 100% completed, Design of the Khan Yunis City sewage system project was done by Palestinian Engineering And Management Consulting Center/EMCC.

Implemented project: Pump Station 3 Pressure Tubes Project (Phase 2) (August, 2003 - October, 2003)

Funding party: Private fund of aid-recipient country, Norwegian government, Dutch government through PECNDAR, Funding amount: 100,803.5USD

Progress: 100% completed.

Additionally, proposed project listed below will be implemented. Completion of sewage construction is 50%.

* Gravity drainpipe (January - May, 2004): Funding body: Private fund of aid-recipient country, Norwegian government, Islamic Development Bank, Funding amount: 550,824USD

* Sewage network (January - May, 2004): Funding body: Private fund of aid-recipient country, Norwegian government, Coast Authority, Funding amount: 291,675USD

* Sewage (February - April, 2004): Funding body: Private fund of aid-recipient country, Norwegian government, Dutch government, Funding amount: 21,638.2USD

* Sewage (February - May, 2004): Funding body: Private fund of aid-recipient country, Dutch government, Norwegian government, Funding amount: 31,602.7USD, 26,937.2USD

* PS3 (September, 2004 - April, 2005) Funding body: Private fund of aid-recipient country, Norwegian government, EU thorough local endowment, Funding amount: 268,280USD

* PS8 (April - September, 2005) Funding body: Private fund of aid-recipient country, Norwegian government, Khan Yunis City, Funding amount: 3,696,000USD

* Pressure Tubes Improvement Project (final phase) (January - April, 2006) Funding body: Private fund of aid-recipient country, Norwegian government, Japanese government, Funding amount: 456,170USD

* Sewage network (January - April, 2006): Funding body: Private fund of aid-recipient country, Norwegian government, Islamic Development Bank Al Aqsa endowment, Funding amount: 330,000USD

* Sewage network machinery installation support Funding body: Private fund of aid-recipient country, Norwegian government, United Nations Relief for Palestine Refugees (UNRWA), Funding amount: 600,000USD

* Sewage network Funding body: Private fund of aid-recipient country, Norwegian government, United Nations Relief for Palestine Refugees (UNRWA), Funding amount: 44,600USD

* Sewage pipes (February - April, 2004) Funding body: Private fund of aid-recipient country, Dutch government, Norwegian government, Funding amount: 13,839.31USD

* Sewage system installation to Western part of the refugee camp and city center (January - March, 2004) Funding body: Private fund of aid-recipient country, USAID, United Nations Relief for Palestine Refugees (UNRWA), Funding amount: 1,217,000USD

In addition to the above projects, part of the sewage system project has been completed. To "East of Khan Yunis City Sewage Installment Plan", the project has been requested from the Japanese government. (Funding amount: 14,830,000USD). The "installment of the sewage pipes and machinery", project has been requested from the United Nations Relief for Palestine Refugees (UNRWA) (Funding amount: 600,000USD).

Technical Cooperation:

Training program: 4 persons, Waste management (9 August, 1999 - 26 September, 1999), Water supply management (5 July, 2005 - 18 September, 2005), Sewage engineering (16 August, 2001 - 11 November, 2001), Sewage treatment (1995)

| COUNTERPART AGENCY AT THE TIME OF DEVELOPMENT STUDY | | | |
| PRESENT COUNTERPART AGENCY | | | |
| 6. OBJECTIVES OF THE STUDY | 1) to formulate a Regional Development Plan for the Jericho and Jordan Rift Valley area targeting the year 2015, and 2) to enhance the capacity to formulate and implement a regional development program through on-the-job training and workshops to be held in the course of the Study. | | |
| 7. CONSULTANT(S) | KRI International Corporation Nippon Koei Co., Ltd. | | |
| 8. STUDY PERIOD | Oct.2005 | ~ Sep.2006 | 11month(s) |
| 9. SITE OR AREA | Jericho/Jordan canyon area (part of Jericho, Tubas, and Nablus) | | |
| 10. MAJOR PROPOSED PROJECT(S) | <p><Contents of the project></p> <p>Palestinian Authority(PNA) kicked off Steering Committee composed by representative of relevant ministries and agencies, in target of the conduction of this Survey. Furthermore, Technical Committee and five working groups were organized based on PNA and local government agents, under the Steering Committee. They considered about technical problems related to making the master plan. In the Survey, group discussion was conducted almost 50 times by applying participation-type plan approach.</p> <p>Participation-type plan approach was also applied in conducting three Quick Impact Project(QIP).</p> <p>The outline of the master plan was established during October, 2005 to March, 2006. The operation of Quick Impact Project(QIP) and establishment of implementation program was made before August, 2006.</p> <p><Contents of suggestion></p> <p>1) Working in cooperation in community level, village level, and region level is important. Also, in private sector, it is important to organize association and cooperate with counterpart organization of neighboring nations, for promotion of business.</p> <p>2) The activities of private sector and public sector should be put together effectively and be adjusted, for the development of economy and society. The regional development organization should be established by the pattern of Regional Council, which developed present JCspd. The activity of NGO should be networked, and put together effectively by activity of regional development.</p> <p>3) It is important to make examination of collecting basic data and information about circumstance of society and economy of resident and organization in Jericho/Jordan canyon area.</p> <p>4) Resource center should be established and compile a database of all development data and information, and all organization and individual should be able to access it.</p> <p>5) Workshop should be held in appropriate timing, for the promotion of cooperation with other sector, which have mutual benefit by the cooperation, and for environment, not only for tourism promotion.</p> <p>6) This plan is useful model for the comprehensive development plan of West Bank of Jordan River and region of Gaza.</p> <p>7) It is important to revise this plan three years later or around 2010, in order to reflect the condition of Jericho/Jordan canyon area, West Bank of Jordan River, and region of Gaza.</p> | | |

| | |
|-----------------------|---------------------------|
| PRESENT STATUS | In Progress or In Use |
| | Delayed |
| | Discontinued or Cancelled |

Description :
(FY2007 Domestic Survey)
Subsequent study: "Plan to Establish Agro-Industrial Processing Estate FS" (development survey scheme of JICA)
Implementing period: from March, 2007 to now
Implementing body: Planning Agency/National Economy Agency of Palestinian Authority
Objective : development of economy in Palestine through the promotion of agro-industrial processing, and contribution to peace building
Contents : selection of promising industry including agriculture and agro-industrial processing, and establishment of Agro-Industrial Processing Estate Plan(Pre-FS)
Progress : Pre-FS has been terminated, and follow-up activities are operated for the conduction of full-scale FS
Bidding time : February, 2007
Successful bidder : KRI International Corp.

(FY2007 Overseas Survey)
The grant aid for project of sewage disposal is requested against JICA, in order to construct sewage-disposal plant for household use, in Jericho city. Suggested activities as followed are conducted.

Implemented project: "Strengthening Support System Focusing on Sustainable Agriculture in Jericho and Jordan River Rift Valley" Implementing body: Ministry of Tourism and Antiquities(MOTA), local government of Jericho
Contents: make up TOR for JHTC, staff JHTC office clerk in MOTA Jericho Executive Office, make up concept paper for PPP, organization of LAG, conduction of workshop for promotion of information exchange about PPP and tourism development activity, conduction of training for JHTC and LAG, make up concept paper for regional development in tourism base from the accomplishment of workshops and training courses, plan events such as seasonal festival by the cooperation with Jericho Executive Office and local government of Jericho, PR activity in preparatory step of events, conduction of events(as pilot project), and other. The grant aid for project of water resource management is requested against JICA, in order to repair water well, because of increase in irrigation water, and to improve the network.

Subsequent Study: Feasibility Study on Water Resources Development and Management in Jericho and Jordan River Rift Valley
Implementing period: from March, 2007 to January, 2009
Implementing body: Ministry of Agriculture, Palestine Waterworks Authority
Objective : The upper target of this Survey is to enhance agriculture production by utilizing limited water resources for agriculture in Jordan canyon effectively, in the concept of "Corridor of Peace and Prosperity". Establishing basic plan of development of water resource water, conducting F/S about resource management scheme of water resource development, which include conduction of selected small-scale pilot activity, and effective utilization of water for agriculture, technology transfer against C/P staffs of Palestine by OJT in the course of Survey, would be conducted. The Survey is divided in two steps. The first step scope to technologic and socioeconomic study for 9 months, and the second step scope to F/S of selected scheme for 13 months.
Progress(at the time of October, 2007) :1) collecting and analyzing relevant data and information, 2) conducting survey of local society, irrigation, and water resource, 3)establishing basic plan of carriage system of natural water and repair of water well for agriculture, 4) conducting IEE, 5)The plan of pilot activity had been prepared, and was approved by Palestine.
The suggested activity as follows was requested as technology supporting matter.
Implementing project : Land use planning

((FY 2009 Domestic Survey)
Technical Cooperation Project "Project on Improvement of the Palestinian Local Administrative System (Community Empowerment Component)"
(Objective)
In order to enhance local administrative functions and self-governing ability of the residents and the local community involved, this project aims 1) to encourage autonomous works of the local government and communities, 2) to investigate the way JCspd works beyond its existing waste management function, and 3) to organize lessons learned and challenges to develop the JC(spd) strategy, by mapping out a strategy for a pilot project and implementing it as well as short-term local development strategy (I-LDS).
(Implementing Period)
2007.2-2010.9
(Implementing Agency)
Department of Joint Councils for Services, Planning and Development, Ministry of Local Government
(Project Overview)
Based on the Local Authorities Law of 1997, more 480 of Local Government Units (LGU)have been established. However, many of them are small-scale and not functional enough from administrative and financial aspects. Therefore, the Ministry of Local Government has introduced the Joint Service Councils (JSCs) in various regions and formulated cooperation and integration among the LGUs. In 1998, the Ministry has decided to introduce the JCspd which is the JSCs with enhanced and strengthened functions, and established the JCspd in the Ministry of Local Government in 2004. JCspd is seeking its systematic improvement and reinforcement of capacity to be able to provide public services and draft plans, which are originally LGU's responsibility, by absorbing small LGUs under the JCspd or integrating some parts of LGU into JCspd
1)Training for planning implication of the pilot project by JCspd, 2)Developing an implementation plan of the pilot project, 3)Assisting the operation of, monitoring, and providing the final assessment for the pilot project, 4)Finding out challenges and lessons learned from the pilot project, 5) Formulation and implementation of the I-LDS, 6) Consolidating the implementation structure of the Joint Council(JC), 7) Conducting the capacity-building training for the JC, 8)Assisting the JC's strategic formulation Finalizing policy proposals of the local government finance
(Others)
In order to complement this technical cooperation program, JCspd has coordinated challenges and lessons learned to promote community development through various pilot projects since February, 2007. It now aims to get involved in its strategic formulation while the community development program became one component of the technical cooperation program mentioned above and will be implemented.
Next-phase Study "Feasibility Study on agro-industrial park development in the Jordan River Rift Valley" (Objective); 1) To formulate a industrial complex plan and to investigate the system to implement projects, 2) Through (1), to engage in technical transferring and capacity development to the Palestinian counter-partners in order for them to map out the industrial complex development plan on their own.
(Implementing Period)2008.4-2009.5
(Implementing Agency)Palestinian Authority Ministry of Planning, Ministry of the National Economy
(Cooperating agency)JICA

| | Processing | Discontinued or Cancelled |

Description :
 (FY 2009 Domestic Survey)
 No detailed progress can be seen at this stage for 'Agricultural Well Repair Operation' 'Operation to Improve the Spring Water Conducting System' and 'Flood Water Retention Project'.
 -To conduct the water resource development in Palestine, obtaining an approval from the Joint Water Committee, which is a combined committee of Palestine and Israel is necessary. However no approval seems to have been given at this point.
 -Through the pilot project of this development study, similar work of well repair and improvements on the spring water conducting system have been implemented. However this was possible due to the efforts made by JICA's research group explaining the operation to the Israeli Water Committee number of time to get an approval from them. The difficulty of obtaining an approval from the state of Israel on the water resource development project without the strong request from a third party state such as Japan, is the direct reason as to why the three studies have not been implemented.
 -Furthermore, all above projects were planned under the assumption that they were to be funded by Japan's grant aid.

(FY 2009 Overseas Survey) No information.

(FY2013 Domestic Survey)No information to be specifically mentioned.

(FY2013 Overseas Survey)
 The Subsequent Study of "Improvement of Domestic and Agricultural Water Systems In Jordan Valley" has been implemented in order to integrate and examine the following projects which were taken on priority by the development survey.
 -Repair and improvement projects of the Al Nwai'mah spring and eleven agricultural wells.
 -Other two proposal items;
 1. Maintenance of the waterworks facility such as rehabilitation of the existing wells and new well-digging at the Palestinian refugee camps in Jericho City and the environs,
 2. Improvement and maintenance of the head of a river, which were wells and springs, water distribution facilities and water storage facility of the Jordan Valley.

| | Completed | |
| | Partially Completed | Delayed or Suspended |
| | Implementing | |
| | Processing | Discontinued or Cancelled |

Description :
 (FY 1991 Overseas Survey)
Background:
 As of July 1989, the executing agencies of the project have been changed to the Ministry of Industry and public Works and the Municipal Government of Doha City. At the time, the Ministry of Industry and Public Works already had its own drainage improvement plan, and the plan proposed by the JICA study was partly utilized for revising the guidelines for drainage improvement. It was decided that the implementation be carried out by consulting both plans.

Subsequent Studies:
 D/D PENCOL (England) conducted utilizing the JICA study.

Finance:Own fund

Construction:
 The construction was implemented by seven national companies. (construction management by PENCOL)
 Construction in Musherib and Rayyan Destricts was completed in areas of Doha City, updating of the Master Plan is considered necessary, involving the integration of the existing small irrigation plan with the growth of the City. The project implementation was delayed in 1988 when the oil prices declined. It is expected that the entire plan area will be provided with drainage facilities by the end of 1993.
 1994 completed. (FY 1996 Domestic Survey)

Maintenance & Operation:
 The constructed facilites have been well operated.
 (FY 1996 Domestic Survey)

***Mangrove Park Project**
 (FY 1991 Overseas Survey)
 The JICA study suggested the construction of canals from Rayyan District through a mangrove park proposed on the west coast, but due to the problem of public finance, the mangrove park project was not adopted. The west coast area is now being developed as residential areas.

Description :
(FY2000 Domestic Survey)
There is no information after the study.

(FY 2002 Overseas Survey)
Prospect for the implementation of the proposed projects: within 1-2 years
After the study completed, the NCWCD accomplished several field trips to the area to collect the tide gages and temperature gages to analyze their data. These studies lead to master plan of the northern part of the Read Sea coast and management plans of Al-Wajh, Ras Swahal and Ras Al-Qasbar. NCWCD held a workshop to discuss these management plans and master plan.
In the time being, the special survey are being prepared to collect more information concerning the social and economic and zonation for proposed protected area to discuss with the committee from different agencies and solve the conflict if it occurs and have their opinion on the proposed protected areas. After the survey, the memorandum are prepared to be submit to the board of the NCWCD to approve it, then to be declared as a protected area by the Council of Ministers.

(FY 2003 Overseas Survey)
1) In 2002, JICA and NCWCD formulated a study associated with the sea mammal (dugong) inhabiting along the shore of the Northeast part of the Red Sea and its protection plan. In February 2002, an aerial transect study and a hearing survey were implemented between Al-Wajh and Yanbu. During the study, 18 dugongs in all including a group consisting of three dugongs, two groups consisting of two dugongs respectively and 11 individuals were observed. Those dugongs were all adults of over 3 m in length and no young dugongs were found.
2) In 2003, a joint study (check) on fishes inhabiting the coral reef was executed by staff of NCWCD.
3) In order to facilitate the declaration that the selected coastal area of the Northern Red Sea was appointed as a reserve for wildlife, a technical committee was established. As the first proposal, the execution of a socioeconomic study was advocated by the technical committee as the first proposal which is considered essential partly for the purpose of bringing about equal profits to concerned parties of the target region.

(FY 2004 Domestic Survey)
In February 2004, Protected Areas Planning Department has implemented a study in order to identify the current status and to settle a boundary of the protective zone within proposed Ra's Suwayhil/Ra's al-Qasbah region. Proposed boundary stretches from south most part of Haqil autonomous region to South most part of Burqan Island, which was proposed in the previous study. This is set to 100 metres from the land at high tide. However, for the coast lines which is less than 100 meters from the land, coastal line will be the boundary line. All of the private land, municipal land, and other public land will be excluded from the protective zone. Mountains and hills between Wadi Kulayb and Maqna, and surfaces which includes wadi (dry river except for the rainy season) have been determined by studying/discussing with coastal guards and Muhafiz in Al-Bad region.
For the proposed shallow areas in Al-Wajh, D/S is planned to be conducted in early 2005.

(FY 2009 Domestic Survey) No information.

(FY 2009 Overseas Survey)
1) A planning survey of the proposed Al-Wajh Bank protected area is to be conducted 2010/ 2011.
2) The proposed Ra 's Suwayhil/ Ra 's al-Qasbah Protected Area was submitted to the Board Governors of the Saudi Wildlife Commission and it is now land study by a Technical Committee, in accordance with the process for proclamation of Protected Areas.

Description :
(FY 2000 Domestic Survey)
The 2nd field survey (Jun.-Jul. 1999):
The study team prepared monitoring plan in the Arabian Gulf in cooperation with MEPA Eastern Province. The preparatory field survey was conducted in the intensive study area to collect information necessary for the preparation of monitoring plan. During the works, the technologies needs for the field and laboratory works were transferred to counterpart. MEPA and the study team held the workshop jointly and presented the results of this stage.

The 3rd field survey (Sep.-Nov.1999):
In order to identify the characteristics of seawater in the Gulf during the autumn season, the 1st round monitoring work was conducted with jointly MEPA. A set of equipment for field and laboratory works was installed in this stage. During the course of each operation, all technologies including the laboratory management, data management and statistical methods, as well as operation and maintenance of the equipment were transferred to MEPA. Also in this stage, MEPA and the study team held the workshop and presented the results of this stage to the relevant organizations.
Discussions and investigations to develop the organization for the planning and execution of monitoring in the near future were conducted. The analysis of the water pollution by using satellite image was also conducted.
This project will be continued hereafter, the 2nd monitoring work(in the summer) and further technology transfer including the satellite image analysis will be implemented. In the final stage, the study team and MEPA will jointly hold technology transfer seminar to present the results of the project and to discuss the future prospect and management of the coastal environmental along the Arabian Gulf.

(FY 2001 Domestic Survey)
The technical transfers by means of OJT and tutorial manner both technically and theoretically on this development study are as follows:
1) Monitoring planning method of coastal seawater characteristics
2) Field survey technique
3) Scientific analysis technique
4) Data analysis method
5) Satellite image analysis technique
The MEPAEP has acquired the skill to implement a basic monitoring independently around the coastal area as a result of the technical transfer mentioned above. The future targets to be covered are the establishment of continuous monitoring implementation system, and reflection and suggestion of the analysis to the administration.

(FY 2002 Overseas Survey)
In 2002, The Director-general of PME changed to a member of the Royal family and the PME has been reorganized. The Eastern Office of PME, C/P of this Study will be reorganized after the nest fiscal year.

(FY 2005 Domestic Survey)
No information to be specifically mentioned.

Description :
(FY 2015 Domestic Survey)

(1) A subsequent study of the Project for the Improvement of Water Supply System of Juba in South Sudan (B/D, implemented from May 2010 to March 2011) included some components proposed in the development study.

(2) Grant Aid of the Project for the Improvement of Water Supply System of Juba in South Sudan is under implementation. (from August 2013 to September 2017).
Project Purpose: to increase the water production capacity and provide the safe drinking water to the residents in Juba, who had not have access to safe and treated water.
Overview of the Project: Construction of water supply facilities (pulpification facilities, distribution pipelines, connection pipeline, resevoir, pumping station, head tank, public taps, water truck and water supply stations).
Change in the project scope: due to the civil war, the project was suspended for 14 months and the increase in cost of standby
Implementing agency: Southern Sudan Urban Water Corporation (SSUWC)

(3) Technical Cooperation Project of "the Project for Management Capacity Enhancement of South Sudan Urban Water Cooperation" was implemented from November 2010 to November 2013.
Project Purpose: The management capacity of SSUWC-Juba is enhanced through capacity development on operation and maintenance of water supply facilities.
Implementing agency: Ministry of Water Resources and Irrigation (MWRI)

Description :
(FY 2015 Survey, from Summary of Preliminary Study, and JICA Knowledge Site)

In response to the recommendations made in the development study, the Technical Cooperation Project, "Project for Strengthening Vocational Training in the Republic of Sudan" was implemented. The Project aimed to strengthen the vocational training system of Sudan through pilot activities leading to strengthening SCVTA's function to support VTCs as well as to support various training providers through technical guidance and training of trainers (TOT). This project was carried out from January 2011 to December 2013.

<The Technical Cooperation Project: Project for Strengthening Vocational Training in the Republic of Sudan>
Period: from January 2011 to December 2013
Implementing Organization: Supreme Council for Vocational Training and Apprenticeship
Project Site: Khartoum 2 VTC
Project Purpose: SCVTA's capacity for managing vocational training based on social and labor market needs is strengthened.

(FY 2015 Domestic Survey and JICA Knowledge Site)
"Project for Human Resources Development for Darfur and the Three Protocol Areas"
Period: from June 2009 to May 2013
Implementing Organization: Higher Council for Decentralized Government
Project Site: Three Darfur States (North, West and South), South Kordofan, Blue Nile States
Project Purpose:
1) Coordination capacities of the state government are strengthened through management of pilot activities and training programmes.
2) Human Resources for water supplies, health (maternal health) and vocational education are improved through implementation of pilot activities and training programmes.

Description :

(1) First five-year Plan (targeting the whole country of Syria)
(FY 1998 Domestic Survey)

Finance:

1997/Sep Loan from Arab (84 million USD) Kuwait and Abu Dhabi (100 million USD) funds.
Own Fund STE 130 million USD

Construction: 24 months from 1999

- Constructors: 1. Exchanged (Ericsson, Siemens, Samsung)
2. Transmission (Ericsson)
3. MW (BOSCH)
4. OSP (Siemens Turkey)

(2) Second five-year Plan

(FY 1998 Domestic Survey)

STE express their intentions to implement the second five-year plan, and examine the introduction of cellular (GSM) after the completion of the five-year plan. However, it will be hard to implement the plan due to financial problem.

* The proposed projects will be implemented by the first and second five-year plans.

(FY 2000 Overseas Survey)

The 2nd phase project is divided into telephone network expansion and its computer system, and introduction of GSM.

BOT (Introduction of GSM)

Construction: 48 months until Dec. 2001 (389 Telephone Center for Network Expansion)

- Constructors: 1. Exchanged (Ericsson, Siemens, Samsung)
2. Transmission (Ericsson)
3. MW (BOSCH)
4. OSP (Siemens Turkey)

Backgrounds:

(FY 1997 Domestic Survey)

The Master Plan on National Telecommunications Network Expansion Plan in the Syrian Arab Republic included the (3) phase of five-year plan up to the year 2010.

As for the first five-year plan up to the year 2000, it was seriously studied how they should be able to implement the plan by using Yen Loan of Japanese Government.

Japanese Government had provided loan to Syria for Electric Power Project in 1993. As for telecommunications project, there were not submissions of request letter to Japanese Government due mainly to delicate situation of the country.

Syrian Telecommunications Establishment (STE) had experience of using loan of Arab Fund for telecommunications project in the past. Thus, STE requested loan to Arab fund for this project again.

Kuwait fund and Abu Dhabi fund decided to provide loan 100 million US dollars each out of 500 million US dollars of total cost for the Project. 250 million US dollars is STE's own funds. 50 million US dollars will expectedly be provided by other Arab fund.
