LOCAL WATER SUPPLY AND WASTEWATER SECTOR SURVEY
FINAL REPORT

LIST OF APPENDICES

Appendix 1-1	Population Projection
Appendix 1-2	List of Water Treatment Plant (Operating)
Appendix 1-3	List of Water Treatment Plant (Under Preparation)
Appendix 1-4	List of Water Treatment Plant (Investment Waited)
Appendix 1-5	List of Wastewater Treatment Plant (Plan)
Appendix 2-1	Questionnaire for the Training Program for Improving the Capacity of Sewerage in Vietnam
Appendix 2-2	Result of Questionnaire for the Training Program Improving the Capacity of Sewerage in Vietnam
Appendix 3-1	Result of Questionnaire for Yokohama Water Business Conference
Appendix 3-2	Result of Questionnaire for Kitakyushu Overseas Water Business Association
Appendix 4-1	Result of Water Quality Analysis by Pack-Test
Appendix 4-2	Result of Water Quality Analysis
Appendix 4-3	Material of U-BCF for 8 Cities
Appendix 5	List of Proposed Project for the Water Sector Loan
Appendix 6	Material of the Workshop on Human Resources Training and Development for Drainage and Sewerage Sector in Vietnam

QUESTIONNAIRE

FOR

THE TRAINING PROGRAM FOR IMPROVING THE CAPACITY OF SEWERAGE

IN VIETNAM

Prepared by JICA Survey Team

January 2014

To Sewerage Organization concerned

Questionees, which will be decided through consulting with Government of Vietnam.
(Draft)

Ministry of Construction
Department of Construction, Hanoi City
Department of Construction, Ho Chi Minh City

MOC, Ha Noi City and Ho Chi Minh City achieve significant roles of training program since not only basic theory but also experience and know-how are indispensable for practicable training.
The JICA Survey Team shall furnish general and specific information on the training program of sewerage in order to clarify the contents of the training program project and to consider the scope of cooperation.
Please answer in detail as much as possible in writing to the following questions, and provide available data and information requested herein for the sake of smooth implementation of the JICA Survey.

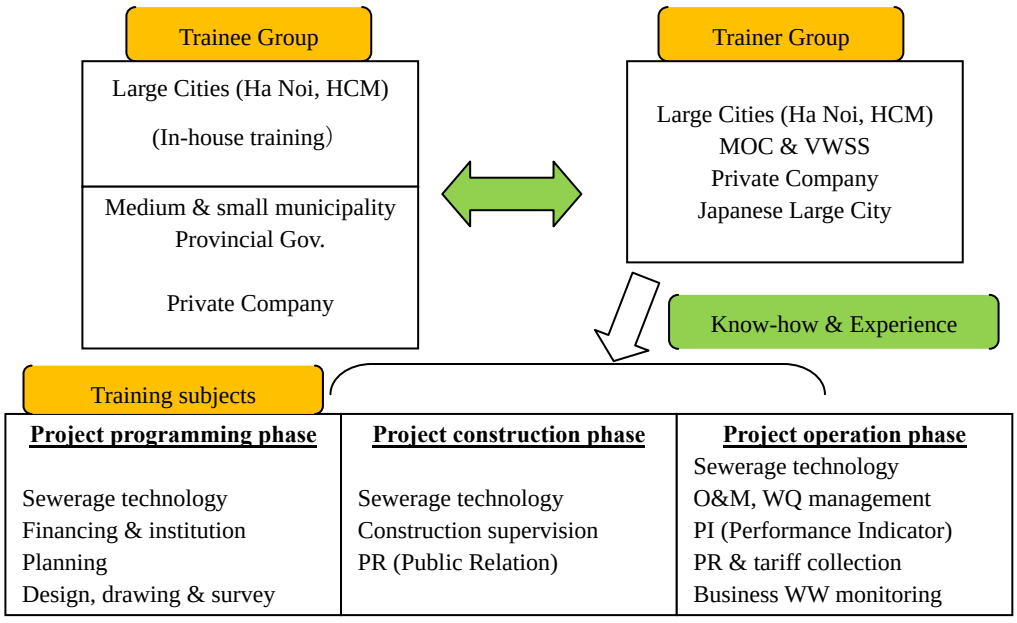

Fig. Task Force of Sewerage Training Program

1. General Information

1.1. Organization

(1) The latest organization chart with staff composition of each division, section and branch office

(2) Work contents of each division

(3) Budget and financial source

(4) Relation of each institution(MOC, Hanoi DOC and Ho Chi Minh DOC)

1.2. Staff training needs

(1) The records of staff training in last three years

a. Training programs of in-house, domestics and overseas

b. Number of trainees (managers, engineers and operators/office clerks/workers) by each training course

c. Budget for staff training

(2) Do you have trainers for staff training in your office? If you have, please describe their name and training course they teach, and records of staff training in your office.

(3) Your plan for staff training in the next year

(4) What types of training programs do you need such as basic theory of sewerage technology, workshop/seminar on hot topics, operation and maintenance skills, practices of sewerage engineering and practicable knowhow transfer on project implementation and operation?

Training manner	Priority
Basic theory of with class room style	
Workshop/seminar on hot topics	
Operation & maintenance skills for technician class	
Practices of sewerage engineering	
Practicable knowhow transfer on project implementation and operation	

(5) Do you think what kind of staff training is necessary for improving wastewater management and storm water drainage? Please describe your needs for staff training in detail according to your priority.

Training Subject	Priority
Sewerage Planning	
Sewer design and construction	
Sewer maintenance	
O&M of pumping station and WWTP	
Water quality management	
Industrial and business discharge management	
Storm water drainage and reuse	
Building construction approval	
Sewerage business management	
Public relation and tariff collection	
Project procedure and evaluation	

(6) In case the College of Urban Works Construction and/or the College of Construction No.2 establish the sewerage training course in collaboration with JICA, what kinds of training course do you want to participate?

1.3. Other donor's cooperation in capacity development

(1) German Government and other organization are working to improve the performance of water utilities by enhancing their managerial capacities; please describe the details of cooperation which is extending to you for enhancing managerial capacities and its progress

(2) Please describe the details of other donor's cooperation for capacity development, if you have.

2. Specific Information about sewerage

2.1. Sewerage and storm water drainage projects

(1) Please describe the outline of national development plan of urban drainage and wastewater treatment.

(2) Which issues on technologies and institution are to be solved for implementing national development plan?

2.2. Planning, design and construction skills of sewerage and storm water drainage system

(1) Are planning and design documents/drawings executed in-house or out-source?.

(2) Do you provide design manuals of sewer and drainage system?

(3) How do you examine pipe materials and equipments of domestic products?

(4) Do you provide wastewater pretreatment guideline for municipal/industrial wastewater discharge?

(5) How do you appraise house connection application and check the result of plumbing?

(6) Current issues and problems on planning, design and construction.

2.3. Operation and maintenance of sewerage facilities

(1) Do you provide facility information system (ledger of sewer, drain, pumping station and wastewater treatment plant). Please describe in detail as followings;
   a. Map/layout plan
   b. Individual sewer/equipment information of location, structure and maintenance record and
   c. Operation & maintenance record of equipments of wastewater treatment plant
   d. Customer information of house connection

(2) Do you provide facility operation and maintenance plan of day, week, month and year? What task force reviews facility operation and maintenance plan? And please describe followings;
   a. Record of clogging/failure of sewer in last three year
   b. Record of number of pipe repair in last three year
   c. Record of machinery repair of pump and screen in last three year
   d. Record of wastewater treatment performance in last three year

(3) How do you maintain dredger, truck and equipments of sewer inspection? Please describe list of principal machinery/equipment and job outline.

(4) How do you purchase spare parts? Please describe inventory list of spare part and expendables.

(5) How much budget is allocated to operation and maintenance? Please describe detailed cost of personnel, spare part/consumables and administration in last three years.

(6) What kind of problems do you have in operation and maintenance of sewerage and storm water facilities? Please describe the problems by facilities

(7) Do you think what kinds of technical assistance are useful for you to solve the problems? Please describe your opinions.

Facilities	Problems	Useful technical assistance
Sewer/house connection		
Storm water drainage		
Pumping station		
Wastewater Treatment Plant		

2.4. Water quality management

(1) Monitoring manuals of wastewater treatment plant, municipal/industrial wastewater discharge and water course

(2) Water sampling point, frequency of test and parameter of water quality test, and the latest water quality test records

(3) List of laboratory and its staff composition (number, level and specialty)

(4) List of available laboratory equipment for water quality analysis

(5) Current issues and problems on waste water quality examination which you encounter at present

2.5. Others

(1) Record of the guidance for citizens

a. Urban development planning

b. Industrial wastewater pretreatment

c. Public campaign

(2) In case of outsourcing, please describe the contractor, kinds of work and contract money.

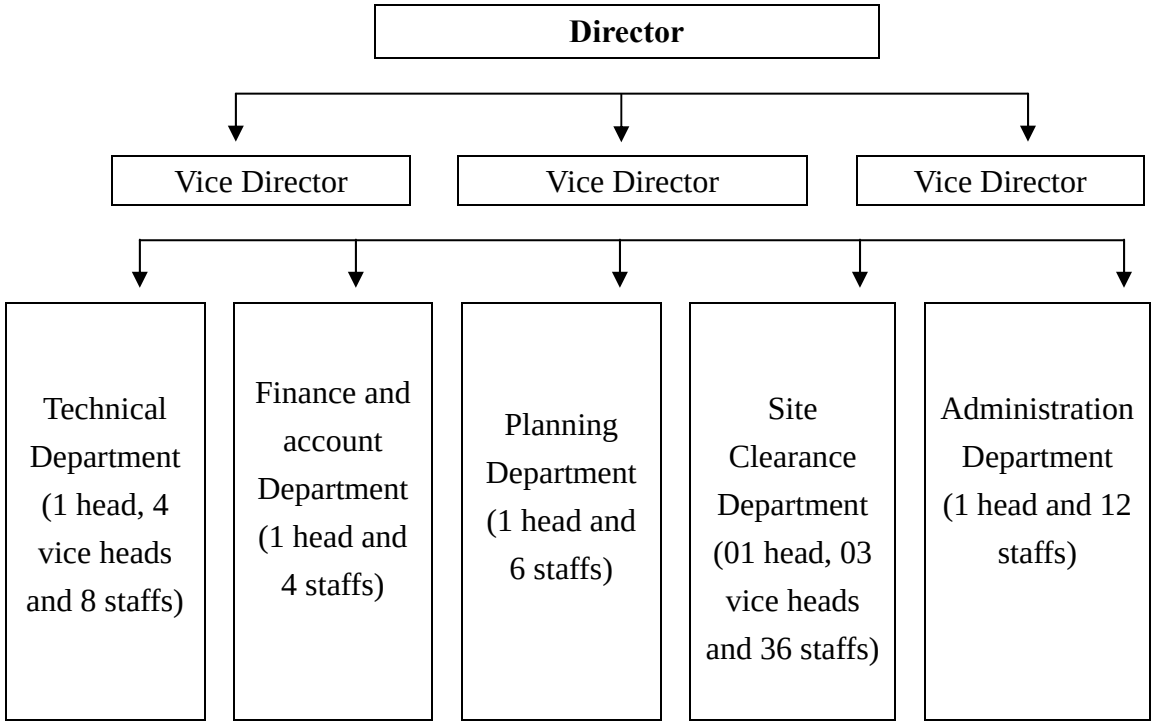
Appendix 2-2

Department of Construction, Hanoi City

1. General Information

1.1. Organization

(1) Organization chart of HSDPMB (PMB)



(2) Work contents of each division

Organization model of HSDPMB included: 1 director, 3 vice directors and 5 departments such as: Technical, finance and account, administration, planning and site clearance departments. Total staffs of PMB are 84 people.

Task of functional departments:

Administration department:

- Consult with the director board of PMB on personel arrangement, administration work, and public relation in order to serve for the policy purpose of PMB.
- Coordination with the related authorities and functional departments of PMB in order to well complete the assigned tasks.

Site clearance department:

- Consult with PMB's director board in the field of site clearance, resettlement of

Hanoi Drainage project and other projects which are implemented by PMB.

Planning department:

- Consult with PMB's director boards in the field of planning, investment monitoring, prequalification bidding.
- Management and consultant to Hanoi Drainage project – phase 2.
- Coordination with related authorities and functional task in order to well implemented assigned tasks.

Technical Department:

- Consult with PMB's director in the field of management of project implementation, construction items, management of quality of construction work, acceptance of works, handover and put the works into use with effective and high quality.
- Coordination with related authorities and functional departments to implement assigned work.

Finance and account department:

- Consult with PMB's director board on investment funds management and allocation of contract packages and also the internal expenditure of PMB in line with current regulations.

  Coordination with related authorities and functional departments to implement assigned work.

(3) Budget and financial source

HSDPMB is a unit which has income, legal status, own stamp and account in State treasury and al so it is responsible for bear all operation cost by itself.

Project management cost cited from project for payment in compliance with current regulations of the government.

(4) Relation of each institution(MOC, Hanoi DOC and Ho Chi Minh DOC)

HSDPMB is a unit which has income, legal status, own stamp and account in State treasury and al so it is responsible for bear all operation cost by itself.

Project management cost cited from project for payment in compliance with current regulations of the government.

1.2. Staff training needs

(1) The records of staff training in last three years

Year	Training program	Participants	budget
2011	- PPP training course - Advanced pipe jacking technology	04 01	Granted by JICA Granted by JICA
2012	Drainage and sewerage technology	01	Granted by JICA
2013	- Water environment management - Industrial wastewater treatment	01 01	Granted by Fukuoka Granted by JICA

(2) Do you have trainers for staff training in your office? If you have, please describe their name and training course they teach, and records of staff training in your office.

No

(3) Your plan for staff training in the next year

Yen Xa WWTP project is one of the key environment projects in Ha noi. Thus, in order to implement project effectively, PMB need to obtain a list of qualified staffs. The upcoming plan for enbhance capacity of management staffs serving for Yen Xa WWTP project as follows:

- Pipe jacking technology
- Experience on sewerage development planning
- Buil up frame contents and plan for sewerage works management
- Wastewater treatment technology and wastewater treatment system planning.

(4) What types of training programs do you need such as basic theory of sewerage technology, workshop/seminar on hot topics, operation and maintenance skills, practices of sewerage engineering and practicable knowhow transfer on project implementation and operation?

Training manner	Priority
Basic theory of with class room style	2
Workshop/seminar on hot topics	1

Operation & maintenance skills for technician class	4
Practices of sewerage engineering	3
Practicable knowhow transfer on project implementation and operation	5

(5) Do you think what kind of staff training is necessary for improving wastewater management and storm water drainage? Please describe your needs for staff training in detail according to your priority.

Training Subject	Priority
Sewerage Planning	2
Sewer design and construction	2
Sewer maintenance	2
O&M of pumping station and WWTP	5
Water quality management	4
Industrial and business discharge management	5
Storm water drainage and reuse	3
Building construction approval	5
Sewerage business management	1
Public relation and tariff collection	1
Project procedure and evaluation	5

(6) In case the College of Urban Works Construction and/or the College of Construction No.2 establish the sewerage training course in collaboration with JICA, what kinds of training course do you want to participate?

With the aim at enhancing capacity of PMB' staffs serving for Yen Xa WWTP project, PMB would like to focus on the following training courses:

- Pipe jacking technology
- Drainage and sewerage system
- Wastewater treatment technology
- Water environment management
- Wastewater treatment system technology

- Wastewater treatment system operation

1.3. Other donor's cooperation in capacity development (NONE)

(1) German Government and other organization are working to improve the performance of water utilities by enhancing their managerial capacities; please describe the details of cooperation which is extending to you for enhancing managerial capacities and its progress

(2) Please describe the details of other donor's cooperation for capacity development, if you have.

2. Specific Information about sewerage

2.1. Sewerage and storm water drainage projects

(a) *Study on drainage and urban wastewater treatment system in Hanoi (*"MP 1995") (Decision No. 430/1995/QD-TTg, with supporting from JICA in 1995, MP for drainage and wastewater treatment system towards 2010 was issued. This MP plays a role as the overview project map for *Hanoi drainage for environment improvement in Hanoi – Phase 1* (Project Phase 1) as well as *Hanoi drainage for environment improvement in Hanoi – Phase 2* (Project phase 2) with the use of Japanese ODA loan.

(b) *Revised MP for Hanoi Capital towards 2020* ("MP1998") (Decision No. 108/ 1998/QD-TTg) is a basic MP based on MP 1995 with additional of northern area of Red River delta. In this MP, 3 large scale-centralized WWTPs were proposed such as: Yen So, Yen Xa and Phu Do, in which Yen So WWTP has been constructed under BT method by Gamuda Berhad Corporation (Malaysia) and budget from HPC.

(c) *Comprehensive urban development program for Hanoi Capital* ("HAIDEP Study") is a MP of the Hanoi city planned by JICA's support in 2007. This study proposed 12 combined and separated sewerage systems as a part of urban development planning.

(d) *General plan for construction of Hanoi capital towards 2030 and vision to 2050 (*Hanoi vision 30/50) is the latest plan of Hanoi city which was prepared in 2010. This plan proposed land use values per capita for difference period and provide common orientation with sewerage development system, specifically is wastewater from urban areas is also collected by combined sewer while separated sewer shall be developed to new urban areas.

(e) *Drainage plan of Hanoi capital towards 2030, vision to 2050,* the latest special plan on drainage and wastewater treatment in Hanoi following MP Hanoi 30/50. This plan proposed 41 centrally-small scaled wastewater treatment plants in Hanoi including Yen Xa WWTP with remaining capacity. Drainage plan of Hanoi capital to 2030, vision to 2050 was approved by the Prime Minister at the Decision No. 725/QĐ-TTg dated 10/5/2013.

2.2. Planning, design and construction skills of sewerage and storm water drainage system

(1) Are planning and design documents/drawings executed in-house or out-source?.

Out source

(2) Do you provide design manuals of sewer and drainage system?

Yes

(3) How do you examine pipe materials and equipments of domestic products?

Before project implementation

(4) Do you provide wastewater pretreatment guideline for municipal/industrial wastewater discharge?

Yes

(5) How do you appraise house connection application and check the result of plumbing?

Monthly schedule or right after residents inform about the problem.

(6) Current issues and problems on planning, design and construction.

Current problems on planning, design and construction of HSDPMB are lacking experience on dealing with problems of underground sewer, constructing large scale WWTPs so sharing from the developed countries is necessary.

Questions from 2.3 to 2.5 focus on O&M work which is handed over to HSDC. Finance source for O&M work paid by HPC.

2.3. Operation and maintenance of sewerage facilities

(1) Do you provide facility information system (ledger of sewer, drain, pumping station and wastewater treatment plant). Please describe in detail as followings;

a. Map/layout plan

b. Individual sewer/equipment information of location, structure and maintenance record and

c. Operation & maintenance record of equipments of wastewater treatment plant
d. Customer information of house connection

(2) Do you provide facility operation and maintenance plan of day, week, month and year? What task force reviews facility operation and maintenance plan? And please describe followings;

a. Record of clogging/failure of sewer in last three year
b. Record of number of pipe repair in last three year
c. Record of machinery repair of pump and screen in last three year
d. Record of wastewater treatment performance in last three year

(3) How do you maintain dredger, truck and equipments of sewer inspection? Please describe list of principal machinery/equipment and job outline.

(4) How do you purchase spare parts? Please describe inventory list of spare part and expendables.

(5) How much budget is allocated to operation and maintenance? Please describe detailed cost of personnel, spare part/consumables and administration in last three years.

(6) What kind of problems do you have in operation and maintenance of sewerage and storm water facilities? Please describe the problems by facilities

(7) Do you think what kinds of technical assistance are useful for you to solve the problems? Please describe your opinions.

Facilities	Problems	Useful technical assistance
Sewer/house connection		
Storm water drainage		
Pumping station		
Wastewater Treatment Plant		

2.4. Water quality management

(1) Monitoring manuals of wastewater treatment plant, municipal/industrial wastewater discharge and water course

(2) Water sampling point, frequency of test and parameter of water quality test, and

the latest water quality test records

(3) List of laboratory and its staff composition (number, level and specialty)

(4) List of available laboratory equipment for water quality analysis

(5) Current issues and problems on waste water quality examination which you encounter at present

2.5. Others

(1) Record of the guidance for citizens

a. Urban development planning

b. Industrial wastewater pretreatment

c. Public campaign

(2) In case of outsourcing, please describe the contractor, kinds of work and contract money.

Appendix 3-1

	会社名	回答者情報	1．ベトナム国に対するビジネス展開の現状・計画 貴社のベトナム国におけるビジネスの状況を以下から選択してください。	（1）貴社がベトナム国にてビジネスを行っている技術、今後のビジネス展開を検討されている技術を以下から選択してください 1）ビジネス展開実施中	2）ビジネス展開予定	（2）貴社がベトナム国に展開されるビジネスの形態を以下から選択してください	（3）貴社ビジネスの取引先を以下から選択してください	（4）ベトナム国に事務所・関係会社を有していれば、住所・連絡先を記載ください。 1）事務所	2）関係会社	2．ベトナム国における水ビジネス展開支援策の利用状況 ① VietWaterでJETROの主催するJapan Booth	② Business Matching	参加された企業はその効果についてお答えください。	③ 日本政府の支援する普及事業等（JICA中小企業支援事業等）

Appendix 4-3

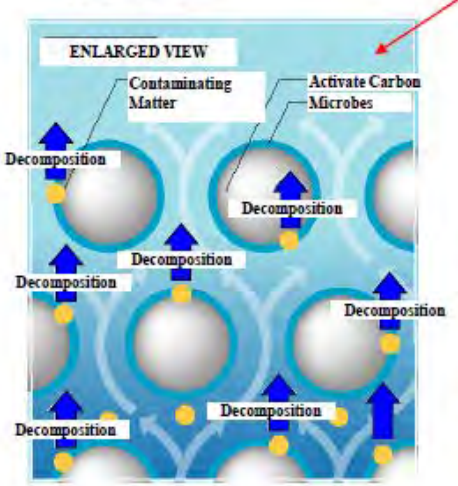
History of U-BCF (Upward Biological Contact Filtration)

ONGA river water which is used main water supply resource has been polluted by domestic waste water.

Kitakyushu Water itself invented an advanced treatment method applying the biological power against the water pollution of ONGA river, as a result of itself researching from 1987 to1997.

In 1997, Kitakyushu Water had applied for a Japanese patent on the new treatment method named "Upward Biological Contact Filtration" (U-BCF).

In 2006, the Japan Patent Office registered U-BCF as P-3831055.



本城浄水場 上向流式生物接触ろ過池

Construction Record of U-BCF in Kitakyushu City

In 2000, installed **71,000**m3/D into the HONJO water treatment plant

In 2003, installed **171,000**m3/D into the ANOH water treatment plant

In 2009, installed **32,500**m3/D additionally into the HONJO water treatment plant (Total U-BCF capacity of HONJO is **103,500**m3/D)

Procedure for Encouraging Broad Use of U-BCF in Vietnam

【1st Step】 JICA Partnership Program（2010 to 2012）
Place : Haiphong City, Vietnam (Friendship-city with Kitakyushu)
Contents: Implementation of the Pilot Study on U-BCF
Technical Cooperation on The Water Treatment Process in Japan

Confirmed Good Effectiveness of U-BCF on The Pilot Study (1 Year)

【2nd Step】 Installation of U-BCF into BIN VAO Treatment Plant
The Haiphong Water have decided to install U-BCF into the small scale treatment plant (5,000 m3/D) using own budget.
Breaking of the construction in May, 2013 (Completed in December, 2013)

To confirm the operation and maintenance of U-BCF

【3rd Step】 Installation of U-BCF into the Main Treatment Plant
The Haiphong Water will have a plan to install U-BCF into the main treatment plant (100,000m3/D) in Haiphong City.

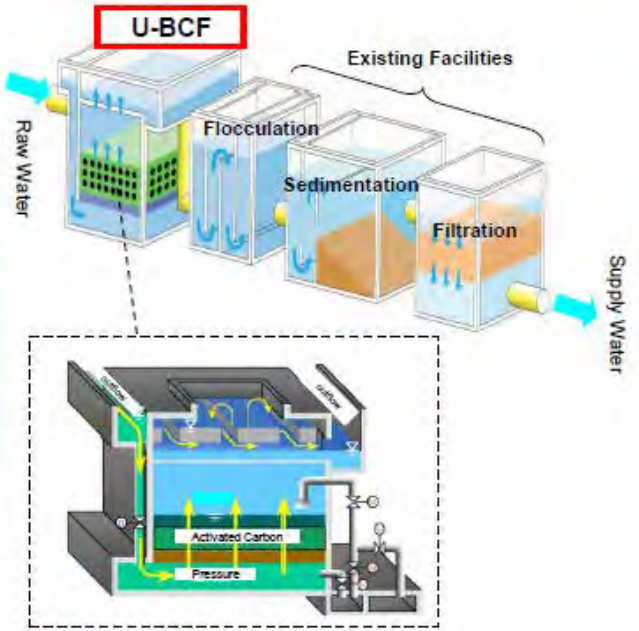
Other hand, Haiphong Water and Kitakyushu Water have engaged in **mutual activities to encourage the broad use of U-BCF**, because the use of **U-BCF will be the most effective and advanced water treatment method in Vietnam**.

Expectation to encourage the broad use of U-BCF

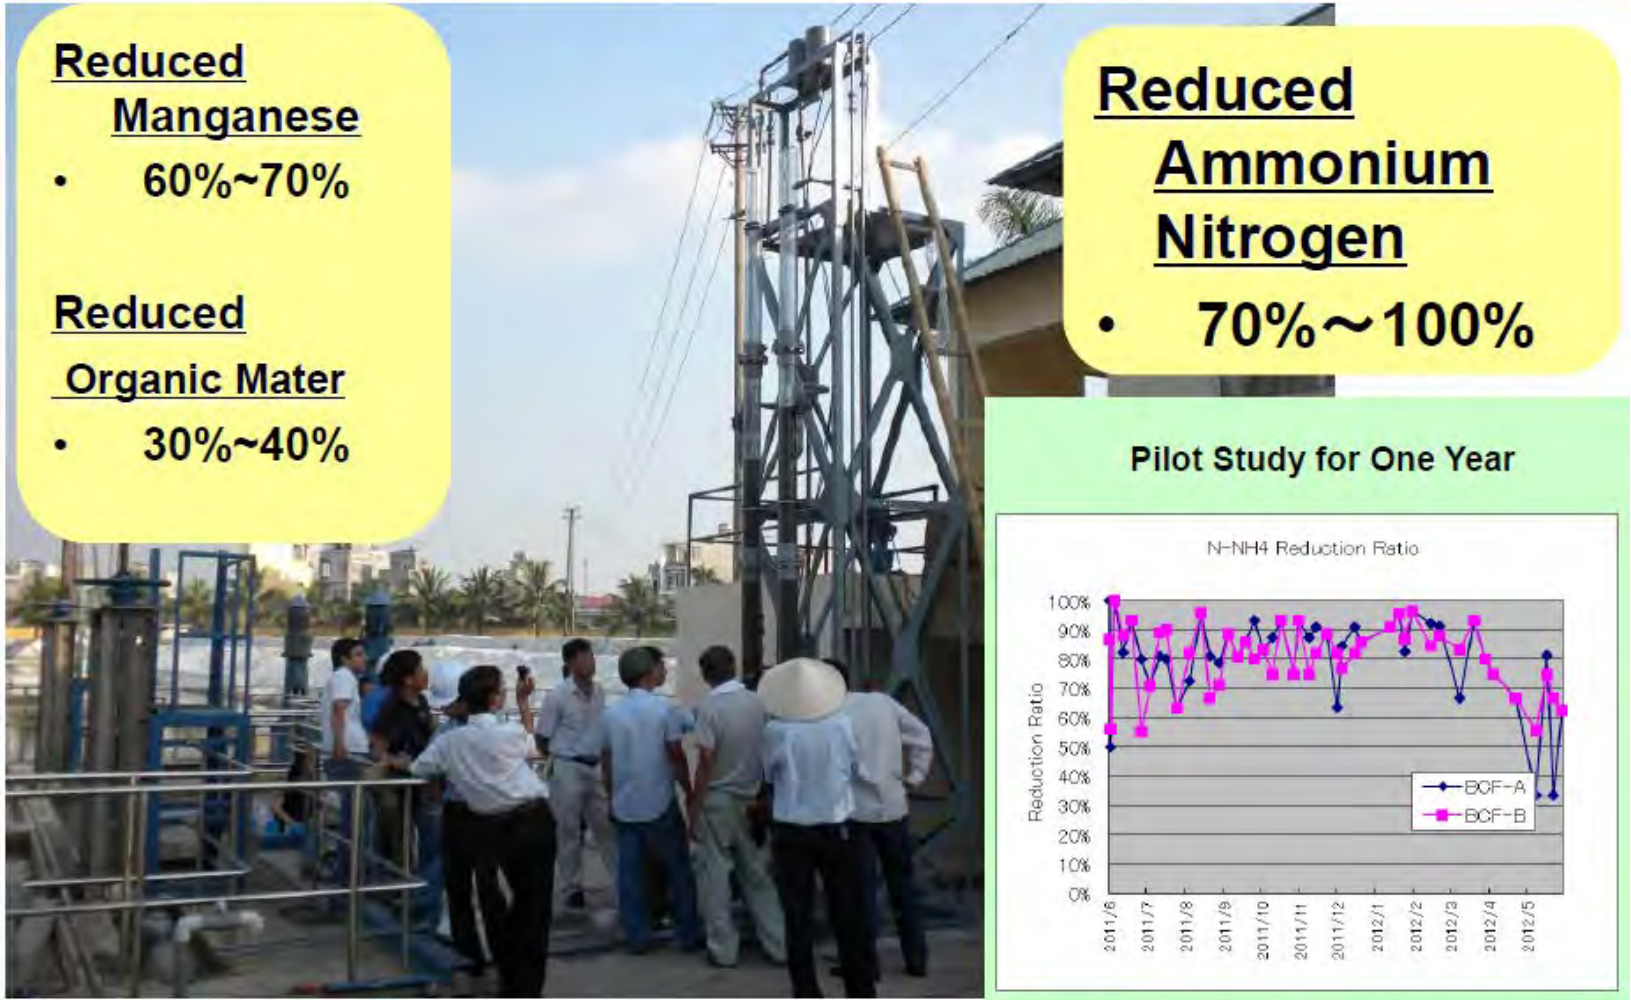
Contribution to supply safe water for the residence in Vietnam

Upward Biological Contact Filtration (U-BCF) System
The City of Kitakyushu is the inventor of U-BCF and its patentee in Japan.
The U-BCF is one of Japanese advanced treatment method applying the biological action to remove the ammonium nitrogen, manganese, iron and organic substance economically and effectively.

Cost estimation
- Construction cost of U-BCF is about **half price** compared to the **ozonation facility**.
- **Operation Cost**: around **0.36JPY/m3 (0.36US cent/m3)**



Result of The Pilot Study for U-BCF in Haiphong City, Vietnam



Activities between Haiphong and Kitakyushu, Japan

U-BCF Mutual Cooperation (May 2013)

Haiphong Water and Kitakyushu Water have engaged in mutual activities to encourage the broad use of U-BCF, because the use of U-BCF will be the most effective and advanced water treatment method in order to supply safe water for the residents in Vietnam.

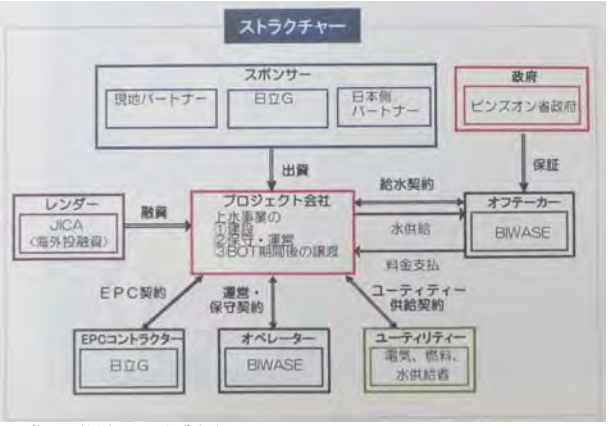
Breaking Ceremony of U-BCF at Vinh Bao (Haiphong) (May 2013)

Construction U-BCF at Vinh Bao (August 2013)

Appendix 5

Sector Loan Potential Project: プロジェクトプロファイル（水道）

Province & City	Binh Duong Province		
Project Relevant PPP/ODA Project	ビンズオン省北部新都市・工業地域上水道整備事業 (PPP インフラ)		
	Intake	Public	
	Transmission	Public	
	WTP	SPC	
	Distribution & HC	Public	
Project Profile		Implementation Plan	Long Term Plan
	Served area	N.A. ha	ha
	Served population	N.A. cap.	cap.
	Pipe length（送水管）	km	10 km
	WTP capacity	300,000 m^3/day	300,000 m^3/day
Implementation status	FS: Completed Year (2024.7 月予定)		
Implementation schedule	Project implementation starts: 2014 Operation starts: 2019		
Estimated Project Cost	導水・貯水池 118.3 mil. USD 送水・配水 51.5 mil. USD 計 118.3～169.8 mil. USD		



出典：（株）日立製作所

案件概要	
地点	ベトナム国ビンズオン省北部新都市·工業地域
事業内容	ビンズオン省水道公社向け上水道整備·水供給事業
設備規模	日量300,000m3/日
総事業費	推定:USD 386.0Million
D:E比率	70:30
レンダー	JICA(海外投融資)
スポンサー	想定:現地パートナー(水道公社が出資の意向あり) 日立グループ、その他パートナー
オフテーカー	ビンズオン省水道公社(BIWASE)
EPCコントラクター	日立グループ
オペレーター	ビンズオン省水道公社(BIWASE)
建設/操業開始	2014年着工/2016年稼動予定
Equity Back Finance	プロジェクトが計画通りに進行，水道公社がプロジェクト会社に30%出資の場合、2014年に USD34.74Millionを申請
Viability Gap Funding	Two Step Loan金利(二桁)負担の軽減等 (BOT期間中のキャッシュフロー平準化)

出典：（株）日立製作所

Province & City	Long An Province		
Project Relevant PPP/ODA Project	ロンアン省給水会社送水管建設事業 Ben Luc Water Supply Project		
	Intake	SPC	
	Transmission	SPC	
	WTP	SPC	
	Distribution & HC	Public	
Project Profile		Implementation Plan	Long Term Plan
	Served area	ha	ha
	Served population	cap.	cap.
	Pipe length（送水管）	10 km	10 km
	WTP capacity	25,000 m^3/day	48,000 m^3/day
Implementation status	FS: Completed Year (2010)　On-going　Not-implemented		
Implementation schedule	Project implementation starts:　2013 Operation starts:　2016		
Estimated Project Cost	Pipe & PS　mil. JPY WTP　mil. JPY Total　mil. JPY		
Estimated ODA Loan	Approx.　1,000 mil. JPY		
Remarks	Beneficiaries and advantages ➢ 神鋼環境ソリューショングループ、ロンアン省給水公社等が進める給水事業で、確約されたもの。Ben Luc 地区の水需要増加に早期に応えることが可能である。 ➢ 韓国が Duc Hoa 及び Ben Luc 地区の水道事業 (80,000 m^3/日) を進めているが、Ben Luc 地区では事業化の見通しが立っていない。 ➢ Phu An Thanh 給水プラントの稼働率を高めて、Ben Luc 地区向け給水事業の経営を支援する。

MINISTRY OF CONSTRUCTION

PRIMARY ISSUES ON SEWERAGE MANAGEMENT AND WASTEWATER DISPOSAL IN URBAN AREAS IN VIETNAM

TRAN THAO HUUONG– ADMINISTRATION OF TECHNICAL INFRASTUCTURE

Hanoi, May 20, 2014

MOC– 37 Le Dai Hanh– Hai Ba Trung– Ha noi – Vietnam

CONTENT

1. DRAINAGE AND WASTEWATER TREATMENT IN URBAN AREAS IN VIETNAM
2. INSTITUTIONAL FRAMEWORKS AND POLICIES
3. SOME ISSUES NEED TO BE PAID ATTENTION

SEWERAGE AND WASTEWATER TREATMENT IN URBAN AREAS IN VIETNAM

- Since1998 – sewerage works has been improved and non-stop developed
- For service ratio coverage; wastewater and sewage sludge
- For drainage, urban inundation control in correlation with climate changes
- For centralize, decentralized WWT, model, technology and selection criteria
- For sewage sludge reuse

SEWERAGE AND WASTEWATER TREATMENT IN URBAN AREAS IN VIETNAM

- Drainage service charge, environmental protection fee
- Organization models in management activities and operation in drainage activities
- Management and operation contract
- House connection
- Regulations of after-treated WW quality

SEWERAGE AND WASTEWATER TREATMENT IN URBAN AREAS IN VIETNAM

- **Construction investment of drainage system**
  - Nationwide/total drainage & sewerage projects/ WWTP (WB, ADB, KFW, JICA, Denmark, france…)
  - General characteristics: can not utilize capacity for operation, financial commitment and withdrawal cost.

4

SEWERAGE AND WASTEWATER TREATMENT IN URBAN AREAS IN VIETNAM

Enhance capacity in drainage management & WWT works

- Training method: In-house, technology transfer, in site, short/long term
- Training content: Technical, finance, arrangement, management, operation and customer relation.

COMMUNITY AWARENESS

24

INSTITUTIONAL FRAMEWORKS AND POLICIES

- Law (environment protection and water resources)
- Sewerage law is not available
- Decree, orientation
- Circular
- Regulation, sewerage regulation in local municipalities
- Local standard

25

INSTITUTIONAL FRAMEWORKS AND POLICIES

➢ **Environment protection:**

- Regulation on environment protection activities; policy, countermeasure and human resources for environment protection

Environment protection in transportation activities, goods transit import, tourism, craft village, service business…

Characteristics: general regulations, discharged object into environment, not specify discharged object Into the drainage system (including right, responsibility and payment for service supply fees..)

26

INSTITUTIONAL FRAMEWORKS AND POLICIES

➢ **Water resources Law:**

- Manage, summarize water resources, protection, exploitation and suitable utilize water resources.

Focus on basic investigation on water resources, set up monitoring system, supervision, warning and projecting on water resources, database, pollution prevention plan and overcome difficulties caused by water and planning on control, distribution of water resources.

27

INSTITUTIONAL FRAMEWORKS AND POLICIES

- Just only has Decree on urban and industrial drainage.
- **At present, MOC is submitting drainage , sewerage and WW treatment draft to the Prime Minister**
- Basic contents of Decree draft
- **Sewerage and WW treatment law is not available**

• (Important issues of sewerage and drainage hasn't been regulated in the law
•Implementation sancetion, wastewater tariff...)

28

INSTITUTIONAL FRAMEWORKS AND POLICIES

- **Circular**: regulate and instruct basic content s related to urban WW treatment, wastewater, sewage sludge reuse, drainage and inundation prevention.
- **Regulation, stipulation of sewerage in local municipalities: Institutionalize regulations on sewerage following specific conditions of local municipalities**
- **Local standard: discharge into centralized sewerage system form decentralized treatment system.**

29

PROPOSAL AND RECOMMENDATION

- Support to study , build sewerage law
- Support to set up sewerage training center

Reinforce of international cooperation, experiences exchange

30

Q&A

- THANK YOU AND
- BEST REGARDS

31

WORKSHOP ON
Human Resources Training and Development
for Drainage and Sewerage Sector in Vietnam

Primary Information of Water Supply & Sewerage Sector, and Needs of Training Center & JICA Technical Assistance Program

May 20, 2014

Yakuro INOUE, JICA Survey Team

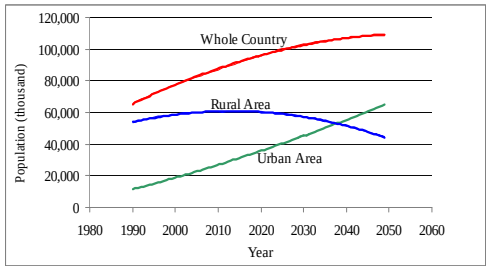
Part-1
Primary Information of Water Supply and Sewerage Sector

Population Projection

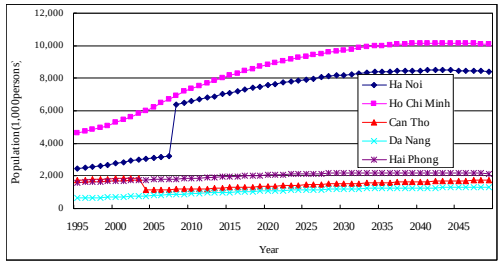
Population increases in urban area.

WS & WW Project Circumstances

- Rapid urbanization due to population increase in urban area.
- Water supply demand increases stably.
- Serious water environment pollution & enormous project needs of WS & WW management medium/small cities as well as large cities



Change of urban/rural population



Population change of five central cities

Project Needs: Orientation 2025 & Vision 2050

Water Supply Sector

- Increase of Water Supply Coverage to 100%
- Increase of Water Consumption due to life style change.
- Reduction of Non-Revenue Water
- Rehabilitation of Water Treatment Facility & Up-grading Quality

Sewerage Sector

- Service Coverage
  70-80% for IV or higher and 50% for V & Craft Village by 2025,
  100% for All Urban Areas by 2050

Financial Needs of WS & WW Sector by 2020/ 2050

Water supply : Less project needs than sewerage due to service rate of 70% at present. Replacement and NRW mitigation projects required.

Sewerage : Enormous financial needs exceeding 2011-20 orientation (8.25 billion USD) estimated by MPI.
Existing cost data uses large scale project, accordingly low cost technology and focusing on priority projects are indispensable.

Public fund investment mechanism : Low interest rate & long repayment period as well as huge financial source are indispensable.

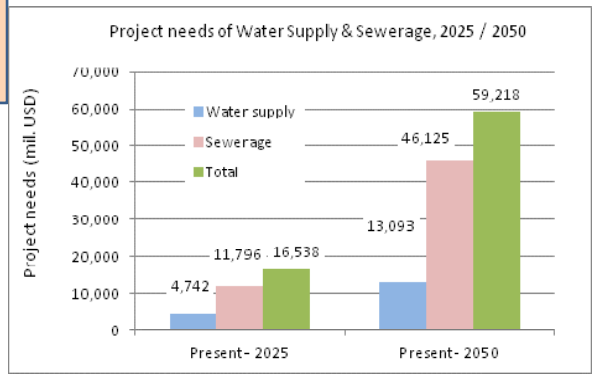
Financial Gap of Sewerage

Present: 250 mil.USD/year
2025/2050: approx. 1,000 mil. USD/year

Project Needs of Water Supply and Wastewater Sector
(Unit: mil. USD

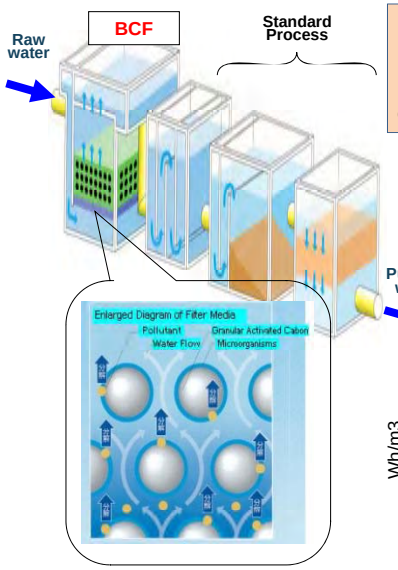
Year	Present - 2025	Present - 2050
Water supply	4,742	13,093
Sewerage	11,796	46,125
Total	16,538	59,218

Source: JICA Survey Team



Advanced Technology of Water Supply

U-BCF (Upward Biological Contact Filtration)



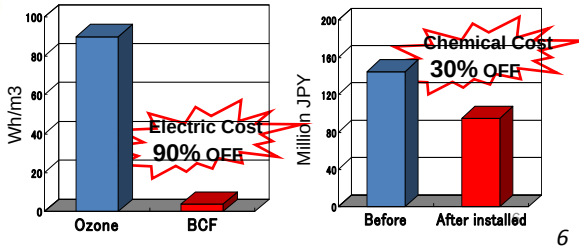
Issues
High NH_3 & Organic due to Discharged WW raises Cl dosing rate & THM formation.

Removal Rate

NH_3-N	70- -100%
Mg	60 – 70%
Organic	30 - 40%

Cost estimation

- Construction cost of U-BCF is about **half price** compared to the **ozonation facility**.
- **Operation Cost**: around **0.36US cent/m³**



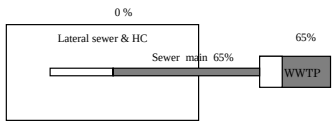
Project Programing Know-how of Sewerage

Step-wised Sewerage Development

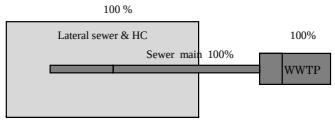
- ✓ Sewerage role in Vietnam: improvement of water environment & sanitation
- ✓ Septic tank remains & Septage will be treated by WWTP

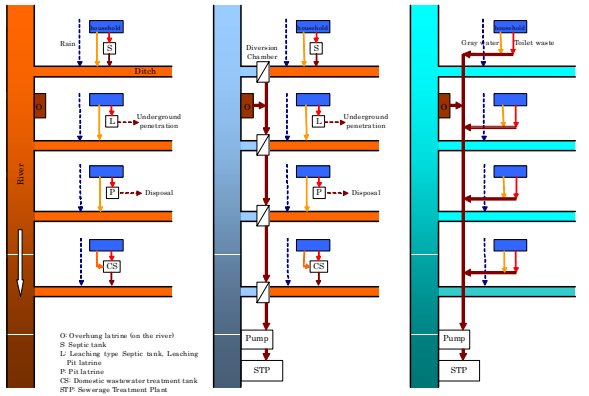
Phased project programming

Sewerage Development Year 2025



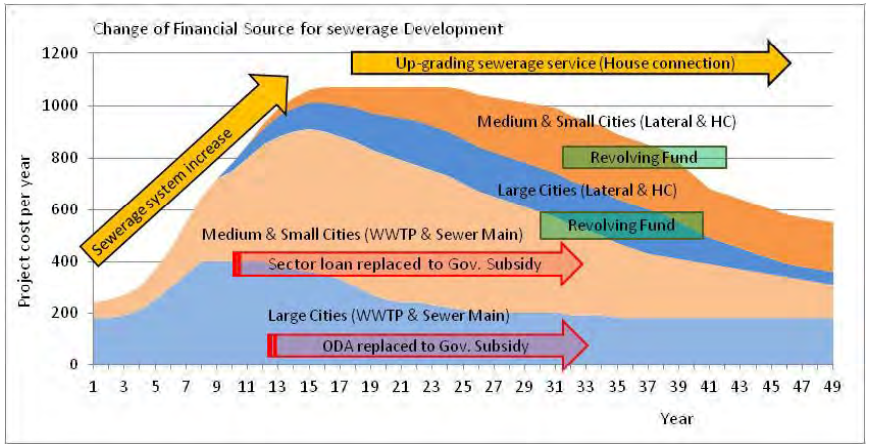
Sewerage Development Year 2050





How to Accomplish the Project Needs in Sewerage Sector?

(Financial and Human Sources for the Project Implementation)



Two Stream of Large and Medium/Small Projects

- ➢ Large cities & tourist resort followed by medium & small cities
- ➢ Sewer main & WWTP followed by Lateral sewer & House connection

Various financial source of public and private shall be provided.

Part-2
Needs of Training Center & JICA Technical Assistance Program in Sewerage Sector

Background of Training Center

Sewerage projects are urgently prevailing to whole country, and the sustainability of O&M is the most important requirement.
However, sewerage engineers and know-how are seriously lacked especially in medium and small municipalities.

Issues & regulations to be considered:

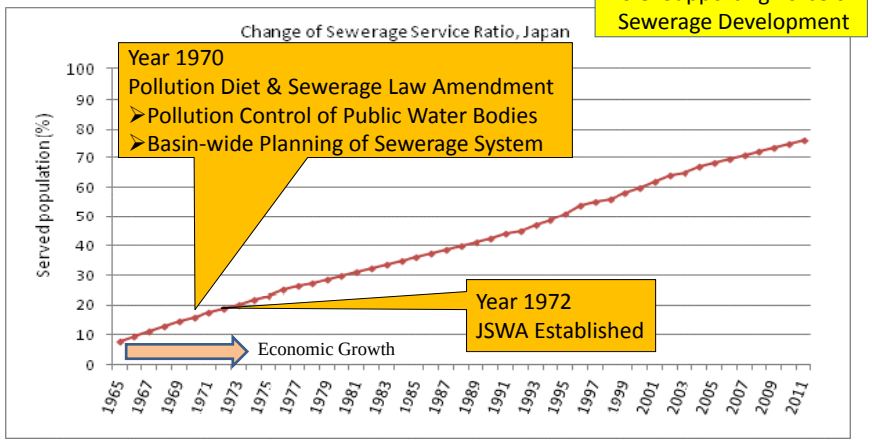
1. Sewerage and drainage planning to be in line with the Urban Planning
2. Standards and norms for wastewater discharged
3. Connecting to public sewerage and drainage, and exemption
4. Centralized and decentralized wastewater treatment models; management of WWTP
5. Monitoring of wastewater quality (households, agencies, service and industrial enterprises…)
6. Sanctions for violations of organizations and individuals.
7. MOC' contribution: or cities III & downwards…
8. Development of database, criteria for selection of technology & treatment models, investment forms (PPP), sludge treatment…
9. Mechanism and policies for investment in sewerage and wastewater treatment
10. Management responsibilities at central and local levels in sewerage, drainage, flood control and environmental management.
11. Wastewater tariff:

Training & Consultation Center learned from Overseas

(1) Historical Background: Japan Sewage Works Agency

Role of JSWA (Japan Sewage Works Agency)
- ➢ Planning, Design & Construction Super Vision of Sewerage Project
- ➢ Training of Staffs of Municipality Gov. **& Technical Certification**
- ➢ Research & Technology Development

Role: Supporting Force of Sewerage Development



Training & Consultation Center learned from Overseas

Roles: Japan Sewage Works Agency

- Japan experienced severe water pollution at the public water bodies due to rapid economic growth in 1960's.
- To cope with the above pollution problem, Japanese Central Government provided huge allocation of budget for sewerage works and established a support agency for local municipalities to promote sewage works.
- The Japan Sewage Works Agency (JS) shall construct and carry out operation and maintenance of main facilities of sewer systems based on requests received from local governments.
- The JS shall promote improvement of sewer systems by offering technical assistance related to wastewater works, by training wastewater engineers, and by pursuing research and technology development on water pollution control for possible practical applications.

Recommendation: Similar model can be applied to Vietnam.

Project Implementation Support

(1) Necessity of the Project Implementation Support for the Operation of Water Sector Loan

- Governments have insufficient experience and human resources for the management of the sector loan and its sub-project so far.

(2) Function of Implementation Support Team (Consultant)

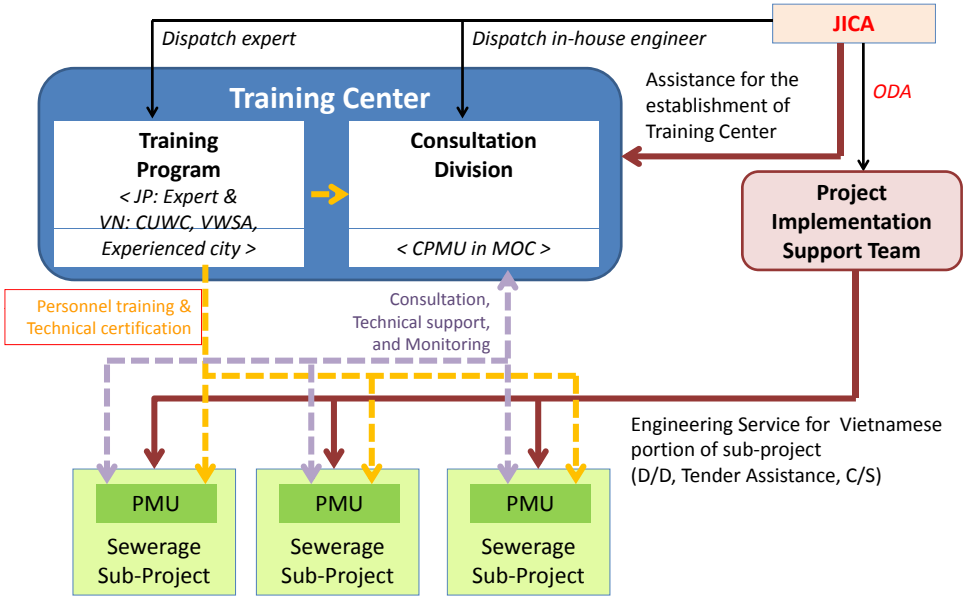
1) Short Term (First Tranche): Financed by JICA Sector Loan

- Engineering works (D/D, Tender Assistance, and C/S) for Vietnamese portion of the project.

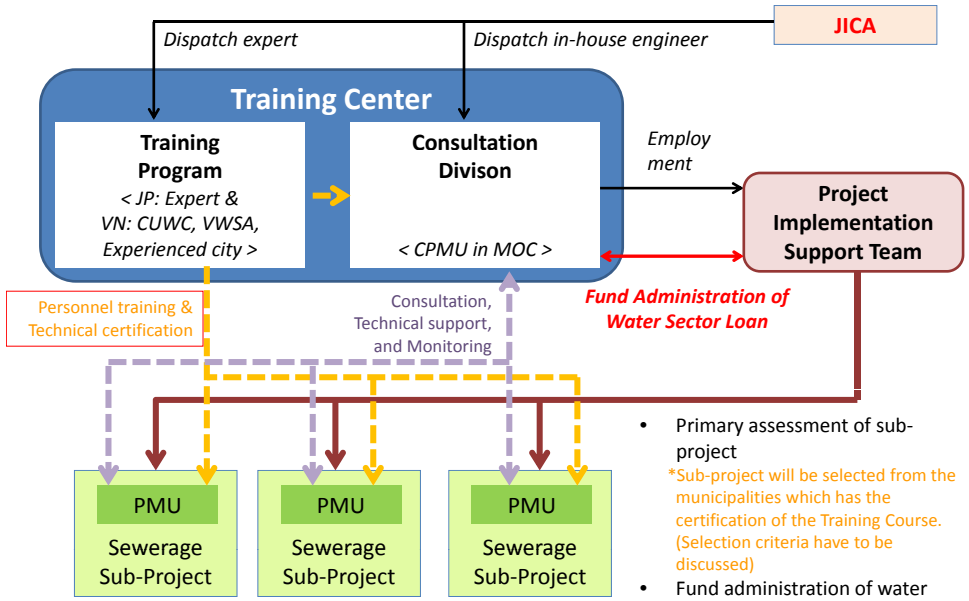
2) Middle Term (Third Tranche or later): Hired by MOC

- Primary assessment of sub-project
- Fund administration of the water sector loan

Project Implementation Support (Short Term)



Project Implementation Support (Mid. & Long Term)



- Primary assessment of sub-project
  *Sub-project will be selected from the municipalities which has the certification of the Training Course. (Selection criteria have to be discussed)
- Fund administration of water sector loan

Thank you

&

Xin Cám ơn

HUMAN RESOURCES FOR URBAN DRAINAGE MANAGEMENT WASTEWATER TREATMENT – ISSUES NEED TO BE CONCERNED

Mr. Trần Quang Hưng

Vice Chairman cum General Secretary, Vietnam water supply and sewerage Association (VWSA)

1. General Background of urban drainage

There has been over 770 urban areas at all types with more than 34 million people at 63 provinces so far. If new urban areas was considered as urban level, even the lowest category (type V), urban infrastructure with drainage system will be formulated. However, only urban with type III upward, water supply and drainage works have been relatively done to meet the people's requirements. Therefore, drainage system with management system and O&M are just only available at 78/770 equivalent to 10% of urban areas.

Different from urban water supply sector, management of urban drainage is spread. At present, there are 73 enterprises involve in urban drainage management in the whole country in which 6 urban areas have separated drainage companies such as Hai phong, Hanoi, Thai Nguyen, Da Nag, HCM city and B area- Vung Tau; 29 water supply companies and 38 urban work companies concurrently manage drainage field. Drainage management force at sewerage and drainage companies or urban works companies will be divided into enterprises or sewerage and drainage management team.

Investment, construction, management, operation of drainage system and wastewater treatment facilities are also scattered in the whole country. Almost the investment and construction period are assigned to a unit under the PPC for its management. After completion of construction, the work will be transferred to drainage enterprise for O&M work. However, some local municipalities assign this work to irrigation unit or urban flood control center or lease an operation management company under the contract between urban management authority and special company.

There are 300 industrial zones and economic zones in Vietnam. These zones are responsible for drainage sewerage and wastewater management by itself but wastewater treatment system just covered 60% of industrial zones. Hospitals, craft villages are almost lacking of WWTP system. Drainage and sewerage companies collect water tariff through house connection in to combined sewer system but WW quality monitoring, pollution level determination when connect it to the combined sewer system are implemented by environment management agency or environment police decides to sanction of violations.

Therefore, urban sewerage, drainage management and urban and industrial WWT are mainly under the management of local municipalities but it is under the regulation and influence of multiple agencies as MONRE, MOC and MOIT etc…

The situation of spreading of current institution arrangement have much influence on management and operation work of urban sewerage and drainage in general and on enhancement of human resources capacity to meet the demand of urban, socio-economic development.

2. Current situation of human resources in the field of WW management and requirements need to be solved

Following the current statistics, total staff of urban sewerage and drainage companies are about 13.000 people. Woman staff and woman worker is account for 25% and 18%, respectively. Showing that sewerage and drainage is hard work sector, woman worker is in low rate.

- **Age:** On average, 64% of staffs is under 40 years old, 13% is more than 50 years old. In which 80% of management officers at the level of head and vice divisions, manager of enterprises is under 50 years old. 75% of professional staffs and 62% of technical staffs are under 40.
- **Qualification:** more than 90% of management officer graduated universities in which leader:27% , management staff: 21% and officer: 18% are from water supply, drainage and environment faculty.
  60% of technical staff reached skill of level 4 upward but there are only 44% of which is not really trained in this sector.

On the other hand, urban sewerage and drainage management company usually seasonally outsource. They hire social labor force or agricultureal labor to do the simply work but not continuously such as: channel revetment, flood protection, or flood tide etc.., these labors are not in the list of company's workforce but fluctuate from 10- 20% of main labor force of the company per year.

Regarding training, There are 12 universities possess environment faculty but graduated trainees can meet the market's requirements are from university of civil Engineer, HAU, water resources university and university of technology. Some colleges under the MOC train technical workers specialty in pipe line installation, operation treatment area for both water supply and WW. There's no college or vocational school specialty in operation of WWTP.

Besides universities, colleges and vocational schools, drainage management companies of urban areas especially in urban area Type 1 also hold the training courses to facilitate the management, operation skills of staffs or sometime hold the raise salary contest. ODA projects from Japan,, German, Denmark and projects under the program of WWB or ADB also arrange traning courses and programs on management and operation works. Since 2011 up to now, with the assistance from

German water association and some German institutes, VWSA held some pilot training courses aiming to enhance capacity for management staffs of surrounding drainage companies. Subjects of training courses focus on drainage system palnning, urban flood control and general knowledge on O&M, WW tariff.

Generally, current human resources of urban drainage management companies can meet the requirements of management, common urban drainage system maintenance. Also they can cope with weather occurs such as flood, storm and rain. Labor forces of drainage management companies of urban area as well as special urban area, type 1, 2 urban areas had experiences, knowledge and responsibility in management and operation of drainage system. Also they are dedicated to the work although the work is hard.

3. Innovation of model, pay attention to human resources development for urban and industrial sewerage and drainage management companies.

Vietnam is one of the countries with rapid economic growth, population and urbanization. Vietnam is also a country with a long coastline, complex weather and heavily suffered from climate changes as flood tide, rising sea level, storms, flood with the complicated occurs. All the fluctuation of population, urbanization, climate change affects to drainage management. Orientation of urban and industrial drainage to 2025 and vision 2050 approved by the Prime Minister has set out the very specific target for drainage sector and also set the basic solutions on science, technology, organization and human resources development respectively . Seeing the two basic targets from now to 2025, type 4 urban areas need to " *eliminate the frequent inundation by storm water and expand the service ratio of drainage system to 100%. Type IV urban areas and upwards will try to have WW collection system and centralized domestic WWTP; domestic wastewater ratio will be collected and treated at 70 - 80%, after treated wastewater will reach standard.".* Over the past 10 years, Although the Government has utilized ODA loan for drainage field, we have 18 commission WWTPs and more than 40 WWTPs will come into operation from now to 2020, Yen So pumping station in Hanoi and Nhieu Loc, Thi Nghe channel and WWTPs with capacity of over 200,000m3/day in HCM city, the government authorities has been headache whenever long hour rain comes. Hanoi still suffers from floods if rain lasts about one hour and HCM city has to cope with severe flood tide. Moreover, how to treat sewage sludge, bad odor of WWTPs and cost for management and operation of WWTPs is a big problem regardless the technology matching, following centralized or decentralized model in sewer connection, WW collection etc. It's not easy to solve all these above mentioned in several upcoming years.

Hence, human resources development of drainage sector, finance, technology, equipment investment are very important to handle with the above mentioned issues.

But a question need to be answered is how to arrange if we can not clarify the importance of drainage, urban and industrial wastewater treatment.

Drainage management agency has to bear consequences of many factors. Mistake in planning, low capability in selection of investment on technology and capital source and also the unconscious of the community in building, business and in daily life are subjective factors which Vietnamese side can overcome . Pay much attention to improve the quality of drainage management agency without raise awareness, responsibility of community and knowledge in macro vision on drainage and WW field, targets setting for the orientation will lack of feasibility.

VWSA highly appreciate guidelines, ideas of international organizations which are concerning to technical assistance, human resources quality enhancement for drainage management field. We are willing to cooperate, share experiences and mobilize members of the Association participate in every activities for the success of Water sector in Vietnam. VWSA's principle is that every activities for human resources development must base on "approach following demand" in order to bring practical learn to members. And also we expected that this program positively impact to government authorities, local authorities and community because only drainage management agency is no meaning in the process of improvement of this sector.

CURRENT STATUS OF HUMAN RESOURCES AND EXISTING ISSUES IN OPERATION AND MAINTENANCE MANAGEMENT OF DRAINAGE/SEWERAGE AND WASTEWATER TREATMENT SYSTEM IN PROVINCES. PROPOSALS AND RECOMMENDATIONS.

The report is written accordance to suggestion of Administration Technological Infrastructural – Ministry of Construction and JICA for workshop on: ***"Human Resources Training and Developing for Drainage and Sewerage Sector in Vietnam"*** *on 20/5/2014*

Writer: **Le Thanh**, Director of Phu Dien Company &
Nguyen Phuong Quy, General Director of SFC Vietnam Environment Corp.

Phu Dien Construction Investment and Trading Joint Stock Company and SFC Investment Development for Environment Corp. have many experiences about BT – BOT Investment, Operation and Maintenance (O&M), supply technology, design, construction, training, starting up and commissioning, transfer technology (EPC) for wastewater treatment plant in Vietnam. During the actual construction of more than 30 wastewater treatment plants in Vietnam, accordance to the suggestion of Administration of Technological Infrastructural - Ministry of Construction, we would like to present some contents about: Current status of Human resources and existing issues in Operation and Maintenance managemet for Drainage/Sewerage and Wastewater treatment system in provinces; we also would like to present the proposals as well as recommendations. In the framework of this report, we also only mention issues related to waste water treatment sector that PHU DIEN and SFC have many experiences and capital, particularly **WASTEWATER TREATMENT PLANT (WWTP)**, not including operation and maintenance management for the drainage system.

I. REQUIREMENTS FOR HUMAN RESOURCES

Operation Management for WWTP is difficult balance process between keeping operation to archive environmental standard and rising not much secondary waste which harm for environment and human's health with suit cost. It also includes asset management, failures and repairs management to archive requirement about longevity and efficiency for the project as well as machinery. Thus, human resources must be equipped the knowledge of many fields, not only in technology, equipment but also in management skills ,**THE KNOWLEDGE ABOVE IS OBTAINED NOT ONLY IN TRAINING PROCESS AT THE SCHOOL BUT ALSO IN ACTUAL EXPERIENCES**.

- Knowledge about entire technology process;
- Knowledge about the technology of each treatment stage;
- Knowledge about the machine, equipment;
- Knowledge about the characteristics of the influent and the fluctuations;
- Knowledge about the related standards and regulations
- Knowledge about the value and efficiency of the current operation of machinery and entire technological process
- Knowledge about operated history and failures, incidents

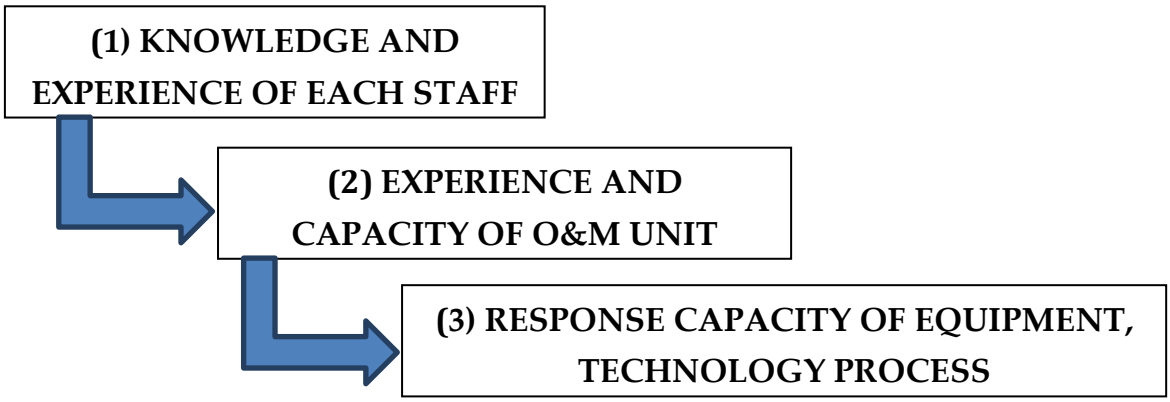
- Knowledge about consumption cost for each period;
- Knowledge and experience in community relations where projects operate;
- Knowledge about environmental assessment
- Ability to communicate and re-training for new operator;

Table 1. Skills and knowledge of operation management positions

Otherwise, wastewater treatment project – especially **WWTP – IS THE TECHNOLOGICAL PROJECT WHICH NEED KNOWLEDGE OF MULTI-FIELD: BIOLOGY, CHEMISTRY, MECHANIC, CONTROL, ELECTRIC ... AND MANAGERS MUST HAVE SYNTHETIC KNOWLEDGE**. Generally, WWTP includes many positions with human resources in many fields.

- General Manager - Assistant for Manager; - Administrative Assistant;; - Operation manager; - Maintenance manager; - Operation shift manager; - Operation technician; - Maintenance technician; - Operation trainer; - Maintenance trainer; - Technological process manager; - Lab manager - Chemical Manager; - Chemical Engineer; - Biological Engineer; - Lab staff; - Maintenance supervisor; - Technological Engineer - Mechanical Engineer; - Electrical Engineer - Control Engineer; - Asset Management - Technician, worker - Security, industrial cleaner, odds
Table 2. Human positions in WWTP operation chart

It is clear that the factors affect to efficiency of operation management for general WWTP as well as the hi – tech WWTP is **(1). KNOWLEDGE AND EXPERIENCE OF EACH STAFF , (2) EXPERIENCE AND CAPACITY OF OPERATION - MANAGEMENT UNIT AND (3) RESPONSE CAPACITY OF EQUIPMENT, TECHNOLOGY PROCESS OF WWTP.**



Fingure 1: Factors decide efficiency of operation – management WWTP

Because operation management WWTP need multi – field knowledge, thus team work is very important. Because of the multi – field, experience and synthesis knowledge are very important. Thus, besides **HUMAN RESOURCE** factor, **EXPERIENCE AND CAPACITY FACTORS OF OPERATION MANAGEMENT UNIT ARE VERY IMPORTANT**. **PERIOD OF OPERATION MANAGEMENT WWTP IS VERY IMPORTANT, FOR ALONG TIME, IS A DECIDED PERIOD FOR EFFECTIVE INVESTMENT**. In investment stage, there are many legal document to state about selecting consultant contractor, construction contractor which have enough capacity, however there is not legal document to state about capacity condition for the contractor as well as the operator resource who can manage and operate the project.

II. CURRENT RESPONSE

The training of human resources is devided into types as follows

1. <u>The training in universities, colleges, vocational schools:</u> equip to individuals with knowledge about chemistry, biology, economic…Some universities training about drainage that supply for trainer knowledge about wastewater treatment but mainly are technology and human for drainage, includes Ha Noi Universty of Technology, Ha Noi Contruction University, University of Economics, Thang Long Universty, Ha Noi Universty of Science….Ho

Chi MinhUniversty of Technology and some universities in Da Nang, Hue, Can Tho. These universities are mainly equipped with base knowledge, theory is mainly; attach special importance to higher education but lack of vocational school and skilled labour.

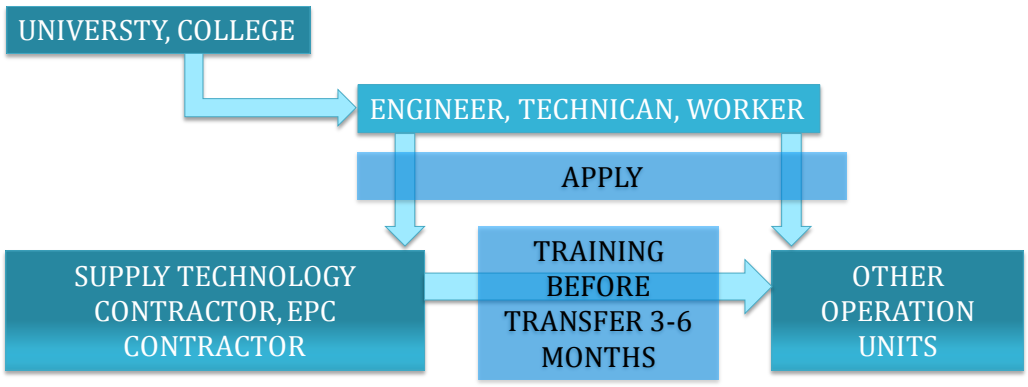
On the other hand, a very specific definition for wastewater treatment is applied various technology (drinking water treatment is only applied some of technologies) and the technology is developing very quickly. The technology is also provided and developed by the technology unit, the EPC contractor and only they can master technology (not design consultant and construction units). Therefore, to carry out the training in a school for a particular technology is difficult, and students cannot learn deeply conditioned to all technologies. Technology of a WWTP is only determined when building WWTP.

2. Training when transferring technology for units which are not understand the technology and operation management: shall be carried out by the construction company, transfer the technology to units that designated operation- usualy is a local dranage and supply company during execution process. The tranining process for a period is from 3-6 months. Operators are appointed from human resources or recruited new staffs by drainage and supply Water Company. For a limited period, workers are trained a new job without experience ; the training and certification performed by the Contractor that makes the draiage and supply water company was not able to get the operation within the limited time, or incurred additional training cost, or are difficult to ensure quality as well as operating costs . For large-scale WWTP, the training often does not bring efficiency. In Yen So WWTP, Binh Hung WWTP, the training unit was still not operatedWWTPimmediately after the training process.
3. Training regularly, supplementation, replacement personnel: The fact that operator must be required to train through basic training in the university or college but then must necessarily practical training in WWTP. In the fluctuation labor situation, the operating units are trained to perform the replacement operation or

management of new updated technology. The technology do not understand, as well as lack of experienced personnel will not be made for training replacement workers - especially with the new technology is a major challenge for the local Drainage and Supply Company.

4. <u>For the companies that master the technology and have a skillful staff:</u>

   Join-Venture Phu Dien-SFC is the master technology, experienced through construction work , training and technology transfer for WWTP in a large cities ; available manpower . The company as Phu Dien, SFC will be able to get the right management operation without any training process by training and technology transfer company . In fact as Yen So WWTP, Phu Dien and SFC just need 5 days to take over operation and maintenance and has been successful. The human resources of Phu Dien and SFC has been training through universities, colleges, vocational school but experienced in many years and the company had trained regularly updated for new technology. The fact that a human must first be trained through schools with expertise and experience a reality at least from 2 to 10 years depending on position can meet job requirements



Fingure 2: Training process

There is not legal document clearly to stipulate for capacity of company, operation manager, so that the training of human resources are still many limitations.

III. PROPOSALS AND RECOMMENDATIONS

On the basis of the current situation above, we have the following recommendations to ensure the operational management WWTP promotes the most effective:

1. Need to have clear rules, in particular the capacity of company and individuals involved in the management and operation of WWTP.
2. Should have a training program for operator resources in WWTP, link between training company and the prestigious, ability and experience business of the operation, especially technology is mastered to ensure learning - just reach out the new technology as well as the management and operation skills in practice.

Ha Noi, Dated 15/5/2014

Lê Thanh: General Director of Phu Dien Construction Investment and Trading Joint Stock Copany;
Nguyễn Phương Quý: General Director of SFC Viet Nam Investment Development for Environment Corp

NHỮNG NỘI DUNG CƠ BẢN VỀ ĐÀO TẠO QUẢN LÝ VẬN HÀNH HỆ THỐNG THOÁT NƯỚC ĐÔ THỊ

PGS.TS TRẦN ĐỨC HẠ
Trưởng Bộ môn Cấp thoát nước – Môi trường nước, trường Đại học Xây dựng;
Phó Viện trưởng Viện Nghiên cứu Cấp thoát nước và Môi trường

1. Hiện trạng thoát nước và XLNT đô thị và khu công nghiệp

- Hệ thống thoát nước ở các đô thị Việt Nam chủ yếu là HTTN chung (dùng chung đường cống hay kênh mương cho cả nước mưa và nước thải).
- Bình quân khoảng 50% đến 60% diện tích đô thị có cống và mương thoát nước.
- Khoảng 60% hộ gia đình được đấu nối thoát nước vào hệ thống cống chung (WB, 2013)

Hiện trạng thoát nước và XLNT đô thị và khu công nghiệp

- 19 nhà máy xử lý nước thải (XLNT) đô thị đã đi vào vận hành và 31 nhà máy XLNT đô thị khác đang được xây dựng với tổng công suất khoảng 670.000 m^3/ngày;
- 66% khu công nghiệp đã xây dựng trạm XLNT tập trung với số lượng 118 trạm và tổng công suất 431.510 m^3/ngày.

2. TÌNH HÌNH ĐÀO TẠO CÁN BỘ VÀ CÔNG NHÂN KỸ THUẬT VỀ THOÁT NƯỚC

- Toàn quốc hiện nay có khoảng gần 10.000 cán bộ công nhân ngành nước nhưng lực lượng này phân bố không đều, tạo thành hình nấm trong cơ cấu nhân lực (Hội Cấp thoát nước Việt Nam).
- 40 trường đại học, cao đẳng và trung cấp kỹ thuật có đào tạo liên quan đến lĩnh vực Cấp thoát nước , Kỹ thuật môi trường và Kỹ thuật tài nguyên nước. Trong đó chỉ có 4 trường đại học được đào tạo kĩ sư ngành cấp thoát nước (mã số: 52110104), 4 trường cao đẳng và 3 trung tâm đào tạo về cấp nước đô thị.
- Không có một trường trung học chuyên nghiệp hoặc trung học nghề nào đào tạo chuyên về thoát nước và XLNT.

/Nguồn: IWASSE, 2013/

3. NHU CẦU ĐÀO TẠO VỀ VẬN HÀNH VÀ BẢO DƯỠNG HTTN & XLNT

Cơ cấu đội ngũ lao động phục vụ trong lĩnh vực kỹ thuật hạ tầng

- Các nhà phát minh và đổi mới công nghệ : 2,5%;
- Các nhà quản lý : 6,5%;
- Các nhà kỹ thuật công nghệ: 9%;
- Công nhân lành nghề : 22%;
- Công nhân không lành nghề và lao động giản đơn: 65%.

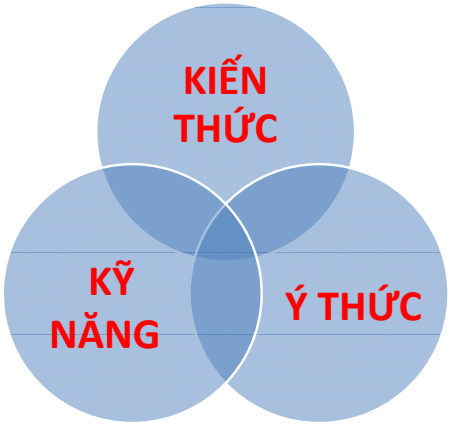
(**Theo tổ chức lao động Quốc tế (ILO) của Liên hợp quốc**)

NHU CẦU ĐÀO TẠO VỀ VẬN HÀNH VÀ BẢO DƯỠNG HTTN & XLNT

- Việt Nam có 770 đô thị (Bộ Xây dựng, 2013) và 283 khu công nghiệp (Bộ Kế hoạch và Đầu tư, 2012).
- Quyết định số: 1930/QĐ-TTg ngày 20/11/2009 của Thủ tướng Chính phủ phê duyệt định hướng phát triển thoát nước đô thị và khu công nghiệp Việt Nam đến năm 2025 và tầm nhìn đến năm 2050:

"Củng cố, mở rộng các trường dạy nghề và nâng cao chất lượng đào tạo công nhân ngành nước phục vụ yêu cầu quản lý, vận hành và bảo dưỡng hệ thống thoát nước."

4. Nội dung đào tạo quản lý vận hành HTTN và XLNT đô thị



A. Kiến thức thoát nước và XLNT đô thị

Khái niệm thoát nước đô thị:

- Tổ chức thoát nước và XLNT (XLNT tập trung, XLNT phân tán/ tại chỗ, ...)
- Các loại HTTN (chung, riêng, nửa chung, nửa riêng,...)
- Mạng lưới thoát nước mưa, nước thải và các công trình trên MLTN;
- Cấu tạo các loại công trình thoát nước (cống/ mương thoát nước, giếng thăm/hố ga, hồ điều hòa, trạm bơm nước mưa, trạm bơm nước thải, giếng tách nước thải/ xả nước mưa CSO, cống xả nước thải,.....

Kiến thức thoát nước và XLNT đô thị

Xử lý nước thải đô thị

- Các phương pháp và công trình XLNT (xử lý cơ học, xử lý sinh học, xử lý hóa lý,...);
- Các phương pháp và công trình xử lý bùn cặn (tách nước, ổn định bùn cặn, làm khô bùn cặn,...);
- Các phương pháp và xử lý mùi;
- Các phương pháp khử trùng;
- Các phương pháp và công trình xả nước thải ra nguồn tiếp nhận.

Kiến thức thoát nước và XLNT đô thị

Các kiến thức bổ sung khác:

- Tổ chức quản lý vận hành hệ thống thoát nước và nhà máy XLNT
- Các tiêu chuẩn và quy chuẩn kỹ thuật kiểm soát chất lượng nước và quá trình xử lý nước
- Các kiến thức cơ bản về cơ khí, điện kỹ thuật và tự động hóa trong quá trình vận hành bảo dưỡng các công trình, thiết bị thoát nước và XLNT;
- Các kiến thức về an toàn lao động trong quá trình vận hành và bảo dưỡng công trình và thiết bị thoát nước và XLNT.

B. Kỹ năng vận hành bảo trì các công trình, thiết bị thoát nước và XLNT

Lắp đặt, vận hành và bảo trì đường ống và thiết bị:

- Lắp đặt, vận hành và bảo trì, sửa chữa các thiết bị cơ điện (máy bơm, máy thổi khí, máy khuấy, máy ép bùn,...);
- Lắp đặt cống và đường ống thoát nước (cống tự chảy, đường ống áp lực,...)
- Lắp đặt, vận hành và sửa chữa các thiết bị điện và thiết bị điều khiển (tủ điều khiển, tủ điện, thiết bị đo on-line,...)
- Lắp đặt và kiểm soát các thiết bị đo lưu lượng, giếng đấu nối nước thải,...
- Vận hành các thiết bị nạo vét bùn cống thoát nước.

Kỹ năng vận hành bảo trì các công trình, thiết bị thoát nước và XLNT

Vận hành và bảo trì hệ thống thoát nước và XLNT:

- Vận hành và bảo trì mạng lưới thoát nước mưa và các công trình trên đó;
- Vận hành và bảo trì mạng lưới thoát nước thải và các công trình trên đó;
- Vận hành và bảo trì các trạm bơm thoát nước mưa và nước thải;
- Vận hành và bảo trì các công trình XLNT (các công trình xử lý bậc 1, xử lý sinh học bậc 2 và bậc 3, xử lý bùn cặn, xử lý mùi, khử trùng nước thải,...)
- Vận hành và bảo trì các cống xả nước thải và nước mưa ra nguồn tiếp nhận.

Kỹ năng vận hành bảo trì các công trình, thiết bị thoát nước và XLNT

Kiểm soát quá trình XLNT và bùn cặn:

- Thử nghiệm jar-test để xác định liều lượng hóa chất quá trình XLNT và bùn cặn;
- Nuôi cấy vi sinh vật và đưa công trình XLNT bằng phương pháp sinh học vào hoạt động;
- Phân tích các chỉ tiêu chất lượng nước thải và bùn cặn trong phòng thí nghiệm;

Kỹ năng vận hành bảo trì các công trình, thiết bị thoát nước và XLNT

Tổ chức hoạt động của hệ thống thoát nước và nhà máy XLNT:

- Sử dụng PLC để điều khiển quá trình vận hành hệ thống thoát nước và XLNT
- Vận hành hệ thống quan trắc tự động chất lượng nước thải xả ra nguồn tiếp nhận
- Đấu nối nước thải từ các hộ gia đình vào cống thoát nước thải

5. TỔ CHỨC VÀ PHƯƠNG PHÁP ĐÀO TẠO

A. TỔ CHỨC ĐÀO TẠO

- Hình thức 1: Đào tạo tập trung theo chương trình đào tạo nghề hoặc trung cấp kỹ thuật 2 năm;
- Hình thức 2: Đào tạo chuyên đề ngắn hạn theo khóa học;
- Hình thức 3: Đào tạo tại chỗ (tại các nhà máy XLNT).

B. PHƯƠNG PHÁP ĐÀO TẠO

- Đào tạo lý thuyết cung cấp các kiến thức cơ bản về thoát nước và xử lý nước thải;
- Đào tạo thực hành tại các xưởng thực nghiệm, phòng thí nghiệm, mô hình pilot,... để tạo kỹ năng nghề.
- Ngoại khóa: tham quan trao đổi kinh nghiệm, seminar theo nhóm,...để nâng cao hiểu biết, kỹ năng và ý thức nghề nghiệp.

WORKSHOP ON
Human Resources Training and Development
for Drainage and Sewerage Sector in Vietnam

Proposed Training Center learned from Oversea' Experiences

May 20, 2014

Takehiko KAWAI, JICA Survey Team

6-1

4.1 Necessity of Training Center

(1) Necessity of Training Center

- Together with the financing mechanism proposed in the previous section, a sustainable capacity building mechanism is necessary especially for sewerage development in medium and small urban areas due to insufficient their human resources.
- Sewerage sector is developing rapidly in Vietnam.

Result of Interview Survey

- *Many sewerage projects will be implemented*
  - ✓ *Commissioned 21 WWTPs in 10 cities*
  - ✓ *Under implementation 31 WWTPs in 21 cities*
- *Sewerage tariff is not sufficiently implemented*
- *MOC needs the capacity building in the water and sewage works sector*

Result of Questionnaire Survey

- *All training programs in the past 3 years were provided by foreign institutions.*
- *There is an insufficient number of trainers in the organization.*
- *Upcoming implementation of Yen Xa project*

Ha Noi, HCM & MOC strongly request practical training & consultation center

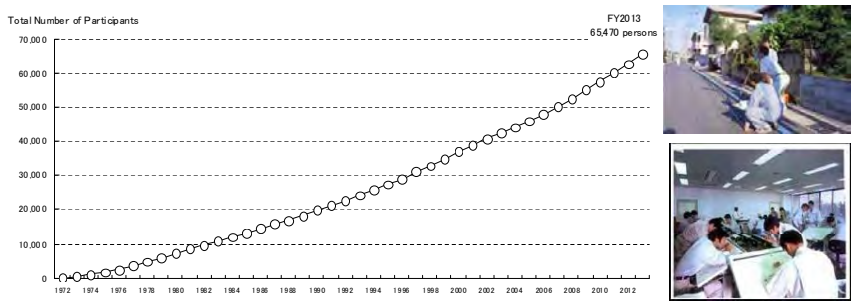
4.1 Necessity of Training Center

(2) Japanese Experience: Japan Sewage Works Agency (JS)

- Japan experienced severe water pollution in public water bodies due to a rapid economic growth in the 1960s.
- To cope with the above pollution problems, Japan's Central Government provided a huge allocation of budget for sewage works and at same time established a technical assistance agency to build the capacity of local governments.
- The Japan Sewage Works Agency (JS) constructs, operates and maintains the main facilities of sewerage systems based on requests received from local governments.
- JS promotes the improvement of sewerage systems by offering technical assistance in the field wastewater works, by training wastewater engineers, and by conducting research and technology development on water pollution control for possible practical applications.
- A similar model can be applied in Vietnam.

4.1 Necessity of Training Center

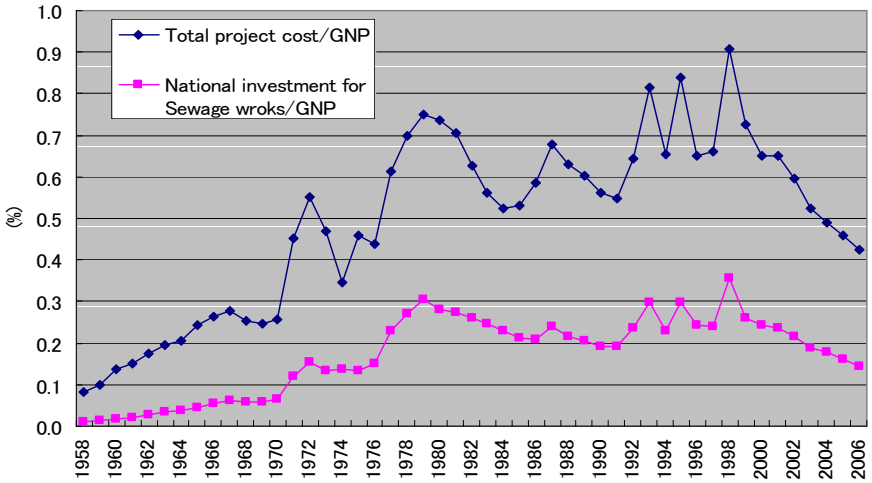
(3) Japanese Experience: Total Number of Trainees in the JS Training Center



- Over the past 40 years, the total number of trainees at the JS Training Center is more than 60,000 persons.
- According to an analysis made from JS in 1991 on former trainees, the percentage of sewage works engineers engaged in local governments who were trained at the JS Training Center was 32.3 %.

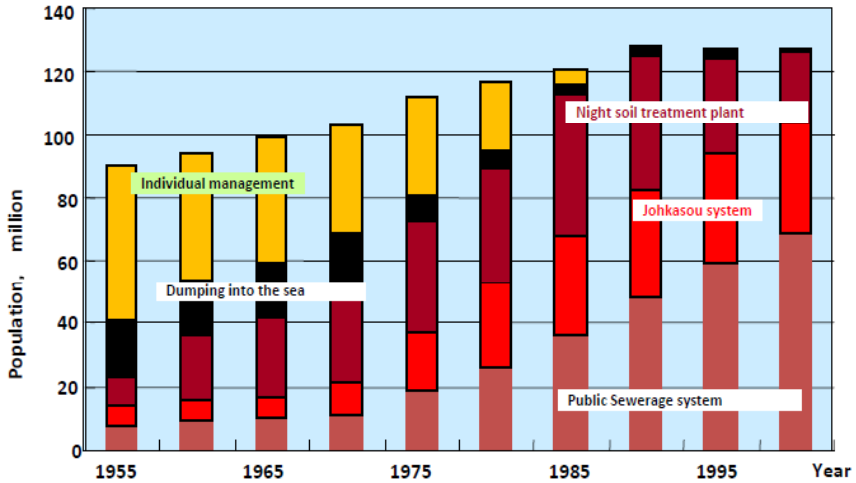
4.1 Necessity of Training Center

(4) Sewerage Investment Cost/GDP in Japan(1958-2006)



4.1 Necessity of Training Center

(5) Population trends for on-site and off-site sanitation systems in Japan



Development of domestic wastewater management in Japan (1955-2000)

4.2 Current Situation of Training

(1) Training Program in Vietnam

(Inside Vietnam)

- Vietnam Water Supply and Sewerage Association (VWSA): organizes workshops and seminars on sewage works in association with international institutions and organizations
- College of Urban Works Construction (CUWC): in water supply field only
- Hanoi Architectural University (HAU): for "Water Supply" and "Sewerage, drainage and wastewater disposal" etc.

(Outside Vietnam)

JICA provides the group and region-focused trainings as follows:

- "Sewage Works Engineering and Stormwater Drainage Technology "
  - Only one engineer per year can participate in this course for three month training.
- JICA counterpart training in Japan
  - JICA long-term expert provides once a year for almost 20 persons for two weeks to learn sewage works in Japan.

MLIT also provided two weeks training on the microtunneling method.

These trainings outside Vietnam are not enough not only in number of participants but also in the contents of training.

4.2 Current Situation of Training

(2) Training Program in Japan

- Technical requirement for engineers on planning, design and O&M regulated by Sewerage Law
  - ✓ Technical experience such as 7 years of business experience
  - ✓ Certification of training program and licensing examination
- Training course provided by the Japan Sewage Works Agency (JS)
  - ✓ Sewer design
  - ✓ Sewer construction supervision
  - ✓ WWTP design
  - ✓ O&M of WWTP
  - ✓ Finance & Institution
- Certification of qualification test provided by JS Law
- The Japan Sewage Works Association and other related organizations provide technical seminars and workshops on new technologies.

Closing Ceremony

4.2 Current Situation of Training

(3) Training Program in Private Company: Indah Water Konsortium (IWK)

- Indah Water recognizes that the sewerage sector workforce must possess relevant knowledge, skills and competencies.
- They effectively plan, operate and maintain the sewerage facilities of the country through a structured training and development program. Emphasis has been placed on human capacity development throughout the years.
- In 2011, 1,743 or 62% of the 2,801 average headcount attended at least one training program. This represents an 11% increase from 2010 in which 51% of the 2,726 average headcount received training.

(Source) Sustainability Report 2011, Indah Water Konsortium Sdn. Bhd

4.3 Proposal of Training Center

(1) Function of Training Center

- To develop required capacity for sewerage development and management:

☐ Training of Trainer

➔ Experts of Training Center develop trainer group

➔ Consultation Division in Training Center will do same function.

☐ For the executing agency and private company:

➔ Technical capacity for the planning and designing work

☐ For the central government:

➔ Programming, implementation, and management capacity of the project

- To support the project through accumulating experience and know-how
- To assist Vietnamese & Japanese private companies which work for the project operation

4.3 Proposal of Training Center

(2) Scheme of Training Program

Trainer Group

- ☐ Large Cities (Ha Noi, HCM)
- ☐ MOC & VWSA
- ☐ Private Company
- ☐ Japanese Large City

Transfer of Know-how & Experience

Trainee Group

- ☐ Large Cities (Ha Noi & HCMC) (In-house training)
- ☐ Medium & Small Municipality
- ☐ Provincial Gov.
- ☐ Private Company

Training subjects

Programming phase	Construction phase	Operation phase
☐ Sewerage Technology ☐ Financing & Institution ☐ Planning ☐ Design, Drawing & Survey	☐ Sewerage Technology ☐ Construction Supervision ☐ PR (Public Relation)	☐ Sewerage technology ☐ O&M, WQ management ☐ PI (Performance Indicator) ☐ PR & Tariff Collection ☐ Business WW Monitoring

4.3 Proposal of Training Center

(3) Location of Training Center

Items for Evaluation	VWSA	CUWC	HAU
Relationship with MOC	Administration officer assigned from MOC	Under MOC	Under MOC
Physical Distance from MOC	Close	One hour by car	Forty minutes by car
Rooms for lectures or practical work	Need to arrange in other place	Available	Available
WWTP for practical work	None	Space for the construction of plant available	Close to the site for construction project of Yen Xa WWTP
Result of evaluation	Limited activity such as arrangement of trainers	Best option	Acceptable

Water quality analysis

Activated sludge process

Microscope & monitor

Activated sludge (microscopic view)

4.3 Proposal of Training Center

(4) Sewerage Training Program

Training courses shall be prepared for covering all the phases of the project.

1) Planning (including off-site and on-site systems)
2) Design, Bidding and Supervision
3) Operation and Maintenance of Sewerage Facilities
4) Regulations and Measures for Accepting Wastewater to Sewerage System
5) Public Announcement of Sewage Works
6) Management of Organization
7) Training of Vietnamese Trainers (TOT)

(5) Organization

Management Unit to unify the following divisions in ATI of MOC

1) Division of Training Engineers

Planning of the training courses, management of applicants for training and trainees, assignment of trainers and arrangement of lecture rooms, preparation of textbooks, etc.

2) Division of Trainers

Responsible for studying the contents of training and preparing the textbooks for the training of the Vietnamese trainers. Foreign Experts and candidates of Vietnamese trainers will be assigned.

4.3 Proposal of Training Center

(6) Step-wised Implementation

1st Step

- Set up training program including:
  - Lectures and practical training for engineers and administrators of the sewage works project
  - TOT program for potential trainers
  - O&M training in a WWTP on the location of the training center or in an existing WWTP in Ha Noi City
- Start of consulting advice to sewage works projects by Japanese experts in the training course.

2nd Step

- Set-up consulting function, organization or division in the Training Center .

Final Step

- Establish the Vietnam Sewage Works Agency

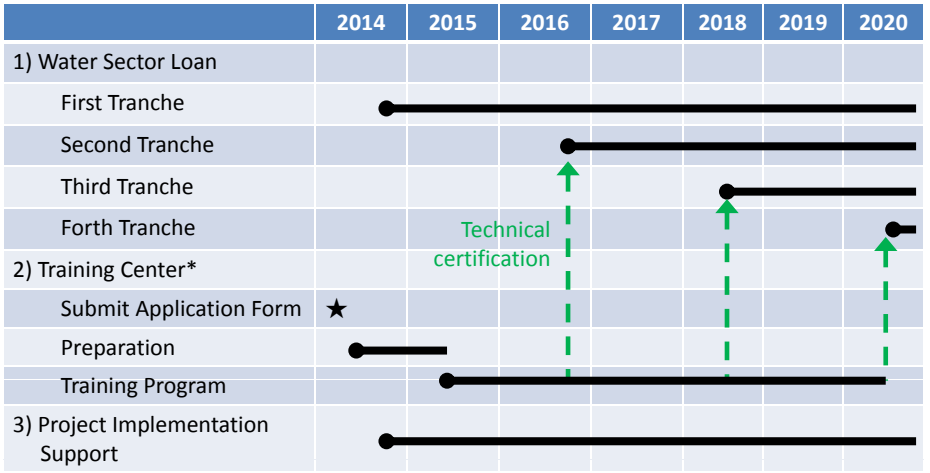
4.3 Proposal of Training Center

(7) Estimation Cost of the Initial Training Course (2 years)

Item	Cost (Million JPY)	Equivalent in 1,000 USD[1*)]
1) Initial Cost	**150**	**1,500**
Procurement of Facilities and Instrument	100	1,000
Construction of WWTP for Training	50	500
2) Assignment of Foreign Experts	**172**	**1,720**
Long-term expert (2 persons)* 25 million JPY/year x 2 persons x 2 years	100	1,000
Short-term expert (3 persons)* 3 million JPY/month x 4 times/year x 3 persons x 2 years	72	720
3) Operation Cost	**35.6**	**356**
Cost for Trainings (16 courses, 10 persons / course) 16 times x 10 persons x 0.05 million JPY/person x 2 years	16	160
Translation and Preparation of Text	10	100
Translator (2 persons) 0.15 million JPY/month/person x 12months x 2persons x 2years	7.2	72
Car Rental Services 0.1 million JPY/month x 12 months x 1 car x 2 years	2.4	24
Total 1)+2)+3)	**357.6**	**3,576**
Administration Cost by Vietnamese Gov.	**Provided in due course**	

* Long time foreign experts: Planning Sewerage System, Mechanical and Electrical Equipment
* Short time foreign experts: Sewer Design and Construction Supervision, Water Quality Control , Management of Sewerage System

4.4 Implementation Schedule (Tentative)



Note: Candidate of sub-projects to be financed under the Water Sector Loan will be selected and loan appraisal will be carried out by JICA in First Tranche.
Note: The function of sub-project appraisal will be transferred to MOC after Third Tranche.

EXPERIENCE IN MANAGING WATER TRAINING CENTERS IN VIETNAM

Mr. Bùi Hồng Huế

Dean of the College of Urban Works Construction – Ministry of Construction

The College of Urban Works Construction (CUWC) which is an institution under Ministry of Construction locates at Yenthuong, Gialam, Hanoi.

Our college currently manages two water training centers, including: Training Center for Water & Environment and Training Center for Water in the Central region.

This article consists of 3 main parts:

- Brief Introduction of the Training Centers;
- Experience in managing Training Centers; and
- Recommendations and proposals.

I. BRIEF INTRODUCTION OF THE TWO WATER TRAINING CENTRES

1.1. Hanoi Training Center for Water & Environment

- It was founded according to the Decision No. 705 /QD-BXD on April 27th, 2004 signed by the Minister of Construction.
- The Head Quarter locates inside CUWC at Yen Thuong, Gialam, Hanoi
  Phone: (04) .3.878. 0619 - Fax: 04.3.827.1305 - Email: cneehanoi@gmail.com
- The total cost of the project: € 1,000,000 (One Million Euro)

Main tasks:

1 – Providing re-training and refresher courses for staffs and workers on business management, technical management, operation, installation and maintenance of water supply and drainage/sewerage works;

2 - Coordinating with universities, institutes, enterprises, national and international organizations in conducting scientific researches, experiments, technical consultancy, technology transfer related to water sector;

3 - Implementing effectively the project of the training center for water and environmental sponsored by French Republic Government;

4 - Performing laboratory tasks such as testing, analyzing water for training, scientific research and other consulting services;

- From 1997 to 2006, the Center was appointed to implement the project with the Government of the French Republic through two phases: Phase 1 (from 04/04/1997 to

04/04/1998); Phase 2 (from 2000 to 2006) with the goal of building a national training center for water and environment and establishing a sustainable training system for the center .

- From 2007 to 2009, the Center carried out the Project of technical assistance for water supply companies funded by Denmark.

Since its establishment, the Center has trained and improved skills for thousands of managers and workers from water companies nationwide each year.

2.2. Training Center for Water in the Central Region

- Founded according to the Decision No. 1118 / QD-BXD on November 30, 2009 by the Minister of Construction.
- The Headquarter locates in the Division of CUWC at Phu Bai, Huong Thuy, Thua Thien Hue.

Phone: (054) .3.954. 997 - Fax: 054.3.954.997 - Email: ttnuocmt@gmail.com

The total cost of the project (according to the Decision No. 246: QD-BXD) is: $ 4,004,608 (Four million, four hundred thousand, six hundred and eight U.S. dollars); in which:

+ Non-refundable aid by Japanese government: 316,312,000 Japanese Yen, equivalent to $3,721,318 (1 USD = 85 yen)
+ Counterpart fund by Vietnam Government: 5,807,463 billion VND, equivalent to $ 283,290 ($ 1 = 20,500 dong).

Main tasks:

In addition to the same tasks as Hanoi Center, the center also has been assigned to implement effectively the project for the human resources development of water supply companies in the central region funded by Japan Government (6/2010 - 6/2013)

As results of the Project (completed in June 2013), the Center had provided 21 courses for 418 trainees from water supply companies in the Central region.

II. EXPERIENCE IN MANAGEMENT OF WATER TRAINING CENTERS OVER THE PAST YEARS

- The two training centers have been taking steps towards sustainable development and achieving positive results: annually, thousands of managers and technicians attend refresher courses related to water sector such as: administration - customer service management; operation and maintenance of equipments, water distribution and water quality management, etc. Typically, the Hanoi Training Center for Water and Environment so far has trained more than 10,000 people from water supply and drainage companies nationally; the Training Center for water in Central Region has conducted 23 courses (18 courses under the project implementation and 5 other courses after the project's completion) for more than 600 people from 18 urban water supply companies in the Central region.
- We have achieved remarkable mentioned-above results thanks to the great cooperation between the agencies and organizations, especially the efforts of the Centers, the interest and support of the leaders of Ministry of Construction, Administration of Technical Infrastructure under Ministry of Construction, relevant local governments and Japan International Cooperation Agency (JICA).
- We would like to share some experience in order to support water training centers to develop sustainably:

1. Personnel management and development:

In order to help training centers grow continuously and sustainably, it requires a competent human resources capable of managerial skills and good professional knowledge who are well-trained and are able to train human resources for existing water supply companies .

Thus, we have carried out organizational restructure of the Training Centers aiming to run the centers as enterprises-like operation. The full-time staff of the centres are mainly experts and staff trained during the implementation phase of the project. We also send officials and experienced lecturers from our Water Supply and Drainage Division to work part-time for Training Centres. These people have many years of participation in the water and environment projects. Experts support the Water Training Center in the Central Region in a number of areas such as finance management, planning, training management, equipment maintenance and so on.

2. Development and implementation of training programs:

- As soon as the the project ended, we conducted a survey of training and retraining needs of water supply companies in three regions (mostly in the North and the Central) . This is also the basis for preparing annual training and retraining plans.
- After the survey we have edited, adjusted and developed training programs adopting the advanced technology of developed countries (such as Japan and France). These training programs have been sent to water companies, experts for comments as well as presented in wokshops for recommendations. Finally, a bank of training programs have been selected in accordance with qualifications and training needs of the existing water supply companies.
- After adjusting and developing training programs, we edited teaching materials which were developed during the project time. We have received help of experienced experts from water supply companies, Vietnam Water Supply Association (VWSA), University of Civil Engineering and University of Architecture. We have compiled and printed:

+ 1000 Handbooks on Water Treatment written by Degremont Company of Water treatment & Environmental Protection;
+ 01 Technical Dictionary for Water Sector (1030 prints) in 03 languages: English, French, Vietnamese under permission of Degremont Company;
+ 01 book on Urban Wastewater Treatment Technology (500 copies published) written by Mr. André Lamouche, an experienced and an expert from France;
+ 01 book on Ductile Iron Pipe Installation compiled by the Centre with Pont - a – mouson's permission;
+ 01 book of Training for Water sector Workers using modules-base method

- Those training programs along with training cost estimates have been offered to water supply companies. After reaching agreements, parties have signed contracts to provide training and retraining courses for staffs and workers from water companies in the North, the Central and the South of the country.
- Assessments have been conducted before, during after individual course for experiences learning. The criteria include: the organization of the course, the appropriateness of the contents of training programs, communication skills of teachers, and the applicability of trainees after training, etc.

3. Facilities:

We have managed and used efficiently all machinery and equipment supplied by the project fund as well as well carried out maintenance works. Every year, we deduct a part of

the profits to upgrade and renovate some components of works for the training process as well as for activities of the Centers.

Besides the equipment supported by the project, we have bought more machines, teaching models for training such as automation and PLC lab, some laboratory facilities, power engines practical rooms , outworks, pipe installation establishments, etc.

4. Finance:

The Training Centers operate independently in term of finance. The goal of the training centers is getting higher revenues and profits. The College supports just partial funding for the first year of operation.

The College creates favorable conditions for Training Centers to actively promote their capabilities, and to build their own strategies. The two Training Centers should compete with each other in a positive way so that they can co-exist and develop. Currently, the Hanoi Training Center is very competitive with a broad market, high revenue and profit. To facilitate the development of the Water Training Center in the Central region, we have divided the market between the two centers. The Hanoi Training Centre orients the customers from water companies, universities and colleges providing water-related training programs from Thanh Hoa to the North outward and the Water Training Center in the Central region orients customers from Nghe An towards the Southern region.

In addition to training for staffs from water supply companies, the centers also focus on improvement of practical skills for students from universities and colleges providing water-related training.

III. RECOMMENDATIONS AND PROPOSALS

- To establish a Training Center for human resource development in drainage and sewerage sector in Vietnam, the great supports from MOC and JICA are needed and highly appreciated.

- With the available infrastructure and experienced officials in the management of water-related Training Centers as mentioned above, we suggest that the proposed Training Center for drainage and sewerage sector should be located in CUWC.

Thank you for your attention.
