(REFERENCE) CONSTRUCTION SEQUENCE OF CONTINUOUS STEEL BOX GIRDER

S=1:4000

STEP 1

- Driving Steel Pipe Ø1.2m by a Vibration Hammer and install temporary bents for erection steel box girders in advance.
- Steel box girder blocks are erected by 200t Crawler Crane mounted on barge on the temporary bents.
- Joint each steel box girder with H.T.B.
- First steel box girder blocks remains not to erect for stressing PC cables of PC box girder.

STEP 2

- Temporary bents are installed within 3 spans to minimize disturbance of river traffic.

STEP 3

- Procedure of installing temporary bents and erecting steel box girder is frequently repeated.

STEP 4

- Last steel box girder block is erected and jointed continuously.

STEP 5

- Finally the reaming the first block erects after PC cables are stressed at the end of PC box girder.
- Completed.

PROJECT NAME DETAILED DESIGN ON BAGO RIVER BRIDGE CONSTRUCTION PROJECT	FINANCED BY JAPAN INTERNATIONAL COOPERATION AGENCY	COUNTERPART REPUBLIC OF THE UNION OF MYANMAR MINISTRY OF CONSTRUCTION DEPARTMENT OF BRIDGE	JICA STUDY TEAM NIPPON KOEI CO., LTD. 				APPROVED BY	Y. SANO			21 Jun.2017	P2-REF-0003

(REFERENCE) CONSTRUCTION SEQUENCE OF CONTINUOUS PC BOX GIRDER

S=1:2000

STEP 1

- In advance of segment erection, bearing shoes are set on abutment and piers. Pier head segments are erected by 200t crawler crane and fixed by PC bars.

STEP 4

- After all segment are suspended at the designed position, epoxy adhesive applies to the segment which is pulling and connected by PC bars. Mortar is placed in wet joints at both sides. Permanent inner and external tendons for span are installed and tensioned by hydraulic jack.
- After completion of one span erection sequence, the erection girder advances to next span and erects segments in the same procedure up to pier 20.

STEP 2

- For assembling of erection girder, temporary bent are installed. The erection girder and erection apparatus are set in designated position and girder support fixed on the pier head segment.

STEP 5

- Span for Pier-23 to Pier-20 pre-cast segments are transported on barge under the erection girder and lifted by electric hoist and moved the setting position. The segment transfers the load to temporary hanging beam and adjusts the slope and gradient by jack.

STEP 3

- Span for abutment -A2 to Pier-23 pre-cast segments are transported by trailer under the erection girder and lifted by electric hoist and moved the setting position. The segment transfers the load to temporary hanging beam and adjusts the slope and gradient by jack.

STEP 6

- Demolition of erection girder and then completion.
