Chapter 1 Project Background and Outline

1-1 Background

Flooding in the Republic of the Union of Myanmar (hereinafter, Myanmar) in July of 2015 affected approximately 1.624 million people in 12 states and regions (Ayeyarwady, Bago, Yangon, Magway, Mandalay, Sagaing, Chin, Kachin, Kayin, Mon, Rakhine, and Shan), and 4,116 school facilities sustained damage.

According to the report "Post-Disaster Needs Assessment of Floods and Landslides July-September 2015," 213 schools were completely destroyed, 430 schools sustained structural damage (among these, 66 schools in Rakhine were destroyed, and 226 schools sustained structural damage, meaning that the most damage occurred in Rakhine). The total cost of the damage came to 50.5 billion kyat (about 5 billion yen).

The Ministry of Education of Myanmar drafted the "Recovery Plan for Schools Damaged by Floods and Landslides," and in the beginning of September 2015, the government of Myanmar applied to Japan to reconstruct or rehabilitate 493 damaged schools. Upon receiving the application, the Japanese government began to offer support for reconstructing under several different schemes. Among them, as for the Grant Aid for Financial Support, the both governments signed an Exchange of Notes (E/N) on November 13th, 2015 for a Grant Aid up to a limit of 1.5 billion yen. Based on this, on the same day, the Minutes of Meeting (M/M) for the First Steering Committee were signed, and the Grant Agreement (GA) and Programme Document (PD) were concluded on December 22nd. Based on the "Build Back Better" principle in the basic disaster control policy hammered out by the Japanese government in the third World Conference on Disaster Risk Reduction, it is planned to hire local contractors for the reconstruction work on an engineering, procurement and construction monitoring contract from the Ministry of Education of Myanmar.

Other schemes include Grant Assistance for Grassroots Human Security Projects (GGP, 400 million yen), projects implemented by UNICEF (1.2 billion yen), by a procurement agency (JICS: Japan International Cooperation System, 1.2 billion yen), and by Bridge Asia Japan (BAJ, an authorized NPO). This survey aims to gather information and to provide technical advice regarding the planning, procurement, and construction status for school reconstruction projects financed by grant aid from JICA. The school constructions constantly conducted by the Ministry of Education appears not to be adequately considering, the structural suitability for the soil bearing power of the location, earthquake/wind resistant design, and disaster damage, so it was hoped that the provision of technical advice and suggestion would contribute to the improvement of such situation.

1-1-1 Survey Items

The survey includes the following work regarding the "Programme for Rehabilitation and Reconstruction of Schools in Flood and Landslide Affected Areas" which is implemented by the Department of Basic Education, Ministry of Education of Myanmar:

(1) Technical advice on the following information gathering/fact checking, quality assurance and efficiency:

- 1) Status of school sites
- 2) Facility design plans (design drawings, specifications)
- 3) Tender plan (tender document content, conditions, etc.)
- 4) Construction monitoring plan (system, method)
- 5) Contract with local contractors (content, contracted status)
- 6) Construction status
- (2) Checking the disbursement status of the grant aid, supporting appropriate execution management
- (3) Support for holding the coordinating committee meetings with participants from the Ministry of Education of Myanmar, the Embassy of Japan, and the JICA Myanmar office
- (4) Support for public relations activities implemented by the Ministry of Education of Myanmar and the Japanese government

1-1-2 Counterpart

Department of Basic Education (DBE), Ministry of Education of Myanmar

1-1-3 Target Regions

With operations based in Nay Pyi Taw, disaster-hit regions (Ayeyarwady, Bago, Yangon, Magway, Mandalay, Sagaing, Chin, Kachin, Kayin, Mon, Rakhine, and Shan) shall be visited as needed.

1-1-4 Implementation Period

February 2016 – February 2017 (initial), February 2016 – April 2018 (following 2nd revisions)

1-1-5 Implementation System

This grant aid scheme was implemented under the system shown in the figure below.

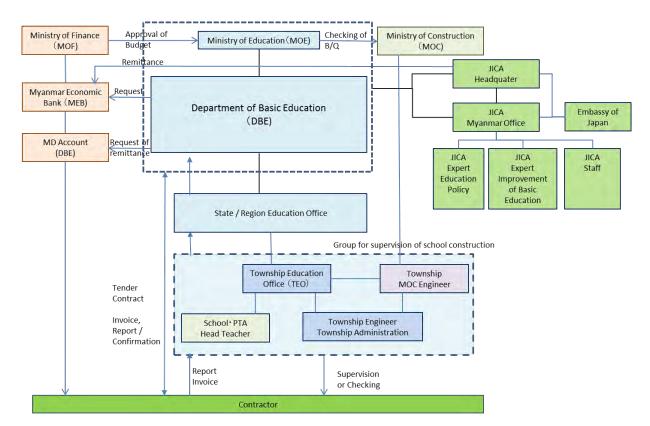

Figure 1-1 Implementation System for the Financial Support-Based School Reconstruction Grant Aid Project

1-2 Programme Document

An outline of the content of the Program Document signed on December 22nd, 2015 is shown below.

Programme Document (PD)

- Reconstruction based on the BBB (Build Back Better) principle (5)
- Results based on the Disbursement Linked Indicator (DLI) (7)
- (Ministry of Education) (MOE) shall bear total responsibility for implementing the program. (11)
- MOE shall open a yen account at the Myanmar Economic Bank (MEB). (12)
- (The Government of Myanmar) (GOM) shall bear total responsibility for the financial management. (15)
- Payment will be made according to the progress regulations of DLI. (20)
- MOE shall transfer funds from its yen account at the MEB to its Myanmar kyat (MMK) account at the same bank with the approval of JICA. (22)
- MOE shall convene the Steering Committee (SC). (23)
- (The Office of the Auditor General (OAG) shall inspect the yearly audit report. (23)
- (A Working Committee (WC) shall be organized. (24)
- The results obtained by the SC and WC shall be recorded in the minutes of meeting. (25)
- Changes/revisions to PD shall require the approval of SC and the consent of JICA. (26)
- Procurement based on the contract shall follow the January 8th, 2014 guidelines of MOC and MOE.
 (29)
- OAG shall conduct a yearly audit of accounts. (31)

- MOE shall retain all records for five years following completion. (32)
- All contracts shall include environmental clauses relating to health and safety. (34)
- MOE shall install nameplates at all completed schools. (35)
- MOE shall bear all responsibility for public relations work, including SNS, television, and newspaper. (37)
- MOE shall prepare JICA PR information such as videos and other materials in both English and Burmese. (38)

*Numbers in parentheses indicate the corresponding item in the Programme Document

BBB (Build Back Better)

- ① Build resilient facilities which meet Myanmar's building codes and will be resistant to future disaster damage.
 - Facilities furnished with safe stairways of appropriate size.
 - Elevation of schools built in delta regions and others.
 - Sanitation facilities
- ② Ensure a better learning environment under ongoing educational reforms.
 - Add extra classrooms for the kindergarten classes operated from June 2016.
 - Add classrooms to upgrade post-primary schools to middle schools.
 - Add teachers' rooms.
 - Prepare lodgings for the school principal and teachers (if necessary).
 - Install classroom furniture of appropriate quality (single-student desks/chairs, blackboards/whiteboards, shelves for textbooks, etc.)

1-3 Outline Progress

The tender was originally planned to take place from January to February 2016, with construction beginning in March and completed by December. However, due to the delay of the first disbursement, the delay in the preparation of design and tender documents, and time-consuming coordination with other support schemes, the tender of 117 schools was delayed by 2 months and finally announced in March. However, because the announcement concerning the 117 schools was made without cooperating with other schemes, the announcement was withdrawn, and a new announcement was made concerning 47 non-overlapping schools, divided into 11 lots as the 1st batch.

The deadline for tender on the 1st batch was March 31st, 2016. After the tenders were opened on April 22nd, contracts were concluded in August 2016 for 22 schools in six lots based on the results of the tender document evaluations and contract negotiations.

For the 2nd batch, 67 schools were selected in July 2016, tender was announced on August 29th, 2016, closed on September 29th, 2016, and tenders were opened on October 6. Following this, based on the results of the tender document evaluations and contract negotiations, contracts for 64 schools in 20 lots were concluded between December 2016 and February 2017.

For the 3rd batch, target schools were selected once contract amounts for schools up through the 2nd batch were finalized, but due to personnel shuffling in the Ministry of Education, such as new appointments for the Department of Basic Education and the Education Minister, etc., selection and approval of target schools was greatly delayed, and the seven target schools were not selected until March 2018.

For the 4th batch, the Japanese government agreed to rebuild 15 schools in Rakhine to help restore the Rakhine State. However, the target schools and facility scale are currently being determined by the DBE and the Rakhine State Department of Education.

The process outline from the start of the on-site survey until March of 2018 is shown below.

	Date	Description	Submission
First On-Site Survey (2016)	Date February 16 February 11 February 16	DescriptionSurvey StartProgramme Document (PD) (December 22, 2015) Target Schools:493 (Actual schools number is 464)DBE Recovery Plan (Oct. 2015) Target Schools: 643Schools for recovery in DBE: 117 SchoolsDiscussion at JICA Myanmar officeDBE, EOJ, JICA, JICS, UNICEF Coordination MeetingDiscuss target schools with EOJ (GGP), JICS. 1-4 DBE Tender Committee Members

The DBE committee for the tender was configured with the following members on March 10, 2016.

No.	Name	Position	Committee Position
1	U Zaw Win	Deputy Director General (Administration-Finance)	Chairman
2	Dr. Zaw Win	Deputy Director General (MOE)	Vice-Chairman
3	U kyaw Swar Thwin	Deputy Director, Education Office Yangon Region	Member
4	Dr. Soe Myit Tun	Deputy Director, Education Office Mandalay Region	Member
5	U Thein Saung	Director, Education Office Chin State	Member
6	U Thein Myint	Director, Education Office Sagaing State	Member
7	U Aung Kyaw Tun	Director, Education Office Rakhine State	Member
8	U Win Maung	Director, Education Office Ayeyarwady Region	Member
9	U Nyunt Soe	Deputy Director, Education Office Pyi District	Member
10	U Khin Maung Win	Director (Administration), Department of Basic Education	Member
11	Dr. Chit Ko	Deputy Director (Budget), Department of Basic Education	Member
12	Daw Saundar Oo	Assistant Director (Engineer), Department of Basic Education	Member
13	Dr. Kyaw Win Soe	Deputy Director (Finance), Department of Basic Education	Secretary
14	U Khin Aung	Deputy Director (Chief Engineer), Department of Basic Education	Co-Secretary

Table 1-2 Department of Basic Education (DBE) Tender Committee Members

1-5 Tender Evaluation

As appropriate tender evaluation was expected to be difficult due to insufficient conditions, such as site locations not yet having been confirmed, interviews were conducted with the contractors to assess their abilities.

No.	Check Items	Checked Content
1	Checking for Target school preliminary survey	 Have you visited the target school(s) and assessed the condition of the construction site? Have you considered the access to the target school(s)? (Has the rainy season been considered?) Have you checked the soil status and considered the foundation structure? Have you checked for the presence of obstructing objects?
2	Checking for Bill of Quantities	 Any overshoots or shortfalls in your quantity survey? Does your estimate take into account a foundation suitable for soil conditions and the possibility of uneven ground? Are your roof steel truss members compatible to the required size? Does your estimate take into account the necessary site preparation and leveling?
3	Checking for Construction schedule	 Have you made a construction schedule for each building? Does your conversion plan take into account the time needed for sheathing remaining period? Is your schedule based on appropriate manpower? Does your schedule include the time needed for preliminary preparation and approval of shop drawings?
4	Checking for Quality Control	 Does the site agent possess the experience and knowledge necessary to assure the quality of work? Do you plan concrete tests and trial mixing? Have you confirmed the reasonable quality of the materials you plan to use? Are staircases, handrails, and steel structures taken into account in the creation of your shop drawings for approval?
5	Checking for Safety Control	 As a company, do you make site safety and environmental measures a priority? Site health and safety management system check (contact method for each worker) Site environment maintenance check (neat and tidy, scaffolding, signage, safety gears, etc.) Shared understanding of the safety management level required for this project
6	Checking for Contractor execution ability	 Company resume check (capital, employees, plant and equipment owned, etc.) Check work experiences with similar projects (years executed, construction period, workmanship)

 Table 1-3
 Contractor Interview Content Checked During Tender Evaluation

1-6 Construction and Payment

- Each school shall have an inspection group headed by the Township Education Office (TEO), made up of the following three people; Township Education Officer, Township Construction Engineer and the school head master. The inspection group shall conduct their inspection in the following 4 stages, and if no issues are identified the three members shall sign an inspection completion form:
- Four installment payments on partial completion

1)	Completion of foundation work	: 25%
2)	Completion of roofing work	: 25%
3)	Completion of floor and wall plastering work	: 25%

- 4) Building completion : 25%
- The contractor shall submit a monthly progress report (with photos) to DBE.
- On the part of DBE, the signed inspection completion form from the inspection group and the progress reports shall be checked by Director General (DG), Deputy Director General (DDG), and the Director of Finance Department, and contractors shall be paid from DBE account.
- The content of payments shall be reported to the Working Committee (Minister of Education, DBE, EOJ, JICA, etc.).
- The survey group offered guidance to DBE engineers regarding the points and timings of the work inspection, and also held an informational workshop on July 29th, 2016 for explaining the points of construction monitoring and inspections to the persons in charge of the State / Regional Education Office (S/REO) and of the Township Education Office (TEO), the principal of each target school, etc.
- Upon completion of each local school survey and inspection, the survey group explained the inspection points to construction committees made up of school principals and PTA members.
- The system of progress report and payment is shown in Figure 1-2 below.

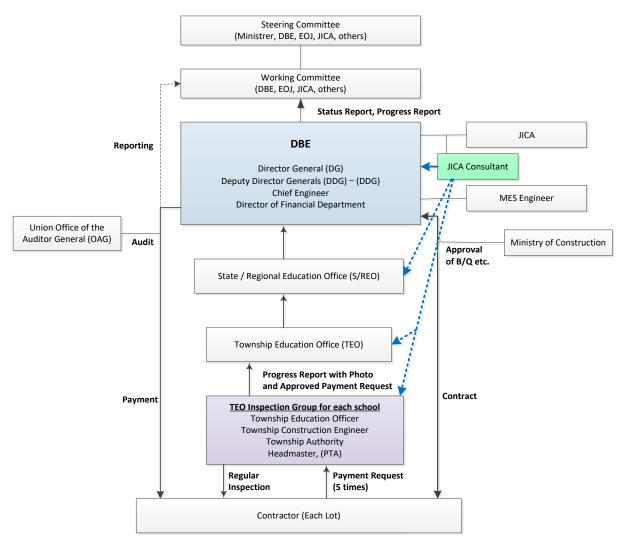

Figure 1-2 Monitoring System of School Construction

(Footnotes)

<Steering Committee (SC)>

[Roles]

- Grasp the implementation status of the grant aid, and note the progress of the Programme Results Framework and Disbursement Links Indicators
- 2) Check the progress reports submitted by the Department of Education
- 3) Check the yearly accounting audit reports from the Myanmar Auditor of Accounts, etc.

[Structure]

- Chair: Myanmar Minister of Education
- Vice Chairs: Myanmar Vice Minister of Education, Chief Representative of JICA Myanmar Office
- Members: Education Under-Secretary, Department of Basic Education (DBE) department head, deputy department head, administration section manager, budget section manager, officials recommended by the MOE, the Japanese Ambassador, JICA Education Policy Adviser, JICA Myanmar Office

<Working Committee>

[Roles]

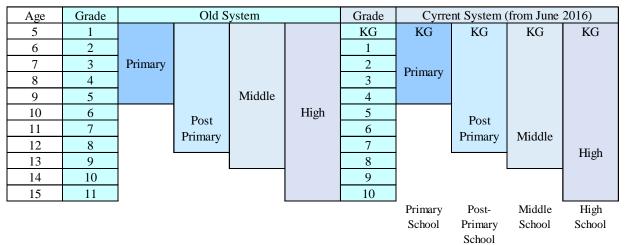

Reporting to and coordination with the Steering Committee

[Structure]

- Chair: Director General of the Department of Basic Education (DBE)
- Members: DBE Deputy Director General, Director (administration), Director (Budget)n, officials recommended by the MOE (Ministry of Construction, etc.), Embassy of Japan, JICA Basic Education Improvement Adviser, JICA Myanmar Office

<Myanmar's Education System>

Myanmar differs from many other countries, in that students enter primary school at age five. Until April 2016, primary school consisted of five years of education beginning at age five (G-1 through G-5), followed by four years of middle school (G-6 through G-9), followed by two years of high school (G-10 through G-11). From June 2016, the system was altered such that five-year-old primary school students were enrolled in kindergarten (KG), followed by four years of primary school from age six (G-1 through G-4), followed by four years of middle school (G-5 through G-8), and then by two years of high school (G-9 through G-10). At schools which do not offer education through G-8, grades G-5 through G-7 are known as Post Primary School. In general, schools which offer G-1 through G-8 are known as middle schools, while schools which offer G-1 through G-10 are known as high schools.

KG=Kindergarten

Chapter 2 **Tender / Supervision**

2-1 1st Batch

(1) 1st Batch from Tender to Tender Opening

The process from tender announcement to opening for the 1st batch was conducted as follows.

- Newspaper Announcement: March 11th, 2016 (11 lots, 47 schools) 1)
- Tender Documents on Sale: March 14th, 2016 (sets purchased: 187) 2)
- 3) Tender Closing: March 31st, 2016 (100 companies submitted tenders, including multiple tenders)

The number of tenders submitted differed depending on the location of the lot. The number of tenders was highest for the easily-accessible Yangon (Lot-31), coming in at 23. However, few tenders were made for Chin State (Lot-27, Lot-28, and Lot-29) due to difficulty of access and poor public safety.

Tender Opening: April 22nd, 2016 4)

> Contractors who submitted tenders gathered at the Ministry of Education, and each company disclosed the value of its bid.

Table 2-1 No. of Tender Documents Purchased and No. of Contractors Submitting Tenders for the 1st Batch

Lot-24	12	8	6
Lot-25	8	5	6
Lot-26	14	10	4
Lot-27	5	3	4
Lot-28	7	4	4
Lot-29	4	1	4
Lot-30	42	21	4
Lot-31	46	23	2
Total	187	100	47
Actual Bidding	84		

1st Batch Tender (11 Lots, 47 Schools)

companies

Tender Evaluation (2)

- After the disclosure of prices, the tenders were evaluated. The consultants reviewed specifications, quantities, costs, work periods, etc., and instructed the tenderers to revise their unit price to meet quality requirements for certain items (such as steel structures) where the quality instructions on the standard drawing were insufficient.
- The tenderers who placed the lowest bids for Lot-24 and Lot-25 doubled their tender prices after • confirming the required quality and making changes to other parts not mentioned in the instructions, and so were rejected.
- The tenderer who placed the lowest bid for Lot-27 turned down the contract due to calculation errors

found after the tender.

- Lot-29 was suspended because the security and land problems made construction impossible.
- On Lot-30, the two top tenderers did not include kindergartens (KG) in their quotations, and so were rejected. Negotiations were held with the third-place tenderer but when doubts were raised concerning their construction capabilities and they were asked to submit additional documents proving their capability, they turned down the contract.
- On August 12th, 16th, and 25th, DBE concluded the construction contracts with contractors for 22 schools (6 lots; 20 schools in Chin, 2 schools in Yangon).

Outline of 1st Batck Schools and benefited Student Number

(4) Monthly Progress Meetings for 1st Batch

DBE, Consultant and the contractors for the 1st batch convened for a meeting in Nay Pyi Taw every month to discuss the following matters. (From January 2017 and onward meeting contents for the 1st batch are recorded in the table for the 2nd batch)

Date	Attendance	Contents
September 30, 2016	6 companies	Determined that the schools were to be constructed according to the contract drawings. Explained the procedure for submitting monthly progress reports with photos. Explained the payment procedure: to be carried out after the school Headmaster, the TEO and Township Engineer signs. Confirmed the progress at each lot and issues.
November 1, 2016	6 companies	Issued the monthly report form. Confirmed the progress at each lot and issues.
November 29, 2016	5 companies Absence: Lot-28	Confirmed the progress at each lot and issues. Confirmed the effects of the rainy season on each lot.
December 27, 2016	6 companies	Determined that the schools were to be constructed according to the contract drawings. Instructed the participants to report to each TEO. Confirmed the progress at each lot and issues.

 Table 2-6
 1st Batch Monthly Meeting Contents

Date	Attendance	Contents
		Instructed the participants about the hooks of the column head
		rebar (issued a sketch).
		Determined that inspections were to be done by the TEO,
		Township Engineer, and headmaster at each school.
		Instructed the participants that sand was to be filled under the
		slabs on grades. Explained the method and procedure for
		erecting the steel trusses.
		Discussed the cost for reclamation of Code No.39 in Lot-22.
		Discussed the road repair problem for Lot-26.
		Discussed the lack of ability and effort of the Lot-28
		contractor.

(5) Improvement of DBE's Tender Document

The survey team improved the following items in the tender documents before the 2^{nd} batch tender.

	Item Changed	1 st Batch	2 nd Batch	Reason for the Change
1)	, and the second s	JICA's name was not filled in	Filled in JICA's Name.	
1)	Cover of the tender	JICA's name was not filled in	Filled in JICA's Name.	The face/role of Japan did not
	document			appear on the 1 st batch
				document.
2)	Instructions to the	DBE normal condition	Additional note:	
	Tenderer		Clause 7) The tenderer shall	Clause 7) Some contractors
			visit and check the site	claimed additional costs for
			conditions before the tender.	transportation after
				contracting due to bad road
				conditions.
			Clause 9) The cost of the	Clause 9) Because DBE does
			retaining wall shall be	not perform site checks.
			included in the tender, if	
			necessary.	
			Clause 10) A proposed	Clause 10) Construction
			construction schedule that	periods cannot be fixed at

		list.	schools and Junior high schools.	
4)	Tender summary sheet-1	 The numbers of classrooms were not entered in the sheet. The types of furniture were not classified in the 	 Fill in the number of classrooms for each type of building. Furniture shall be listed separately for elementary 	 The contractor made a mistake in counting the number of classrooms. The cost of furniture varies by type.
		sheet.	schools and Junior high schools.	
5)	Tender summary sheet-2	• None	 Add a summary sheet that gives a breakdown of each building. 	 Some tenderers forgot the KG estimation in the 1st batch tender. There were no failed tenderers in the 2nd batch tender.
6)	Tender Form	None	Cover of Tender Form A-1 Master Construction Schedule A-2 Detailed Construction Schedule B-1 List of Engineers B-2 Proposed Site Organization Chart B-3 List of Tenderer's Equipment B-4 Annual Turnover and Financial Report B-5 List of Experiences with Similar Construction Work	DBE did not confirm the tenderers' abilities or financial backgrounds in the tender. It is important to confirm a tenderer's ability from the viewpoint of the BBB principles.
7)	Particular Specification	DBE standard particular specification	No change	
8)	Structural Particular Specification (General Structure Note)	None	 Confirm the soil-bearing capacity Confirm Benchmarks Backfilling and compaction Concrete compression test Water-cement ratio Concrete curing Remaining period for sheathing Concrete coverage for rebar Concrete material test Fresh concrete test Rebar tension test, etc. 	No definitions are given for the quality of structures in the DBE standard specification. Set the minimum requirements according to the BBB principles after discussion with the Myanmar Engineering Society.
9)	Bill of quantities	DBE standard form	No change	

	Item Changed	1 st Batch	2 nd Batch	Reason for the Change
10)	Drawing list for each lot	None	Made a drawing list for each lot.	It was difficult to determine if drawings were missing from the tender documents (because no drawing list was provided).
11)	Cover sheet for each type of building	DBE standard	No change	
12)	Drawing list for each type of building	None	Made drawing lists. (A) Architectural drawing (S) Structural drawing (E) Electrical drawing	It was difficult to determine if drawings were missing from the tender documents (because no drawing list was provided).
13)	Each drawing	 The drawing numbers were not in order. (60'x30' One Storey) 1/16, 2/16, 3/16, 4/16 ·····1/16, 12/16, (fb, O, A/16, 23) Architectural drawings, and electrical drawings were also out of order. No titles were provided for the drawings. 	 Ordered the drawing numbers as follows: A1-A9 S1-S6 E1 Filled in the titles of the drawings. 	 It was difficult to determine if drawings were missing from the tender documents (because the numbers were not in order). It was difficult to confirm if any of the necessary drawings were missing (because they were arranged at random).
14)	Toilet drawings	Dimension were not entered in the septic tank drawing for the 2-booth toilet.	Made a new septic tank drawing for the 2-booth toilet with clear indications of the dimensions.	For proper estimation at tender.
15)	Furniture drawings	No drawings were provided for single chairs.	Attached a photo of the chair to the drawing (because DBE was considering a ready- made chair).	For proper estimation at tender.

2-2 2nd Batch

(1) 2nd Batch from Tender to Tender Opening

The process from tender announcement to opening for the 2^{nd} batch was conducted as follows.

- Newspaper Announcement: July 27th, 2016 and July 29th, 2016 (20 lots, 67 schools)
- Tender Documents on Sale: August 30th, 2016 (sets purchased: 341)
- Tender Closing: September 29th, 2016 (154 companies submitted tenders, including multiple tenders)
- Tender Opening: October 6th, 2016

Contractors who submitted tenders gathered at the Ministry of Education, and each company disclosed the value of its bid.

• 154 companies submitted tenders for 20 lots and 67 schools.

the 2nd Batch

(2) Tender Evaluation

From October 10th, the week after tender opening, a consultant evaluated the tenders, and submitted the results of the evaluation to the DBE department head and the JICA Myanmar office. (Attachment 7. Refer to 2nd batch tender evaluation)

Points of future consideration which were noticeable in the tender evaluations are listed below.

- Eight contractors purchased estimates from an estimate company, and knew nothing of the contents of their own tenders. These contractors lacked the ability to come up with an estimate, and there was concern that they did not even check which materials were specified in the tender documents. There is also a strong possibility that they did not check the construction location, and therefore lacked an understanding of the issues associated with each site.
- The DBE/JICA side had few choices of contractors who bid on lots for which few tenders were submitted, so the technical inspection had to be particularly thorough. Unpopular lots for which few bids were submitted posed problems with materials transport, etc., so experienced contractors avoided bidding on these lots.
- During the technical inspection, the workflow chart contents must be carefully scrutinized. Contactors who cannot create a workflow chart with an appropriate work period have little workflow management ability, and therefore pose a high possibility of construction delays.
- Contractors that received a poor technical evaluation were generally also poor at document creation, and often did not submit monthly progress reports.

• The DBE called on experts from Yangon and Mandalay to help with the evaluations, and conducted tender evaluations independently, but mainly focused on the value of each bid. The DBE did nothing beyond eliminating contractors who placed tenders below the minimum value, and did not conduct an inspection of the tenderers' work management abilities. By this evaluation method, there is concern that contractors with poor work management ability will be selected. The construction problems which arose in the 1st and 2nd batches were due to the contractors' lack of work management ability.

In the future, a method must be adopted whereby a prequalification inspection is conducted prior to tender, and only contractors that pass this inspection are allowed to submit tenders.

(3) 2nd Batch Contract Status

Contract statuses for orders in the 2nd batch are shown below, coming to a total of 9.65471 billion kyat. The number of classrooms constructed was 420 (including 51 preschool classrooms).

Among the 67 schools for which tenders were made up until February 10th, 2017, three schools were canceled, while contracts were concluded for 64 schools. However, following this, one school was added while contracts for a further two schools were canceled, so ultimately, the 2nd batch consisted of 63 schools in total.

The process by which the contracts were canceled and schools were added is shown below.

(Pre-contract) February 2017

- Lot-46: The school was already under construction using funding from another donor, so the contract for school code No. 469 was canceled.
- Lot-51: A site could for school construction could not be secured, so the contracts for school codes No.8 and No.10 were canceled.

(During construction)

- Lot-46: School code No. 463 was added to the contract list to replace code No. 469. (April 2017)
- Lot-48: The contract for school code No. 103 was canceled due to a decline in public safety in the area. (April 2017)
- Lot-48: The contract for school code No. 148 was canceled due to blocked access to the site. (July 2017)

(5) Monthly Progress Meetings for 2nd Batch (Includes 1st Batch after January 2017)

The first monthly meeting for the 2nd batch was held at the DBE in Nay Pyi Taw on January 23rd, 2017, and was attended by a total of 16 contractors.

Date	Attendance	Content
January 23, 2017	16 companies	Determined that the schools were to be constructed according to the
		contract drawings. Explained the procedure for submitting monthly
		progress reports with photos.
		The Code No.469 school was to be constructed by Asia World. The
		contractor could not construct at Lot-51, -8 and -10 because the
		locations had not been decided.
February 27, 2017	22 companies	Confirmed the progress at each lot and issues. (U Zaw Win, DDG)
		Explained the quality requirements of DBE to the contractors.
April 4, 2017	20 companies	Confirmed the progress at each lot and issues.
May 2, 2017	20 companies	Confirmed the progress at each lot and issues. DBE explained the
		Water System to the contractors. YEC instructed the contractors on
		the painting for doors and windows (in consideration of the quality
		problem at Lot-31).
May 30, 2017	12 companies	Confirmed the progress at each lot and issues. YEC provided the
		Inspection Sheet for School Building to all contractors and explained
		the details of quality control at the sites.
July 4, 2017	18 companies	Confirmed the progress at each lot and issues. DBE instructed all
		contractors on problems with the furniture and stairs at some of the
		completed sites. YEC instructed all contractors to use specified
		materials according to the drawings (rebar, steel, doors and
		windows).
August 2, 2017	20 companies	Confirmed the progress at each lot and issues. DBE instructed all
		contractors that the contractors could only apply time extensions
		after obtaining approvals from the TEO and headmaster. YEC
		instructed the contractors on properly photographing the progress of
		their work.
August 31, 2017	18 companies	Confirmed the progress at each lot and issues. DBE again explained
		the procedure for obtaining time extensions. YEC instructed the
		contractors on the quality control points for finishing work.
October 17, 2017	14 companies	Confirmed the progress at each lot and issues.

 Table 2-13
 Monthly Progress Meeting for 1st Batch & 2nd Batch

Date	Attendance	Content
December 14, 2017	18 companies	Confirmed the progress at each lot and issues. The Lot-43 contractor resumed site work. The Lot-42 contractor reported a transportation issue. The Lot-46 contractor commenced work at the Code No.463 site.
January 17, 2018	18 companies	Confirmed the progress at each lot and issues. The Lot-43 and -44 contractors suspended site work due to security problems in Rakhine. Work at the Lot-45 site was delayed due to difficulties with river transportation.
February 23, 2018	7 companies	Confirmed the progress at each lot and issues. A hearing was held on the expected completion date.
March 13, 2018	5 companies	Confirmed the progress at each lot and issues. The Lot-28 contractor once again appeared without bringing a monthly report. Lot-47 will be completed at the end of April. Lot-48 will be completed at the end of March.

2-3 3rd Batch

After the 2nd batch was finalized in December 2016, we repeatedly requested DBE to select target schools for the 3rd batch and promoted implementation. The Working Committee Meeting agreed on the target schools on November 26, 2016. The exchange rate then was fixed at 10.08. Sixteen schools were selected as target schools and those accessible in Rakhine State were studied.

 Table 2-14
 List of 16 Schools for the 3rd Batch

The DG of DBE changed in January 2017, and Dr. Khine Myae was appointed as the new DG on the 18th of that month. However, due to the handing over process taking time, school selection work was delayed for a while. Dr. Khine Myae attended his first WC on February 6th, 2017.On February 15th, 2017 at the WC, it was determined that in addition to the 16 schools in the list above, with the exchange rate at 11.52, there was a budget of 4.424 million kyat for the 3rd batch, which would make it possible to construct

about 30 more schools. Therefore, an additional 14 school selections were submitted to the DBE by a consultant.

At the five WC meetings between March 9th and August 29th, 2017, selection of schools for the 3rd batch and implementation advancement were discussed, but no developments were seen.

At the Steering Committee (SC) meeting on November 20th, 2017, JICA requested that schools in Rakhine be given priority in the 3rd batch. This would use up 75% of the remaining funds, and JICA and the DBE agreed to construct 15 schools in Rakhine for the 3rd batch.

At the Steering Committee meeting on December 6th, 2017, the DBE presented a list of 10 schools for the 3rd batch, but this list did not include schools in Rakhine. This was because the Myanmar side would provide budgets to rebuild most of the schools in Rakhine, and because the 15 schools in Rakhine could not be rebuilt with the budget that would be available for use until March 2018 (1.238 billion kyat), so the schools in Rakhine were moved to a 4th batch (from April 2018). The DBE determined that the 10 schools it had selected, including the three schools which had been eliminated from the 1st batch, would make up the 3rd batch.

 Table 2-15
 List of 10 Schools for the 3rd Batch

When the budget for the 3rd batch was checked against the Ministry of Constructions standard values, it was seen that 10 schools could not be constructed with the remaining budget of 1.238174 trillion kyat, so the number of candidate schools for the 3rd batch was revised down to seven. The seven candidate schools were authorized by the Education Minister on March 14th, 2018.

The tender process for the 3rd batch was scheduled to continue until the end of March, but at the beginning of April, the tender had still not been announced.

The water festival took place between April 13th and April 16, while April 17th was a holiday to celebrate the New Year. No progress was made during this time period, so it is expected that the tender will not be announced until after the end of April. It is expected that tenders will be opened following the end of May, and that following tender evaluation and approval of results, contracts will be signed and construction will begin in July at the earliest.

 Table 2-16
 List of 7 Schools for the 3rd Batch

2-4 4th Batch

Under plans for the next stage, the remaining budget of 1.5 billion yen is to be spent for school construction until the Steering Committee Meeting is held in November. In the Working Committee Meeting of December 6, however, DBE explained that 70% of the second payment could only be spent in the 2018-2019 budget. DBE therefore presented a proposal for a tender in two sections—a 3rd batch (budget of 1,238.174 million kyat) and 4th batch (budget of 1,408.98 million kyat, 30% of the second payment)—along with a list. The list named 39 schools in the Ayeyarwady and Yangon regions as candidate schools for the 4th batch. JICA selected 12 schools in Rakhine State that had been so far left untouched, from the list of 493 schools. It also selected schools in Rakhine State from the list of 150 schools in the 4th batch and strongly requested that priority be given to the construction of schools in that state.

DBE submitted a list of 14 candidate schools for the 4th batch in the Working Committee Meeting of February 27th. Discussions are needed, however, as the schools in the list fail to meet the requirements for the construction of 15 schools in Rakhine State, which the Government of Japan promised. No survey on facilities to be built has been conducted. JICA proposed that a survey team be formed with the remaining budget to study candidate schools and decide on assistance details.

Up until the Water Festival on April 13th, no new candidate schools had been selected, and as of April 19th, the list of fourteen schools shown below in Table 2-17 had not been updated.

Chapter 3 Financial Plan and Progress

3-1 Funding Plan and Cash Flow

•	First Disbursement	
	Disbursement Date:	February 28th, 2016
	Amount Disbursed:	75% of 1.5 billion yen (1,125,000000 yen)
	Disbursement Destination:	MOE Myanmar Economic Bank (MEB) yen account
	Exchange Rate on Disbursement Date:	10.08MMK/ yen (the currency was not exchanged, but according to plan, the Myanmar Ministry of Finance would fix the budget based on the exchange rate on the day of disbursement.)
•	First Currency Exchange	
	Currency Exchange Value:	375,000,000 yen (4,320,000,000 MMK)
	Exchange Rate:	11.52MMK/ yen
	After exchange into MMK, the funds we	nt into the DBE account to be paid to the contractors, not
	the MOE account, so the PD was revised.	
	At the JICA-DBE meeting on February 1	5th, 2017, a motion was submitted to exchange the entire
	amount as quickly as possible.	
•	Second Currency Exchange	
	Exchange Rate:	750,000,000 yen (8,925,000,000 MMK)
	Exchange Rate:	11.90MMK/ yen
•	Third Currency Exchange	
	Exchange Rate:	375,000,000 yen (4,552,500,000 MMK))
	Exchange Rate:	12.14MMK/ yen
•	1 st Batch Construction Contract Amount:	MMK 2,440,465,000 (19 schools as of March 15 th , 2018)
•	2 nd Batch Construction Contract Amount:	MMK 9,566,360,000 (63 schools as of March 15 th , 2018)
•	Amount Remaining after the First Disburs	sement:
		MMK 1,238,175,000 (3 rd batch budget as of March 15 th , 2018)
•	1 st Batch Expenditure:	MMK 2,121,491,000 (86.9% as of March 31 th , 2018)
•	2 nd Batch Expenditure:	MMK8,466,170,000 (88.5% as of March 31 th , 2018)
	Due to implementation delays for the 2 nd a	and 3 rd batches, the 1,125,000,000 yen already disbursed is
	not expected to be spent completely until	August 2018.
•	Second Disbursement	
	Scheduled Disbursement Date:	April 2018
	Amount Disbursed:	25% of 1.5 billion yen (375,000,000 yen)
	At the Steering Committee meeting on N	ovember 20 th , 2017, it was confirmed in a DBE progress

report that 30% completion had been achieved, which was a condition for the second disbursement.

Chapter 4 Present Condition of DBE, Technical Assistance

4-1 Present Condition of DBE's Engineering Management

(1) DBE's staff for School Construction In charge

The Myanmar government budget for school construction was transferred from the Ministry of Education to the Ministry of Construction in April 2017, so the Ministry of Education only remained involved in school reconstruction to deal with funding from donors. Therefore, the Chief Engineer (CE) was assigned to double as the director of finance of DBE, but the actual number of workers did not increase.

Currently, the only engineers working under the CE doing double duty are the Assistant Engineer (AE) specializing in facility construction, and the construction management workers, and the only structural engineer is the overworked CE. With its current number of workers and fields of specialty, the DBE will have difficulty conducting bidding, contract negotiation, and construction monitoring for school construction on its own.

(2) School Selection/Facility Planning

For the 1st batch through the 4th batch, school selection and facility planning for the schools to be reconstruction was conducted by the CE alone. Because of this, there was no time to actually visit the sites of the schools to be reconstruction, so the plans for some schools in the 1st and 2nd batches did not reflect the requests of the schools.

(3) Myanmar School Standard Drawings

In Myanmar, schools are constructed using a school standard drawings, but the data of drawings is stored only on the Assistant Engineer's computer, and copied from this computer when necessary, such as for use for tenders. The DBE standard plan uses a reinforced concrete structure, with a roof made of steel trusses, but depending on the region, material transport can be difficult, so the DBE allowed wood-frame construction in some cases at the request of the contractors.

(4) Myanmar School Construction Specification

The DBE standard specification documents were attached to the tender documents, but the specifications do not include enough specifics for quality assurance, such as the required compressive strength of the concrete.

(5) School Construction Monitoring by the DBE

The CE made multiple inspections of two Yangon schools in the 1st batch (code no. 441, code no. 442), but inspections for other schools were left up to the township education departments or the schools themselves, and the DBE itself conducted few to no inspections.

4-2 Technical Guidance

(1) DBE Standard Drawings Improvement Guidance

At the time of tender document preparation for each batch, the consultants provided the following guidance on how to improve the DBE standard drawings. (See Appendix 4.)

No.	Item	Problem Point	Improvement Guidance
1	Drawing List	In some cases, necessary drawings were missing from the tender documents, due to the fact that there was no list of tender drawings included in the tender documents.	A list of tender drawings was made, and DBE staffs used the list during the tender document preparation period to confirm that all necessary drawings were included in the tender documents.
2	Site Plan/Layout Plan	No building layout plan was included in the tender drawings.	Cannot currently be created, due to the fact that no site surveys were conducted prior to tender. After selecting a contractor for each lot, the contractors shared the building layout plans as confirmed with the schools.
3	Dimensions of Plan and Elevation in the Architectural Drawings	The necessary dimensions were not specified in the drawings.	Many missing dimensions were requested to be included, such as the floor level, stair height, number of steps, handrail height, etc.
4	Width/Landing Width Of Staircase	The stair's width was only 5 feet wide. The proposed Myanmar building codes mandate a stair width of at least 6 feet for school building.	The width of the stairs and landings were requested to be widened to 6 feet. (The span length of the staircase was increased from 10 feet to 12 feet.)
5	Riser Height of Stair	A riser height of 7.5 inches is too high for primary school pupils.	It was suggested that the riser height should be changed to 6 inches, appropriate for primary school pupils.
6	Footing Size	The same footing size was used regardless of soil bearing capacity.	It was suggested that the footing dimensions should be decided upon after a soil test to confirm the soil bearing capacity.
7	Rebar diameter of stirrups and hoops	A thin rebar (6 mm) was used for stirrups and hoops to reduce cost.	Not enough rebar area was included for shear reinforcement, so it was suggested that stirrups and hoops diameter be increased.
8	Hooks of Column Main Bar's Top End	There was no detailed drawing for the hooks which must be included at the top end of the columns. At some schools, contractors did not make hooks.	Without hooks, the column cannot be anchored to the beams, so a detailed section drawing of the hooks was added to the column drawing.
9	Anchorage of Column Bottom End into Footing	The plans did not specify the length of column bottom end needed for anchorage.	The rebar length for the column bottom end was added to the drawings.
10	Anchorage of Beam's Rebar into Columns	The section drawings did not specify the beam's rebar length needed for anchorage, or its location.	The section drawing of the beam anchorage was revised, and dimensions past the hook were specified.

Table 4-1 Main Contents of the DBE Standard Drawings Improvement Guidance	Table 4-1	Main Contents of the	e DBE Standard Drawin	gs Improvement Guidance
---	-----------	----------------------	-----------------------	-------------------------

No.	Item	Problem Point	Improvement Guidance
11	Slab Thickness	The slabs were only 4 inches thick, so enough concrete could not be secured to appropriately coverage of the slab reinforcement bars from above and below.	The slab thickness was requested to be increased from 4 inches to 6 inches.
12	Steel Members Thickness of Steel Roof Truss	The thickness of the steel members was not listed.	Steel thickness appropriate for welding was specified on the diagram at 5 mm for steel channel, and 4 mm for steel angle.
13	Arrangement Interval for Roof Light Gauged Steel (LGS) Purlins	The roof LGS purlin interval was wider for corridor roofs than for classroom roofs, causing concern that the roof might be blown off during cyclones. This kind of damage is already common in the corridor of existing schools.	It was requested that the corridor roof purlin interval be decreased to match the classroom roof purlin interval.
14	First Floor Height of Classroom Building	The only elevated first floor height type available was for a 6 feet elevation. According to a school survey, the water level reached 6 feet at some schools.	A 7 feet first floor height type building was added.
15	Toilet Floor Height	The toilet standard drawing only include an elevation for a floor height of 1.5 feet, meaning that the toilets cannot be used during the rainy season.	Elevation were added for a toilet with 5 feet high floor, which can be used during the rainy season.

Chapter 5 Steering Committee, Working Committee and Joint Coordination Meeting

5-1 Steering Committee (SC)

The role of the Steering Committee (SC) in this project was to grasp the progress of implementation status and funding status. The SC checked the progress reports submitted by the DBE, and also checks the yearly accounting audit reports from the Myanmar Auditor of Accounts, etc.

The first meeting of the Steering Committee was held on November 13th, 2015, with the participation of the Ministry of Education, the Embassy of Japan, and the JICA Myanmar office.

Date	Main Content
13 November 2015	• Check and approval of initial expenditure linked indices.
	• Following signing of the GA and PD, opening of an account at the Myanmar Economic
	Bank (MEB) etc., the Ministry of Education submitted the application form and invoice
	for the first payment (75% of 1.5 Billion yen) to JICA.
	• The future schedule was agreed upon.

Table 5.1	First Steering Committee Meeting
1 abic 3-1	First Steering Committee Meeting

The second Steering Committee was held on November 20, 2017 with the participation of the Ministry of Education, Japan Embassy, JICA Myanmar office, etc.

Date	Main Contents
20 November 2017	• For payment twice, Myanmar prepared a progress report and confirmed achievement
	of 30% in volume.
	• JICA requested DBE to submit an Audit Report.
	• JICA requested DBE to prioritize Rakhine state school construction in the 3 rd batch.
	• Request for improved communications between DBE and local education office.
	• Request for improved supervision and inspection.
	• DBE requested consultants to cooperate on improving the standard drawing

Table 5-2	Second Steering Committee Meeting	
1 abic 5-2	Second Steering Committee Meeting	

5-2 Working Committee (WC)

In addition to the coordination committee meeting detailed above, this committee serves to convene JICA-DBE discussion meetings, with participation from DBE (DG, DDG, CE, etc.), the JICA Myanmar office, and consultants.

Table 5 2	Toniog of the Worlding	Committee Meetings (Inne	2016 to Eshanson 2019)
1 able 5-5	Topics of the working	Committee Meetings (June	, 2010 to repruary, 2018)

Date	Main Contents
27 June 2016	Bidding status / Tender evaluation for the 1 st batch, contract delays, and future prospects.
	Problems with the bidding documents, construction monitoring. Schedule after the 2 nd batch.

Date	Main Contents
17 October 2016	 DBE provided JICA with a progress report on the schools where construction/renovation had been started or had ended. The construction of 156 schools was completed by DBE itself, reaching 30 % of the
	 493 school target. ⇒ Review the status of the submitted documents and consider future responses (because 30 % completion under the BBB principles for construction/renovation was a condition for disbursement). The following plan was established: return to the Ministry of Planning and Finance once again regarding the carry forward, then apply again in the next fiscal year.
	 The exchange rate from Japanese yen to Myanmar kyat was fixed at 10.08, the rate at the time of contract signing. (Later, it turned out that the rate at the time of cashing was applied.)
	 The members of the supervising team held discussions within DBE and were to report to JICA in the next week. (But there was no progress.) Problematically, there was assumed to be a successful bidder if only one firm was called in a lot. Therefore, two firms would have to be called in each lot for clarification
	 of the 2nd batch. It was agreed that the bid for the 2nd batch should be awarded by the third week of November 2016.
22 November 2016	 In order to extend the PD deadline, it was determined to be necessary to open the Steering Committee in February 2017 and sign the Amendment by April 2017. Confirmed the BBB principles. The 156 schools rebuilt/restored by DBE did not include support from China but
	 The 156 schools rebuilt/restored by DBE did not include support from China but included private aid. The 30% rate of school completion, a condition for the second payment, required that the schools conform to the BBB principles, but they could also include GGP, JICS, UNICEE
	 UNICEF, and BAJ support. DBE was to collect data on the 156 schools that DBE had rebuilt/restored since November 25 based on the consultant proposal form, and the deadline for submitting the form was to be December 15.
	 In total, 75% of the remittance was in yen accounts and not converted to MMK. DBE confirmed whether the budget could be carried forward to the next fiscal year by the Ministry of Planning and Finance (MOPF). DBE prepared the Baseline Data.
	 DBE prepared the Baseline Data. The 2016 - 2017 budget was to begin in December 2017, and the program for the 2015 2016 Audit was unnecessary. JICA requested DBE to appoint a person responsible for this matter, and DBE agreed.
	Soe Moe Yandar of Lot-46 and Lot-50, and Thein Phyu Tun of Lot-51 were family companies, hence there was doubt about their construction abilities. The need to review their abilities was recognized.

Date	Main Contents				
	• DBE had requested MOC of the Ministry of Construction for cooperation w				
	construction monitoring team and was still awaiting a reply.				
7 December 2016	Status of measures taken on issues from the previous meeting				
	1. DBE asked the State/Regional Education Office (S/REO) to submit data for each				
	school on the 25 th of December.				
	2. DG instructed the S/REO, Township Education Office (TEO) to submit details on the				
	status of school restructuring/recovery, including a BBB completion status report.				
	3. DG was to attend a meeting on budget carry forward with the Ministry of Planning and				
	Finance (MOPF) on the 13 th of December. DG instructed the Chief Engineer (CE) to				
	forecast the expenditure by the first week of March 2017.				
	4. DG instructed the Assistant CE to investigate the number of students before and after				
	the disaster at the target school.				
	5. The work plan for the previous issue had not progressed.				
	6. We requested cooperation with construction monitoring from the MOC of the Ministry				
	of Construction but received no answer.				
	• Steering Committee: To be held in the first week of March 2017.				
	• PD extension: The DB agreed to extend the PD period from 12 months to 18 months.				
	PD needs to be amended within 6 weeks.				
	• PD Annex VI: Request for Disbursement and Flow of Grants (Flowchart of funds) :				
	MOE's Program Account (MMK) at MEB and S/REO's MD Account was deleted				
	because it did not pass.				
	• Update of the list of 493 schools: There were 464 actual schools, because some of the				
	schools listed overlapped. It was necessary to update the latest numbers, because				
	circumstances had changed for several schools. Chargers such as GGP, JICS, UNICEF,				
	etc. were constantly changing. The DBE budget covered 77 schools out of the 156				
	schools it had reconstructed/restored itself, so DBE submitted detailed data on the				
	latter.				
	• Request for a list of supervising teams: The consultant requested DBE to create a list				
	of schools with the following details included: the principal supervising the school, the				
	TEO, the Township Engineer's name and mobile phone number. DBE agreed.				
	• Expense Status Table: The consultant gave DBE a form for producing a table to				
	monitor the status of expenditure on contractors, and requested DBE to submit the table				
	with updated expenditure status for each expenditure. DBE agreed.				
	• BBB Checklist: The consultant gave DBE a checklist to confirm whether the school				
	rebuilding/restoration conformed to the BBB principles.				
	• 3 rd batch target schools: DBE had yet to decide upon the reconstruction/restoration in				
	46 schools. For the 3 rd batch, the consultant asked that 13 to 14 schools from the				
	inaccessible North Rakhine province be excluded from the expendable amount.				

Main Contents
• School furniture: DBE-JICA agreed to arrange two-seat desks and benches for elementary and junior high schools and single-seat desks and chairs for high schools.
 The 30% rate of school completion stipulated as a condition for the second payment still required the approval of the Steering Committee. This may have included schools completed by GGP, JICS, UNICEF, and BAJ. Completed data had to be submitted by DBB's 158 schools conforming with the BBB principles. YEC was to cooperate with this. JICA strongly urged DBE to submit a Financial Report specifying the rate of exchange to MMK, payment amount / due date to contractors, etc. 3rd batch target school: There were many schools without furniture, so there were also plans to commit half of the budget into furniture purchases. Request to the Ministry of Construction for cooperation with construction monitoring: No response had yet been received from the Ministry of Construction yet, so requests were being addressed to engineers from the MOE's Department of Higher Education (DHE). JICA advised the construction superintendent team that it would also be possible to use part of the budget. Baseline Data: Contact was to take place at a later date, because there were no classrooms in the Baseline Data submitted by DBE. PD Amendment: The PD Amendment had to be signed before February 24. → The extended-period PD Amendment was signed on February 6. YEC confirmed YEC confirmed that a Monthly Progress Meeting to collect contractors was to be held
 every month, DBE agreed. Proposition of the previous Minutes: Delete "After DG meeting with his staff, DG signed on GA and PD." of GA/PD Revisions (Revised Date / Signer). Financial Report: DBE exchanged DBE exchanged 375,000,000 yen on December 8, 2016 at the exchange rate of 11.52. JICA requested the remaining yen to be converted to MMK as soon as possible. The completion of 30 % of schools: DBE was to cooperate with consultants to provide evidence. Supervision Team: DBE was requesting cooperation from the Higher Education Bureau (DHE). A construction check performed by the Township Education Officer and Township Engineer was indispensable, and a workshop to strengthen capacity at the local level would be meaningful. 3rd batch target schools: A 3rd batch of approximately 30 target schools was considered possible, when calculating at an exchange rate of 11.52. By the next liaison meeting about 16 schools were added, and DBE submitted a list of 30 target schools. These

Date	Main Contents		
	Steering Committee: To be held in the third week of March, due to end-of-term and		
	entrance examinations.		
9 March 2017	• The 30% rate of school completion: Confirm whether the 103 schools completed by		
	DBE conformed to the BBB principles.		
	• Steering Committee: A committee meeting on the 26 th of April was planned, since the		
	30 % completion rate had not yet been reached.		
	• Bid for the 3 rd batch: There was no clear response in spite of urgent requests to hasten		
	preparations in view of the nearing rainy season.		
	• Check the present condition of the 1 st batch and 2 nd batch: Sharing problem support.		
	• Supervision Team: There was no response even after the situation was confirmed with DBE.		
	• Explained that the applicable exchange rate for the first payment was 10.08.		
	• Discussion on the delivery ceremony of the Yangon completed school. Two schools		
	were to be completed at the end of March.		
3 April 2017	• The 30% rate of school completion: A completed list was required to close the Steering		
	Committee Meeting of the 26 th of April, so a consultant presented a completed school		
	list for DBE to the Steering Committee Meeting.		
	• Confirmed the applicable exchange rate for deciding on the 3 rd batch budget. No		
	conclusion was reached.		
	• DBE reported on the schools whose contracts had been canceled in the 1 st and 2 nd		
	batches.		
	• The delivery ceremony for Yangon Lot-31 will be moved toward the 3 rd of May.		
25 July 2017	• JICA gave explanations to DG on the GA second draft and modifications of the PD.		
	• Discussed the progress (status of delays) and quality issues of the 1 st and 2 nd batches.		
	• The 3 rd batch school selection had not progressed in the past two months. An early		
	decision was requested.		
	• The time spent on school construction was increased as a result of the promotion of		
	Mr. Khin Aung to the position of Director. JICA requested DBE to have engineers		
	supervise construction at an early stage.		
	• The first payment exchange rate was 10.08, leaving 13,245 million kyat in remaining		
	funds. There was a difference of 1,875 million kyat, however, from the actual rate		
	usable under the designated procedures.		
29 August 2017	• The Amendment to the Grant Agreement (GA) and Programme Document (PD) was		
	signed		
	• JICA confirmed the exchange rate and budget with DBE.		
	• YEC submitted a list of 41 schools for the 3 rd batch and requested expedited bidding		
	preparations so as to start construction in the rainy seasons.		

Date	Main Contents				
	• DBE had to verify 30% completion in the overall progress of school constructions for				
	the second payment and continue discussing the arrangements for the Steering				
	Committee.				
6 December 2017	• Confirmed the proposed minutes of the Steering Committee Meeting.				
	• JICA gave DBE explanations on the approvals for the second payment.				
	• DBE explained that 30% of the second payment could be used as the 2018 budget				
	(April - September) but that the remaining 70% would compose the 2018-2019 budget.				
	• JICA requested DBE to change from the Thandwe school to the Kyauk Phyu school in				
	the batch of 12 candidate schools. (Thandwe was not covered because it had not been				
	affected by flooding as of 2015.)				
	• Discussed the 4 th batch, including the 10 3 rd batch schools and 12 schools in Rakhine				
	State. It was agreed that the 3 rd batch bid would be conducted before April 2018.				
25 January 2018	• Q&A on the system for carrying forward the budget for the first payment.				
	• JICA requested DBE to implement the 3 rd batch in the 2017 - 2018 budget.				
	• In the 4 th batch, JICA requested DBE to consult with the state education office on the				
	selection of the 15 schools in Rakhine State promised by the Japanese government.				
27 February 2018	• Confirmed the list of the target schools in the 3 rd batch				
	• Consulted on JICA's support system for the 4 th batch: Launch of the field survey team.				
	Bidding support. Cooperation system and division of roles.				
	• Proposal to appropriate the 4 th batch construction monitoring fee from the 25% budget.				

5-3 Joint Coordination Committee (JCC)

The Embassy of Japan (EOJ) convened a monthly coordination committee meeting consisting of the parties involved in the Grant Aid of 5 billion yen for the reconstruction of disaster-damaged schools (EOJ, DBE, JICA, JICS, UNICEF, BAJ). The DG and Chief Engineer from DBE attended the meetings to make up the Working Committee mentioned above.

Date	Main Contents			
16 February 2016	Reviewed the DBE's target schools according to the planning GGP and JICS school.			
17 March 2016	Withdrew the bidding notice published on the 11th of March announcing the 120 schools for			
	which DBE had not made adjustments. Re-published schools without overlap.			
24 May 2016	Reviewed the subject schools of CBE based on the subject schools almost fixed by UNICEF			
	and JICS.			
24 August 2016	DBE: In the 1 st batch, contracts had been completed for 22 schools (6 lots).			
	In the 2 nd batch, the sale of tender document for 67 schools (20 lots) started on the 30 th of			
	August with the deadline set for the 29 th of September.			
	DBE considered action on the 46 schools "under consideration" out of the list of 493 schools.			

 Table 5-4
 Joint Coordination Meeting

Date	Main Contents			
25 October 2016	Supervision over the preparation of a report on the construction content of 156 schools by			
	DBE and another donor to the department and state personnel.			
	DBE proposed that the remaining 2 nd batch budget be passed on to furniture (desk chairs,			
	blackboards) for the above 156 schools. As it is connected to BBB, JICA had no issues with			
	the furniture procurement, but Headquarter approval was required. JICA is planning to			
	prepare a budget that clearly specifies the procurement contents.			
	The remaining 50 of the 86 schools were to be funded with DBE budget.			
	It remained undetermined how the 3 rd batch was to be kept within the remaining budget.			
	The 75% deposit was fixed at the exchange rate at the time of payment, 10.08.			
	MES is not involved in construction monitoring. Although DG fielded the idea of asking the			
	Ministry of Construction to continue last time, it had not materialized.			
10 December 2016	Adjustments concerning the 493 schools.			
21 March 2017	Checked progress status of each scheme.			
20 October 2017	Checked progress status of each scheme.			

Chapter 6 **Public Relations and Workshop on School Construction**

6-1 Reporting by the Myanmar Ministry of Education and the Japanese Government

PR at the Handover Ceremony for the First School Completed in the 1st Batch (1)

Date and Time:	August 4 th , 2017 (Friday) 9: 30-12: 00			
Location:	Htantbin Township, Yangon			
School Name:	Ywar Thit Elementary School (1 st batch Lot-31, Code No. 441)			
Guest of Honor:	Myanmar Education Minister Dr. Myo Thein Gyi,			
	Japanese Ambassador to Myanmar Tateshi Higuchi			
News Media Institutions: Newspaper: New Light of Myanmar (state-sponsored daily)				
	Television: Skynet (major domestic television company)			
Pamphlet Distribution:	PR pamphlets were created for this programme, and distributed to the			

attendees at the ceremony. (See attachment 14.)

First School reconstructed from the Japanese grant project completes

A school, which was affected by of 490 schools affected by Cyclone the Cyclone Komen in 2010 and Komen in 2013. Mr. Taleshi Hi-A school, which was attracted with the Cyclone Komen in 2018 and Romen in 2018. Mr. Taitesm to reconstructed with the financial GUCHI, Ambassador of Japan GUCHI, Ambassador of Japan to Myanma, H.E. (2) 2nd Batch Joint Completion/Handover Ceremony

Scheduled Time Period: June 2018

Location: Sittwe, Rakhine State

A joint handover ceremony for the 39 schools constructed in Rakhine State as part of the 2nd batch is planned for the start of the new school term in June. The Education Minister will of course be in attendance at this ceremony, and the date is also being determined so that the newly appointed Ambassador Maruyama may also attend.

As with the handover ceremony for the completed 1st batch schools, newspapers and television outlets will provide coverage of the event, and are expected to spread news of Japan's support for Rakhine State widely among the people of Myanmar.

Target Schools:

Lot-32: 4 schools, Lot-33: 2 schools, Lot-34: 4 schools, Lot-35: 2 schools, Lot-36: 1 schools, Lot-37: 2 schools, Lot-38: 2 schools,

Lot-40: 3 schools, Lot-41: 5 schools, Lot-42: 5 schools, Lot-43: 2 schools, Lot-44: 2 schools, Lot-45: 2 schools, 39 schools total

6-2 Workshop on School Construction

On July 29, 2016, the parties involved in the 1st batch of this program (DBE, the State / Regional Education Offices involved in the 1st batch target schools, the Township Education Offices, school principals, JICA, UNICEF, SDC, and JICS) gathered at a high school hall near the MOE and DBE in Nay Pyi Taw to hold a workshop on school construction. The main topics covered were BBB, engineering/construction, quality assurance, and maintenance.

Venue: B.E.H.S-6 Hall, Nay Pyi Taw

Attendance: DBE, JICA, UNICEF, SDC, JICS, JICA Expert, Township Education Officer / Headmaster in Chin State; Deputy Director / District Education Officer / Township Education Officer in Ayeyarwady Region; Deputy Director / District Education Officer / Township Education Officer in Mandalay Region; Deputy Director / District Education Officer / Township Education Officer in Rakhine State; District Education Officer/Township Education Officer in Bago Region (Total 75 persons)

Workshop Program:

- 09: 30 Registration
- 10: 00 Opening Announcement by the Department of Basic Education (DBE)
- 10: 05 Opening Address by U Aung Than Oo, Director General of DBE, MOE
- 10: 20 Introduction of Participants by DBE Chief Engineer
- 10: 40 Introducing of the Programme by the DBE/JICA Technical Team BBB (Built Back Better) How to maintain school facilities in sustainable conditions Questions and Answers
 12: 00 Lunch Break

- 13: 00 Technical Guidance by U Khin Aung, DBE Chief Engineer
- 13: 10 Technical Guidance by the JICA Technical Team
 Typical Process of School Facility Construction
 Basic Construction Materials and Technical Points (Strength and Proof Stress)
 Construction Scheduling
 Construction Monitoring Points / Quality Control
- 15: 30 Questions and Answers
- 16:00 Closing Address

Ayeyarwady	6	5	1	August:1school
Mandalay	3	0	3	Julyl:3schools
Yangon	2	2	0	
Magway	1	0	1	July:1school
Total	82	64	18	

 Table 7-1
 Completion Status of 1st Batch and 2nd Batch (April 2018)

(2) 1st Batch

As of April 2018, sixteen schools have been completed in the 1st batch, and the construction of 3 schools in Lot-28 have not. In addition, the roads to two of the four schools initially contracted for Lot-26 were destroyed, and the schools could not be accessed, so the contracts were canceled.

Lot	Region/State	Township	Number of Schools	Completed	in Progress	Expected Completion Date
21	Chin	Hakha	5	5	0	
22	Chin	Hakha Htantlang	5	5	0

31	Yangon	(N)Okkalapa Htantabin	2	2	0	
Total			19	16	3	

 Table 7-2
 Completion Status of 1st Batch (April 2018)

1) Lot-28

As of April 2018, the 1st batch has completed five lots of 16 schools. Three schools in Lot-28 have not yet been completed. The following factors are responsible for the delay.

- No skillful construction companies have shown interest in this area, because Lot-28 is located south of Chin State, an area where security is poor.
- It takes much more time to transport materials to the area than normal. Boats are the only available transport, and they have to be small because of the shallow river water.
- The Lot-28 contractor cannot report on the progress because it doesn't recognize the status of construction.

2) Lot-26

There were 4 schools in Lot-26, but two of them broke off their contracts because their construction sites could not be accessed even during dry seasons.

• Cause: failure to check whether construction access was possible during the school selection process.

(3) 2nd Batch

As of April 2018: 48 schools had been completed in the 2nd batch and the construction of 15 schools was still underway.

Lot	Region/State	Township	Number of Schools	Completed	in Progress	Expected Completion Date
32	Rakhine	Sittwe	4	4	0

 Table 7-3
 Completion Status of 2nd Batch (April 2018)

1) Lot-39

Delayed by deteriorating security conditions in Rakhine State.

2) Lot-42

Delayed by deteriorating security conditions in Rakhine State and an inability to transport materials by boat due to shallow river water.

3) Lot-43

Delayed by deteriorating security conditions in Rakhine State.)

4) Lot-46

One of the schools was already being constructed by another donor, so it was changed to another school. Construction was subsequently delayed by flooding in the dry season.

5) Lot-47

Delayed by bad weather in the outback of Chin State.

6) Lot-48

Construction was interrupted by a rethinking of the construction management system after the consultant found many construction defects in a survey. The contractor was also very slow in restarting construction, which resulted in further delay.

(4) 3rd Batch

The minister's approval of the 3rd batch tender was received on March 14, and the tender is currently being prepared.

The consultant has modified drawings in the bid documents and prepared the prequalification documents for the contractor.

In the 1^{st} and 2^{nd} batches, no system was in place to emphasize the technical review in the bidder determination by DBE. This is expected to improve in the 3^{rd} batch.

There was also a need to establish a construction monitoring system as soon as possible to cope with pending problems.

(5) 4th Batch

The selection of target schools is in progress, focusing on Rakhine State. The third SC is planned for the latter half of April 2018.

JICA Myanmar office will hire a local consultant to survey schools and prepare the tender documents in preparation for the tender.

Establishing a monitoring system will be a challenge, just as it was for the 3rd batch.

7-2 Future Suggestions

(1) Problems, Consultant Advice, and Future Improvements

The current round of surveys encountered the following major problems, listed below.

The consultants provided as much advice and support as possible, but since the counterpart for this project is a government, in many cases, customary practices could not be changed, so in some cases, advice was not heeded, and some problems could not be solved. These were collated for future improvement strategies.

No.	Problem	Consultant Advice	Future Improvement
		School Selection Stage	
1.	 Because DBE did not conduct a survey of target schools (on-site survey) prior to tender, the facility scale, floor height, desk and chair size and quantity did not match the request from the school in many cases. DBE passed out a survey form, and based on reports submitted by schools, Chief Engineer alone determined the selection of schools and the numbers of classrooms and desks, without any reflection of the requests from the 	 Where possible, schools were visited and asked directly for required changes to the contract before the contract was concluded. The required changes were forwarded to DBE and the contract contents were altered. (1st and 2nd batches). For 3rd batch a survey of candidate schools was conducted and the tender contents (floor height, furniture quantity) were revised. 	 Before finalizing tender contents, DBE needs to discuss with regional education offices and schools in order to approximate the details of the work. On-site surveys of all target schools must be conducted prior to tender. The survey and selection of target schools must not be conducted by DBE, but by a third-party institution.

 Table 7-4
 Problem, Consultants Advice, and Future Improvement

No.	Problem		Consultant Advice	Future Improvement
110.	regional education offices or		Consultant / luvice	i uture improvement
	-			
2.	school head masters. From the 3 rd batch, it took 18 months to select the target schools and the completion of the programme was pushed back significantly. Personnel changes among the upper levels of MOE continued, and the selection of schools was delayed due to the persons in charge being absent or busy. The top-down flow of decision-making means organizational strengths cannot	•	Status reports were made to JICA Myanmar office and requests were made at the coordination meetings to bring forward the selection, but promises made at the meetings were empty and no progress was made.	 Construction of schools for basic education should be entrusted to the local education departments from the school selection stage through the project implementation stage, while the DBE must take on the higher-level work of evaluating school selections and handling construction funds.
	be utilized.		11 0 00 1 5	
		-	lity of Tender Documents	
3.	 As there are no architectural engineers at the DBE, no standard drawings and specifications have been prepared capable of ensuring sufficient quality. Drawing data used for improvement guidance were not properly stored. Drawings were looked up and printed for each tender, and modifications needed to be made repeatedly to the same drawings. 	•	Guidance was offered on how to improve drawings from a safety point of view, starting from the first survey. (Width of stairs, height of stairway steps, correct bar arrangement etc.) A structural particular specification form was created, and tests to necessary to ensure the construction of safe buildings were made compulsory in the contract. For the 3 rd batch, the drawings were revised in Japan, and the data size was reduced. In addition, PDF data was divided by type, reducing the work required to create tender documents.	The Swiss Agency for Development and Cooperation (SDC) drafted and proposed a prototype design diagram (design and specifications) for a higher quality Myanmar school with three classrooms and a staff room, so standard plans must be improved based on this proposal. There are no architectural engineers at the DBE, so school construction quality level should be improved in collaboration with engineers from the Ministry of Construction.
	2			
		1	tion of Successful Tenderer	East the DDE to distinct
4.	 A scheme for choosing eligible contractors has not been established. So long as the tender price was not lower than the minimum amount determined by MOE, a tenderer with poor construction management ability could receive orders. Evaluation of contractor's technical abilities was not taken seriously enough. In order to prevent collusion 		For the 1 st batch, documents for technical evaluation could not be submitted prior to the tender, so submission was requested as an addendum following the tender, and as a result of the technical evaluations, three lots were disqualified. For the 2 nd batch, submission of a work process flow chart and organizational chart was requested in the tender	For the DBE to eliminate contractors with poor technical abilities from tender, the tender system must be revised such that contractors must pass a pre- qualification inspection in order to participate in the general bidding.

No.	Problem	Consultant Advice Fu	ture Improvement
	with contractors individual clarification meetings with tenderers were not allowed. As a result, pre-contract checks were inadequate.	 document, and a technical evaluation was conducted. The same documents were prepared for the 3rd batch, and have been submitted to the DBE. 	
	Con	struction Monitoring / Inspection	
5.	Because schools and Township Education Offices were not provided with copies of any of the contract documents (Price breakdown, condition of contract, contract drawings, specifications), they have no knowledge of the contents of the contract. In addition, since the schools did not possess copies of the drawings, they could not conduct verifications or inspections to assess whether construction was progressing according to the contract documents.	 When DBE was requested to distribute copies of the contracts to the schools and regional education offices, they replied that they would order the contractors to do so. From 2nd batch, the submission of copies of the contract from the contractor to the school and regional education office was made compulsory and written in the tender conditions. Copies of the drawings and specifications were brought along on school visits and handed over directly to the school principals, and an explanation was given, with Relevation of the schools and regional education offices. Relevation of the schools and regional education offices was made compulsory and written in the tender conditions. 	ant parties from the all education offices meet the contractors at the of contract signing, to ade fully aware of the this of the contracts. fore, it is better that the cts should be drawn up e regions where the ls are located.
6.	Construction materials were brought into the sites without prior material approval or receiving inspection, so some contractors used inferior materials for construction in order to make a profit. • Cracked or warped wooden materials were used despite being flawed.	 using construction monitoring check sheets, on points of consideration related to construction monitoring. (Photo on the right: at Mogok School No.147) For schools to which visits were possible, interim inspections and completion inspections were conducted, and the parts which did not meet the required quality standards were ordered to be exchanged or fixed. A list was made of all materials for which a sample or catalog submission, or mockup would be required for approval, and this was explained to contractors before the conclusion of the 2nd batch contracts. A new list was re-prepared for 	because material wals have rarely been ed so far in the oring of school uction in Myanmar. actors are required to the monthly meetings, samples should be tted from each company the meetings. stem of prior material wal will not become

No.	Problem	Consultant Advice	Future Improvement
		documents, in which the submission was added as a required condition.	
7.	As construction monitoring was not conducted, site management was left up to the contractors, but due to the poor technical ability of the contractors themselves there were cases where quality management was not conducted at all. • Floor level lower than specified in drawings. • Columns erected without casting foundation (footing) concrete.	 Surveys and inspections were carried out at schools for which school visits were possible. In cases where construction was deemed unsatisfactory, reports were made to DBE and JICA Myanmar office, construction was suspended, and appropriate instructions were given. On sites where foundations were improperly built, the foundations were dismantled and rebuilt correctly. In schools where cornercutting was found, contractors were involved in meetings where the problem points in the current construction and future points of consideration for construction monitoring were explained to the school principal and construction committee members. (Photo on the right: Saelan School No.146) 	 Improvement of the tender method can enable exclusion of contractors lacking technical ability. Township engineers should be involved in this job. Local construction consultants should be involved within the construction budget to make regular monitoring inspections.
8.	 Some contractors barely submitted any construction progress reports (monthly reports). They attended monthly meetings to receive their payment, empty-handed without having prepared the monthly reports, and when they were asked the details of the work, it turned out that they did not grasp the status of the site (one contractor from the 1st batch, two contractors from the 2nd batch). 	• The DBE also put pressure on these contractors at monthly meetings, but they could not be contacted after the meeting because their phones were switched off, so the construction status could not be ascertained.	• A condition must be added to the contract whereby payment will not be made if a report is not submitted to JICA. (The DBE must be proactive about this.)
		Checking of Payment	
9.	There were lots where payment was carried out even though the partial completion conditions were not met.	• After checking the progress and the payment status based on monthly progress reports, DBE was warned that some	After 3 rd batch, local consultants must be involved to continue checking achieved volumes and payment status.

No.	Problem	Consultant Advice	Future Improvement
	 Due to the school headmaster and TEO being unaware of the partial payment conditions designated in the contract, they signed the completion form whenever asked to do so by the contractor. If the signatures of the school headmaster and TEO are present, DBE carries out payment without confirming the completed amount of construction. 	 sites not meeting the required conditions had nonetheless been paid. During the school and township visits, the TEOs and school headmasters were instructed on how to check the completion of each part of the construction using an inspection check sheet annotated with reference photos. (Photo on the right: Seminar for the target school township TEOs at the Rakhine State Education Office) 	
10	These many late where an energy	Progress Delay	• The accessibility of the acheal
10.	 There were lots where progress was significantly delayed. Due to the lack of accessibility assessment in the preliminary survey, even when contracts were concluded, work could not begin. (Trucks could not make deliveries because the roads were in poor condition. Boats could not be used because the rivers had dried up.) Security worsened following the start of construction, so enough workers did not come to work. Work was interrupted for long periods due to contractors' negligence and their financial problems. 	 Clearing of roads accessing the sites falls outside of the scope of the contracts, so local cooperation is required. DBE was asked to find a solution, but ultimately, the only possible solutions were to cancel the contract or to tolerate significantly delayed work. Nature phenomenon such as river water level is inevitable. Flexible scheduling is suggested. No funds-handling problems at this time. 	 The accessibility of the school can be confirmed in advance through a phone call or e-mail to the regional education office, so a thorough survey of accessibility must be made by DBE at the time of school selection. The inclusion of local consultants is requested in order to conduct thorough preliminary surveys

(2) Grant aid programmes in financial assistance to the Ministry of Education of the Government of Myanmar

Financial assistance grant aid programmes are a new scheme by which funding is donated to a partner country, and the government of the partner country can conduct procurement under its own system. A characteristic of financial support grant aid is to "provide broad financial support for the implementation of policies/projects being undertaken by partner governments, and execute projects not according to an institution but according to the procurement rules set out by the partner government."

The schools targeted by this programme, which were damaged in the flooding and landslides which occurred between July and August 2015, range across a wide region, including some difficult-to-access regions. In

addition, depending on the level of damage, some schools required rebuilding, expansion, repair, and other work, so it would have been extremely difficult to draft and implement a detailed recovery plan within a short time frame.

In some areas, foreigners are restricted from entry due to public safety concerns, and 493 schools were included in the list which would have been difficult to deal with under other schemes. However, Japan's financial support grant aid allowed the Ministry of Education to conduct school rebuilding projects in all the affected regions.

In addition, by using the grant aid, by following the standard designs and tender methods used by the Ministry of Education up until now, the implementation period could be shortened.

This programme was based on the plan that "while a preliminary cooperative preparatory survey will not be conducted, information gathering and applicability checks will be conducted instead." Therefore, a Japanese consultant was employed to assist the partner government with target site selection, engineering, and construction monitoring.

The foremost purpose of the Japanese consultant's work was "to provide technical support with the school reconstruction plan (including engineering) to be implemented by the Myanmar Ministry of Education and supported by the Japanese government, to aid with construction status information gathering, procurement and to offer quality support on reconstruction schools in line with the 'BBB' principle." However, the consultant also offered advice on the tender documents for the 1st through 3rd batches under the principle of "① Resilient facilities must be constructed which can withstand future disasters and meet Myanmar's design standards.", as stated in "Chapter 4 4-2 (1) DBE Standard Plan Improvement Guidance." For example, regarding construction of facilities which satisfy the first item in BBB principle ①, "facilities with safe and appropriately-sized stairways," the consultant offered technical guidance on how to improve standard plans (architectural diagrams, construction diagrams) for the width of stairways and landings, railing height, stair rise height, step size, etc. In addition, the consultant provided technical advice on how to improve the durability of the buildings by improving architectural structure, standard plans, and special specifications.

Regarding "elevated floors for schools in delta regions," the DBE determined the floor heights for each school to be reconstructed before tender, based on a survey chart of the target schools. However, when the consultants performed surveys of each school, they found that the floor elevation level was below the level of the flood water, leaving the schools open to inundation by floods, so the floor elevation was revised appropriately before the contracts were signed. For the target schools in the 3rd batch, the consultant conducted an on-site survey in advance of tender, and advised the DBE on changes that should be made to the school facility plans so that the schools would be sufficiently elevated to escape the danger of flooding. Regarding "sanitary facilities," toilet and water supply facilities were expanded for 82 schools which received reconstruction funding in the 1st and 2nd batches.

Regarding "inclusion of preschool classrooms" under BBB principle ②, "guarantee better education under education reforms currently being implemented," a total of 105 new classrooms were added under this programme: 11 wings for the 1st batch (33 classrooms), 17 classroom buildings for the 2nd batch (51

classrooms), 5 wings for the 3rd batch (15 classrooms), and 2 wings for the 4th batch (6 classrooms, currently under selection).

Beyond this, to "expand classroom facilities to upgrade post-primary school (PPS) to middle school," this programme included target schools offering PPS (through school year 6): one school in the 1st batch, and nine schools in the 2nd batch. For PPS to be upgraded to middle school (through school year 8), two classrooms must be added. Ten schools multiplied by 9 school years (including kindergarten) = a need for 90 classrooms in total, but only 48 classrooms were added to the 10 PPS schools in the 1st and 2nd batches, meaning that 42 more classrooms must still be constructed. However, these 10 schools have other existing classrooms that can be used, so if residents of the school districts request an upgrade to middle school, implementation of this programme has prepared the schools to upgrade at any time.

"Installation of a staff room" was not included in the reconstruction plans, but expansion of the number of classrooms enabled the staff to use pre-existing classrooms at the school facilities, so as a result, staff rooms were made available nonetheless.

For "installation of school headmaster's and teachers's lodgings (if necessary)," school headmaster's lodgings were installed at 11 schools in the 1st batch and 34 schools in the 2nd batch.

As stated above, the initial "BBB" principle goals for school facility reconstruction were largely achieved.

As to the question of whether financial assistance grant aid enabled a reduction of costs or not, the average area unit cost for the contract value of the 2^{nd} batch was 402,000 MMK/m² (about 35,000 yen /m²), which was about 96% of the scheduled DBE value for the 2^{nd} batch, meaning that the contracts were completed at the standard Myanmar market price for school construction. Therefore, from a cost perspective, the financial assistance grant aid lived up to expectations, and achieved a reduction in costs.

The secondary purpose of the Japanese consultant was to "To check the budget execution and construction progress status of the project to be implemented by the Myanmar Ministry of Education and supported by the Japanese government, and make sure that the project is completed without delay." To this end, the consultant received payment status information every week, assessed it along with the completion status, and sent reports to the JICA Myanmar office.

In addition, to monitor construction progress status, the Ministry of Education held monthly progress meetings, at which it received progress reports from the construction contractors, and checked over any problems with quality or workflow in cooperation with the DBE. Information was shared regarding problem points and points of improvement.

However, the school selection and tender process for the 3rd batch and beyond did not proceed smoothly due to various circumstances at the project counterpart (the DBE), which made it impossible to complete the project in the originally planned period of time.

The main reason for the delay was due to the top-down decision-making structure at the Myanmar Ministry of Education, which prevented the departments responsible for the project from putting their organization power to work until policy was decided upon at the top level

Still, the top management cannot provide a detailed policy on school selection, so after the project department manager unilaterally created a target school selection proposal, the proposal stopped at the top management level, and precious time was lost.

School selection and compilation of facility plans is not a job that can be performed by a single central government official. The parties who are most aware of the circumstances surrounding the disaster-damaged schools are the township departments of education, and the regional and state departments of education which received the reports from the townships. Though the proliferation of the internet and mobile phones allows easy communication with remote regions, this programme did not take regional education department voices into account during the school selection phase, and even after school selection, the regional and state education departments were not informed of the results. If this type of situation continues within the Myanmar government, project completion will take even more time.

Going forward, to implement effective school construction, responsibility for school selection, tender monitoring, and construction monitoring should be shifted from the central government to regional and state education departments. Consultants who visited the regional and state education departments met with local education officials who expressed strong agreement with this idea.

Furthermore, if Japanese consultants are to be employed, the status, identity, and duties of the consultants must be clarified. Based on the fact that the financial assistance grant aid programme does not clearly specify the role of consultants, and that the counterpart government is not able to effectively make use of the consultants' advice, the below contents should be incorporated into the PD created during the time of the G/A.

- Consultant's recommendation complete with a clear description of consultant status, identity and duties
- Small preliminary survey for consultant selection
- Basic conditions for recommended consultant duties:
 - ① Advice and support to the counterpart government on review of the basic plan, detailed engineering, tender document creation, tender examination, and the process of contractor selection.
 - 2 Advice and support to the counterpart government on work monitoring during project implementation.
- The consultant fees shall be paid for out of the grant aid.
- Clarify tax exemptions for long-term stay visas for consultants.
- Clarify items which require JICA approval and the consultant term of duty.

Until now, the Myanmar Ministry of Education has built several thousand public primary and middle school classrooms per year, but staff numbers are insufficient, and it is difficult to monitor progress and quality by themselves, so most is reliant on the good faith of the construction contractors. If orders are placed with construction contractors with poor technical ability, the schools may not be structurally sound, and other quality problems may arise, and the work period will be extended. In order to prevent these problems from recurring, the entire process from tender method to contractor selection should be improved.

It is advisable that DBE of the MOE and regional education offices communicate and cooperate more closely with a view to constructing schools where students can receive satisfactory education.

Improved types are as follows,

144'x30' RCC2、120'x30' PL6'、120'x30' PL7'、120'x30' RCC1、60'x30' PL6'、60'x30' PL7'、60'x30'

RCC1, Headmaster House, 2B Toilet, 4B Toilet, Furniture

Improvements for Item of No.1 \sim 24 were same in each type classroom building.

I

Appendix 5

Additional particular Structural Specification for DBE Tender

Appendix 5Additional particular Structural Specification for DBE Tender

April 2016

General Structural Specification

This specification shall apply to all drawings.

- 1. The contractor shall check relevant topographical, geological and metrological conditions of the construction site and shall design and construct safe and strong structure against all possible loads including dead load, live load, wind load, seismic load etc.
- 2. The contractor shall check all drawings and verify levels and dimensions in advance of the work and shall report any discrepancies to the Client immediately.
- 3. Unless otherwise noted all level refer to top surface of structural concrete.
- 4. The contractor shall obtain the Client's approval for all excavation and back filling as well as before placing any lean concrete and reinforced concrete. The excavation outside the foundation shall be backfilled with soil that is free of organic material, construction debris, cobbles and boulder or a controlled low-strength material (CLSM) Existing and backfill ground under footings, plinth beams, brick walls and slabs shall be compacted inlayers not exceeding 1 foot before applying 6 inches compacted sand layer.
- 5. The minimum depth of footing s below the undisturbed ground surface shall be 12 inches (305mm)
- 6. All concrete works shall conform to the Myanmar National Building Code (2016) requirement for reinforced concrete.
- 7. The Contractor shall determine the design mix proportion of reinforced concrete (RCC) prior to start work and obtain the approval of the Client. Designed mix proportion shall be established through trial mix. When designed mix proportion is being established with the objective of obtaining concrete strength at 28 days
- 8. Concrete have to be with minimum ultimate compressive strength at 28 days are as follows,

Required concrete compressive strength		
For lean concrete	2,000 psi	
For Slab on grade	2,500 psi	
For other RCC structure	3,000 psi	

9. Water-Cement Ratio

Water-cement ratio shall be establish so as satisfy each of two conditions given below, and shall be approval by the Client.

- (1) Proportioning strength must be attainable.
- (2) Water-cement ratio shall be lower than the maximum values indicated below table.

Kind of Cement	Maximum Water-Cement Ratio (%)
Ordinary Portland Cement	58

10. Curing

After concrete has been placed the concrete surface shall be kept moist by sprinkling water or by other appropriate method, and shall be protected from direct sunlight, rapid drying and cold.

Kind of Cement	Minimum Periods of Curing and Protection (days)
Ordinary Portland Cement	7

- 11. Reinforcing steel bar shall be hot rolled or cold-worked deformed bars and conform to ASTM A615 or equivalent and shall have minimum yield stress of 40,000psi.
- 12. Minimum period before striking formwork

Type of formwork	Minimum period before striking
Vertical formwork to columns	24 h
Vertical formwork to beams	2 days
Soffit formwork to slabs	7 days
Soffit formwork to beam and props to slabs	14 days or shore until achieve design compressive strength
Props to beams	21 days or shore until achieve design compressive strength

13. Concrete cover for Reinforcing Bars

(a)	$1^{1}/_{2}$ " for Columns and beams
(b)	$1^{1}/2^{"}$ for pedestals and plinth beams
(c)	3" for footings

- 14. The dimension of structure and building shall be revised upon requirement and request by the Client.
- 15. All the building shall be constructed as per designed drawing and modification of partition, change of doors and windows' location shall be upon request by the Client.
- 16. All timber work shall conform to the Myanmar National Building Code (2016) requirement.

TEST

- 1. Concrete material
 - a) Cement

Cement shall be conform ASTM C150 (Ordinary Portland Cement). The Contractor shall submit mill certificate of cement for Client approval.

b) Aggregate

Fine and coarse aggregate shall be tested in accordance with following standard for Client approval.

ASTM C29 (Method of test for aggregates for concrete)

ASTM 136 (Standard method for sieve analysis of fin and coarse aggregates)

ASTM 127 (Test method for density, relative density (specific gravity), and absorption of coarse aggregate)

ASTM 128 (Test method for density, relative density (specific gravity), and absorption of fine aggregate)

c) Water

As water is not suitable and sufficient for mixing of concrete in construction sites, water shall be brought in to each site from nearest town. At the beginning of site work, water quality of those sources shall be checked by the Client on its cost with testing that water sample at designated laboratories in accordance with ASTM 1602 (Specification for construction water). Then when the result of water quality is met with criteria, will be approved by the Client for construction use at site.

2. Fresh Concrete

a) Concrete Slump Test

The slump test carried out as follows,

Description	slump	tolerance
All reinforcement concrete	5 inches	±1 inch

b) Temperature Test for Concrete

Temperature of mixed concrete shall be checked by the Contractor on the day of each concrete placing with thermometer.

c) Concrete Compressive Strength Test

For all important reinforced concrete works, concrete compressive strength test shall be carried out regularly. For each day of concrete placing, six number of test specimens are to be taken, 3 for 7days strength and 3 for 28 days strength.

3. Tensile Strength Test for Reinforcing Bars

Before delivery of reinforcing bars to the site, tensile strength test shall be carried out at the designated laboratories. When the test result satisfy the criteria of reinforcing bars, those reinforcing bars will be approved by the Client to use them at site. After that this test shall be carried out once in every 15 tons of delivery.

Sign Board of the Programme and Work

Before commencement of temporary and permanent works, the contractor shall provide and erect a temporary name board that inform the public all general configurations of the construction works including Japan's national flag and the national flag of the Republic of the Union of Myanmar and the project name showing support from Japan, in English and Myanmar language.

Commemorative plate

The Contractor shall provide and install at each project site commemorative plates shown Japan's national flag and the national flag of the Republic of the Union of Myanmar, the project name and year of taking-over shall be written.

The Commemorative Plate will be installed outside; therefore the plate shall be Stainless Plate which will be withstood able to exposing sunshine and weather-beaten.

The Commemorative plate shall be embedded or fixed firmly to the concrete pedestal, the dimension and location of the pedestal shall be approved by the Engineer.

The Contractor shall provide the plates and/or stickers of Japan's national flag of which outline is shown as below.

1) Color System

The Contractor shall be required to render the full-color, not black-and-white, of the flag only.Red

"Red" is the color of the national flag of Japan, a symbolic color of Japanese harmony, and a color which evokes passionate images. Based on these associations, red color has been chosen to represent the nation of Japan.

- DIC156.
- PANTONE185 (approx. decimal fraction).
- Four-color resolution M100% +Y90% (approx. decimal fraction).

Flag of Japan

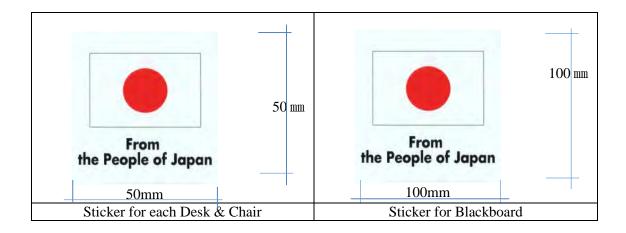

Flag of Myanmar

PROGRAMME FOR REHABILITATION AND RECONSTRUCTION OF SCHOOLS IN FLOOD AND LANDSLIDE AFFECTED AREAS

> FUNDED BY JAPANESE GRANT AID AS A TOKEN OF FRIENDSHIP AND COOPERATION

BETWEEN JAPAN AND MYANMAR

2018/19 (Year of completion)

Safety, health and environmental consideration

Protection of the Works and Adjoining Properties, Anti Pollution Measures

The Contractor shall provide all things necessary for the protection of the Works and all unfixed materials and goods delivered upon the Site of the Works, whether delivered by the Contractor, nominated Contractors, and direct Contractors for use upon the Works. The Contractor shall assume full responsibility for any cost and damage sustained to the foregoing from whatever cause arising, throughout the duration of the Contract.

The Contractor shall carry out the Works in such a manner so as to avoid noise and environmental pollution and causing damage to the existing houses, adjoining, and adjacent and subjacent properties. The Contractor shall make adequate provisions, by the suitable methods as directed by the Engineer or required by the Authorities, against any nuisance or damage by dust or other pollution for work under this Contract and to persons or properties in the vicinity, and he will be held solely responsible for any complaint, damage or claim in this connection.

Consideration of Environment and No Use of Asbestos

The Contractor shall care about the environmental matters including noise, vibration, water contamination, air pollution etc. The Contractor shall properly handle and dispose of toxic materials including asbestos if any would be found in the site. Toxic materials including asbestos shall not be used in any case.

Removal of Refuse from Site

Refuse and waste shall be removed from the worksites to the designated disposal site.

Appendix 6

Tender Evaluation Result for 1st Batch Tender

1st Batch Tender Evaluation

	from 23rd April 2016 to July 2017.													
Lot No.	Name of Tenderer	Bid Price (mil.MMK)	Rank	Evaluation Price by Consultant	Final Price (mil.MMK)	Issues of Tender Proposal								
21	Htet Arkar	643.360	5	578.370	638.810	Mistake of slab concrete quantity.								
						(Slab thickness 1.5" - 1.5')								
						Mistake of brick wall quantity.								
						Confirm rafter steel member thickness.								
						6nos of footing F1 cancel.								
						Add 2nos of F2 for 2story building.								
						Htet and Su Htoo(Lot-22) are partner companies.								
22	Su Htoo San	881.440	5	796.180	740.320	Mistake of slab concrete quantity.								
						(Slab thickness 1.5" - 1.5')								
						Mistake of brick wall quantity.								
						Confirm rafter steel member thickness.								
						8nos footing cancel front 140'x30' 3story building								
						Htet(Lot-21) and Su Htoo used same estimator.								
23	Soe Moe Yadanar	126.860	1	Consultant	122.538	Not include Electrical work cost.								
				instructed missing cost		No breakdown sheets for WC and water system.								
				in the bid.		Confirm rafter steel member thickness.								
24	Nawarat Thitsar	582.130	1	586.330	Tenderer	Misunderstood number of classrooms. 3 to 2								
					failed due to their cost	Not include electrical work cost.								
					increasing	Rafter steel member is too thin. (3mm thk.?)								
					after quality request.									
25	Nawarat Thitsar	339.290	1	342.440	Tenderer	Misunderstood number of classrooms. 3 to 2								
					failed due to their cost	Not include electrical work cost.								
					increasing	Rafter steel member is too thin. (3mm thk.?)								
					after quality request.									
26	Linn Yaung Htoo	563.680	4	Consultant		Not include Electrical work cost.								
				instructed missing cost		Rebar quantity is lack.(50% shortage) Refer comparison table								
				in the bid.		No splice, no anchorage, Stirrup dia mistake								
						Lintel main bar 10mm change to 12mm.								
						Confirm rafter steel member thickness.								
						Not necessary hardcore under slab.								
27	No qualified Tenderer in this lot.				Tenderer dropped after bidding due to estimation mistake.	Lowest tenderer dropped, 2nd and 3rd tenderer' s price were higher than DBE budget.								

Lot No.	Name of Tenderer	Bid Price (mil.MMK)	Rank	Evaluation Price by Consultant	Final Price (mil.MMK)	Issues of Tender Proposal
28	A Chinn Sit Than	578.800		Consultant instructed missing cost in the bid.	450.740	Rebar quantity calculation mistake. Main bar too much, Stirrup is lack. Plaster and paint quantity is lack.(forgot column)
29	Thiha Yarzar Soe	488.237	1	478.267	This lot was canceled due to land and security issue.	Misunderstood number of classrooms. 3 to 2 Mistake roof beam form quantity. Eaves quantity mistake. Apply 120' Q'ty for 60'
30	Myanmar Shwe Taung	249.000	3		Tenderer dropped because of no submission of additional Information.	Attached schedule is too poor consideration. (How can construct building complete structure within 1 month.) Myanmar Shwe and Byar(Lot-31) use same estimator.
31	Byar La Thu Kha	224.955	4	No issue in the estimation.	235.607	Attached schedule is too poor consideration. (How can construct building complete structure within 1 month.) Myanmar Shwe(Lot-30) and Byar use same estimator.

DBE 修正標準図

တည်ဆောက်ခြင်းဆိုင်ရာလုပ်ငန်း ဆွေးနွေးပွဲ

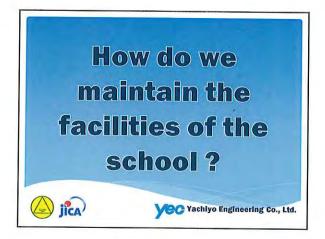

JICA Project Team

29 July 2016

Yec Yachiyo Engineering Co.,Ltd

Objective of this introducing

- 1. All facilities (classrooms, toilets, desk & chirrs and other facilities) provided from the people of Japan and expected to be properly used so that it will last longer.
- 2. To make the school environment cleaner.
- 3. To make pupils healthier.
- 4. To make maintenance culture takes root in the community.
- 5. The Japanese people will be pleased because the facilities will last long

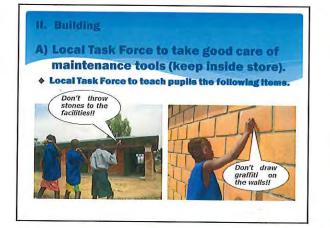

Building and Facilities Maintenance Control Activities

I. Duties of Local Task Force

Local Task Force(should be established) is:

- To purchase/ prepare cleaning tools and keep them properly. (brooms, brushes, dust clothes, buckets, dustbins, detergent, etc.)
- To teach pupils cleaning methods.
- To instruct pupils to clean classrooms, toilets and school premise every day.

- To instruct pupils to take good care of cleaning tools. (to be kept in the store) To include daily cleaning into the timetable and give pupils clear
- instructions. To organize monthly general cleaning.
- To make any minor repairs to all facilities.
- To teach pupils proper use and handling of all facilities.
- To report to the State/Region Task Force any Major Damages which is beyond local task force budge.

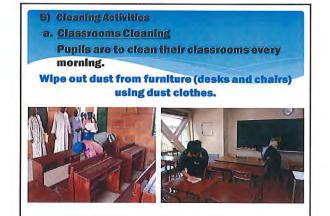

resump	es. sk Force is expected to ry repair or replaceme don of the next term. In re described as followi	nt work before the structions of repair
Name of part	Probable Damage	Repair Works for Damage
A) Roof	Small hole or crack in aluminum sheet	Fill it with putty silicon sealant or flash
A) NOOI	Big hole or splitting in aluminum sheet	Change the sheet
B) Concrete structure	foundations, floors and corridor get damage	using mortar (mixture of sand, cemen and water)
C) Wooden parts	Decay or remove	Spray anti-termites and replace
	Rust or affected by light corrosion	Repair by using gloss paint
D) Steel parts	Rust or broken or affected by serious corrosion	Weld the affected parts and coal using gloss paint
E) Glasses	Broken	Replace with new glasses
F) Desks& Chairs	Decayed or broken	Replace timbers and paint them
G) Walls	Any part of brick on wall is chopped off or broken	Use cement and sand mortar to patch it and paint the affected part of the wall to match

Name of Part	How to Maintenance
A) Wooden part	Spray anti-termites to wooden parts once in 5 years.
B) Steel parts	Paint and coast steel parts using gloss paint once in 5 years
C) Desks& Chairs	Spray desks and chairs using stain paint once in 5 years
D) Blackboards	Paint and coating blackboards using emulsion paint once every term

III. Control Activity Duties of Local Task Force

- A) Builes of Local Task Force Local Task Force is;
- To construct garbage dumping pits and treat garbage.
- To teach pupils cleaning methods.
- To instruct pupils to clean classrooms, toilets and school premise everyday.
- To instruct pupils to use garbage cans and pits always.
- To instruct pupils to wash their hands after using toilet, before eating meals and after cleaning facilities.
- To instruct pupils use different brooms for cleaning toilets and classrooms.
- To organize monthly general cleaning.

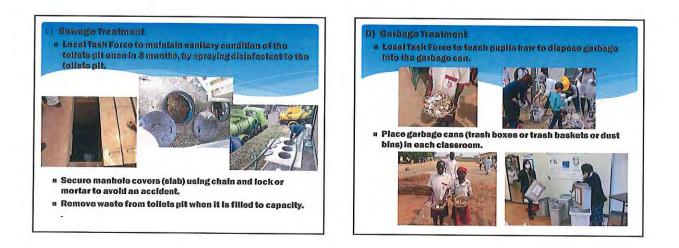

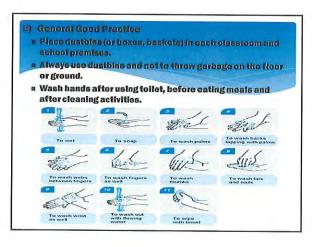

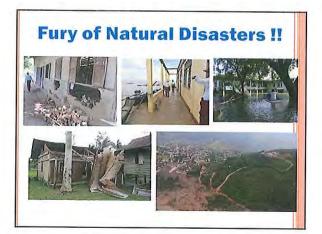

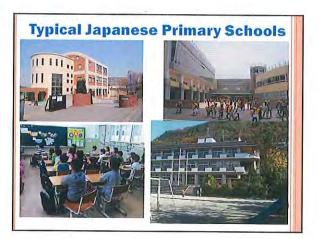

Programme Concept by the BBB

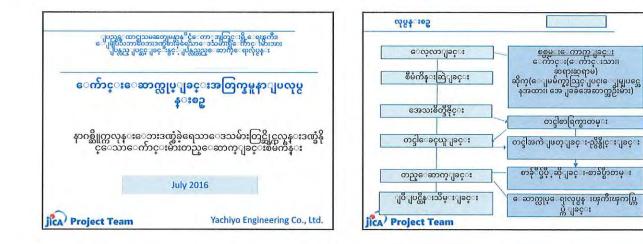

- 1. Resilient to future disasters in line with appropriate standards.
 - Resilient buildings with safe and adequately sized staircases.
 - Necessary elevation for schools in delta area.
 - Improved WASH facilities.

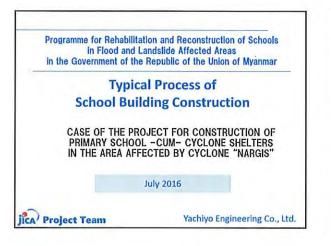

- 2. Ensuring better leaning environment under on-going educational reform.
 - Additional classrooms for KG in primary schools.
 - Additional classrooms for post-primary schools to upgrade to middle schools.
 - Teacher's room.
 - Houses for head teacher, teachers and security where necessary.
 - "Good Quality" classroom furniture such as Desk/Chairs, Black/Whiteboard, shelf for teaching leaning materials, etc.

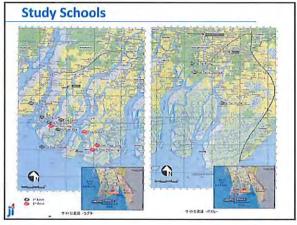

What should we do ?

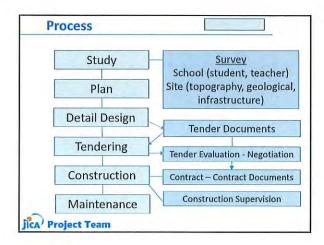

- 1. An accurate request for the tenderer. (by Tender Documents)
- Properly to review/check the proposal of the bidders.
- Should maintain a minimum of knowledge to review and evaluate for tenderer proposal.
- 4. If there is a doubt about the contents of the proposal, to clarify perform the bidders and interviews. In this case, the idea for the construction of the bidders, such as a general matter, it is effective as an opportunity to hear directly.

60.	U San Thein	Staff Officer (Bago West Region)	09-43006429
61.	U Win Zaw Oo	Deputy Staff Officer, General Administration State Office (Hinthata, Ayeyawady Region)	09-451230917
62.	U Aung Myat Phyo	Deputy Staff Officer, General Administration State Office (Inngapu, Ayeyawady Region)	09-422524334
63.	U Aung Than Oo	Deputy Director (Department of Basic Education)	-

Appendix 9

Sample of Tender Form for Evaluation of 3rd Tender

Appendix 9 GUIDELINE FOR CONSTRUCTION SUPERVISION LIST OF CHECK ITEMS AND METHD OF CHECKING

	WORK ITE	čΜ	CHECK ITEM BY I	NSPECTOR
Work Item	Γ	Description	Check Item	Method of Checking
1. General	eral 1.1 Material		Standard of production Quality of product Efficiency Formaldehyde emission rate etc.	 Visual examination Material test before delivery Acceptance test before unloading Quality control record
	1.2 Execution		Execute work by approved construction method	 In-house inspection sheet Statement of delivery Test record or certificate 1) Confirmation of Standard product 2) Confirmation of quality certificate 3) Confirmation material test report
2. Temporary Work	2.1 Execution	1) Site condition & Setting out	Site condition Location of boundary mark(stone) Difference in elevation Building position (site layout)	 Visual examination Attendance to site survey Quality control record In-house inspection sheet Site survey record
		2) Bench mark	Existence Location Level (height from design ground level)	 Visual examination Attendance to site survey Quality control record In-house inspection sheet Site survey record Record photo for present condition
3. Earth Work	3.1 Material	 Backfilling material & filling material 	Kind of backfilling (filling)soil	 Visual examination Quality control record In-house inspection sheet Statement of delivery
	3.2 Execution	1) Excavation	Level of subgrade and condition Bearing layer condition	 Visual examination Attendance check of compaction Quality control record In-house inspection sheet
		2) Backfilling & Filling	Method of compaction, Thickness of each compacted layer Extra fill for settlement	Execution report Record photo of construction
3. Foundation Work	4.1 Material	1) Hard core, Sand & Lean concrete	Hard core (Standard, kind, grain size) Sand (kind, grain size) Compression strength and slump of (1:3:6) concrete	 Visual examination Attendance check of compaction Quality control record In-house inspection sheet

	WORK ITE	M	CHECK ITEM BY INS	SPECTOR
Work Item	L L	Description	Check Item	Method of Checking
				Statement of delivery Record photo of construction
	4.2 Execution	1) Hard core, Sand fill & Lean concrete	Hard core and sand fill laying and compaction Type of compactor, Thickness of each layer, Number of compaction Crack free Level and thickness Flatness Lean concrete Level and thickness Flatness	 -Visual examination -Attendance check for filling level & compaction -Quality control record In-house inspection sheet Statement of delivery Record photo of construction -Attendance check for level and flatness -Quality control record In-house inspection sheet Execution report Record photo of construction
4. Reinforcing Bar Work	g 5.1 Material		Reinforcing bar (product code, kind, diameter, material certificate or tension test) Spacer block or chair (material, size)	 Visual examination Quality control record In-house inspection sheet Statement of delivery Tension test result
	5.2 Execution	1) Fabrication & placing	 -Fabrication (Kind, diameter, length, bending) -Shape of stirrups(Consider main bar) -Placing (binding, bar position, numbers, concrete cover, space between adjacent bars, spacing of stirrup, alignment) -Splice joint(splice position, rap length) -Anchorage(position, anchoring length, hook) -Reinforcement for void and opening) -Spacer block or chair(figure, position, spacing) -Length of dowel bar 	 Visual examination Attendance check of re-bar placing Quality control record In-house inspection sheet Execution report Record photo of construction
6. Concrete Work	6.1 Material		-Cement (Standard, kind of cement) -Aggregate(Standard, kind, water absorption rate, alkali silica reaction, chloride content, size of coarse aggregate) -Mixing water	 Visual examination Attendance of material laboratory test (Sieve test, specific gravity etc.) Quality control record In-house inspection sheet

WORK ITEM			CHECK ITEM BY INS	PECTOR
Work Item	L	Description	Check Item	Method of Checking
			-Concrete admixture(AE agent, Retarder) -Form material(wood, plywood ,metal)	Laboratory test report
	6.2 Execution	1) Formwork	Shop drawing for structure Floor marking. Design of forms, alignment Construction joint(location) Embedded metal (Anchor bolt etc.)	 Visual examination Attendance check prior to concrete pouring Quality control record In-house inspection sheet Execution report Record photo of construction
		2) Concrete pouring	Concrete mixing Approved mix design Approved water content Mixing time	 Visual examination Attendance of trial mixing and compression test Quality control record In-house inspection sheet Laboratory test report Statement of delivery
			Concrete pouring Cleaning of form, wetting of form surface, Height of discharge, sequence of pouring, avoid cold joint Vibrations Construction joint Curing Initial curing,(keep moisture by water spraying under cold weather and hot weather	- Visual examination -Quality control record In-house inspection sheet Execution report Record photo of construction
			After concrete poring Period of removal of forms and shores Dimension of element Cracking, honeycomb, cold joint (proper repairing)	 Visual examination Dimensional measurement of each element Quality control record In-house inspection sheet Execution report Record photo of construction
	6.3 Test	 Fresh concrete Compression test 	Type of concrete, slump, air content, chloride content, concrete temperature, test specimenCompression strength Weight	-Attendance of field test -Attendance of laboratory test -Quality control record Test record

	WORK ITE	М	CHECK ITEM BY INS	SPECTOR
Work Item	L	Description	Check Item	Method of Checking
			Concrete age(7days, 28days)	Record photo of test
7. Steel Structure Work	7.1 Material		Steel member(Standard, kind. dimension, certificate) Bolt & nut, anchor bolt(Standard, kind, size) Welding rod(Kind, proper stock)	 Visual examination Quality control record In-house inspection sheet Statement of delivery Certificate
	7.2 Execution	1) Qualification	License of welder License of nondestructive test engineer	-Quality control record Copy of license
		2) Fabrication	workshop (capacity, facility) Shop drawings/ full scale drawing on the floor Product Cutting dimension, Position and diameter of bolt hole drilling	 Visual examination Attendance to dimensional measurement of each element Quality control record In-house inspection sheet Daily work report
		3)Erection	Anchor bolt setting(position, anchorage length, grout thickness) Accuracy of frame alignment	 Visual examination Attendance to alignment check Quality control record In-house inspection sheet Execution report Record photo of construction
		4) anti-corrosive paint	Non paint portion Touch up paint to damaged portion	 Visual examination Quality control record In-house inspection sheet Execution report Record photo of construction
	7.3 Test	1) Welding joint	Visual inspection(Undercutting, pit, lock for overlap, cracks, crater, bead shape, slag, fillet leg size,) Inside fault(blowhole, poor penetration, cracks, slag)	 Visual examination Attendance to welding quality test Quality control record In-house inspection sheet Test report Record photo of construction
8. Brick Masonry	8.1 Material		Brick (standard, kind, compression strength, size) Mortar(1:3)	- Visual examination -Quality control record
Work	8.2 Execution		Marking and guide post Dowel bar Lintel (Size, re-bar, concrete)	In-house inspection sheet Statement of delivery Record photo of construction
9. Carpentry Work	9.1 Material		Timber(standard, kind of wood, size, water content) Joining and fixing metal(shape, size ,rust proof)	- Visual examination -Attendance to water content test

	WORK ITE	М	CHECK ITEM BY INS	PECTOR
Work Item	D	escription	Check Item	Method of Checking
				-Quality control record In-house inspection sheet Statement of delivery Record photo of construction
	9.2 Execution		Finishing of surface Anti-septic and termite proofing(application quantity)	 Visual examination Attendance to water content test Quality control record In-house inspection sheet Record photo of construction
10. Roofing Work	10.1 Material	1) 4-aqngle Color Sheet Roofing Ridge cover	Standard, kind of sheet, dimension, thickness Fixing screw and washer	 Visual examination Quality control record In-house inspection sheet Statement of delivery
		2) Fascia (eaves)board	Timber(standard, kind of wood, size, water content Joining and fixing metal(shape, size ,rust proof)	 Visual examination Attendance to water content test Quality control record In-house inspection sheet Statement of delivery
	10.2 Execution	1) 4-aqngle Color Sheet Roofing Ridge cover	Lapping of roofing sheet Spacing of fixing screw	 Visual examination Quality control record In-house inspection sheet Record photo of construction
11. Metal Work	11.1 Material	1) LGS ceiling suspension system	Standard, kind, shape, size	- Visual examination -Quality control record In-house inspection sheet Statement of delivery
	11.2 Execution	1) LGS ceiling suspension system	Ceiling height, alignment Reinforcement around opening Spacing of suspension wire(bolt)	 Visual examination Quality control record In-house inspection sheet Record photo of construction
12. Plaster Work	12.1 Material		Mix proportion of cement mortar (1:3)	- Visual examination -Quality control record In-house inspection sheet
12. Plaster Work (Cont'd)	12.2 Execution	 Wall plaster Floor screed 	Backing preparation (washing, surface roughness) Finishing (Flatness, thickness) Backing preparation (washing, surface roughness) Finishing (Flatness, thickness)	-Visual examination -Quality control record In-house inspection sheet Record photo of construction

	WORK ITEM	CHECK ITEM BY I	NSPECTOR
Work Item	Description	Check Item	Method of Checking
13. Door and	13.1 Material	Wood(wood kind, water content)	- Visual examination
Window		Glass(standard, type, thickness)	-Quality control record
Work		Hardware(standard, type, durability)	In-house inspection sheet
			Statement of delivery
	13.2 Execution	Product	- Visual examination
		Function, shape	-Quality control record
		Surface finishing condition, flatness	In-house inspection sheet
		Assembling, door operating,	Execution report
		Installation	Record photo of construction
		Anchor to wall	
		Grouting around door jamb	
14. Painting	14.1 Material	Standard	- Visual examination
Work		Kind of paint	-Quality control record
		Color	In-house inspection sheet
			Statement of delivery
	14.2 Execution	Surface preparation (Water content, dirt, flatness)	- Visual examination
		Kind of paint, number of coats	-Quality control record
		Workmanship(tone, even color)	In-house inspection sheet
			Execution report
			Record photo of construction
15. Finishing	15.1 Material 1) False ceiling	Standard	- Visual examination
Work		Kind of material(Non asbestos containing)	-Quality control record
		Thickness	In-house inspection sheet
			Statement of delivery

INSPECTION SHEET for SCHOOL BUILDING

May 2017

Yachiyo Engineerirng Co., Ltd

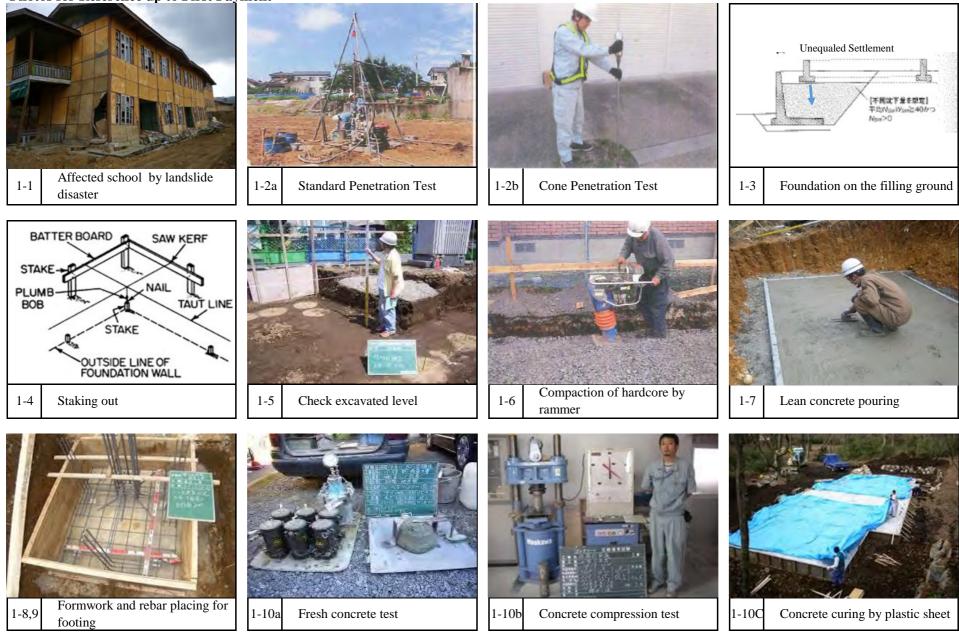

INSPECTION SHEET for SCHOOL BUILDING (1)

Up to First Payment

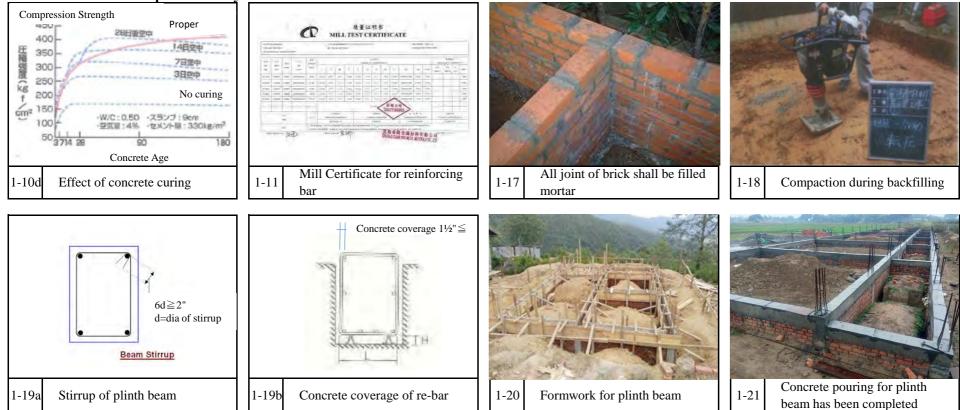

No.	Work Item (Work Sequence)	Check Item	Criteria		lge	Remarks
				Ok	NG	Kemarks
	Confirmation of planned construction site	Select safety area from disaster	Check past disaster record			
	Confirmation of bearing capacity of soil	Execute penetration test or test digging	Enough capacity to support building load			
	Levelling and clearing of construction site	Building has been constructed on landfill site	Footings shall be on undisturbed ground	 		
	Setting out/Staking out	Check batter board level (ground floor level)	Ground floor level as per drawing (3')			
	Excavation for footings	Check excavated level and subgrade soil condition	As per drwg. Level measurement			
1-6	9"thk. Hard core laying for footings	Quality of filling material	Well graded granular subbase material			
		Compaction of hardcore	Well compacted by proper equipment			
1-7	3"thk. Lean concrete for footings	Top level of lean concrete	As per drwg. Level measurement			
1-8	Formwork for footings	Dimension, position of footing form	As per drwg. Size measurement			
		Striking period of footing form	Min. Period before striking 24h≦			
1-9	Rebar placing for footings and columns	Diameter and number of footing rebar	16mm dia. Number as per drwg			
		Concrete coverage of footing rebar	Concrete cover $3" \leq$			
1-10	Concrete(3,000psi) pouring for footings	Mix proportion and mixing	As per approved mix proportion			
		Concrete pouring and vibration	Avoid to segregate. Well vibrated			
		Concrete curing after concreting	Moist condition for at least 7 days			
1-11	Rebar placing for columns	Diameter of rebar, end hook and tie spacing	8mm dia, 135° hook, L=2" \leq , tie 6"c/c,			
		Concrete coverage	Conc coverage 1½"≦			
1-12	Formwork for columns up to plinth	Dimension, plumb of column form	Size as per drwg. Plumb check			
		Striking period of column form	Min. Period before striking 24h≦			
1-13	Concrete(3,000psi) pouring for columns up	Mix proportion and mixing	As per approved mix proportion			
	to plinth	Concrete pouring and vibration	Avoid to segregate. Well vibrated			
		Concrete curing after concreting	Moist condition for at least 7 days			
1-14	Excavation for retaining walls	Check excavated level and subgrade soil condition	As per drwg. Level measurement			
1-15	3"thk. Hard core laying for retaining walls	Quality of filling material	Well graded granular subbase material			
		Compaction of hardcore	Well compacted by proper equipment			
1-16	3"thk. Lean concrete for retaining walls	Top level of lean concrete	As per drwg. Level measurement			
	Stepped brick retaining walls laying	Brick quality, mortar mix proportion	Brick isn't soft and shaky. Cement:Sand=1:3			
		Lay brick properly	All joint shall be filled by mortar			
1-18	Back filling with compaction	Quality of filling material	No use unsuitable material (clay etc.)			
		Compaction method	Compact every 1 foot layer by compactor			

No.	Work Item (Work Sequence)	Check Item	Criteria	Ju Ok	dge NG	Remarks
1-19	Rebar placing for plinth beams	Diameter, number and stirrup spacing	As per drwg.			
		Anchorage and lap splice length	As per drwg. Splice $26.5" \le$			
		Concrete coverage	Concrete cover 1½"≦			
1-20	Formwork for plinth beams	Dimension, alignment	As per drwg. Check alignment by string			
		Striking period of plinth beam form	Min. Period before striking 24h≦			
1-21	Concrete(3,000psi) pouring for plinth beams	Mix proportion and mixing	As per approved mix proportion			
		Concrete pouring and vibration	Avoid to segregate. Well vibrated			
		Concrete curing after concreting	Moist condition for at least 7 days			
		Inspection for 1st payment				
	- Progress check	Activities up to No.1-21 have been completed.				
	- Concrete columns and plinth beams	Dimensional accuracy of structural member	as per drawing S-2			
		Plinth beam top level	as per drawing S-1,2			
		Free from wide cracking on the concrete surface				
		Free from honeycomb on the concrete surface				
	- Brick retaining wall	Free from hole on the brick joint

Photos for Reference up to First Payment

INSPECTION SHEET for SCHOOL BUILDING (2)

Up to Second Payment

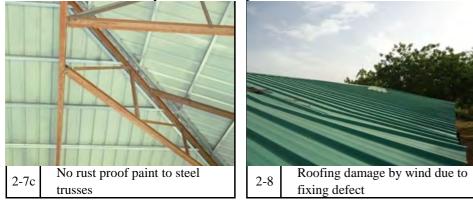

No.	Work Item (Work Sequence)	Check Item	Criteria	Juc Ok	dge NG	Remarks
2-1	Rebar placing for G/F columns	Lap splice length and hook of main bar	16mm dia, splice 26.5"≦, 180°hook		110	
		Diameter of rebar, end hook and tie spacing	8mm dia, 135° hook, L=2" \leq , tie 6"c/c,			
		Tie spacing, concrete coverage and top hook	Tie 6"c/c, Cover $1\frac{1}{2}$ " \leq , 180° hook			
2-2	Formwork for G/F columns	Dimension, plumb of column form	Size as per drwg. Plumb check			
		Striking period of column form	Min. Period before striking 2days≦			
2-3	Concrete(3,000psi) pouring for G/FL columns	Mix proportion	As per approved mix proportion			
		Concrete pouring and vibration	Avoid to segregate. Well vibrated			
		Concrete curing after concreting	Moist condition for at least 7 days			
2-4	Formwork for roof beams	Soffit level, alignment	As per drwg.			
		Minimum period before striking props	21 days or shore until achieve strength			
2-5	Rebar placing for roof beams	Diameter, number and stirrup spacing	As per drwg. 8mm dia, 135°hook			
		Anchorage and lap splice length	As per drwg. Splice $26.5" \leq$			
		Concrete coverage	Concrete cover $1\frac{1}{2}$ "			
2-6	Concrete(3,000psi) pouring for roof beams	Mix proportion and mixing	As per approved mix proportion			
		Cleaning form and water spreading before pouring				
		Concrete pouring and vibration	Avoid to segregate. Well vibrated			
		Concrete curing after concreting	Moist condition for at least 7 days			
2-7	Steel trusses and purlins erection	Size of steel member(section)	Steel member as per drwg			
		Welding joint of steel truss	No defect (Crack, under cut etc.)			
		Alignment of roof trusses and purlins	Straight and equal level			
		Fixing to anchor plate on the roof beam	Fixed firmly by bolt/nut or welding			
		Rust proof paint	All joint portion shall be touch-up			
2-8	0.42mm thk, 4 angle color sheet roofing	Proper roofing material	Check thickness by caliper. 0.42mm			
		Proper sheet lapping, proper fixing	Fixed firmly by roof nail, no leakage			
		Ridge cover and hip cover	Fixed firmly by roof nail, no leakage			
2-9	"8x1" Fascia board with 1"x1"Hollow frame	Quality of fascia board	Smooth surface, no cracking			
		Board fixing	Fixed firmly, alignment and no gap		$\square \blacksquare$	
				<u> </u>	\square	
				<u> </u>	\square	
				 	\square	

No.	Work Item (Work Sequence)	Check Item	Criteria	Jud Ok	dge NG	Remarks
		Inspection for 2nd payment	nt			
	- Progress check	Activities up to No.2-9 have been completed.				
	- Concrete columns and roof beams	Dimensional accuracy of structural member	as per drawing S2,S4			
		Free from wide cracking on the concrete surface				
		Free from honeycomb on the concrete surface				
	- Steel roof trusses (Rafter)	Specified size steel rafter	4"x2" MS channel thick 4.5mm $\leq t$			
		Specified size steel strut	2"x2" MS angle thickness 4mm≦t			
		Rafter & post strut joint	as per drawing S5 joint detail			
	- Steel purlin	Specified size steel rafter	3"x2" GI-C-channel			
		Installation of purlin	Alignment and equal spacing			
	- Roofing	Specified thickness sheet	0.42 mm $\leq t$			
		Installation of roofing	Free from gap or hole			

Photos for Reference up to Second Payment

Photos for Reference up to Second Payment

INSPECTION SHEET for SCHOOL BUILDING (3)

Up to Third Payment

No.	Work Item (Work Sequence)	Check Item	Criteria	Jud Ok	lge NG	Remarks
3-1	4 ¹ / ₂ "Brick walls laying with	Brick quality, mortar mix proportion	Brick isn't soft and shaky. Cement:Sand=1:3			
		Lay brick properly	All joint shall be filled by mortar			
3-2	5"x3"RCC frame, window sill and lintel	RCC frame shall be casted every 4' brick layer	As per drwg. A5 Section C-C			
3-3	5"x2"Door & window frame installation	Check material quality	Structurally sound, free from bent			
		Check water content of wood	Wood moisture content $18\% \ge$			
		Check surface condition	Smooth, free of cracks, splits, and knots			
		Check fixing condition	Plumb, square and flush			
3-4	¹ / ₂ " Plastering to walls	Check ratio of cement and sand	First coat 1:3, second coat 1:4			
	-	Concrete surface preparation	Making clean and wash the surface			
		Check finishing surface	Smooth, plumb and free of cracks			
		Check joint (corner) of plaster	Joint must be in right angle			
3-5	12"thk. Sand filling under floor	Check sand quality for filling	Well-gravity without silt			
		Check sand layer thickness	Sand layer 12" thick			
3-6	Polyethylene sheet (0.15mm thk.) laying	Check Lapping joint width, if any	More than 6" lapping			
3-7	4 ¹ / ₂ "thk. 1:3:6 Concrete (2500psi)floor	Check concrete pouring work	Well vibrating and tamping			
		Curing after concrete pouring	Keep moist condition for at least 7 days			
		Inspection for 3rd payme	ent			
	- Progress check	Activities up to No.3-7 have been completed.				
	- Wall plaster	Surface condition of wall plaster	Free from cracking			
	•		Free from un-bonding portion			
			Smooth, flat and plumb			
	- Wooden door & window frame	Surface condition of wood	Smooth, free of cracks, splits, and knots			
	- Concrete floor	Surface condition of floor concrete	Free from cracking on the concrete			

Photos for Reference up to Third Payment

INSPECTION SHEET for SCHOOL BUILDING (4)

Up to Fourth Payment

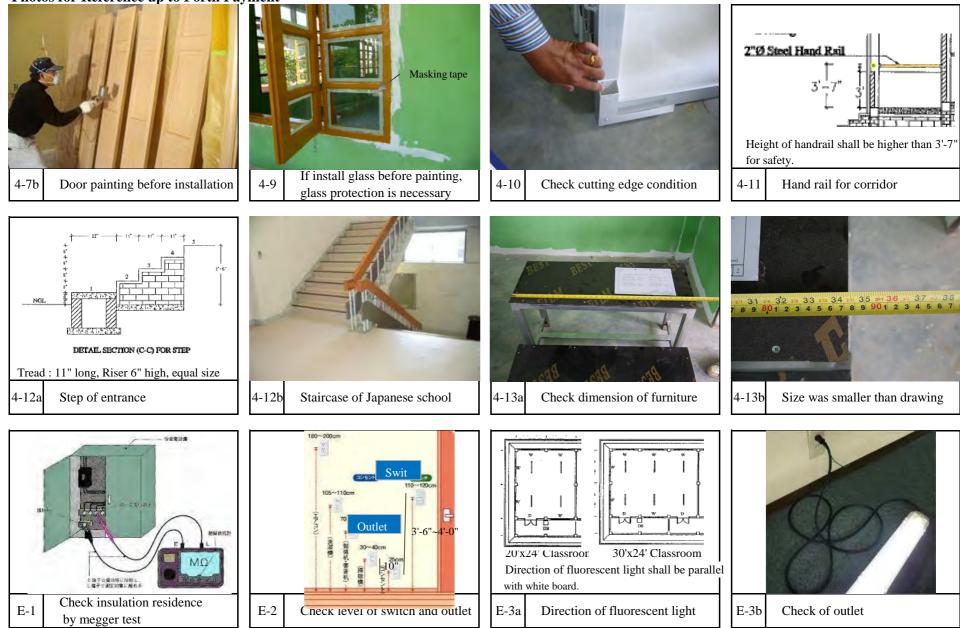

No.	Work Item (Work Sequence)	Check Item	Criteria	Juo Ok	ige NG	Remarks
4-1	Ceiling joist(C-channel) or T-bar frame	Distance between suspended bolts or wires	5'-3" c/c \geq both ways	OK	110	
		Suspended bolts or wires distance from wall	Approx. 6" from wall			
		Alignment of frame	Level and even			
4-2	Ceiling mold	Sequence of work	Install after wall painting			
4-3	2'x2' Cement board ceiling	Board surface condition	Free from damage and stain			
		Board cutting size adjacent wall	Don't use small piece			
4-4	Window and door leaves	Check material quality	Structurally sound, free from bent			
		Check water content of wood	Wood moisture content $15\% \ge$			
		Check surface condition	Smooth, free of cracks, splits, and knots			
		Check size and quality of butt hinges	Door: 5" hinge, window: 4" hinge			
		Movement check for door/window leaf	Close and open smoothly			
4-5	5"x5" PVC Gutter & 3"φPVC drain pipe	Proper gutter slope to drain pipe.	Gutter slope 1/300			
		Check fixing condition	Fix gutter/pipe firmly with proper bracket			
4-6	Wall painting	Decision of color scheme and kind of paint	Sample shall be approved before order			
		Check dry condition of mortar surface	Water content of wall $10\% \ge$			
		Ceiling mold	Mold is not to be painted			
		Number of coats and film thickness	Apply coats getting even color			
4-7	Doors and windows painting	Decision of color scheme and kind of paint	Sample shall be approved before order			
		Surface preparation for wood	Remove dirt and oil and well sanding			
		Border of wall and door/window frame	Make straight and to be in right angle			
		Hardware and glass	Hardware and glass are not to be painted			
4-8	1 ¹ / ₂ "thk.1:2:4 Concrete(3000psi) floor topin	Surface preparation on the base	Remove laitance and water washing			
		Level and flat surface	Make reference point before screeding			
		Curing after screeding	Moist condition for at least 7 days			
4-9	3mm Glass installation with teak beading	Glass installation timing	After painting of window frame			
		Surface condition	No scratch, no damage, no stain			
4-10	White board installation	Check surface condition of aluminum frame	No burr on cutting edge for safety			
		Check board fixing (hanging) condition	Fixed to wall by adequate hanging hardware			
4-11	2" øSteel handrail installation	Check top height of steel pipe handrail	Height from corridor floor $3'-7'' \leq$			
		Check handrail fixing condition	No shaky if shaking by hand			
4-12	Step to corridor	Check height of riser and width of tread	As per drwg. A5 Riser:6", Tread:11"			
	_	Up and down stair safety	All steps are even in height			
4-13	Furniture	Check size of furniture	As per drwg			

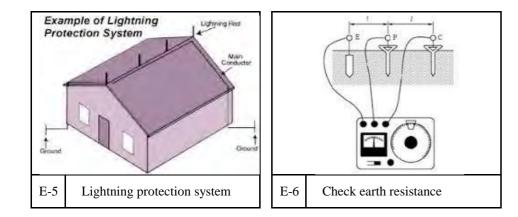

No.	Work Item (Work Sequence)	Check Item	Criteria	Jud Ok	ige NG	Remarks
		Check quality of furniture	Steady frame and desk top edge is smooth	<u>U</u> K	110	
E-1	Main distribution board 30A 2 pole breaker		$5M\Omega \ge$			
		Check wiring condition	Not expose (covered or embedded)			
		Check level of switch and outlet	Switch: 3'-6" Outlet : 10" from floor level	1		
E-3	40w fluorescent lighting fixture installation	Check quality and numbers	As per drawing			
		Check direction of fluorescent light	Pararrel with white board			
		Check lighting switch	Lighting switch on and off			
		Check outlet	Outlet is working or not (Use light)			
E-4	Lightning system	Check fixing condition of rods and wire	Fix tighten with roof			
		Check earth resistance	$10\Omega \ge$			
		Inspection for 4th payment	nt			
	- Progress check	All work in the contract have been completed.				
	- Ceiling	Level and flat				
		No damage, no dirt				
	- Wall	Even color and no dirt				
		Border of different color is straight				
		Free from crack and unbond portion				
	- Floor	Level and flat				
		No damage, no cracking and no unbonding				
	- Door and window	Smooth opening and closing				
		Smooth locking				
		No damage on the glass				
	- Step	Equal size of tread and riser	Tread: 11", Riser: 6"			
	- Furniture	Durable and no damage				
	- Light	Checking light switch on and off

Appendix 11

Programme Pamphlet for Public Relations

Appendix 11

Material's Submittal for Approval

Material's Approval

Prior to use, The Contractor shall notify to the School and Township Education Office of all proposed material to be incorporated in to the project in accordance with the Contract.

No.	Work Item	Material or Product	Check Item for Approval
1	Earth Work	Hard Core under Lean Concrete	To be sufficiently hard as well as being compressed
		Backfilling Material	Choice well graded soils (Coarse-grained soils include gravelly and sandy soils)
		Sand for Filling under Concrete Flooring	No contain any silty and organic matter
		Plastic Sheet for Dump Proof	Polyethylene film, thickness more tan 0.15mm
2	Concrete Work	Cement	Ordinary Portland Cement producted conforming to ASTM C150 or equivalent.
		Fine Aggregate	Source of Aggregate, No contain any silty and organic matter
		Coarse Aggregate	Source of aggregate, Maximum size:(25mm for super structure, 40mm for footing)
		Mixing Water for Concrete	Confirm source of Concrete Mixing Water
		Concrete	Confirm concrete mix design
			Execute concrete compression test and confirm compression strength (Min 3,000psi)
3	Formwork	Sheathing Materials	Confirm sheathing material (Plywood, Moisture-resistant Particleboard, Metal etc.)
		Joist, Stringer and Shore Materials	Confirm supporting material (Timber, Steel Pipe etc.)
4	Rebar Work	Deformed Reinforcing Steel bars	Confirm Mill Certificate (16mm, 12mm, 10mm diameter)
		Round Steel bars	Confirm Mill Certificate (8mm diameter)
5	Brick/Block Masonry Work	Common Burnt Clay Bricks	Min. compressive strengh:1500psi, Max.water absorption:20%
		Concrete Hollow Block (If any)	Alternative material for clay brick.(If brick is not available)
		8"x8"x3" Concrete Screen Block	Confirm sample (surface condition)
		Mortar for Brick/Block Laying	Confirm Mortar Mix Ratio, Cement, Sand, Water
6	Steel Structure Work	Steel Roof Trusses	Confirm steel member size ([-4"x2"x5mm, L-2"x2"X4mm)
			Confirm bolts & nuts size) (5/5"dia 1.5" long)
		Rust Proof Paint (Steel surface)	Confirm kind of paint (Red Oxide Primer), number of coat and thickness.
		Purlin	Confirm steel member size (C-3"x1 1/2"x2.3mm)
7	Roof Work	0.42mm thickness 4 Angle Color Sheet	Confirm sheet thickness and color (green)
		0.42mm thickness Color Plain Sheet	Confirm sheet thickness and color (green)
		2.5"Long EVA Screw with Washer	Confirm sample (length, free from rusting)
		"8x1 Fascia Board (Pyinkado)	Confirm sample (kind of wood, surface condition, Max. moisture content:18%)
		5"x5" PVC Gutter	Confirm sample (size)
		MS Bracket for Gutter	Confirm sample (free from rusting)
		3" dia 1.35mm thk. PVC Drain Pipe	Confirm sample (inner diameter:3", thickness:1.35mm)

No.	Work Item	Material or Product	Check Item for Approval
8	Doors & Windows Work	Double Swing Door 4'(W)x7'(H)	Confirm mock-up sample (Max. moisture content:18%)
		-5"x2" Jamb and Header (Pyinkado)	kind of wood, size, free from damage, dirt, bent and harmful knot on the surface
		-4"x1.5" Stiles, Rails and Mentions (Teak)	kind of wood, size, free from damage, dirt, bent and harmful knot on the surface
		-Door Panel Plank Tongue & Grove (PTG)	Confirm sample (free from damage)
		-5"Hinge (stainless steel)	Confirm sample (durability, free from rusting)
		-Slide Bolt (stainless steel)	Confirm sample (durability, free from rusting)
		-Pull Handle (stainless steel)	Confirm sample (durability, free from rusting)
		-Door Bolt (stainless steel)	Confirm sample (durability, free from rusting)
		Double Swing Window 3'(W)x4'(H)	Confirm mock-up sample before fabrication (Max. moisture content:18%)
		-5"x2" Jamb, Header & Sill (Pyinkado)	kind of wood, size, free from damage, dirt, bent and harmful knot on the surface
		-4"x1.5" Stiles and Rails (Teak)	kind of wood, size, free from damage, dirt, bent and harmful knot on the surface
		-2"x2" Mentions (Teak)	kind of wood, size, free from damage, dirt, bent and harmful knot on the surface
		-4"Hinge (stainless steel)	Confirm sample (durability, free from rusting)
		-Window Bolt (stainless steel)	Confirm sample (durability, free from rusting)
		-Hook and Eye (stainless steel)	Confirm sample (durability, free from rusting)
		MS Flat (Wall Tie) for Door & Window	Confirm sample (figure)
		3mm Clear Glass	Confirm sample (thickness, free from scratches, dirts)
		Glass Bead (Glass Stop) (Teak)	kind of wood, size, free from damage on the surface
		Painting for Door & Window (Oil Paint)	Confirm mock-up sample (color, surface preparation, even color)
9	Plaster Work	Mortar for Plaster	Confirm Mortar Mix Ratio (Cement: Sand=1:3)
10	Metal Work	2"dia Stainless Steel Pipe Handrail (Corridor)	Confirm sample (durability, free from rusting)
		3"dia Stainless Steel Pipe Handrail (Staircase, if any)	Confirm sample (height=3', durable, free from rusting)
11	Ceiling Work	Ceiling Joist (Light gauge steel suspension system)	Confirm sample (durability, free from rusting)
		T-bar suspension system	Confirm sample (durability, free from rusting)
		2"x2" or 2"x1" Cement Board for Ceiling	Confirm sample (non-asbestos, thickness≧6mm))
12	Painting Work	Selection of paint color	Confirm mock-up sample (color)
		Exterior Wall Paint (Mortar surface)	Confirm kind of paint (Exterior Gloss Emulsion Paint, Weathershield)
		Interior Wall Paint (Mortar surface)	Confirm kind of paint (Synthetic Resin Emulsion Paint, Vinyl Silk etc.)
		Door & Window Frame Paint (Wood surface)	Confirm kind of paint (Synthetic Resin Oil Paint, Gloss Enamel etc.)
		Ceiling Paint (Cement Board Surface)	Confirm kind of paint (Synthetic Resin Emulsion Paint, etc.)
		Patty for mortar surface	Confirm kind of putty (Cementations Skim Coat)
		Patty for wood surface	Confirm kind of putty (Synthetic Resin Emulsion Putty)

No.	Work Item	Material or Product	Check Item for Approval
13	Furniture	Wooden Table for primary school pupils	Confirm sample (durability, stability, dimension, surface condition)
		Wooden Bench for primary school pupils	Confirm sample (durability, stability, dimension, surface condition)
		Wooden Desk for high school student	Confirm sample (durability, stability, dimension, surface condition)
		Plastic Chair for high school student	Confirm sample (durability, stability, dimension, surface condition)
		Black board (White Board)	Confirm sample (dimension, surface condition, Ironmongery for fixing)
14	Plumbing Work	Water Closet (Squat Type)	Confirm sample or Catalogue
		PVC Drain Pipe	Confirm sample or Catalogue
		PVC Water Supply Pipe	Confirm sample or Catalogue
		Water Faucet	Confirm sample or Catalogue
15	Electrical Work	Fluorescent Light 40w	Confirm sample or Catalogue
		Lighting Switch	Confirm sample or Catalogue
		PVC Insulated Cable 3029	Confirm sample or Catalogue
		Distribution Board incl. Breaker	Confirm sample or Catalogue
16	Lightning Arrester	Lightning Rod	Confirm sample or Catalogue
		Lightning Conductor	Confirm sample or Catalogue
		Earth Rod	Confirm sample or Catalogue

Appendix 14 Public Relations Pamphlet

From the people of Japan

The Programme for Rehabilitation and Reconstruction of Flood and Landslide Affected Areas in the Union of Myanmar

Japan International Cooperation Agency

ស្រ្លីទៅរបុណ្យស៊ីស៊ីដែលនៃស៊ី បញ្ហានឮ:ពនិ៍ញ្រី:ဌាន

Build Back Better

Programme backdrop

The Cyclone Komen, which passed by western Myanmar in 2015, caused massive flood and lands. In respond to a request from the Government of the Republic of the Union of Myanmar, the Government of Japan decided to execute the Programme for Rehabilitation and Reconstruction of Flood and Landslide Affected Areas under the Japanese Grant Aid with assistance by Japan International Coorperation Agency (JICA) as 1.5 billion yen Grant, which is a part of the whole Japanese Grant that Government of Japan aim to rehabilitate and reconstruct 493 schools in all.

Programme goal

The goal of the Programme is reconstruction and rehabilitation of the schools in flood and landslide affected areas, as stated in the Recovery and Reconstruction Strategy in Post Flood and Landslide Needs Assessment (PFLNA), and with the "Build Back Better" called BBB principles. The BBB principles contain following two concepts; (i) Resilient to future disasters with safe and adequately sized staircases, necessary elevation for schools in delta areas and improved wash facilities, (ii) Ensuring a better learning environment under on-going educational reforms with additional classrooms for KG and post-primary schools, teachers' room, houses for head teacher and teachers and security where necessary and good-quality classroom furniture.

Cyclone Komen destroyed hundreds of school buildings..

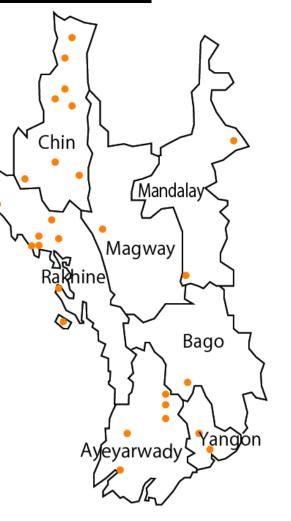

Reconstructed school with Build Back Better principle
