4) Experience of the Loan/Grant Project Implementation

No.	Project Title	Funding Organization	Grant/Loan Amount	Project Period	Implementation task
Comp	leted Project		•		
1	Non-Project Grand Aid	Japan ODA Grant	JPY(144.58) Million	(2012-2013)- (2013-2014) (2)years	To provide the tractors (65)units and implements for recovery of crops land affected by the flood in six project sites.
2	Irrigation Development in Bago Region (West)	Japan ODA Loan	JPY(750) Million	(2014-2015)- (2018-2019) (5)years	-To support farm machinery such as Tractor (220)units, Combine Harvester (31)units and Excavator (5)units to five project site in order to provide land preparation, land consolidation and harvesting service for local farmers.
On-go	ing Project	-	-		
1	Food Security Project for UnderPrivileged Farmer (2KR-2012)	JICA Grant	JPY(230) Million	(2013-2014)- (2016-2017) (4)years	-To provide the mechanization services on land preparation with tractors(92) units and harvesting with combine harvester (10)Units in four project sites and Meikhtila Training Center. Counterpart fund in collected from hiring service of the machinery to get one half (FOB) price of Machinery
2	Food Security Project for UnderPrivileged Farmer (2KR-2013)	JICA Grant	JPY(230) Million	(2014-2015)- (2017-2018) (4)years	-To provide the mechanization services on land preparation with tractor(93)units and harvesting with combine harvester (10)units in four project sites . Counterpart fund in collected from hiring service of the machinery to get one half (FOB) price of Machinery.
3	The Project for Farmland Consolidation and Agricultural Machinery Training for Agricultural Mechanization in Myanmar	KOICA Grant	USD(6) Million	(2014-2015)- (2016-2017) (3)years	-To emerge mechanized farmland (100 ha.) -To establish Agricultrual Machinery Training Center and conduct training program for farmers and AMD's staff on operation & maintenance of farm machinery.
4	Fosterring Agricultural Revitalization in Myanmar-FARM	IFAD Loan	USD(18.7) Million (No use directly from AMD)	(2014-2015)- (2019-2020) (6)years	-To emerge modernized farmland by consolidating in irrigated areas.
5	Agriculture Development Support Project-ADSP	World Bank Grant	USD(4) Million	(2014-2015)- (2020-2021) (7)years	 To support farm machineries to four AMS for demonstration and conducting farmers training. To supply farm machineries and equipment as well as teaching aids in order to upgrade the Meikhtila Training Center
6	Development of Irrigation Schemes in Myanmar	Exim Bank of India Loan	USD(101.626) Million	(2014-2015)- (2016-2017) (3)years	-To procure and sell farm machineries and implements to farmers by installment paying system and AMS of AMD in project areas and to upgrade the workshops

APPENDIX VIII. ENVIRONEMENT VIII.1 RESULT OF SOCIO-ECONOMIC SURVEY TO AFFECTED PERSONS BY KYAUNK MYAUNG JETTY IMPROVEMENT

Kyaunk Myaung Jetty is located on Kyung Myaung Town under Shwebo District, which is in due east of Shwebo Town, around 20 km away (refer to Figure 1). It has been established along the Ayeyarwady River, traveling down through almost of the land of Myanmar from north to south. About 500 thousands rice bags per year transported from the jetty to China, and 50-100 labors per day work at the jetty. However, the bridge between ships and the jetty are wooden as shown in photo below (left), which makes the works inefficient and unsafe. The water level of the Ayeyarwady River is fluctuated by rainfall, and sometimes, surrounding area is flooded in rainy season. Just near the jetty, there are some temporary shops, while there are some permanent houses. Such temporary shops are constructed every year at the beginning of dry season (see photo right).

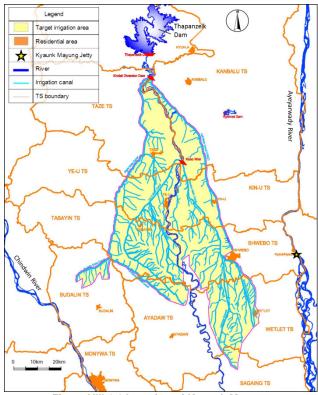

Figure VIII.1.1 Location of Kyaunk Myaung

It is necessary to demolish such structures mentioned above for the jetty improvement works, and the occupants are requested to shift to other sites. There are 16 households who will be affected by the jetty improvement works. A socio-economic survey targeting them was implemented (refer to Table-1). Out of 16 households, 6 households reside and operate their business in the affected area, while remaining 10 households have their residents in other sites. The affected area is governmental land, which means that all of the people are illegal settlers. It is noted that 10 shops are temporary operated in dry season, and the people re-construct their structures every year, since the structures can be flooded by the Ayeyarwady River in rainy season. They have stayed for many years and their income are mainly obtained from the shop operation near jetty.

The affected persons by the jetty improvement generally get stable income, around 5 million Kyat /household annually on average, and they cannot be categorized into the poor. Almost all of the occupants are Burma, while there is only one Kayin woman who married Burma guy. She migrated

from her hometown for marriage and she does not have any difficulties to communicate in Burma language, hence, it is not necessary to pay special attention to her. Therefore, it can be said that there are no the poor, indigenous, and ethnic people whom consideration have to be taken.

During construction period, the current jetty will be closed, however, a temporary jetty will be operated nearby. Therefore, present labors for shipment at the jetty will work at the temporary jetty. The persons who are requested to shift their houses/shops also can continue their business around the temporary jetty, so that, their livelihood will not severely affected by the Component. During operation, they will re-start their business near jetty, even after their residences are moved to other sites. Due to improvement of jetty, it is expected that the area will be developed. Therefore, it can be said that the impacts on livelihood of affected persons will be not be significant.

VIII.4 PROCEDURE OF EIA/IEE

Source: EIA Procedure, 2015

VIII.5 MINUTES OF STAKEHOLDER MEETING

(1) Village: Late Chin District/City: Shwebo

- 1. Venue : Chapel of village
- 2. Date & Time: From 10:00 am to 12:00 am on 21 September 2016

3. Participants:

- 1) JICA Team: Mr. Hideaki Hiruta Mr. Ryo Inoue, Mr. Takahiro Funayama
- 2) Surveyor Team Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win, Mr. Aung Moe Naing
- 3) Number of participants from the village: 79 (Male 36 and Female 43, Farmers 64 and non-farmers 15)

4. Meeting Content

i. Project introduction

- Explained about objectives and three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas How randomly selected 12 villages for survey and project will cover Shwebo irrigation scheme and related areas in Sagaing Region.
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

- Villagers ask who will bear for the construction costs of the irrigation rehabilitation (Mr. Hiruta answers the cost will be shouldered by the Project)
- The villagers are willing to participate for the implementing of the other two project components 1) Agricultural extension strengthening, 2) Road and bridge Improvement for their brighter future.
- The villagers agree for two conditions of project implementation but ensure that to supply the water for the other crops instead of summer paddy on the sowing time.
- Relating to the land consolidation they have prior idea for road to farm land and small canals (tertiary) but it is difficult to implement by themselves.

- 1) Irrigation
 - a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <
 - b) Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- c) There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <<u>Yes</u>/No>
- d) Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/Three seasons/Never >
- 2) Land consolidation
 - a) Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)? <<u>Yes</u>/No>
 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>

(2) Village: Htan Zin District/City: Shwebo

- 1. Venue: School (Primary)
- 2. Date & Time: From 9:00 am to 10:30 am on 23 September 2016

3. Participants:

- 1) JICA Team: Mr. Hideaki Hiruta, Mr. Takahiro Funayama
- 2) IWUMD: Mr. Saw Thet Khine Win (Executive Engineer) and Mr. Tay Zar Tun (Assistant Engineer)
- 3) Surveyor Team-Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win, and Mr. Aung Moe Naing
- 4) Villagers
 Number of participants: 129 (Male 95 and Female 34, Farmer 97 and Non-farmer 32)

4. Meeting Content

i. **Project introduction**

- Explained about objective of three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas How randomly selected 12 villages for survey and project will cover Shwebo irrigation scheme and related areas in Sagaing Region.
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation work and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

No.	Type of person	Remark
1.	Farmer	He agrees with the project implementation because summer
		paddy is less profitable crop.
2.	Non Farmer	He agrees to implement the project because Myanmar government prioritizes the agriculture than other sectors. Therefor he believes that if the agricultural sector is developed, the other sectors will be developed as well.
3.	Women	If agriculture sector develops, village's economy will be better soon. She thinks that is mutual development.
4.	The old	• He thinks that it is possible to improve in future for agriculture.

No.	Type of person	Remark
		• They want to have road to farm land and small canal (tertiary) because their farmland can only get the water by farm to farm irrigation. (Mr. Hiruta responded that the project will not construct any extension of existing canals. The project just intends to rehabilitate existing canals).
5.	Youth	He asks about drainage system because his farmland was flooded two times last year. Therefore, we would like to propose about improvement of drainage system. The project side answered that the project will examine the drainage improvement as well as irrigation canal, but at this moment, it is under the discussion.

- 1) Irrigation
 - a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <Yes/No>
 - b) Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- c) There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <<u>Yes</u>/No>
- d) Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/Three seasons/Never >
- 2) Land consolidation
 - a) Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)? <<u>Yes</u>/No>
 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>

1. Venue: Monastery

2. Date & Time: From 10:20 am to 11:10 am on 26 September 2016

3. Participants:

1) JICA Team: Mr. Ryo Inoue

2) IWUMU: Mr. Aung Thu Rain Maw (Assistant Engineer)

3) Surveyor Team: Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win, Mr. Aung Moe Naing

4) Number of participants from the village 58 (Male 48 and Female 10, Farmer 56 and Non-farmer 2)

4. Meeting Content

i. Project introduction

- Explained about objective of three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas How randomly selected 12 villages for survey and project will cover Shwebo irrigation scheme and related areas in Sagaing Region.
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project.

No.	Type of person	Remark
1.	Farmer	His farm was flooded every year because the drainage canal was not in good condition. He requested to rehabilitate existing drainage canal.
2.	Non-farmer	He agrees with project implementation. He hopes the project will help to improve their live in future. If agriculture sector is improved, livelihood of non-farmers will be improved as well.
3.	Women	She requests to get small irrigation canal (tertiary) to her farmland.
4.	The old	He has no comments. But he agrees with this project.
5.	Youth	He requests to improve access road which connects the market.

1) Irrigation

- a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <<u>Yes</u>/No>
- b) Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- c) There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <<u>Yes</u>/No>
- d) Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/Three seasons/Never >
- 2) Land consolidation
 - a) Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)?
 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>

(4) Village: Pyin Htaung District/City: Kin-U

1. Venue: Monastery

2. Date & Time: From 09:30 am to 10:45 am on 28 September 2016

3. Participants:

1) JICA Team: Mr. Hideaki Hiruta and Mr. Takahiro Funayama

- 2) IWUMD: Mr. Aung Thurain Maw (Assistant Engineer)
- 3) Surveyor Team: Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win,

Mr. Aung Moe Naing

4) Number of participants from the village: 60 (Male 43 and Female 17, Farmer 59 and non-farmer 1)

4. Meeting Content

i. **Project introduction**

- Explained about objective and three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas How randomly selected 12 villages for survey and project will cover Shwebo irrigation scheme and related areas in Sagaing Region.
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project.

No.	Type of person	Remark
1.	Farmer	He strongly agrees with project implementation but he worries about cost of rehabilitation for irrigation canal. And he would like to add one more request to rehabilitate existing drainage canal.
2.	Non Farmer	He agrees with project because farm labors depend on farmers. If the farmers are improved, farm labors' livelihood will be improved as well.
3.	Women	She would like to request to repair or rehabilitate existing drainage canal which were damaged since long ago. For this year, her farm was flooded three times. Mostly, two or three times per year her farmlands were flooded in monsoon season. The cause is inflowing from three drainage canal (about 200ft) to one drainage canal (about 80ft). Therefore, every year she faced flood problem.

No.	Type of person	Remark
4.	The old	He thinks that flood issue started 5 year ago after Kindat Weir was constructed. One time flood takes 5-7 days. Normally, the flood occurs in July, August and September (in Monsoon season).
5.	Youth	They are in rain-fed area. After Thapanzeik Dam was constructed, they get the water not only from rainfall but also from irrigation canal. If the rainfall is too much, they have to face flood issue but they don't have good drainage canal to drain of exceeding water.

1) Irrigation

- a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <<u>Yes</u>/No>
- b) Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- c) There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <\vec{Yes}/No>
- d) Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/Three seasons/Never >
- 2) Land consolidation
 - a) Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)? < Yes /No>
 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>

1. Venue: Monastery

2. Date & Time: From 11:00 am to 12:30 pm on 30 September 2016

3. Participants:

- 1) Surveyor Team: Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win, and Mr. Aung Moe Naing
- 2) IWUMD: Mr. Thi Aye Nyein (Assistant Engineer)
- 3) Participants from the villages: 31 (Male 24 and Female7, Farmer15 and Non-farmer 16)

4. Meeting Content

i. Project introduction

- Explained about objective of three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas (Shwebo irrigation scheme and related areas in Sagaing Region)
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.

Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

No.	Type of person	Remark
1.	Farmer	He wants to know if the farm road will be constructed alongside with the irrigation canal for the land consolidation. Answer: Yes
2.	Non Farmer	-
3.	Women	She wants to upgrade the access road to market because it is very bad condition and therefore farm gate price of their crops are lower than the other villages' ones.
4.	The old	-
5.	Youth	-

- 1) Irrigation
 - a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <
 - b) Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- c) There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <\vec{Yes}/No>

 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>

(6) Village: Ta Kaung Min District/City: Watlat

1. Venue: Monastery

2. Date & Time: From 09:30 am to 11:05 am on 03 October 2016

3. Participants

- 1) IWUMD: Mr. Yan Naing (Assistant Engineer)
- 2) Surveyor Team Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win, and Mr. Aung Moe Naing
- 3) Participants from the village: 30 (Male 24 and Female 6 and Farmer 26 and Nonfarmer 4)

4. Meeting Content

i. Project introduction

- Explained about objectives and three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas (Shwebo irrigation scheme and related areas in Sagaing Region)
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

No.	Type of person	Remark
1.	Farmer	 Only 200 acre can get the water from irrigation canal and rest of 600 acre get water from drainage canal. They faced flooded in every year. Sometime it takes 18 days.
2.	Non-Farmer	None
3.	Women	She does not have any comments on the project. If all the farmers agree, she will follow the project.
4.	The Old	They would like to request one new canal bridge cross over drainage canal which is located western part of their village.
5.	Youth	They couldn't cultivate any crops in summer season, and access road from village needs to be improved by the project. They would like to request to rehabilitate Mote Soe Gyone canal.

1) Irrigation

- a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <<u>Yes</u>/No>
- b) Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/ Three seasons/ Never>

- c) There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <<u>Yes</u>/No>
- d) Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/<u>Three seasons</u>/Never >
- 2) Land consolidation
 - a) Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)?
 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>

(7) Village: Indai District/City: Taze

- 1. Venue: Monastery (Hman Yin) Indai
- 2. Date & Time: From 10:00 am to 11:00 am on 05 October 2016

3. Participants:

- 1) JICA Team: Mr. Hideaki Hiruta
- 2) IWUMD: Mr. Tun Tun
- 3) Surveyor Team: Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win, Mr. Aung Moe Naing
- 4) Participants from the village: 115 (Male 71 and Female 44, Farmer 115 and Non-farmer:0)

4. Contents

i. Project introduction

- Explained about objective of three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas (Shwebo irrigation scheme and related areas in Sagaing Region)
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

No.	Type of person	Remark
1.	Farmer	If it is necessary to stop irrigation water during summer season
		for one to three years, he can only agree up to one year
		because he wants to cultivate in the summer season.
2.	Non Farmer	-
3.	Women	She agrees with the project but she wants to finish the project
		within the short time as soon as possible.
4.	The old	He agrees with the project implementation and he wants to get
		access road to his farmland
5.	Youth	He agrees with the project and he also wants land
		consolidation to be implemented in his farmland.

1) Irrigation

- a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <
- b) Up to how many seasons of stoppage of irrigation during summer season can you accept?
 - <<u>One season</u>/Two seasons/Three seasons/Never>
- c) There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <<u>Yes</u>/No>
- d) Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/Three seasons/Never >
- 2) Land consolidation
 - a) Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)? <<u>Yes</u>/No>
 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>

(8) Village: Htan Gyi District/City: Ye-U

1. Venue: Monastery

2. Date & Time: From 11:15 am to 12:20 am on 07 October 2016

3. Participants:

- 1) JICA Team: Mr. Takahiro Funayama
- 2) IWUMD: Mr. Aung Naing (Assistant Engineer)
- 3) AMD: Mr. Ngwe Zaw Soe (Staff Officer)
- 4) Surveyor Team: Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win, Mr. Aung Moe Naing
- 5) Number of participants from the village: 67 (Male 37 and Female 30, Farmer 64 and Non-farmer 3)

4. Meeting Content

i. **Project introduction**

- Explained about objective of three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas (Shwebo irrigation scheme and related areas in Sagaing Region)
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

No.	Type of person	Remark
1.	Farmer	He agrees to rehabilitate and improve irrigation system. He can
		fallow his farmland in summer season when irrigation is
		stopped.
2.	Non Farmer	He would like to propose to get access road to urban area.
		Their village road is not in good condition.
3.	Women	She is a casual labor and she agrees with implementation of
		the project, which will increase labor cost.
4.	The old	He agrees but requests to avail of sufficient water in summer
		season upon the rehabilitation of irrigation system.
5.	Youth	At present, they don't get sufficient water and they need to get
		more water, and if possible, consider about farm road and
		access road to market.

- 1) Irrigation
 - a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <<u>Yes</u>/No>
 - b) Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

VIII.6 MINUTE OF STAKEHOLDER MEETING IN LAND CONSOLIDATION PILOT SITES (1) Village: Late Chin District/City: Shwebo

- 1. Venue: Chapel of village
- 2. Date & Time: From 10:00 am to 11:15 am on 24 October 2016

3. Participants:

- 1) JICA Team: Mr. Takahiro Funayama
- 2) IWUMD: Mr. Myo Tint ()
- 3) AMD: Mr. Tun Naing Than (Staff Officer)
- 4) DOA: Ms. Zar Zar Min (Staff Officer)
- 5) DALMS: Mr. Soe Tun Aung (Staff Officer)
- 6) GAD: Ms. Su Su Hlaing (Dy Staff Officer)
- 7) Surveyor Team: Mr. Kyaw ThuAung, Mr. AungHtay Lin, Mr. KaungHtut Win, and Mr. Aung Moe Naing
- 8) Number of participants from the village side: 164 (Male 127 and Female 37, Farmer 154 and non-farmer 10)

4. Meeting Content

i. Project introduction

- Explained about objective of three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas (Shwebo irrigation scheme and related areas in Sagaing Region)
- Explained briefly about the benefits of land consolidation
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Also presented that farmers who owned farmlands under the targeted area must stop cultivation (winter crop and summer crop) during the implementation period for the land consolidation. The implementation period will start after monsoon paddy cultivated and finish before the seeding time of next monsoon paddy. It would last about three to six months.
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the irrigation canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

ii. Comments on the Project

No.	Type of person	Remark
1.	Village Chairman	He asked that why didn't choose the other farmland apart from the targeted area irrigated by SMC DY-4 MR-2. He also asked that the targeted area could change to another place if the other farmers are interested in this land consolidation project. The project side responded that the village was selected as a pilot site for land consolidation site. Therefore, it is important to ask the farmers' feeling about the project. On the other hand, the whole actual target area of the land consolidation covering 4,000 ha (10,000 acre) has yet to be fixed at this moment.
2.	Farmer (Male)	He agrees with this project and he is expecting that the other farmlands of his village also to be land-consolidated.
3.	Farmer (Female)	N/A
4.	The old	He agrees with the project and has no comment.
5.	Youth	He said that there is difference between registered land area and actual cultivated area. He asked, in such case, how the project will precede the land consolidation. The project side responded that it is needed to survey the actual farmland area prior to the land consolidation.

iii. Questions to the village by the Project

- 1) Irrigation
 - a. Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <<u>Yes</u>/No>
 - b. Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- c. There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition?

Questions to the villagers by the Project" below).
 - Answered the questions related to the project asked by the participants.

ii. Comments on the Project

No.	Type of person	Remark		
1.	Farmer	He asks how to arrange the segmented pieces of farmland		
		after the land consolidation.		
		The project side answered that it is needed to prepare the		
		replotting plan and the plan should be presented to the farmers		
		for the further discussion, and agreed upon by all the		
		beneficiary farmers.		
2.	Farmer (Male)	His concern is that the farmers can get their existing places		
		after land consolidation.		
		The project side answered that basically it will be arranged as		
		requested with other farmers consensus.		
3.	Farmer	She is very pleased with land consolidation and has no		
	(Female)	comment.		
4.	The old	N/A		
5.	Youth	Agree with the project.		

iii. Questions to the village by the Project

- 3) Irrigation
 - e. Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <<u>Yes</u>/No>
 - f. Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- g. There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <<u>Yes</u>/No>
- h. Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/Three seasons/Never >
- 4) Land consolidation
 - d) Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)? < Yes/No>
 - e) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>
 - f) Do you accept winter and summer crop stoppage for land consolidation work? <<u>Yes</u>/No>

- Explained briefly about the benefits of land consolidation
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Also presented that farmers who owned farmlands under the targeted area must stop cultivation (winter crop and summer crop) during the implementation period for the land consolidation. The implementation period will start after monsoon paddy cultivated and finish before the seeding time of next monsoon paddy. It would last about three to six months.
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

No.	Type of person	Remark	
1.	Farmer	Asked who will bear the cost for the project. Answer: the project	
2.	Farmer (Male)	He wishes that his farmland to be measured before land consolidation. He said that the actual farmland area is different from the registered one. The project side responded that it is needed to measure the actual farmland area prior to the land consolidation.	
3.	Farmer (Female)	Asked how to arrange the segmented farmlands which are less than one acre. The project side answered that the segmented lands will be consolidated.	
4.	The old	Asked whether he can get his own place after the land consolidation project. The project side answered that it is not fixed who will get which site after the land consolidation at this moment. It is planned to prepare a replotting plan, which will be reviewed and shall be agreed upon by the beneficiaries.	
5.	Youth	N/A	

ii. Comments on the Project

iii. Questions to the village by the Project

1) Irrigation

- a. Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <<u>Yes</u>/No>
- b. Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- c. There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <\Yes\/No>
- d. Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/Three seasons/Never >
- 2) Land consolidation
 - Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)? < Yes/No>
 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>
 - c) Do you accept winter and summer crop stoppage for land consolidation work? <<u>Yes</u>/No>

(4) Village: Tavayin District/City: Tabayin

1. Venue: Chapel

2. Date & Time: From 10:00 am to 11:20 am on 03 November 2016

3. Participants:

- 1) JICA Team: Mr. Takahiro Funayama
- 2) IWUMD: Mr. Win Myint
- 3) DOA: Mr. Aye Min Tun
- 4) DALMS: Mr. Myint Oo
- 5) Surveyor Team: Mr. Kyaw Thu Aung, Mr. Aung Htay Lin, Mr. Kaung Htut Win, and Mr. Aung Moe Naing
- 6) Participants from the village side: 74 (Male 60 and Female 14, Farmer 63 and Non-farmer 11)

4. Meeting Content

i. Project introduction

- Explained about objective of three main components of this project (irrigation rehabilitation, Road and bridge Improvement and Agricultural Extension Strengthening)
- Explained about survey areas (Shwebo irrigation scheme and related areas in Sagaing Region)
- Explained briefly about the benefits of land consolidation
- Presented about the two project conditions which have to contribute by beneficiaries (two conditions are 1) stopping irrigation for summer season up to three years 2) beneficiaries have to surrender 6% to 10% of their farm land).
- Also presented that farmers who owned farmlands under the targeted area must stop cultivation (winter crop and summer crop) during the implementation period for the land consolidation. The implementation period will start after monsoon paddy cultivated and finish before the seeding time of next monsoon paddy. It would last about three to six months.
- Explained that compensation for 1) land area decrease (6-10%) due to the land consolidation, 2) irrigation/cultivation suspension due to the canal rehabilitation works and 3) cultivation suspension due to the land consolidation works will not be provided.
- After the explanation, some questions such as "Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years?" are asked to the participants to confirm their feelings about the Project under the conditions (See "iii. Questions to the villagers by the Project" below).
- Answered the questions related to the project asked by the participants.

No.	Type of person	Remark	
1.	Farmer	Asked how to arrange the segmented pieces of farmland after	
		the land consolidation.	
		The project side responded that replotting plan will be prepared	
		and the plan will be presented to the beneficiaries for review	

ii. Comments on the Project

No.	Type of person	Remark	
		and agreement by all the beneficiary farmers.	
2.	Farmer (Male)	Agree with the project but wish to surrender his farmer less	
		than 6% if possible.	
3.	Farmer	Agree with the project and no comment.	
	(Female)		
4.	The Old	He wishes that his farmland to be measured before land	
		consolidation.	
5.	Youth	N/A	

iii. Questions to the village by the Project

1) Irrigation

- a) Do you agree with the project, although it is necessary to stop irrigation water during summer season for one to three years? <<u>Yes</u>/No>
- b) Up to how many seasons of stoppage of irrigation during summer season can you accept?

<One season/Two seasons/Three seasons/Never>

- c) There may be an arrangement with which irrigation water is released for the sowing times of sesame or green gram so that you can cultivate these crops instead of summer paddy for one to three seasons. Do you agree with the project with this condition? <\vert Yes/No>
- d) Up to how many seasons of this arrangement can you accept?
 <One season/Two seasons/Three seasons/Never >
- 2) Land consolidation
 - a) Typical land consolidation usually needs minimum 6% to max 10% of your farmland to construct the new farm roads and small (tertiary) canals. So, still can your village agree on the land consolidation with the loss of the farmlands or percentage (6-10%)? < Yes/No>
 - b) Up to how much percentage of the farmland, can your villagers surrender for the construction of farm roads and small (tertiary) canals? <10%>

(b) Number of Project Affected Persons (PAPs): 94 (Male:74, Female: 20)See "Attachment: Participant list" for all of name of PAP in this Appendix VIII.7

(4) Meeting Content

(a) Opening speech by Dr. A Zin Latt (Parliament member of Shwebo Township)

She explained the road project briefly. Implementation date of the Project is not too close, since the Loan Agreement between the Government of the Myanmar and JICA has not been exchanged. It is the first opportunity of our rural people to make comments and to raise their opinion prior to project implementation. Our people should take this opportunity for their regional development

- (b) Explanation of the Project, road expansion and land acquisition by the Project Team staff
 - Overall of the Project
 - Location of rural road improvement site
 - Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (c) Questions from JICA Project Team to the participants

Survey Team staff asked the following questions to the land owners.

- Q-1 Do you agree with the road improvement?
- A-1 Yes, we agree that. (All of the participant raise their hand to show their agreement.)

Q-2 Do you agree for land loss without compensation?

A-2 We can agree the land loss without compensation because -

Land Owner-male (from Yin Mar village) – This project is for public purpose, not only for individual. Therefore, we can give not only for some portion but also for all our own land for road so as to develop our village.

Q-3 Do you accept the unit price set by the Land Management Committee?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, we accept this proposed grievance handling mechanism.

(d) Supplementary explanation by U Win Myat Thein, Township Officer, DRD Shwebo

This village is one of the project areas of the rural road improvement site with JICA agriculture income improvement project in Shwebo. We need to cooperate with the project team for successful project implementation. Road's width will be expanded from current 18 feet to 20 feet by 1 foot for both sides of the Road Sb-33. If we complete the road improvement, we can use it for a long time until our next generation.

(e) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer
One male villager from Yin Mar village	We installed electricity line with our own budget in 2013. At this time, we donated our land to build electricity posts. We can also donate our land for this time (road expansion).	-	-
One female villager from Yin Mar village	I don't want to lose my land anymore as I had already donated my residential land for electricity line.	U Win Myat Thein Township Officer DRD Shwebo	In accordance with road standard design, we need only 2 feet for road expansion. If you don't agree road expansion because of land loss, we will not expand in-front of your house, only upgrading shall be implemented.

2. Target Road: Sb-36

- (1) Venue: Thiri Mingalar Monastery, Village Tract: Myin Chin District/City: Shwebo
- (2) Date & Time: From 09:30 am to 12:30 pm on 26 April 2017
- (3) Participants: 125 in total including PAPs
 - (a) Participants of governmental staff and the AIIP Project members

No	Name	Organization	Position
1	U Pho Kan	MOHA – GAD	Village Administrator
2	U Win Myat Thein	DRD	Assistant Director – Shwebo Township
3	Daw Nyein Nyein Aye	DRD	Staff Officer (Technology)
4	Daw May Zaw Oo	DRD	Junior Engineer-3
5	U Kyaw Tun Oo	IWUMD	Canal Inspector
6	U Myo Lwin	DALMS	Staff Officer
7	U Thein Swe Oo	DALMS	Surveyor-4
8	U Win Tun	DALMS	Surveyor-4
9	Ms. Rie Kitao	JICA Project Team	Environmental and Social Consideration
10	U Han Soe	JICA Project Team	Project Assistant
11	U Thaw Zin Naing	JICA Project Team	Project Assistant
12	U Aung Moe Naing	JICA Project Team	Project Assistant

(b) Number of Project Affected Persons (PAPs): 113 (Male:90, Female: 23) See "Attachment: Participant list" for all of name of PAPs.

(4) Meeting Content

- (a) Opening Speech and introduction by JICA Team and DRD Township Officer
- (b) Explanation of the Project, road expansion and land acquisition by the Project Team staff
- Overall explanation of the Project
- Location of rural road improvement site
- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (c) Supplementary explanation by U Win Myat Thein, Township Officer, DRD Shwebo
- Road will be upgraded to asphalt road with 20 feet.
- If the villagers agree and cooperate in the land acquisition for the road upgrade project, it is easier to upgrade the road, which leads to convenient transportation.
- Road will be extend by about 1 feet each for both sides upon as far as the current road is 18 feet.
- (d) Question from the JICA Team to the participants

Survey Team staff asked the following question to the land owner.

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally.

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If yes, why?

A-2 Yes, we can agree without compensation because -

One villager –male (from Myin Chin village) – This project intend for all, not only for individual. We can donate our land up to total 24 Ft road expansion.

Q-3 Do you accept the unit price set by the Land Management Committee? If no , any suggestions?

A-3 Yes, we can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(e) Questions from the participants and answers

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team.
- (b) Introduction and Opening speech by U Kyaw Min Tun (Parliament member of Regional Parliament)

This project aims at rural development, and participation from local people side is important. In our township, it is planned to upgrade three roads by JICA. This is a chance to develop our rural area and we are very lucky this time. After the implementation of this project, we can access to town easily for your education, religious and social affairs. I hope that you would understand this purpose and warmly welcome this project.

(c) Introduction of Daw Cho Cho Nwet, Township Officer, DRD Khin U.

We, DRD are very close relationship with this village, since we are one of Municipal departments. In this road upgrading project, we will do our best and cooperate with JICA. Therefore, you need to maintain this road for long life. In addition, we need to avoid crossing of animals carts on the road because it can damage to the asphalt pavement. JICA wants to know about your opinions for this project especially from land owners which have beside of the road.

- (d) Explanation of the Project, road expansion and land acquisition by the Project Team staff
- Overall explanation of the Project

- Location of rural road improvement site
- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (e) Questions from JICA Project Team to the participants

Project Team asked the following question to the land owner.

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, we agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If yes, why?

A-2 Yes, we can agree without compensation because –

Land Owner - male (from Kan Thar Yar village) – By using this upgraded road, we can promote our health care, education, transportation until our next generation.

Land Owner – male (from Ba O village) – If we won a lottery, we shall use it for daily activities and the money will be gone out within one day. However, this upgraded road can be kept for our next generation.

Land Owner – male (from Mya Kan Thar Ward) – This project is for our rural area development.

Land Owner – female (from Kan Thar Yar village) – It will be useful for our next generation.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(f) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer
One villager, Kan	Please construct the farm	JICA Project Team	In our project components, land
Thar Yar Village	road within the farmlands in		consolidation project is included.
	our village.		If your area is target for the land
			consolidation project site, it will
			be constructed as you requested.

4. Target Road: KU-12

- (1) Venue: Si Bok taya Monastery, Village Tract: Si Bok taya District/City: Khin-U
- (2) Date & Time: From 10:00 am to 12:30 pm on 28 April 2017

(3) Participants: 125 in total including PAPs

(a) Participants of governmental staff and the AIIP Project members

No	Name	Organization	Position
1	U Kyaw Min Tun	Regional Parliament	Parliament member
2	U Nyunt Swe	MOHA, GAD	Village Tract Administrator

4	Daw Myo Myo	DRD	SAE
5	U Thiha Maung Maung	DRD	Junior Engineer -3
6	Ms. Rie Kitao	JICA Project Team	Environmental and Social Consideration
7	U Han Soe	JICA Project Team	Project Assistant
8	U Thaw Zin Naing	JICA Project Team	Project Assistant
9	U Aung Moe Naing	JICA Project Team	Project Assistant

(b) Number of Project Affected Persons (PAPs): 116 (Male: 95, Female: 21) See "Attachment: Participant list" for all of name of PAPs.

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team.
- (b) Opening Speech and introduction by U Kyaw Min Ttun (Parliament member ,Regional Parliament)

This project aims at development of rural economy. Therefore, you need to participate actively from local people side. We can use this upgraded road not only for agriculture products transportation but also for ambulance, fire track & vehicle for social affairs and rescue in emergency case. I hope that you will understand and accept the project.

(c) Opening Speech and introduction by Daw Cho Cho Nwet, Township Officer, DRD Khin U

This road is connected to Old Mu Canal IP road, and villagers can transport their agriculture inputs and products by using the road, and also for social affairs (education, health, emergency cases). After the implementation of the project, it is suggested to use animal cart wheel with rubber cover for long life road.

(d) Explanation of the Project, road expansion and land acquisition by the Project Team staff

- Overall explanation of the Project
- Location of rural road improvement site
- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (e) Question from the JICA Project Team

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (99 % of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If Yes, why?

A-2 Yes, we can agree land loss without compensation because -

Land Owner - male (from Si Bok taya village) - I can donate our land as much as you need for road expansion because this type of project is target for all people, not only for individual.

Land Owner – male (from Tha yet kan village) – By upgrading this road, people can access easily famous historical pagoda near our village.

Land Owner – male (from Gya Bo village) – This project is intend for our rural area development.

Land Owner – male (from Pay Gone village) – Everyone can access easily to famous historical pagoda.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, we can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(f) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer
One villager, Si Bo taya village	If a land owner cannot provide his/her land with or without compensation, how shall you do?	JICA Project Team	If land owner cannot provide his/her land, we will not make expansion for that. Only upgrading will be performed.
One villager, Tha yet kan village	How about the quality of road?	Daw Cho Cho Nwet, Township Officer , DRD Khin U	The construction of this road shall be implemented by JICA expert and DRD. Therefore, we will perform in accordance with international standards.

Apart from the stakeholder meeting, JICA Team visited one villager who does not accept the land acquisition of his land, even if compensation for the land loss is provided, since he does not want to cut down his tamarind trees. Following opinion and answer were exchanged:

Speaker	Opinion/question	Respondent	Answer
U Nyo Aye, Gya Bo village (tamarind tree owner along road)	I cannot agree road expansion in-front of my land with or without compensation. I don't understand why they choose my way as there has another old way along this road. They can also use this old road for road expansion. Road distance is not so different between old road and new road. In addition, I don't want to lose my long life tamarind tree (about 55 years old)	JICA Project Team	JICA choose this road to implement so as to link with OMC IP road for rural transportation. However, if you don't agree loss of your land for road expansion, we will only upgrade without expansion.

Myanmar

(4) Meeting Content

(a) Introduction and Opening speech by U Myint Tun (Lower House Parliament Member, Taze Township.

Under leading of State counselor, Daw Aung San Su Kyi, new government tries to get peace countrywide and economic development. For that case, we need to improve infrastructure such as transportation, telecommunication for economic development. On the other hand, we need budgets (via economic development) to implement those infrastructure improvement. Our country is under poverty and we need international development assistance, e.g. from JICA. The JICA assistant is a sign of good relationship between Myanmar and Japan. Therefore, JICA plans to start this development project in Sagaing Region with the improvement of many components such as irrigation, agriculture, rural road and bridges. Among them, Chaung Zon(S) road is one of the project sites for road improvement, and beneficiary people are very lucky. I request and suggest villagers to be unity and to participate actively for successful of this project.

(b) Introduction of U Thi Han Soe (Township Administrator, GAD, Taze Township)

Today is the good (Mingalar) day for people in this area. Formerly, rural development was responsible for township municipal with municipal budget, which was collected tax from Township level. Nowadays, Department of Rural Development organizes rural economy development, sanitation, road and bridges, electrification etc. In our township, we plan to implement development

sectors such rural road, health, education, not only support from international organization such as JICA, Europe but also from ourselves. I hope that villager will actively participate in this project

- (c) Explanation of the Project, road expansion and land acquisition by the Project Team staff
 - Overall explanation of the Project
 - Location of rural road improvement site
 - Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (d) Question from the JICA Project Team

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If Yes, why?

A-2 Yes, we can agree land loss without compensation because -

Land Owner - male (from Chaung Zon village) – This upgraded road is majorly effect for our village development.

Land Owner – male (from Chaung Zon village) – This project is mainly for all, not for individual.

Land Owner – male (from In Kok Ka village) – This project is greatly beneficial for our two villages (Chaung Zon and In Kok Ka) transportation.

Land Owner – female (from Chaung Zon village) – It is very difficult to set one stone (for road construction) in-front of our house by our own budgets. Therefore, we warmly welcome JICA project and be really appreciated.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

7	U Thaw Zin Naing	JICA Project Team	Project Assistant
8	U Aung Moe Naing	JICA Project Team	Project Assistant

(b) Number of Project Affected Persons (PAPs): 24 (Male: 16, Female: 8) See "Attachment: Participant list" for all of name of PAPs.

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team.
- (b) Introduction of Daw Cho Cho Nwe (Township Officer, DRD Khin U township)

(c) Explanation of the Project, road expansion and land acquisition by the Project Team staff

- Overall explanation of the Project
- Location of rural road improvement site
- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.

(d) Question from the JICA Project Team to the participants

Project Team staff ask the following questions to the land owner.

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If yes, why?

A-2 Yes, we can agree land loss without compensation because –

Land Owner - Male (from Ma daung hla village) – This project will improve our village transportation and economic opportunity of villagers.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(e) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer
One farmer from Ma daung hla village	If I lose large farmland area (more than one acre), I need to be compensated. However, one or two feet of land loss is no problem for me.	JICA Project Team	According to road design, you will lose one or two feet of land for road expansion. The land loss is not very big. If government can get budgets, it is possible to provide compensation for the land loss. If not, the road will not be expanded, just only upgrading of existing condition.

7. Target Road: KU-10 (2)

- (1) Venue: High School, Ma daung gyi village, Village Tract: Ma daung gyi District/City: Khin U
- (2) Date & Time: From 10:00 am to 12:30 pm on 28 April 2017

(3) **Participants**: 49 in total including PAPs

(a) Participants of governmental staff and the AIIP Project members

No	Name	Organization	Position
1	U Swe Lin Oo	GAD, MOHA	Village Tract Administrator
2	Daw Cho Cho New	DRD	Staff officer of Township
3	Daw Khin Moh Moh Lwin	DRD	Deputy Staff Officer
4	U Thiha Maung Maung	DRD	Junior Engineer-3
5	Ms. Rie Kitao	JICA Project Team	Environmental and Social Consideration
6	U Han Soe	JICA Project Team	Project Assistant

8	U Aung Moe Naing	JICA Project Team	Project Assistant

(b) Number of Project Affected Persons (PAPs): 41 (Male:28 Female: 13) See "Attachment: Participant list" for all of name of PAPs.

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team
- (b) Introduction of Daw Cho Cho Nwe (Township Officer, DRD Khin U township)

JICA plans to upgrade three roads in our township. This time is only preparatory survey, not actual implementation period. JICA will implement their project step by step systematically. JICA project team will explain you about the Project by using vinyl (banner) later. Please listen carefully to their explanation and make a question for unclear points.

- (c) Explanation of the Project, road expansion and land acquisition by the Project Team staff
- Overall explanation of the Project
- Location of rural road improvement site
- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (d) Question from the JICA Project Team to the participants

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If yes, why?

A-2 Yes, we can agree with the land loss without compensation because –

Land Owner - male (from Ma daung gyi village) – Being a farmer, I have to use this road to transport agriculture products and inputs. This upgraded road shall be effective for our agriculture business.

Land Owner – male (from Shwe Kar village) – For our village, it is very important to get enough space for road expansion. Even government cannot provide compensation for land loss, our village can pay that by ourselves.

Land Owner – female (from Ma daung gyi village) – We can donate our land for road because this road is for public use.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(e) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer
One villager from Ma daung gyi village	How about irrigation rehabilitation?	JICA Survey Team	Irrigation rehabilitation is the one of the major components for our project. We plan to rehabilitate the structures of Thapanzeik Dam Irrigation Scheme.

8. Target Road: Tb-20

- (1) Venue: Dhamma Hall, Yin dwe Village Monastery, Village Tract: Yin dwe District/City: Tabayin

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team.
- (b) Introduction by U Win Zaw Htwe (Assistant Director, GAD Tabayin Township)

JICA always helps our county to improve infrastructure and it is a well-known organization by Myanmar people. They plan to improve two roads in our township, namely, Yin dwe road and Ohm Tabin road. It is very difficult to upgrade to asphalt pavement by government budgets within next ten years. JICA road standard will be higher than local. JICA requests you to use this road for transport of agricultural inputs and products. As for me, let me request to participate actively in this meeting.

(c) Introduction by Daw Khin Mi Mi Aung (Staff Officer, DRD Tabayin Township)

We need 20fts for road expansion in accord with road standard design. With our DRD budgets, it is very difficult to plan asphalt pavement for village road. Please ask unclear points on their explanation and participate well for successful road project.

- (d) Explanation of the Project, road expansion and land acquisition by the Project Team staff
 - Overall explanation of the Project
 - Location of rural road improvement site
- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (e) Question from the JICA Project Team to the participants

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If yes, why?

A-2 Yes, we can agree land loss without compensation because -

Land Owner - male (from Let ti village) – This road is greatly beneficial to our village transportation, education, health and even for emergency case.

Land Owner – female (from Yin dwe village) – This road project is not only for individual, for all people. Therefore, we can donate our land as much as you want for road expansion.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(b) Number of Project Affected Persons (PAPs): 50 (Male: 41, Female: 9) See "Attachment: Participant list" for all of name of PAPs.

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team.
- (b) Introduction by Daw Khin Mi Mi Aung (Staff Officer, DRD Tabayin Township)

We held meeting here in last month for 1 mile asphalt pavement for this road. JICA plan to upgrade 4.5 mile asphalt for this road. We will discuss with JICA for another remaining parts. Thank you very much for coming here today. Please ask them openly your unclear points.

(c) Explanation of the Project, road expansion and land acquisition by the Project Team staff

- Overall explanation of the Project
- Location of rural road improvement site
- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.

(d) Question from the JICA Project Team to the participants

Survey Team staff ask the following questions to the land owner.

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If yes, why?

A-2 Yes, we can agree land loss without compensation because -

Land Owner - male (from Min Swe Hnit village) – Road width have enough space for 20 ft. No one will effect as land loss. Therefore, we can agree for road expansion.

Land Owner - male (from Min Swe Hnit village) – This upgraded road will effect directly to our village development.

Land Owner - male (from Min Swe Hnit village) -I guess that no one will face land loss. Since our childhood, first construction time, the road width is about 50 fts. Therefore, we agree for road expansion.

Land Owner - female (from Min Swe Hnit village) – By using this upgrade road, we will easy to access to Tabayin town.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(e) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer

(b) Number of Project Affected Persons (PAPs): 49 (Male:44, Female: 5) See "Attachment: Participant list" for all of name of PAPs.

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team.
- (b) Introduction by U Win Zaw Htwe (Assistant Director, Township Administrator, GAD)

JICA project plan to upgrade rural road and bridge and also irrigation rehabilitation, agriculture, mechanization. In our township, 67 miles for macadam upgrade and 6 mile for asphalt upgrade will be implemented. This project will not start in very near future because JICA take time to implement systematically. Therefore, villagers need to be patient. I suggested villagers to participate actively on this meeting.

(c) Introduction by Daw Khin Mi Mi Aung (Staff Officer, DRD Tabayin Township)

I am very happy to come here for road upgraded project. JICA team will explain about the project detail later. Please discuss and make comments on this project and female aslo be welcome.

- (d) Explanation of the Project, road expansion and land acquisition by the Project Team staff
- Overall explanation of the Project
- Location of rural road improvement site
- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (e) Questions from JICA Project Team to the participants

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If Yes, why?

A-2 Yes, we can agree land loss without compensation because -

Land Owner - male (from Ohm Ta Pin village) – This project will benefit to rural economy and transportation.

Land Owner - female (from Ohm Ta Pin village) – Since I was child, our villagers try to upgrade this road. But they could not it until now. Today, we have such kind of chance to fulfill village requirement. Therefore, we can give our land as much as you need. I am very pleased and thankful to JICA for this project.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(b) Number of Project Affected Persons (PAPs): 28 (Male: 19 Female: 9) See "Attachment: Participant list" for all of name of PAPs.

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team.
- (b) Introduction by U Than Lwin (Assistant Director, Township Administrator, GAD Ye U)

There are total 67 village tract in our township. We try to construct macadam and asphalt roads in our township as much as we get budget from the government. Among them, JICA chooses your road to upgrade to asphalt. JICA tries to make less environmental and social impact by the project in accordance with their policy. They came here to know your opinion and comments on this project in advance. Please try to make opinions and question for your unclear points.

(c) Introduction by Daw Win Myint (Staff Officer, DRD Ye U Township)

We proposed total 51 roads to upgrade asphalt in our township. Among them, this road is one of our proposed roads and JICA selects this road to upgrade. We upgraded this road 1 mile to asphalt in last fiscal year and will upgrade another 0.625 mile in this year by DRD budget. For this road, it is needed to upgrade only 1.625 mile by the JICA project. Therefore, we need to discuss the matter with JICA. For my concern, that is all my information.

- (d) Explanation of the Project, road expansion and land acquisition by the Project Team staff
- Overall explanation of the Project
- Location of rural road improvement site

- Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (e) Question from the JICA Project Team to the participants

JICA Project Team asked following questions to the land owners.

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If yes, why?

A-2 Yes, we can agree land loss without compensation because -

Land Owner - male (from Shaw Phyu village) – This project intend for all, not only for individual.

Land Owner - female (from Shaw Phyu village) - I can donate my land for road.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(f) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer	
One villager from	There are 9 pipes between	DRD officer	The pipes are not under the	
Shaw Phyu village	drains of each side of		management of DRD. If you	
	road. Does the Project	•		
	cover improvement of the		to new ones, you have to pay	
	pipes also?		the cost by yourselves.	

It is noted that some of village elders asked about the impacts by the animal carts on the paved road to the DRD officer after the project. The DRD officer responded that DRD can construct additional new road for animal cart along the target road.

12. Target Road: Ad-5

- (1) Venue: High School, Wartawma village, Village Tract: Wartawma District/City: Ayadaw
- (2) Date & Time: From 11:30 am to 1:00 pm on 22 May 2017

(b) Number of Project Affected Persons (PAPs): unknown due to no cadastral map

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team.
- (b) Introduction by U Tay Zar Tun (Staff Officer, DRD Ayadaw Township)

We also plan to upgrade 1.5 miles asphalt for this road in this budget year by DRD budget and I had been working in Ayadaw DRD for 3 years. I request you to participate in this meeting actively.

- (c) Explanation of the Project, road expansion and land acquisition by the Project Team staff
 - Overall explanation of the Project
 - Location of rural road improvement site
 - Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (d) Question from the JICA Project Team to the participants

JICA Team staff ask the following questions to the land owner.

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally. (100% of land owner are agreed.)

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If Yes, why?

A-2 Yes, we can agree land loss without compensation because -

Land Owner - male (from Wartawma village) - This road greatly beneficial to our village.

Land Owner - female (from Wartawma village) – I prefer this project because it intend for our village development.

Land Owner - male (from Wartawma village) - I can donate as much as you need for road as my land is beside the road.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(e) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer
One villager from Wartawma Village	Could you start the project earlier than 2019-2020?	JICA Project	In accordance with JICA policy, we shall take enough time for preparing state before starting the project. That is why we can start this project in 2019-2020.
One villager from Wartawma Village	If the government do not sign the loan agreement, can or cannot this road upgrade project implement?	JICA Project	If two governments do not sign loan agreement, we cannot start the project. We can no say exactly until now because the loan agreement has not yet.
One villager from Ywa si gon village	Can you extend this road up to our village?	JICA Project	We have already submitted project site to JICA. Therefore we cannot extend this road up to your village. However, you can request to DRD to include in government budgets.

13. Target Road: Ad-3

- (1) Venue: Village Administration Office, Village Tract: Oak Shi Gyi District/City: Ayadaw
- (2) Date & Time: From 12:30 am to 2:00 pm on 23 May 2017

9	U Aung Moe Naing	JICA Project Team	Project Assistant

(b) Number of Project Affected Persons (PAPs): 7 (Male: 7, Female: 0)Due to lack of cadastral map in Ayadaw Township, only 7 PAPs were identified. See "Attachment: Participant list" for all of name of PAPs.

(4) Meeting Content

- (a) Introduction and Opening speech by JICA Project Team
- (b) Explanation of the Project, road expansion and land acquisition by the Project Team staff
 - Overall explanation of the Project
 - Location of rural road improvement site
 - Implementation structure, target area, road improvement from macadam to asphalt, upgrading and land acquisition and project implementation schedule, precondition of the project, proposed grievance mechanism.
- (c) Question from the JICA Project Team

Q-1 Do you agree with the road improvement, even if a part of your land is lost and compensation is provided?

A-1 Yes, We agree totally.

Q-2 If compensation is not provided for the land loss, do you agree with the road improvement? If Yes, why?

A-2 Yes, we can agree land loss without compensation because –

Land Owner - male (from Oak Shi Gyi village) – This road will directly effect to villagers economy.

Land Owner - male (from Oak Shi Gyi village) – I had donated 2 acres for road construction since last 30 years ago. I can also donate this time for road.

Q-3 Do you accept the unit price set by the Land Management Committee? If no, any suggestions?

A-3 Yes, We can accept that.

Q-4 Do you accept the proposed grievance handling mechanism? Any modification of that is needed?

A-4 Yes, We accept this proposed grievance handling mechanism.

(d) Questions from the participants and answers

Speaker	Opinion/question	Respondent	Answer
One villager from Oak Shi Gyi village	Please start the project as quickly as possible	JICA Survey Team	As we have already explained the project will start in 2019- 2020 Fiscal Years.
One villager from Oak Shi Gyi village	You mentioned that this project is loan project. Do we (villagers) need to pay back this loan?	JICA Survey Team	Loan agreement is between Myanmar and Japan government. Therefore, the villagers no need to pay back loan themselves. The government will pay for that.
One villager from Oak Shi Gyi village	Our current road condition is earth pavement. This project includes upgrading of earth to macadam and macadam to asphalt both step.	U Tay Zar Tun, Staff Officer , DRD Ayadaw	In this project, we will upgrade earth to asphalt directly. As you know, we construct two types like as 1) earth to macadam road and 2) macadam to asphalt road. However, we can construct earth to asphalt directly in technology.

Table Breakdown of the Cost Estimation for Agricultural Extension Strengthening and Seed Center 1. Capacity building for DOA extension staff and private sector

Main Items	Specifications (TK≕thousand Kyat)	Cost (TK)
TOT of the officers, including IT-based extension system		
Workshops for the preparation of contents, including IT-based extension system		
Production of materials & IT-based extension establishment (using SNS, e.g. Facebook)		
Trainings/ Workshops (plenary)		
Training at camp site		

1.1 Expert/trainer recruitment (Capacity building for DOA extension staff)

Main Items	Specifications (TK≕thousand Kyat)	Cost (US\$) Cost (TK)
Input to the TOT of the officers		
input to the 101 of the onicers		
Input to the Trainings/ workshops (plenary)		
	US\$ TK (1US\$ = 1347.7)	

1. Capacity building for DOA extension staff + 1.1 Expert/trainer recruitment

2. Agriculture extension & marketing strengthening

Main Items	Specifications (TK=thousand Kyat)	Cost (TK)
Conduct of demo activities 2 plots x 2 staff x 52 camps = 208 plots per season		
Marketing enhancement		
IT Based Extension, using SNS e.g. Facebook		

3. Improvement of Camp and DOA Offices

Main Items	Specifications (TK=thousand Kyat)	Cost (TK)
Land acquisition		
Construction of buildings		
Procurement of office equipment (camp)		
Procurement of ICT equipment (TS and district office)		

4. Establishment of Seed Center

Main Items	Specifications (TK=thousand Kyat)	Cost (TK)
Land acquisition		
Construction of buildings		
Procurement		
	Total

APPENDIX X. PROJECT EVALUATION

X.1 Comparison of Three Options

There are three options proposed by the Team, namely, plan A - C. Plan C is made based on the minimum requirement, but some of upgrading / rehabilitation may not sufficient enough for long-term service period. Plan B was made by adding factors to plan C. For irrigation and drainage rehabilitation, for example, plan B is expected to increase the safety of the facilities, reduce the operation and maintenance costs etc. On the other hand, plan A is proposed as a modern systems by adding advanced facilities to plan B, however, advanced technology may not be cost-effective, so the best option is qualitatively uncertain and should be identified quantitatively.

The Team calculated economic benefits and costs by each of three plans all of which are standardized in Base 0. Plan A has maximum components so that the benefit and cost mark the largest, while the Plan C has only minimum components and the supposed benefit should be lowest. The Team considered target irrigable area, target yield, and total target length of rehabilitation which associate with volume of agro transportation within the target roads. Table X.1.1 and Table X.1.2 summarize these parameters.

Cono		Area Cultiva	ated (acre)			Yield (te	on/acre)	
Cops	Current	Plan A	Plan B	Plan C	Current	Plan A	Plan B	Plan C
Shwebo Paw San	308,024	313,089	313,089	313,089	1.17	1.46	1.46	1.32

Based on Table X.1.1 and Table X.1.2, EIRR, NPV, and B/C are calculated. Table X.1.3 summarizes the result of comparison. The result shows that, for every components, the plan B marks the highest EIRR, indicating that it can be regarded as optimal plan. It is not reasonable and unrealistic to study every options in detail because at most only one option will be realized. Thus, hereinafter, the report refers to only plan B unless there are any necessity to mention for other options.

Table X.1.3 Comparison of Three Candidate Plans

Case	IRR	NPV [™] , million Kyats	B/C ^{*1}
Irrigation & Drainage Improvement			
Plan A	17.2%	83,501	1.51
Plan B	20.1%	112,963	1.85
Plan C	15.3%	31,403	1.31
Land Consolidation			
Plan A	5.6%	-1.902	0.60
Plan B	5.6%	-1.902	0.60
Plan C	5.6%	-1.902	0.60
Distribution Infrastructure Improvement			
Plan A	19.0%	29,775	1.44
Plan B	19.3%	29,636	1.46
Plan C	18.2%	22,666	1.39

Note: discount ratio of 12% was applied in calculating NPV and B/C ratio.

This comparison was made based on the project costs estimated on March. On the other hand, the result of IRR analysis in Chapter 7 refers to the project cost on June. Therefore, these results are not same each other. These cash flows are available in Appendix X-4.

1) Project Implementation (Irrigation Rehabilitation, Road Improvement)

Table X.2.2 summarizes expected amount of employments to be generated in each of the Project implementation stage. Approximately 648,000 person-day/year (4,300 person/day, 108,000 person-day/ month) of employment opportunities are to be created to meet the construction demand. Likewise, the distribution infrastructure improvement is expected to generate additional employments; about 456,000 person-day/year, consisting of 1,800 person/day or 3,000 person/day for the construction period of 10 months and 6 months respectively.

Case1: If it is assumed that construction period is 10 month in a year, about 456,000 (744 for Canal Inspection Road, 936 persons for Rural Road and 144 for Rural Bridge) of employment to be generated. For monthly and yearly, correspond to 45,600 persons/ month and 456,000/ year of employment will be generated respectively. This case plans to implement the construction work through the year except 2 month of heavy rainy season.

Case 2: If it is assumed that construction period is 6 month in a year, approximately corresponds to 3,000 persons/ day (1,240 for Canal Inspection Road, 1,560 for Rural Road and 240 for Rural Bridge) of employment to be generated. For monthly and yearly, correspond to 76,000/month and 456,000/ year of employment will be generated. This case plans to implement the construction work except rainy season.

с	omponent	Million Kyat	per day (No./day)	per month (Person× days per month)	per year (Person×days per year)
Irrigatio	n Rehabilitation	16,160	4,320	108,000	648,000
Case 1	Road Improvement	9,226	1,824	45,600	456,000

period)	Rural Bridge	9,972.5	240	6,000	36,000

Source: JICA Survey Team

2) Agriculture

Currently, only 58% of low land irrigable area is being cultivated during summer season due to insufficient irrigation water. The cropping intensity during the summer season can be increased from 58% to 69% (21,513 ha) provided that paddy is cultivated in the project area by the project. 62,370 ha under irrigated area which is increment area of 31% are cultivated for pulses. It is proposed to archive 100% in cropping intensity in summer season. About 496,000 tons of paddy production will be increased by the project implementation totally.

In relation to increased agricultural production with the Project completed, there will be a lot of employment opportunities for farm casual labors. If the current labor intensive agriculture is assumed to continue even in future, it is expected to generate new employments of 4,636,000 person-day per year (62,000 person/day, 1,545,000 person-day/month) for the farm casual labors, composed of 228,915 person-day per season for monsoon paddy, 1,345,038 person-day per season for summer paddy, and 3,062,100 person-day per season for such alternative crops as sesame or green gram as summer crop. Note that since increment for monsoon paddy is minimal with the Project, the newly created employment is also minimal, and visa versa. Table X.2.3 is shown the number of casual labor required to cultivate 1 acre of Paddy/ Pulses field for 1 day. The amount of employment in agriculture sector is referred the table and increment area of each products.

Mon	soon Paddy		Su	ummer Paddy		Pulses/Sesame			
Activity	No. of	Cost	Activity	No. of	Cost	Activity	No. of	Cost	
	Labor	(Kyat)		Labor	(Kyat)	-	Labor	(Kyat)	
	Force			Force			Force

2nd weeding	5	20,000	2nd weeding	5	17,500	2nd weeding	5	15,000	
Harvesting	10	40,000	Harvesting	10	35,000	Harvesting	10	30,000	
Total	30	120,000	Total	25	87,500	Total	20	60,000	

Table X.2.3	Basic Assumptions of Labor C	ost of Agriculture

Source: JICA Survey Team

3) Processing (Rice Miller)

Due to increments of the paddy production, rice millers also need additional manpower to handle the increased amount. Approximately 694,000 person-day/year (4,960 person/day, 124,000 person-day/ month) of employment are generated in this stage. As for the seasonal labor, they will work for 4

month in a year during the peak period for processing. Table X.2.4 is shown basic assumption of labor force in rice miller which has about 50tons of milling capacity per day. If such kind of rice miller will handle the increment yield of rice (496,000 ton), aforementioned amount of labor force will be required.

Labor	No. of Labor force	Unit cost (Day)	Labor cot (Day)	Labor cost (Month)
Permanent Labors	15	5,520	138,000	2,070,000
Seasonal Labors	20	4,500	112,500	2,250,000
Total	35	10,020	250,500	4,320,000

Table X.2.4 Basic Assumptions of Labor cost for Processing (Case of 50t of Milling Capacity Rice Miller)

Source: JICA Survey Team

4) Distribution

As for the distribution of products, approximately 696,000 person-day per year (5,414 person/day, 135,348 person-day/month) of employment will be expected to occur upon the Project completed. The Seasonal labors are working for 4 month during the peak season. They are mainly working for loading and unloading the products. Mainly, there are two kinds of distribution way, one is from farm land to rice miller (Trader) another is from rice miller to retailer (or consumer). Table X.2.5 is shown of basic assumption of labor cost for distribution. After the road improvement, it assumes the small and medium scale of track will be used for distribution instead of bull cart.

Table X.2.5 Basic Assumptions of Labor cost for Distribution									
Type of Vehicle	hicle Working Time (hrs/time)		Unit Cost	Operator	Unit Cost				
S & M Truck (3 tons)	3	2	1,200	1	1,200				

Table X.2.5 Basic Assumptions of Labor cost for Distribution

Source: JICA Survey Team

X.2.2 Ripple Effect on Employment in Other Sectors

To simulate the ripple effect on employment in other industries, the analysis refers to an input-output analysis approach. The process of calculation is in accordance of a paper, "*Coefficients For Input-Output Analysis and Computation Methods*", Ministry of Internal Affairs and Communications of Japan.

In Myanmar, input-output table has not frequently been updated. The Team could find only 2000-2001 version prepared by a Japanese university Team¹, and therefore the Team employs it with necessary modifications. An "*employment matrix*", which is also a necessary tool of the analysis, has been prepared by the Team with reference to "*Labor Force, Child Labor, and School-to-Work Transition Survey, 2015*" conducted by ILO for Myanmar (These Tables can be referred to Chapter X.3.4).

Table X.2.6 is the result of calculation, showing number of jobs generated by a change in demand incurred by the Project based on general industrial structure in the union of Myanmar². It is estimated that 51,392 numbers of employment will be generated thanks to 125,543 million Kyats for additional demand to be born by the Project, which is the benefit with irrigation & drainage improvement including agriculture development and extension strengthening (Base 1 case).

The most benefitted sector is "Trade", creating 8,533 numbers of employment opportunities followed by "Transportation" (694 employed), "Livestock and Fishery" (534 employed), and "Processing &

¹ "Industrial Structure in Myanmar using a new Estimated Input Output Table (2000-2001)", Kan Khine Su Thwin et al (2010)

 $^{^2}$ The input-output table is based on 2000-2001. It is unrealistic if one would claim that current industrial structure is not significantly different from 2000-2001, but inter-sectoral linkage generally becomes stronger as being industrialized. In this regard, the result can be interpreted as lower bound of the effect on employment.

Manufacturing" (458 employed). As the overall effect, 51,392 numbers of employment opportunities are supposed to be created.

Table X.2.6 Ripple Effect on Employment to Other Sectors based on Input-Output Table in 2000-2001

No	Sectors	Additional Demand, Million Kyats	Ripple Effect on Employment
No	Sectors	(Based on Current Price in 2015)	Person

X.3.2. Economic Costs

Table X.3.6 summarizes the financial and economic total cost by main project component. Table X.3.7 - X.3.9 show the breakdowns of economic conversion each of total costs by main project components.

Component	Financ	ial Cost (BC	+ PhC)	Economic Cost (BC + PhC)			
Component	FC	LC	Total	FC	LC	Total	
Irrigation Improvement & Agriculture Extension	20,608	146,252	166,862	20,608	129,856	150,464	
Land Consolidation	90	8,334	8,425	90	7,375	7,465	
Distribution Infrastructure Improvement	4,298	109,606	113,906	4,298	98,217	102,516	
Program Overall	24,997	264,192	289,193	24,997	235,448	260,446	

Note1: The project cost used in the economic evaluation excludes Tax, Interest and Subsidies (so-called, "Transfer Items") since they represent only transfer between individuals of the nation. Likewise, price escalation is excluded as long as it can be assumed that the influences of escalation are equally likely between benefits and costs.

Note2: Program Overall is the cost of all components, that is why the sum of the three is not corresponding to it.

Note3: To accomplish the yield increases, not only irrigation & drainage improvement but also agricultural extension services need to be implemented. Therefore, the economic evaluation is performed with the total cost of these two components. Source: JICA Survey Team

Table X.3.16 Estimated Fuel Cost, kph

Source: JICA Survey Team referencing "Bangkok Urban Transport Project in Thailand" (2005) with necessary modification.

Note: Because of data limitation, the Survey Team employs VOC in neighboring country. For S&M Truck, the Team applies "Medium Truck", while Trollergyi, the Team applies "Samlor Tuk Tuk", and for the case of bull-cart, no fuel charge is needed, however, feeding and depreciation cost have to be taken into account, so the Team applies the lowest unit cost among the list, namely; the VOC of motor cycle

XI.1 Objective of Analysis

A field survey for planting area and harvested area has substantial limitation of data collection and encounters difficulties with its measurement at specific points and further with appropriate data selection in numerous farmlands. In case of field survey based on existing land registration, the result may be accurate but it takes huge time and requires lots of effort into continuous observation.

To release constraint of conventional methods and raise its cost-effectiveness and its ability in observation, the remote sensing by satellites image has used for the estimation of planting area and harvested area. The sensor on the satellite gathers vegetation and water cover information on temporal and spatial scales.

This satellite imagery analysis is aimed to obtain the temporal data on irrigated areas as a baseline data, and clarify long term tendency of decreasing of irrigation through the comparative analysis between a recent year and a past year when the canal system under Thapanseik dam still had maintained its full function. For this purpose, the analysis was carried out in 2015/16, 2013/14 as recent years and 2008/09 as a past year.

XI.2 Target Area of Analysis

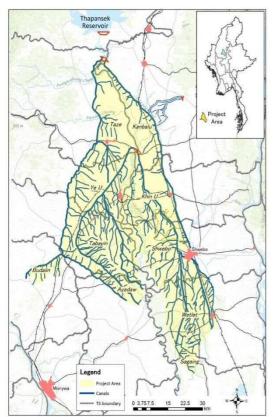

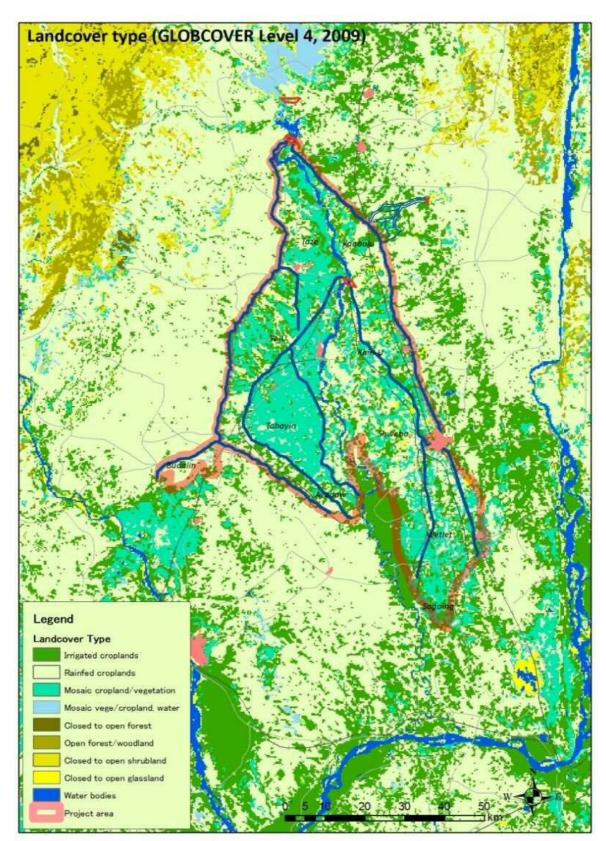

Figure XI.2.1 Target Area of Analysis

There is a spatial agricultural variation such as various cropping patterns in the target area of analysis (see Figure XI.2.1). The analysis focused on 10 townships (Ayadaw, Budalin, Kanbalu, Kin-U, Sagaing, Shwebo, Tabayin, Taze, Wetlet, and Ye-U township) which have 33,000 ha of land area as shown in Table IV.5.1. Triple cropping is dominant across the area, which is reflected by water availability from Thapanzeik dam irrigation system.

The global study of land cover (GlobCover 2009, ESA) has distinguished the rain fed cropland, irrigated cropland, and mosaic cropland / vegetation among the target area (see Figure IX.2.2). Based on GlobCover, the half of western part of the area which belongs to the lower reach of Right Main Canal (RMC) is recognized as rain-fed cropland because of the insufficient irrigation water. Likewise, in eastern part of the area covered by Shwebo Main Canal (SMC) and Old Mu canal (OMC) system, patches of rain-fed croplands are sporadically found out in the irrigated area. In the outside of the target area, the west margin consists of the upland with rain-fed croplands, while the eastern side is covered by the irrigated cropland by the neighboring canal system.

XI.3 Landsat Image Data

XI.3.1 Landsat 5 and Landsat 8

Among available satellites, Landsat 5 and Landsat 8 are equipped with Thematic Mapper (TM) and Operation Land Imager (OLI) respectively and applied for the analysis. Those sensors have the spatial resolution of 30 m with multi-spectral bands (seven for TM and nine for OLI respectively) and a short revisit interval (16 days).

Landsat 5 was launched in January 1984 and ended in 2013, while the data receiving of TM had stopped in 2011. For 28 years, Landsat 5 had delivered the data of Multispectral Scanner (MSS) and Thematic Mapper (TM) with eight spectral bands (1 to 8) as longest-operated earth observation satellite (see Table XI.3.1).

Landsat 8 was launched in February 2013 and carried the improved Operational Land Imager (OLI) sensor and Thermal Infra-Red Sensor (TIRS). The OLI sensor provides nine spectral bands (1 to 9), and TIRS provides two spectral bands (10 and 11) as shown in Table XI.3.1.

	Die Al.S. I Waveleitigtil Kalige a			
Band Number	Wave length range (µm)	Band Number	Wave length range (µm)	Resolution
OLI 1	0.433-0.453(coastal/aerosol)	N/A	-	30 m
OLI 2	0.450–0.515(blue)	TM 1	0.45-0.52(blue)	30 m
OLI 3	0.525–0.600(green)	TM 2	0.52-0.60(green)	30 m
OLI 4	0.630-0.680(red)	TM 3	0.63-0.69(red)	30 m
OLI 5	0.845-0.885(NIR)	TM 4	0.76-0.90(NIR)	30 m
OLI 6	1.560–1.660(SWIR-1)	TM 5	1.55-1.75(SWIR-1)	30 m
OLI 7	2.100-2.300(SWIR-2)	TM 7	2.08-2.35(SWIR-2)	30 m
OLI 8	0.500-0.680(Pan)	TM 8	(0.52-2.35) (Pan)	15 m
OLI 9	1.360–1.390(Cirrus)	N/A	-	30 m
TIRS 10	10.6-11.2(LWIR-1)	TM 6 (spans both)	10.40-12.50(LWIR)	100 m
TIRS 11	11.5-12.5(LWIR-2)	TM 6 (spans both)		100 m

Table XI.3.1 Wavelength Range and Spatial Resolution of OLI, TIRS, and TM

Within OLI 9 bands, the bands of the very shortest wavelengths (bands 1–4 and 8) sense the visible light. The others are in parts of the invisible spectrum. The true-color view obtained from Landsat displays only half of what it senses. Six bands of OLI (band 2 to 7) are consistent with the TM bands (band 1 to 5 and 7). The band 1 and 9 of OLI make it possible to measure water resources¹, investigate coastal zone, and improve the detection of cirrus clouds.

In the analysis, TM data have been used for 2008/09 and OLI data has been applied for 2008/09 and 2015/16 respectively.

XI.3.2 Landsat Image Applied for the Analysis

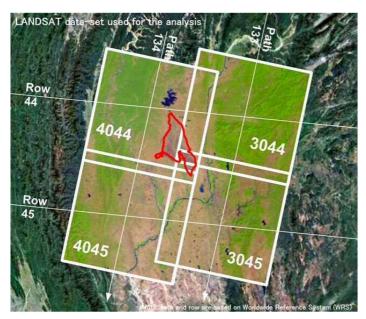

XI.3.2.1 Landsat Data

Although the analysis has used optical remote sensing data of Landsat TM and OLI to estimate the acreage of farmland in the area, in the regional-scale analysis, it is sometimes difficult to estimate the optimum stage of crops or paddy by these sensors because of limited supply of images. Landsat provides the images every 16 days with 30 m resolution, but they often contain clouds. It is sometimes hard to obtain multi-temporal cloud free images for identifying a detail stage of crops and paddy. In reality, the available image is solely acquired on monthly basis at the regional level.

¹ The OLI sensor provides better Signal to Noise Ratio (SNR) and radiometric performance. Band 1 and 9 allows more effective way to measure water resources. In addition, TIRS outputs thermal image which can be applied to the evapotranspiration rate measure.

On the other hand, plant-glowing is susceptible to changeable climate condition. The method of analysis therefore was considered as described in Chapter 5.

Landsat orbit is pre-defined by Landsat operation system with WRS; Worldwide Reference System². In the vicinity of the area, their paths and rows run on the area, so that plural images are necessary to obtain one image of the month. In the Project area, four (4) scenes are overlapped at four directions of northwest (scene No. 4044), northeast (3044), southwest (4045) and southeast (3045) as shown in Figure XI.3.1.

Note: Scene numbers is given as a composite figure by WRS path and row, such as a data set taken at pass 134 and row 044 comes to 4044 of dataset. The availability of Landsat data for the analysis refers to Table XI.3.2 with the scene numbers.

Figure XI.3.1 LANDSAT Data Sets of the Project Area

XI.3.2.2 Data Processing

Acquired OLI and TM data are raw data and requires the calibration for proceeding the analysis. The calibration consisted of three (3) steps, i.e. 1) Radiometric Calibration, 2) Dark Subtraction, and 3) Seamless Mosaic.

1) Radiometric Calibration

The radiometric calibration attempts to compensate the radiometric errors from sensor's defects, variations in the scan angle, and system noise and produce an image which represents the true spectral radiance at the sensor location. It calibrates the imagery to radiance, reflectance, or brightness temperatures with available options depending on what the metadata of the imagery includes. Landsat Level-1 product, i.e. the raw data includes Metadata (MTL file) together with the image data.

target three (3) seasons, i.e. 2008/09, 2013/14 and 2015/16, data quality affected by cloud cover and cloud confirmed shadow were before pre-processing of the analysis. By verification of data quality in target years, the eight (8) timings for each year were selected. TM and OLI products were downloaded from Earth Resources Observation and Science (EROS) Center (https://eros.usgs.gov/) as shown in Table IX.3.2. The number of available scenes totaled 94 images, i.e. 32 each for 2008-09 and 2013-14 and 30 for 2015-16.

For four (4) scenes in each month of

² The Worldwide Reference System (WRS) is a global notation used in cataloging Landsat data. Landsat 8, 7, 5, and 4 follow the WRS-2. Landsat 1, 2, and 3 followed WRS-1. (https://landsat.gsfc.nasa.gov/the-worldwide-reference-system/)

2) **Dark Subtraction**

Dark subtraction is to remove the effects of atmospheric scattering from an image by subtracting a pixel value that represents a background signature from each band. It is conducted by Band Minimum Subtraction to gain a minimum DN (Digital Number) value of each spectral band.

Seamless Mosaic 3)

Seamless mosaic conducted was by overlapping four (4) images with given priority to 4044 scene which covers larger project area than the others (4045, 3044, and 3045) as shown in Figure XI.3.2. Following the order, the individual bands were mosaicked with feathering technique to blend image boundaries with 15 pixel of distance.

Eight (8) mosaicked image were created for each year at almost one month interval from October to May. Finally, 24 periods of images were prepared for the analysis.

XI.4 Calculation of NDVI and NDWI

Using 24 images obtained from calibration of three-year images, the Normalized Difference Vegetation Index (NDVI) and the Normalized Difference Water Index (NDWI) were calculated by surface reactance of Blue, Red, Near Infrared (NIR), and Short Wave Infrared (SWIR) band.

The result of NDVI was used for the measurement of primary productivity which worked for determining the cropping area and the paddy area, while NDWI was applied to detect the water body and the submersion area before transplanting or seeding. The outlines of NDVI and NDWI are as follows.

XI.4.1 NDVI

NDVI is sensitive to the active photosynthetic compounds and is therefore utilized for one way to measure the productivity of vegetation or greenness. NDVI is calculated by using the percent reflectance of two bands of the electromagnetic spectrum; the visible red (R: $0.4-0.7 \mu m$) and the near-infrared (NIR: $0.7-1.1 \mu m$)³. The difference between the spectral bands is divided by their sum. This calculation yields a value between -1 and 1 (Tucker and others, 1979, 1985).

As shown in Table XI.4.1, flowing formula is adopted with bands of OLI (2015/16, 20013/14) and TM (2008/2009), respectively.

NDVI = (NIR-Red) / (NIR+Red), for Landsat 8(OLI) = (band 5-band 4) / (band 5 +band 4), or for Landsat 5(TM) = (band 4-band 3) / (band 4 +band 3)

Because NDVI is a spectral measurement of the photosynthesis in a defined spatial area, the value generally increases throughout the growing season and then decreases during the plants' senescent period. In addition, NDVI can change from year to year⁴. The analysis of NDVI imageries in different timeframes have to be done with the carefulness. In Figure XI.4.1, monthly change of NDVI is shown as an example of verification data to check-up the crop growing process in 2015/16 season.

XI.4.2 NDWI

The principle of NDWI is similar to NDVI. NDWI enhances the spectral reflectance of surface water bodies, which uses differences of two bands. In the analysis, Green and SWIR is applied with following formula (McFeeters, 1996).

³ To determine the density of green on a patch of land, the distinct colors (wavelengths) of visible and near-infrared sunlight reflected by the plants must be observed. As can be seen through a prism, many different wavelengths make the spectrum of sunlight. When sunlight strikes objects, certain wavelengths of this spectrum are absorbed and other wavelengths are reflected. The pigment of plant leaves, chlorophyll, strongly absorbs visible light (from 0.4 to 0.7 μ m) for photosynthesis. The cell structure of the leaves, on the other hand, strongly reflects near-infrared light (from 0.7 to 1.1 μ m). The more leaves a plant has, the more these wavelengths of light are affected. (<u>http://earthobservatory.nasa.gov/Features/MeasuringVegetation/</u>)

⁴ NDVI is changed by annual environment such as the amount of rainfall or the temperatures in the prior seasons (Prasad and others, 2008).

NDWI =
$$(Green-SWIR) / Green+SWIR)$$
,

for Landsat 8(OLI)

= NDWI = (band 3-band 6) / (band 3 +band 6), or

for Landsat 5(TM)

= NDWI = (band 2-band 5) / (band 2 +band 5)

NDWI offers the mean value in order to assess water bodies and the submersion of paddy, which can be used in conjunction with NDVI images to assess the context of apparent changing areas. In the changes of NDWI, the submersion appears from March after canal open as shown in Figure XI.4.2.

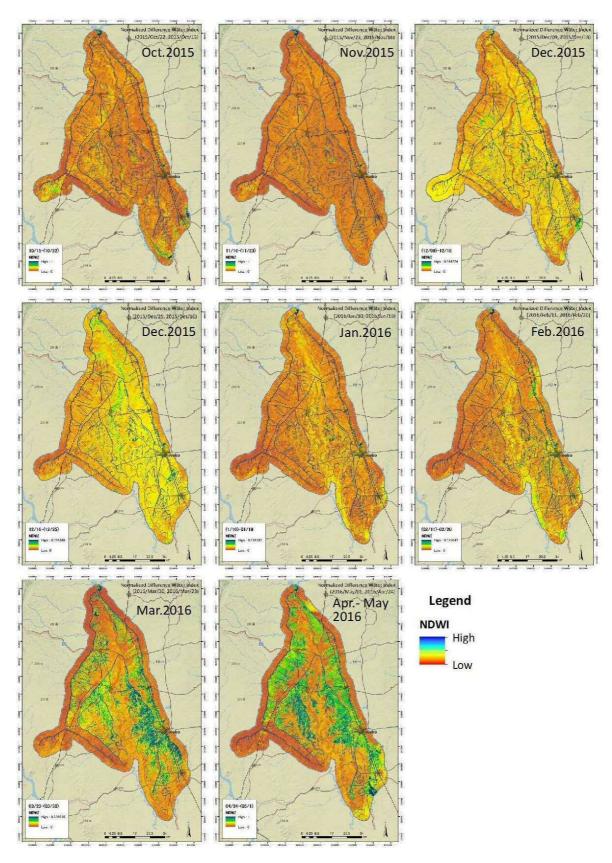

Figure XI.4.2 NDWI (Oct.2015 – May.2016)

XI.5 Algorism for Identifying Paddy and Crops Area

In the analysis, Landsat OLI and TM images were applied to the landscape-scale interpretation. The images were acquired for three (3) years from October to May at Path of 133-134 and Row of 44-45. This area covers Thapanzeik dam irrigation system in Sagaing Region including 10 townships with the elevation which varies from 75 to 140 m. Mu river runs through the analysis area. Other surface water bodies include reservoirs, floodplain and agriculture middle of ponds.

XI.5.1 Farmland Type Classification and Cropping Pattern

In view of land cover type classification for the area in 2015/16, approximately 91% (300,360 ha) of a total area (328,699 ha) is occupied by farmland and remaining 9 % (28,339ha) is classified as non-farming area including open water and residential area, as shown in Table XI.5.1.

Table IX.5.1 Area of Farmland Type (Classified from NDVI from 2015 Oct to 216 May), ha

Note 1 Non-farming area (residence, woods, shrub, barren, shoal area)

2 Upland (semi-cultivated area, grassland, wetland \cdot pond with waterweed)

3 Upland (cultivated area, orchard, small paddy and open woods)

 $5\;$ Lowland (semi-irrigable area (or temporary pumping), low range of NDVI)

 $6\;$ Lowland (irrigable paddy area (by canal networks), high range of NDVI)

Agriculture in the Project area is dominated by double or triple cropping patterns consisting of monsoon paddy, winter crops, and summer paddy or summer crops. According to farmland type derived from Landsat OLI image showed in Figure XI.5.1, lowland (indicated as red color) which contained summer and monsoon paddy fields is intensively developed and centered upon irrigation canals. While the upland (indicated as light-green) consisting of crops and vegetables is located far from canals and is isolated from irrigation area.

In the lowland area, monsoon paddy is generally re-planted (replaced) by winter crops, summer crops, or summer paddy. In ordinary year, sowing of summer paddy commences at one (1) month later after canal-open which is annually scheduled in February. Even in seed-bed nurseries, the transplanting is completed at least by the end of April. After seeding or transplanting, it grows over for three (3) to four (4) months until the harvest in July.

Simultaneously, in the upland area, summer crops are seeded from February to April and are re-planted (re-placed) in August by monsoon rice with short drainage/dry periods.

Along with flooding plain, orchards and commercial vegetables are cultivated through seasons.

Souse: Study team, delineated from Landsat OLI (Oct2015/May16)

Taking consideration of farmland classification and related cycle of crops, the cropping pattern is simplified for the analysis (refer to Section "3.3 Agriculture in the Project Area" in Main Report). In Figure XI.5.2, cropping pattern for the analysis is shown with acquired timing of Landsat images and NDVI changes.

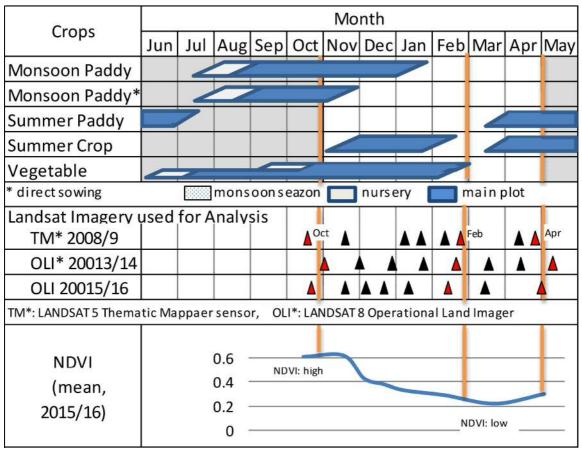

Figure XI.5.2 Cropping Pattern and Available Landsat Images

XI.5.2 Procedure of Detecting Planting Area

According to the above cropping pattern and available Landsat images, the procedure to detect planting area is introduced for the respective crops as follows.

Monsoon paddy: NDVI of monsoon paddy reaches its maximum in November and abruptly decreases in December or January after its harvesting. The rice planting area is thus detected by the difference between before and after harvesting (October and February). The difference of NDVI between them indicates its planting area with the threshold; 'mean - $1x\sigma$ ' which resulted in the ground truth survey, i.e. the field survey mentioned in Chapter 6. (σ : Standard Deviation of the difference of NDVI)

<u>Winter crops</u>: Winter crops are not cultivated by canal water and are exclusively planted in flooding plain along with Mu River and in groundwater utilization area which is mainly located at the border and southern part of the Project area. Winter crops are distributed especially in February because of lower level of the distribution of other crops (monsoon/ summer paddy and summer crops). Based on the ground truth survey and histogram pattern of NDVI, threshold is obtained as '0.39'.

<u>Summer paddy</u>: The area of summer paddy is characterized by submersion condition with irrigation water. The submersion of summer paddy starts in February together with canal-open and

continues at least until May. The end of the submersion can be recognized by closing water surface by rice canopy. Its plating area is detected by calculating NDWI in April (or May). The threshold is determined as NDWI = -0.08 by the ground truth survey.

<u>Summer crops</u>: Summer crops are planted in March to April which is same period as those of summer paddy. To detect its planted area, as first step, total area of summer crops and paddy is once obtained by image-difference of NDVI between April (or May) and February. Then, it is reduced by the area of summer paddy. Threshold is obtained as 'mean + 0.66 x σ ' by verification survey in filed.

Figure XI.5.3 shows the applied algorism for calculation of planting area of paddy and crops, which was resulted by the ground truth survey conducted in January to February 2017.

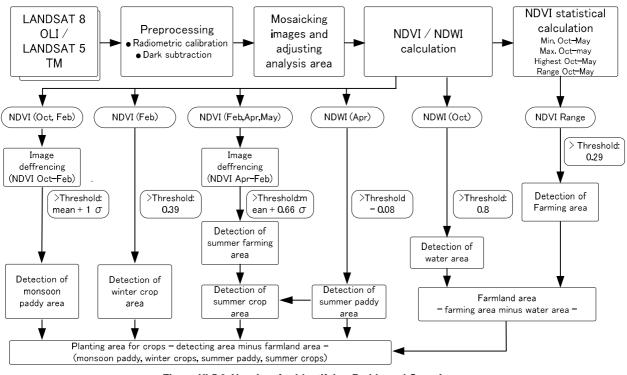

Figure XI.5.3 Algorism for Identifying Paddy and Crop Area

Because of limited acquisition of Landsat data compared to the congested farming activity in the season, a constant value may not be applied as threshold for all the cases which covers some years and seasons. In accordance with the susceptible condition of the satellites image, the statistical approach is better to be applied with the standard deviation of the mean of the values for explaining the annual variation of farming area.

In the case of monsoon and summer crops, seasonal and annual change in NDVI occurs in large portion of the Project area. The distribution of the pixel values indicated as skews, so that the threshold (a coefficient multiply standard deviation) was empirically adjusted through a comparative works in the field survey.

XI.6 Field Survey

The ground truth survey was carried out in January 2017. Prior to the survey, the daft map of farmland area was prepared by NDVI statistical analysis. The map had been verified through comparative works to current status at the selected points as respective farmlands.

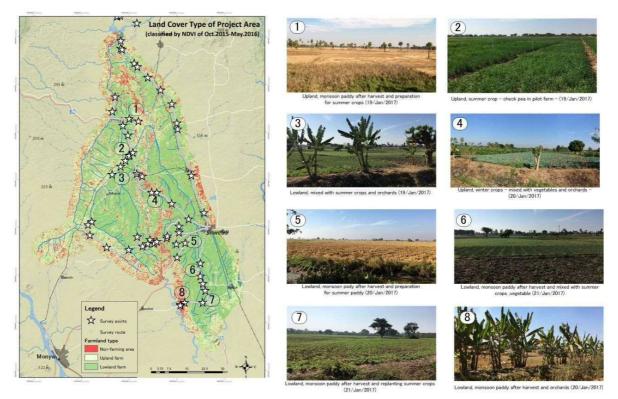

Figure IX.6.1 Field Survey Points and Area Landscape in Jan - Feb 2017

At each survey point, the local farmers were interviewed about the current land-use and recent farming activity, e.g. crop types and their planting/harvesting date. The number of survey points were about 70, which covered the analyzed area and respective farmland types as shown in Figure XI.6.1.

Through this comparative survey, threshold for non-farming area was determined as 0.29 for the range of NDVI (maximum change of image-difference in eight (8) month from October to May). The information of farming activity was also collected to determine aforesaid thresholds for image-differencing changes to detect planting area for respective crops.

In following sub-sections, relationship between NDVI, NDWI and field condition is described.

XI.6.1 NDVI Changes and Cropping Cycle

During the field survey, farmers were interviewed about planted timing and its cultivated period especially of 2015/2016. Through the survey, the Team collected information about the cropping pattern in the typical cropping area as follows:

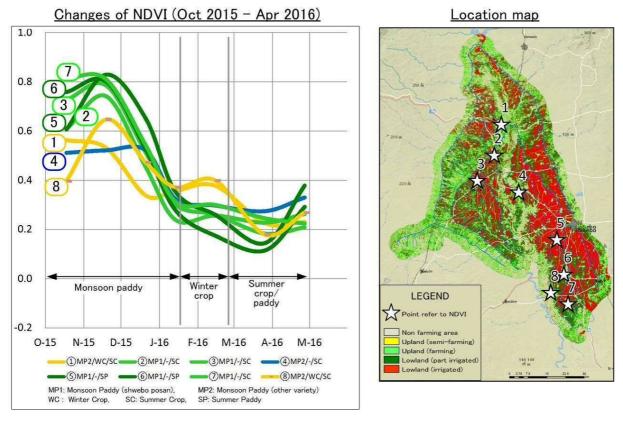

Cropping	g Pattern	Survey Point (see Figure XI.6.2)
a) Monsoon paddy (shwebo-posan)	→Summer crops,	2,3,7
b) Monsoon paddy (shwebo-posan)	→Summer paddy,	5,6
c) Monsoon paddy (other variety)	\rightarrow Winter crop \rightarrow Summ	ner crop, 1,8
d) Monsoon paddy (other variety)	→Summer crop	4
e) Monsoon paddy (other variety or s	hwebo-posan)	-

To confirm relationship between cropping pattern and NDVI value, changes of NDVI at survey points

was delineated in Figure XI.6.2. The temporal trend of NDVI fluctuated and had clear peaks at monsoon, winter, and summer season. They are correlated to as three (3) growing season; monsoon paddy (October to January), winter crop (January to March) and summer crop and summer paddy (March to May) in the survey area.

Besides, even in the same season, NDVI level is classified into two parts. First, in the case of monsoon paddy, there is a correlation between higher NDVI and Shwebo Powsan cultivated area, while lower NDVI in general corresponds to the early ripening paddy variety (e.g. IR 747 at point 4). As for winter and summer season, plots of summer crops (green gram, sesame, etc.) are identified as higher NDVI than that of paddy field.

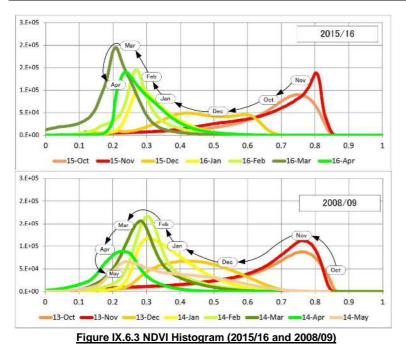

The minimum range of NDVI (max.-min.value) calculated by survey points was about 0.3, which is the same level as threshold (i.e.0.29) of non-farming / farming area.

XI.6.2 Spatial Distribution of NDVI with Multiple Peaks

In the case of monsoon paddy in 2015/16 season, northwestern part of the survey area includes lots of early-harvesting plots for coming cropping. On the other hand, at the same period, the southeastern part still remains in growing stage, i.e. one to two month before harvesting. Also in summer season, paddy and other crops were simultaneously planted, however, their growing peaks and harvesting times were different each other. In this condition, the spatial distribution of NDVI was not monotonous for all the survey area, so that it probably describes compound curves with multiple NDVI peaks. The condition also presented as various shapes of NDVI histogram in Figure XI.6.3.

Out of histograms drawn for October to May, only two month, February to March, were regarded as the normal distribution reflected by a quiet period of sowing and transplanting stage. Toward growing period, they grew into the non-normal distribution and skewed further until harvesting. Besides, the changes between different years were also huge due to climate condition and other factors.

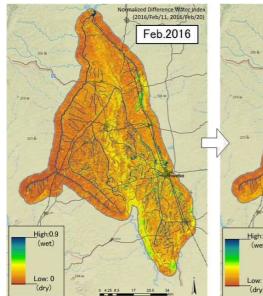

As a result of field survey correlated with NDVI, a routine method which applies a constant threshold to NDVI data is hard to be employed for an estimation of

cropping area especially over multiple years. Instead, statistical approach for image-difference (e.g. before/after harvesting) is judged to be applied for the analysis.

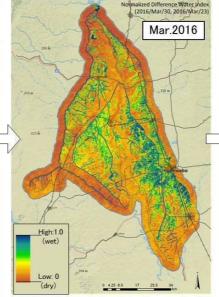

XI.6.3 Spatial Distribution of NDWI and Summer Paddy

Thapanseik reservoir releases irrigation water from the beginning of February every year. After canal opening, irrigation water gradually flows down and spreads over irrigable area by the end of March. Crop planting then commences from the middle of February and in general terminates by the end of April. Regarding the summer cropping area located in downstream of canal network, the irrigation water is just once supplied to plots for seeding time and is interrupted in growing period. On the other hand, for summer paddy located nearby main canals, irrigation water is supplied continuously beyond March.

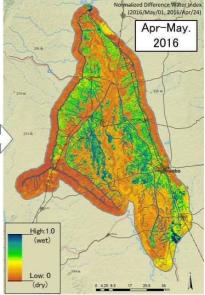

Spatial distribution of NDWI shows the range of water distribution after canal open (see Figure XI.6.4). In the field survey, higher rage of NDWI in April (indicated as "green color") was judged as correlative key to submersion area of summer paddy. The threshold was determined through cross-checking between NDWI value and actual location of paddies at survey points.

Figure IX.6.4 Spatial Distribution and Changes of NDWI (2015/16)

XI.7 Quantitative Evaluation of Paddy and Crops

Quantitative evaluation was done for three (3) years, i.e. 2008/09, 2013/14 and 2015/16 with following steps, 1) detection of farming area, 2) detection of planting area of respective crops and paddy 3) statistical analysis by administration boundary. The details of quantitative evaluation are described in following subsections.

XI.7.1 Detection of Farming Area

Farming area was detected by NDVI and NDWI of a season. As for NDVI, the difference between October and May was calculated. The exceeding range was extracted with threshold of 0.29. The exceeding area was once extracted as a 'temporary farmland' which may include water area such as lakes, ponds, and rivers other than farming area.

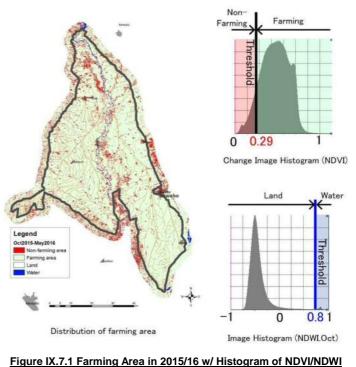

While NDWI was applied for extraction of 'water area', Applying 0.8 of threshold, higher part than threshold value was regarded as 'water area'.

Farming area is then obtained by subtracting 'water area' from 'temporary farmland' which is previously obtained from NDVI image.

In Figure XI.7.1, the spread of farming area in 2015/16 and the calculation process with histograms of NDVI and NDWI is shown.

XI.7.2 Detection of Planting Area of Crops and Paddy

Crop planting area was calculated based on algorism determined by local farming condition of cropping pattern and the climate (see Figure XI.5.3). As described in Chapter 5, the area of monsoon paddy was estimated based on the change detection method between pre-harvest (October) and post-harvest (February). For summer paddy, planting area is regarded as higher range of NDWI which reflects a liquid water content of paddy just after sowing or transplanting. As for area of summer crops, it was clarified by comparison of NDVI values between two dates, i.e. pre-planting (February) and post-planting or glowing stage (May). Firstly, the cropping area was obtained by the difference of NDVI, and it was then subtracted by area of summer paddy. The distribution of crops and paddy in 2008/09, 2013/14, and 2015/16 are as follows.

2008/09 (refer to Table XI.7.2): 2008/09 season had normal rain fall of 1,200 mm. Monsoon paddy was extended to 272,630 ha (673,683 acre) without narrow strip of floodplains of Mu River. On the other hand, 11,842 ha (29,263 acre) of winter crops are limitedly detected along Mu River and southern area of the Project area, depending on rainwater and river runoff in/after monsoon season. In summer season, paddy area covers 154,876 ha (382,706 acre) of 78% of

Thapanzeik dam irrigation area, while summer crops laid sporadically along Old Mu canal and southern area and its area is small as 11,446ha (28,284 acre).

20013/14 (refer to Table XI.7.3): This season stood for a long draught succeeded from previous year of 2012, and had water shortage as was about 60 % of average rainfall, so that cropping pattern was different from normal years'. Due to insufficient rainwater in particular north part of the analysis area, monsoon paddy decreased to 249,906 ha (617,532 acre). It was predicted that monsoon paddy was re-planted earlier by winter crops nearby Mu River and ground water sources (see southern end of the analysis area in Figure XI.7.3). Summer paddy was also laid on limited area because of insufficient water from Thapanzeik dam. The irrigated area was 105,590 ha (260,919 acre). Summer crops were detected as 25,501 ha (63,014 acre).

<u>2015/16</u>(refer to Table XI.7.4): This season received sufficient rainfall more than 160 % of average year's, so that monsoon paddy was extended to 266,895 ha (659,512 acre). At the rest of monsoon paddy, the area of winter crops was brought up to 29,659 ha (73,288 acre) which is centered upon Mu River. As for irrigated land in summer season, 108,822 ha (268,904 acre) of summer paddy were re-planted after monsoon paddy (or some winter crops). In the detached area from canals system, summer crops were cultivated in 37,048 ha (91,546 acre). This may be caused by insufficient irrigation supply.

In Figure XI7.2 to XI.7.4, spatial distribution of monsoon paddy, winter crops, summer crops and summer paddy are shown respectively.

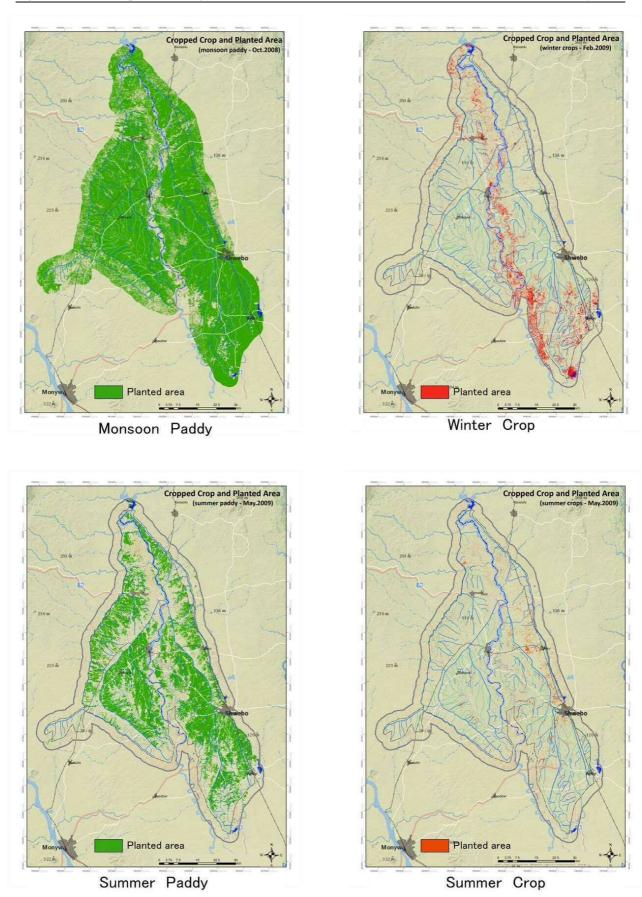

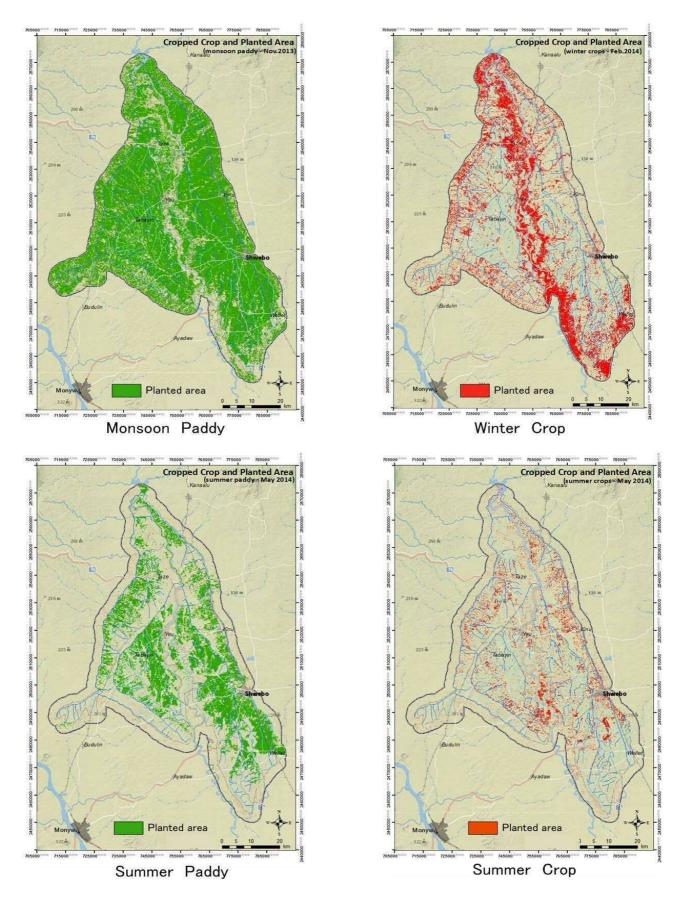

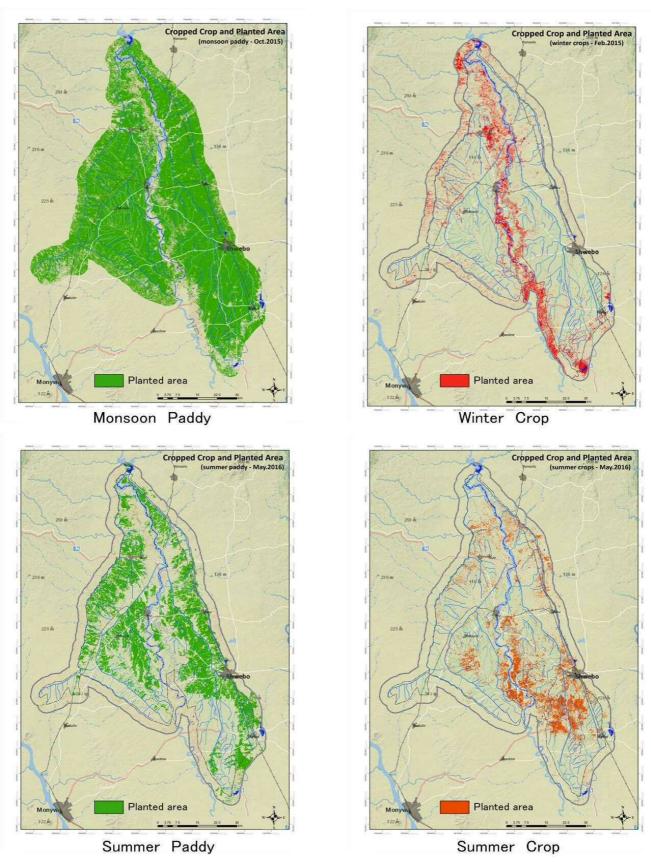

Figure XI.7.2 Crop Planted Area (2008-09)

XI.7.3 Statistical Analysis with Administration Boundary

Source: Myanmar Information Management Unit, 10-May-2010)

Figure XI.7.5 Village and Township Boundary

The planting area estimated by binary change detection was classified with administration boundaries. With village tracts and townships boundary as shown in Figure XI.7.5, the area enclosed by each boundary was calculated to compare itself to the existing agriculture statistics prepared by IWUMD, MOALI.

Since the statistical information, as for the irrigation area of Thapanzeik dam, is solely available, the correlation between the analysis' and the statistics data had to be based on whole the analysis area as shown in Table XI.7.1, XI.7.2, XI.7.3 and XI.7.4.

XI.7.3.1 Evaluation of Analysis Result

There are four (4) cropping areas distinguished by Landsat imagery in the analysis (or irrigation) area as aforesaid. However, in the existing agriculture statistics, two (2) cropping areas, i.e. winter crop and a part of monsoon paddy which is planted outside of the irrigation area is not complied.

Therefore the two (2) cropping areas of summer paddy and summer crop was compared. As a result of the comparison, the difference remained at 1% to 11 % even in a variation of hydrological condition for three 110(in decemer(2012)(14) and 20(in met ever(2015)(16))

(3) years, i.e. 9% in normal rainfall (2008/09), 11% in dry year(2013/14) and 2% in wet year(2015/16) respectively.

JICA

As for a comparison of monsoon paddy, about 270,000 ha (670,000 acre) has been cultivated in normal hydrological year. It exceeded the figure of the existing statistics and accounted for 125 % to 140%. 12,000 to 44,000 ha (30,000 to 110,000 acre) of winter crop was calculated in the three (3) analysis years.

XI.7.3.2 Planted Area of Each Village Tract

Planted area of crops and paddy was calculated by village tracts. There are more than 300 village tracts in the analysis area. In the monsoon season, the paddy field extensively spreads over every village. 85 to 94 % of their farmland was recognized as the monsoon paddy (85 % in dry year of 2013/14 and 94 % of wet year of 2015/16). After the monsoon season, a second crop is planted and farmers shift to dual (or triple in part) cropping. However, due to available water source, its spatial and time-series distribution had been changed as shown in Figure XI.7.6. The annual cropping patterns with village tract based distribution can be described as follows.

1) 2008/09 (Normal Year)

The cropping pattern in 2008/09 was a monotype. Farmers in most village tracts were engaged in dual cropping consisting of monsoon paddy and summer paddy. In the village tracts located at the end of canal system, single cropping of monsoon paddy is dominant due to insufficient irrigation water in dry season.

2) 2013/14 (Dry Year)

Because of dry year, cropping pattern was different from the other years. The winter crops occupied the large portion of the central strip along with Mu River and border area. The rest of the area located near canals shows the same dual cropping pattern with monsoon and summer paddy as that of 2008/09. In some area which supplement water sources such as groundwater and seepage water from rivers or their tributaries, triple cropping consisting of monsoon paddy, winter crops and summer paddy had been observed.

3) 2015/16 (Wet Year)

The tendency of 2015/16 was the same as those of the other years. The monsoon paddy was laid widely on every village tracts and covered 89% of farmland. Besides, the four (4) types of cropping pattern were recognized.

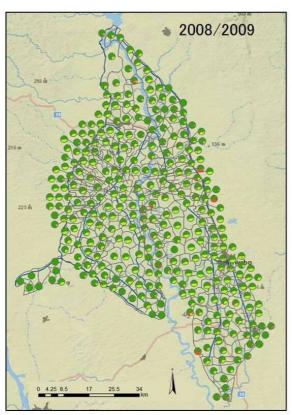

Single cropping: Only monsoon paddy was cultivated because of in-sufficient irrigation water. It lay at the end of right main canal (RMC) and the south-western part of the project area.

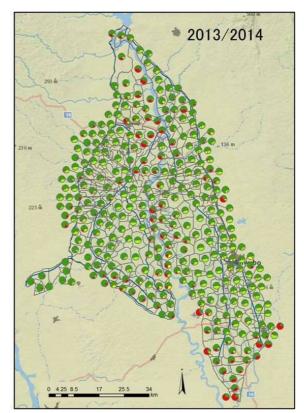

Dual cropping (monsoon paddy / summer paddy): This pattern occupied majority of the area and was observed nearby old mu canal (OMC) and the upper portion of Shwebo main canal (SMC), ye-U main canal (YMC), and right main canal (RMC). It accounted for about 60 % of the analysis area and has not been unchanged since 2008/09 because of the sufficient water for summer paddy until July.

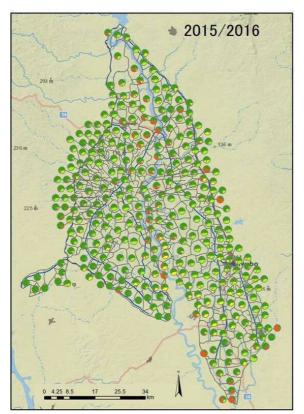

Dual cropping (monsoon paddy / summer crops): This area was centered upon Wetlet township and the west part of Shwebo township, which was located at the lower reach of Shwebo main canal (SMC) to left bank of Mu River. This area correlated with the fields where irrigation water was not supplied continuously but was interrupted at the begging of canal open period, i.e. February to March.

Triple or Dual cropping (monsoon paddy / wither crops / summer paddy): This area is limited to flooding area of Mu river located in the east part of Taze and the southwest part of Ye-U and Kin-U.

Through (3) three years analysis, above mentioned changes of cropping pattern may be regarded as being induced by various condition such as the availability of water recourses, the limitation by climate changes and also facility deterioration of 17 year-old irrigation system.

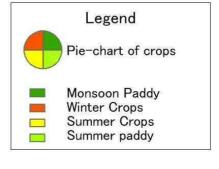

Figure XI.7.6 Annual Cropping Pattern of Village Tracts in 3 Years

XI.8. Detailed Work Procedures for the Analysis

The following table shows the detail of the procedure applied for the analysis.

No	Category	Work Items	Contents	Work Steps and Procedure	Reference
1	Preparation	Preparation	Preparation for analysis tools Brush-up of work contents	 ①Brush-up of required work contents and necessary work flow ②Preparation of analysis tools and arranging analysis environment 	-
