5. テクニカル・ノート

オキナワ道路整備計画準備調査

テクニカル・ノート

JICA 調査団は、サンタクルス県公共事業・土地整備局(SOPOT)と技術的な協議を実施し、添付の事項について確認した。なお、各事項については、日本での解析、外務省及び JICA との協議を経て最終的に決定される。

サンタクルス　2016 年 5 月 18 日

カルロス　ソーサ	中村友彦
局長	業務主任
サンタクルス県公共事業・土地整備局	JICA 準備調査団

添　付

1. 本テクニカル・ノートでの合意事項

本テクニカル・ノートでの合意事項は、道路舗装構造の検討方針及びボリビア側負担事項の内、現状の EIA ライセンスの取得手続き状況を反映した EIA ライセンス及び樹木の伐採・抜根許可の取得手続きのスケジュールについてである。

2014 年 8 月 29 日に署名、合意したテクニカル・ノートの内容の内、本テクニカル・ノートで更新した内容以外は有効である。

2. 道路舗装構造の検討方針

道路構造は設計交通荷重に耐えうるコンクリート層、下層路盤、構築路床から構成されるが、これらの厚さの複数の代替案を検討し、経済的な案を提案する。また、アスファルト舗装についても検討し、コンクリート舗装と比較して経済的な案を提案する。

3. ボリビア側負担事項

・EIA ライセンス及び伐採・抜根許可書の取得

ボリビア側は、Okinawa1~Okinawa3 間道路の EIA カテゴリーが「2」と決定された事を受け、抜根・伐採計画及び EIA レポートを作成し、EIA ライセンスを 2017 年 5 月 31 日までに取得する。

付属文書：2014 年 8 月 29 日に署名したテクニカル・ノート

Estudio Preparatorio para el Proyecto de Pavimentación de la Carretera Okinawa I,II,III

Memorando Técnico

La Misión de JICA mantuvo conversaciones técnicas con distintas autoridades de Bolivia tales como la Secretaría de Obras Públicas y Ordenamiento Territorial del Gobierno Autónomo Departamental de Santa Cruz (SOPOT), Servicio De Caminos (SEDCAM), Administradora Boliviana de Caminos (ABC), la Alcaldía de Santa Cruz de la Sierra y la Alcaldía de Okinawa, y confirmó los ítems descritos en el Documento Adjunto. Con respecto a cada uno de dichos ítems, se definirá después de hacer análisis de los resultados del Estudio Preparatorio y mantener conversaciones con la Cancillería del Japón y JICA.

Santa Cruz, 29 de agosto de 2014

Ing. Carlos Hugo SOSA ARREAZA
Secretario de Obras Públicas y Ordenamiento Territorial del Gobierno Autónomo Departamental de Santa Cruz

Ing. Tomohiko NAKAMURA
Jefe de los consultores
Misión del Estudio Preparatorio de JICA

Documento Adjunto

1. Contenido del Proyecto

- Pavimentación de la Carretera Okinawa (Tramo de unos 35 km de distancia desde la Intersección de Okinawa 1 hasta la de Okinawa 3) .
- Mejoramiento de Cunetas、Alcantarillas transversales y alcantarillas a las cuales fluye finalmente el agua de dichas cunetas de la mencionada Carretera
- Mejoramiento de las aceras de las comunidades habitadas, ubicadas sobre dicha Carretera (Okinawa2、San Miguel、alrededores de la Intersección de Okinawa 3)
- Señalizaciones horizontales y verticales de todo el trayecto de dicha Carretera (línea eje, etc.)
- Mejoramiento de 5 intersecciones sobre dicha Carretera (Okinawa1、Okinawa2、San Miguel、Zona Franca～Okinawa2,3、Okinawa3)
- Mejoramiento de otras intersecciones y de rampa de acceso desde la entrada de construcciones hasta dicha Carretera
- Reconstrucción del Puente

2. Normativa de estructura geométrica de camino

- Normativa de AASHTO
- Velocidad de diseño : 80km／hora
- Pendiente(bombeo) transversal vial estándar : 2 %

3. Normativa de diseño estructural para pavimentación de camino

- tipo de pavimentación : pavimentación de concreto asfáltico o de hormigón
- vida útil diseñada : 10 años en caso de la pavimentación de concreto asfáltico, 20 años en caso de la pavimentación de hormigón
- método de diseño (Normativa aplicable) : AASHTO GUIDE FOR Design of Pavement Structures (AASHTO 1993)、"Analisis de teoría elástica de multi-estrato" (Japan Road Association)

4. Perfil normal vial

・En la mayor parte del trayecto de la Carretera

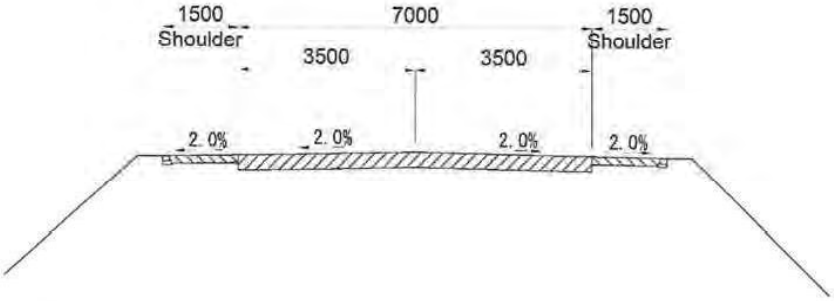

Figura 4-1 Perfil transversal normal vial en la mayor parte del trayecto de la Carretera

・Áreas habitadas

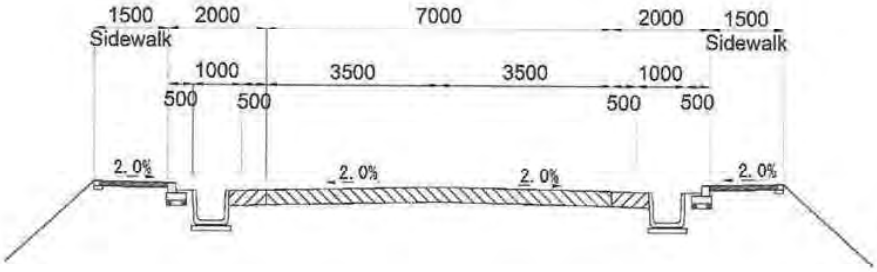

Figura 4-2 Perfil transversal normal vial en las áreas habitadas

5. Mejoramiento de canal de drenaje

Como se menciona en la Figura 5-1, las instalaciones de drenaje existentes ubicadas desde Okinawa 1 hasta el Puente, en un tramo de unos 9.7 km de distancia, están conectadas con la hidrovía existente, pasando por las alcantarillas ubicadas a lo largo de la Ruta 10.

Las instalaciones de drenaje desde dicho puente hasta Okinawa 3, en un tramo de unos 25.4 km de distancia, están conectadas con el río Pailón sobre el cual está construido dicho puente.

Para mantener la estructura vial en buen estado, se necesitará elevar la cota de la rasante del camino en tramos donde se inunda la carretera. Por lo tanto, se

instalarán alcantarillas transversales para no cambiar el drenaje de agua en momento de inundaciones.
El plan definitivo se definirá en consideración al resultado del estudio de campo que se llevará a cabo en el próximo mes de diciembre, en la época de lluvias.

Figura 5-1 Ríos・hidrovías en los alrededores de la carretera Okinawa y tramos inundados de dicha carretera

6. Mejoramiento de intersecciones y caminos de acceso

Abajo se mencionan propuestas para mejorar cada intersección.

・Intersección de Okinawa 1

La Misión mantuvo conversaciones con ABC sobre el alcance de obras (Ver el Anexo-1)

Figura 6-1 Propuesta para el mejoramiento de la Intersecciόn de Okinawa 1

・Intersección de Okinawa 2

Figur6-2 Propuesta para el mejoramiento de la Intersección Okinawa2

・Intersección de Okinawa2 y 3～Zona Franca

Con respecto al alcance de obras, la Misión mantuvo conversaciones con ingenieros encargados de diseño de SEDCAM. (Ver el Anexo-2)

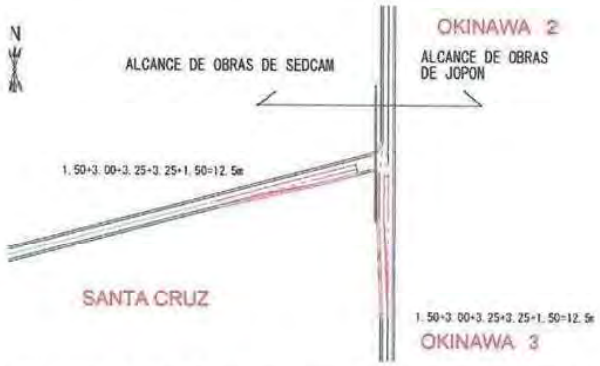

Figura 6-3 Propuesta para el mejoramiento de la Intersección de Okinawa2,3～Zona Franca

・Intersección de San Miguel

Figura 6-4 Propuesta para el mejoramiento de la Intersección de San Miguel

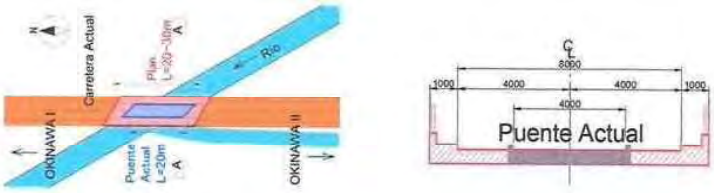
・Intersección de Okinawa 3

Con respecto al alcance de obras, la Misión mantuvo conversaciones con ingenieros encargados de diseño de SEDCAM. (Ver el Anexo-3)

Figura 6-5 Propuesta para el mejoramiento de la Intersección de Okinawa 3

7. Reconstrucción del puente

7-1 Plano de ubicación del puente a ser reconstruido



Plano　　Sección

Figura 7-1 Plano de ubicación del puente a ser reconstruido

7-2 Tipo de puente y longitud de luz

Tabla 7-1　Examen comparativo de tipo de puente

Número de luces	2 luces	1 luz	
Tipo de puente	Puente de viga I Hormigón Armado	Puente de viga I Pretensado	Puente mixto
Sección			
Longitud de puente 30m	2@15=30 m	1@30=30 m	1@30=30 m
Facilidad de ejecución	Las obras serán complicadas debido a que se necesitará estancar el río para la construcción de pilas.	Será facil hacer obras por no tener necesidad de estancar el río.	Será facil hacer obras por no tener necesidad de estancar el río.
Mantenimiento	Se necesitará poco mantenimiento por ser de hormigón.	Se necesitará poco mantenimiento por ser pretensado.	Se requiere con frecuencia el mantenimiento por ser de acero.
Plazo de obras	Se necesitará bastante tiempo para construir pilas.	No se necesitan pilas. Es posible ejecutar obras en corto tiempo .	No se necesitan pilas. Es posible ejecutar obras en corto tiempo .Sin embargo, se necesita tiempo de transporte debido a ser fabricadas en algún tercer país.
Proporción de costo de construcción	1.0	1.0	1.4
prioridad	2	1(recomendable)	3

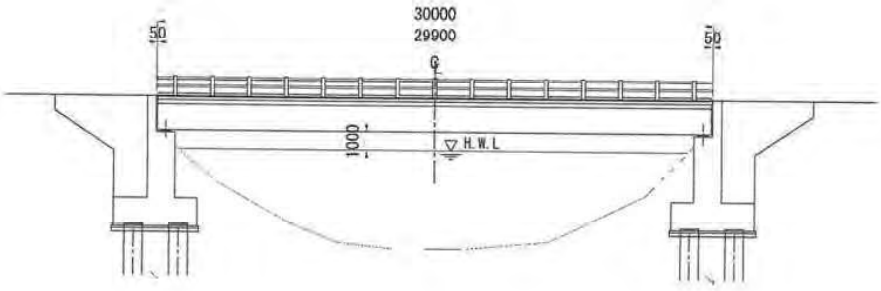


Figura 7-2 Elevación lateral y transversal del puente

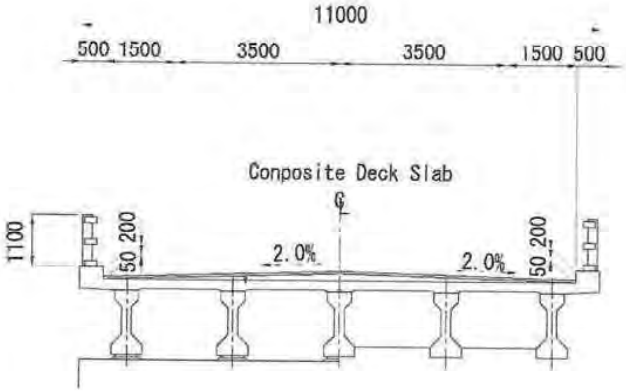

Figura 7-3 Sección transversal del puente

7-3 Normativa de diseño de puente

Método de diseño(base aplicable): Se aplicará la normativa del Japón.

Carga viva: carga viva B (equivalente a 125% de HS20-44)

Carga en momento de sismo:

Carga viva en momento de sismo : Se utilizará el coeficiente sísmico diseñada Kh=0.1.

8. Medidas de seguridad

Se asegurará la seguridad de peatones en las áreas habitadas debido a que se mejore la carretera y eleve la velocidad de vehículos. Como se menciona en la Figura. 4-2, se asegurará la seguridad de peatones a través de elevarse el nivel de superficie de

8

carretera e instalarse cunetas a ambos lados de la carretera. Además, en las intersecciones se examinará a instalar pasos peatonales e instalarán marcas viales como "paso peatonal", "máxima velocidad 20km/h" y "sonorizadores".

9. Responsabilidades a ser asumidas por la parte boliviana

9-1 Consideraciones socio-ambientales

・Obtención de licencia ambiental de EIA

La parte boliviana quedó acordado con el siguiente cronograma de obtención de licencia ambiental de EIA para la Carretera Okinawa I～III.

Tabla 9-1 Cronograma de obtención de la licencia ambiental de EIA

※1 : Existe previsto presentar la Ficha ambiental entre finales de octubre y primeros de noviembre
※2 : En caso de no haber re-solicitud, se adelantará la fecha de elaboración del informe EIA
※3 : PASA = plan de seguimiento ambiental
: MM (PMM) = Plan de mitigación ambiental

・Plan de monitoreo ambiental

La parte boliviana quedó acordado con el siguiente plan de monitoreo ambiental.

Tabla 9-2 Propuesta del plan de monitoreo ambiental

Items ambientales	Items	lugar	Frecuencia arriba : antes de obras medio : durante obras abajo : despúes de obras	Entidad responsable
【antes】【durante】【despues】				
aire	$PM_{2.5}$, PM_{10}, CO, O_3, NOx, SOx, polvo,, olor Dirección de viento, velocidad de viento	Punto inicial (área urbana) , punto intermedio (entre Okinawa1 y 2) , punto intermedio (okinawa2) , punto intermedio (okinawa2～3 ㎞) , punto final (área urbana)	1 vez(antes de EIA) 1 vez／cada 3 meses 1 vez／cada 6 meses	Constructora o SOPOT
ruidos・vibraciones	Nivel de ruidos・vibraciones	Zona habitada (okinawa1,2,3,san miguel) , área escolar(okinawa2), área agrícola (entre Okinawa 1y2, entre 2 y 3)	1 vez(antes de EIA) 1 vez ／cada 3 meses 1 vez／cada 6 meses	Constructora o SOPOT
Calidad de agua	pH, SS, COD, DO, aceites, conductividad, turbiedad, olor, color	pozo(uno o dos・cerca de la carretera)	1 vez(antes de EIA) 1 vez ／cada 3 meses 1 vez／cada 6 meses	Constructora o SOPOT
biosfera	Fauna y flora	Okinawa1～3 (dentro del Derecho de vía)	1 vez(antes de EIA) 1 vez ／cada 3 meses 1 vez／cada 6 meses	Constructora o SOPOT

・Con respecto al monitoreo ambiental previo

La parte boliviana, de acuerdo con el plan de monitoreo ambiental previo arriba descrito, acordó con la ejecución de monitoreo ambiental previo como parte de responsabilidades a ser asumidas por el país receptor del Proyecto. La parte boliviana informará a la parte japonesa el resultado de dicho monitoreo.

・Obtención de permiso de desmonte y poda de árboles

La parte boliviana acordó con la obtenciíon de permiso de desmonte y corte de árboles que hay entre Okinawa 1 ～Okinawa 3, de acuerdo con el cronograma de desmonte y corte de árboles.

Tabla 9-3 Cronograma de obtención de permiso de desmonte y corte de árboles.

(※1 PASA=plan de seguimiento ambiental
MM (PMM)=plan de mitigación ambiental

9-2 Traslado de instalaciones (tuberías de agua, postes de energía eléctrica, etc.) y de casetas de vigilancia

La parte boliviana, con base al plano esquemático de mejoramiento de dicha Carretera y plano de ubicación de instalaciones como tuberías de agua, postes de energía eléctrica y casetas de vigilancia que se adjuntarán al Borrador del Informe Final, que se presentará en marzo de 2015, terminará de desplazar las instalacioes necesarias antes de la convocatoria de precalificación de constructoras (posiblemente en octubre de 2015).

9-3 Disposición del campamento provisional para obras y de botadero de residuos

La parte boliviana, consultando con los consultores y constructoras a la hora del inicio de obras, dispondrá de un patio o área provisional para colocar materiales y equipos, construir plantas y campamento. La extensión de dicho patio será de varias hectáreas a definirse. Además, asegurará un botadero de residuos sólidos cerca del sitio de obras. La Alcaldía de Okinawa asegurará un

patio provisional (1 hectárea) para obras cerca de Okinawa 2. Y, está de acuerdo con el uso de botadero ubicado a unos 14 km al norte de Okinawa 1.

9-4 Impulso de mejoramiento de los caminos en sus contornos

La parte boliviana, con el fin de lograr más eficacia del mejoramiento de la Carretera Okinawa, impulsará a distintas ejecutoras, del Proyecto de pavimentación de la carretera entre Santa Cruz y Okinawa3 (Proyecto de la Gobernación de Santa Cruz y de la Alcaldía de Santa Cruz de la Sierra)、Mejoramento de la Ruta 10 entre Okinawa1～Los Troncos (Proyecto de ABC)、y Construcción del Puente Banegas (Proyecto de ABC) , para que terminen dichos Proyectos antes de finales del año 2017.

Estudio Preparatorio para el Proyecto de Pavimentación de la Carretera Okinawa I,II,III

Memorando Técnico

La Misión de JICA mantuvo conversaciones técnicas con la Secretaría de Obras Públicas y Ordenamiento Territorial del Gobierno Autónomo Departamental de Santa Cruz (SOPOT) y confirmó los ítems descritos en el Documento Adjunto. Con respecto a cada uno de dichos ítems, se definirá después de hacer análisis y mantener conversaciones con la Cancillería del Japón y JICA.

Santa Cruz, 18 de mayo de 2016

Ing. Carlos Hugo SOSA A.
Secretario de Obras Públicas y Ordenamiento Territorial del Gobierno Autónomo Departamental de Santa Cruz

Ing. Tomohiko NAKAMURA
Jefe de los consultores
Misión del Estudio Preparatorio de JICA

Documento Adjunto

1. **Ïtems acordados en el presente Memorando Técnico**

   Los ítems acordados en el presente Memorando Técnico, dentro de los lineamientos del análisis de la estructura de pavimentación de las carreteras y las responsabilidades a asumirse por la parte boliviana: los trámites para conseguir Licencia Ambiental y el permiso de ABT para corte y desmonte de árboles.

   Dentro del contenido del Memorando Técnico, firmado el día 29 de agosto de 2014, los ítems son vigentes salvo el contenido renovado en el presente Memorando Técnico.

2. **Líneamientos para el análisis de la estructura de pavimentación de carretera**

   La estructura de carretera se compondrá de capa de hormigón que pueda resistir a la carga de tráfico diseñada , subbase y plataforma (o subrasante) a construirse. Sin embargo, se analizarán distintas opciones del espesor y se propondrá una opcion económica. También, se analizará la pavimentación asfáltica y se propondrá una opción económica en comparación con la pavimentación de hormigón.

3. **Responsabilidades a asumirse por la parte boliviana**

   ・Obtención dela Licencia Ambiental y el permiso de tala y desmonte

   Debido a que se ha definido la categoría "2" para la Carretera Okinawa1~Okinawa3, la parte boliviana elaborará un informe del EEIA y plan de tala y desmonte de árboles , y obtendrá la Licencia Ambiental antes del día 31 de mayo de 2017.

Documento Anexo : Memorando Técnico firmado el día 29 de agosto de 2014

Estudio Preparatorio para el Proyecto de Pavimentación de la Carretera Okinawa I,II,III

DECLARATORIA DE IMPACTO AMBIENTAL (DIA)
070202/06/DIA/Nº 7059/18.

LA AUTORIDAD AMBIENTAL COMPETENTE NACIONAL

CERTIFICA:

Que, dando cumplimiento al artículo 25° de la Ley Nº 1333 del Medio Ambiente, y con ajustes al Procedimiento de Evaluación de Impacto Ambiental del Reglamento de Prevención y Control Ambiental (RPCA), el **Gobierno Autónomo Departamental de Santa Cruz,** legalmente representado por el **Ing. Carlos Hugo Sosa Arreaza**, ha presentado la Ficha Ambiental Nº 7059/15 y el correspondiente Estudio de Evaluación de Impacto Ambiental – Analítico Específico del proyecto **"CONSTRUCCIÓN CARRETERA OKINAWA I - II - III"**, el mismo se encuentra ubicado en el municipio de Okinawa I, provincia Warnes del departamento de Santa Cruz, habiéndose cumplido con los requisitos mínimos desde el punto de vista ambiental, por lo cual queda autorizada la implementación del proyecto.

La presente Declaratoria de Impacto Ambiental (DIA) se constituye conjuntamente el Estudio de Evaluación de Impacto Ambiental aprobado, en particular con el Programa de Prevención y Mitigación (PPM) y el Plan de Aplicación y Seguimiento Ambiental (PASA), en referencia para la realización de los Procedimientos de inspección, vigilancia y control, establecidos en el Reglamento de Prevención y Control Ambiental.

En caso de no darse estricto cumplimiento a lo previsto en los planes anteriormente mencionados y el Estudio de Evaluación de Impacto Ambiental, se aplicarán las sanciones previstas en la Ley Nº 1333 sus Reglamentos (Decreto Supremo 24176) y demás disposiciones conexas.

Es cuanto certifico para los fines consiguientes.

26	2013	55.1	0.07143	3,036.01	-0.9704
27	1988	53.3	0.03571	2,840.89	-1.2037
	Total	2,699.3		302,350.11	
	平均 Σx/N=	99.97	Σx^2/N=	11198.152	
		$\overline{x}$		$\overline{x^2}$	

F(x)=1-j/(N+1)

Sx = $(\overline{x^2}-(\overline{x})^2)^{0.5}$ = 34.7009

N= 27 であるから、上表より

$\overline{y}$ = 0.5332 Sy = 1.1004

よって

1/a=Sx/Sy= 31.5348

$x_0 = \overline{x}-(1/a)*\overline{y}$ = 83.156

以上より確率雨量の基本式は

x=83.156+31.5348*y

確率年Tとyの関係は上表3.6に示されているので、これを上式に代入して以下のように確率雨量xが求まる。

T 回帰年	F(%)	$\overline{y}$	(1/a)*$\overline{y}$	x 確率雨量	
3	66.7	0.9027	28.467	112	
10	90	2.2504	70.965	154	
20	95	2.9702	93.665	177

(5) 道路排水施設サイズの計算

側溝および排水管の排水能力は、以下のマニングの流速等式より求められる通水量の８割を排水施設の可能通水量とした。

$$Qc = 0.8 \times V \times A$$

$$V = 1/n \times R^{(2/3)} \times I^{(1/2)}$$

ここで

Qc：排水施設の可能通水量（m3/sec）

V：流速（m/sec）

n : 粗度係数（コンクリート管 0.013、コンクリート側溝 0.015、石積側溝 0.025）

R：径深（m）, R = A/S

I：流路勾配

A ：排水施設の通水断面積（m2）

S ：潤辺（m）

8-3 流出解析（パイロン川、橋梁）

1) 雨量記録の整理

CETABOL 及び SENAMHI の雨量データを整理し、最終的に SENAMHI のデータを利用して、最大雨量を取り出し水文統計処理の準備を行った。

2) 超過確率の算定

対数正規分布法と Gumbel 法を使って確率雨量の算定を行った。結果を下記に示す。流量計算には、Gumbel 法を用いた。

表 2-2-14 確率日雨量

回帰年	確率日雨量（mm/日）	
	対数正規分布法	Gumbel 法
10	146	154
20	168	177
25	175	184
30	181	190
40	190	199
50	198	206
100	221	228

出典：調査団

3) 降雨確率年の算定

サンタクルス県の基準より降雨確率年の回帰年 100 年、確率日雨量 228mm/日を採用した。

4) 流域面積の算定

Instituto Geografico Militar (軍地理院)から入手した地形図から流域面積 30.5km2 を算出した。

5) 流出係数の設定

パイロン川流域周辺は耕地であることから、流出係数は建設省河川砂防基準（案）を参考に 0.45 を採用した。

6) 洪水到達時間の算定

パイロン川流域の標高と流路延長から洪水到達時間を算出した。この結果より洪水到達時間は、表 2-2-15 に示す複数の算定式による結果を比較し、110 分とした。

表 0-15 洪水到達時間

算出方法	等流流速法	土研式	角屋式	Kinematic Wave 式
洪水到達時間（分）	80	140	110	90

出典：調査団

7) 洪水到達時間内の平均雨量の算定

洪水到達時間 110 分の場合の平均降雨強度の計算結果を表 2-2-16 に示す。一般的で安全側の物部式で算出した値を採用した。

表 0-16 到達時間内平均降雨強度

	伊藤式	物部式
到達時間内平均降雨強度（mm/h）	38.2	52.8

出典：調査団

8) 高水位流量の算定

ラショナル式を使って解析洪水流量を算定した。

Qp = 1/3.6*fp*r*A = 201m3/s

Qp: 洪水ピークの流量（m3/s）

r: 洪水到達時間内平均降雨強度

fp: 流出係数

A: 流域面積（km2）

9) 高水位の算定

上記から得た回帰年 100 年における確率日雨量を用いて算出した流量 201m3/s を地形測量から得た河川断面から作成した水位水量曲線に当てはめると H=280.11 となった。

3.00	3.00											

OBSERVATIONS:
The presence of the Water Table at a depth of 1.70 m was evident. until the end of Geotechnical Study. For the study is considered the mouth 0.00 level survey done.

A= Number of hammer blows between readings
B= Penetration accumulated after each series of blows
C= Unlike cumulative penetration (Note B) between readings
D= Note C between A Note
E= Position "1" if the hammer is 8 Kg., And "half" if the hammer is 4.6 Kg.
F= Note D Note E
G= Correlation between CBR and DCP index

The presence of the Water Table was not evidenced until the end of Geotechnical Study. For the study is considered the mouth 0.00 level survey done..

A= Number of hammer blows between readings
B= Penetration accumulated after each series of blows
C= Unlike cumulative penetration (Note B) between readings
D= Note C between A Note
E= Position "1" if the hammer is 8 Kg., And "half" if the hammer is 4.6 Kg.
F= Note D Note E
G= Correlation between CBR and DCP index

				6	90	90	15.00	1	15.00	9.25	8.60	
	3.00			4	190	100	25.00	1	25.00	5.22		
				8	290	100	12.50	1	12.50	11.34		

OBSERVATIONS:

The presence of the Water Table at a depth of 2.50 m was evident. until the end of Geotechnical Study. For the study is considered the mouth 0.00 level survey done.

A= Number of hammer blows between readings
B= Penetration accumulated after each series of blows
C= Unlike cumulative penetration (Note B) between readings
D= Note C between A Note
E= Position "1" if the hammer is 8 Kg., And "half" if the hammer is 4.6 Kg.
F= Note D Note E
G= Correlation between CBR and DCP index

OBSERVATIONS:

The presence of the Water Table was not evidenced until the end of Geotechnical Study. For the study is considered the mouth 0.00 level survey done.

A= Number of hammer blows between readings
B= Penetration accumulated after each series of blows
C= Unlike cumulative penetration (Note B) between readings
D= Note C between A Note
E= Position "1" if the hammer is 8 Kg., And "half" if the hammer is 4.6 Kg.
F= Note D Note E
G= Correlation between CBR and DCP index

3.00												

OBSERVATIONS:

The presence of the Water Table was not evidenced until the end of Geotechnical Study. For the study is considered the mouth 0.00 level survey done.

A= Number of hammer blows between readings
B= Penetration accumulated after each series of blows
C= Unlike cumulative penetration (Note B) between readings
D= Note C between A Note
E= Position "1" if the hammer is 8 Kg., And "half" if the hammer is 4.6 Kg.
F= Note D Note E
G= Correlation between CBR and DCP index
