Management

Dr. Jeffrey H. LUHANGA

Dr. Mary SHAWA

Principal Secretary for the Ministry of Agriculture and Food Security

Principal Secretary for the Ministry of Gender Children and Social Welfare

K. SIMBANI

Director of Debt and Aid Management Division

Ministry of Finance

Based on the minutes of meetings on the Detailed Planning Survey for the Project for Promoting Catchment Management Activities in Middle Shire (hereinafter referred to as "the Project") signed on September 20<sup>th</sup>, 2012 by the Department of Forestry (hereinafter referred to as "DOF"), the Land Resources Conservation Department, the Department of Agricultural Extension Services, the Department of Community Development and the Japan International Cooperation Agency (hereinafter referred to as "JICA"), JICA held a series of discussions with relevant organizations of the Government of Malawi (hereinafter referred to as "GOM") to develop a detailed plan of the Project.

All parties agreed the details of the Project and the main points discussed as described in the Appendix 1.

All parties also agreed that DOF, the main counterpart to JICA, will be responsible for the implementation of the Project in cooperation with JICA, coordinate with other relevant organizations and ensure that the self-reliant operation of the Project is sustained during and after the implementation period in order to contribute toward environmental conservation and socio-economic development of Malawi.

The Project will be implemented within the framework of the Agreement on Technical Cooperation signed on March 1st, 2006 (hereinafter referred to as "the Agreement") and the Note Verbales exchanged on June 14th, 2012 between the Government of Japan (hereinafter referred to as "GOJ") and GOM.

Appendix 1: Project Description

Appendix 2: Minutes of Meetings on Detailed Planning Survey

O G

#### Appendix 1

#### PROJECT DESCRIPTION

All parties confirmed that there is no change in the Project Description agreed on in the minutes of meetings on the concerning Detailed Planning Survey on the Project signed on September 20<sup>th</sup>, 2012 (Appendix 2).

#### I. BACKGROUND

The Middle Shire area is adjacent to Blantyre, the largest commercial city in the country, thus has provided the city with firewood and charcoal as most common sources of domestic energy. As the local population has exploited forest resources, customary land has been deteriorated to a great extent. It resulted in soil erosion and a huge amount of silt deposited in the dams along Shire River, thus narrowed the capacity of power generation and urban water supply for the area.

To find a solution to this exigent problem, "the Pilot Study on Community Vitalization and Afforestation in Middle Shire" (hereinafter referred to as "the Pilot Study"), supported by JICA, was conducted from the year 2002 to 2005. Based on the results of the Pilot Study, the technical cooperation project named Community Vitalization and Afforestation in Middle Shire (hereinafter referred to as "COVAMS") was implemented in two traditional authorities of Blantyre District from 2007 to 2012, making remarkable achievements in disseminating soil erosion control techniques in 244 villages. However, although COVAMS has been successful at village level, further effort is needed to institutionalize the approach in the government structure. In addition, it is recommended to verify the effectiveness of the soil erosion control techniques through research. Moreover, as the Middle Shire Catchment is a large area, therefore, further support is necessary to reduce soil erosion in the whole catchment area.

Under such circumstances, GOM requested GOJ further cooperation to upscale the approach developed by COVAMS (hereinafter "COVAMS Approach") to other areas of Middle Shire Catchment. In response to the above request, JICA has dispatched the Detailed Planning Survey Team to formulate the Project, and signed the Minutes of Meetings on Sept. 20<sup>th</sup>, 2012. The Project aims at institutionalizing the implementation process of catchment management through farmers' activities in four target districts.

#### II. IMPLEMENTING INSTITUTIONS AND COLLABORATING INSTITUTIONS

1. Implementing Institutions

The implementing institutions are as follows:

- (1) DOF, Ministry of the Environment and Climate Change Management
- (2) Blantyre District
- (3) Neno District
- (4) Balaka District

(D)

de

**P** 

THE

#### (5) Mwanza District

#### 2. Collaborating Institutions

The collaborating institutions are as follows:

- (1) Land Resources Conservation Department, Ministry of Agriculture and Food Security
- (2) Department of Agricultural Extension Services, Ministry of Agriculture and Food Security
- (3) Department of Community Development, Ministry of Gender, Children and Social Welfare

#### 3. Roles of the Collaborating Institutions

The collaborating institutions will collaborate with the Project within the mandate of respective institutions and expected role at the central level will be the following;

- (1) To participate in JCC as its member
- (2) To approve annual work plans of the Project
- (3) To monitor and review the overall progress of the Project
- (4) To provide guidance on major policy issues and recommend corrective action
- (5) To guide their personnel at the regional and district level to collaborate with the Project
- (6) To ensure that the result of the Project contributes to the environmental conservation and socio-economic development of Malawi

#### III. OUTLINE OF THE PROJECT

Details of the Project are described in the Project Design Matrix (PDM) (Annex 1) and the tentative Plan of Operation (Annex 2).

#### 1. Project Approach

# (1) "COVAMS Approach"

The Project promotes "COVAMS Approach" developed by COVAMS as the approach of catchment management through farmer's activities. "COVAMS Approach" is a training-based extension approach aiming at disseminating specific soil erosion control techniques (i.e. contour ridge making, tree planting, gully control) rapidly and widely at farmers' level. It prioritizes utilization of local resources, conducting training within the local peoples' sphere of living, providing equal training opportunities for all, and implementing training for a large number of people.

COVAMS approach will work within government extension system, and adopt Lead Farmer concept that the Department of Agricultural Extension Services promotes. Following the Guidelines on Lead Farmers, Trainers' Fee will not be paid to Lead Farmers for conducting training for fellow farmers.

"COVAMS Techniques" refers to the three (3) specified techniques disseminated through COVAMS Approach, namely, contour ridge making, tree planting, and gully control techniques. These three (3) techniques are selected among others during early stage of COVAMS based on acceptability of farmers as well as

Or

M

Jet .

PA

impact on soil erosion control.

(2) District Plans of Catchment Management through Farmers' Activities
District Plans of Catchment Management through Farmers' Activities (hereinafter
referred to as "CMFAs") will be developed in the Project in each district. The Plan
includes a detailed implementation plan of CMFAs in TA(s) and an integrated
plan of the district consisting of description on current situation of natural
resources and land use in each district, identification of areas where COVAMS
Techniques are adoptable, necessary input in terms of finance and human
resources by unit (e.g. per TA, per ha), and expected outcomes.

#### 2. Input

- (1) Input by JICA
  - (a) Team of Experts headed by Chief Advisor (Areas of expertise include: Soil Erosion Control, Rural Development, Action Research, Training and Extension, Monitoring and Evaluation, and Coordination)
  - (b) Training in Japan and/or Other Countries
  - (c) Equipment (Vehicle, Motorcycles, Training Equipment and other necessary equipment)

#### (2) Input by GOM

The relevant organizations of GOM will take necessary measures to provide the following at its own expense:

- (a) Services of GOM counterpart personnel and administrative personnel as referred to in III.-3;
- (b) Suitable office space with necessary equipment;
- (c) Supply or replacement of machinery, equipment, instruments, vehicles, tools, spare parts and any other materials necessary for the implementation of the Project other than the equipment provided by JICA;
- (d) Information as well as support in obtaining medical service for JICA Experts;
- (e) Credentials or identification cards for JICA Experts;
- (f) Available data (including maps and photographs) and information related to the Project;
- (g) Running expenses necessary for the implementation of the Project (e.g. allowance for GOM counterpart personnel, office management costs, fuel costs for GOM counterpart personnel);
- (h) Expenses necessary for transportation within Malawi of the equipment referred to in III.-2 (1) as well as for the installation, operation and maintenance thereof; and
- (i) Necessary facilities to the JICA experts for the remittance as well as utilization of the funds introduced into Malawi from Japan in connection with the implementation of the Project

#### 3. Implementation Structure

The Project organizational chart is given in the Annex 3. The roles and assignments of implementing institutions are as follows:

Service

級

Jul )

- (1) Project Director (Director of Forestry) Project Director will be responsible for overall administration and implementation of the Project in cooperation with the collaborating institutions.
- (2) Regional Project Coordinator (Regional Forestry Officer (South))

  The Regional Project Coordinator will be responsible for leading supervision including financial accountability of districts and coordination at the regional level in collaboration with the collaborating institutions.
- (3) District Project Coordinators (District Commissioners) The District Project Coordinators will be responsible for supervision and coordination in each district.
- (4) Project Managers (District Forest Officers) The Project Managers in each district will be responsible for administration and implementation of the Project in cooperation with the collaborating institutions.
- (5) JICA Experts

The JICA experts will provide necessary technical guidance, advice and recommendations to implementing institutions and cooperating institutions on any matters pertaining to the implementation of the Project.

(6) Joint Coordinating Committee

For the supervision and coordination among relevant stakeholders for smooth implementation of the Project, both sides agreed upon the need for establishment of a Joint Coordinating Committee (hereinafter referred to as "the JCC"), to be chaired by PS of Ministry of Environment and Climate Change Management. The JCC meeting will be held once a year and whenever the necessity arises. The functions of the JCC are as follows;

- 1) To approve annual work plans of the Project, based on the Plan of Operations within the framework of the Record of Discussions;
- 2) To monitor and review the overall progress of the Project operations carried out under the above-mentioned annual work plans; and
- 3) To provide guidance on major issues that may arise during the implementation of the project, and to recommend corrective measures.

#### 4. Target Areas and Beneficiaries

Target Areas: Blantyre District, Neno District, Balaka District, Mwanza District Direct Beneficiaries: GOM counterpart personnel of the four districts, farmers of project sites in four target districts

5. Duration5 years

Q 4

6 111 RQ.

6. Contribution to Climate Change Adaptation and Mitigation

The Project is expected to contribute to adaptation and mitigation to climate change. The Project aims at disseminating soil erosion control techniques in the rural areas of Malawi. Such measure prevents soil to be eroded by erratic rain falls, as well as conserving moisture during dry spells. Therefore, it is considered serving as a measure for adaptation against changing precipitation patterns due to climate change. In addition, dissemination of tree planting techniques can be expected to serve as a measure for mitigation.

7. Environmental and Social Considerations

GOM agreed to abide by 'JICA Guidelines for Environmental and Social Considerations' in order to ensure that appropriate considerations will be made for the environmental and social impacts of the Project.

#### IV. UNDERTAKINGS OF GOM

GOM will take necessary measures to:

- (1) ensure that the technologies and knowledge acquired by the Malawi nationals as a result of Japanese technical cooperation contributes to the economic and social development of Malawi, and that the knowledge and experience acquired by the personnel of Malawi from technical training as well as the equipment provided by JICA will be utilized effectively in the implementation of the Project; and
- (2) grant privileges, exemptions and benefits to the JICA experts referred to in III.-2 (1) above and their families, which are no less favorable than those granted to experts and members of the missions and their families of third countries or international organizations performing similar missions in Malawi.

#### V. EVALUATION

JICA and the relevant organizations of GOM will jointly conduct the following evaluations and reviews.

- 1. Mid-term review at the middle of the cooperation term
- 2. Terminal evaluation during the last six (6) months of the Project duration

JICA will conduct the following evaluations and surveys to mainly verify sustainability and impact of the Project and draw lessons. The relevant organizations of GOM is required to provide necessary support for them.

- 1. Ex-post evaluation to be conducted three (3) years after the project completion
- 2. Follow-up surveys on necessity basis

00 h

\*\*

g K

# VI. PROMOTION OF PUBLIC SUPPORT

For the purpose of promoting support for the Project, the relevant organizations of GOM will take appropriate measures to make the Project widely known to the people of Malawi.

#### VII. MUTUAL CONSULTATION

JICA and the relevant organizations of GOM will consult each other whenever any major issues arise in the course of Project implementation.

# **VIII. AMENDMENTS**

The record of discussions may be amended by the minutes of meetings between JICA and the relevant organizations of GOM. The minutes of meetings will be signed by authorized persons.

# MINUTES OF MEETINGS BETWEEN THE DETAILED PLANNING SURVEY TEAM OF JAPAN INTERNATIONAL COOPERATION AGENCY AND THE AUTHORITIES CONCERNED OF THE GOVERNMENT OF MALAWI ON JAPANESE TECHNICAL COOPERATION FOR THE PROJECT FOR PROMOTING CATCHMENT MANAGEMENT ACTIVITIES IN MIDDLE SHIRE

Japan International Cooperation Agency (hereinafter referred to as "JICA") has dispatched the Detailed Planning Survey Team (hereinafter referred to as "the Team") headed by Mr. Hiroyuki HATORI to the Republic of Malawi from September 3rd to September 23rd, 2012 for the purpose of formulating the Project for Promoting Catchment Management Activities in Middle Shire (hereinafter referred to as "the Project"). During its stay in Malawi, the Team exchanged their views and had a series of discussions with relevant organizations of the Government of Malawi (hereinafter referred to as "GOM"). As a result of discussions, both sides came to an understanding concerning the matters referred to in the documents attached hereto.

Lilongwe, September 20th, 2012

#### ATTACHED DOCUMENT

#### 1. Draft Record of Discussions

Both sides confirmed the draft Record of Discussions (hereinafter referred to as "R/D") shown in the Attachment. After the approval of the R/D by JICA Headquarters, commencement of the Project will be determined by signing of the R/D. The R/D will be signed by the Principal Secretary (hereinafter referred to as "PS") for the Ministry of the Environment and Climate Change Management, PS for the Ministry of Agriculture and Food Security, PS for the Ministry of Gender, Children and Social Welfare, and the Secretary to the Treasury, Ministry of Finance.

# 2. Draft Project Design Matrix

Both sides confirmed the draft Project Design Matrix (hereinafter referred to as "PDM") shown in Annex I of the R/D as a tool for monitoring, evaluating and managing the activities of the Project. The PDM will be modified as needed by the signing date of the R/D and during the Project after mutual consultations and agreements by both sides. Both sides agreed that the "Objectively Verifiable Indicators" will be determined during the Project, based on the baseline surveys to be conducted within the Project.

# 3. Draft Plan of Operation

Both sides confirmed the draft Plan of Operation (hereinafter referred to as "PO") shown in Annex 2 of the R/D as a tool for monitoring, evaluating and managing the activities of the Project. The PO will be modified as needed by the signing date of the R/D and during the Project after mutual consultations and agreements by both sides.

# 4. Project's Main Emphasis

The Project will place stronger emphasis on the institutionalization of the implementation process of catchment management through farmers' activities, in addition to execution of trainings at village level. Furthermore, action research will be another important component of the Project. In order to promote this Project's approach as a model to be adopted in other areas of Middle Shire Catchment, the Project will conduct various researches aiming to verify the effectiveness of soil erosion control techniques.

#### 5. Target Area

The Project will target four districts: Blantyre, Neno, Balaka, and Mwanza. One TA or STA will be selected as project sites within each target district.

a

4

tot an MA.

*-2*2

## 6. Cost Sharing

JICA will contribute to the costs for expert dispatch, trainings in Japan and/or other countries, and equipment provision. On the other hand, the Project implementation costs to be borne by the GOM (e.g. allowances for GOM counterpart personnel, office management costs, fuel costs for GOM counterpart personnel) will be financed by the Department of Forestry, the Project's core implementing institution.

7. Memorandum of Understanding with the District Commissioners

Memorandum of Understanding (hereinafter referred to as "MOU") that describes the Project's implementation structure and the terms of reference of each stakeholder at district level will be signed by the District Commissioners (hereinafter referred to as "DCs") of four target districts, the Project Director and the Resident Representative of JICA.

# MINUTES OF MEETINGS BETWEEN

# THE JAPANESE PROJECT IMPLEMENTATION REVIEW TEAM AND

# THE AUTHORITIES CONCERNED OF THE GOVERNMENT OF MALAWI ON

# JAPANESE TECHNICAL COOPERATION

**FOR** 

# THE PROJECT FOR PROMOTING CATCHMENT MANAGEMENT ACTIVITIES IN MIDDLE SHIRE

The Japanese Project Implementation Review Mission (hereinafter referred to as "the Mission"), dispatched by the Japan International Cooperation Agency (hereinafter referred to as "JICA"), and headed by Mr. Kazuhiro GOSEKI visited Malawi from 14<sup>th</sup> to 26<sup>th</sup> May 2015 for the purpose of monitoring the progress of the technical cooperation project titled "Project for Promoting Catchment Management Activities in Middle Shire" (hereinafter referred to as "the Project").

During its stay, the Mission visited the Project sites and had a series of discussions with the authorities concerned of the Government of Malawi (hereinafter referred to as "GOM"), namely the Ministry of Natural Resources, Energy and Mining (hereinafter referred to as "MNREM") represented by Dr. Yanira M. Ntupanyama, Principal Secretary.

As a result of the discussions, the authorities concerned of the Government of Malawi and the Mission agreed on the matters referred to in the document attached hereto.

Lilongwe, 25th May 2015

Mr. Kazuhiro GOSEKI

Leader

Project Implementation Review Mission Japan International Cooperation Agency Dr. Yanira M. Ntupanyama (PhD)

Principal Secretary

Ministry of Natural Resources, Energy and Mining

THE SECRETARY FOR EXPANOR
AND CLIMATE CHANGE
MANAGEMENT

25 MAY **2015** 

Private BAG 363, LILONGWE 3

#### THE ATTACHED DOCUMENT

#### 1. Overall Progress of the Project

Both sides reviewed the progress of the Project according to the latest Project Monitoring Sheet as of April 15, 2015. It was confirmed that the Project is being implemented following the Tentative Plan of Operation (TPO) attached to the Sheet, in general, although some issues, both mentioned in TPO and additionally found by the Mission, have arisen.

#### 2. Issues and Recommendations

To solve issues mentioned below and to ensure that the Project Purpose is reached in the last half of the period of the Project, both sides agreed that the following recommendations shall be undertaken by responsible stakeholders, as well as solutions and countermeasures identified in TPO:

#### 2.1. Integration of CMFA using COVAMS approach into DIP/AIP

It was revealed that District Implementation Plan and/or Annual Investment Plan (DIP/AIP) are formulated under bottom-up planning manner, integrating Village Action Plans (VAPs).

Therefore, to reach Output 1 of the Project, "Plans of CMFA using COVAMS approach should be integrated into the District Implementation Plan / Annual Investment Plan of target districts", the plans of CMFA need to be included in VAPs at first, then to be integrated into DIP/AIP.

Since VAPs are formulated by villagers themselves without being forced by districts, it is important to disseminate the benefits of the COVAMS approach to famers, so that they can integrate them into VAPs by the bottom-up planning approach.

Covams approach to farmers of the target villages of the Project and facilitate the target group village headmen to integrate plans of Catchment Management through Farmers' Activities (CMFA) using COVAMS approach into VAPs.

In each target districts, District Management Team (DMT) should integrate plans of CMFA using COVAMS approach into DIP/AIP, based on such VAPs.

# 2.2. Amendment of the Objectively Verifiable Indicator for Project Purpose

As like above mentioned DIP/AIP, District Strategic Development Plan (DSDP) is also

2

44

formulated under the bottom-up planning system and subject to be changed following VAPs, therefore it is not an appropriate indicator for measuring the "institutionalization" of COVAMS approach.

An extension strategy/plan that secures permanent efforts of the extension agents in the target districts to continuously promote COVAMS approach to farmers is required to achieve the Overall Goal of the Project, "Catchment management through farmers' activities (CMFA) are widely implemented in target districts".

Therefore the Project Team (Malawian counterparts and Japanese Experts) is requested to replace the indicator by examining institutionalization ways of extension systems/mechanisms in Malawi.

The Project Team should adjust the objectively verifiable indicators for the Project Purpose to appropriately monitor and evaluate the degree of achievement of the Project Purpose, "CMFA is institutionalized in target districts".

## 2.3. Securing Budget of Malawian Side

Officers in the target districts complained of inadequate budget allocation to implement Project activities and maintain the facilities and equipment for the Project.

Actually, JICA has been covering a part of these costs, but expenses necessary for the operation and maintenance of the equipment provided by JICA are supposed to be provided by relevant agencies of the GOM.

Not only for smooth implementation of the Project during the remaining period, but also for sustainability of CMFA after the Project termination, these costs should be fully provided by Malawian side.

The Malawian Side should secure and timely release its counterpart budget by well-functioning approach, such as requesting fund for implementing CMFA including into DIP/AIP.

#### 2.4. Preparing Sustainable CMFA Implementation Structure

Currently, DOF is the leading central government organization under the Project Implementation Structure and has responsibility to secure Malawian side local budget.

However, it is not sure whether this structure will be maintained after the termination of the Project, since the CMFA is the cross-sectorial activities and DOF can't continue to provide budget for such related central and local governmental organizations.

五

Me

The Malawian Side should establish CMFA implementation structure to widely implement CMFA using COVAMS approach in the target districts after the termination of the Project, identifying roles of the central and local government organizations as well as sources of the budget.

#### 2.5. Takeover of Logistical Works to Malawian Side

The logistical works done by JICA Experts are rigid, mainly because of applying JICA's accounting system.

However, it is not realistic to continue the same works after the termination of the Project by Malawian side.

The most important thing is to handle all the account works by standard Malawian way, to simplify the works, and to improve capacity of Malawian side through OJT involving necessary Malawian officers in the logistical works of the Project.

The Project Team should complete to secure Malawian side budget and build capacity of Malawian side to take over all the logistical works which have been currently done by JICA Experts while the Project is still on going.

#### 2.6. Effective Management through RMT

Regional Management Team (RMT) was introduced to solve the shortage of the Malawian counterparts and also their commitment to other assignments, by dividing them into three task-forces (extension, institutionalization and research).

However, some of the RMT members are still busy with other works, so the effectiveness of this new system has to be monitored and, if necessary, further improvement should be considered.

RMT should continue with the Project activities through fully functioning of its three task-forces, and monitor and evaluate the effectiveness of this system.

# 2.7. Functioning DMT

It is pointed out that DMTs in the target districts are not well functioned, without full participation of all the member organizations.

To solve this matter, instruction of the central organization could be required.

The related central organizations of GOM, such as Department of Agricultural Extension Services of Ministry of Agriculture, Irrigation and Water Development, Department of Community Development of Ministry of Gender, Children, Disability and Social Welfare, Department of Environmental Affairs of MNREM, and Department of Local Development of Ministry of Local Government and Rural Development, should request related DMT member organizations by official letter to actively participate in the Project activities in the target districts.

#### 2.8. Facilitating Understanding of Local Leaders

It is reported that in some cases there is poor understanding of villagers, especially of the leaders, on Lead Farmer (LF) on COVAMS approach which compromises activities. There is need of LF getting support from local leaders for smooth implementation COVAMS approach.

DMT should promote better communications between local leaders and LF so that they can effectively conduct the training for farmers.

## 2.9. Improvement of Facilitation Capacity of CCO and LF

CCOs and LFs complained of lacking facilitation skills to promote CMFA to farmers.

The Project should provide facilitation skill training for Technical Support Team (TST) members, so that they could develop the skill of CCOs who will conduct TOT to improve the skills of LFs.

#### 2.10. Minimizing the Damages of Changing Officers

Sometimes Project activities are interrupted because of sudden changes of the Project officers of the institution. It is important to take necessary measures to minimize such negative impacts.

Each institution of the Project should manage implementation of the required supplemental training to the successor, and the adequate takeover from predecessor in advance, when the Project counterparts and related personals are changed.

#### 3. Modification of PDM and PO

Based on the result of the COVAMS II Institutionalization Workshop, the Project Team has prepared a modified Project Design Matrix (PDM) and Plan of Operation (PO) focusing on the substantial procedure of institutionalization of COVAMS approach, and finalized them as shown in Appendix 1, considering the Overall Progress of the Project and Recommendations mentioned above.

Both sides consulted the contents of them and agreed to propose them to the Joint Coodinating Comittee (JCC) meeting held on May 25, 2015, for getting approval of JCC.

#### 4. Introduction of JICA's New Monitoring System

JICA has introduced a new monitoring system for a Technical Cooperation Project since last year, and the Mission applied it to the Project from the implementation review this time. The monitoring system requires MNREM and JICA to jointly and regularly monitor and self-evaluate the progress of the Project through the Project Monitoring Sheets. The Monitoring shall be conducted every six (6) months using Monitoring Sheets, and Project Completion Report shall be drawn up one (1) month before the termination of the Project.

Consequently, joint evaluation at the middle (i.e., mid-term evaluation) and during the last six months of the cooperation term (i.e., terminal evaluation), stipulated in R/D, will not be conducted. JICA will initiate the following evaluation and surveys to mainly verify sustainability and impact of the Project and draw lessons, as mentioned in R/D. MNREM will be required to provide necessary support for them.

- 1. Ex-post evaluation three (3) years after the project completion, in principle
- 2. Follow-up surveys on necessity basis

#### 5. Plan of Dispatching JICA Experts

The Mission informed Malawian side that, after termination of the assignment of the three (3) JICA long-term Experts currently dispatched to the Project, a company, which will make a contract with JICA, will procure necessary Experts by their own responsibility. The Mission confirmed that it is just a matter of changing procurement way of JICA side within input by JICA stipulated in R/D, and it will not cause any negative effects on the Project implementation. The Plan of the Future JICA Experts is shown in Appendix 2, but the exact plan will be proposed to the Malawian side by the company when their first Expert(s) will be dispatched to Malawi, provably in September 2015.

Appendix 1: Project Design Matrix (PDM-02) and Plan of Operation (PO-02)

Appendix 2: Plan of Dispatching JICA Experts

M

3\_

Project Design Matrix

Project title: Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II)
Implementation Agency: Departent of Forestry, Munitry of Natural Resources, Energy and Mines, Blamyre, Balaka, Mwanza, and New Districts
Target group: Management staff and extension staff of the four districts
Period of Project: Five (3) years, April, 2013—March, 2018
Project Site: Four (4) districts in Middle Shire (Blantyre, Balaka, Mwanza and Nero Districts)

PM Form 1 PDM 1/2

Version 2 Dated 25, May 2015

Narrative Summary	Objectively Verifiable Indicators	Means of Verification	Important Assurations
Overall Goal	Company Company	Olding of Vernagion	THEOREM ASSESSMENTS
Catchment management through farmers' activities (CMFA) are widely implemented in target districts.	CMFA spread to other TAs in target districts     CMFA using COVAMS approach utilized by other donors' projects operated in target districts	- District annual work plans of the target districts - Performance reports of the target districts	
Project Purnose CMFA is lustitutionalized in target districts.	- CMFA included in the District Strategic Development Plan of each target districts - The plan of CMFAs using COVAMS approach carried out in each target district.	- Project reports - District Strategic Development Plan	Each target district allocates budget for the expansion of the implementation of CMFAs to other TAs.     District Strategic Development Plan is developed and updated in each target district.
OUTPUTS	- The plan of CMFA using COVAMS approach included in District		
Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.	Implementation Plan/Annual Investment Plan of each target distinct.  - District Implementation Plan/Annual Investment Plan approved by full council of target distincts	District Implementation Plan/Annual Investment Plan of four districts     Official document related to the CMFA in the districts     Project reports	Consolidated district annual work plan is compiled and updated in each target district      Administrative and financial institutional changes in central ministries and local
<ol> <li>Capacity of management and extension staff in target districts is improved in operation of COVAMS approach.</li> </ol>	Capacity improvement  - Number of training subjects described in the training plan  - Number of training conducted, at least one time each subject  - Number of trained DMT members  - Number of trained TST members  - Number of trained TST members	Canacity interovernent - Needs assessment report Training plan - Training materials - Reports on training	administration do not affect the Project activities
	Implementation of COVAMS approach  - Annual working plan prepared in each district.  - Number of villages covered by COVAMS approach  - Number of trained LFs  - Number of trained SLFs	Implementation of COVAMS approach - Annual working plans of four target districts - Monthly reports from the districts - Monthly reports - Households list	
	Detail of indicators is discribed in the attached table.  Impact as the result of capacity improvement and implementation of COVAMAS approach Refer indicators for the output 3 below	Other records and documents     Project reports	
<ol> <li>Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research.</li> </ol>	Extension method  - Compiled reports which explain following items - Compiled reports which explain following items Number of ruining conducted in the villages by LFs - Number of HHs trained by LFs and the % to the total number of HHs - Number of HHs adopted COVAMS techniques and the % to the total number of HHs of pilot TA - Cost of COVAMS approach operation - Companison between COVAMS LFs and other LFs	- Research plans - Research reports - Project reports - Monitoring report from four target districts

#### Output 02

<u>Capacity improvement</u>
- Number of training subjects discribed in the trianing plan: 10 subjects

3 Strategic skill 4 Extension skill

5 COVAMS approach

Category	Subject
1 Administrative management	1 Induction course for general management
capacity	2 Computer course (Word, Excel and Powerpoint)
2 Organizatoinal management	1 Motivation study for government staff
capacity	2 Motivation study for farmers
	3 Importance of division of roles
	Review of job description and establishement of roles for effective management/monitoring

1 Effective deligation in extension work

1 Re-orientation to COVAMS approach

5 Effective report writing
1 Logical frame/assessment of achievement/communication system

- Number of training conducted	10 training sessions, each subject at least one time as minimum number.
- Number of trained DMT members	20 members, as 5 in one district times 4 districts, and it is fixed.
- Number of trained TST members	6 in Blantyre (FO, FA, DLRCO, LRCO, AEDC, CDA) 6 in Mwanza (ADFO, FA, DLRCO, AEDC, AEDC, CDA) 4 in Neno (ADFO, DLRCO, LRCO, AEDC) 4 in Balaka (ADFO, DLRCO, AEDC, CDA)
Total	20 members at 2015 March, it may be increased as the area (EPA and TA) expanded.
- Number of trained CCOs	8 in Blantyre (FA x 2, FG x 2, AEDO x 3, CDA x 1) 9 in Mwanza (FA x 1, FG x 2, AEDO x 4, CDA x 2) 6 in Neno (FA x 1, FG x 1, AEDO x 3, CDA x 1) 6 in Balaka (FA x 2, AEDO x 3, CDA x 1)
1 the job training and training session total	29 CCOs at 2015 March, it may be increased as the area (EPA and TA) expanded.  161 Including additional CCOs for future expantion trained on COVAMS approach through lecture

MIT

#### Indicators 2/3

#### Implementation of COVAMS approach

- Annual working plan prepared in each district.

- Number of villages covered by COVAMS approach

62 in Blantre (TA Lundu all 54 villages, TA Chigaru 8 out of 33 villages) 44 in Mwanza (TA Govati all 38 villages, TA Nthache 6 out of 48 villages)

38 in Neno (TA Mulauli all 38 villages, TA Dambe 0 out of 50 villages)

91 in Balaka (TA Chantunya 91 out of 109 villages)

Total lower side 235 villages at 2015 March, it may be increased according to the available resources for operation.

Total higher side 370 villages including remaining number in pilot TA

- Numbers of trained LFs and qualified (certified) LFs

1,000 in Blantyre (600 in 37 villages and estimated 400 in 25 villages) 360 in Mwanza (310 in 38 villages and estimated 50 in 6 villages)

495 in Neno (495 in 38 villages)

455 in Balaka (300 in 60 villages and estimated 155 in 31 villages)

Total lower side 2,310 LFs at 2015 March, suject to confirm after election of new LFs in new villages.

Total higher side 3,637 LFs estimated from 370 villages

- Numbers of trained SLFs and qualified (certified) SLFs (one in one village at least in second year)

62 in Blantyre

44 in Mwanza

38 in Neno

91 in Balaka

Total lower side 235 SLFs estimated by the end of March 2015. It is subject to confirm after selection of SLFs in

second year of intervention.

Total higher side 407 SLFs estimated from total number of villages and added 10%

#### Impact as the result of capacity improvement and implementation of COVAMAS approach

Figures of impact are representing quality of extension approach and it will be measured under Output 3 activities.

2

#### Indicators 3/3 Output 03

#### Extension method

- Compiled reports

1 report in each season from the 2014/2015 season.

- Number of training conducted in the villages by LFs (at least one time each subject by one LF)

2,310 training sessions in contour planting

2,310 training sessions in small scale gully control

2,310 training sessions in tree growing

Total lower side 6,930 training sessions
Total higher side 10,911 training sessions

- Number of HHs trained by LFs and the % to the total number of HHs in each pilot TA 80 % in each subject

- Number of HHs adopted COVAMS techniques and the % to the total number of HHs of pilot TA 50 % in each subject

- Cost of COVAMS approach operation

1 report in each season from the 2014/2015 season

- Comparison between COVAMS LFs and other LFs

1 report after study in 2015 by short term expert

#### Extension subject

- Compiled reports

3 reports, for the seasons of 2013/2014, 2014/2015 and 2015/2016

- Soil volume protected from erosion from gardens and small scale gully
- Yield increased after adopting contour ridge planting
- Stand growth of planted trees

#### AMENDMENT OF RECORD OF DISCUSSION

The Japan International Cooperation Agency (hereinafter referred to as "JICA") and Department of Forest Malawi (hereinafter referred to as "DOF") hereby agree that the Record of Discussion (hereinafter referred to as "R/D") on Japanese technical cooperation for The Project For Promoting Catchment Management Activities in Middle Shire (hereinafter referred to as "the Project") signed on January 10, 2013, will be amended as follows based on the discussion at the Joint Coordinating Committee of the Project on 7 June, 2017.

Detailed of the Project are described in the Project Design Matrix (hereinafter referred to as "PDM") shall be amended as Annex 2 (amended Project Design Matrix).

All the other articles of the original R/D shall remain unchanged.

This amendment will become effective as August, ,2017.

Annex 1: Record of Discussions (signed on January, 10<sup>th</sup>, 2013)

Annex 2: Project Design Matrix (PDM) version 2

Annex 3 Plan of Operation (PO) versions 2

Based on the minutes of meetings on the Detailed Planning Survey for the Project for Promoting Catchment Management Activities in Middle Shire (hereinafter referred to as "the Project") signed on September 20<sup>th</sup>, 2012 by the Department of Forestry (hereinafter referred to as "DOF"), the Land Resources Conservation Department, the Department of Agricultural Extension Services, the Department of Community Development and the Japan International Cooperation Agency (hereinafter referred to as "JICA"), JICA held a series of discussions with relevant organizations of the Government of Malawi (hereinafter referred to as "GOM") to develop a detailed plan of the Project.

All parties agreed the details of the Project and the main points discussed as described in the Appendix 1.

All parties also agreed that DOF, the main counterpart to JICA, will be responsible for the implementation of the Project in cooperation with JICA, coordinate with other relevant organizations and ensure that the self-reliant operation of the Project is sustained during and after the implementation period in order to contribute toward environmental conservation and socio-economic development of Malawi.

The Project will be implemented within the framework of the Agreement on Technical Cooperation signed on March 1st, 2006 (hereinafter referred to as "the Agreement") and the Note Verbales exchanged on June 14th, 2012 between the Government of Japan (hereinafter referred to as "GOJ") and GOM.

Appendix 1: Project Description

Appendix 2: Minutes of Meetings on Detailed Planning Survey

#### Appendix 1

#### PROJECT DESCRIPTION

All parties confirmed that there is no change in the Project Description agreed on in the minutes of meetings on the concerning Detailed Planning Survey on the Project signed on September 20<sup>th</sup>, 2012 (Appendix 2).

#### I. <u>BACKGROUND</u>

The Middle Shire area is adjacent to Blantyre, the largest commercial city in the country, thus has provided the city with firewood and charcoal as most common sources of domestic energy. As the local population has exploited forest resources, customary land has been deteriorated to a great extent. It resulted in soil erosion and a huge amount of silt deposited in the dams along Shire River, thus narrowed the capacity of power generation and urban water supply for the area.

To find a solution to this exigent problem, "the Pilot Study on Community Vitalization and Afforestation in Middle Shire" (hereinafter referred to as "the Pilot Study"), supported by JICA, was conducted from the year 2002 to 2005. Based on the results of the Pilot Study, the technical cooperation project named Community Vitalization and Afforestation in Middle Shire (hereinafter referred to as "COVAMS") was implemented in two traditional authorities of Blantyre District from 2007 to 2012, making remarkable achievements in disseminating soil erosion control techniques in 244 villages. However, although COVAMS has been successful at village level, further effort is needed to institutionalize the approach in the government structure. In addition, it is recommended to verify the effectiveness of the soil erosion control techniques through research. Moreover, as the Middle Shire Catchment is a large area, therefore, further support is necessary to reduce soil erosion in the whole catchment area.

Under such circumstances, GOM requested GOJ further cooperation to upscale the approach developed by COVAMS (hereinafter "COVAMS Approach") to other areas of Middle Shire Catchment. In response to the above request, JICA has dispatched the Detailed Planning Survey Team to formulate the Project, and signed the Minutes of Meetings on Sept. 20<sup>th</sup>, 2012. The Project aims at institutionalizing the implementation process of catchment management through farmers' activities in four target districts.

#### II. IMPLEMENTING INSTITUTIONS AND COLLABORATING INSTITUTIONS

1. Implementing Institutions

The implementing institutions are as follows:

- (1) DOF, Ministry of the Environment and Climate Change Management
- (2) Blantyre District
- (3) Neno District
- (4) Balaka District

O

A

PP

The

# (5) Mwanza District

2. Collaborating Institutions

The collaborating institutions are as follows:

- Land Resources Conservation Department, Ministry of Agriculture and Food Security
- (2) Department of Agricultural Extension Services, Ministry of Agriculture and Food Security
- (3) Department of Community Development, Ministry of Gender, Children and Social Welfare

# 3. Roles of the Collaborating Institutions

The collaborating institutions will collaborate with the Project within the mandate of respective institutions and expected role at the central level will be the following;

- (1) To participate in JCC as its member
- (2) To approve annual work plans of the Project
- (3) To monitor and review the overall progress of the Project
- (4) To provide guidance on major policy issues and recommend corrective action
- (5) To guide their personnel at the regional and district level to collaborate with the Project
- (6) To ensure that the result of the Project contributes to the environmental conservation and socio-economic development of Malawi

# III. <u>OUTLINE OF THE PROJECT</u>

Details of the Project are described in the Project Design Matrix (PDM) (Annex 1) and the tentative Plan of Operation (Annex 2).

# 1. Project Approach

# (1) "COVAMS Approach"

The Project promotes "COVAMS Approach" developed by COVAMS as the approach of catchment management through farmer's activities. "COVAMS Approach" is a training-based extension approach aiming at disseminating specific soil erosion control techniques (i.e. contour ridge making, tree planting, gully control) rapidly and widely at farmers' level. It prioritizes utilization of local resources, conducting training within the local peoples' sphere of living, providing equal training opportunities for all, and implementing training for a large number of people.

COVAMS approach will work within government extension system, and adopt Lead Farmer concept that the Department of Agricultural Extension Services promotes. Following the Guidelines on Lead Farmers, Trainers' Fee will not be paid to Lead Farmers for conducting training for fellow farmers.

"COVAMS Techniques" refers to the three (3) specified techniques disseminated through COVAMS Approach, namely, contour ridge making, tree planting, and gully control techniques. These three (3) techniques are selected among others during early stage of COVAMS based on acceptability of farmers as well as

Or to

PA

impact on soil erosion control.

(2) District Plans of Catchment Management through Farmers' Activities District Plans of Catchment Management through Farmers' Activities (hereinafter referred to as "CMFAs") will be developed in the Project in each district. The Plan includes a detailed implementation plan of CMFAs in TA(s) and an integrated plan of the district consisting of description on current situation of natural resources and land use in each district, identification of areas where COVAMS Techniques are adoptable, necessary input in terms of finance and human resources by unit (e.g. per TA, per ha), and expected outcomes.

# 2. Input

(1) Input by JICA

- (a) Team of Experts headed by Chief Advisor (Areas of expertise include: Soil Erosion Control, Rural Development, Action Research, Training and Extension, Monitoring and Evaluation, and Coordination)
- (b) Training in Japan and/or Other Countries
- (c) Equipment (Vehicle, Motorcycles, Training Equipment and other necessary equipment)

# (2) Input by GOM

The relevant organizations of GOM will take necessary measures to provide the following at its own expense:

- (a) Services of GOM counterpart personnel and administrative personnel as referred to in III.-3;
- (b) Suitable office space with necessary equipment;
- (c) Supply or replacement of machinery, equipment, instruments, vehicles, tools, spare parts and any other materials necessary for the implementation of the Project other than the equipment provided by JICA;
- (d) Information as well as support in obtaining medical service for JICA Experts;
- (e) Credentials or identification cards for JICA Experts;
- (f) Available data (including maps and photographs) and information related to the Project;
- (g) Running expenses necessary for the implementation of the Project (e.g. allowance for GOM counterpart personnel, office management costs, fuel costs for GOM counterpart personnel);
- (h) Expenses necessary for transportation within Malawi of the equipment referred to in III.-2 (1) as well as for the installation, operation and maintenance thereof: and
- (i) Necessary facilities to the JICA experts for the remittance as well as utilization of the funds introduced into Malawi from Japan in connection with the implementation of the Project

# 3. Implementation Structure

The Project organizational chart is given in the Annex 3. The roles and assignments of implementing institutions are as follows:

#

紹

THE )

- Project Director (Director of Forestry)
   Project Director will be responsible for overall administration and implementation of the Project in cooperation with the collaborating institutions.
- (2) Regional Project Coordinator (Regional Forestry Officer (South)) The Regional Project Coordinator will be responsible for leading supervision including financial accountability of districts and coordination at the regional level in collaboration with the collaborating institutions.
- (3) District Project Coordinators (District Commissioners) The District Project Coordinators will be responsible for supervision and coordination in each district.
- (4) Project Managers (District Forest Officers) The Project Managers in each district will be responsible for administration and implementation of the Project in cooperation with the collaborating institutions.
- (5) JICA Experts

  The JICA experts will provide necessary technical guidance, advice and recommendations to implementing institutions and cooperating institutions on any matters pertaining to the implementation of the Project.
- (6) Joint Coordinating Committee For the supervision and coordination among relevant stakeholders for smooth implementation of the Project, both sides agreed upon the need for establishment of a Joint Coordinating Committee (hereinafter referred to as "the JCC"), to be chaired by PS of Ministry of Environment and Climate Change Management. The JCC meeting will be held once a year and whenever the necessity arises. The functions of the JCC are as follows;
  - 1) To approve annual work plans of the Project, based on the Plan of Operations within the framework of the Record of Discussions;
  - 2) To monitor and review the overall progress of the Project operations carried out under the above-mentioned annual work plans; and
  - 3) To provide guidance on major issues that may arise during the implementation of the project, and to recommend corrective measures.
- 4. Target Areas and Beneficiaries

Target Areas: Blantyre District, Neno District, Balaka District, Mwanza District Direct Beneficiaries: GOM counterpart personnel of the four districts, farmers of project sites in four target districts

Duration
 years

D 4

· All

奶

6. Contribution to Climate Change Adaptation and Mitigation
The Project is expected to contribute to adaptation and mitigation to climate change. The Project aims at disseminating soil erosion control techniques in the rural areas of Malawi. Such measure prevents soil to be eroded by erratic rain falls, as well as conserving moisture during dry spells. Therefore, it is considered serving as a measure for adaptation against changing precipitation patterns due to climate change. In addition, dissemination of tree planting techniques can be expected to serve as a measure for mitigation.

7. Environmental and Social Considerations

GOM agreed to abide by 'JICA Guidelines for Environmental and Social Considerations' in order to ensure that appropriate considerations will be made for the environmental and social impacts of the Project.

# IV. <u>UNDERTAKINGS OF GOM</u>

GOM will take necessary measures to:

- (1) ensure that the technologies and knowledge acquired by the Malawi nationals as a result of Japanese technical cooperation contributes to the economic and social development of Malawi, and that the knowledge and experience acquired by the personnel of Malawi from technical training as well as the equipment provided by JICA will be utilized effectively in the implementation of the Project; and
- (2) grant privileges, exemptions and benefits to the JICA experts referred to in III.-2 (1) above and their families, which are no less favorable than those granted to experts and members of the missions and their families of third countries or international organizations performing similar missions in Malawi.

# V. <u>EVALUATION</u>

JICA and the relevant organizations of GOM will jointly conduct the following evaluations and reviews.

1. Mid-term review at the middle of the cooperation term

2. Terminal evaluation during the last six (6) months of the Project duration

JICA will conduct the following evaluations and surveys to mainly verify sustainability and impact of the Project and draw lessons. The relevant organizations of GOM is required to provide necessary support for them.

- 1. Ex-post evaluation to be conducted three (3) years after the project completion
- 2. Follow-up surveys on necessity basis

D 45

W.

PA

# VI. PROMOTION OF PUBLIC SUPPORT

For the purpose of promoting support for the Project, the relevant organizations of GOM will take appropriate measures to make the Project widely known to the people of Malawi.

# VII. MUTUAL CONSULTATION

JICA and the relevant organizations of GOM will consult each other whenever any major issues arise in the course of Project implementation.

# VIII. AMENDMENTS

The record of discussions may be amended by the minutes of meetings between JICA and the relevant organizations of GOM. The minutes of meetings will be signed by authorized persons.

# Annex 4. A List of Proposed Members of Joint Coordinating Committee

# Members of the JCC

The JCC will be composed of chairperson, members and observers. The rules and guidelines for the management of the JCC will be determined at the initial stage of the Project.

# I. Chairperson

Principal Secretary for the Ministry of the Environment and Climate Change Management

# 2. Members

# (1) Malawian Side

Director of Forestry (Vice Chairperson)

Director of Land Resource Conservation, Ministry of Agriculture and Food Security Director of Agricultural Extension Services, Ministry of Agriculture and Food Security

Director of Community Development, Ministry of Gender, Children and Social Welfare

District Commissioners

Regional Forestry Officer (South)

Blantyre Agricultural Development Division

Machinga Agricultural Development Division

District Forest Officers

# (2) Japanese Side

Resident Representative of JICA Malawi Office

Chief Advisor

Japanese Experts

# 3. Observers

Forest Research Institute of Malawi Department of Agricultural Research Services Official(s) of Embassy of Japan

Note: New members can be added to the JCC and other participants are allowed to attend meetings, upon agreement of the JCC.

Q 4

## MINUTES OF MEETINGS

# BETWEEN THE DETAILED PLANNING SURVEY TEAM OF JAPAN INTERNATIONAL COOPERATION AGENCY AND THE AUTHORITIES CONCERNED OF THE GOVERNMENT OF MALAWI ON JAPANESE TECHNICAL COOPERATION FOR THE PROJECT FOR PROMOTING CATCHMENT MANAGEMENT ACTIVITIES IN MIDDLE SHIRE

Japan International Cooperation Agency (hereinafter referred to as "JICA") has dispatched the Detailed Planning Survey Team (hereinafter referred to as "the Team") headed by Mr. Hiroyuki HATORI to the Republic of Malawi from September 3rd to September 23rd, 2012 for the purpose of formulating the Project for Promoting Catchment Management Activities in Middle Shire (hereinafter referred to as "the Project"). During its stay in Malawi, the Team exchanged their views and had a series of discussions with relevant organizations of the Government of Malawi (hereinafter referred to as "GOM"). As a result of discussions, both sides came to an understanding concerning the matters referred to in the documents attached hereto.

Lilongwe, September 20th, 2012

Mr. Hiroyuki HATORI,

Team Leader,

Detailed Planning Survey Team.

Japan International Cooperation Agency

Dr. Dennis KAYAMBA

Director of Forestry,

Ministry of the Environment and Climate

Change Management

Director of Land Resources Conservation,

Ministry of Agriculture and Food Security

Ms. Stella KANKWAMBA

Director of Agricultural Extension Services, Ministry of Agriculture and Food Security

Mr. George MKAMANGA

Director of Community Development,

Ministry of Gender, Children and Social

Welfare

D 4

# ATTACHED DOCUMENT

# 1. Draft Record of Discussions

Both sides confirmed the draft Record of Discussions (hereinafter referred to as "R/D") shown in the Attachment. After the approval of the R/D by JICA Headquarters, commencement of the Project will be determined by signing of the R/D. The R/D will be signed by the Principal Secretary (hereinafter referred to as "PS") for the Ministry of the Environment and Climate Change Management, PS for the Ministry of Agriculture and Food Security, PS for the Ministry of Gender, Children and Social Welfare, and the Secretary to the Treasury, Ministry of Finance.

# 2. Draft Project Design Matrix

Both sides confirmed the draft Project Design Matrix (hereinafter referred to as "PDM") shown in Annex I of the R/D as a tool for monitoring, evaluating and managing the activities of the Project. The PDM will be modified as needed by the signing date of the R/D and during the Project after mutual consultations and agreements by both sides. Both sides agreed that the "Objectively Verifiable Indicators" will be determined during the Project, based on the baseline surveys to be conducted within the Project.

# 3. Draft Plan of Operation

Both sides confirmed the draft Plan of Operation (hereinafter referred to as "PO") shown in Annex 2 of the R/D as a tool for monitoring, evaluating and managing the activities of the Project. The PO will be modified as needed by the signing date of the R/D and during the Project after mutual consultations and agreements by both sides.

# 4. Project's Main Emphasis

The Project will place stronger emphasis on the institutionalization of the implementation process of catchment management through farmers' activities, in addition to execution of trainings at village level. Furthermore, action research will be another important component of the Project. In order to promote this Project's approach as a model to be adopted in other areas of Middle Shire Catchment, the Project will conduct various researches aiming to verify the effectiveness of soil erosion control techniques.

# 5. Target Area

The Project will target four districts: Blantyre, Neno, Balaka, and Mwanza. One TA or STA will be selected as project sites within each target district.

W-

a

P

, レレ|

illa.

da

# 6. Cost Sharing '

JICA will contribute to the costs for expert dispatch, trainings in Japan and/or other countries, and equipment provision. On the other hand, the Project implementation costs to be borne by the GOM (e.g. allowances for GOM counterpart personnel, office management costs, fuel costs for GOM counterpart personnel) will be financed by the Department of Forestry, the Project's core implementing institution.

7. Memorandum of Understanding with the District Commissioners

Memorandum of Understanding (hereinafter referred to as "MOU") that describes the Project's
implementation structure and the terms of reference of each stakeholder at district level will be
signed by the District Commissioners (hereinafter referred to as "DCs") of four target districts, the
Project Director and the Resident Representative of JICA.

Annex 2: Project Design Matrix Ver 2 Page 1

ANNEX II Version 2 Dated: June 8, 2017

# Project Design Matrix (PDM)

Project title: Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II) Implementation Agency: Departent of Forestry, Ministry of Natural Resources, Energy and Mines, Blankyre, Balaka, Mwanza, and Neno Districts
Target group: Management staff and extension staff of the four districts
Period of Project: Five (5) years. April 2014 - March 2018
Project Site: Four (4) districts in Middle Shire (Blantyre, Balaka, Mwanza, Neno)

Marrativa Summan	Objectively Verificable Indicates	Macco of World and	1	7	
Overall Goal	Cojectively verniable mulcators	Means of Vermoanon	IIIDOLGIII ASSUIIDOIII	Acmevement	Nemains
Catchment management through farmers' activities (CMFA) using the COVAMS approach is widely implemented in the target districts.	1. CMFA using COVAMS approach is implemented in at least two (2) TAs other than the target districts	Budget document in the four districts			
	2. CMFA using COVAMS approach adopted by at least one (1) project funded by other donors in the target districts	2. Project reports prepared by other donors, interview to residents			
Project Purpose CMFA is institutionalized in the target districts.	The annual plan and the budget request for CMFA using the COVAMS approach are prepared and implemented by the district departments	1-1. Project reports prepared by ministries, district departments, donors and the private sector) 1-2. Interview to the parties concerned and residence of the target villages.	The Government of Malawi maintains current level of fiscal austerity		
	2. The guidelines for the COVAMS approach is acknowledged by ministries concerned	and bestoons of the dayer vinages			
Outputs				AND CANADA CONTRACTOR	ANNI ANNI ANA SERVENENTENTON NY TONON NY TONON NY TANÀNA NY TANÀNA NY TANÀNA NY TANÀNA NY TANÀNA NY TANÀNA NY
Promotion for the target districts and the ministries concerned to ensure institutionalization and budget for the COVAMS is carried out	1-1. The materials for providing information meeting the needs of at least three (3) organizations, including the guidelines for the COVAMS approach, are prepared	1-1-1. List of the organizations visited and explained 1-1-2. Monitoring sheet 1-1-3. Materials prepared 1-1-4. The guidelines			
	1-2. A seminar for information sharing/ PR inviting the private sector with a stake in catchment management is convened at least two (2) times	1-2. List of the private sector, agenda of the seminars, minutes of the seminars			
	1-3. A field visit inviting participants from donor/ media is organized at least two (2) timess	1-3. Monitoring Sheet			
2. Capacity for implementing the COVAMS approach by officers of the target districts is improved	2-1. Training covering ten (10) designated subjects* is carried out at	2-1-1. Training report 2-1-2. Annual Activity Plan			
	2-2. At least 80% of participants fulfill the requirements in the post-training evaluation of the training on CMFA using the COVAMS approach	2-2-1. Training report 2-2-2. Evaluation result			
	2-3. The COVAMS approach is adopted [2-3-1, Report prepared by at least 80% of the villages (more than departments 296 villages out of 370 villages) within the [2-3-2. Monitoring Sheet pilot TAs	2-3-1. Report prepared by the district departments 2-3-2. Monitoring Sheet			
	2-4. At least 80% of the LFs (2,910 LFs out of 3,637) elected by fellow farmers are acknowledged	2-4-1. Report prepared by the district departments 2-4-2. Monitoring Sheet			

Annex 2: Project Design Matrix Ver 2 Page 2

	2-5. At least 80% of the selected SLFs (326 SLFs out of 407) are acknowledged	2-5-1. Report prepared by the district departments 2-5-2. Monitoring Sheet	
3. Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified	3-1. At least 80% of the LFs elected by the fellow farmers carry out minimum of one (1) training each subject on the CMFA using the COVAMS approach**	3-1. Questionnaire Survey Report***	
	3-2. At lease 80% of the households in the villages covered by the project participate the training on the CMFA using the COVAMS approach carried out	3-2. Questionnaire Survey Report	
	3-3. At least 50% of the households in the villages covered by the project adopt the CMFA of the respective areas	3-3. Household Questionnaire Survey Report	
	3-4. The effectiveness of the contour ridge cultivation as one of the CMFA technique using COVMAS approach is identified	3-4-1. Report on soil erosion prevention by the long-term experts 3-4-2. Literature Study Report 3-4-3. Working Paper prepared by the long-term experts	
	3-5. The effectiveness of gully prevention technique as one of CMFA technique of COVAMS approach is identified	3-5. Working Paper prepared by the long-term experts	
4. The commitment of the COVAMS approach among leaders of all levels is enhanced	4-1. A monthly meeting by the CCO <sup>4</sup> - TST <sup>5</sup> is convened regularly by the initiatives of the district forestry departments	4-1. Monthly Activity Plan	
	4-2. A monthly PM meeting of the target districts is convened regularly by the initiatives of the district forestry departments and other district departments concerned	4-2. Minute of Meeting	
	4-3. The field visit inviting minimum of 8 officers of the ministries and districts is organized at least once by the district departments	4-3. Monitoring Sheet	
	4-4. The visit and explanation to the organizations concerned is carried out at least three (3) times by the initiatives of officers of ministry and the distract departments	4-4. List of the organizations visited and explained	
Activities	duj	Inputs	Important Assumptions
Activities for Output 1: Promotion for the target districts and ministries concerned to ensure institutionalization and budget for COVAMS carried out	The Japanese Side	. Malawian Side	- Area Stakeholders Panels and village heads of pilot TAs agree with the purpose of the Project and participate in activities.
1-1. List the organizations to promote CMFA using the COVAMS approach			- Socio-economic and political conditions do not affect adversely to activities of the Project (shortage of petrol, etc.)
1-2. Prepare a material to explain CMFA using the COMVAM approach to the organizations concerned	(1) Advisors	(1) Human resource for the operation of the Project	- Cifmate conditions do not change drastically.

Annex 2: Project Design Matrix Ver 2 Page 4

- Collaborating institutions (LRCD, DAES, DCD) are fully supportive.		Issues and countermeasures	
			<b>-</b>
3-5. Verify the foles and the effectiveness of the Lr's of COVMAS compared to those of LFs employed by other extension approaches S-B. Prepare a plan to verify the technologies to be extended by the COVAMS approach 3-7. Verify the technology according to the plan 3-8. Report the results of the verification.	Activities for Output 4: 4. The commitment of the COVAMS approach among leaders of all levels is enhanced	4-1. Support the initiatives of the district forestry departments to conven a regular meeting of the ${\rm CCO}^4$ -TST $^5$	4-2 Support the initiatives of the district forestly departments and other district departments to conver PM meeting of the target districts 4-3 Support the district departments to organize field visits inviting minimum of 8 officers of the ministries and districts at leased once 4-4. Support the initiatives of officers of ministry and the distract departments to organize visits and explanation to the organizations concerned listed in the item 1.1 carried out at least three (3) times

Note: 1. The ten (10) designated subject are shown in the table bellow.

Category	Subject
1 Administrative management capacity	1-1. Induction course for general
	management 1-2. Computer course (Word, Excel and
	PowerPoint)
2. Organizational management capacity	2-1. Motivation study for government staff
	2-2. Motivation study for farmers
	2-3. Importance of division of roles
	establishment of roles for effective
:	management/monitoring method
1 No. annual ann	2-5. Effective report writing
3 Strategic skill	3. Logical frame/assessment of
	achievement/communication system
4. Extension skill	4. Effective delegation in extension work
5. COVAMS approach	5. Re-orientation to COVAMS approach

2. The support to the field-level training by the Project reaches up to the implementation of the TOT for LFs. No financial support is given to the farmer training carried out by the LFs (i.e. training to villagers and its follow-up training by LFs.). Therefore the effectiveness of the extension methodology is verifiable by the indicators 3-1, 3-2 and 3-3.

3. A questionnaire survey carried out by the project. It was a sample survey of 760 house holds from 38 villages out of approximately 35,000 households in 230 villages of the four target districts.

4. CCO: Conservation Coordinating Officer is a de fact position under the project. CCO is responsible for extension activities on the district-level COVAMS approach. The position is assigned to the officers of MoNREM, MAIWD, MOWYCS and MLGRD.

5. TST: Technical Support Team is a defact position for the members providing technical advise to CCOs under the project. TST members are the officers belonging to the above four ministries.

# AUTHORITIES CONCERNED OF THE GOVERNMENT OF MALAWI

# ON

# THE PROJECT FOR PROMOTING CATCHMENT MANAGEMENT ACTIVITIES IN MIDDLE SHIRE

The Terminal Evaluation Team (hereinafter referred to as "the Team"), organized by Japan International Cooperation Agency (hereinafter referred to as "JICA") visited the Republic of Malawi from November 6 to 25, 2017. The purpose of the visit is to evaluate the progress of the technical cooperation project titled "The Project for Promoting Catchment Management Activities in Middle Shire" (hereinafter referred to as "the Project").

During the stay, the Team visited the project sites and relevant offices, and had series of discussions with the Malawian authorities concerned, namely, Ministry of Natural Resource Energy and Mining, Ministry of Agriculture, Irrigation and Water Development, Ministry of Civic Education, Culture and Community Development and Ministry of Finance and Economics, the Project team including the Japanese experts, and related stakeholders including district offices.

The findings of the evaluation were documented in the attached report based on the consultation with the Malawian side. Both sides confirmed its contents and agreed to take necessary actions that are required to accelerate the project implementation.

# 1. Framework of Terminal Evaluation Study

# 1-1. Background of the Project and Objective of the Terminal Evaluation

Malawi is an inland country located in Southern Africa and 20% of its land area is covered by Lake Malawi (24,000 km²), the 9<sup>th</sup> biggest lake in the world and the 3<sup>rd</sup> biggest ones in Africa. The total population was approximately 14.9 million and the population density (156.7 persons/km²) and the population growth rate (3.0%) were relatively high among the Sub-Saharan African countries (2010, the United Nations, "World Statistics Pocket Book").

In a whole country, forest land dramatically decreased from 4.2 million ha (38% of the national land) in 1990 to 3.4 million ha (30.7%) in 2005. In particular, forest resources in the Middle Shire River Basin, which flows from the southern edge of Lake Malawi to the Southern Malawi, rapidly diminished because of the issues induced by the population growth in Blantyre, the largest commercial city in the country, such as increases in firewood collection in the forests. The decreased forest resources caused a lower water retention capacity in the Basin, a lower agricultural productivity by soil erosion and degradation. As a result, the people in communities with vulnerable living conditions had been aggravating their poverty status. In addition, the huge volume of silt discharge into the Shire River, which have been piled up on the river bed, has been reducing water flows of the River. It has brought about adverse impacts, including lower power generation capacities of hydropower plants located in the Shire water system which have been generating 94% of electric power in the country. Also, it has increased floods in the downstream areas.

Under these situations, international donors and NGOs have been proactively supporting activities to mitigate environmental degradation in the Shire River Basin. In particular, in June 2014, the World Bank (WB) launched "the Shire River Basin Management Program (Phase I) Project" including inter-sectoral development planning and coordination mechanism, the most urgent water-related infrastructure investment, and development of up-scalable systems and methods to rehabilitate sub-catchment and protect existing natural forests, wetland and biodiversity.

Before those activities, the Japan International Cooperation Agency (JICA) initiated "the Project for Community Vitalization and Afforestation in Middle Shire" (2007-2012) (hereinafter referred to as "COVAMS I") based on the various survey results conducted since 1999. COVAMS I resulted broad practice of technologies for soil conservation and tree planting introduced by the project among the farmers in the target areas through dissemination of the technologies based on the village training approach using the Specified Village Training Approach (SVTA) (hereinafter referred to as "the COVAMS Approach") to over 30,000 households in 244 village within two Traditional Authorities (TAs) in Blantyre District located in Middle Shire. On the other hand, The target area of COVAMS I limitedly covered 400km<sup>2</sup> out of the total land area of Middle Shire of 7,350 km<sup>2</sup>. Also, there were

Br Qu

Blad Mutar remaining issues to establish implementation mechanism to promote well-designed activities as an administration system. Therefore, the Government of Malawi requested the Government of Japan a technical cooperation project to extend the soil conservation activities based on the COVAMS approach to broader areas.

The Terminal Evaluation Study Team (hereinafter referred to as "the Evaluation Team") dispatched by JICA visited Malawi from November 6th to 25th, 2017 for the purpose to verify attainments and results by the Project in accordance with the "Five Evaluation Criteria" as well as to identify necessary measures and activities for the remaining project period and for post project period.

The objectives of the terminal evaluation study are as follows:

- (1) To review and assess the inputs, activities and achievements of the Project;
- (2) To evaluate results of the Project by the five evaluation criteria of "Relevance", "Effectiveness", "Efficiency", "Impact" and "Sustainability";
- (3) To identify problems and issues to be addressed for successful implementation of the Project for the remaining project period;
- (4) To propose recommendations for better implementation of the Project in the remaining period and for future activities to achieve the Overall Goal of the Project and to ensure sustainability of project effects; and
- (5) To identify key driving forces and constraints for/against success of the Project for drawing lessons learned for future technical cooperation projects.

# 1-2. Members of the Terminal Evaluation Study Mission

The Terminal Evaluation Team is composed of the following members as below.

Team Leader	Mr. Takahiro MORITA	Group Director for Forestry and Nature Conservation
		Global Environment Department
		Japan International Cooperation Agency (JICA)
Cooperation	Ms. Emi TESHIMA	Special Advisor
Planning		Natural Environment Team 2
		Forestry and Nature Conservation Group
		Global Environment Department, JICA
Evaluation	Ms. Hisami NAKAMURA	Executive Director/ Principal Consultant
and Analysis		OPMAC Corporation

# 1-3. Schedule of the Terminal Evaluation Study

The Study in Malawi was conducted from November 6th to 25th, 2017. The detailed schedule is as

# 1-4. Outline of the Project

The outline of the project is shown as follows. The Project Design Matrix Version 2 (hereinafter referred to as "PDM Ver.2"), which was approved at the Joint Coordinating Committee in June, 2017, is shown in Appendix I.

# Target Area

Four districts in the South Region: Balaka District (Traditional Authority Chanthurya) Blantyre District (TA Chigaru and TA Lundu), Mwanza District (TA Govati and TA Nthache), and Neno District (TA Mlauli and TA Symon)

# Target Group

Management staff and extension staff in the four target districts.

# Overall Goal

Catchment management through farmers' activities (CMFA) using COVAMS approach is widely implemented in the target districts.

# Project Purpose

CFMA is institutionalized in the target districts.

A

Qua

1881 Lutat

# **Outputs**

- 1. Promotion for the target districts and the ministries concerned to ensure institutionalization and budget for COVAMS is carried out.
- 2. Capacity for implementing the COVAMS approach by officers of the target districts is improved.
- 3. Effectiveness of the COVAMS approach, both extension method and extension subject, is verified.
- 4. The commitment of the COVAMS approach among leaders of all levels is enhanced.

# Activities

- 1.1 List the organizations to promote CMFA using the COVAMS approach
- 1.2 Prepare a material to explain CFMA using the COVAMS approach to the organizations concerned
- 1.3 Make the result of the verification identified by the output 3 into the materials for explanation
- 1.4 List the names of the private sector with a stake in catchment management
- 1.5 Convene a seminar for information sharing inviting the private sector with stake in catchment management
- 1.6 Organize a field visit inviting personnel of donors, private sector and media with stake in catchment management
- 1.7 Revise the guideline of the COVAMS approach based on the feedback received through activities 1-5 & 1-6 and follow procedures for official approvals of the ministries concerned
- 2.1 Evaluate ability of implementing the COVAMS approach by the officers of the district departments concerned
- 2.2 Plan training on the COVAMS approach and project management
- 2.3 Carry out training on COVAMS approach and project management
- 2.4 Support capacity development through OJT by the officers of the district departments concerned
- 2.5 Plan evaluation of officers of the district departments on understanding of CMFA using the COVAMS approach
- 2.6 Evaluate the officers of the district departments on understanding of CMFA using the COVAMS approach
- 3.1. Plan the questionnaire survey on extension methodology by the COVAMS approach
- 3.2. Carry out the questionnaire survey to collect data according to the plan
- 3.3. Prepare the survey report
- 3.4. Identify the cost of implementing the COVAMS approach
- 3.5. Verify the roles and the effectiveness of the Lead Farmers (LFs) of COVAMS compared to those of LFs employed by other extension approaches
- 3.6. Prepare a plan to verify the technologies to be extended by the COVAMS approach
- 3.7. Verify the technology according to the plan
- 3.8. Report the results of the verification
- 4.1. Support the initiatives of the district forestry departments to convene a regular meeting of the CCO (Conservation Coordination Officer) TST (Technical Support Team)
- 4.2. Support the initiatives of the district forestry departments and other district departments to convene PM meeting of the target districts
- 4.3. Support the district departments to organize field visits inviting minimum of 8 officers of the ministries and districts at least once
- 4.4. Support the initiatives of officers of ministry and the district departments to organize visits and explanation to the organization s concerned listed in the item 1.1 carried out at least three times

18th M

# 1-5. Methodology of Terminal Evaluation

The Study is carried out in accordance with the JICA Guideline for Project Evaluation, along with the following process:

- (1) Assessing progress of the Project based on the plan shown in the Project Design Matrix (PDM) and the Plan of Operation (PO),
- (2) Analyzing the Project by the five evaluation criteria,
- (3) Recommending improvements of the Project, and
- (4) Drawing lessons learned for other similar types of projects.

Both quantitative and qualitative data and information were collected by the following methods.

- Review of the project reports and other relevant documents,
- Questionnaire and/or interview to Japanese experts, Counterparts, and other stakeholders.

The five evaluation criteria used for the analysis of the Project are as follows:

### (1) Relevance:

Relevance of the Project is consistency of the Project Purpose and the Overall Goal with development policies and needs of Tanzania as well as the ODA policy of Japan towards Malawi.

# (2) Effectiveness:

Effectiveness of the Project is likelihood of achievement of the Project Purpose by the end of the project period through produced outputs at the time of the Terminal Evaluation Study.

# (3) Efficiency:

Efficiency of the Project is extent of conversion from the inputs to the outputs assessed from the aspects of achievement of the planned outputs as well as quantity, quality and timing of the inputs by the Japanese and Tanzanian sides.

# (4) Impact:

Impacts of the Project are assessed by likelihood of achievement of the Overall Goal, which is the intended impact of the Project and positive and negative, direct and indirect effects resulted or to be resulted by the Project.

# (5) Sustainability:

Sustainability of project is continuity of positive effects and benefits resulted by project after

USP

May

completion of project. It is assessed by the political/institutional, organizational, technical and financial aspects.

## Japanese Side

Inputs by the Japanese side have been made mostly as planned.

# a. Dispatch of Japanese Experts

For the first two and half years of the project period, 3 long-term experts in 3 areas and 3 short-term experts were dispatched in order to design and establish a standardized CMFA using the COVAMS approach as well as verify its effectiveness to disseminate the model of CMFA activities and to

AF

M

Row

contribute to catchment management.

For the last two and half years of the project period, 11 short-term experts in 9 areas were dispatched in order to institutionalize CMFA using the COVAMS approach as well as to disseminate it further in the four target districts.

#### b. Counterpart Training

29 staff in total, including TSTs working for the target four districts, participated in 12 training courses related to natural environment conservation and extension activities in total, including "promotion of SATOYAMA Initiative: Biodiversity Conservation and Community Promotion through the Sustainable Management of Natural Resources", "Capacity Development in Operation an Management for Extension Activities" and "Farmer-led Extension Method ("Curriculum Development for Motivating Farmers").

1 counterpart staff (TST of Balaka) participated in a training course in Kenya, "Regional Training on Adaptation to Climate Change".

#### c. Provision of Equipment

The necessary equipment for operation and management of the Project, including copier, computers and printers, were provided. Also, vehicles, including 4WD pickup trucks for the TSTs and motorbikes for CCOs of the four target districts were provided for their activities to deliver trainings for the Lead Farmers (LFs) who can be focal points of technical transfer to farmers and communities.

#### d. Local Cost

The Japanese side borne costs for delivery of trainings for LFs, including printing manuals, training tools, lunch and so on. Also, the fuel cost for the motorbikes used by CCOs and the maintenance and repair cost of the pickup trucks for the TSTs were borne by the Japanese side. In addition, the Japanese side covered cost for providing bicycles for the Senior Lead Farmers (SLFs) who technically support LFs and farmers.

#### <u>Malawian Side</u>

Inputs by the Malawi side have been made partially compared to the plan.

#### a. Counterpart Personnel

In total, 120 personnel have been engaged in the Project. At the central level, the Department of Forestry of the Ministry of Natural Resource Energy and Mining (MoNREM), the Department of Agricultural Extension Service and the Department of Land Resource and Conservation of the

BP CNA

BOX Junear Ministry of Agriculture, Irrigation and Water Development (MoAIWD), the Department of Community Development of the Ministry of Civic Education, Culture and Community Development (MoCECCD), the Department of Performance Enforcement of the Office of the President and Cabinet (OPC) are the key counterpart organization. In addition, at the regional level, the Regional Forestry Officer of South under the Department of Forestry has been involved in the Project and the Assistant District Forestry Officer of Blantyre has coordinated the project activities as the Regional Management Team. At the district level, the District Commissioners and the District Forestry Officers of the four target districts of Blantyre, Mwanza, Neno and Balaka, have been committed to the Project. In addition, all the stakeholders of catchment management of the four districts, including, TSTs and CCOs, have been engaged in the project activities.

#### b. Facilities

The Malawian side provided the project office spaces in MoNREM in Lilongwe and the Regional Forestry Office (South) in Blantyre.

#### 2-2. Progress of Activities

The activities for the planned Outputs have been mostly implemented as planned.

The activities for the Output 1 were mostly completed, but a public relations seminar for private companies and a field visit by the media are scheduled before the completion of the Project. In addition, the activities of the Project were broadcasted in Neno and Balaka through community radio and TV.

The activities for the Output 2 were completed as planned. Trainings of the COVAMS approach for the CCOs and TSTs in the four target districts were completed by June 2017 and the trained CCOs and TSTs trained the Lead Farmers (LFs) and the Senior Lead Farmers (SLFs), who conduct technical trainings and demonstration of the CMFA technology, a package of techniques for the CMFA composed of tree planting and growing, contour ridge farming, and gully reclamation, in their villages. LFs and SLFs are nominated by farmers at village meetings. In total, 3,795 farmers were nominated and trained as LFs and 3,745 out of them were certified as LFs in the four target districts. All the 435 nominated SLFs were certified in the four target districts.

The activities for the Output 3 were completed as planned. LFs trained by the Project delivered trainings of the CMFA technology for their fellow farmers in their villages more than one time and the majority of villagers trained by LFs has practiced the CMFA technology. Also, a study to verify effectiveness of the contour ridge farming and small scale check dams on soil erosion in maize gardens in the target sites was conducted by the Japanese experts and the results were compiled a working paper in September 2015.

The activities for the Output 4 were mostly completed as planned. Monthly meetings of CCOs and

RP "

(IM)

BM

TSTs have been regularly held in each target district. Also, monthly PM (Project Managers at district level) meetings have been regularly held under an initiative of the Regional Forestry Office. In addition, the Project Team visited the key stakeholders, including MoNREM, MoAIWD, MoCECCD, the Malawi College of Forestry and Wildlife (MCFW), other donors and the private companies, and explained about the CMFA introduced by the project in order to institutionalize the CMFA.

#### 2-3. Achievement of Outputs

By the time of the Terminal Evaluation Study conducted in November 2017, most of the planned outputs have been produced.

The Output I has been partially achieved and likely to be achieved by the end of the Project. The guidelines and manual of the COVAMS approach were drafted and have been finalized. A public relation seminar targeting the private sector and a field visit by media are scheduled before ending the Project. It is expected to visualize a good practice of the Project by attractive one-page leaflet and to broadly deliver them as a part of public relations.

The Output 2 has been achieved. All the verifiable indicators for the Output 2 were achieved and the

A C

A

My My Mar

targeted groups for capacity development, including TSTs, CCOs and LFs, improved their technical knowledge and skills to train the farmers to conduct the CMFA introduced by the Project and LFs and their fellow farmers obtained necessary technical knowledge and skills to practice the CMFA technology.

The Output 3 has been achieved. All the verifiable indicators for the Output 3 were achieved and effectiveness of the COVAMS approach as a farmer to farmer extension method and the CMFA technology were verified. 100% of the LFs trained by the Project have practiced the CMFA technology.

The Output 4 has been mostly achieved. The coordination mechanisms at district and at regional levels for dissemination of the CMFA based on the COVAMS approach were established through the monthly meetings of CCOs, TSTs and PMs.

#### 2-4. Achievement of Project Purpose

As mentioned above, since the planned outputs have been achieved or mostly achieved, the Project Purpose is likely to be achieved by the time of project completion.

The indicator 1 was revised in PDM Ver.2 since the District Strategic Development Plan<sup>1</sup> had not been functional due to lack of resources and initiatives. Under the Project, activity plans for the fiscal year (FY) 2017/18 for each target district were prepared at the review meetings held from February to March 2017. In the process of preparation of the activity plans, each target district organized review meetings to collect and analyze information of the target villages. Although there is no mechanism to prepare mid-term development plan and investment plan at district level, the activity plans for FY 2018/19 will be prepared through the review meetings to be held from February to March in 2018. In addition, it is expected that action plans for the next three years including plans for dissemination and follow-up activities of the CMFA based on the COVAMS approach will be discussed and elaborated through the review meetings, as well.

As for the indicator 2, the guidelines for the COVAMS approach has been in the finalization process at the time of terminal evaluation. In addition, all the counterpart organizations, MoNREM, MoAIWD, and MoCECCD have already agreed to officially acknowledge and endorse it as their technical document in order to utilize nationwide.

Table 4: Achievement of the Project Purpose

M

Balan

by MoNREM, MoAIWD, and MoCECCD before JCC in 2018.

#### 2-5. Prospects for Achievement of Overall Goal

The Overall Goal is an intended outcome resulting from the Project to be achieved within three to five years after completion of the Project in case of JICA's Technical Cooperation Project. For the Project, it is expected to be achieved within three years after the project completion.

For the Indicator 1, the Project has already extended the CMFA based on the COVAMS approach in 5 villages in non-targeted TAs in Mwanza through the Lean COVAMS approach with minimized inputs which can be applied for the post project. In addition, some of non-targeted TAs in the target districts have already requested the Project to deliver the CMFA trainings based on the COVAMS approach and the target districts are willing to extend the CMFA to non-targeted TAs after the project completion.

For the Indicator 2, several cases where other donor and NGO supported the post COVAMS villages in the area related to catchment management were identified at the time of terminal evaluation. For example, the Save the Children supported Mthabarika Village in Blantyre to construct large scale check dams covering 72.5 ha to mitigate gullies and soil erosion. Another case is support by the World Food Programme (WFP) for Nposa Village in Blantyre to construct storm drains to mitigate flushes by storms and heavy rains and soil erosion. They mobilized the SLFs and LFs trained by the Project with community participation using the skills introduced by the Project.

Table 5: Prospects for Achievement of the Overall Goal

>Neno: Evangelical Association of Malawi (EAM), Save the Children, Hunger Project, etc.

#### 2-6. Implementation Process

The project has been implemented under coordination at national, regional and district level. Since catchment management is a cross cutting issue to be addressed by a multi-sectoral approach covering environmental conservation, agricultural activities, land use and community development, the three related ministries of MoNREM, MoAIWD, and MoCECCD are members of the Joint Coordination Committee (JCC) which is a decision making body of the Project. At the regional level, the monthly PM meetings have been organized under the initiative of the Regional Forestry Office of South to discuss about the project activities and issues to be tackled as well as sharing information and experiences through the Project. Also, the district level, CCOs and TSTs have had monthly meetings regularly to discuss about the training activities for the target villages and issues to be tackled as well as sharing information and experiences in each target district. The coordination mechanism established by the Project has facilitated and promoted coordination among the stakeholders of the Malawian side at national, regional and district level not only for implementation of this particular project but also for their common mandate of catchment management.

The implementation arrangement of the Japanese side was changed from the first period and to the last period of the Project. For the first period, the long-term Japanese experts were dispatched and stationed in Blantyre and they had devotedly supported the counterparts at district level in order to establish the CMFA technology to be disseminated and the COVAMS approach to disseminate the CMFA technology rapidly and widely. For the second period, the short-term Japanese experts were dispatched to mainly support for institutionalization of the CMFA based on the COVAMS approach for sustainable catchment management as well as support further dissemination of the CMFA based on the COVAMS approach in the targeted TAs of the target districts. The less intervention by the Japanese experts in the last period enhanced ownerships of the Malawian side.

On the other hand, there is a room to improve an implementation arrangement and process for institutionalization of the CMFA based on the COVAMS approach for ensuring sustainability to make the CMFA contribute to effective catchment management in the target districts. Although the project office was set up in the Department of Forestry (MoNREM) in Lilongwe and the activities for the institutionalization have been conducted at national level for the last period of the Project, there was still difficulties to conduct necessary actions to be taken at sufficient level since the focus of the project activities has been put on the activities in the target districts where physically distance

Parp

W.

Modula

from Lilongwe. In particular, as no focal point in each key ministry was established, it took time to facilitate coordination and decision making at national level in order to promote the institutionalization of the CFMA based on the COVCAMS approach.

- 18 -

At and

#### 3. Evaluation by Five Evaluation Criteria

#### 3-1. Relevance

Relevance of the Project is high and it is expected to keep the relevance until the end of the Project.

#### (1) Consistency with the development policy of Malawi

The Project has been consistent with the national forest policies of Malawi since the time of ex-ante evaluation by the time of terminal evaluation.

The Government of Malawi adopted the "National Forest Policy" in 1996 and the "National Forest Programme" in 2000 for sustainable forest management and improvement of socio-economic benefits by prevention of resource degradation by measures, including community-hased forest management and sustainable use of forest resources for timbers and fuel.

After reviewing the "National Forest Policy1996" in a wide consultative process with a wide range of stakeholders to solicit their views on the implementation gaps, the Government of Malawi launched a successive forest policy, the "National Forest Policy 2016" in June 2016. The goal is for the conservation, establishment, protection and management of trees and forests for the sustainable development of Malawi. The policy aims at promoting strategies that will contribute to increase forest cover by 2% from the current 28% to 30% by 2021, and sustainable management of existing forest resources.

The nine overall policy objectives include, provision of an enabling framework for promoting the participation of local communities, the civil society and the private sector in forest conservation and management; promotion of the growing of trees by all sections of the communities in order to achieve sustainable self-sufficiency of wood and forest derived products and services; promotion of sustainable management of forests for the protection of the environment, conservation of biodiversity and climate change management; promotion of the development of initiatives for adequate and sustainable short, medium and long term financing mechanisms for the forestry sector and its contribution to GDP; enhancement of the development of requisite human resource commensurate with the implementation of the policy.

In addition, the "National Forest Landscape Restoration Strategy" (NFLR Strategy) was launched in June 2017 for addressing the national goals by 2020, including improvement of food security, increase in energy source, increase in climate resilience, improvement of water quality and supply and alleviation of poverty. The NFLR Strategy also aims at accelerating implementation of the National Forest Policy (2016). It contains action plans in the areas of community forest and woodlots, forest management, soil and water conservation and river and stream bank restoration for the period from 2018 to 2020.

- 19 -

A am

#### (2) Consistency with the needs in Malawi and the target districts

The Project has been consistent with the development needs in Malawi and the target areas for catchment management of the Middle Shire River Basin through soil conservation and reforestation since the ex-ante evaluation.

According to the National Forest Policy 2016, the estimated deforestation rate is 2.8% representing an annual average loss of 250,000 ha of forest cover. The direct causes of deforestation include agricultural expansion, human settlement, uncontrolled fires, unsustainable harvesting for energy (charcoal and firewood) and timber requirements.

Although the CMFA based on the COVAMS approach has been disseminated and broadly practiced in the four target districts through the activities by the target villages with interventions by the Project, further promotion of the CMFA based on the COVAMS approach is required because it takes long time to bring about effective catchment management to mitigate soil erosion and recovery of degraded forests in the Middle Shire River Basin. In fact, while forest conservation activities have been promoted in the four target districts, illegal logging for charcoal production and firewood have continued and deforestation has not been stopped. In particular, consumption of charcoal in Blantyre has been growing by the growing population since the charcoal is main source of energy. On the other hand, siltation into the Shire River has adversely affected hydropower generation which is an alternative energy source in the region and the whole country.

#### (3) Consistency with the Japanese ODA policy for Malawi

The Project was consistent with the Japan's ODA policy for Malawi at the time of ex-ante evaluation.

The Government of Japan formulated and launched the "Country Assistance Policy for Malawi" in April, 2012. One of the two priority areas is support for establishmen of foundation for development of agriculture and mining. It includes cooperation for natural resource conservation such as afforestation and catchment/watershed management as a part of adaptation for environment protection and against climate change.

#### 3-2. Effectiveness

At the time of the terminal evaluation, it can be judged that effectiveness of the Project is high as the Project Purpose is likely to be achieved by the outputs produced though there is still room to further enhance institutionalization of the CMFA based on the COVAMS approach.

For the institutionalization of the CMFA based on the COVAMS, the Project established a mechanism to prepare activity plans at district level under coordination among the stakeholders. Also, the effective and useful guidelines and manual to implement the CMFA based on the COVAMS on the ground was elaborated by the Project and will be officially endorsed by the key

CAP

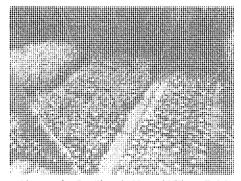

The Antor

ministries. However, for more effective institutionalization, it was necessary for the Project to incorporate a component in order to establish a mechanism to mobilize financial resources from both district councils and external sources including donors and NGOs. Also, it was essential to promote the institutionalization to mobilize resources at central level in order to facilitate coordination among the stakeholders at central level for continuation and dissemination of the CMFA based on the COVAMS on the ground.

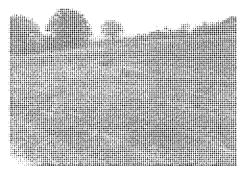

On the other hand, the Project has brought about prominent effects to promote institutionalization of catchment management in the four target districts. There are two driving forces, the farmer to farmer training and extension activities by the COVAMS approach and the locally adequate and applicable CMFA technology.

The COVAMS approach is significantly effective to train farmers and disseminate targeted technologies and techniques through the cascade of technical transfer from CCOs and TSTs to SLFs and LFs, and from SLFs and LFs to farmers within a short term and with broader coverage compared with other conventional training or dissemination approaches. Through the project activities, 32 CCOs, 435 SLFs and 3,745 LFs were trained for the last five years and have been engaged in the training and dissemination activities in their target villages. Their activities have covered 347 villages with more than 45,000 households in the four target districts by the time of terminal evaluation. The coverage of the Project has dramatically increased from 50 villages in 2013 when the Project started. In addition, many villagers have continuously practiced any of the CMFA technology trained by the Project though there are slow adopters among them.

The three techniques for CMFA selected by the Project, tree planting and growing, contour ridge farming and gully reclamation, are effective to widely disseminate and to simply practice in the target villages. As of FY 2015/16, the results from the practices of the CMFA technology are as follows: the number of seedlings planted in 218 villages was 196,684; the size of land conserved was 272 ha; the number of check dams constructed to recover gullies was 14,020.

Nursery for Seedlings in Vamusi Village, Balaka

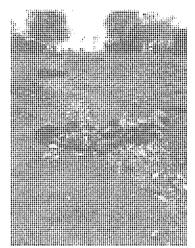

Contour Ridge Farming in Makanan Village, Neno District

As for tree planting and growing, the farmers are able to produce seedlings for their individual use

OFF

Jular

for firewood which can reduce illegal logging. Also, they have effectively planted trees in communal woodlots for forest conservation and reforestation as well as in their maize gardens or along river banks to prevent soil erosion. The contour ridge farming techniques, including marker ridges and box ridges increase water harvest from rainfalls in their maize gardens and to reduce soil erosion. As a result, many farmers adopting the CMFA technology, were able to increase their maize production with less farm land and less work load. In the villages with check dams constructed, the soil erosion has been reduced and the gullies have been recovered by sediments of soils.

Gully Reclamation Using Stones in Vamusi Village, Balaka District

It is noteworthy that the key success factor of the broader dissemination of the CMFA technology is locally adequate and applicable techniques using locally available resources. For tree planting and growing, the villagers in some villages have been engaged in community based tree planting for natural regeneration activities conducted by the Regional Forestry Office which focuses on planting of indigenous species by truncheons propagation. Also, contour ridge farming has been traditionally and widely practiced in the target villages but in ineffective manner. Therefore, the villagers can easily adopt the improved and more effective contour ridge farming with appropriate alignment of ridges based on accurate marker ridges and with box ridges to harvest water. For gully reclamation, check dams were constructed by using locally available materials in any target

villages, such as stones and rocks as well as blanches.

#### 3-3. Efficiency

Although there were some constraints against efficient implementation of the project activities, overall efficiency of the Project is high at the time of the terminal evaluation. It was because the inputs for the Project efficiently produced the planned outputs and the greater outcomes with the broader coverage of capacity development and dissemination of the CMFA based on the COVAMS approach.

By the time of the terminal evaluation, the inputs by the Japanese side were made mostly as planned. The quantity of inputs, including the number of Japanese experts dispatched and the number of equipment provided, were sufficient. Also, expertise of each Japanese expert was adequate. However, frequent replacements of the short-term experts since 2015 reduced efficiency of the project activities because they needed to learn and understand the situations of the target sites. Also, quality and specification of equipment harmed efficient activities by the TSTs and CCOs at district level. The pickup trucks and motorbikes provided by the Japanese side, which are essential to conduct extension activities, were broken and repaired. Those repairs were time consuming and costly.

OFF

Mobble

The inputs by the Malawian side were partially made. The number of counterparts, in particular, TSTs and CCOs, were sufficient to efficiently deliver trainings for LFs. However, the necessary costs, including fuel cost for the motorbikes, have not been covered by the Malawian side due to the budget constraints of the Government of Malawi. Also, the posting of new DCs in the three target districts besides Balaka slowed down the decision makings on the project activities at district level for a certain period.

However, the coordination mechanism established by the Project enabled to efficiently mobilize inputs in the target villages and to avoid duplication of interventions by other projects and programs. In particular, under coordination among the three line ministries of MoNREM, MoAIWD and MoCECCD, which have required time-consuming process and efforts, the project activities were well coordinated through efficient mobilization of CCOs and TSTs though they are extension officers or district officers from different sectors of forestry, agriculture and community development.

Furthermore, although the Project minimized the inputs for trainings and dissemination activities, the coverage of the training and dissemination activities was considerably large since around 350 villagers more than 45,000 households have practiced the CMFA introduced by the Project. The prominent coverage of the activities greatly contributes to high efficiency of the Project.

#### 3-4. Impact

#### (1) Achievement of Overall Goal

It is highly expected that the Overall Goal will be achieved by efforts of the post COVAMS villages and support by the three CP ministries and the District Councils as well as other donors and NGOs.

As mentioned above, the Project has already extended the CMFA based on the COVAMS approach in 5 villages in non-targeted TAs in Mwanza through the Lean COVAMS approach with minimum input. Also, some TAs neighboring the TAs targeted by the Project have already requested introductions of the CMFA based on the COVAMS approach since they have recognize the effects of the CMFA. Also, in the post COVAMS villages, the activities related to catchment management activities have been supported by other government programs or other donors and NGOs through mobilization of SLFs and LFs trained by the Project.

In order to ensure attainment of the Overall Goal for the post project period, it is essential to prepare action plans at district level for dissemination and upgrading the CMFA and to establish a mechanism to mobilize necessary resources for sustaining the CMFA in order to contribute to effective catchment management in the Middle Shire River Basin.

#### (2) Other impact

At the time of the terminal evaluation, no negative impact was observed while the following positive

SAP

W

impacts have been observed at the time of the terminal evaluation.

#### [Improvement of Agricultural Production in the Target Villages]

Also, according to the farmers and LFs interviewed by the terminal evaluation mission, agricultural production, mainly maize production, have increased after the introduction of the improved contour ridge farming promoted by the Project. They mentioned that improvement of water harvest enabled higher yield of maize production with less farming plots and work load as mentioned above, because Although it is hard to objectively verify the impacts on agricultural production at the time of terminal evaluation because of no monitoring data available, the farmers interviewed by the Evaluation Team in the target villages testified that their maize production increased by more than three times through application of the improved contour ridge farming without expensive chemical fertilizer.

#### [Recovery of Forests in the Post COVAMS Villages]

Through the site visits in the post COVAMS villages, it was confirmed that the reforestations have been progressing through the CMFA introduced by the Project though it is difficult to verify the impacts on reforestation objectively due to limited monitoring data at the time of terminal evaluation.

#### [Introduction of CMFA in Environmental Education at School]

A TST of Mwanza District, who had participated in the training in Japan under the Project, introduced the CMFA in Environmental Education at the Tsupe Primary School in Chali Village. Through technical transfer of the CMFA technology from CCOs to the teachers in the school, the students of the Grade 5 and 6 have been practicing seedling production and tree planting and growing, contour ridge farming and manure production. The TST expects that the students understand the importance of catchment management and forest conservation and will

CCOs teaching importance of forest conservation for students at the Tsupe Primary School Chali Village, Mwanza District

practice the CMFA when they become adult and their parents also understand the importance of the CMFA and acquire the knowledge and technologies through their children. In Neno, TSTs also initiated to introduce the CMFA at school as well.

#### [Well-coordinated and Harmonized Extension Service Delivery at District Level]

Under the implementation of the Project, the three ministries have been coordinatingly involved in the project activities at any levels of national, regional and district, in particular for training and extension of the CMFA. As a result, CCOs and TSTs have been well functioning to deliver coordinated and harmonized technical support and extension services covering multi-sectoral issues

H

SA BA

for the CMFA for SLFs and LFs. That is because they have learned the CMFA technology covering techniques of forestry, farming and soil conservation while they have different background as extension officers or district officers from the sectors of forestry, agriculture and community development. In addition, the approach of CCOs and TSTs enables to extend the extension activities by MoCECCD though only one extension officer for community development is deployed in each district. Also, the Project demonstrated a good practice of the well-coordinated and harmonized extension service through CCOs and TSTs while MoAIWD has currently reorganized their extension services to integrate as one stop service under one extension officer to cover various issues under the mandates of MoAIWD.

#### [Local leadership of SLFs and LFs strengthened]

SLFs and LFs in Mthabarika Village and TSTs and CCOs of Blantyre District

3,745 certified LFs and 435 certified SLFs in the four target districts are fairly confident not only as technical leaders to demonstrate and disseminate technologies and techniques but also as "Change Agents" for development in their villages. It is expected that they can be focal points to introduce and disseminate new technologies for conserving natural resource and improving agricultural production, thereby contributing to improvement of livelihood in their villages as well as catchment management in the Middle Shire River Basin. In fact, their leaderships have been appreciated

by other donors and NGOs for effectively implementing their supports in the post COVAMS villages as mentioned above.

#### 3-5. Sustainability

For the Project, sustainability can be verified by continuity of the CMFA by the post COVAMS villages. It is expected that the sustainability of the effects of the Project will be ensured to some extent after the completion of the Project from the aspects of policy/institutional, organizational, technical and financial. However, there are still some challenges remaining.

#### (1) Policy /institutional aspect

There is no change in policy priority on catchment management and environment conservation in the Shire River Basin and the target four districts.

Under the "National Forest Policy 2016", deforestation and forest degradation control is aspired by a holistic approach to sustainable forest management. The policy priority areas, such as community based forest management, capacity development of the forest sector, and financing

OFF

mechanism, will endorse continuity of the CMFA based on the COVAMS approach in the four target districts.

#### (2) Organizational aspect

It is expected that the extension mechanism based on the COVAMS approach will be sustained since SLFs trained by the Project can continuously play a role as focal point of technical transfer and backstop for LFs and fellow farmers. However, there are concerns about how to continuously motivate them to keep their roles in the villages without further inputs for training the fellow farmers after the project completion though they are confident as SLFs or LFs. In addition, LFs can leave their village as migrating workers to other areas, in particular in Mwanza District, a border area with Mozambique, when they face severe food insecurity because they heavily depend on subsistence farming and no other alternative income source besides illegal charcoal production.

On the other hand, posting of the officers involved in the Project to non-project areas may promote dissemination of the CMFA based on the COVAMS approach.

Also, there are concerns about sustainability of the coordination mechanisms established by the Project. At district level, the meetings of CCOs and TSTs will be continued but maybe less frequently because of the limited mobility without support for maintenance of the motorbikes and procurement of fuel by the Project. In addition, it might be more challengeable to sustain the coordination mechanism at regional level without financial support by the Project.

#### (3) Technical aspect

The key issue to ensure technical sustainability is continuity of activities by SLFs and LFs trained by the Project. Periodical follow-ups by TSTs and CCOs are essential for SLFs and LFs, including technical advice on the ground. Such follow-up activities by TSTs and CCOs can motivate and encourage them to continue their activities to technically support the fellow farmers and to practice new technologies and techniques for catchment management which can benefit their livelihood. At the same time, CCOs and TSTs can identify needs of SLFs and LFs to keep or upgrade their activities.

#### (4) Financial aspect

The budget sources at any level are very limited and the development budget of Malawi heavily depend on external sources from the donors and NGOs. Although the counterpart budget to cover the recurrent costs related to the project activities should have been allocated by the Malawian side, the very limited amounts were allocated for the first period and no budget was allocated for the last period due to the national budget constraint. Therefore, it is hardly expected to ensure financial sustainability by the budget sources of Malawi without external sources.

- 26 -

UAT

W Bal

Under such situation, the Project introduced the Lean COVAMS approach which minimizes inputs for trainings on the ground. It can help to reduce a required budget for dissemination of the CMFA based on the COVAMS approach. However, the activities can be slowed down and scaled down without external supports.

Also, the Project made efforts to mobilize alternative financial resources, including the Tabaco levy, the Forest Development and Management Fund (FDMF), the Malawi Social Action Fund (MASAF) and the Shire River Basin Management Program. For Blantyre District, the safety net budget can be mobilized for the CFMA. In addition, as higher yield of agricultural production by the improved contour ridge farming without expensive chemical fertilizer, it is expected that a budget for the fertilizer subsidy program, which has not been efficiently disbursed, can be allocated to other programs related catchment management through rolling out of the improved contour ridge farming.

#### 3-6. Conclusion

In the light above, the Project is highly relevant with the National Forest Policy of Malawi and needs for catchment management of the Middle Shire River Basin and the Japan's ODA policy for Malawi. Effectiveness and efficiency of the Project are high because of the very effective capacity development for farmers and broader dissemination of the CMFA technology to the farmer in the four target districts with the minimized inputs. Also, the positive impacts, including the Overall Goal is highly expected to be achieved after the project completion though there are some challenges for sustainability. Therefore, the Project can be evaluated as "highly satisfactory" at the time of terminal evaluation.

A

Moral

#### 4. Recommendations and Lessons Learned

Based on the above evaluation findings, the following recommendations are proposed for the remaining project period as well as for post project period towards the Overall Goal of "Wide implementation of catchment management through CMFA using the COVAMS approach in the target districts".

#### 4-1. Recommendations

[For the remaining project period]

## 1) Finalization and authorization of the drafted guidelines for CMFA based on the COVAMS approach

For ensuring attainment of the Project Purpose, it is inevitable to officially authorize the COVAMS approach guidelines developed by the Project in order to broadly use them on the ground for not only for dissemination of the CMFA introduced by the Project but also other related activities for catchment management in Malawi. It is preferable that the higher rank authorities at the director level of each counterpart ministry will sign of the preface of the guidelines as an official technical document.

[For the remaining project period and the post project period]

## 2) Preparation of action plans for the next three years at district level to mobilize necessary resources for dissemination and upgrade the CMFA based on the COVAMS approach

As mentioned above, it is recommended for the District Councils in the four target districts to prepare their action plans for the next three years for dissemination of the CMFA based on the COVAMS approach to reach out other villages and TAs and enhancement of the CMFA in the post COVAMS villages. The action plans enable to identify not only necessary resources, including human resource and financial resource and available resources, but also to specify strategies to mobilize external financial resources. Then, annual activity plan and budgeting can be more feasible for training and dissemination activities at district level.

## 3) Design and introduction of monitoring activities to record changes in the sites with CMFA based on the COVAMS approach

In order to mobilize necessary resources for the sustainable CMFA based on the COVAMS, it is inevitable to verify and give concrete evidence of effects of the CMFA introduced by the Project on catchment management. It is recommended to design and introduce a simple and feasible monitoring system to record changes, including forest coverage and soil conservation, on the sites, by fixed observation by digital photos with geographical information or satellite images. Those records can be clear evidences to make stakeholders understand the positive impacts of the CMFA introduced by the Project in order to facilitate resource mobilization.

UAR

- 28 -

M

Moll

#### 4-2. Lessons Learned

#### 1) Effectiveness and efficiency of capacity development by the COVAMS approach

The COVAMS approach realized effective dissemination of CMFA technologies based on farmer to farmer technical transfer through the two-year intensive intervention with limited training inputs which enables to cover more number of villages in a short-run. Also, very simplified, locally appropriate and applicable techniques using locally available resources are another factor for broader dissemination and high adoption rates. While catchment management requires efforts by the broader areas and long-term efforts, the COVAMS approach can be very effectively, efficiently and sustainably address the issues by the community based activities through very effective and efficient capacity development with broader coverage of areas in short-term.

## 2) Coordination mechanism for efficient implementation of project activities and efficient resource mobilization based on harmonized planning

Since catchment management covers cross sectoral issues, it is essential to establish coordination mechanisms at national, regional and district levels for introduction of effective community based catchment management activities. Such coordination mechanism enables efficient implementation of project activities and efficient resource mobilization based on harmonized planning to cover multi-sectoral efforts although the process of their establishment is quite time consuming. Therefore, at the project designing stage, stakeholder analysis is inevitable to identify which organization can be involved in which issues and how and to make necessary implementation arrangements for the both sides of a recipient side and a Japanese side.

## 3) Necessity of inventories of villages with interventions for necessary follow-ups for the post project period

Although the Project has brought about great effects through dissemination of the CMFA based on the COVAMS approach, it is difficult to objectively verify them due to no inventories of the villages with interventions. It is necessary to compile inventories of the villages with interventions in order to come up with necessary follow-ups by the counterparts after the project completion since the country like Malawi has difficulty to mobilize domestic resource and necessity to mobilize external resources by convincing other donors and NGOs. Also, since the Project aimed at contributing to catchment management, it is essential to verify how the CMFA contribute to catchment management. Therefore, it is preferable to incorporate a component to make inventories of the villages with interventions in order to follow them up and to verify impacts of the activities introduced by the Project for the goal of catchment management.

## MINUTES OF MEETING BETWEEN JAPAN INTERNATIONAL COOPERATION AGENCY AND THE GOVERNMENT OF MALAWI FOR THE PROJECT FOR PROMOTING CATCHMENT MANAGEMENT ACTIVITIES IN MIDDLE SHIRE

The Japan International Cooperation Agency (hereinafter referred to as "JICA") and the Government of Malawi hereby agreed upon the matters referred to in the document attached here to.

Mr. Koichi Kito

Resident Representative, Malawi

Office

Japan International Cooperation

Agency

Lilongwe, 27th March 2018

Mr. Bright Kumwembe

Chief Director, Environment

Ministry of Natural Resources, Energy

and Mining

Mr. Gray Nyandule Phiri

Principal Secretary

Ministry of Agriculture Irrigation

and Water Development

Mrs. Ivy J. Luhanga

Principal Secretary

Ministry of Civic Education, Culture and

Community Development

Mr. David Wilima

Acting Director

Debt and Aid Division

Ministry of Finance and Economic

Planning

#### Matters Discussed

1. Approval of the Project Completion Report

The Project Completion Report (Attachment 1) submitted in March 2018 was approved.

2. Approval of COVAMS Guidelines

The COVAMS Guidelines (Attachment 2) prepared in March 2018 was approved.

3. The status of the recommendation addressed by the Terminal Evaluation Team submitted in November 2017

The status of the recommendation was explained as follows:

- (1) The preparation of the Guidelines was completed and endorsed by the Departments concerned,
- (2) Total of 12 monitoring sites were identified and set-up markers for tracking the change of vegetation and tree cover for long-term monitoring. Each district has 3 sites to be monitored. The District Forestry Officers will monitor the sites once every year and report to the Director of Forestry (DoF); evidence of vegetation change will be provided by digital photographs,
- (3) A variety of promotion materials such as banners, T-shirts and a brochure have been prepared and delivered to districts to improve on dissemination of CMFA using the COVAMS approach.
- 4. Approval of future Action Plans for districts

A summary of Action Plans for the districts covering 3 years was presented to the JCC Meeting. It was agreed that electronic versions of detailed District Action Plans would be circulated to JCC members and concerned Departments.

5. Implementation structures at district and national levels

Coordination structures should be strengthened at the district council and a similar structure be established at national level involving the three main Ministries to monitor implementation of activities. These coordination structures should assist in

1 1 5 1

2

implementation, lobbying and mobilizing resources to ensure the sustainability of activities in the districts and elsewhere;

#### 6. Financial support from Government

The last JCC Meeting agreed that the Ministry of Finance should endeavor to provide requisite financial resources to support the districts in implementing their activities; in addition, District Councils should prioritize financing the CMFAs

#### 7. Establishment of partnerships

The Department of Forestry and coordinating Departments, should take lead in creating partnerships with the private sector, civil society organizations, Non Governmental Organizations (NGOs) and others towards mobilizing technical and financial support for the sustainability of the CMFAs

#### 8. Termination of the Project

The Project support by JICA will be terminated on 31<sup>st</sup> March 2018 as agreed in the Record of Discussions on the Project for Promoting Catchment Management Activities in Middle Shire dated 10<sup>th</sup> January 2013.

RMT - Regional Management Team

SLRCO - Senior Land Resources Conservation Officer

TST - Technical Support Team

VH - Village Headman/woman

#### 1. INTRODUCTION

The Office of the President and Cabinet, Performance Enforcement Department (OPC - PED) undertook a mission to COVAMS II Project implementing districts from the 7<sup>th</sup> to 11<sup>th</sup> September 2015 following a meeting that was held between the COVAMS II Project Management Team and OPC-PED on 17<sup>th</sup> July 2015 on the challenges that the project was facing. The mission incorporated representation from the Ministry of Finance, Economic Planning & Development. The mission comprised of Mr. Elliot Phiri (Deputy Director for Policy, Programmes and Projects Assessment) who was the mission team leader from PED, Mr. Hansford Yusufu (Chief Policy, Programs and Projects Assessment Officer from PED), and Mr. Moses Chirwa (Assistant Director from Debt and Aid Division in the Ministry of Finance, Economic Planning and Development Headquarters). The mission was joined by Mr. Moses Millinyu (Programs Officer from JICA Office in Lilongwe) in an observer capacity.

The mission wishes to express its gratitude to the COVAMS II Project and the Japanese Government for the financial and technical assistance towards the implementation of the project and for facilitating communication, good collaboration and support with the implementing districts.

This report presents key findings and recommendations arising from the mission on the basis of discussions held with relevant project stakeholders listed in annex 1. The first section of the report gives an introduction, background and justification of the mission, the mission objectives and expected results. The second section dwells on the approach used to gather information while the third section gives a brief description of the COVAMS II Project. Key findings/lessons are presented in section four (findings for specific districts are presented in appendix 1) followed by mission advice to districts in section five. Key recommendations for districts are discussed in section six while those for central line ministries are presented in section seven followed by a conclusion in eight.

#### 1.1. Background and Justification of the Mission

The COVAMS II Project has been in progress since inception in 2013. It has registered reasonable success. However, there are inter-departmental management-related challenges that prompted the COVAMS II Project management core team to raise an alarm for intervention. The fact was that there was lack of or limited collaboration and cooperation among members of the District Management Team (DMT) who happen to be District Departmental Heads of sectors taking part in the project implementation. DMT is the body entrusted with providing guidance and offering overall management solutions at the District.

It was a concern because this is a team that would ensure and promote mainstreaming and sustainability of the environmental conservation package (COVAMS Approach) the project

was introducing in the communities of the Middle Shire River Catchment. The DMT's lack of commitment and failure to participate in the project processes in relation to its management spelt doom to a critical step in the cycle of operations and diminished the probability of continued support for institutionalisation and sustainability of the COVAMS Approach once the Project winds up.

This situation was brought to the attention of the Performance Enforcement Department (PED) in the Office of the President and Cabinet for an appropriate and decisive intervention and direction.

#### 1.2. Objectives of the Mission

The mission was aimed at achieving the following specific objectives:

- To identify origin and nature of the challenges faced by the members of the DMT that resulted in their failure to undertake their monthly management meetings;
- To understand the project institutionalization measures put in place and the challenges that the districts might face in the process.
- To determine and enforce solutions for addressing the management deficiency and lapses at the DMT level; and
- To identify any other factors affecting the operations and propose a way forward.

#### 1.3. Expected Results

The mission would be expected to produce a report with key findings, recommendations and direction given to the DMT and any relevant intervention to improve project implementation from the perspective of the district staff. The report would be shared with COVAMS II Project staff, the districts implementing the COVAMS II Project, the Ministry of Finance, Economic Planning & Development, the Ministry of Natural Resources, Energy and Mines for their positive action in a bid to resolve the challenges to make all operations of the project especially at the district smooth and effective. The report will also be shared with any other concerned and relevant authorities for their appreciation and support in certain cases.

#### 2. MISSION APPROACH

In an effort to find solutions to the challenges, the mission conducted stakeholder consultations in all the districts where the project is being implemented to understand the magnitude of the challenges that the COVAMS II Project Implementation Team is facing. During the consultative process which was done for five days (from 7<sup>th</sup> to 11<sup>th</sup> September, 2015), the mission held discussions with management, technical and field staff, and the beneficiaries (farmers) to appreciate the impact of the project on their livelihoods and the challenges associated with the implementation of COVAMS II Project in the four implementing districts of Blantyre, Balaka, Mwanza and Neno. In Blantyre and Balaka, the mission had the opportunity of meeting and hearing views of the District Commissioners.

The mission held discussions with District Management Team (DMT) in each district to appreciate and resolve challenges faced *vis-à-vis* the implementation of the Project. After discussing with each DMT, the mission visited some selected villages participating in the project in three districts except Neno to appreciate and verify the actual progress of project activities on the ground. At every site, sentiments and observations of the mission were shared with the district staff present at the meeting and encouragement extended to the farmers to sustain participation in the project and internalization of the practice as a livelihood principle. The mission gave decisive direction for the next steps for addressing the management apathy or deficiency. Annex 1 presents a list of officials and persons met during the consultation process. The Mission visited all the four districts of Blantyre, Balaka, Mwanza and Neno (refer to annex 2 for the mission programme). At the end of the visit in each district, the DMT was urged to implement the proposed resolutions.

The last day of the mission, 11<sup>th</sup> September, was reserved for a wrap-up where findings and some initial recommendations were shared with the COVAMS core-team members including the technical experts.

Subsequent to this, further consultations were done at the central level with the office of the Director of Forestry in the Ministry of Natural Resources, Energy and Mines who are coordinating implementation of the project, office of the Budget Director and that of the Debt and Aid Division in the Ministry of Finance, Economic Planning and Development and the Department of the Agriculture Extension Service in the Ministry of Agriculture, Irrigation and Water Development on 12<sup>th</sup> and 17<sup>th</sup> November 2015.

#### 3. BRIEF PROJECT DESCRIPTION AND OBJECTIVES

The COVAMS II Project is as a result of the successful implementation of the COVAMS Project in Blantyre District which achieved increased crop yields and significant reductions in soil erosion through three technologies of soil conservation, tree growing and gully control between the years 2007 and 2012. Following this, the Government of Malawi requested the Government of Japan further cooperation to scale up the approach developed by COVAMS to other areas of the Middle Shire Catchment.

The Project was scaled up to include additional areas in Blantyre District and select sites in Balaka, Mwanza and Neno in 2013 which are increased over time. The COVAMS II Project is aimed at promoting wide implementation of catchment management through farmers' activities (CMFAs) in target districts by building capacity of everyone in targeted communities in three technologies of tree growing, soil conservation and gully control. The purpose is to have CMFAs institutionalised in the target districts to ensure sustained implementation of the approaches by districts and communities. The immediate benefits of the project include prevention of soil erosion, improved natural environment by tree growing and increased crop yields.

#### 4. KEY FINDINGS

The findings have been subdivided into three, namely: community observations / lessons, institutionalisation issues, and key challenges on coordination and commitment towards implementation of the project. District-specific findings are presented in Appendix 1. This section focuses on the common observations.

#### 4.1.Community Observations / Lessons

Observations and lessons drawn from the engagement of the Office of the President and Cabinet mission are summarised below.

- a) The mission observed a great deal of commitment and ownership at the community level to continue with and sustain the implementation of COVAMS Approach owing to the visible benefits to the farmers' livelihoods. The mission was of the view that this deserves to be supported and encouraged to the benefit of the participating communities and Malawi as a nation.
- b) New members and village heads are willingly and massively joining the project after seeing the benefits that their colleagues have realised. Before this, many village heads and villagers refused or resisted to join but now they are encouraged by the attractive and convincing results they have seen on the ground e.g. increase in crop yield. The approaches, if fully supported financially and materially, may eventually reduce dependency on hand-outs. Over time, Government would only assume the role of advisor and supervisor to the communities.
- c) The COVAMS approaches are gaining maximum support from Village heads and other traditional leaders who are poised to embrace and sustain them.
- d) The Mission also observed that utilization of locally available materials has been vital to the catchment management. The implication is that communities will be able to continue with the catchment management activities in their areas thereby realizing more benefits at a lower cost.
- e) The rising demand for the COVAMS approaches in some districts has been attributed to the changes in the distribution of subsidized farm inputs. Communities are turning to the COVAMS approaches as a more sustainable means of realizing bumper yields which, at the same time, are assisting in conserving soil, water and the environment.
- f) There is reduction in staff turnover amongst extension workers at the grassroots due to some form of motivation under COVAMS such as provision of motor cycles that has eased official mobility challenges.
- g) The mission observed that community participation was all-inclusive and gendersensitive.

#### 4.2. Institutionalisation

- a) All districts gave the assurance that they would integrate COVAMS activities in their District Implementation Plans (DIPs) or Annual Work Plans of the participating departments at the district and allocate a budget to sustain and institutionalise the approaches.
- b) The Project has increased collaboration and networking amongst extension workers at the grassroots levels. The mission was of the view that multi-skilling for the extension service workers should, therefore, be encouraged to ensure greater impact and optimal utilisation of front line staff. This could be one way of reducing front line staff shortages. For example, Community Development Assistants are able to train farmers to construct soil conservation structures on the ground yet their original basic training does not cover that component. It is a skill acquired post-training in the field as a response to a felt need in communities they assistants serve.

#### 4.3. Keys Challenges on Coordination & Commitment at District Level

- i. The ineffective collaboration and dodgy cooperation among senior officials from the departments that constitute District Management Team (DMT) make the COVAMS II Project coordination, guidance and crucial decision making problematic. Departments are, therefore, unable to respond decisively to issues concerning the Project which could have implications on institutionalisation and sustainability later. The DMT is made up of Director of Planning and Development (DPD), District Forestry Officer (DFO), District Agriculture Development Officer (DADO), District Community Development Officer (DCDO) and Environmental District Officer (EDO). The DPD is the Chairperson and DFO is the Project Manager. The secretariat is assumed by the District Forestry Office.
- ii. There are communication challenges in scheduling of activities for DMT which is usually done by the secretariat without consulting with other DMT members and securing consensus. The districts also do not have calendar of events to inform DMT members of the schedule of activities.
- iii. There is lack of personal commitment by DMT Members to attend meetings.
- iv. In certain cases, DMT officials claim that they are not familiar with their terms of reference and are not clearly aware of their role in the COVAMS activities at the grassroots. In some cases, it was indicated that the work of CCOs and lead farmers was progressing very well. As such, the DMT saw no reason to be meeting with the assumption that the project could progress even without them. This mentality, however, militates against the idea of promoting sustainability and institutionalisation that will have to be later spearheaded by them as sector heads at the district.
- v. There is apparent constant comparison of projects being implemented within the districts. Projects with a lot of resources attract more enthusiastic and greater participation than technical cooperation projects; at times, DMT members show little or no commitment to the latter type of projects. On such a basis, there is lack

- of dedication to the COVAMS II Project despite the fact that it is a Government Project only receiving technical support from the Japanese Government.
- vi. Counterpart operational funds from the Government of Malawi (GoM) to the project had not been forthcoming as required and as per agreement. According to the Project Agreement, GoM was supposed to fully fund the operations while the Government of Japan through Japan International Cooperation Agency (JICA) would meet the cost of and provide technical assistance. Because the GoM delayed to disburse the required funding, JICA went out of the way to backstop the Government using its own resources to run the operations in order to facilitate and guarantee dynamic progress. In addition, the total funding contribution to be made by the GoM up to the end of the Project was not known to the core team.
- vii. Funds from Government are channelled through the Regional Forestry Office but the districts officials are not quite sure. Funding channels and amounts to be received are not clear to the district team which poses challenges of follow-up on the release of funds. Delays in accessing the Development Budget Part II funding from the Ministry Headquarters are frustrating the operations at the district level. The funds are also not enough to cater for the planned activities by the District Forestry Office (DFO) towards the project.
- viii. The channel of resources through the DFO seems to alienate and disappoint other sectors who are used to receiving funds through the District Development Fund (DDF).
  - ix. The model of implementation of COVAMS II Project was seen as unique and different from the other projects the districts were implementing or responsible for in that funds seemed hard to come by to facilitate operations. Members were silently expressing disenchantment with this reality and experience. During some field operations, field officers spent the whole day in the field without being provided meal/lunch allowances to cater for lunch when they operate away from home. Guidelines from Ministry of Local Government can regulate how the lunch allowances issue should be handled.
  - x. Failure to harmonise the COVAMS approach with other programs that are being implemented at the district level makes coordination and management of the Project awkward. Programmes with similar goals at the district are operating in isolation, hence not synergising for greater impact.
  - xi. In certain areas, such as Blantyre and Balaka, farmers have a challenge to raise local seedlings of some important tree species and acquire polythene tubes for raising seedlings. Such species are rarely available in the areas.
- xii. Dropping out of lead farmers inconveniences, frustrates and delays the promotion of the approaches since more training is conducted for the incoming lead farmers to prepare them for their role.

## 5. MISSION ADVICE AND DECISION ON HOW TO TACKLE THE DMT CHALLENGES

- i. The DMT members were reminded that the COVAMS II Project was uniquely designed, as per their observation, because its operations were basically designed to be funded by the GoM. However, the Government is currently experiencing financial challenges. The Government of Japan provides Technical Support and some capital equipment to facilitate the implementation. This means that the comparison that is being made between the Project and other projects that the districts are implementing is untenable and unnecessary. Implementation and participation in the Project should therefore be taken as one of the tasks in the regular operation of the respective sectors/departments. In this connection, the mission commended and encouraged the districts for conceiving institutionalization plans for the coming financial year that would promote mainstreaming and sustainability of COVAMS Approach.
- ii. The mission assured the district staff that the funding issue would still be pursued with the relevant authorities to ensure that financing pressures are eased off to some degree.
- iii. Notwithstanding this, the DMT was requested to draw up an acceptable calendar and use effective means of communication in reminding members of the forthcoming pre-scheduled meetings. The calendar and minutes of every meeting should be shared with the DC being the District Coordinator of the Project.
- iv. The PED mission would keenly follow the implementation of the recommendation and make another important visit after three months. Meanwhile COVMAS II Project management should be duty-bound to update PED on whatever would be happening to keep it in the loop.

## 6. OBSERVATIONS WITH RESPECT TO CENTRAL GOVERNMENT INSTITUTIONS

Three central government institutions were consulted, namely office of the Director of Forestry in the Ministry of Natural Resources, Energy and Mines who are coordinating implementation of the Project, office of the Budget Director and that of the Debt and Aid Division in the Ministry of Finance, Economic Planning and Development and the Department of the Agriculture Extension Service in the Ministry of Agriculture, Irrigation and Water Development. Issues that came out of the consultations are presented hereunder.

#### 6.1. Department of Forestry

- i. The project experienced funding challenges and has been unable to fund district activities adequately. The project is supposed to get Development Part II funding from Treasury. However, funding levels have been a challenge. For 2014/15 Financial Year, the Department only got MK15million out of the budgeted MK50million. For the current financial year 2015/16, the project has so far been funded MK10million. The total budget for this year is MK50million.
- ii. With inadequate funding, the Department had to ask for extra support from JICA to insure COVAMS II Project motor cycles for field staff in the districts.
- iii. The Department has been working a lot with the Land Resources Department in the Ministry of Agriculture. It was indicated that the Department of Agriculture Extension Services has not been able to participate in most of the project activities. Thus participation from DAES is extremely limited. Ironically, the project is building capacity of extension workers in executing their services in the implementing districts and these are under the DAES. PED is, therefore, of the view that such disjointed coordination may affect concomitant institutionalisation and subsequent sustainability of the COVAMS technologies.
- iv. In terms of financial resource flows, it was indicated that as soon as the Department is notified of funds by Treasury, it relays the message to the Regional Forestry Office. The RFO is expected to hold a meeting with all the four implementing districts to discuss the availability of funds and plan for the expenditures. Once this has been done, implementing districts are then requested to submit funding requirements through the RFO to the Department of Forestry Headquarters that then verifies the vouchers before submitting them to the Ministry of Natural Resources, Energy and Mines (MoNREM) Headquarters. At the MoNREM, the vouchers are processed for payments then submitted through the government accounting system to the Department of Accountant General for printing of cheques. This is contrary to what was learnt in the districts. Evidently, the districts are not aware of or unfamiliar with the funding channels.
- v. Department of Forestry acknowledged the vital role of the COVAMS technologies in tree growing and soil conservation. It proposed that the technologies be maintained in the communities.

#### 6.2. Ministry of Finance (Budget and Debt & Aid Division)

i. The project team does not provide or submit progress reports to Ministry of Finance, Economic Planning and Development. This affects funding levels as the

MoFEPD does not exactly have a clear picture of how the funds have been utilised or if the funds are being used for the intended purpose.

ii. It appears that Department of Forestry does not have an annual work plan on how to use the COVAMS II Project funds. This was evident through the fact that in the current financial year 2015/16 in July, when Treasury disbursed the first tranche of MK10million, the Department of Forestry has been unable to utilise all funds. This gives Treasury the impression that the Department of Forestry is unable to absorb all the funds under the Development Part II. As such, Treasury felt justified to change the funding levels hence the erratic and reduced funding to the Project.

#### 6.3. Department of Agriculture Extension Services

- i. The Department of Agricultural Extension Services is not directly involved in the coordination and implementation of the project at the central level. PED observed that perhaps this could explain why the Department is not represented in most of the COVAMS undertakings.
- ii. There are coordination and communication challenges at the central level as some key stakeholders in the project are not aware of the specific details of the COVAMS II Project.
- iii. PED is proposing the need for a joint meeting of the key stakeholders in the project: Department of Forestry, Land Resources, and DAES to iron out coordination issues at the central level.
- iv. The Directorate of Agriculture Extension Services (DAES) needs to support the desk officer on COVAMS within the Department to coordinate COVAMS II Project issues or attend COVAMS joint meetings.
- v. DAES is very critical in ensuring that the COVAMS technologies are institutionalised and sustained. It will also play a key role in replicating the COVAMS technologies elsewhere in the country. As such, its involvement is crucial.

#### 7. RECOMMENDATIONS

Recommendations have been categorised thus; those to be attended to by the Project and those that are directed to the central government institutions. They have been presented like that to ease referencing by the concerned entities.

#### 7.1.KEY RECOMMENDATIONS FOR DISTRICT MANAGEMENT TEAM

The following key recommendations were made in line with the observations on DMT operations at the district:

- i. It has been observed that DMT meetings hardly take place. When the meetings are convened, only very few key DMT members turn up. The following recommendations have been put forward:
  - a. The DMT should draw up an agreeable calendar of events through wider consultations to ensure member accommodation and buy-in. It must be circulated to all stakeholders once approved by the chairperson and endorsed by the DC.
  - b. Formal reminders should be made to DMT members probably three days before the meeting and statement of confirmation or otherwise secured.
  - c. DMT meetings must take place every month and minutes of the DMT meetings must be shared with the District Commissioner.
  - d. Time management at the DMT meetings is of essence so that they are not inadvertently prolonged to the discomfort of other members with pressing official matters to attend to.
  - e. In Blantyre, the venue for the DMT meetings must be identified and jointly agreed upon amongst the DMT members.
- ii. OPC PED will follow up on the implementation of the recommendations. The first follow up will be done after three months which will guide subsequent follow ups.
- iii. District officials need to assist farmers at the grassroots to solve local level challenges in relation to environmental conservation and management practices. During discussions with some of the lead farmers, the mission observed that the communities need support, encouragement and proper training in order to internalize the approaches and be persuaded to buy their own tools and inputs for use during implementation. However, in certain cases, farmers need support from the project especially on seedlings and tools that would be difficult for them to acquire.
- iv. Multi-skilling should be encouraged for field staff / extension workers to overcome the challenges of staff shortages.
- v. Districts should mainstream COVAMS Approaches in the environmental conservation practices by integrating into the District Implementation Plans as a way of institutionalising and sustaining the approaches. District Project staff must have access to the Project Document so that they appreciate that this is a Malawi Government project whose operations are to be funded from local resources.
- vi. There should be proper and effective documentation of results of the project in order to be able to demonstrate success and serve as a base for continuous learning.
- vii. Exchange visits should be encouraged and arranged for COVAMS district team members and lead farmers.

## 7.2. KEY RECOMMENDATIONS FOR CENTRAL GOVERNMENT INSTITUTIONS

Below are recommendations for various ministries for improving their role *vis-à-vis* the COVAMS II Project operations and subsequent mainstreaming and adaptation of COVAMS approach.

- a) There is need for Ministry of Local Government to coordinate program initiatives at the district council to avoid multiplicity of projects that operate independently and in a rather confusing manner. As such, there is need for a Development Partners Policy for local councils to guide districts on entry, coordination and implementation of projects.
- b) The funding channel for resources from Government need to be revisited to avoid delays in disbursements of funds, promote accountability and transparency. It is essential to enlighten stakeholders on the funding modalities and channels and how much resources they have been allocated to prevent disillusionment and speculation among them.
- c) The networking observed at the frontline staff level should be replicated with respect to various other government services supported by different ministries in the districts. This is likely to address the challenges of staff shortages and also promote coordination of programmes for greater impact. Even the initiative-specific operational, administrative and management structures of the COVAMS can be adapted to enrich focus in other district initiatives.
- d) The COVAMS II Project approaches have potential to increase productivity and be sustainable since most of the activities require only personal commitment from the farmers. As such, it is recommended that the ministry responsible for agriculture should look into the approaches with all the seriousness they deserve in order to improve on food security and promote replication to other areas. Progressive rolling out of COVAMS approach has the potential to facilitate phasing out of the Farm Input Subsidy Programme.
- vi. The tree-growing practice incorporated in COVAMS should be encouraged to address the rampant deforestation and control siltation of important rivers in the country. It is imperative that the Ministry responsible for forestry and environment management takes this matter seriously.
- vii. There is need for a joint meeting of the key stakeholders in the project: Department of Forestry, Land Resources, and DAES to iron out coordination issues at the central level.
- viii. The Director of Agriculture Extension Services (DAES) needs to support the desk officer within the Department to coordinate COVAMS II Project issues or attend COVAMS joint meetings.
- ix. DAES is very critical in ensuring that the COVAMS technologies are institutionalised and sustained. It will also play a key role in replicating the COVAMS technologies elsewhere in the country. As such, its involvement is absolutely crucial.

- x. Introduction of COVAMS approach in various colleges and other tertiary training institutions that provide soil and environmental conservation training should be strongly considered. The onus for this lies with the Ministry responsible for environmental conservation and management.
- xi. Ministry of Natural Resources, Energy and Mines should submit status and progress reports to the Ministry of Finance, Economic Planning and Development
- xii. Ministry of Finance, Economic Planning and Development specifically Treasury should honour its obligation in releasing finances for the Project to facilitate its operations. This does not prevent Treasury to insist on the accountability of the disbursed resources.

#### 8. CONCLUSION

The COVAMS approach is a very good initiative for Malawi as a country. The benefits that farmers are realising on the ground are significant and telling. The approach can also help the country tackle some of its serious common environmental and soil conservation and food security challenges. Implementation of the recommendations outlined in this report would help ease the challenges that the project is currently facing. This report has described what was obtaining in the COVAMS II project sites, what should be done to address challenges that face the project and what is being done to promote institutionalization of the COVAMS approach in the project areas. In addition, a number of recommendations that have been advanced will be shared with project and concerned ministries to renew their interest and draw practical lessons for further consideration in the current project and future endeavours and initiatives. Above all, it has indicated the direction the Office of the President and Cabinet has given to restore discipline in the DMT so that confidence of the project coordinating and core team in the desirable possibility of mainstreaming and sustainability of COVAMS approach is reinforced and firmly cemented.

#### APPENDIX I – KEY FINDINGS PER DISTRICT

#### Day 1: Blantyre District

The first Project site to be visited was Blantyre district. On the first day of the Performance Enforcement Department (PED) mission, 7th September 2015 consultations took place at three separate venues. First, a preparatory meeting was conducted in the Blantyre District Forestry Office Conference Room in Kanjedza in the presence of the COVAMS II Project management core team and other members of the district secretariat as shown in the annex. Next meeting took place in the Blantyre District Council Office Conference room which was preceded by a courtesy call at the District Commissioner's office. Lastly, a field visit was conducted around Lirangwe in Gombe Village, TA Lundu (Blantyre Rural). Ensuing from stakeholder consultations in Blantyre District, the PED mission made a number of observations and key findings which are highlighted below.

- 1. The COVAMS II Project management core team stated that counterpart operational funds from the Government of Malawi (GoM) to the Project had not been forthcoming since inception. In addition, the total funding contribution the GoM is expected to make up to the end of the Project was not known. According to the Project Agreement, GoM was supposed to fully fund the operations while the Japanese Government through JICA would meet the cost of and provide technical assistance. Because the GoM delayed to disburse the required funding, JICA went out of the way to backstop the Government using its own resources to run the operations in order to facilitate and guarantee dynamic progress.
- 2. The ineffective collaboration and dodgy cooperation among senior officials from the departments that constitute District Management Team (DMT) make the COVAMS II Project coordination, guidance and crucial decision making problematic. Departments are, therefore, unable to respond decisively to issues concerning the Project which could have implications on institutionalisation and sustainability later. The DMT is made up of Director of District Planning (DPD), District Forestry Officer (DFO), District Agriculture Development Officer (DADO), District Community Development Officer (DCDO) and Environmental District Officer (EDO). The DPD is the Chairperson and DFO is the Project Manager. Secretariat is assumed by the District Forestry Office. As highlighted during the consultations, the difficulties in coordination could possibly arise from the following:
  - a. The *de facto* venue for the District Management Team Meetings (at the District Forestry Office) was considered not suitable for the participation of all the stakeholders due to long distances to be travelled. The proposal to change the venue to the District Council, considered as the *de jure* venue, did not seem to solve the challenge of poor or unsatisfactory attendance by members from the other constituent Departments of the DMT i.e. DPD, DADO, DCDO and EDO. However, when the District Forestry Office reverted to the former venue of meetings without formality or announcement, this inadvertently attracted alienation and resentment from the rest of the members.
  - b. The other members also cited lack of fuel as the major contributing factor. However, since it was observed that there was already a degree of non-commitment amongst the other team members, as such, no fuel support was extended to them. With respect to other meetings, choice of alternative venues in Blantyre necessitated that officers take up accommodation at the meeting or event venue to ease logistics and facilitate attendance. Nonetheless, COVAMS II Project management was considered inflexible to

permit some members to operate from home in that such choices were not supported with alternative arrangements because that was considered to contravene JICA policy, regulation and practice.

- 3. The model of implementation of COVAMS II Project was seen as unique and different from the other projects the district is implementing or responsible for in that funds seem hard to come by to facilitate operations. Members are silently expressing disenchantment with this reality. During some field operations, meal allowances are not provided or the officers are not allowed an opportunity to take or go to look for lunch. Members of the field staff are not given lunch allowances to cater for lunch when they operate away from home.
- 4. Delays in accessing the development budget part II funding from the Ministry Headquarters are frustrating the operations at the district level. The funds are also not enough to cater for the planned activities by the District Forestry Office. It is claimed that funds are processed through the Department of Forestry headquarters in Lilongwe posing challenges of follow-up on the physical release of the funds.
- 5. Failure to harmonise the COVAMS Approach with other programs that are being implemented at the district level makes coordination and management of the Project awkward. Programmes with similar goals at the district are operating in isolation, hence not synergising for greater impact.
- 6. The DC was of the view that there is need for Ministry of Local Government to provide policy guidance to facilitate coordination of program initiatives at the district council to avoid multiplicity of projects that operate in parallel and in the process fail to reinforce or complement each other.
- 7. The DC gave the assurance that the next annual planning round would witness the integration of the COVAMS activities in district implementation plans of the participating departments at the district.
- 8. There was a strong disposition that COVAMS Approach should be part of the training curriculum for forestry officers to ensure sustainability.
- 9. There is a great deal of commitment at the community level to continue with the implementation of COVAMS Approach. This deserves to be supported and encouraged to the benefit of the participating communities and Malawi as a nation.
- 10. Mind-set change of the villagers is a challenge. Households are not adopting the technologies with anticipated speed but prefer to carry on with the methods they are familiar with. Nevertheless, new members are joining as they observe the benefits accruing to those that have adopted and are practising the novel technologies that are progressively paying off.
- 11. Farmers are in need of seeds of other important tree species and polythene tubes for raising seedlings.
- 12. Village heads and other traditional leaders are poised to embrace, support and sustain the approach.
- 13. At the conclusion of the meeting, the mission left with a sense that the DMT would resume meeting by following their schedule which would be consultatively determined.

#### Day 2: Balaka

On the second day of the PED mission, 8<sup>th</sup> September 2015, consultations took place at two separate venues in Balaka District. The first venue was the DC's office where the meeting was patronised by the majority of the members of the DMT in the presence of the DC. The next venue was the field at three separate localities: the first field visit occurred at a senior lead farmer's garden in Fulanjobvu village that is under the Group Village Headman Chanthunya II in TA Chanthunya, the second was a stopover at Thombozi village in TA Chanthunya where the mission was briefed on manure-making and last point was at Phalula EPA where farmers, lead farmers and senior lead farmers gathered and made a presentation of successes and challenges of COVAMS in the presence of Group Village Headmen and Village Headmen.

Proceeding from the stakeholder consultations in Balaka District, the PED mission made some observations and key findings thereof are summarized below.

- 1. There is a communication concern amongst the top level officials of the District Management Team (DMT). The communication that is used is not effective. Invitation to the meeting is made through SMS (mobile cellphone short message system).
- 2. Secretariat develops schedules for the DMT meetings without consulting with other DMT members and securing consensus.
- 3. There is lack of personal commitment by DMT Members to attend meetings.
- 4. The DC was not updated on the challenges DMT was facing with respect to its failure to hold scheduled meetings.
- 5. There is constant comparison of projects being implemented within the districts. Projects with a lot of resources to attract greater participation than technical cooperation projects. There is lack of ownership of the COVAMS II Project despite the fact that it is a government project only receiving technical support from the Japanese Government.
- 6. The high-level DMT officials claim that they are not familiar with their terms of reference (ToRs).
- 7. The channel of resources through the DFO seems to alienate and disappoint other sectors who are used to receiving funds through the District Development Fund (DDF).
- 8. Support from other sectors is made available in complementing COVAMS II project resources e.g. from DADO Office. Such support can entrench the inclination towards institutionalisation of the COVAMS Approach.
- 9. The district institutional arrangements for COVAMS II are well structured and the most effective. They may just need to be reinforced and respected.
- 10. The district is considering including COVAMS activities in the annual work plans (Development Implementation Plans) to institutionalise the approaches.
- 11. There is enthusiastic commitment at the community level to continue implementation of COVAMS Approach. The mission in the discussion with some of the lead farmers observed that the communities need support, encouragement and proper training in order to internalize the approach and be persuaded to buy their own tools for use during implementation.
- 12. The senior lead farmers and lead farmers made a request for the following items to enable smoothing operations:
  - a. Polythene tubes
  - b. Lining level
  - c. Strings
  - d. Watering canes

- e. Wheelbarrows
- f. Picks
- g. Shovels
- h. Bicycles for lead farmers who do not have
- i. Starter packs as farmers failed to yield a good crop due to drought

#### Day 3: Mwanza

On the third day of the PED mission, 9<sup>th</sup> September 2015, consultations took place at two separate venues also in Mwanza District. The first venue was the District Council's Conference Room where the meeting was patronised by some of the members of the DMT. The next venue was the field at two separate localities in TA Govati: the first locality was the community clinic where there were presentations from senior lead farmers and a discussion at Group Village Headman Sembedzera in the presence of some lead farmers and traditional leaders including GVH Sembedzera himself. A visit was also made at the garden of a senior lead farmer to show swales and a re-orientation of ridges.

Ensuing from stakeholder consultations in Mwanza District, the PED mission made a number of observations and key findings thereof are highlighted below.

- 1. There are challenges in scheduling of activities for DMT which is usually done by Forestry in isolation of other DMT members and that there is limited communication within the DMT set up.
- 2. The issue of comparison between projects is still apparent and at times does affect commitment by DMT members.
- 3. The issue of allowances did not appear prominently but remains an issue. Guidelines from Ministry of Local Government can regulate how the allowances issue should be handled.
- 4. The DMT is aware of their Terms of Reference and participated in their revision to suit the situation. The ToRs were adapted from a prototype developed by Japanese Government and Malawi Government during the preparation of the project.
- 5. The issue of absenteeism at crucial DMT meeting by DMT members has been resolved when COVAMS II project management permitted delegation of bona fide members at meetings. However, DMT Members were advised to keep delegation to a minimum to ensure consistent participation of the bona fide members during passing of key decisions concerning the COVAMS Project.
- 6. Funds from Government are channelled through the Forestry Regional Office but the districts officials are not quite sure.
- 7. Maintenance of motor vehicles and motor cycles is a challenge due to the government requirement to have the vehicles certified by PHVO Personnel in Blantyre.
- 8. The district has planned to include COVAMS activities in the development implementation plans and allocate a budget to institutionalise the approaches.
- 9. New members and village headmen are willingly and massively joining the project after seeing the benefits that their colleagues have realised. Before this, many village headmen and villagers refused or resisted to join but now they are encouraged by the attractive and convincing results they have seen on the ground e.g. increase in crop yield.
- 10. There is reduction in staff turnover amongst extension workers at the grassroots due to some form of motivation such as provision of motor cycles that eased their mobility challenges.
- 11. The Project has increased collaboration and networking amongst extension workers at the grassroots. Multi-skilling for the extension service workers should, therefore, be encouraged to ensure greater impact and optimal utilisation of front line staff. This could be one way of reducing front line staff shortages. For example, Community Development Assistants are able to train farmers to construct soil conservation structures on the ground yet their original basic training does not cover that component.

- 12. The project has enabled collaboration amongst various sectors at the district level which can be adopted in the overall general operations at the district.
- 13. There is need to organise exchange visits for lead farmers amongst implementing districts to learn from each other.
- 14. Entry point of development partners should be the District Commissioner. There should be guidelines from the Ministry of Local Government which should be adapted to the district context to cater for standardization and synergies in project implementation e.g. the issue of allowances, fuel management etc.

#### Day 4: Neno

On the fourth day of the PED mission, 10<sup>th</sup> September 2015, consultations took place at only Neno District Commissioner's office. Due time constraints, field visits were called off. Proceeding from the stakeholder consultations in Neno District, the PED mission made some observations and key findings thereof are summarized below.

- 1. DMT members do not attend DMT meetings. They claim to be busy. The district never had a full DMT meeting before.
- 2. The district indicated that they will be taking COVAMS Activities into their development implementation plans.
- 3. The motor cycles under the COVAMS approaches has eased mobility challenges.
- 4. The challenges with farm input subsidy have forced people to adopt manure making under COVAMS II Approaches. The approaches under the project will eventually reduce dependency on handouts.
- 5. After the first year of implementation, there has been overwhelming response from farmers who are eager to adopt COVAMS Approach.
- 6. Field officers spend the whole day in the field while not getting any lunch allowances.
- 7. Funding channels and amount to be received are not clear to the district team.
- 8. Dropping out of lead farmers inconveniences, frustrates and delays the promotion of the approaches for more training is required for incoming lead farmers.
- 9. The district has no calendar of events to inform DMT members of the schedule of activities.
- 10. There are challenges with the role of DMT involvement in the COVAMS activities at the grassroots. There is need to find a way to involve DMT members for active participation. It was observed that the work of CCOs and lead farmers was progressing very well, as such the DMT saw no reason to be meeting with the assumption that the project can progress even without them. This mentality however militates against the idea of promoting sustainability and institutionalisation that will have to be later spearheaded by them.

## APPENDIX 2: KEY FINDINGS PER CENTRAL GOVERNMENT INSTITUTION

### Department of Forestry 12th November, 2015

The following key issues were observed during the consultations with the Department of Forestry in Lilongwe District on COVAMS II Project.

- i. The project experienced funding challenges and has been unable to fund district activities adequately. The project is supposed to get Development Part II funding from Treasury. However, funding levels have been a challenge. For 2014/15 Financial Year, the Department only got MK15million out of the budgeted MK50million. For the current financial year 2015/16, the project has so far been funded MK10million. The total budget for this year is MK50million.
- ii. With inadequate funding, the Department had to ask for extra support from JICA to insure COVAMS II Project motor cycles for field staff in the districts.
- iii. The Department has been working a lot with the Land Resources Department in the Ministry of Agriculture. It was indicated that the Department of Agriculture Extension Services do not participate in most of the project activities. Thus participation from DAES is extremely limited. Ironically, the project is building capacity of extension workers in executing their services in the implementing districts and these are under the DAES. PED is, therefore, of the view that such disjointed coordination may affect concomitant institutionalisation and subsequent sustainability of the COVAMS technologies.
- iv. In terms of financial resource flows, it was indicated that as soon as the Department is notified of funds by Treasury, it relays the message to the Regional Forestry Office. The RFO is expected to hold a meeting with all the four implementing districts to discuss the availability of funds and plan for the expenditures. Once this has been done, implementing districts are then requested to submit funding requirements through the RFO to the Department of Forestry Headquarters that then verifies the vouchers before submitting them to the Ministry of Natural Resources, Energy and Mines (MoNREM) Headquarters. At the MoNREM, the vouchers are processed for payments then submitted through the government accounting system to the Department of Accountant General for printing of cheques. This is contrary to what was learnt in the districts. Evidently, the districts are not aware of or unfamiliar with the funding channels.
- v. Department of Forestry acknowledged the vital role of the COVAMS technologies in tree growing and soil conservation. It proposed that the technologies be maintained in the communities.

## Ministry of Finance, Economic Planning and Development 12th November, 2015

The following key issues were observed during the consultation with the Ministry of Finance, Economic Planning and Development in Lilongwe District on COVAMS II Project.

- i. The project team does not provide or submit progress reports to Ministry of Finance. This affects funding levels as the MoF does not exactly have a clear picture of how the funds have been utilised or if the funds are being used for the intended purpose.
- ii. It appears that Department of Forestry does not have an annual work plan on how to use the COVAMS II Project funds. This was evident in the fact that in the current financial year 2015/16 in July, when Treasury disbursed the first tranche of MK10million, the Department of Forestry has been unable to utilise all funds. This gives Treasury the impression that the Department of Forestry does not require all the funds under the Development Part II. As such, Treasury felt justified to change the funding levels hence the erratic and reduced funding to the Project.

## Department of Agriculture Extension Services 17th November, 2015

The following key issues were observed during the consultation with the Department of Agriculture Extension Services in Lilongwe District on COVAMS II Project.

- i. The Department of Agricultural Extension Services is not directly involved in the coordination and implementation of the project at the central level. PED observed that perhaps this could explain why the Department is not represented in most of the COVAMS undertakings.
- ii. There are coordination and communication challenges at the central level as some key stakeholders in the project are not aware of the specific details of the COVAMS II Project.
- iii. PED is proposing the need for a joint meeting of the key stakeholders in the project: Department of Forestry, Land Resources, and DAES to iron out coordination issues at the central level.
- iv. The Director of Agriculture Extension Services (DAES) needs to support the desk officer within the Department to coordinate COVAMS II Project issues or attend COVAMS joint meetings.
- v. DAES is very critical in ensuring that the COVAMS technologies are institutionalised and sustained. It will also play a key role in replicating the COVAMS technologies elsewhere in the country. As such, their involvement is crucial.

#### TO CR of JICA MALAWI OFFICE

#### PROJECT MONITORING SHEET

<u>Project Title: Promoting Catchment Management Activities in Middle Shire</u> Version of the Sheet: Ver.01 (Term: April, 2015 - September, 2015)

Name:	
Title:	
Submission Date:	November, 2015

#### I. Summary

#### 1 Progress

#### 1-1 Progress of Inputs

From September, Japanese project members of the latter half of the project has been dispatched as scheduled, and the inputs from the members of the first half of the project were implemented as scheduled.

#### 1-2 Progress of Activities

Capacity improvement of district staff is in progress through several sessions of trainings implemented during this term, as well as the institutionalization of COVAMS approach has been taken into action.

#### 1-3 Achievement of Output

- Output 1: No progress since the last term.
- Output 2: Trainings for the district staff on the management of the implementation of COVAMS were conducted. The topics of the trainings were: Facilitation Skill; Motivation Study; Report Writing; Data Analysis; and COVAMS approach orientating skill. The trainings were all in-class trainings, and the last training on the COVAMS approach orientation was implemented along with the actual orientation towards the new staff members of the COVAMS in the district.
- Output 3: Reports on Soil Loss Study and Gully Control practices has been issued with the analyzed data collected during the research.
- Output 4: Short-term expert was dispatched to develop materials for institutionalization of COVAMS approach. During the dispatch, power point presentation, brochure, and a poster were developed as the means of promotion materials. Along with the materials produced, radio programs were broadcasted with the aim to encourage and motivate the farmers practicing COVAMS approach, and a PR to those who are not practicing the COVAMS approach.

#### 1-4 Achievement of the Project Purpose

Institutionalization is divided into three factors; authorization of approach, secure human resource, and funds.

As of the human resources, the trainings are been implemented, and there are little improvements that can be seen through the monthly reports and documents submitted from the districts.

As of the funding, the cooperation from the C/Ps in the central government are fundamental, and therefore, a visit to the office of the President and Cabinet was made to gain support on the coordination amount the different Ministry C/Ps.

#### 1-5 Changes of Risks and Actions for Mitigation

In Balaka district, due to the failure of proper management by the PM and one of the TST, the project activity situation has deteriorated during September. Most activities by the CCOs and TST had been stopped during the month. This was revealed at the PM Meeting on 30<sup>th</sup> September, and therefore, meetings and problem analysis has been scheduled at the begging of October by both the RMT and Japanese Experts to resolve the situation, and bring back the activities on track.

For the actions to be taken to mitigate the situation of lack of funding from the GoMW side, the involvement of the central government are fundamental and their coordination is crucial. Thus, from October onwards, approaches towards the Central Government agencies will be made frequently, starting with the first step of explaining the COVAMS approach.

#### 1-6 Progress of Actions undertaken by JICA

Short term experts were dispatched as scheduled.

#### 1-7 Progress of Actions undertaken by Gov. of Malawi

New district staffs of Balaka has been allocated, however, the replacement has not been processed yet, and is causing deterioration in the OCVAMS activities in Balaka district.

## 1-8 Progress of Environmental and Social Considerations (if applicable)

## 1-9 Progress of Considerations on Gender/Peace Building/Poverty Reduction (if applicable)

Progress has been seen during the harvesting season of Maize in the previous term of monitoring sheet.

## 1-10 Other remarkable/considerable issues related/affect to the project (such as other JICA's projects, activities of counterparts, other donors, private sectors, NGOs etc.)

In district such as Neno and Balaka where projects by other organizations are implemented, there are times where the meetings which has been scheduled under the

COVAMS activities are canceled due to other activities of other projects.

#### 2 Delay of Work Schedule and/or Problems (if any)

#### 2-1 Detail

- 1) Four courses of trainings were not implemented as scheduled during 2014/2015.
- 2) Approaches towards the Central Government C/Ps were not implemented proactively.

#### 2-2 Cause

- 1) RMT members who were scheduled to be the lecturers and district staffs who were to be the participants could not manage to secure time to participate in the training, due to their other activities. Also the funds which were supposed to be supported from the GoMW side was not allocated.
- 2) The activities throughout the project were much focused on the district level, and therefore, including the funding allocation issue, the approaches were not made towards the Central Gevernment.

#### 2-3 Action to be taken

- 1) As the training was not the crucial course to be implemented, it can be rescheduled if the training is still observed to be necessary.
- 2) As mentioned earlier, from October, Japanese Experts will make frequent visits to the C/Ps and related agencies promoting the COVAMS approach.

#### 2-4 Roles of Responsible Persons/Organization (JICA, Gov. of Malawi,etc.)

New members of the project from IC Net Limited, C/Ps in the Central Government, Governors of the target districts.

#### 3 Modification of the Project Implementation Plan

#### 3-1 PO

Modified in the activities of the project Outputs (see the attachment).

#### 3-2 Other modifications on detailed implementation plan

(Remarks: The amendment of R/D and PDM (title of the project, duration, project site(s), target group(s), implementation structure, overall goal, project purpose, outputs, activities, and input) should be authorized by JICA HDQs. If the project team deems it necessary to modify any part of R/D and PDM, the team may propose the draft.)

The modification of the PDM is suggested with the additional activity proposed.

# 4 Preparation of Gov. of Malawi toward after completion of the Project Allocation of the funding is crucial in the institutionalization of the COVAMS approach activities. Therefore, actions for the CMFA to be included in the District Implementation Plan/ Annual Investment Plan will need to be continuously implemented.

#### II. Project Monitoring Sheet I & II as Attached

#### Project Design Matrix (Revision of Project Design Matrix)

Annex 5. Monitoring Sheet Version 1
Dated ●●, November 2015

Project title: Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II) Implementation Agency: Departent of Forestry, Ministry of Natural Resources, Energy and Mines, Blantyre, Balaka, Mwanza, and Neno Districts
Target group: Management staff and extension staff of the four districts
Period of Project: Five (5) years. April 2014 - March 2018
Project Site: Four (4) districts in Middle Shire (Blantyre, Balaka, Mwanza, Neno)

[n	T all 11 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1		1		
Narrative Summary Overall Goal	Objectively Verifiable Indicators	Means of Verification	Important Assumption	Achievement	Remarks
Catchment management through farmers' activities (CMFA) are widely implemented in target districts.	CMFA spread to other TAs in target districts     CMFA using COVAMS approach utilized by other donors' projects operated in target districts	District annual work plans of the target districts     Performance reports of the target districts			
Project Purpose CMFA is institutionalized in target districts.	CMFA included in the District     Strategic Development Plan of each     target districts     The plan of CMFAs using COVAMS     approach carried out in each     target district.	Project reports     District Strategic Development Plan	- Each target district allocates budget for the indicators expansion of the implementation of - District Strategic Development Plan is developed and updated in each target district.		
Outputs  1. Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.	1.1 The plan of CMFA using COVAMS approach included in District Implementation Plan/Annual Investment Plan of each target district. 1.2 District Implementation Plan/Annual Investment Plan approved by full council of target districts	1.1 District Implementation Plan/Annual Investment Plan of four districts     1.2.1 Official document related to the CMFA in the districts     1.2.2 Project reports	- Consolidated District Annual Work Plan is compiled and updated in each target District  - Administrative and financial institutional changes in central ministries and local administration do not affect the Project activities	Achievements are provided with the detailed descriptions of the	
Capacity of management and extension staff in target districts is improved in operation of COVAMS approach.	Capacity improvement  Number of training subjects described in the training Plan	Capacity improvement  Needs Assessment Report			
	Number of training conducted, at least one time each subject Number of trained DMT members Number of trained TST members Number of trained CCOs	Training plan  Training materials  Reports on training			
	Implementation of COVAMS approach Annual working plan prepared in each Number of village covered by COVAMS approach Number of trained LFs Number of trained SLFs	Implementation of COVAMS approach annual working plans of four target Monthly reports from the districts Monitoring reports			
	Detail of indicators is described in the attached table	Households list Other records and documents Project report			
	Impact as the result of capcacity improvement and implementation of COVAMS approach Refer indicators for the output 3 bellow				
3. Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research.	Extention method -Compiled reports which explain following items - Number of training conducted in the villages by LFs - Number of HHs trained by LFs and the % to the total number of HHs in each pilot TA - Number of HHs adopted COVAMS techniques and the % to the total number of HHs of pilot TA -Cost of COVAMS approach operation - Comparison between COVAMS LFs and other LFs	Research plans Research reports Project Reports Monitoring report from four target districts			
	Detail of indicators is described in the attached table.  Extension subject - Compiled reports which explain				
Ownership of the COVAMS approach is enhanced among leaders of	following items - Soil volume protected from erosion from gardens and small scale gully - Yield increased after adopting contour - Number of organizations received	- Plan for disseminating information			
all levels.	explanation on COVAMS approach (related departments=8, donor projects =3, and others) - Number of leaders received explanation on COVAMS approach (Number of organizations x 2= 22 and others) - Number of sharing meeting and seminars (4 times x 2years =8)	- Submitted reports - Officiel document - Minutes of Shire River Basin Coordinating Meeting - Other Project reports			

Activities	Inc	puts	Important Assumptions
Activities for Output 1: Plans of CMFA using COVAMS approach	The Japanese Side	The Malaian Side	- Area Stakeholders Panels and village
are integrated in to District Implementation Plan/Annual Investment Plan of target districts.	The Japanese Side	The Malalan Side	heads of pilot TAs agree with the purpose of the Project and participate in activities.
1-1. Orient stakeholders in the districts on the COVAMS II project and COVAMS approach	(1) Advisors - Team of advisors headed by Chief Advisor	(1) Human resource for the operation of the Project	- Socio-economic and political conditions do not affect adversely to activities of the Project (shortage of petrol, etc.)
1-2. Set up district management team under DESC	- Technical areas include Soil Erosion Control, Rural Development, Research, Training and Extention, Publicity, Monitoring and Evalution	- Project Director, Regional Project Coordinator, Regional Management Team members, Project Managers in 4 target districts, District Management Team members, Conservation Coordinating Officers, Administrative personnel, Various Supporting Staff and	- Climate conditions do not change drastically.
1-3. Facilitate group village headmen in target districts to include CMFA using COVAMS approach in the village - Team of advisors headed by Chief Advisor	(2) Equipment - Vehicles, Motorcycles, Training Equipment and other necessary	(2) Office working environment     - Suitable office space with necessary equipment	<ul> <li>Trained management staff and extension staff continue their services in their respective positions.</li> </ul>
1-4. Implement training sessions for the district staff to strengthen their	(3) Training courses for counterpart	(3) Funds	
abilities on formulating activity implementing plan and annual input plan	personnel in Japan		
towards budget allocation 1-5. Integrate CMFA plan into district implementation plan and/or annual implementation plan (DIP/AIP), based on VAPs		- Running expenses necessary for the implementation of the Project such as allowance for GOM project staff, office management costs,	
1-6. Obtain approval from full council on the DIP/AIP	(4) Funds - A part of operation cost		
Activities for Output 2: Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.  2-1. Assess capacity of district staff in operation of COVAMS approach through observation and assessment survey.  2-2. Prepare capacity improvement plans on COVAMS approach and project management			
2-3. Improve capacity of district staff by On the Job Training through implementation of COVAMS approach 2-3-1. Introduce COVAMS approach to district teams 2-3-2. Prepare annual working plan 2-3-3. Implement COVAMS approach according to the annual working plan 2-3-4. Monitor progress of implementation of COVAMS approach 2-3-5. Review annual activities 2-4. Improve capacity of district staff by training 2-5. Monitor degree of capacity improvement of district staff 2-6. Evaluate capacity improvement plan and improve it if necessary			
Activities for Output 3: Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research.  3-1. Conduct research on extension method of COVAMS approach 3-1-1. Design research 3-1-2. Conduct research survey and data collection 3-1-3. Compile result of survey and data collection as a report 3-2. Conduct research on extension subjects of COVAMS approach			Pre-conditions - Collaborating institutions (LRCD, DAES, DCD)
3-2-1. Design research 3-2-2. Conduct research according to the design 3-2-3. Compile result of the research as a report			are fully supportive DCs of target districts are fully supportive.
Activities for Output 4: Ownership of the COVAMS approach is enhanced among leaders of all levels. 4-1. Plan activities to promote understanding of the leaders and organizations on 4-1-1. List up target groups of the promotion 4-1-2. Compile action plan to promote understanding of the target groups 4-1-3. Prepare necessary explanation materials for promotion 4-2. Implement planned activities to promote understanding of the leaders and organizations on the CMFA using COVAMS approach 4-3. Evaluate promotion results and modify/ improve plan if necessary			Issues and countermeasures

#### PROJECT MONITORING SHEET

**Project Title: Promoting Catchment Management Activities in Middle Shire** 

Version of the Sheet: Ver.01 (Term: September, 2015 - May, 2016)

Name: Masato Onozawa

Title: Team Leader/ Institutionalization 1

Submission Date: May 31, 2016

# I. Summary

#### 1 Progress`

The Japan International Cooperation Agency (JICA) has entrusted IC Net Ltd. to carry out the latter half of the Project for Promoting Catchment Management Activities in Middle Shire Phase II (COVAMS II) since September 2015. A team of consultants led by Mr. Masato Onozawa has been dispatched to the Forestry Department in Limbe, Blantyre and have taken over the project activities from the long-term Japanese experts dispatched since 2013 by JICA.

## 1-1 Progress of Inputs

1-1-1 Assignment of Counterpart Personnel

(See Appendix for the list of counterpart)

**Table 1 List of Key Counterpart Personnel** 

Title/ Responsibilities	Affiliate/ Ministry	Name
Principle Secretary	Ministry of Natural Resource Energy and Mining (MoNREM)	Mr. Kester Kaphaizi Botolo
Deputy Director of Forestry Department	MoNREM, Forestry Department	Mr. Thomas Makhambere Francis Chilimampunga
Director of Agricultural Extension Service, Agricultural Extension Service Department	Ministry of Agriculture, Irrigation and Water Development (MoAlWD),	Mrs. Stella Kankwamba
Director of Community Development Dept. Of Community Development	(MoGCDSW)	Mrs. Clotilda Sawasawa
Deputy Director, Department of Performance Enforcement	Office of the President and Cabinet (OPC)	Mr. Elliot Phiri
Regional Forestry Officer (South)-RFO (S), Department of Forestry,	MINISTRY OF NATURAL RESOURCE ENERGY AND MINING (MONREM)	Mrs. Cecilia Chauluka
District Forestry Officer, Balaka	MoNREM	Mr. Baird Nangwale
District Forestry Officer, Blantyre	MoNREM	Mr. Geoffrey Kanyerere
District Forestry Officer, Mwanza	MoNREM	(Late) Mr. Brian Mtambo (As of June 2016, vacant). Mr. Gregory Kulemeka (from July, 2016)
District Forestry Officer, Neno	MoNREM	Mr. Emmanuel Ngwangwa
Assistant District Forestry Officer, Blantyre, Regional Management Team	MoNREM	Mr. Peter Mkwapatira

(RMT)

# 1-1-2 Assignment of Japanese Experts

The Project inaugurated in October 2013 followed by the dispatch of long-term experts from JICA (Table 2). Since September 2015, the consultant team has been dispatched and taken over the Project (Table 3). The following is the summary of the assignment of the experts as of the end of May 2016.

# 1) Experts (Dispatched by JICA)

Table 2 List of Experts (April 2013-October 2015)

Promotion of SATOYAMA Initiative: Biodiversity Conservation and Community Promotion through the Sustainable Management of Natural Resources	2015	October 12 – November 14, 2015	Mr. Drake Chiningwa	TST/ Forestry, Assistant Director, Mwanza Forestry Department Ministry of Natural Resources Energy and Mines	Output 2
Farmer-led Extension Method (Curriculum Development for Motivating Farmers)	2016	May 1 – June 1, 2016	Mr. Maxwell John Moyo	CCO/ Agriculture, Balaka Agriculture Development Department, Ministry of Agriculture, Irrigation and Water Development	Output 2

#### 1-2 Progress of Activities

Capacity improvement of district staff is in progress through several sessions of trainings implemented during this term. In addition, the institutionalization of COVAMS approach has been taken into action. Details are explained as shown in the following section (1-3 Achievement of Outputs).

#### 1-3 Achievement of Output

- 1-3-1 Output 1: "Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts."
- In the Work Plan submitted in September 2015, the Team defined "institutionalization" from the following three elements: (1) extension; (2) administration; and (3) finance. The elements are closely related to each other and essential for achieving the "Institutionalization" of the COVAMS approach. In "Extension", the COVAMS approach is expected to be extended steadily, and policy-makers will get to acknowledge its positive impact. In "Administration", preparation of annual activity plan, budgeting and allocation, project implementation and regular M&E are to be implemented, and a system for the implementation will be in place. Finally, in "Budget", activity plans (including budgeting and finance) are to be prepared at the local levels and been approved based on the existing annual budget cycle of Malawi.
- ii) The Team has examined Malawi's government budget processes and financial conditions through interviews with government officials and politicians to identify potential funding sources and prioritize actions for securing funds. In addition, the Team has worked with the Department of Forestry to support them to complete the submission of PSIP budget request.
- iii) Through a series of interviews to COVAMS key personnel, including DMTs/ TSTs/ CCOs/ DMT/ TST/ CCO, the Team has reviewed the current district-level administrative procedures. Challenges

- and difficulties likely to happen when all COVAMS activities were transferred to GOM have been derived from the analysis. Based on above, a roadmap for transfer of the work responsibility toward the end of the technical cooperation project will be proposed for further discussion.
- One important and prospective area of capacity development with high level of needs and priority in Output 1 is strengthening of accounting-related capacity of the four districts. The existing reporting procedures on COVAMS activities are mostly carried out through paper-based means. Thus information sharing is not necessarily transparent and lacks full accountability, remaining one of weak points of district-level administration. Based on the analysis, the objectives and detailed activities for the proposed capacity development shall be further analyzed and proposed.
- 1-3-2 Output 2: "Capacity of management and extension staff in target districts is improved in operation of COVAMS approach."
- i) As of March 2016, the four target-districts prepares annual implementation plan of catchment management through farmers' activities (CMFA) using COVAMS approach. The budget plan has been prepared accordingly and they are submitted to MoNREM through DFO in Blantyre for annual budget planning for final approval expected in June.
- ii) The total number of the target villages has increased by 319 from 50 in 2013. (see the Table 6). Total households currently working with are estimated as much as 34,000.

				• •	•
	Balaka	Blantyre	Mwanza	Neno	Total
2013/14	20	10	10	10	50
2014/15	43	28	28	30	128
2015/16	17	25	6	0	40
2016/17	28	48	22	11	101
Total	108	111	66	51	319

Table 6 Changes of the Number of the Target Villages (2013-2017)

iii) Based on the observation and the interview with farmers, farmers' attainment level of adopting conservation technologies (i.e. galley control, tree planning and contour ridge cultivation, check dam, etc.) varies from one farmer to another. This is because extension relies on LFs' interest and intensity of direct communication between LFs and farmers and/or among farmers in the field rather than specific training intentionally and specifically organized. For example, a LF who demonstrates relatively good results in his/her field can communicate the technology better to other farmers because fellow farmers become more interested in because of his/ her better yields and results. Another good practice is that LFs forming a group can teach better because it enhances the strength of the member LFs to transfer knowledge by reducing anxiety and increased confidence.

1-3-3 Output 3: "Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research."

- Based on the advise from the long-term experts, soil erosion testing has been carried out with the following four plot categories: a) 45 degree straight ridge (plot made "business as usual" practice for comparison), b) contour ridge, c) soil conservation employing mulching by various organic matters, and d) a plot using manure. The yield of each experiment plot varies due to the serious draught hit in Southern Africa in 2016. Based on the observation, the plots using mulcting (type c above) yields better this year because the organic matters covering the plot have conserved and retained moisture in the soil. Applying the farming technique depends on weather conditions particularly the precipitation. When much rainfall is expected, contour ridge farming is effective. Whereas when draught is expected mulching is the most appropriate technique. The challenge for ordinary farmers is to collect and apply appropriate amount of organic materials because they are an integral part of animal feed for raising cattle, goats, etc.
- ii) Household questionnaire survey is scheduled in June-July 2014. 760 households were randomly selected and they are to be interviewed. A team of researcher to conduct the survey employing structured questionnaire has been recruited to ensure the quality of data collection. Currently preparation of the survey is undertaking.
- 1-3-4 Output 4: "Ownership of the COVAMS approach is enhanced among leaders of all levels."

The main activity in this period is to identify the procedures and available resources for promoting and disseminating COVAMS to broad audiences and patronages.

Promotion using radio is considered as one of promising approaches for disseminating sustainable conservation practice. It is the most popular medium reaching mass population in rural Malawi. The team investigated the procedures and challenge to use broadcasting. The team requested MBC, the national broadcasting system in Malawi, to broadcast two trial radio programs to introduce COVAMS activities. The programs were planned and developed by the long-term experts in 2015. They were on the air from the Blantyre Station on a regular evening agricultural program supported by the Ministry of Agriculture, Irrigation and Water Development (MoAIWD) on April 18 and 20, 2016. The broadcasting was supported by the efforts of the extension department of MoAIWD. It was found that the regular broadcasting are subject to fee payment while reduced tariff may be applied to public broadcasting program officially requested by the public sector. In addition, development and production of the program (e.g. planning, recording, editing, etc.) requires additional cost paid to MBC. Further discussion and review for possible production and broadcasting regular radio program on COVAMS via MBC is continued.

#### 1-4 Achievement of the Project Purpose

Overall, judging the achievement of the Project Purpose is still premature. The current status is explained as

#### following:

- i) The Project Purpose is defined as "Catchment Management through Farmers Activities (CMFA) is institutionalized in target districts". There are two indicators along the purpose; "(1) CMFA included in the District Strategic Development Plan of each target district" and "(2) The plan of CMFAs using COVAMS approach carried out in each target district."
- ii) Achievement of the Project Purpose against the former indicator is that each district is able to prepare district development plan based on the annual work plan. The plan is the basis for preparing the budget plan. The achievement against the second indicator is the coverage of villages using and adopting the COVAMS approach is still in progress. As shown in the Table 6, mere 300 villages in the four target-districts are currently actively involved in the COVAMS approach.
- In addition, achievement through three elements of institutionalization, namely administration, extension and budge/finance, may be discussed. Firstly, in the administration area, capacity development activities are being implemented since the beginning of the training. Interaction with expert team as well as among the counterparts of all levels and organizations in the day-to-day business transaction will help the project members to improve management. The current status, however is still much to improve. Reporting as well as fuel request, for example need to be submitted on time. Secondly, in the finance area, cooperation among different ministries is well established in the Project. The Office of President and Cabinet (OPC) in the central government is supportive to the project activities.

#### 1-5 Changes of Risks and Actions for Mitigation

It should be noted that the current status of the activities and the achievement varies from one district to another due to the difference in their conditions and circumstances (e.g. staffing, physical location, climate conditions in a particular year, etc.).

- i) For example, project activities in Balaka were completely stopped in September, 2015 due to late disbursement of resource by mistakes and failure. The situation, however, was revealed at the PM meeting on September 30 and ad-hoc meeting by RMT and Japanese experts to assist the Balaka district were scheduled in the first week of October. With help from other district members, the cause of the problem and challenges were analyzed and the situation was back on the track. As seen on the incident, peer-to-peer learning as well as oversight from the Regional Forestry Officer is a key for maintaining collaboration.
- ii) Another challenge the project faces is weak and irregular disbursement of funding from the GOM. This has been a persistent challenge for the project for the current project activities is aiming at the termination scheduled in March 2018 and beyond. For the actions to be taken to mitigate such situation, involvement, acknowledgement as well as coordination of the central government are the key.

# 1-6 Progress of Actions undertaken by JICA

The transitional period of change of management from the long-term experts to IC Net Ltd. has been supported properly. Activities related to the take-over has completed smoothly.

#### 1-7 Progress of Actions undertaken by Gov. of Malawi

The assignment of Balaka district for new staff was completed in a prompt manner. The assignment of the new project manager of Mwanza is expected soon (Mr. Mtambo of Mwanza District, passed in February, 2016.) Fuel from the Government of Malawi delivered from April to 1<sup>st</sup> week of June.

# 1-8 Progress of Environmental and Social Considerations (if applicable)

NIL

#### 1-9 Progress of Considerations on Gender/Peace Building/Poverty Reduction (if applicable)

Progress has been seen during the harvesting season of Maize in the previous term of monitoring sheet.

# 1-10 Other remarkable/considerable issues related/affect to the project (such as other JICA's projects, activities of counterparts, other donors, private sectors, NGOs etc.)

In Balaka and Neno districts, a variety of activities funded by various international organizations and NGOs has been carried out. The key personnel at these districts tend to be preoccupied with the activities of such agencies and organizations. This is because of lack of communication and coordination among the projects and because of shortage of competent personnel at the local level.

# 2 Delay of Work Schedule and/or Problems (if any)

#### 2-1 Detail

Training courses originally planned have not been implemented in 2014/2015.

# 2-2 Causes

RMT members who were scheduled to become the lecturers were not able to spare the time for the course. In addition, the participants from districts were not able to manage the appropriate time to match with the lecturer. In addition, local funding that should be provided from the Government of Malawi was not provided to some prospective participants especially in Neno and Balaka.

#### 2-3 Action to be Taken

For the scheduling issue, the planning and announcement of such training will be announced ahead of time to avoid overlapping schedule and immediate notice to the participants. As the theme and topic of the proposed training was not significantly important one, according to the long-term experts, these courses may be rescheduled if it is still considered necessary. The current consultant team has been reviewing the local-level transaction and administrative procedures. The plan of capacity development along the line of institutionalization will be proposed.

As mentioned earlier, from October, Japanese Experts will make frequent visits to the C/Ps and related agencies promoting the COVAMS approach.

For the funding issue, the current activities are aimed at and focused on the activities of district level. In this arrangement, most funding comes from the Project and self-sufficient to allocate fund to participants.

# 2-4 Roles of Responsible Persons/Organization (JICA, Gov. of Malawi, etc.)

None

#### 3 Modification of the Project Implementation Plan

#### 3-1 PO

Modified in the activities of the project Outputs (see the attachment).

#### 3-2 Other modifications on detailed implementation n plan

(Remarks: The amendment of R/D and PDM (title of the project, duration, project site(s), target group(s), implementation structure, overall goal, project purpose, outputs, activities, and input) should be authorized by JICA HDQs. If the project team deems it necessary to modify any part of R/D and PDM, the team may propose the draft.)

The modification of the PDM (indicators) may be necessary in addition to additional activity proposed. The team will propose such modification as soon as the preliminary result of the household survey is completed.

#### 3-3 Preparation of Gov. of Malawi toward after completion of the Project

The team considers that allocation and securing financial resources is integral part of achieving "institutionalization". Thus, the CMFA shall be included in the District Implementation Plan/ Annual Investment Plan and they need to be implemented accordingly.

# II. Project Monitoring Sheet I & II

As Attached

Project title: Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II)

Implementation Agency: Departent of Forestry, Ministry of Natural Resources, Energy and Mines, Blantyre, Balaka, Mwanza, and Neno Districts

Target group: Management staff and extension staff of the four districts
Period of Project: Five (5) years. April 2014 - March 2018
Project Site: Four (4) districts in Middle Shire (Blantyre, Balaka, Mwanza, Neno)

Project Site: Four (4) districts in Middle Shire (Blantyre, Balaka, Mwanza, No					
Narrative Summary Overall Goal	Objectively Verifiable Indicators	Means of Verification	Important Assumption	Achievement	Remarks
Catchment management through farmers' activities (CMFA) are widely implemented in target districts.	CMFA spread to other TAs in target districts	District annual work plans of the target districts			
Puriod Durana	CMFA using COVAMS approach utilized by other donors' projects operated in target districts	2. Performance reports of the target districts			
Project Purpose CMFA is institutionalized in target districts.	CMFA included in the District Strategic     Development Plan of each	Project reports	- Each target district allocates budget for the indicators		
	target districts	District Strategic Development Plan	expansion of the implementation of CMFAs to - District Strategic Development Plan is developed and updated in each target district.		
Outputs  1. Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.	Plan/Annual Investment Plan of each target	District Implementation Plan/Annual Investment Plan of four districts	- Consolidated District Annual Work Plan is compiled and updated in each target District	Achievements are	
	Investment Plan approved by full	1.2.1 Official document related to the CMFA in the districts 1.2.2 Project reports	- Administrative and financial institutional changes in central ministries and local administration do not affect the Project activities	provided with the detailed descriptions of the Monitoring Sheet	
Capacity of management and extension staff in target districts is improved in operation of COVAMS approach.	Capacity improvement  Number of training subjects described in the training Plan	Capacity improvement  Needs Assessment Report			
	Number of training conducted, at least one time each subject Number of trained DMT members Number of trained TST members Number of trained CCOs	Training plan  Training materials  Reports on training			
	Implementation of COVAMS approach Annual working plan prepared in each district Number of village covered by COVAMS approach	Implementation of COVAMS approach annual working plans of four target districts Monthly reports from the districts			
	Number of trained LFs Number of trained SLFs	Monitoring reports			
	Detail of indicators is described in the	Households list			
		Other records and documents Project report			
	Impact as the result of capcacity improvement and implementation of COVAMS approach  Refer indicators for the output 3 bellow				
Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research.	Extention method  -Compiled reports which explain following items  - Number of training conducted in the villages	Research plans Research reports Project Reports			
	-Number of Haining conducted in the villages by LFs - Number of HHs trained by LFs and the % to the total number of HHs in each pilot TA - Number of HHs adopted COVAMS techniques and the % to the total number of HHs of pilot TA -Cost of COVAMS approach operation - Comparison between COVAMS LFs and other LFs	intolling report normoun target districts			
	Detail of indicators is described in the attached table.				
	Extension subject - Compiled reports which explain following items - Soil volume protected from erosion from gardens and small scale gully - Yield increased after adopting contour ridge planting				
Ownership of the COVAMS approach is enhanced among leaders of all levels.	- Stand growth of planted trees - Number of organizations received explanation on COVAMS approach (related departments=8, donor projects =3, and others) - Number of leaders received explanation on COVAMS approach (Number of organizations x 2= 22 and others) - Number of sharing meeting and seminars (4 times x 2years =8) - Evaluation reports after the activities	- Plan for disseminating information - Submitted reports - Officiel document - Minutes of Shire River Basin Coordinating Meeting - Other Project reports			
Activities Activities for Output 1: Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of	Inp The Japanese Side	The Malaian Side	Important Assumptions - Area Stakeholders Panels and village heads of pilot TAs agree with the purpose of the		
target districts.  1-1. Orient stakeholders in the districts on the COVAMS II project and COVAMS	(1) Advisors	(1) Human resource for the operation of the	Project and participate in activities.  - Socio-economic and political conditions do not		
approach The Japanese Side The Malawian Side	1, ,	Project	affect adversely to activities of the Project (shortage of petrol, etc.)		
1-2. Set up district management team under DESC	- Technical areas include Soil Erosion Control, Rural Development, Research, Training and Extention, Publicity, Monitoring and Evalution	- Project Director, Regional Project Coordinator, Regional Management Team members, Project Managers in 4 target districts, District Management Team members, Conservation Coordinating Officers, Administrative personnel, Various Supporting Staff and drivers	- Climate conditions do not change drastically.		
1-3. Facilitate group village headmen in target districts to include CMFA using COVAMS approach in the village - Team of advisors headed by Chief Advisor	(2) Equipment - Vehicles, Motorcycles, Training Equipment and other necessary equipment	(2) Office working environment - Suitable office space with necessary equipment	- Trained management staff and extension staff continue their services in their respective positions.		
1-4. Implement training sessions for the district staff to strengthen their abilities on formulating activity implementing plan and annual input plan towards budget allocation.	(3) Training courses for counterpart personnel in Japan				
allocation  1-5. Integrate CMFA plan into district implementation plan and/or annual implementation plan (DIP/AIP), based on VAPs		- Running expenses necessary for the implementation of the Project such as allowance for GOM project staff, office management costs,			
1-6. Obtain approval from full council on the DIP/AIP	(4) Funds - A part of operation cost	,			
Activities for Output 2: Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.  2-1. Assess capacity of district staff in operation of COVAMS approach through observation and assessment survey.  2-2. Prepare capacity improvement plans on COVAMS approach and project management					
2-3. Improve capacity of district staff by On the Job Training through implementation of COVAMS approach 2-3-1. Introduce COVAMS approach to district teams 2-3-2. Prepare annual working plan					

- Area Stakeholders Panels and village heads of pilot TAs agree with the purpose of the Project and participate in activities.	Annex 5. Monitoring Sheet
Pre-conditions - Collaborating institutions (LRCD, DAES, DCD) are fully supportive DCs of target districts are fully supportive.	
-	

Activities for Output 1: Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of The Malaian Side The Japanese Side target districts. 2-3-3. Implement COVAMS approach according to the annual working plan 2-3-4. Monitor progress of implementation of COVAMS approach 2-3-5. Review annual activities 2-4. Improve capacity of district staff by training 2-5. Monitor degree of capacity improvement of district staff 2-6. Evaluate capacity improvement plan and improve it if necessary Activities for Output 3: Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research. 3-1. Conduct research on extension method of COVAMS approach 3-1-1. Design research 3-1-2. Conduct research survey and data collection 3-1-3. Compile result of survey and data collection as a report 3-2. Conduct research on extension subjects of COVAMS approach 3-2-1. Design research 3-2-2. Conduct research according to the design 3-2-3. Compile result of the research as a report Activities for Output 4: Ownership of the COVAMS approach is enhanced among leaders of all levels.

4-1. Plan activities to promote understanding of the leaders and organizations on the CMFA using COVAMS

4-1-1. List up target groups of the promotion Issues and countermeasures 4-1-2. Compile action plan to promote understanding of the target groups 4-1-3. Prepare necessary explanation materials for promotion 4-2. Implement planned activities to promote understanding of the leaders and organizations on the CMFA using COVAMS approach
4-3. Evaluate promotion results and modify/ improve plan if necessary

Dated 31, May, 2016

#### PROJECT MONITORING SHEET

Project Title: Promoting Catchment Management Activities in Middle Shire

Version of the Sheet: Ver.01 (Term: June, 2015 - Oct, 2016)

Name: Masato Onozawa

Title: Team Leader/ Institutionalization 1

Submission Date: Oct 31, 2016

# I. Summary

#### 1 Progress`

This is the second report since IC Net Ltd. was entrusted the latter half of the Project for Promoting Catchment Management Activities in Middle Shire Phase II (COVAMS II) by Japan International Cooperation Agency (JICA) in September 2015. The project has been carried out by a team of consultants led by Mr. Masato Onozawa, Team Leader of the Project, and has been collaborating with officers of the ministries concerned in the Southern Region of Malawi.

#### 1-1 Progress of Inputs

1-1-1 Assignment of Counterpart Personnel

(See Appendix for the list of counterpart)

#### **Table 1 List of Key Counterpart Personnel**

Title/ Responsibilities	Affiliate/ Ministry	Name
Principle Secretary	Ministry of Natural Resource Energy and Mining (MoNREM)	Mr. Kester Kaphaizi
	(until September 2016)	Mr. Kester Kaphaizi Botolo
Deputy Director of Forestry Department	MoNREM, Forestry Department	Mr. Thomas Makhambere Francis Chilimampunga
Director of Agricultural Extension Service, Agricultural Extension Service Department	Ministry of Agriculture, Irrigation and Water Development (MoAlWD),	Mrs. Stella Kankwamba
Director of Community Development Dept. Of Community Development	(MoGCDSW)	Mrs. Clotilda Sawasawa
Deputy Director, Department of Performance Enforcement	Office of the President and Cabinet (OPC)	Mr. Elliot Phiri
Regional Forestry Officer (South)-RFO (S), Department of Forestry,	MINISTRY OF NATURAL RESOURCE ENERGY AND MINING (MoNREM)	Mrs. Cecilia Chauluka
District Forestry Officer, Balaka	MoNREM	Mr. Baird Nangwale
District Forestry Officer, Blantyre	MoNREM	Mr. Geoffrey Kanyerere
District Forestry Officer, Mwanza	MoNREM	Mr. Gregory Kulemeka (from July, 2016)

# 1-1-2 Assignment of Japanese Experts

The Project inaugurated in October 2013 followed by the dispatch of long-term experts from JICA (Table 2). Since September 2015, the consultant team has been dispatched and taken over the Project (Table 3). The following is the summary of the assignment(s) of the experts as of the end of October 2016.

# 1) Experts (Dispatched by JICA)

# 1-2 Progress of Activities

Capacity improvement of district staff is in progress through several sessions of trainings implemented during this term. In addition, the institutionalization of COVAMS approach has been taken into action. Details are explained as shown in the following section (1-3 Achievement of Outputs).

#### 1-3 Achievement of Output

- 1-3-1 Output 1: "Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts."
- In the Work Plan submitted in September 2015, the Team defined "institutionalization" from the following three elements: (1) extension; (2) administration; and (3) finance. The elements are closely related to each other and essential for achieving the "Institutionalization" of the COVAMS approach. In "Extension", the COVAMS approach is expected to be extended steadily, and policy-makers will get to acknowledge its positive impact. In "Administration", preparation of annual activity plan, budgeting and allocation, project implementation and regular M&E are to be implemented, and a system for the implementation will be in place. Finally, in "Budget", activity plans (including budgeting and finance) are to be prepared at the local levels and been approved based on the existing annual budget cycle of Malawi.
- ii) The Team has examined the budget processes of the Government of Malawi and financial conditions through interviews with government officials and politicians to identify potential funding sources and prioritize actions for securing funds. In addition, the Team has worked with the Department of Forestry to support them to complete the submission of PSIP budget request.
- iii) The Team discussed with district officers who is responsible for the financial affairs regarding the

most updated "Annual Investment Plan". It was found that the plan is no longer prepared at the district-level as stated in the PDM. The plan is replaced by PSIP. Currently, district offices of ministries prepare and compile annual budget proposal for submission using the PSIP budget template every year. For the budgeting of COVAMS, the Regional Forestry Office is primarily responsible for preparation of budget proposal through PSIP.

- iv) Through a series of interviews to COVAMS key personnel, e.g. DMTs/ TSTs/ CCOs, the Team has reviewed the current district-level administrative procedures. Based on above, a roadmap for transfer of the work responsibility toward the end of the technical cooperation project has been proposed and discussed through the monthly regular PM meetings. The
- v) One important and prospective area of capacity development with high level of needs and priority in Output 1 is strengthening of accounting-related capacity of the four districts. The existing reporting procedures on COVAMS activities are mostly carried out through paper-based means. Thus information sharing is not necessarily transparent and lacks full accountability, remaining one of weak points of district-level administration. Based on the analysis, the objectives and detailed activities for the proposed capacity development shall be further analyzed and proposed.

1-3-2 Output 2: "Capacity of management and extension staff in target districts is improved in operation of COVAMS approach."

- By March 2016, the four target-districts prepares annual implementation plan of catchment management through farmers' activities (CMFA) using COVAMS approach. The budget plan has been prepared accordingly and they are submitted to MoNREM through DFO in Blantyre for annual budget planning for final approval expected in June. The disbursement for the counterpart budget (Part II Budget), however, has been MWK0.0 (zero) while the original budget request for the FY2016/17 on the PSIP was MWK120 million.¹ This is also causing dependency to external support such as financial support to COVAMS II. The Project needs to diversify funding other than ordinary Part II Budget through PSIP.
- Shortage of local financial resources makes the attitude of people concerning of COVAMS II complex. Although utilization of of locally available resources is the principle of COVAMS approach, people involving the project tends to be dependent to a various support from the Japanese side. Because such external support (e.g. fuel for extension works and monitoring, provision of various incentives including materials, allowance, etc.) makes the lives of CCOs easier because such support works well for recruiting LFs and SLFs easier. In this sense, the government officers are more dependent<sup>2</sup> to external input than farmers. Officers see that the external input is essential

<sup>&</sup>lt;sup>1</sup> The total budget disbursement in the FY 2015/16 was only 15 million for COVAMS II while its original request on the PSIP was MWK150 million and its approved budget plan was MWK50 million. According to the officers responsible for district finance, a priority was given to physical investment projects to avoid contractual

<sup>&</sup>lt;sup>2</sup> Japanese experts see that government officers (CCO, TST, PM, etc.) are dependent than farmers to material and financial support provided mainly by the Japanese side to COVAMS project. Not all such support is considered absolutely essential for people participating COVAMS project. They are, however, to facilitate the process.

- element of implementing COVAMS approach despite the principle of COVAMS avoiding such dependency to external resources.
- iii) The Team has been communicating deliberately with counterparts on the issue of minimizing inputs because the current setup creates the dependency and is not sustaining when the Project terminates in March 2018. The situation is even more complex because of the persistent shortage of financial resources due to the on-going budget restriction across the public sector in Malawi.
- iv) The project initially proposed to strengthen the capacity of utilizing Malawi's PSIP procedure for secreting financial resources for implementing and sustaining activities derived from all phases of COVAMS. During the FY2015/16, the Team has reviewed and analyzed the existing procedures and practices for implementing COVAMS II. In the aspect of the funding, complying PSIP alone does not ensure and guarantee the financial resources aiming at the post-COVAMS project activities, because the allocation of financial resources that may be used by the Government of Malawi when necessary is very limited and declining. It is projected that on-going austerity will continue because the development partners (e.g. IMF, The World Bank, and EU) will no longer finance the general account in FY2017/18 and beyond.
- v) The total number of the target villages as of FY 2016/17 has increased by 345 from the initial 50 in 2013. (See the Table 6). Total households currently working with are estimated as much as 45,000 through 3,000 LFs and 32 CCOs.

**Table 6 Changes of the Number of the Target Villages (2013-2017)** 

District	Year	No of CCOs	No. of Target	No. of	No. of LF
			Villages	Household	
	2013/14	5	10	2,478	99
Blantyre	2014/15	7	36	9,217	600
Diantyre	2015/16	8	62	12,020	803
	2016/17	9	111	26,835	1,789
	2013/14	5	10	1,314	63
Mwanza	2014/15	6	37	4,586	310
IVIWaliza	2015/16	9	43	6,052	426
	2016/17	9	72	9,915	661
	2013/14	5	10	2,675	115
None	2014/15	6	38	7,567	495
Neno *	2015/16	7	38	7,567	495
	2016/17	8	46	_	_
	2013/14	5	20	1,696	70
Dalaka	2014/15	6	60	4,466	300
Balaka	2015/16	6	87	6,694	462
	2016/17	6	116	8,955	597
	2013/14	20	50	8,163	347
Total	2014/15	25	171	25,836	1,705
Total	2015/16	30	230	32,333	2,186
	2016/17	32	345	45,705	3,047

Note that the data from Neno is still counting.

vi) Based on the observation and the interview with farmers, farmers' attainment level of adopting conservation technologies (i.e. galley control, tree planning and contour ridge cultivation, check dam, etc.) varies from one farmer to another. This is because extension relies on LFs' interest and intensity of direct communication between LFs and farmers and/or among farmers in the field rather than specific training intentionally and specifically organized. For example, a LF who demonstrates relatively good results in his/her field can communicate the technology better to other farmers because fellow farmers become more interested in because of his/ her better yields and results. Another good practice is that LFs forming a group can teach better because it enhances the strength of the member LFs to transfer knowledge by reducing anxiety and increased confidence.

1-3-3 Output 3: "Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research."

- i) An experiment for soil erosion was carried out based on the advice from the long-term experts., with the following four plot categories: a) 45 degree straight ridge (plot made "business as usual" practice for comparison), b) contour ridge, c) soil conservation employing mulching by various organic matters, and d) a plot using manure.
- The field-based experiment through different plot preparation did not see significant impact because the mechanism of sediment production caused by runoff water is influenced by many different factors and parameters. The model employed in COVAMS was too simple that factors such as soil type, strength of rainfall, slopes, etc. were not taken into account<sup>3</sup>. In addition the site design and the locations designated by the experts have not carefully calibrated<sup>4</sup>. For example, eroded soil made by the runoff water of each plot were mixed by soils felled the walls of trenches and excavated banks surrounding the pit. Apart from the physical design of the sites advised by the long-term experts, the plan of the experiment lacks literature study on hydrology<sup>5</sup>. According to literature study conducted by the Team, an erosion estimation model predicting long-term average soil loss resulting from raindrop splash and runoff from specific field slopes in specific cropping and management systems and rangeland. In light of such short-coming o appropriate approach to analyze long-term example is the Revised Universal Soil Loss Equation<sup>6</sup> (RUSLE) developed by

<sup>&</sup>lt;sup>3</sup> The subject is complex and few textbooks or manuals provide much in the way of guidance. As a result, much time, effort and money have been wasted on work that has yielded little useful information. Many experiments, particularly those involving runoff plots and measuring weirs, have been abandoned because they proved to be impractical to operate, faulty in design or too slow in providing the type of information needed. (Source: N. W. Hudson (1993) . Field measurement of soil erosion and runoff. . Food and Agriculture Organization of the United Nations. Rome)

<sup>&</sup>lt;sup>4</sup> Multiple testing sites and the plots should have been chosen as similar as possible, for no plots are ever identical, and the two plots are calibrated, i.e., the difference between the two is measured by plotting values of some suitable parameter of one plot against the other

<sup>&</sup>lt;sup>5</sup> According to Mr. Sato, former Chief Advisor of COVAMS II, the previous experiments was based on no literate study on hydrology or River Engineering, etc.

<sup>&</sup>lt;sup>6</sup> The Universal Soil Loss Equation (USLE) is a widely used mathematical model that describes soil erosion processes. It was developed in the U.S. based on soil erosion data collected beginning in the 1930s by the U.S. Department of

#### US Department of Agriculture.

- iii) According to interviews during monitoring visits made by experts, the yield of each experiment plot varies due to the serious draught hit in Southern Africa in 2016. Based on the observation, the plots using mulcting (type c above) yields better this year because the organic matters covering the plot have conserved and retained moisture in the soil. Applying the farming technique depends on weather conditions particularly the precipitation. When much rainfall is expected, contour ridge farming is effective. Whereas when draught is expected mulching is the most appropriate technique. The challenge for ordinary farmers is to collect and apply appropriate amount of organic materials because they are an integral part of animal feed for raising cattle, goats, etc.
- iv) Household questionnaire survey was carried out in June-July 2014. 760 households were randomly selected and were interviewed by a team of researchers. The finding is summarized as following:
  - COVAMS approach shows effectiveness and strength in extending agricultural practices within relatively short period of time.
  - Adoption of techniques (e.g. soil conservation, building check dam) exceeds 50% level within one year from the beginning of intervention.
  - Seedling production within 2 years from the beginning of intervention totals over 2.3 million; average seedling production per household is 67.

1-3-4 Output 4: "Ownership of the COVAMS approach is enhanced among leaders of all levels."

The main activity in this period is to identify the procedures and available resources for promoting and disseminating COVAMS to broad audiences and patronages.

- i) Promotion using radio is considered as one of promising approaches for disseminating sustainable conservation practice. It is the most popular medium reaching mass population in rural Malawi. The team investigated the procedures and challenge to use broadcasting. The team requested MBC, the national broadcasting system in Malawi, to broadcast two trial radio programs to introduce COVAMS activities. The programs were planned and developed by the long-term experts in 2015. They were on the air from the Blantyre Station on a regular evening agricultural program supported by the Ministry of Agriculture, Irrigation and Water Development (MoAIWD) on April 18 and 20, 2016. The broadcasting was supported by the efforts of the extension department of MoAIWD.
- ii) A regular broadcasting that attracts farmers and other broad audience is subject to skillful development and professional production (e.g. planning, scripting, recording, editing, etc.) by such organizations as MBC and local contractors. It was found that a reduced tariff may be applied to public broadcasting program at MBC, the national broadcasting corporation, when a special arrangement was made between the Forestry Department and the Ministry of Agriculture, Irrigation

Agriculture (USDA) Soil Conservation Service (now the USDA Natural Resources Conservation Service). The model has been used for decades for purposes of conservation planning both in the United States where it originated and around the world (Source: USDA; URL= https://www.ars.usda.gov/southeast-area/ford-ms/national-sedimentation -laboratory/watershed-physical-processes-research/docs/revised-universal-soil-loss-equation-rusle-welcome-to-rusle-1-and-rusle-2/)

- and Water Development. A professional work made by the production side requires additional cost beyond the reduced airtime. Given difficulty of securing financial resources of the public sector in Malawi, securing the cost of sustainable radio program is highly challenging.
- COVAMS II. The Team has contacted a couple of major corporations in Blantyre to see their interest in investing in some of COVAMS activities. The response varies due to the causes those companies have. As for the marketing tools, A flyer (brochure) produced by the previous team was updated and the designed were revised by a local designer for distribution in Malawi. Printing completed. The team continues to communicate with the prospective partners with a relatively long-term commitment.
- iv) Collaboration with other development partners (donor agencies, etc.) is another issue to see if any opportunities arise. The team worked with WFP and WRI by introducing COVAMS approaches as a means for extension technique. CCOs have been visiting respective project site for exchange of techniques. Relevant technical document of COVAMS was given to the counterpart organizations.
- v) Further discussion and review for possible collaboration with different agencies and organization shall be continued.

#### 1-4 Achievement of the Project Purpose

Overall, judging the achievement of the Project Purpose is still premature. The current status is explained as following:

- i) The Project Purpose is defined as "Catchment Management through Farmers Activities (CMFA) is institutionalized in target districts". There are two indicators along the purpose; "(1) CMFA included in the District Strategic Development Plan of each target district" and "(2) The plan of CMFAs using COVAMS approach carried out in each target district."
- ii) Achievement of the Project Purpose against the former indicator is that each district is able to prepare the annual work plan. The plan is the basis for preparing the budget plan. The District Strategic Development Plan, which was originated by GTZ, is no longer produced, according to officers of Blantyre District. Further confirmation is necessary for the next fiscal year. The achievement against the second indicator is the coverage of villages using and adopting the COVAMS approach is still in progress. As shown in the Table 6, 345 villages in the four target-districts are currently actively involved in the COVAMS approach.
- In addition, achievement through three elements of institutionalization, namely administration, extension and budge/finance, may be discussed. Firstly, in the administration area, capacity development activities are being implemented since the beginning of the training. Interaction with expert team as well as among the counterparts of all levels and organizations in the day-to-day business transaction will help the project members to improve management. Presently, there is a much room for improvement. For example, reporting as well as fuel request need to be submitted on time. Secondly, in the finance area, cooperation among different ministries is well established in the

Project. The Office of President and Cabinet (OPC) in the central government is supportive to the project activities.

### 1-5 Changes of Risks and Actions for Mitigation

Overall, the major risk associated to implementation of COVAMS is funding as discussed in the section 1-3-2 Output 2. In addition, it should be noted that the current status of the activities and the achievement varies from one district to another due to the difference in their conditions and circumstances (e.g. staffing, physical location, climate conditions in a particular year, etc.).

- Project activities in Balaka were completely stopped in September, 2015 due to late disbursement of resource by mistakes and failure. The situation, however, was revealed at the PM meeting on September 30 and ad-hoc meeting by RMT and Japanese experts to assist the Balaka district were scheduled in the first week of October. With help from other district members, the cause of the problem and challenges were analyzed and the situation was back on the track. As seen on the incident, peer-to-peer learning as well as oversight from the Regional Forestry Officer is a key for maintaining collaboration.
- ii) A stoppage occurred in Neno in October 2016 due to absence of core management team during the counterpart training in Japan. The responsibility of implementing activities was transferred to the substitute while they were out of country. The operation of TOT is too complex for un-skilled individuals when PM and core management was out of office. Back log of the planned TOT is to be cleared by the end of November.
- iii) Another challenge the project faces is weak and irregular disbursement of funding from the GOM. This has been a persistent challenge for the project for the current project activities is aiming at the termination scheduled in March 2018 and beyond. For the actions to be taken to mitigate such situation, involvement, acknowledgement as well as coordination of the central government are the key.

### 1-6 Progress of Actions undertaken by JICA

- i) The Team acknowledges the support from JICA on the various changes and difficulties during the transitional period from the long-term experts to IC Net Ltd. As a result, activities related to the take-over has completed smoothly.
- ii) The funding issue discussed in this report is the single most difficult persistent challenge for the Team. Financial independence is the center of transferring the project activities for institutionalization. The issues shall be discussed in any occasions between GOM and JICA.

### 1-7 Progress of Actions undertaken by Gov. of Malawi

- i) The assignment of Balaka district for new staff was completed in a prompt manner. The assignment of the new project manager of Mwanza was also completed.
- ii) As discussed in the previous section, the funding allocation has been persistent challenge to all parties concerned. The transfer of the project activities depends on local financial resources to sustain COVAMS technologies and the institutions.

### 1-8 Progress of Environmental and Social Considerations (if applicable)

NIL

### 1-9 Progress of Considerations on Gender/Peace Building/Poverty Reduction (if applicable)

 Progress has been seen during the harvesting season of Maize in the previous term of monitoring sheet.

# 1-10 Other remarkable/considerable issues related/affected to the project (such as other JICA's projects, activities of counterparts, other donors, private sectors, NGOs etc.)

i) In Balaka and Neno districts, a variety of activities funded by development partners (e.g. international organizations and NGOs) has been carried out. The key personnel at these districts tend to be preoccupied with the activities of such agencies and organizations. This is because of lack of communication and coordination among the projects and because of shortage of competent personnel at the local level.

#### 2 Delay of Work Schedule and/or Problems (if any)

### 2-1 Detail

 Only problem observed in this reporting period was the delay of TOT schedule in Neno as discussed in 1-3-2

#### 2-2 Causes

i) It was caused by the participation of the counterpart training in Japan.

#### 2-3 Action to be Taken

i) As mentioned earlier, from November this year the delayed TOT has been carried out to catch up the back log. CCOs from neighboring districts were helping Neno to carry out the TOT.

### 2-4 Roles of Responsible Persons/Organization (JICA, Gov. of Malawi, etc.)

None

### 3 Modification of the Project Implementation Plan

#### 3-1 PO

No modification was made during this reporting period. (see the attachment).

### 3-2 Other modifications on detailed implementation n plan

(Remarks: The amendment of R/D and PDM (title of the project, duration, project site(s), target group(s), implementation structure, overall goal, project purpose, outputs, activities, and input) should be authorized by JICA HDQs. If the project team deems it necessary to modify any part of R/D and PDM, the team may propose the draft.)

No modification was made during this reporting period.

### 3-3 Preparation of Gov. of Malawi toward after completion of the Project

The team considers that allocation and securing financial resources is integral part of achieving "institutionalization". The current funding mechanism including PSIP is not reflecting the project and the sector's needs due to the shortage of revenue, etc.

## PM Form 3-1 Monitoring Sheet Summary

### II. Project Monitoring Sheet I & II

As Attached

## Project Design Matrix (Revision of Project Design Matrix)

Project title: Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II)
Implementation Agency: Departent of Forestry, Ministry of Natural Resources, Energy and Mines,
Planture, Palaka, Mwanza, and Nano Districts

Blantyre, Balaka, Mwanza, and Neno Districts

Target group: Management staff and extension staff of the four districts

Period of Project: Five (5) years. April 2014 - March 2018

Project Site: Four (4) districts in Middle Shire (Blantyre, Balaka, Mwanza, Neno)

Narrative Summary	Objectively Verifiable Indicators	Means of Verification	Important Assumption	Achievement	Remarks

Annex 5. Monitoring Sheet

3. Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research.	Extention method -Compiled reports which explain following items - Number of training conducted in the villages by LFs - Number of HHs trained by LFs and the % to the total number of HHs in each pilot TA - Number of HHs adopted COVAMS techniques and the % to the total number of HHs of pilot TA -Cost of COVAMS approach operation - Comparison between COVAMS LFs and other LFs			
Ownership of the COVAMS approach is enhanced among leaders of all levels.	Detail of indicators is described in the attached table.  Extension subject - Compiled reports which explain following items - Soil volume protected from erosion from gardens and small scale gully - Yield increased after adopting contour ridge planting - Number of organizations received explanation on COVAMS approach (related departments=8, donor projects =3, and others) - Number of leaders received explanation on COVAMS approach (Number of organizations x 2= 22 and others) - Number of sharing meeting and seminars (4 times x 2years =8)	<ul> <li>Plan for disseminating information</li> <li>Submitted reports</li> <li>Officiel document</li> <li>Minutes of Shire River Basin Coordinating Meeting</li> <li>Other Project reports</li> </ul>		

Activities	Inp	outs	Important Assumptions
Activities for Output 1: Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.	The Japanese Side	The Malaian Side	- Area Stakeholders Panels and village heads of pilot TAs agree with the purpose of the Project and participate in activities.
1-1. Orient stakeholders in the districts on the COVAMS II project and COVAMS approach The Japanese Side The Malawian Side	(1) Advisors - Team of advisors headed by Chief Advisor	(1) Human resource for the operation of the Project	- Socio-economic and political conditions do not affect adversely to activities of the Project (shortage of petrol, etc.)
1-2. Set up district management team under DESC	<ul> <li>Technical areas include Soil Erosion Control, Rural Development, Research, Training and Extention, Publicity, Monitoring and Evalution</li> </ul>	- Project Director, Regional Project Coordinator, Regional Management Team members, Project Managers in 4 target districts, District Management Team members, Conservation Coordinating Officers, Administrative personnel, Various Supporting Staff and drivers	- Climate conditions do not change drastically.
using COVAMS approach in the village - Team of advisors headed by Chief	<ul><li>(2) Equipment</li><li>Vehicles, Motorcycles, Training</li><li>Equipment and other necessary equipment</li></ul>	<ul><li>(2) Office working environment</li><li>Suitable office space with necessary equipment</li></ul>	- Trained management staff and extension staff continue their services in their respective positions.
	(3) Training courses for counterpart personnel in Japan	(3) Funds	
1-5. Integrate CMFA plan into district implementation plan and/or annual implementation plan (DIP/AIP), based on VAPs		- Running expenses necessary for the implementation of the Project such as allowance for GOM project staff, office management costs,	
1-6. Obtain approval from full council on the DIP/AIP	<ul><li>(4) Funds</li><li>A part of operation cost</li></ul>		
Activities for Output 2: Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.  2-1. Assess capacity of district staff in operation of COVAMS approach through observation and assessment survey.  2-2. Prepare capacity improvement plans on COVAMS approach and project management			
2-3. Improve capacity of district staff by On the Job Training through implementation of COVAMS approach 2-3-1. Introduce COVAMS approach to district teams 2-3-2. Prepare annual working plan 2-3-3. Implement COVAMS approach according to the annual working plan			
2-3-4. Monitor progress of implementation of COVAMS approach 2-3-5. Review annual activities 2-4. Improve capacity of district staff by training 2-5. Monitor degree of capacity improvement of district staff 2-6. Evaluate capacity improvement plan and improve it if necessary			
Activities for Output 3: Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research. 3-1. Conduct research on extension method of COVAMS approach 3-1-1. Design research 3-1-2. Conduct research survey and data collection			
<ul><li>3-1-3. Compile result of survey and data collection as a report</li><li>3-2. Conduct research on extension subjects of COVAMS approach</li><li>3-2-1. Design research</li></ul>			Pre-conditions - Collaborating institutions (LRCD, DAES, DCD) are fully supportive DCs of target districts are fully supportive.
3-2-2. Conduct research according to the design 3-2-3. Compile result of the research as a report  Activities for Output 4: Ownership of the COVAMS approach is			
Activities for Output 4: Ownership of the COVAMS approach is enhanced among leaders of all levels.  4-1. Plan activities to promote understanding of the leaders and organizations on 4-1-1. List up target groups of the promotion  4-1-2. Compile action plan to promote understanding of the target groups  4-1-3. Prepare necessary explanation materials for promotion  4-2. Implement planned activities to promote understanding of the leaders and organizations on the CMFA using COVAMS approach			Issues and countermeasures

Annex 5. Monitoring Sheet

### **Indicators 1/3**

### Progress by 20150930

### Output 02

Capacity improvement

- Number of training subjects discribed in the trianing plan: 10 subjects

Category	Subject	]
1 Administrative management	1 Induction course for general management	done 1/1
capacity	2 Computer course (Word, Excel and Powerpoint)	done 1/2
2 Organizatoinal management	1 Motivation study for government staff	done 1/1
capacity	2 Motivation study for farmers	done 1/1
	3 Importance of division of roles	done in each distric
	Review of job description and establishement of roles for effective management/monitoring method	done in each distric
	5 Effective report writing	done 1/1
3 Strategic skill	1 Logical frame/assessment of achievement/communication system	not yet
4 Extension skill	1 Effective deligation in extension work	not yet
5 COVAMS approach	1 Re-orientation to COVAMS approach	done every year
- Number of trained DMT membe	20 members, as 5 in one district times 4 districts, and it is fixed.	done 20/20
- Number of trained TST member	6 in Blantyre (FO, FA, DLRCO, LRCO, AEDC, CDA)	6
	6 in Mwanza (ADFO, FA, DLRCO, AEDC, AEDC, CDA)	6
	4 in Neno (ADFO, DLRCO, LRCO, AEDC)	4
	4 in Balaka (ADFO, DLRCO, AEDC, CDA)	4
Total	20 members at 2015 March, it may be increased as the area (EPA and TA) expanded.	20
- Number of trained CCOs	8 in Blantyre (FA x 2, FG x 2, AEDO x 3, CDA x 1)	8
	9 in Mwanza (FA x 1, FG x 2, AEDO x 4, CDA x 2)	11
	6 in Neno (FA x 1, FG x 1, AEDO x 3, CDA x 1)	8
	6 in Balaka (FA x 2, AEDO x 3, CDA x 1)	7
ob training and training session total	29 CCOs at 2015 March, it may be increased as the area (EPA and TA) expanded.	34

161 Including additional CCOs for future expantion trained on COVAMS approach through lecture

### **Indicators 2/3**

### Implementation of COVAMS approach

- Annual working plan prepared in each district.

- Number of villages covered by C	COVAMS approach	
5	62 in Blantre (TA Lundu all 54 villages, TA Chigaru 8 out of 33 villages)	62
	44 in Mwanza (TA Govati all 38 villages, TA Nthache 6 out of 48 villages)	43
	38 in Neno (TA Mulauli all 38 villages, TA Dambe 0 out of 50 villages)	38
	91 in Balaka (TA Chantunya 91 out of 109 villages)	87
Total lower side	villages at 2015 March, it may be increased according to the available resources for operation.	230
Total higher side	370 villages including remaining number in pilot TA	
- Numbers of trained LFs and qual	lified (certified) LFs	
•	1,000 in Blantyre (600 in 37 villages and estimated 400 in 25 villages)	803
	360 in Mwanza (310 in 38 villages and estimated 50 in 6 villages)	426
	495 in Neno (495 in 38 villages)	495
	455 in Balaka (300 in 60 villages and estimated 155 in 31 villages)	462
Total lower side	2,310 LFs at 2015 March, suject to confirm after election of new LFs in new villages.	2186
Total higher side	3,637 LFs estimated from 370 villages	
- Numbers of trained SLFs and qu	alified (certified) SLFs (one in one village at least in second year)	
•	62 in Blantyre	58
	44 in Mwanza	41
	38 in Neno	50
_	91 in Balaka	60
Total lower side	SLFs estimated by the end of March 2015. It is subject to confirm after selection of SLFs in second year of intervention.	209
Total higher side	407 SLFs estimated from total number of villages and added 10%	

Impact as the result of capacity improvement and implementation of COVAMAS approach
Figures of impact are representing quality of extension approach and it will be measured under Output 3 activities.

# Indicators 3/3 Output 03

### Extension method

- Compiled reports 1 report in each season from the 2014/2015 season. Working paper No. 4, No. 5 and N

- Number of training conducted in the villages by LFs (at least one time each subject by one LF)

2,310 training sessions in contour planting

2,310 training sessions in small scale gully control

2,310 training sessions in tree growing

By the end of 201503

Total lower side 6,930 training sessions Total higher side 10,911 training sessions

- Number of HHs trained by LFs and the % to the total number of HHs in each pilot TA Working paper No. 4 and No. 5

80 % in each subject 32 - 40 %

- Number of HHs adopted COVAMS techniques and the % to the total number of HHs of pilot TA Working paper No. 4 and No. 5

50 % in each subject

27% in soil conservation 29% in tree growing 17% in gully control

3844 (Refrer Working paper No. 4

- Cost of COVAMS approach operation

1 report in each season from the 2014/2015 season

Working paper No.4

- Comparison between COVAMS LFs and other LFs

1 report after study in 2015 by short term expert

Prepared one by short term expert as a working paper No. 6

Extension subject

- Compiled reports 3 reports, for the seasons of 2013/2014, 2014/2015 and 2015/2016

- Soil volume protected from erosion from gardens and small scale gully

Not yet

- Yield increased after adopting contour ridge planting

Calculated for 2013/2014 and 2014/2015

- Stand growth of planted trees

Changed to literature study

### TO CR of JICA MALAWI OFFICE

### PROJECT MONITORING SHEET

Project Title: Promoting Catchment Management Activities in Middle Shire

Version of the Sheet: Ver.01 (Term: June, 2015 - Oct, 2016)

Name: Masato Onozawa

Title: Team Leader/ Institutionalization 1

Submission Date: Oct 31, 2016

### I. Summary

### 1 Progress`

This is the second report since IC Net Ltd. was entrusted the latter half of the Project for Promoting Catchment Management Activities in Middle Shire Phase II (COVAMS II) by Japan International Cooperation Agency (JICA) in September 2015. The project has been carried out by a team of consultants led by Mr. Masato Onozawa, Team Leader of the Project, and has been collaborating with officers of the ministries concerned in the Southern Region of Malawi.

#### 1-1 Progress of Inputs

1-1-1 Assignment of Counterpart Personnel

(See Appendix for the list of counterpart)

### **Table 1 List of Key Counterpart Personnel**

Title/ Responsibilities	Affiliate/ Ministry	Name
Principle Secretary	Ministry of Natural Resource Energy and Mining (MoNREM)	Mr. Kester Kaphaizi
	(until September 2016)	Mr. Kester Kaphaizi Botolo
Deputy Director of Forestry Department	MoNREM, Forestry Department	Mr. Thomas Makhambere Francis Chilimampunga
Director of Agricultural Extension Service, Agricultural Extension Service Department	Ministry of Agriculture, Irrigation and Water Development (MoAlWD),	Mrs. Stella Kankwamba
Director of Community Development Dept. Of Community Development	(MoGCDSW)	Mrs. Clotilda Sawasawa
Deputy Director, Department of Performance Enforcement	Office of the President and Cabinet (OPC)	Mr. Elliot Phiri
Regional Forestry Officer (South)-RFO (S), Department of Forestry,	MINISTRY OF NATURAL RESOURCE ENERGY AND MINING (MoNREM)	Mrs. Cecilia Chauluka
District Forestry Officer, Balaka	MoNREM	Mr. Baird Nangwale
District Forestry Officer, Blantyre	MoNREM	Mr. Geoffrey Kanyerere
District Forestry Officer, Mwanza	MoNREM	Mr. Gregory Kulemeka (from July, 2016)
		(Vacant until June 2016) Mr. Brian Mtambo (upto June 2016,)

District Forestry Officer, Neno	MoNREM	Mr. Emmanuel Ngwangwa
Assistant District Forestry Officer,	MoNREM	Mr. Peter Mkwapatira
Blantyre, Regional Management Team

### 1-2 Progress of Activities

Capacity improvement of district staff is in progress through several sessions of trainings implemented during this term. In addition, the institutionalization of COVAMS approach has been taken into action. Details are explained as shown in the following section (1-3 Achievement of Outputs).

#### 1-3 Achievement of Output

- 1-3-1 Output 1: "Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts."
- In the Work Plan submitted in September 2015, the Team defined "institutionalization" from the following three elements: (1) extension; (2) administration; and (3) finance. The elements are closely related to each other and essential for achieving the "Institutionalization" of the COVAMS approach. In "Extension", the COVAMS approach is expected to be extended steadily, and policy-makers will get to acknowledge its positive impact. In "Administration", preparation of annual activity plan, budgeting and allocation, project implementation and regular M&E are to be implemented, and a system for the implementation will be in place. Finally, in "Budget", activity plans (including budgeting and finance) are to be prepared at the local levels and been approved based on the existing annual budget cycle of Malawi.
- ii) The Team has examined the budget processes of the Government of Malawi and financial conditions through interviews with government officials and politicians to identify potential funding sources and prioritize actions for securing funds. In addition, the Team has worked with the Department of Forestry to support them to complete the submission of PSIP budget request.
- iii) The Team discussed with district officers who is responsible for the financial affairs regarding the

most updated "Annual Investment Plan". It was found that the plan is no longer prepared at the district-level as stated in the PDM. The plan is replaced by PSIP. Currently, district offices of ministries prepare and compile annual budget proposal for submission using the PSIP budget template every year. For the budgeting of COVAMS, the Regional Forestry Office is primarily responsible for preparation of budget proposal through PSIP.

- iv) Through a series of interviews to COVAMS key personnel, e.g. DMTs/ TSTs/ CCOs, the Team has reviewed the current district-level administrative procedures. Based on above, a roadmap for transfer of the work responsibility toward the end of the technical cooperation project has been proposed and discussed through the monthly regular PM meetings. The
- v) One important and prospective area of capacity development with high level of needs and priority in Output 1 is strengthening of accounting-related capacity of the four districts. The existing reporting procedures on COVAMS activities are mostly carried out through paper-based means. Thus information sharing is not necessarily transparent and lacks full accountability, remaining one of weak points of district-level administration. Based on the analysis, the objectives and detailed activities for the proposed capacity development shall be further analyzed and proposed.

1-3-2 Output 2: "Capacity of management and extension staff in target districts is improved in operation of COVAMS approach."

- By March 2016, the four target-districts prepares annual implementation plan of catchment management through farmers' activities (CMFA) using COVAMS approach. The budget plan has been prepared accordingly and they are submitted to MoNREM through DFO in Blantyre for annual budget planning for final approval expected in June. The disbursement for the counterpart budget (Part II Budget), however, has been MWK0.0 (zero) while the original budget request for the FY2016/17 on the PSIP was MWK120 million.¹ This is also causing dependency to external support such as financial support to COVAMS II. The Project needs to diversify funding other than ordinary Part II Budget through PSIP.
- Shortage of local financial resources makes the attitude of people concerning of COVAMS II complex. Although utilization of of locally available resources is the principle of COVAMS approach, people involving the project tends to be dependent to a various support from the Japanese side. Because such external support (e.g. fuel for extension works and monitoring, provision of various incentives including materials, allowance, etc.) makes the lives of CCOs easier because such support works well for recruiting LFs and SLFs easier. In this sense, the government officers are more dependent<sup>2</sup> to external input than farmers. Officers see that the external input is essential

<sup>&</sup>lt;sup>1</sup> The total budget disbursement in the FY 2015/16 was only 15 million for COVAMS II while its original request on the PSIP was MWK150 million and its approved budget plan was MWK50 million. According to the officers responsible for district finance, a priority was given to physical investment projects to avoid contractual

<sup>&</sup>lt;sup>2</sup> Japanese experts see that government officers (CCO, TST, PM, etc.) are dependent than farmers to material and financial support provided mainly by the Japanese side to COVAMS project. Not all such support is considered absolutely essential for people participating COVAMS project. They are, however, to facilitate the process.

- element of implementing COVAMS approach despite the principle of COVAMS avoiding such dependency to external resources.
- iii) The Team has been communicating deliberately with counterparts on the issue of minimizing inputs because the current setup creates the dependency and is not sustaining when the Project terminates in March 2018. The situation is even more complex because of the persistent shortage of financial resources due to the on-going budget restriction across the public sector in Malawi.
- iv) The project initially proposed to strengthen the capacity of utilizing Malawi's PSIP procedure for secreting financial resources for implementing and sustaining activities derived from all phases of COVAMS. During the FY2015/16, the Team has reviewed and analyzed the existing procedures and practices for implementing COVAMS II. In the aspect of the funding, complying PSIP alone does not ensure and guarantee the financial resources aiming at the post-COVAMS project activities, because the allocation of financial resources that may be used by the Government of Malawi when necessary is very limited and declining. It is projected that on-going austerity will continue because the development partners (e.g. IMF, The World Bank, and EU) will no longer finance the general account in FY2017/18 and beyond.
- v) The total number of the target villages as of FY 2016/17 has increased by 345 from the initial 50 in 2013. (See the Table 6). Total households currently working with are estimated as much as 45,000 through 3,000 LFs and 32 CCOs.

**Table 6 Changes of the Number of the Target Villages (2013-2017)** 

District	Year	No of CCOs	No. of Target	No. of	No. of LF
			Villages	Household	
	2013/14	5	10	2,478	99
Blantyre	2014/15	7	36	9,217	600
Diantyre	2015/16	8	62	12,020	803
	2016/17	9	111	26,835	1,789
	2013/14	5	10	1,314	63
Mwanza	2014/15	6	37	4,586	310
IVIWaliza	2015/16	9	43	6,052	426
	2016/17	9	72	9,915	661
	2013/14	5	10	2,675	115
None	2014/15	6	38	7,567	495
Neno *	2015/16	7	38	7,567	495
	2016/17	8	46	_	_
	2013/14	5	20	1,696	70
Dalaka	2014/15	6	60	4,466	300
Balaka	2015/16	6	87	6,694	462
	2016/17	6	116	8,955	597
	2013/14	20	50	8,163	347
Total	2014/15	25	171	25,836	1,705
Total	2015/16	30	230	32,333	2,186
	2016/17	32	345	45,705	3,047

Note that the data from Neno is still counting.

vi) Based on the observation and the interview with farmers, farmers' attainment level of adopting conservation technologies (i.e. galley control, tree planning and contour ridge cultivation, check dam, etc.) varies from one farmer to another. This is because extension relies on LFs' interest and intensity of direct communication between LFs and farmers and/or among farmers in the field rather than specific training intentionally and specifically organized. For example, a LF who demonstrates relatively good results in his/her field can communicate the technology better to other farmers because fellow farmers become more interested in because of his/ her better yields and results. Another good practice is that LFs forming a group can teach better because it enhances the strength of the member LFs to transfer knowledge by reducing anxiety and increased confidence.

1-3-3 Output 3: "Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research."

- i) An experiment for soil erosion was carried out based on the advice from the long-term experts., with the following four plot categories: a) 45 degree straight ridge (plot made "business as usual" practice for comparison), b) contour ridge, c) soil conservation employing mulching by various organic matters, and d) a plot using manure.
- The field-based experiment through different plot preparation did not see significant impact because the mechanism of sediment production caused by runoff water is influenced by many different factors and parameters. The model employed in COVAMS was too simple that factors such as soil type, strength of rainfall, slopes, etc. were not taken into account<sup>3</sup>. In addition the site design and the locations designated by the experts have not carefully calibrated<sup>4</sup>. For example, eroded soil made by the runoff water of each plot were mixed by soils felled the walls of trenches and excavated banks surrounding the pit. Apart from the physical design of the sites advised by the long-term experts, the plan of the experiment lacks literature study on hydrology<sup>5</sup>. According to literature study conducted by the Team, an erosion estimation model predicting long-term average soil loss resulting from raindrop splash and runoff from specific field slopes in specific cropping and management systems and rangeland. In light of such short-coming o appropriate approach to analyze long-term example is the Revised Universal Soil Loss Equation<sup>6</sup> (RUSLE) developed by

<sup>&</sup>lt;sup>3</sup> The subject is complex and few textbooks or manuals provide much in the way of guidance. As a result, much time, effort and money have been wasted on work that has yielded little useful information. Many experiments, particularly those involving runoff plots and measuring weirs, have been abandoned because they proved to be impractical to operate, faulty in design or too slow in providing the type of information needed. (Source: N. W. Hudson (1993) . Field measurement of soil erosion and runoff. . Food and Agriculture Organization of the United Nations. Rome)

<sup>&</sup>lt;sup>4</sup> Multiple testing sites and the plots should have been chosen as similar as possible, for no plots are ever identical, and the two plots are calibrated, i.e., the difference between the two is measured by plotting values of some suitable parameter of one plot against the other

<sup>&</sup>lt;sup>5</sup> According to Mr. Sato, former Chief Advisor of COVAMS II, the previous experiments was based on no literate study on hydrology or River Engineering, etc.

<sup>&</sup>lt;sup>6</sup> The Universal Soil Loss Equation (USLE) is a widely used mathematical model that describes soil erosion processes. It was developed in the U.S. based on soil erosion data collected beginning in the 1930s by the U.S. Department of

### US Department of Agriculture.

- iii) According to interviews during monitoring visits made by experts, the yield of each experiment plot varies due to the serious draught hit in Southern Africa in 2016. Based on the observation, the plots using mulcting (type c above) yields better this year because the organic matters covering the plot have conserved and retained moisture in the soil. Applying the farming technique depends on weather conditions particularly the precipitation. When much rainfall is expected, contour ridge farming is effective. Whereas when draught is expected mulching is the most appropriate technique. The challenge for ordinary farmers is to collect and apply appropriate amount of organic materials because they are an integral part of animal feed for raising cattle, goats, etc.
- iv) Household questionnaire survey was carried out in June-July 2014. 760 households were randomly selected and were interviewed by a team of researchers. The finding is summarized as following:
  - COVAMS approach shows effectiveness and strength in extending agricultural practices within relatively short period of time.
  - Adoption of techniques (e.g. soil conservation, building check dam) exceeds 50% level within one year from the beginning of intervention.
  - Seedling production within 2 years from the beginning of intervention totals over 2.3 million; average seedling production per household is 67.

1-3-4 Output 4: "Ownership of the COVAMS approach is enhanced among leaders of all levels."

The main activity in this period is to identify the procedures and available resources for promoting and disseminating COVAMS to broad audiences and patronages.

- i) Promotion using radio is considered as one of promising approaches for disseminating sustainable conservation practice. It is the most popular medium reaching mass population in rural Malawi. The team investigated the procedures and challenge to use broadcasting. The team requested MBC, the national broadcasting system in Malawi, to broadcast two trial radio programs to introduce COVAMS activities. The programs were planned and developed by the long-term experts in 2015. They were on the air from the Blantyre Station on a regular evening agricultural program supported by the Ministry of Agriculture, Irrigation and Water Development (MoAIWD) on April 18 and 20, 2016. The broadcasting was supported by the efforts of the extension department of MoAIWD.
- ii) A regular broadcasting that attracts farmers and other broad audience is subject to skillful development and professional production (e.g. planning, scripting, recording, editing, etc.) by such organizations as MBC and local contractors. It was found that a reduced tariff may be applied to public broadcasting program at MBC, the national broadcasting corporation, when a special arrangement was made between the Forestry Department and the Ministry of Agriculture, Irrigation

Agriculture (USDA) Soil Conservation Service (now the USDA Natural Resources Conservation Service). The model has been used for decades for purposes of conservation planning both in the United States where it originated and around the world (Source: USDA; URL= https://www.ars.usda.gov/southeast-area/ford-ms/national-sedimentation -laboratory/watershed-physical-processes-research/docs/revised-universal-soil-loss-equation-rusle-welcome-to-rusle-1-and-rusle-2/)

- and Water Development. A professional work made by the production side requires additional cost beyond the reduced airtime. Given difficulty of securing financial resources of the public sector in Malawi, securing the cost of sustainable radio program is highly challenging.
- COVAMS II. The Team has contacted a couple of major corporations in Blantyre to see their interest in investing in some of COVAMS activities. The response varies due to the causes those companies have. As for the marketing tools, A flyer (brochure) produced by the previous team was updated and the designed were revised by a local designer for distribution in Malawi. Printing completed. The team continues to communicate with the prospective partners with a relatively long-term commitment.
- iv) Collaboration with other development partners (donor agencies, etc.) is another issue to see if any opportunities arise. The team worked with WFP and WRI by introducing COVAMS approaches as a means for extension technique. CCOs have been visiting respective project site for exchange of techniques. Relevant technical document of COVAMS was given to the counterpart organizations.
- v) Further discussion and review for possible collaboration with different agencies and organization shall be continued.

#### 1-4 Achievement of the Project Purpose

Overall, judging the achievement of the Project Purpose is still premature. The current status is explained as following:

- The Project Purpose is defined as "Catchment Management through Farmers Activities (CMFA) is institutionalized in target districts". There are two indicators along the purpose; "(1) CMFA included in the District Strategic Development Plan of each target district" and "(2) The plan of CMFAs using COVAMS approach carried out in each target district."
- ii) Achievement of the Project Purpose against the former indicator is that each district is able to prepare the annual work plan. The plan is the basis for preparing the budget plan. The District Strategic Development Plan, which was originated by GTZ, is no longer produced, according to officers of Blantyre District. Further confirmation is necessary for the next fiscal year. The achievement against the second indicator is the coverage of villages using and adopting the COVAMS approach is still in progress. As shown in the Table 6, 345 villages in the four target-districts are currently actively involved in the COVAMS approach.
- In addition, achievement through three elements of institutionalization, namely administration, extension and budge/finance, may be discussed. Firstly, in the administration area, capacity development activities are being implemented since the beginning of the training. Interaction with expert team as well as among the counterparts of all levels and organizations in the day-to-day business transaction will help the project members to improve management. Presently, there is a much room for improvement. For example, reporting as well as fuel request need to be submitted on time. Secondly, in the finance area, cooperation among different ministries is well established in the

Project. The Office of President and Cabinet (OPC) in the central government is supportive to the project activities.

### 1-5 Changes of Risks and Actions for Mitigation

Overall, the major risk associated to implementation of COVAMS is funding as discussed in the section 1-3-2 Output 2. In addition, it should be noted that the current status of the activities and the achievement varies from one district to another due to the difference in their conditions and circumstances (e.g. staffing, physical location, climate conditions in a particular year, etc.).

- Project activities in Balaka were completely stopped in September, 2015 due to late disbursement of resource by mistakes and failure. The situation, however, was revealed at the PM meeting on September 30 and ad-hoc meeting by RMT and Japanese experts to assist the Balaka district were scheduled in the first week of October. With help from other district members, the cause of the problem and challenges were analyzed and the situation was back on the track. As seen on the incident, peer-to-peer learning as well as oversight from the Regional Forestry Officer is a key for maintaining collaboration.
- ii) A stoppage occurred in Neno in October 2016 due to absence of core management team during the counterpart training in Japan. The responsibility of implementing activities was transferred to the substitute while they were out of country. The operation of TOT is too complex for un-skilled individuals when PM and core management was out of office. Back log of the planned TOT is to be cleared by the end of November.
- iii) Another challenge the project faces is weak and irregular disbursement of funding from the GOM. This has been a persistent challenge for the project for the current project activities is aiming at the termination scheduled in March 2018 and beyond. For the actions to be taken to mitigate such situation, involvement, acknowledgement as well as coordination of the central government are the key.

### 1-6 Progress of Actions undertaken by JICA

- i) The Team acknowledges the support from JICA on the various changes and difficulties during the transitional period from the long-term experts to IC Net Ltd. As a result, activities related to the take-over has completed smoothly.
- ii) The funding issue discussed in this report is the single most difficult persistent challenge for the Team. Financial independence is the center of transferring the project activities for institutionalization. The issues shall be discussed in any occasions between GOM and JICA.

### 1-7 Progress of Actions undertaken by Gov. of Malawi

- i) The assignment of Balaka district for new staff was completed in a prompt manner. The assignment of the new project manager of Mwanza was also completed.
- ii) As discussed in the previous section, the funding allocation has been persistent challenge to all parties concerned. The transfer of the project activities depends on local financial resources to sustain COVAMS technologies and the institutions.

### 1-8 Progress of Environmental and Social Considerations (if applicable)

NIL

### 1-9 Progress of Considerations on Gender/Peace Building/Poverty Reduction (if applicable)

 Progress has been seen during the harvesting season of Maize in the previous term of monitoring sheet.

# 1-10 Other remarkable/considerable issues related/affected to the project (such as other JICA's projects, activities of counterparts, other donors, private sectors, NGOs etc.)

i) In Balaka and Neno districts, a variety of activities funded by development partners (e.g. international organizations and NGOs) has been carried out. The key personnel at these districts tend to be preoccupied with the activities of such agencies and organizations. This is because of lack of communication and coordination among the projects and because of shortage of competent personnel at the local level.

#### 2 Delay of Work Schedule and/or Problems (if any)

### 2-1 Detail

 Only problem observed in this reporting period was the delay of TOT schedule in Neno as discussed in 1-3-2

#### 2-2 Causes

i) It was caused by the participation of the counterpart training in Japan.

#### 2-3 Action to be Taken

i) As mentioned earlier, from November this year the delayed TOT has been carried out to catch up the back log. CCOs from neighboring districts were helping Neno to carry out the TOT.

### 2-4 Roles of Responsible Persons/Organization (JICA, Gov. of Malawi, etc.)

None

### 3 Modification of the Project Implementation Plan

#### 3-1 PO

No modification was made during this reporting period. (see the attachment).

### 3-2 Other modifications on detailed implementation n plan

(Remarks: The amendment of R/D and PDM (title of the project, duration, project site(s), target group(s), implementation structure, overall goal, project purpose, outputs, activities, and input) should be authorized by JICA HDQs. If the project team deems it necessary to modify any part of R/D and PDM, the team may propose the draft.)

No modification was made during this reporting period.

### 3-3 Preparation of Gov. of Malawi toward after completion of the Project

The team considers that allocation and securing financial resources is integral part of achieving "institutionalization". The current funding mechanism including PSIP is not reflecting the project and the sector's needs due to the shortage of revenue, etc.

## PM Form 3-1 Monitoring Sheet Summary

### II. Project Monitoring Sheet I & II

As Attached

## Project Design Matrix (Revision of Project Design Matrix)

ANNEX | Version 1

Dated November 2015

Project title: Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II)
Implementation Agency: Departent of Forestry, Ministry of Natural Resources, Energy and Mines,
Planture, Palaka, Muyanza, and Nana Districts

Blantyre, Balaka, Mwanza, and Neno Districts

Target group: Management staff and extension staff of the four districts

Period of Project: Five (5) years. April 2014 - March 2018

Project Site: Four (4) districts in Middle Shire (Blantyre, Balaka, Mwanza, Neno)

Activities		outs	Important Assumptions
Activities for Output 1: Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.	The Japanese Side	The Malaian Side	- Area Stakeholders Panels and village heads of pilot TAs agree with the purpose of the Project and participate in activities.
1-1. Orient stakeholders in the districts on the COVAMS II project and COVAMS approach The Japanese Side The Malawian Side	1, ,	(1) Human resource for the operation of the Project	<ul> <li>Socio-economic and political conditions do not affect adversely to activities of the Project (shortage of petrol, etc.)</li> </ul>
1-2. Set up district management team under DESC	- Technical areas include Soil Erosion Control, Rural Development, Research, Training and Extention, Publicity, Monitoring and Evalution	1	- Climate conditions do not change drastically.
1-3. Facilitate group village headmen in target districts to include CMFA using COVAMS approach in the village - Team of advisors headed by Chief Advisor	<ul><li>(2) Equipment</li><li>Vehicles, Motorcycles, Training</li><li>Equipment and other necessary equipment</li></ul>	(2) Office working environment - Suitable office space with necessary equipment	- Trained management staff and extension staff continue their services in their respective positions.
1-4. Implement training sessions for the district staff to strengthen their abilities on formulating activity implementing plan and annual input plan towards budget allocation	(3) Training courses for counterpart personnel in Japan	(3) Funds	
1-5. Integrate CMFA plan into district implementation plan and/or annual implementation plan (DIP/AIP), based on VAPs		- Running expenses necessary for the implementation of the Project such as allowance for GOM project staff, office management costs,	
1-6. Obtain approval from full council on the DIP/AIP	(4) Funds - A part of operation cost		
Activities for Output 2: Plans of CMFA using COVAMS approach are integrated in to District Implementation Plan/Annual Investment Plan of target districts.  2-1. Assess capacity of district staff in operation of COVAMS approach through observation and assessment survey.  2-2. Prepare capacity improvement plans on COVAMS approach and project management  2-3. Improve capacity of district staff by On the Job Training through implementation of COVAMS approach  2-3-1. Introduce COVAMS approach to district teams  2-3-2. Prepare annual working plan  2-3-3. Implement COVAMS approach according to the annual working plan  2-3-4. Monitor progress of implementation of COVAMS approach  2-3-5. Review annual activities  2-4. Improve capacity of district staff by training  2-5. Monitor degree of capacity improvement of district staff  2-6. Evaluate capacity improvement plan and improve it if necessary  Activities for Output 3: Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified through research.  3-1. Conduct research on extension method of COVAMS approach.  3-1-1. Design research.  3-1-2. Conduct research survey and data collection			
3-1-2. Conduct research survey and data collection 3-1-3. Compile result of survey and data collection as a report 3-2. Conduct research on extension subjects of COVAMS approach 3-2-1. Design research 3-2-2. Conduct research according to the design 3-2-3. Compile result of the research as a report			Pre-conditions  - Collaborating institutions (LRCD, DAES, DCD) are fully supportive.  - DCs of target districts are fully supportive.
Activities for Output 4: Ownership of the COVAMS approach is enhanced among leaders of all levels. 4-1. Plan activities to promote understanding of the leaders and organizations on 4-1-1. List up target groups of the promotion 4-1-2. Compile action plan to promote understanding of the target groups 4-1-3. Prepare necessary explanation materials for promotion 4-2. Implement planned activities to promote understanding of the leaders and organizations on the CMFA using COVAMS approach 4-3. Evaluate promotion results and modify/ improve plan if necessary			Issues and countermeasures

## PROJECT MONITORING SHEET

**Project Title: Project for Promoting Catchment Management Activities in Middle** 

**Shire** 

Version of the Sheet: Ver. 04 (term: May 2017 - Oct. 2017)

Name: Masato ONOZAWA

<u>Title: Team Leader/ Institutionalization 1</u>

Submission Date: Oct. 31, 2017

# I. Summary

# 1 Progress

This is the <u>fourth</u> submission of the Monitoring Sheet by IC Net Ltd. The company has been entrusted the latter half of the *Project for Promoting Catchment Management Activities in Middle Shire Phase II* (COVAMS II) by Japan International Cooperation Agency (JICA) since September 2015. Overall, the Project has been carried out as scheduled according to the PO. The current phase of the Project is aimed at concluding the project which is scheduled in March 2018.

## 1-1 Progress of Inputs

1-1-1 Assignment of Counterpart Personnel

(See Appendix for the list of counterpart)

**Table 1 List of Key Counterpart Personnel** 

Title/ Responsibilities	Affiliate/ Ministry	Name
Principle Secretary	Ministry of Natural Resource Energy and Mining (MoNREM)	Mr. Clement Z. Chilima
	(until September 2016)	Mr. Kester Kaphaizi Botolo
Deputy Director of Department of Forestry	MoNREM, Department of Forestry	Mr. Thomas Makhambera, Mr. Francis Chilimampunga
Director of Agricultural Extension Service, Agricultural Extension Service Department	Ministry of Agriculture, Irrigation and Water Development (MoAIWD),	Dr. Jeromy Nkhoma
Director of Community Development, Department of Community Development	Ministry of Civic Education, Culture, and Community Development (MoCECCD)	Ms. Clotilda Sawasawa
Deputy Director, Department of Performance Enforcement	Office of the President and Cabinet (OPC)	Mr. Elliot Phiri
Regional Forestry Officer (South)-RFO (S), Department of Forestry	MoNREM, Department of Forestry	Ms. Cecilia Chauluka
District Forestry Officer, Balaka	MoNREM	Mr. Paul Muhosha (from March 2017)
		Mr. Baird Nangwale

District Forestry Officer, Blantyre	MoNREM	Mr. Geoffrey Kanyerere
District Forestry Officer, Mwanza	MoNREM	Mr. Gregory Kulemeka (from July, 2016)
		(Vacant until June 2016)
		Mr. Brian Mtambo (up to June 2016).
District Forestry Officer, Neno	MoNREM	Mr. Emmanuel Ngwangwa
Assistant District Forestry Officer,	MoNREM	Mr. Peter Mkwapatira
Blantyre, Regional Management Team		
(RMT)		

# 1-1-2 Assignment of Japanese Experts

The Project was inaugurated in October 2013 followed by the dispatch of long-term experts from JICA (Table 2). Then since September 2015, a team of consultants has been dispatched and took over the Project (Table 3). The following is the summary of the assignment(s) of the experts as the end of October 2016.

# 1) Experts (Dispatched by JICA)

#### 1-2 Progress of Activities

Toward the end of the Project scheduled in March 2018, the Activities listed among the four Outputs are in progress. The progress of the activities listed under each Output varies but the institutionalization of COVAMS approach has been taken into action. Details are explained as shown in the following section (1-3 Achievement of Output).

## 1-3 Achievement of Output

- 1-3-1 The revised Output 1 in the PDM Ver. 2 is "Promotion for the target districts and ministries concerned to ensure institutionalization and budget for COVAMS is carried out." There are three indicators and they are: "1-1. The materials for providing information meeting the needs of at least three (3) organizations, including the guidelines for the COVAMS approach, are prepared", "1-2. A seminar for information sharing/ PR inviting the private sector with a stake in catchment management is convened at least two (2) times" and "1-3. A field visit inviting participants from donor/ media is organized at least two (2) times".
- The progress of Indicator 1-1 is that the promotion of COVAMS activities has been carried out to the ministries and agencies such as the Ministry of Agriculture, Irrigation and Water Development, the Ministry of Gender, Culture and Community Development and Forestry Department., etc. The Project will continue to work with these ministries and agencies toward the end of the Project.
- ii) For Indicator 1-2, a public relations seminar targeting the following two private firms is planned in November December 2017. They are Electricity Generation Company (Malawi) Ltd. (EGENCO MW Ltd. and Blantyre Water Board.
- For Indicator 1-3, a field visit for southern newspaper reporters has been planned and implemented (The Daily Times on April 6, 2017). Additional field visits for media will be held in the occasion of the proposed JCC scheduled in November 2017 and March 2018. Regular meetings by organizations concerned are held. For the post project period, the districts are expected to hold monthly meetings.

  In addition, the district-level initiatives will continue to try to disseminate information through community radio and/or TV use in each district.

#### <Others>

- In the Work Plan submitted in September 2015, the Team defined "Institutionalization" from the following three elements: (1) extension; (2) administration; and (3) finance. The elements are closely related to each other and essential for achieving the "Institutionalization" of the COVAMS approach. In "Extension", the COVAMS approach is expected to be extended steadily, and policy-makers will get to acknowledge its positive impact. In "Administration", the preparation of annual activity plan, budgeting and allocation, project implementation and regular M&E are to be implemented, and a system for the implementation will be in place. Finally, in "Budget", activity plans (including budgeting and finance) are to be prepared at the local level and will be approved based on the existing annual budget cycle of Malawi.
- v) The Team has examined the budget processes of the Government and financial conditions through interviews with government officials and politicians, to identify potential funding sources and prioritize actions for securing funds. In addition, the Team has worked with the Department of Forestry to support them to complete the submission of PSIP budget request.
- The Team discussed with district officers who is responsible for the financial affairs regarding the most updated "Annual Investment Plan". It was found that the plan is no longer prepared at the district-level as stated in the PDM. The plan is replaced by PSIP. Currently, district officers of ministries prepare and compile annual budget proposals for submission using the PSIP budget template every year. For the budgeting of COVAMS, the Regional Forestry Office is primarily responsible for preparation of budget proposal through PSIP. Upon the advice and the request from the Operation Advisory Team dispatched by the JICA Head Quarters in January 2017, the team revisited the District Commissioner (DC) and the Director of Planning and Development (DPD) of each district to investigate and reconfirm the current status of the District Strategic Development Plan. It was found that the plan had some shortcoming to be used as an indicator of the PDM, due to the lack of funding to support continuous updating.
- vii) Through a series of interviews to COVAMS key personnel, e.g. DMTs/ TSTs/ CCOs, the Team has reviewed the current district-level administrative procedures. Based on the above, a roadmap for transfer of the work responsibility toward the end of the technical cooperation project has been proposed and discussed through the monthly regular PM meetings.
- viii) The Team discussed with the Department of Forestry (DOF) on possibilities of allocating funding from the Forestry Development and Management Fund (FDMF) and the Tobacco Levies. An agreement was reached that DOF would make best efforts to allocate funding from the next financial year's FDMF and Tobacco Levies preferentially to the region/ districts where CMFAs using COVAMS approach are being planned.
- The Team and the DOF have started to review the Guidelines for Promotion of Catchment Management through Farmers' Activities (CMFA) with COVAMS Approach in preparation for the possible official acknowledgment/ endorsement of the document.

- x) The Team together with the DOF discussed with Malawi College of Forestry and Wildlife (MCFW) the proposed incorporation of COVAMS approach into the curriculum and coursework of MCFW. MCFW Principal and faculty members suggested the possibility of developing a new short-course covering COVAMS approach or using COVAMS approach as a case study in college courses. All the parties agreed that MCFW faculty members should visit COVAMS project sites as a next step forward.
- xi) The Team proposed to Local Development Fund (LDF) officials the potential integration of the inclusive training-based CMFA using COVAMS approach into the MASAF public works program.

  The Team explained the benefits of adopting COVAMS approach into MASAF and presented a design change proposal. Both sides agreed to discuss further involving a top-level LDF official.
- 1-3-2 The revised Output 2 is "Capacity for implementing the COVAMS approach by officers of the target districts is improved". There are 5 indicators and they are: "2-1. Training covering ten (10) designated subjects is carried out at least once", "2-2. At least 80% of participants fulfill the requirements in the post-training evaluation of the training on CMFA using the COVAMS approach", "2-3. The COVAMS approach is adopted by at least 80% of the villages (more than 296 villages out of 370 villages) within the pilot TAs", "2-4. At least 80% of the LFs (2,910 LFs out of 3,637) elected by fellow farmers are acknowledged" and "2-5. At least 80% of the selected SLFs (326 SLFs out of 407) are acknowledged.
- i) The training in the ten (10) areas indicated in 1-1 has been completed by October 2107.
- ii) By the end of September 2017, Indicator 1-2 has been achieved. The project has evaluated the level of understanding of COVAMS approach through the Performance Review Meeting in June 2017 (self assessment and evaluation of each district). The result shows that at least 80% of the 14 TSTs and 80% of 27 CCOs carried out their activities complying with the COVAMS guidelines. The self-evaluation shows that CMFA using COVAMS was higher than 3 out of 5 levels which is satisfactory.
- iii) The adoption rate as of October 2017 for Indicator 1-3 is that the COVAMS approach has been implemented in 347 villages out of 367. The achievement rate is calculated as high as 95%. The achievement rate in Neno prefecture, however, is as low as 55%. This is because the activities of the Shire River Basin Management Program entered the TA Dambe (50 villages), which was the original one of the target TAs of COVAMS. The project forced to change its target to TA Symon (all 47 villages) in order to avoid competition. Also, in Blantyre District, activities are being carried out at the initial target number of villages or more. This seems to be a result of the split of a single village into multiple villages in recent years.
- iv) The current achievement for Indicator 1-4 is completed as of October 2017. Of the 3,795 LFs nominated between 2013 and 2017, some 3,745 LFs were given certificates. The authentication rate is as high as 99%.
- v) The achievement of Indicator 1-5 as of the end of October 2017 is that the indicators have been achieved. All of the 435 SLFs nominated between 2015 and 2017 were all certified.

#### <Others>

- vi) (Budget Planning Process) A persistent difficulty in securing funding for the project¹ has been one of factors whether or not the institutionalization would be achieved. The Project has supported the districts to facilitate the process of preparing the annual budget documents complying the procedures and the requirements of PSIP. The financial difficulty, however, has been causing even more dependency to donor supports such as COVAMS II. Therefore the Project needs to diversify funding other than ordinary Part II Budget through PSIP.
- vii) (Review Meeting) Since the taking over by IC Net Ltd. in September 2015, the planning process of COVAMS-related planning activities has been reviewed and modified thoroughly, aiming at the district officers, who will be able to plan and implement the activity plans. This includes a project cycle consisting of planning, implementing, monitoring and reviewing; and will be carried out routinely without requiring large external inputs (e.g. a formal conference setting for the meeting, etc.). Annual and semi-annual review meetings of the two consecutive years have been convened for preparation and monitoring of the activities.
- viii) (Review Meeting) A series of review meetings for preparation of 2017/18 activities was launched in March 2018. Some modification were given to the agendas of the year, for example the formulation of activity plan for 2017/18 is derived from the full review of the activities of the previous year, identification of priority areas/ communities with spatial and environmental consideration are taking into account, and consideration of minimum requirements for sustaining the COVAMS approach aiming at the post COVAMS local initiatives. Each district prepared its annual activity plan based on the internal discussions and the exchanges across the districts. During the meeting, a set of the criteria for weaning<sup>2</sup> the target villages from the direct support upon completion of initial two years of direct support from the Project was discussed. The final meeting for presenting the plans prepared by each district was convened on March 31, 2017. As a result of the final meeting, the criteria above and the checklist for monitoring activities were approved along with district annual activity plans.
- (Introduction of lean COVAMS) Since the taking over of the Project by IC Net Ltd., the Team has been communicating deliberately with counterparts on the issue of minimizing inputs because the current setup creates dependency and is not sustaining when the Project terminates in March 2018. Though one of the five principles of the COVAMS approach was utilization of locally available resources, people involved in the Project tended to be dependent to the various supports (e.g. fuel

<sup>&</sup>lt;sup>1</sup> The total budget disbursement in the FY 2015/16 was only MWK 15 million for COVAMS II while its original request on the PSIP was MWK150 million and its approved budget plan was MWK 50 million. According to the officers responsible for district finance, a priority was given to physical investment projects to avoid contractual difficulties. The disbursement for the counterpart budget (Part II Budget), however, has been MWK 0.0 (zero) while the original budget request for the FY2016/17 on the PSIP was MWK 120 million. Such trend is considered persistent in the FY2017/18.

<sup>&</sup>lt;sup>2</sup> A positive vocabulary, "Happy Graduation", was used to facilitate and accelerate independence from the direct support from the Project.

for extension works and monitoring, provision of various incentives including materials, allowance, etc.) from the Japanese side. In reality, such support makes the lives of CCOs easier<sup>3</sup>. To minimize negative impact from the dependency for securing sustainability, the team proposes an idea of lean COVAMS which requires minimum input for implementation as a trial basis at five (5) villages in Mwanza district. The team organized a workshop on March 27 to prepare an action plan for the lean COVAMS inviting leaders of these villages. Some new CCOs were nominated and were to facilitate and to lead the workshop. TST of Mwanza district explained how the lean COVAMS is designed, and prepared the activity plan for carrying out the proposed lean COVAMS through a discussion with the participants.

The total number of the target villages as of FY 2016/17 has increased by 345 from the initial 50 in 2013 (see Table 6). Total households currently working with are estimated as much as 45,000 through 3,000 LFs and 32 CCOs.

Table 6 Changes of the Number of the Target Villages (2013-2017)

Target Districts	Year Plan	Conservation Coordinating Officers (CCOs)	Villages (Old & New)	House Holds (HH)	Lead Farmers (LF)
4 Balaka, Blantyre, Mwanza, Neno	2015/16	30	217	32,333	2,186
4 Balaka, Blantyre, Mwanza, Neno	2016/17	32	345	45,750	3,047
Target Districts and TAs					
Balaka	Blantyre:	Mwanza	Neno		
TA: Chanthunya	TAs: Chigaru & Lundu	TAs:Govati & Nthache	TAs: Mlauli & Symon		

# **Table 7 Interventions Initiated by the Project**

Districts	Year	Villages	Tree Seedling	На	Check dams	Gully
Districts		Covered	Planted	Conserved	constructed	Constructed
BLANTYRE		62	38,188	81	461	17

Total		218	196,684	272	14,020	3,222

<sup>.</sup> 

<sup>&</sup>lt;sup>3</sup> Japanese experts see that government officers (CCO, TST, PM, etc.) are dependent than farmers to material and financial support provided mainly by the Japanese side to COVAMS project. Not all such support is considered absolutely essential for people participating in COVAMS project. They are, however, to facilitate the process.

- 1-3-3 Output 3: "Effectiveness of the COVAMS approach, both extension method and extension subjects, is verified."
- i) The achievement of Indicator 3-1 "At least 80% of the LFs elected by the fellow farmers carry out minimum of one (1) training each subject on the CMFA using the COVAMS approach" is that 100% of the LF train at least once in all technologies of nurturing, soil conservation and gully control according to the Household Questionnaire Survey prepared in January 2017.
- The achievement of Indicator 3-2 "At lease 80% of the households in the villages covered by the project participate the training on the CMFA using the COVAMS approach carried out by LFs" is that participation rates of residents' training for nursery training were 81.5% in the first year, 90.3% in the second year and 88.2% in the third year according to the household survey. Similarly, the soil conservation training was 88.8%, 95.1%, 97.0%; the Galley control training was 85.9%, 94.0%, 97.1%.
- The achievement of Indicator 3-3 "At least 50% of the households in the villages covered by the project adopt the CMFA of the respective areas" is that the adoption rate of seedling production was 83.8% in the first year, 89.6% in the second year, 90.7% in the third year, the practice rate for planting trees was likewise 84.6%, 88.3%, 87.9%. The practical rate of soil conservation technology is 88.9% in the first year, 97.2% in the second year, 98.6% in the third year, and the practical rate of gully control technology is 69.1%, 69.2%, 72.1% in the same way.
- The achievement of Indicator 3-4 "The effectiveness of the contour ridge cultivation as one of the CMFA technique using COVAMS approach is identified" is that 1,103 ha Maize farm in 2014/15 agricultural period revealed that the soil erosion of 19,287 m³ (17.49 m³/ ha) as a whole was prevented by soil preservation by the contour farming method ("Working Paper No. 9: Soil Loss Study for Maize Gardens and Small Scale Check Dams" submitted in September 2015).
- v) Indicator 3-5 "The effectiveness of gully prevention technique as one of CMFA technique of COVAMS approach is identified" as of the end of October 2017 is that the Indicators have been achieved. A total of 1,602 m³ of soil erosion was prevented by 21,362 check dams built in the four districts retaining approximately 0.075 m³ of soil each dam according to "Working Paper No. 9: Soil Loss Study for Maize Gardens and Small Scale Check Dams" submitted in September 2015.

#### <Others>

vi) The planned experiment for soil erosion has been carried out based on the advice given by the long-term experts. It consists of the following four plot categories: a) 45 degree straight ridge (plot made "business as usual" practice for comparison), b) contour ridge, c) soil conservation employing mulching by various organic matters, and d) a plot using manure. The simple experiment, however, did not reflect the complex nature of soil erosion caused by runoff water and was difficult to identify the factors and impact of the different preparation of the plots as intended. The hydrological model

for estimating soil erosion caused by runoff water employed in COVAMS was too simple that factors such as soil type, strength and intensity of rainfall, slopes, etc. have not been taken into account<sup>4</sup>. In addition the site design and the locations designated by the previous team of the experts were not carefully calibrated<sup>5</sup>. For example, eroded soil made by the runoff water of each plot were mixed by soil failed from the walls of trenches and excavated banks surrounding the pit. Apart from the physical design of the sites advised by the long-term experts, the plan of the experiment lacks basis of literature study on hydrology<sup>6</sup>. According to literature study conducted by the current Team, an erosion estimation model predicts long-term average soil loss resulting from raindrop splash and runoff from specific field slopes in specific cropping and management systems and rangeland. In light of such shortcoming on appropriate approaches to analyze long-term examples is the Revised Universal Soil Loss Equation<sup>7</sup> (RUSLE) developed by the US Department of Agriculture<sup>8</sup>.

- vii) According to interviews during monitoring visits made by experts, the yield of each experiment plot varies due to the serious draught hit throughout Southern Africa in 2016. Based on the observation, the plots using mulcting (type c above) yields better this year because the organic matters covering the plot have conserved and retained moisture in the soil. Applying the farming technique depends on weather conditions in particular precipitation. When much rainfall is expected, contour ridge farming is effective. Whereas when draught is expected, mulching is the most appropriate technique. The challenge for ordinary farmers is to collect and apply appropriate amount of organic materials because they are high in need for use as animal feed for raising cattle, goats, etc.
- viii) Household questionnaire survey was carried out in June-July 2014. 760 households were randomly selected and were interviewed by a team of researchers. The finding is summarized as follows:
  - COVAMS approach shows effectiveness and strength in extending agricultural practices within a relatively short period of time.
  - Adoption of techniques (e.g. soil conservation, building check dam) exceeds 50% level within one

<sup>&</sup>lt;sup>4</sup> The subject is complex and few textbooks or manuals provide much in the way of guidance. As a result, much time, effort and money have been wasted on work that has yielded little useful information. Many experiments, particularly those involving runoff plots and measuring weirs, have been abandoned because they proved to be impractical to operate, faulty in design or too slow in providing the type of information needed. (Source: N. W. Hudson (1993): Field measurement of soil erosion and runoff; Food and Agriculture Organization of the United Nations. Rome).

<sup>&</sup>lt;sup>5</sup> Multiple testing sites and the plots should have been chosen as similar as possible, for no plots are ever identical, and the two plots are calibrated, i.e., the difference between the two is measured by plotting values of some suitable parameter of one plot against the other.

<sup>&</sup>lt;sup>6</sup> According to Mr. Sato, former Chief Advisor of COVAMS II, the previous experiments were based on no literate study on hydrology or river engineering, etc.

<sup>&</sup>lt;sup>7</sup> The Universal Soil Loss Equation (USLE) is a widely used mathematical model that describes soil erosion processes. It was developed in the U.S. based on soil erosion data collected in the beginning of the 1930s by the U.S. Department of Agriculture (USDA) Soil Conservation Service (now the USDA Natural Resources Conservation Service). The model has been used for decades for purposes of conservation planning both in the United States where it originated and around the world (Source: USDA; URL= https://www.ars.usda.gov/southeast-area/ford-ms/national-sedimentation -laboratory/watershed-physical-processes-research/docs/revised-universal-soil-loss-equation-rusle-welcome-to-rusle-1

<sup>-</sup>laboratory/watershed-physical-processes-research/docs/revised-universal-soil-loss-equation-rusle-welcome-to-rusle-1 and-rusle-2/)

8 Reside the RUSLE discussed above the data collection for the experiment did not follow a general rule and

<sup>&</sup>lt;sup>8</sup> Beside the RUSLE discussed above, the data collection for the experiment did not follow a general rule, and regulation of plot shall be complied with technical guidelines such as the USDA or the Japanese Ministry of Land, Infrastructure and Transport.

year from the beginning of intervention.

- Seedling production within 2 years from the beginning of intervention totals over 2.3 million; average seedling production per household is 67 (please see the summary of the household survey).
- 1-3-4 The revised Output 4 is "The commitment of the COVAMS approach among leaders of all levels is enhanced."
- i) The current status of Indicator 4-1 "A monthly meeting by the CCO4 -TST5 is convened regularly by the initiatives of the district forestry departments" as of October 2017 is that the COVAMS-related meeting at villages are convened regularly.
- ii) The status of Indicator 4-2 "A monthly PM meeting of the target districts is convened regularly by the initiatives of the district forestry departments and other district departments concerned as of now is that the regular PM meeting is held once a month. It is believed that it will continue to be held when the project completes in March 2018. Other current transactions on the Malawian account toward fuel for vehicles necessary to hold such meeting are not fully secured at the time of writing.
- lndicator 4-3 "The field visit inviting minimum of 8 officers of the ministries and districts is organized at least once by the district departments" is still in progress. A COVAMS seminar sponsored by Southern Province (field visit) is scheduled to be held between November and December 2017.

  Prospective participants are included in the current target four prefectures, Middle Shire river basin (e.g. Mangochi, Ntcheu, Macchinga, Zomba and Chiradzule).
- iv) Indicator 4-4 "The visit and explanation to the organizations concerned is carried out at least three

  (3) times by the initiatives of officers of ministry and the distract departments" has been fulfilled as of

  October 2017. The visits and explanation to various organizations and agencies have been implemented.
- v) Radio broadcasting is considered as one of the promising approaches for disseminating sustainable conservation practice in Malawi. Department of Extension Services of the Ministry of Agriculture, Irrigation and Water Development (MoAlWD) used radio broadcasting to reach out mass population for disseminating agricultural practice, etc. Though it is an effective medium for promoting new ideas, etc. it requires skillful development and professional production (e.g. planning, scripting, recording, editing, etc.) by such national broadcasting station as MBC<sup>9</sup>, a national broadcasting corporation.
- vi) The team investigated the procedures and the requirements for a regular broadcasting program that attracts farmers and other audience. It was found that a reduced tariff may be applied to public broadcasting program at MBC, when a special arrangement was made between the Department

<sup>&</sup>lt;sup>9</sup> The Team requested MBC, the national broadcasting system in Malawi, to broadcast two trial radio programs to introduce COVAMS activities. The programs were planned and developed by the long-term experts in 2015. They were on the air from the Blantyre Station on a regular evening agricultural program supported by the extension department of MoAIWD on April 18 and 20, 2016.

- of Forestry and the Ministry of Agriculture, Irrigation and Water Development. A professional work made by the production side requires additional cost beyond the reduced airtime. Given difficulty of securing financial resources of the public sector in Malawi, securing the cost of sustainable radio program is still a challenge.
- vii) Collaboration with the private sector is another untouched area to explore since the beginning of COVAMS II. The Team has contacted a couple of major corporations in Blantyre to see their interest in investing in some of COVAMS activities. The response varies due to the causes those companies have. As for the marketing tools, the brochure produced by the previous team was updated and the designs were revised by a local designer for further distribution in Malawi. The Team continues to communicate with the prospective partners with a relatively long-term commitment.
- viii) Collaboration with other development partners (donor agencies, etc.) is another issue to see if any opportunities arise. The Team worked with WFP and WRI by introducing COVAMS approaches as a means for extension technique. CCOs have been visiting respective project site for exchange of techniques. Relevant technical document of COVAMS was given to the counterpart organizations.

## 1-4 Achievement of the Project Purpose

Overall, judging the achievement of the Project Purpose is still premature. The current status is explained as following:

- The Project Purpose was revised in the PDM Ver. 2 as "Catchment Management through Farmers Activities (CMFA) is institutionalized in the target districts". The new indicators along the purpose are: "(1) The annual plan and the budget request for CMFA using the COVAMS approach are prepared and implemented by the district departments" and "(2) The guidelines for the COVAMS approach is acknowledged by ministries concerned." The current status is summarized as following:
- ii) The "District Strategic Development Plan" of each target district was no longer functional due to the lack of resources and initiatives for the sustaining review. The prepared plan was originally intended to be a basis for budget documents of each district and was initiated originally by GTZ. The plan, however, is no longer prepared nor maintained, according to the Directors of Planning and Development (DPD) of the four districts.

**Table 8 The Updated Status of District Strategic Development Plans** 

	<u>•</u>		<u> </u>	
Items/ Issues	Blantyre	Balaka	Mwanza	Neno
Availability of effective District Strategic Development Plan as of March 2018 and beyond	No	No	No	No
Current Status	District Council Strategic Development Plan (2011-16) expired in June, 2016. Updating is	Strategic Implementation Plan (2013–18) is available and is effective until June 2018.	Strategic and Implementation Plan (2011–16) expired in June 2016. No plan for updating or for revision.	There is no District Strategic Development Plan prepared. District Development Plan is the supreme

	uncertain due to shortage of necessary resources available.	No clear time-frame for updating or for revision		planning document.
Availability of the District Development Plan (alternatives)	Effective DDP (2013–18) available. No clear schedule for updating	Preparation of DDP (2017–22?) in progress. The data of its completion is not clear due to some delay of compilation.	Preparation of the DDP in progress (completion schedule not disclosed).	An effective DDP (2013-18) available. No clear schedule for updating
Annual investment Plan/ Annual Implementation Plan	etc. The Annual Impler	t Plan is a compilation on mentation Plan varies froument or sometimes but	om one district to anothe	
·	Safety guard plan is only applicable for the catchment management activities.	There are no AIPs. Only attached document on budget document is prepared.	Annual budget document prepared while there is no DDP. This lacks the justification of the budget.	AIP was prepared along with the current DDP.

- At the review meeting held from February to March 2017, activity plans for FY 2017/18 in each district were prepared. The activities have been implemented based on the plan. All four districts hold review meetings to collect current information on the target villages and analyze them to prepare the activity plan for the fiscal year. The annual review meeting is expected to hold from February to March 2018 for the preparation of post-project activities with an initiative by the Counterpart side. At the meeting, it is expected that the operation plan for FY 2018/19 will be also drafted.
- iv) Following the district-level planning framework above, each district department prepares the budget plan respectively and annually. The plan, which includes the CMFA through COVAMS approach, is prepared annually. Therefore the achievement of the Project Purpose against the former indicator has been carried out and implemented.
- The achievement of the second indicator as of October 2017 is that the finalization of the draft of the guidelines is completed. The long-term experts originally prepared the draft. It was reviewed by the Department of Forestry and found that both its content and format are not fully suitable for an official document. Department of Forestry and the Ministry of Gender, Culture and Community Development (MoGCCD) have agreed to acknowledge the document. The final draft will be presented to districts in Middle Shire for further review expected in a seminar held in November.
- vi) As shown in Table 6, 345 villages in the four target-districts have been currently actively involved in the COVAMS approach. In addition, four more villages are experimenting Lean COVAMS this year.
- vii) In addition, achievement through three elements of institutionalization, namely administration, extension and budge/finance, may be discussed. Firstly, in the administration area, capacity development activities are being implemented since the beginning of the training. Interaction with

the expert team as well as among the counterparts of all levels and organizations in the day-to-day business transaction will help the project members to improve management. Presently, there is much room for improvement. For example, reporting as well as fuel request need to be submitted on time. Secondly, in the finance area, cooperation among different ministries is well established in the Project. The Office of President and Cabinet (OPC) in the central government is supportive to the project activities.

#### 1-5 Changes of Risks and Actions for Mitigation

Overall, the major risk associated to implementation of COVAMS is funding as discussed in section 1-3-2 Output 2. In addition, it should be noted that the current status of the activities and the achievement varies from one district to another due to the difference in their conditions and circumstances (e.g. staffing, physical location, climate conditions in a particular year, etc.).

- Project activities in Balaka were suspended in September 2015 due to late disbursement of resource by mistakes and failure. With help from other district members, the cause of the problem and challenges were analyzed and the situation was back on track. As seen on the incident, peer-to-peer learning as well as oversight from the Regional Forestry Officer is a key for maintaining collaboration.
- ii) A stoppage occurred in Neno in October 2016 due to the absence of the core management team during the counterpart training in Japan. The responsibility of implementing activities was transferred to the substitute while they were out of the country. The operation of TOT is too complex for unskilled individuals when the PM and core management were out of office. A backlog of the planned TOT was cleared by the end of November 2016.
- Low level of funding disbursement from the government is another persistent challenge for the project when aiming beyond the termination scheduled in March 2018. For the actions for mitigating the situation, even more involvement of the officers of the central government shall be strengthened for better coordination and policy formulation for promotion of CMFA using COVAMS approach.

#### 1-6 Progress of Actions undertaken by JICA

- i) The Team appreciates the support from JICA on the various changes and difficulties during the transitional period from the long-term experts to IC Net Ltd. As a result, activities related to the takeover was completed smoothly.
- ii) The funding issue discussed in this report is the single most difficult persistent challenge for the Team. Financial independence is the center of transferring the project activities for institutionalization. The issue has been seriously taken as an issue when it comes to a dialogue between GOM and JICA.

# 1-7 Progress of Actions undertaken by the Government of Malawi

- i) The assignment of Balaka district for new staff was completed in a prompt manner. The assignment of the new project manager of Mwanza was also completed.
- ii) As discussed in the previous section, the funding allocation has been a persistent challenge to all

parties concerned. The transfer of the project activities depends on local financial resources to sustain COVAMS technologies and the institutions.

#### 1-8 Progress of Environmental and Social Considerations (if applicable)

NIL

#### 1-9 Progress of Considerations on Gender/Peace Building/Poverty Reduction (if applicable)

i) Progress has been seen during the harvesting season of Maize in the previous term of the monitoring sheet.

# 1-10 Other remarkable/considerable issues related/affected to the project (such as other JICA's projects, activities of counterparts, other donors, private sectors, NGOs etc.)

- i) <u>The PDM initially developed (PDM Ver. 1)</u> was found not valid due to some indicators not being updated to match the current situation (discussed in other sections).
- ii) In Balaka and Neno districts, a variety of activities funded by development partners (e.g. international organizations and NGOs) has been carried out. The key personnel at these districts tend to be preoccupied with the activities of such agencies and organizations. This is because of lack of communication and coordination among the projects and because of shortage of competent personnel at the local level.

# 2 Delay of Work Schedule and/or Problems (if any)

#### 2-1 Detail

i) The only problem observed in this reporting period was the delay of TOT schedule in Neno as discussed in section 1-3-2.

#### 2-2 Causes

i) It was caused by the participation of the counterpart training in Japan.

#### 2-3 Action to be Taken

i) As mentioned earlier, from November this year the delayed TOT has been carried out to catch up the backlog. CCOs from neighboring districts were helping Neno to carry out the TOT.

## 2-4 Roles of Responsible Persons/Organization (JICA, Government of Malawi,etc.)

None

## 3 Modification of the Project Implementation Plan

# 3-1 PO

After the consultation among GOM, JICA as well as the Project, modification of PDM and of PO was proposed and discussed during the JCC held in June 2017. The PDM Ver. 2 was approved.

## 3-2 Other modifications on detailed implementation plan

i) As mentioned earlier, the new PDM and the PO (Ver. 2) was approved at the JCC meeting in June 2017.

## 3-3 Preparation of Government of Malawi toward after completion of the Project

The team considers that allocation and securing financial resources is an integral part of achieving

# PM Form 3-1 Monitoring Sheet Summary

"institutionalization". The current funding mechanism is not reflecting the project and the sector's needs due to the shortage of revenue, etc.

#### MEMORANDUM OF UNDERSTANDING

or

#### Post Project Monitoring for the Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II)

This Memorandum of Understanding (MOU) constitutes of the agreement between the District Department of Forestry of XXX district and Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II) (Project) regarding the framework for conducting post project monitoring for preparation of ex-post evaluation which will be scheduled in 2021 by Japan International Cooperation Agency in accordance to the R/D. This MOU is undersigned between the Project Manager of the Department of Forestry of Balaka district (PM) and the Team Leader of the Project.

#### Article 1. Purpose of Conducting Monitoring

- 1. The purpose of conducting monitoring is to meet the recommendation adopted by the Joint Coordinating Committee held on November 23, 2017,
- 2. The Department of Forestry (DOF) agreed to design and to introduce monitoring activities to record changes in the sites with Catchment Management through Farmers Activities (CMFA) based on the COVAMS approach in order to mobilize resources for sustaining CMFA based on the COVAMS for the post-project period. The monitoring is critical to verify effects and effectiveness of the CMFA introduced by the Project,
- 3. The monitoring methodology shall be simple and feasible to record changes of vegetation and / or soil conservation over time. The record shall be available for stakeholders to have clear understanding of the changes of the specific sites made by continuing CMFA, and
- 4. The Policy Evaluations Act of Japan sets the primary objectives of evaluation as management and accountability, regulating evaluation by the responsible governmental organization. It also reflects the result of these evaluations to the policy making in an appropriate manner, in the aspect of efficiency and effectiveness in order to gain well understanding in the outcome of their own policies. According to the Evaluation Guidelines of Japanese Official Development Assistance (ODA), ex-post evaluations are conducted for ODA projects that have past three and five years.

#### Article 2. Methodology and the Procedure of the Monitoring

- The Project Manager (PM) shall establish the three monitoring sites where CMFA has been carried out during the Project. The monitoring sites shall be marked with the beacons (permanent markers made of concrete) or the stable stones marked with oil-based paint. The GPS locations of the monitoring sites are identified by the camera provided by the Project,
- 2. The PM shall organize a meeting with local authority to make community members aware of the purpose and necessity of the monitoring so that the monitoring sites and beacons would be properly managed and maintained.
- 3. The list of the three monitoring sites are as following:
  - 1). BLK-POLOKERA: Polokera village, GVH Silliya, TA Chamthunya
  - 2). BLK-IPENDO: Ipendo village, GVH Bamusi, TA Khamthunya
  - 3). BLK-PHALULA: Phalula village, GVH Phalula, TA Chamthunya
- 4. The methodology of the annual monitoring is to take a panoramic photograph of the designated forest from the monitoring sites marked with the beacon or with the painted stone. The photographs for the monitoring shall be taken by District Forestry Office (DFO) using the cameras provided by the Project. The date(s) of the monitoring shall be within the 1<sup>st</sup> week of March every year. The date(s) may be flexible at maximum of one week if the weather condition does not permit such monitoring activities.

#### Article 3. Reporting and Storing of the Data

- 1. The photographs taken in March 2018 shall be submitted to the Project. The photos along with the location maps of the monitoring sites shall be compiled and stored by the Department of Forestry to be used as baselines for the monitoring. The offices that store the photograph is the following:
  - (1) Regional Forestry Officer (South), and
  - (2) Deputy Director, Department of Forestry
- 2. From 2019 until March 31, 2023 or the date completing the ex-post evaluation whichever comes earlier, the PM shall carry out annual monitoring as stipulate in this MOU, and
- 3. The PM shall analyze the situation and the status of the monitoring sites employing a fix-point observation using the photographs. The analysis along with the photographs taken from the monitoring sites shall be submitted to the Department of the Forestry following the annual reporting procedures.

MIN

M.D

#### Article 4. Undertaking by the PM

- 1. The PM shall take sole responsibility for carrying out the monitoring as stipulated in this MOU. The PM shall pay special attention to his / her work schedule to accommodate the annual monitoring stipulated in this MOU.
- 2. The PM is obligated the duty of care to utilize the camera and its attachments specifically provided to undertake the monitoring of the Project,

#### Article 5. Undertaking by the Project

- 1. The Project shall provide one GPS locator-equipped camera, two memory cards and one camera pouch
- 2. The Project shall consult and collaborate with PM for setting up the monitoring sites and establishing the monitoring procedures stipulated in this MOU.

In witness whereof, the parties to this MOU through their duly authorized representatives have executed this MOU on the days and dates set out below, and certify that they have read, understood, and agreed to the terms and conditions of this MOU as set forth herein.

The effective date of this MOU is the date of the signature last affixed to this page.

Wha.

Mr. Gregory Kulemeka Project Manager of the Department of Forestry of Mwanza District Dateの2 /03/18 Mr. Masato Onozawa Team Leader, COVAMS II

Date:02 /03/2018

#### MEMORANDUM OF UNDERSTANDING

on

#### Post Project Monitoring for the Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II)

This Memorandum of Understanding (MOU) constitutes of the agreement between the District Department of Forestry of Neno district and Project for Promoting Catchment Management Activities in Middle Shire (COVAMS II) (Project) regarding the framework for conducting post project monitoring for preparation of ex-post evaluation which will be scheduled in 2021 by Japan International Cooperation Agency in accordance to the R/D. This MOU is undersigned between the Project Manager of the Department of Forestry of Neno district (PM) and the Team Leader of the Project.

#### Article 1. Purpose of Conducting Monitoring

- 1. The purpose of conducting monitoring is to meet the recommendation adopted by the Joint Coordinating Committee held on November 23, 2017.
- 2. The Department of Forestry (DOF) agreed to design and to introduce monitoring activities to record changes in the sites with Catchment Management through Farmers Activities (CMFA) based on the COVAMS approach in order to mobilize resources for sustaining CMFA based on the COVAMS for the post-project period. The monitoring is critical to verify effects and effectiveness of the CMFA introduced by the Project,
- The monitoring methodology shall be simple and feasible to record changes of vegetation and / or soil
  conservation over time. The record shall be available for stakeholders to have clear understanding of the
  changes of the specific sites made by continuing CMFA, and
- 4. The Policy Evaluations Act of Japan sets the primary objectives of evaluation as management and accountability, regulating evaluation by the responsible governmental organization. It also reflects the result of these evaluations to the policy making in an appropriate manner, in the aspect of efficiency and effectiveness in order to gain well understanding in the outcome of their own policies. According to the Evaluation Guidelines of Japanese Official Development Assistance (ODA), ex-post evaluations are conducted for ODA projects that have past three and five years.

#### Article 2. Methodology and the Procedure of the Monitoring

- The Project Manager (PM) shall establish the three monitoring sites where CMFA has been carried out during the Project. The monitoring sites shall be marked with the beacons (permanent markers made of concrete) or the stable stones marked with oil-based paint. The GPS locations of the monitoring sites are identified by the camera provided by the Project,
- 2. The PM shall organize a meeting with local authority to make community members aware of the purpose and necessity of the monitoring so that the monitoring sites and beacons would be properly managed and maintained,
- 3. The list of the three monitoring sites are as following:
  - 1). NENO-MKOKA: Mkoka village, GVH Ngwenyama, TA Symon
  - 2). NENO-MALAULI: Malauki village, GVH Malauli, TA Malauli
  - 3). NENO-MKWILIR: Mbilidzi village, GVH Dzomodya, TA Malauli
- 4. The methodology of the annual monitoring is to take a panoramic photograph of the designated forest from the monitoring sites marked with the beacon or with the painted stone. The photographs for the monitoring shall be taken by District Forestry Office (DFO) using the cameras provided by the Project. The date(s) of the monitoring shall be within the 2<sup>nd</sup> week of March every year. The date(s) may be flexible at maximum of one week if the weather condition does not permit such monitoring activities.

#### Article 3. Reporting and Storing of the Data

- 1. The photographs taken in March 2018 shall be submitted to the Project. The photos along with the location maps of the monitoring sites shall be compiled and stored by the Department of Forestry to be used as baselines for the monitoring. The offices that store the photograph is the following:
  - (1) Regional Forestry Officer (South), and
  - (2) Deputy Director, Department of Forestry
- 2. From 2019 until March 31, 2023 or the date completing the ex-post evaluation whichever comes earlier, the PM shall carry out annual monitoring as stipulate in this MOU, and
- 3. The PM shall analyze the situation and the status of the monitoring sites employing a fix-point observation using the photographs. The analysis along with the photographs taken from the monitoring sites shall be submitted to the Department of the Forestry following the annual reporting procedures.

#### Article 4. Undertaking by the PM

- 1. The PM shall take sole responsibility for carrying out the monitoring as stipulated in this MOU. The PM shall pay special attention to his / her work schedule to accommodate the annual monitoring stipulated in this MOU.
- 2. The PM is obligated the duty of care to utilize the camera and its attachments specifically provided to undertake the monitoring of the Project,

#### Article 5. Undertaking by the Project

- 1. The Project shall provide one GPS locator-equipped camera, two memory cards and one camera pouch
- 2. The Project shall consult and collaborate with PM for setting up the monitoring sites and establishing the monitoring procedures stipulated in this MOU.

In witness whereof, the parties to this MOU through their duly authorized representatives have executed this MOU on the days and dates set out below, and certify that they have read, understood, and agreed to the terms and conditions of this MOU as set forth herein.

The effective date of this MOU is the date of the signature last affixed to this page.
